Bu çalışmada yüzey tabakası olarak 1mm kalınlığında, 170x100 mm ebatlarında paslanmaz çelik-316, çekirdek malzemesi olarak da alüminyum 1050A-0 alaşımı kullanılmıştır. Alt-üst levha ile çekirdek arası bağlayıcı eleman olarak DP-460 epoksi yapıştırıcı kullanılmıştır. Alüminyum 1050A-0 ve paslanmaz çelik-316 ait fiziksel ve mekanik özellikler tablo-1’de ifade edilmiştir.

	Aluminum 1050A ,O	316-Stainless Steel
Density	2710kg/m <sup>3</sup>	7800kg/m <sup>3</sup>
Tensile Yield Strenght	34,94 MPa	200 MPa
Tensile Ultimate Strenght	80 MPa	515 MPa
Modulus of Elasticity	69 GPa	200 GPa
Elongation (%)	40	40
Shear Modules	50 MPa	82 GPa
Poisson Ratio	0,33	0,275

**Tablo-1.** Alüminyum 1050A-0 ve Paslanmaz çelik-316 alaşımlarına ait mekanik özellikler

**Şekil -1.** DP-460 epoksi yapıştırıcıya ait gerilme - şekil değiştirme grafiği

Yapıştırıcı olarak DP-460 epoksi yapıştırıcı kullanılmış olup DP-460 yapıştırıcıya ait gerilme – şekil değiştirme grafiği şekil-1 ‘de verilmiştir. 1mm kalınlığında 170x100mm paslanmaz çelik-316 malzemeden oluşturulan alt ve üst levhaya ait ölçüler şekil-2’de verilmiştir.

Farklı büküm geometrik varyasyonları ile üretilecek olan çekirdek yapısına ait S çekirdek R10mm için ölçü ve bükümden öncesi ve sonrası sac ölçüleri şekil-3 de verilmiştir.

S çekirdekli sandviç alüminyum kompozit levha varyasyonlarına ait boyutlar tablo-2’de gösterilmiştir. Bu çalışmada üç farklı eğrilik yarıçapı ve üç farklı çekirdek malzeme et kalınlık değerleri için analiz yapılmıştır.

Şekil-4 S-Çekirdekli Bal Peteği Alüminyum Kompozit Levha[19]

Şekil-5 Üç Nokta Eğme Testi Ansys Deneysel Düzenek ile Kuvvet-Adım Diyagramı[19]

S-Çekirdekli Bal Peteği Alüminyum Kompozit Levha şekil-4 teki gibi alt-üst levha ve çekirdek malzeme arası DP-460 bağlayıcı yapıştırıcı kullanılarak oluşturulmuştur. Oluşturulan Sandviç kompozit levha üç nokta eğilme testi analizine tabi tutulmuştur. Analizler ANSYS Workbench 2021 R1 paket programı kullanılarak yapılmıştır. Üç nokta eğilme analizinde yük kademeli verilmiş olup her kademede 50N artırılabilecek şekilde 10 kademede toplamda 500N yük uygulanmıştır. Üç nokta eğme analizi ile ilgili boyutlar ve sınır şartları şekil 5'te verilmiştir.

Üç nokta eğme analizi sonucunda farklı eğrilik ve kalınlıklara sahip alüminyum çekirdekli kompozit levhalar için elde edilen yük-sehim grafikleri şekil 6'da görülen üst levha üst orta hattının boyunca [AB hattı] incelenmiştir, üst levhanın altı orta hattının boyunca [CD hattı], üst yapıştırıcının üstü orta hattı boyunca [EF hattı] aşağıda gösterilmiştir.

Şekil-6 Sandviç kompozite ait A-B, C-D ve E-F Hatları[19]

### 3. SONUÇ VE TARTIŞMA

(a)

(b)

Şekil-7 a)0,7 mm et kalınlığı, R10 mm yarıçaplı, h:70mm yüksekliğe sahip S çekirdekli sandviç kompozit levha ait toplam deformasyon, b) 0,6 mm et kalınlığı R10 mm yarıçaplı, h:60mm yüksekliğinde alüminyum çekirdekli sandviç kompozite ait von-Mises gerilmesi 0,7 mm et kalınlığı, R10 mm yarıçaplı, h:70mm yüksekliğe sahip S çekirdekli sandviç kompozit levhanın çökmesi Şekil 7a' da ve 0,6 mm et kalınlığı R10 mm yarıçaplı, h:60mm yüksekliğinde alüminyum çekirdekli sandviç kompozit levhanın von Mises eşdeğer gerilmesi Şekil 7b' de görülmektedir. Şekil 7a' da çökme görüntüsü incelendiğinde beklendiği gibi en büyük çökme sandviç kompozitin orta kısmında oluşmuştur. Alttaki paslanmaz çelik örtü incelendiğinde çökme çok az meydana gelmiş ve mesnetlerde yine beklendiği gibi çökme sıfır çıkmıştır. S şekilli çekirdek malzemelerde de orta hatta yaklaştıkça renkler yeşilden kırmızıya yaklaşmakta, bu da orta hattaki çekirdek malzemelerin de kenar malzemelerle göre daha fazla çöktüğünü göstermektedir. Üç nokta eğilme testi yüklemesinde en büyük eğilme momenti, kuvvetin uygulandığı ve sandviç kompozitin ortasında oluşmaktadır. Bundan dolayı Şekil 7b' de bu hat kırmızı görülmektedir. Hem üst örtüde hem de sandviç kompozitin geri kalan kısmında eşdeğer ( $\sigma_{eqv}$ ) gerilmeler giderek azalmaktadır.Şekil 7b' de von-Mises eşdeğer gerilmeler incelendiğinde, en büyük eşdeğer gerilmelerin sandviç kompozitin ortasında olduğu ve bu da beklentilerle uyumlu olduğu görülmektedir.

**Tablo-3.** R10mm yarıçaplı 0.6 , 0.7 ve 0.8 mm et kalınlıklı, h=50mm , 60mm ve 70 mm çekirdek yükseklikli sandviç kompozit panelin hasar yükleri

		Hasar Yüğü (N)		
		0,6 mm	0,7 mm	0,8 mm
h	50 mm	135	155	187
	60 mm	195	220	185
	70 mm	145	226	125

Üç nokta eğme analizi sonucunda 50, 60 ve 70 mm çekirdek yüksekliği ve 0.6, 0.7 ve 0.8 mm çekirdek kalınlıklarına sahip alüminyum çekirdekli kompozit levhalar için elde edilen hasar yükler Tablo 3'de verilmiştir. Tablodaki hasar yükleri incelendiğinde 50mm çekirdek yüksekliği için çekirdek kalınlıkları arttıkça hasar yüklerinin arttığı görülmektedir. Bunun nedeni çekirdek kalınlıkları arttıkça eğilme rijitlikleri artmakta bu da hasar yüklerini artırmaktadır. 60 ve 70 mm çekirdek yüksekliğinde en yüksek değerlere 0,7mm et

kalınlığında ulaşılmıştır.Çekirdek et kalınlığının artması yükseklik artışıyla oluşan hasar yükü taşıma kaybına çözüm olamamıştır. Bu durum ( $1/\rho=M/EI$ ) ifadesinde sabit eğrilik yarıçapında atalet momentinin azalmasıyla ( $M/EI$ ) ifadesinin sabit olabilmesi için daha düşük eğilme momenti ile ve dolayısıyla daha düşük hasar yükü ile hasar deformasyonlarına ve hasar gerilmelerine ulaşılmaktadır. Gerek çökme değerleri gerek ondan sonraki gerilme grafikleri  $F=125$  N eğilme yükünde elde edilmiş olup bu bütün varyasyonlarda sandviç kompozitin taşıyabildiği en düşük hasar yüküdür.

Şekil 8’ de verilen sandviç kompozit varyasyonların A-B hattı boyunca çökmeleri incelendiğinde çökmelerin A noktası civarında sıfırın çok az üstünde oluştuğu görülmektedir. Bu noktada üst levha A noktasında saat ibresi ters yönde bir miktar eğim göstermektedir. Levhanın ortalarına doğru gidildikçe çökme giderek artmış ve orta noktada maksimum olmuştur. B noktasına yaklaştıkça çökme önce sıfırlanmış daha sonra levhanın B noktası civarında pozitif olmuştur. Bunun nedeni eğilmen levhaların uçlarında meydana gelen eğimdir. B noktasında oluşan eğimin A noktasında oluşan eğimden fazla olmasının nedeni S şekilli çekirdeklerin yönlerinin A’dan B’ye doğru olmalarından kaynaklanmaktadır.

Şekil-8 0,6 mm Çekirdek Et Kalınlığı R10mm Çekirdek Yarıçapında Farklı Çekirdek Yüksekliklerinde Sandviç Panel Kompozitlerin Çökme Eğrileri

**Şekil-9** 0,7 mm Çekirdek Et Kalınlığı R10mm Çekirdek Yarıçapında Farklı Çekirdek Yüksekliklerinde Sandviç Panel Kompozitlerin Çökme Eğrileri

**Şekil-10** 0,8 mm Çekirdek Et Kalınlığı R10mm Çekirdek Yarıçapında Farklı Çekirdek Yüksekliklerinde Sandviç Panel Kompozitlerin Çökme Eğrileri

Çekirdek kalınlıklarının sandviç kompozit levhanın çökme değerleri üzerindeki etkisi açısından grafikler incelendiğinde ince çekirdekli kompozit levhaların daha çok çöktüğü görülmektedir. Yani çekirdek kalınlığı arttıkça levhalarda oluşan çökme giderek azalmaktadır. Bunun nedeni çekirdek malzemelerin kalınlığı arttıkça eğilmeye karşı gösterdiği direnç atalet momentlerin artmasından artar. Bu da daha az eğilmeye ve çökmeye neden olur. Ayrıca h yüksekliği 0,6 mm et kalınlığında arttıkça çökme miktarı artmış, 0,7mm et kalınlıklı çekirdek yapısında yaklaşık olarak birbirine eşittir denilebilir. 0,8 mm çekirdek yapısında çekirdek yüksekliğinin artması çökme miktarını azaltmıştır.

Çekirdek kalınlığının artmasıyla oluşan direnç atalet momentleri çekirdek yükseklik artışıyla daha fazla çökme eğilimi sergilemişlerdir.

(a)

(b)

Şekil-11 0,8mm çekirdek et kalınlığı,R10mm eğrilik yarıçapındaki s şekilli 50 mm hücre yüksekliğindeki sandviç kompozitin farklı hatlardaki  $\sigma_{eqv}$  gerilme eğrileri a) A-B ve C-D hatları boyunca, b) E-F hattı boyunca

0.7 mm çekirdek et kalınlığı, R10 mm eğrilik yarıçapındaki S şekilli 50 mm hücre yüksekliğindeki sandviç kompozitin AB, C-D ve E-F hatları boyunca von-Mises eşdeğer gerilime dağılımları sırasıyla Şekil 11' de verilmiştir.  $\sigma_{eqv}$  gerilme dağılımları incelendiğinde gerilmeler hem A-B hem de C-D hatları için uçlarda sıfır, ortalara doğru

atmaya başlamış ve ortada maksimum çıkmıştır. Bu üç nokta eğilme testlerinde beklenen bir sonuçtur. Çünkü eğilme momentleri uçlarda sıfır ve merkezde maksimumdur.

#### **4.SONUÇ**

Üç nokta eğilme testine maruz farklı çekirdek yükseklikli ve farklı et kalınlıklı S şekilli 10mm hücre yarıçapındaki sandviç kompozitin numerik gerilme analizi bulguları incelendiğinde aşağıdaki sonuçlar elde edilmiştir.

- Hasar yükleri incelendiğinde çekirdek kalınlıkları arttıkça hasar yüklerinin ve eğilme rijitliklerin arttığı görülmektedir bu da levhalarda oluşan çökmeyi giderek azaltmaktadır. Bunun nedeni çekirdek malzemelerin kalınlığı arttıkça eğilmeye karşı gösterdiği direnç atalet momentlerin artması daha az eğilmeye ve çökmeye neden olmasıdır.
- Çekirdek et kalınlığı ve yüksekliğindeki artışlar çökme miktarını artırmaktadır.
- Yapılan analiz sonuçlarında yapıştırıcı üzerinde oluşan gerilemeler hasara sebep olmamaktadır. Bu durum yapıştırıcı seçiminde daha geniş bir spektrum sunmaktadır.

**ÖZET**

Fosil yakıtlardan üretilen elektriğin çevreye zararı olan sera gazı emisyonu ve diğer olumsuz durumlardan ötürü endişeler neticesinde sağlıklı bir elektrik üretimi için PV (Fotovoltaik) sistemlere talep ve önem günden güne artmakla beraber daha fazla farkındalık görmesine sebep olmuştur. Fotovoltaik ile enerji üretim sistemleri küresel boyutta büyük bir odak noktasına geldi ve enerji tabanlı üretimde, en değerli katkı payına sahip olduğu gözlemlenmektedir. Dünyada yenilenebilir enerji kaynakları ile elektrik üretmek için, güneş enerjisinden faydalanmak için güneş fotovoltaik tabanlı teknolojiler kullanılmaktadır. Ancak üzücüdür ki ülkemiz Güneş kuşağında bulunmasına rağmen sahip olduğu bu enerji potansiyelini katma değere çeviremediği gibi yaygın ve etkin derecede kullanamamaktadır.

Bu çalışmada, ülkemizde güneş enerjisi potansiyeli yönünden avantajlı durumda olan Van ilinde, dünyada uygulama alanı her geçen gün artmakta olan fotovoltaik enerji ile elektrik üreten tarımsal işletmelerden biri olan ceviz işleme tesisinin enerji gereksinimini karşılamak için tüm yönüyle incelenmiştir. Fotovoltaik Güneş Sistemi (FVGS) ile günlük bazda elektrik enerjisi üretimi hesaplanmıştır. Dolayısıyla üretim değerleri aylara göre değişkenlik göstermiştir. Temmuz ayında elektrik üretimi yıl içinde en yüksek değerde enerji ürettiği gözlemlenmiştir. Son olarak FVGS kurulumunun doğru yapılması ile tarımsal işletmelerde kullanılan enerji tüketimlerinin FVGS'leriyle bu enerji gereksiniminin fazlasıyla karşılanabilir olduğu ortaya çıkmaktadır.

**Anahtar Kelimeler:** Güneş Enerjisi, Yenilenebilir Enerji Kaynakları, FVGS, Tarımsal işletmeler, Ceviz İşleme Tesisi

**AVAILABILITY OF ENERGY REQUIREMENTS OF AGRICULTURAL  
ENTERPRISES WITH PHOTOVOLTAIC ENERGY: APPLICATION IN VAN  
PROVINCE**

**ABSTRACT**

As a result of concerns about greenhouse gas emissions and other negative situations that harm the environment of electricity generated from fossil fuels, the demand and importance of PV (photovoltaic) systems for healthy electricity generation has increased from day to day, but has led to greater awareness. Photovoltaic and energy production systems have come into a major focus on the global dimension and are observed to have the most valuable contribution in energy-based production. The world also uses solar photovoltaic-based technologies to make use of solar energy to generate electricity with renewable energy sources. But it is sad that our country, despite its presence in the solar belt, cannot convert this energy potential to added value, as well as use it widely and effectively. In this study, which is advantageous in terms of solar energy potential in our country, in the province of van in the case in the world of application areas and agricultural enterprises, which is one of the growing photovoltaic energy to generate electricity to meet the energy requirements of all aspects of walnut processing plant examined. Electricity production was calculated on a daily basis with the Photovoltaic Solar System (FVGS). Therefore, production values varied over the months. Electricity generation in July was observed to produce the highest value of energy in the year. Finally, with the correct installation of FVGS, it turns out that this energy requirement can be met with Fvgs of energy consumption used in agricultural enterprises.

**KeyWords:** Solar Energy, Renewable Energy Sources, FVGS, agricultural enterprises, Walnut processing plant.

## 1. GİRİŞ

Güneş, insanlığın kullanmış olduğu toplam enerjinin çok daha fazlasını bütün bir yıl boyunca dünyaya göndermektedir. Aynı zamanda yenilenebilir enerji kaynaklarında temel kaynağıdır. Biyokütle, rüzgâr, jeotermal, dalga (gel-git), su (hidrolik) ve güneş enerjisi yenilenebilir enerji grubundadır. Bu enerji grupları arasında uygulama alanı olarak en fazla ve en yaygın olanı güneştir diyebiliriz. Temiz bir kaynak olan güneş enerjisi bir enerji olmakla beraber bol ve tükenmeyen bedava enerji kaynağıdır.

Güneş enerjisinin avantajları yenilenebilir enerji kaynakları arasında oldukça fazladır diyebiliriz. Dikkate şayendir ki havanın açık olması ve güneşli durumunda 15 dk'lık güneş ışması neredeyse tüm dünyanın bir senelik enerji ihtiyacını fazlasıyla karşılamaktadır [1].

Güneş enerjisini direkt elektrik enerjisine dönüştürmek için güneş pillerini kullanmamız gerekir. Güneş panellerinin üzerine güneş ışığının yansmasıyla uçlarında bir elektrik gerilimi oluşur. Bu oluşum güneş pillerinin elektrik enerjisi üretebilen yapılar olduğunu göstermektedir. Güneş pillerinin yapı taşı ışık şiddetidir. Bu yüzden mevsimsel olarak baktığımızda dünyanın farklı yerlerine güneş ışınımın düştüğünden güneş panelleride farklı değerlerde enerji üretir.

Kelime anlamı olarak fotondan elektrik üretmeye fotovoltaik denir. Üretilen elektrik ise fotovoltaik paneller yardımıyla gerçekleşmektedir. Tabii fotovoltaik sistemler güneşten elektrik üretiminde kullanılırlar. Fotovoltaik sistemlerin bileşenleri ise; panel, akü, invertör (evirici) ve şarj kontrol cihazıdır. Genel olarak indirgenmiş çalışma prensibi; şarf regülatörü, fotovoltaik panelden gelen doğru akım enerjisini düzenleyip sabit tutar ve akabinde akü şarjı için stabil şekilde doğru akım elektrik enerjisi oluşturur. İnverterler ise DC elektrik enerjisini AC elektrik enerjisine dönüştürür. Aynı zamanda akü kalitesize göz ardı edilmemesi gerekir. Çünkü şebekeye bağlı olmayan off-grid fotovoltaik güneş panel sistemleri için aküler oldukça önemlidir diyebiliriz. Fotovoltaik güneş sistemlerinin en temel parçaları güneş ve elektriğin üretildiği kısımdır [2,3].

Türkiye'de günlük ortalama güneşlenme süresi toplamda 7,2 saatir ve yıllık ortalama ise metrekarede 2640 saattir [4]. Ülkemizin coğrafi konumu baz alındığında sahip olduğu enerji potansiyeli diğer birçok ülkeye göre daha avantajlı konumda olduğu gözlenmektedir. Aynı zamanda güneş enerji sistemi kırsal bölgelerin elektrik enerjisi kullanmasına da olanak sağlamaktadır.

Yenilenebilir enerji kaynakları olarak sahip olduğu güneşlenme süresinin fazla olma sebebiyle potansiyeli yüksek olan yerlerden biri olan Van'da güneş enerji sistemi ön plana çıkmaktadır. Türkiye geneli bölgeler ve iller göz önüne alındığında oldukça avantajlı bir konumda olan Van

ili, güneşlenme süresi açısından ikinci il ve global radyasyon değerleri açısından üçüncü il durumundadır [5]. Bu gibi avantajları su yüzüne çıkarırsak Van ili fotovoltaik güneş enerjisi sistemlerinde en verimli iller arasındadır.

Bu çalışmada, Van'da kurulacak olan ceviz işleme tesisinin enerji gereksinimi hesaplanıp, enerjiyi temiz ve yenilenebilir enerji olan şebekeden bağımsız sistem olan Off-Grid sistemiyle fotovoltaik güneş enerjisi sisteminin kurulması amaçlanmaktadır. Bu sistem ile tesisin tüm elektrik ihtiyacını karşılanmış olacaktır. Ceviz işleme tesisi incelendiğinde; ceviz soyma, kurutma, kalibre, kırma ve kırık ceviz ayırma makineleri yüksek düzeyde mekanizasyon ve otomasyon sistemleri kullanıldığından elektrik enerjisi tüketim değerleri yüksektir. Bu yüzden elektrik enerjisi maliyeti, işletme için önemli bir enerji girdisi sorunu olarak karşımıza çıkmaktadır.

Yeni yapılan tarımsal üretim projelerinde, ülkemizde tarımsal desteklerin güneş enerjisi sistemlerine de verilmesiyle güneş enerjisinden elektrik elde etmek için FVGS lerin kullanımı da artmaktadır. Bugün ülkemizin farklı coğrafi bölgelerinde yer alan orta büyüklükte ceviz işleme tesislerin aylık elektrik enerjisi faturası ortalama 10.000 TL'dir. Elektrik enerjisi tüketimi ise 10.690 kWh olduğu görülmektedir. Ceviz işleme tesislerindeki yoğun elektrik tüketiminin tamamı veya bir bölümü FVGS lerin kullanımıyla tasarruf edilecektir.

TÜİK 2019 verilerine göre; Türkiye'de %21,55'inin ithalat gideri olarak enerji oluşturmaktadır. Bununla beraber Türkiye'nin yıllık enerji ithalatı ortalama 45 milyar dolardır. Türkiye birincil enerji tüketiminin sektörel dağılımına göre sanayide kullanılan enerji oranı %25,0 en yüksek tüketim oranı olarak karşımıza çıkmaktadır. Aynı zamanda nihai enerji tüketiminin sektörel dağılımında ise %32,5 ile sanayi sektörü en fazla enerji tüketimine sahiptir [6].

Enerjide dışa bağımlılığı azaltıp ithalatın önüne geçebilmek için, ülkemizde yenilenebilir enerji yatırımına hız verilmektedir. Güneş enerjisi santralleri pazarı 2016 yılında fotovoltaik güneş enerjisi doğrudan elektrik enerjisine çevirmede teknolojisine dayalı olarak bir zaman sonra beklenenin üzerinde büyüyerek, yenilenebilir enerji kaynağı olan rüzgâr enerjisinin yıllık kurulumunu geride bırakıp bir önceki yıla göre 51000 MWp yüzde 50 artışla yaklaşık olarak 77000 MWp yıllık kurulumla ulaşmıştır [7]. Fotovoltaik güneş sistemi kurulum maliyetleri gün geçtikçe düşmektedir. Önümüzde ki 20 yıla kadar fotovoltaik güneş enerjisi sistemi yatırım maliyetlerinde yüzde 40 ile 70 oranında, karasal rüzgâr santrali ise yüzde 10 ile 25 oranında azalma beklentisinde bulunmaktadır [8].

Fotovoltaik güneş sistemlerinin tarımsal işletmelerde kurulma maliyeti ve karlılığını hesaplamak kolaydır. FVGS'lerin kurulumları için ülkemizde 1MW ve altındaki güneş sistemi için herhangi

bir lisans alma zorunluluğu bulunmamaktadır [9]. Bundan ötürü mevzuat süreci daha kolay olmaktadır. Fotovoltaik güneş sistemlerinin ekonomik ömrü yatırım analizlerinde 25 yıl olarak kabul edilmektedir ve normal şartlarda 25 yıldan sonra verimi düşse bile tesis 35-40 yıl da kullanılmaktadır [10]. Sistemin kendini amorti etme süresi kullanılan güççe bağlı olarak 3 ile 8 yıl arasında değişmektedir. Ayrıca fotovoltaik güneş sistemlerinin enerji üretimi sırasında sessiz ve kimsiyal kirliliği oluşturmadıkları için çevreye duyarlı teknoloji olarak benimsenmiştir. FVGS lerin olumsuz durumları incelendiğinde, gölgeli alanlarda ve sıcakda verim oldukça düşüktür. Ayrıca geceleri elektrik enerjisi üretimi gerçekleşmez.

## **2. KURAMSAL TEMELLER VE KAYNAK ÖZETLERİ**

### **2.1. Tanımlar**

#### **2.1.1. Güneş enerjisi**

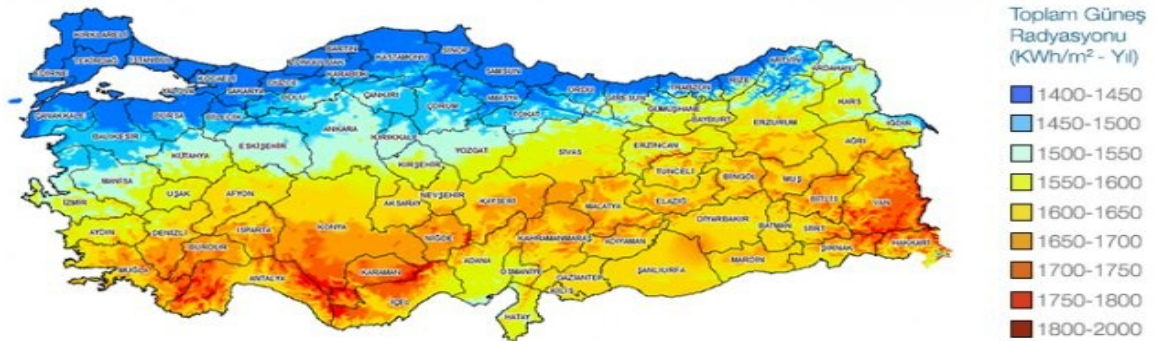

Dünya’da nüfus 4 kat artarken aynı zamanda enerji talebi de 16 kat artmaktadır. Dünya’da yaşayan 7,5 milyar insanın yaşamlarını idame ettirebilmeleri için 13TWh (Terewatt) enerjiye ihtiyaç olduğu bilinmektedir. Tabii bu talep değeri teknolojiye ve nüfus arttırımına paralel olarak hızla artmasına da sebep olmaktadır. Fosil enerji kaynaklarının tükenme durumu ve artan nüfusun enerji tüketiminin hızlı olması, enerji kavramı açısından insanları endişeye sevk etmiştir. Aynı zamanda insanlar alternatif olarak yeni enerji kaynakları arayışına sevk edilmiştir. Alternatif enerji kaynakları arasında; temiz, ekonomik ve çevreye duyarlı olan güneş enerjisi popüler olarak en fazla ilgi gören yenilenebilir enerji kaynağı olduğunu söylemek mümkündür. Fotovoltaik piller ise güneş ışınlarını elektrik enerjisine dönüştürmekte kullanılır. Fotovoltaik kavram olarak, güneş enerjisini elektrik enerjisine dönüştürme olarak tanımlanır. Bu dönüştürmede, kullanılan yarı iletken malzemelerin iş fonksiyonu, mobilite, iletkenlik ve özdirenç gibi karakteristik özelliklerinden faydalanılarak güneş hücresi oluşturulur. Güneş enerjisini kullanılabilir kılmak ve yararlı elektrik enerjisi oluşturmak için güneş pillerinin algıladıkları foton enerjisinden faydalanarak pozitif ve negatif yükler oluşturmaktır. Kısa tanımı ise güneş pildir. Fotovoltaik kelimesini ayırdığımızda “Photo” ışık anlamında, “voltaic” ise elektriksel voltaj anlamına gelir. Elde edilen enerji On-Grid ve Off-Grid olmak üzere ikiye ayrılır. Yani şebekeye bağlı olan ve olmayan demektir. Bizim kullanacağımız sistem Off-Grid “şebekeye bağlı olmayan” sistemdir. Bu sistemle bir tesisin elektrik ihtiyacını şebekeden bağımsız bir şekilde karşılanmasıdır. Güneş enerjisinden elektrik enerjisi elde edilme aşamaları aşağıdaki şekil 2.1’de belirtilmiştir.

Şekil 2.3. Güneş enerjisinden elektrik elde etme aşaması

### 2.1.2. Türkiye’de güneş enerjisi potansiyeli

Coğrafi yapısı sebebiyle sahip olduğu güneş enerjisi potansiyeli açısından birçok ülkeye göre avantaj sahibi olan Türkiye’nin, enerji üretiminde yıllık 100 milyon MW olduğu düşünülürse yaklaşık bir saniyede dünyaya gelen güneş enerjisi, ülkemizin enerji üretiminin 1700 katıdır diyebiliriz. Yani dünyaya saniyede yaklaşık olarak güneş ışını 170 milyon MW enerji olarak gelmektedir [11]. Ülkemizin illere göre yıllık güneş ışını miktarını gösteren güneş enerjisi potansiyel atlası Harita 2.1’de belirtilmiştir [12].

Harita 2.1. Türkiye güneş enerjisi potansiyeli haritası

Türkiye'nin günlük toplam güneşlenme süresi 7,2 saattir ve yıllık bazda ise 2640 saattir. Toplamda ortalama güneş ışını şiddeti ise 1,311 kWh/m<sup>2</sup>-yıl, günlük toplamı incelendiğinde ise 3,6 kWh/m<sup>2</sup> olduğu belirtilmiştir.

**Çizelge 2.1.** Türkiye'nin toplam güneş enerjisi potansiyelinin aylara göre dağılımı [1]

Aylar	Aylık Toplam Güneş Enerjisi		Güneşlenme Süresi (Saat/ay)
	(kcal/cm <sup>2</sup> -ay)	(kWh/m <sup>2</sup> -ay)	
Ocak	4,45	51,75	103,0
Şubat	5,44	63,27	115,0
Mart	8,31	96,65	165,0
Nisan	10,51	122,23	197,0
Mayıs	13,23	153,86	273,0
Haziran	14,51	168,75	325,0
Temmuz	15,08	175,38	365,0
Ağustos	13,62	158,40	343,0
Eylül	10,60	123,28	280,0
Ekim	7,73	89,90	214,0
Kasım	5,23	60,82	157,0
Aralık	4,03	46,87	103,0
<b>Toplam</b>	<b>112,74</b>	<b>1311,0</b>	<b>2640</b>
<b>Ortalama</b>	<b>308,0 cal/cm<sup>2</sup>-gün</b>	<b>3,6 kWh/m<sup>2</sup> -gün</b>	<b>7,2 saat/gün</b>

Çizelge incelendiğinde; ülkemizin güneşlenme süresi ve güneş enerji potansiyeli değerleri aylara göre dağılımı belirtilmiştir. Buna göre ülkemizde en fazla temmuz ayında, en az ise aralık ayında güneş enerjisi üretilir. Ülkemiz yılda 110 gün güneşlenme potansiyeline sahiptir. Bu yüzden gerekli çalışmaların yapılması durumunda ülkemiz birim metre karesinden yılda ortalama olarak 1,100 kWh'lık güneş enerjisi üretebilme potansiyeline sahiptir.

**Çizelge 2.2.** Türkiye'nin yıllık toplam güneş enerjisi potansiyelinin bölgelere göre dağılımı

Bölge	Toplam ortalama güneş enerjisi	Ortalama güneşlenme süresi
	kWh/m <sup>2</sup> -yıl	Saat/yıl
Güneydoğu Anadolu	1,460	2,993
Akdeniz	1,390	2,956
Doğu Anadolu	1,365	2,664
İç Anadolu	1,314	2,628
Ege	1,304	2,738
Marmara	1,168	2,409
Karadeniz	1,120	1,971

Çizelge 2.2 incelendiğinde; ülkemizin yedi güzel bölgesinin yıllık güneş enerji potansiyelinin dağılımı verilmiştir [1]. Ülkemizin en fazla güneş alan bölgesi Güneydoğu Anadolu Bölgesi olup, ikinci sırada Akdeniz Bölgesi ve üçüncü sırada ise Doğu Anadolu Bölgesi gelmektedir.

Bununla beraber Karadeniz Bölgesi ülkemizin en az güneş enerjisi potansiyeline sahiptir. Doğu Anadolu Bölgesinin toplam yıllık ortalama güneş enerjisi 1,365 kWh olarak görülmektedir. Bu verileri dikkate alırsak ülkemizde toplam yıllık alınan enerji  $10^{15}$  kWh olarak gözlemlenmektedir.

### 2.1.3. Van ili güneş enerjisi

Harita 2.2. Van ili güneş enerjisi potansiyeli [13]

Van ilinin eski ismi olan tuşba, zamanında güneş şehri olarak tanınmış ve bazı kaynaklara göre güneş tarlası olarak adlandırılır. Yazın en fazla güneş enerjisi alan Karaman ve Antalya illerimizden sonra üçüncü il olarak yerini almaktadır.[17]

Çizelge 2.3. Van'ın ve Türkiye'nin aylık bazda, günlük ortalama ve yıllık toplamda, güneşlenme süreleri ve güneş enerjisi potansiyeli [13]

Aylar	Van Potansiyeli		Türkiye Potansiyeli	
	Günlük radyasyon (kW/m <sup>2</sup> -gün)	Günlük Güneşlenme Süresi (saat/gün)	Günlük radyasyon (kW/m <sup>2</sup> -gün)	Günlük Güneşlenme Süresi (saat/gün)
Ocak	1,91	5,27	1,79	4,11
Şubat	2,84	6,40	2,50	5,22
Mart	4,14	7,39	3,87	6,27
Nisan	5,13	8,50	4,93	7,46
Mayıs	6,63	10,11	6,14	9,10
Haziran	6,99	11,55	6,57	10,81
Temmuz	7,16	11,65	6,50	11,31
Ağustos	6,05	10,97	5,81	10,70
Eylül	5,25	10,31	4,81	9,23
Ekim	3,64	7,65	3,46	6,87
Kasım	2,31	6,16	2,14	5,15
Aralık	1,73	4,93	1,59	3,75
<b>Toplam</b>	<b>1.635,81 kW/m<sup>2</sup> -</b>	<b>3.068,74 saat/yıl</b>	<b>1.524,18 kW/m<sup>2</sup> -</b>	<b>2.736,89 saat/yıl</b>

	yıl		yıl	
--	-----	--	-----	--

Çizelge 2.3 incelendiğinde; Van ili ile Türkiye'nin güneşlenme süreleri ve güneş enerjisi durumları karşılaştırılıp, Türkiye'nin ortalama yıllık toplam güneşlenme süresi 2.736,89 saat/yıl iken Van ilinin ise 3.068,74 saat/yıl'dır. Toplam günlük global radyasyon şiddeti ise Türkiye ortalaması 1.524,18 kW/m<sup>2</sup>-yıl iken Van ilinin ise 1.635,81 kW/m<sup>2</sup>-yıl olarak gözlemlenmiştir. Buna göre Van şehri her iki durumda da Türkiye ortalamasının üzerinde bir güneş potansiyeline sahip olduğu görülmektedir.

#### **2.1.4. Güneş enerjisinden elektrik üretiminin avantajları**

Temiz bir enerji ve yakıtı tükenmeyen bir kaynak olan güneşten, elektrik enerjisi üretildiğinde ek olarak herhangi bir yakıtı ihtiyaç olmamaktadır. Fosil yakıt olmadığından karbon monoksit, toz, kükürt, gaz ve duman gibi kirletici durumları olmayan temiz ve çevreci bir yenilenebilir enerji kaynağıdır. Güneş enerjisi panellerinin ömrü yaklaşık 20-25 yıllık olduğundan ve kurulum maliyetlerinin 3-8 yıl içinde amorti ettiğinden dolayı oldukça avantajlı bir enerji kaynağı olarak söyleyebiliriz. Güneş enerji santrallerinin kurulumu tesisin büyüklüğüne göre değişmektedir. Genel olarak 1-9 ay arasında süre almaktadır. Bir diğer avantajı ise GES'lerin bakım maliyetleri ve bakımların yapılması aynı zamanda işletme maliyetleri de oldukça düşüktür. Kasaba, köy gibi yerlerde şebeke hatlarına uzak olan bölgeler için güneş enerjisinin kullanımı en büyük avantajlardan biridir. Bununla beraber; ulaşımın kısıtlı olduğu yerlerde, demiryolu, karayolu, denizyolu, havayolu, tarım makinelerinde ve uydularda bile güneş enerjisi kullanılarak enerji ihtiyacı giderilmiş olmaktadır.

#### **2.1.5. Güneş enerjisinden elektrik üretiminin dezavantajları**

Güneş Enerji sistemlerinin kurulumunda enerji büyüklüğünün panel sayısı ile doğru orantı vardır. Bu yüzden panel kurulumu için alanların geniş olması gerekiyor yani çok büyük arazilere ihtiyaç duyulmaktadır. Güneş enerji sistemlerinde kullanılan fotovoltaik güneş panellerinin fiyatının yüksek olmasıdır. Ancak daha önceden paneller ithal olduğu için fahiş fiyatlarda satılmaktaydı şimdi ise yerli hücre üretimleri sayesinde ülke olarak kendi panelimizi üretmeye başladığımızdan ötürü fiyatlarda hafif esneklik başlamıştır. En büyük dezavantajlarından biri akülerin çabuk bozulmasıdır diyebiliriz. GES'lerin normal şartlarda tarıma elverişsiz topraklarda kurulması istenilir ancak günümüzde kâr gütmek isteyenler maalesef tarıma elverişli topraklarda kurmaya başladılar, enerjide dışa bağımlılıkta indirgeme olurken tarımda ki dışa bağımlılık korkunç bir şekilde büyümektedir. Ayrıca günümüzde güneş paneli teknolojisiyle dünyaya gelen güneş ışınlarının en fazla %20'si elektriğe dönüştürülebilmektedir. Daha fazla verim alınabilmesi için iyileştirme çalışmaları yapılması gerekir.

### **2.1.6. Güneş enerjisinin van iline ekonomik faydaları**

Doğu Anadolu'nun güneş tarlası olan Van'da, güneş enerji sistemi yapımı için yeterli mevcut alanlar vardır. Van'da Güneş enerji sistemi kurulumu için uygun olan toplam 80 milyon m<sup>2</sup> alan vardır. Bu alanın mevcut olarak 40,8 milyon m<sup>2</sup> si kullanılmaktadır [5]. Bu demektir ki Van ilinin GES kapasitesi yönünden hemen hemen yarısı aktif olarak kullanılabilir ve ekonomiye ciddi anlamda katkıda sağlayabilir. DAKA'ya toplam bazda 147,77 MW kapasitesinde 178 lisansız başvuru yapılmış, van da bu miktar lisanslı kurulum için belirlenen kota 77 MW olduğundan yaklaşık iki katıdır. Bundan ötürü GES kurulumu için halkın bilinçlendiği gözlemlenmektedir. Bilinçlenen vatandaş hem kendi enerjisini üreterek maliyetini düşürüyor hem de ekonomiye katkı sağlayarak dışa bağımlılığı azaltmaktadır. Örneğin; Van Akdamar Adası enerji gereksinimini tamamen fotovoltaik paneller sayesinde karşılamaktadır. Akdamar Adasının yıllık enerji ihtiyacı 15.000 kWh iken yenilenebilir enerji ile 25.651 kWh üretmektedir. İhtiyacından fazlasını üretmektedir [14].

### **2.1.7. Güneş pilleri (Fotovoltaik sistemler)**

Kırsal kesimlerde, yerleşim yerlerinden uzak ve elektrik şebekesinin olmadığı yerlerde daha fazla kullanılan güneş pilleri, ekonomik yönden daha uygun olduğu için yaygın bir şekilde kullanılmaya başlandı. Ülkemizde hala kullanılan yangın gözetleme istasyonları, deniz fenerleri, telekom istasyonları ve otoyol aydınlatmasında kullanılan güneş pillerinin kurulu gücü 300 kW civarındadır [1]. Fotovoltaik güneş panelleri ile güneşli veya bulutlu her türlü hava şartlarında bile elektrik enerjisi üretilir. Ancak mekanik ve termik yoğunlaştırıcı sistemlerde açık ve güneşli hava gereklidir. Bundan ötürüdür ki mekanik ve termik dönüşümlü üreteçler sadece Akdeniz, Güneydoğu ve Doğu Bölgelerinde tercih edilmesi gerekir. Doğu Karadeniz hariç yurdun tüm bölgelerinde fotovoltaik sistemler uygun olup kullanılmaktadır [1].

## **3. MATERYAL VE YÖNTEM**

### **3.1. Materyal**

#### **3.1.1. Güneş pili sisteminin kurulması**

Güneş pilinin kurulmasında öncelikli olarak dış etkenlere bağlı olarak üç hususa dikkat edilmesi gerekir. Bunlardan ilki, yıllık bazda en verimsiz aya ait günlük güneş ışınım (Wh/m<sup>2</sup>) değerinin tespit edilmesi, ikincisi ise seçilen en kötü ayın sistem veriminin hesaplanması ve sonuncusu ise güneş enerjisi sisteminin kurulumunun yapılacağı tesisin günlük bazda ortalama yük değerinin (Wh) belirlenmesi gerekir. Bu değişkenleri dikkate alarak GPS kurulumu yapılır ve arıza gibi

olumsuz durumlar olmadığı sürece diğer aylarda da elektrik üretilecektir. Güneş Enerji Sistemini kurarken kullanılan ekipmanlar; Güneş paneli, şarj regülatörü, kablolar, akü ve evirici (inverter) kullanılır. Öncelikle GPS kurulurken ilk aşama, enerji ihtiyacını karşılayacak olan güneş panelini seçmektir. Güneş paneli seçilirken boyut, fiyat ve wattına göre değişmektedir. Bunun için kullanıcı ekonomik durumunu ve enerji ihtiyacını göz önüne getirerek seçmelidir. Güneş Paneli seçildikten sonra enerji durumu dikkate alınarak ihtiyacı olan panel sayısının hesaplanması yapılmalıdır. Daha sonra kullanıcı yine ekonomik durumuna göre akü seçer ve akü sayısını özelliklerine göre tespit eder. Daha sonra şarj regülatörünün kapasitesi bulunur. Şarj regülatörünün amacı ani elektrik boşalmasından ve aküyü aşırı şarjdan korumak için kullanılır. Yani güneş panellerinin ürettiği enerjiden maksimum verim alabilmek için maksimum güç sağlayıcılar da denilebilir. Ceviz işleme tesisinde kullanılan makinelerin birçoğu 220 veya 380 Volt olarak alternatif akımla çalışırlar. Güneş ışığından üretilen elektrik ise 12 Voltluk doğru akımdır. Bu yüzden güneş panel sistemi ile üretilen doğru akımın, alternatif akıma dönüştürülmesi için evirici (inverter) kullanılır. Akü ve evirici ortalama %80-%90 arası bir verimle çalışırlar. Aşağıdaki şekil 3.2’de GPS modelinin dış görünümü gösterilmiştir.

Şekil 3.4. GPS modelinin dış görünümü [15]

### 3.1.2. Sistem bileşenleri

Fotovoltaik sistemleri; akümülatör, invertör, akü şarj regülatörü, kablolar ve elektronik destek devreleri oluşturur. Gece panel verimi düştüğünden ve gün içerisinde güneşin yetersiz olduğu

zamanlarda sistemde genellikle akümülatör bulundurulur [16]. Fotovoltaik sistem gün içerisinde güneşten elde ettiği enerjiyi elektrik enerjisine çevirir ve ürettiğini akülerde stoklar. Daha sonra ihtiyaç halinde gerekli elektrik enerjisi akülerden alınır. Şarj regülatörü ise yükün çektiği ya da güneş pillerinden gelen akımı akımı keser. Ayrıca akülerin aşırı bir şekilde şarj olmasını veya deşarj durumunda akülerin hasar almamasını engeller. Güneş Panelinden elde edilen DC gerilim, AC geriliminin gerekli olduğu durumlarda sisteme evirici eklenerek sinüs dalgasına oluşturulur. Güneş paneli sistemlerine ek olarak çeşitli elektronik devrelerde eklenebilir. Mesela kullanıcı fotovoltaik sistemin maksimum güç noktasında çalışıp çalışmadığını görmek için güç noktası izleyici cihazı ekleyebilir. GPS'ler On-Grid olarak tasarlanırsa, tesisin elektrik gereksinimini panellerden karşılanırken üretilen fazla enerjisi ise şebekeye satılabilir veya panellerden yeterli enerji üretilmezse şebekeden enerji alınabilir. Yani şebekeye bağlı sistemler olarak tanımlanır. Tabii böyle bir sistem tasarlanırsa enerji depolanmasına ihtiyaç yoktur. Ceviz işleme tesisinde ise GPS Off-Grid olarak tasarlanması hedeflenmektedir. Tesisin günlük elektrik tüketimi gerek aylık elektrik faturasından kWh cinsinden hesaplanır gerekse tesisde kullanılan makinelerin tükettiği enerji miktarından hesaplanarak bulunur. Günlük enerji gereksinimi hesaplandıktan sonra fotovoltaik panellerin de saatlik üretim miktarı aynı şekilde hesaplanır. Tüketim miktarını karşılayacak panel sayısı ve gerekli araçların kullanımı temin edilir.

### 3.1.2.1. Fotovoltaik paneller

Şekil 3.5. Fotovoltaik paneller

Sistemin ana elemanı olan ve güneşten gelen ışınları elektrik enerjisine çeviren sistem ekipmanıdır. 70 yıl önce panelin verimi %4 iken gerekli iyileştirme çalışmaları sonrasında verimi günümüzde %15 seviyelerine çıkmıştır. Verimi hesaplanırken  $1 \text{ kW/m}^2$  enerji yaydığı bölgeye göre hesaplanmaktadır [17]. Ülkemizde ise bu değer  $1300 \text{ W/m}^2$  olduğundan verimi daha iyi olduğu görülmektedir. Güneş panellerinin optimum düzeyde bakım ve temizliği yapılırsa yani panel camlarının kirlenmemesine önem verilirse optimum güç verebilecektir. Tabii bunun yanında havanın çok sıcak ve soğuk olması bununla beraber güneş ışınlarının dik açıyla gelmemesi güneş panelinden elde edilen enerjinin verimini düşürecektir. Ülkemizin güneşlenme süresi yazın 11 saat, sonbaharda 7 saat, kışın 5 saat ve ilkbahar 7 saat olarak bilinmektedir. Bu yüzden güneş panellerinden elde edilen enerji mevsimlere göre de değişiklik gösterir.

Dört çeşit panel teknolojisi bulunmaktadır. Bunlar; Monokristal panel, Polikristal panel, İnce film panel ve Esnek panellerdir [17].

Şekil 3.6. Panel çeşitleri

Bizim kuracağımız Fotovoltaik Güneş Sisteminde ise Monokristal panel kullanılacaktır.

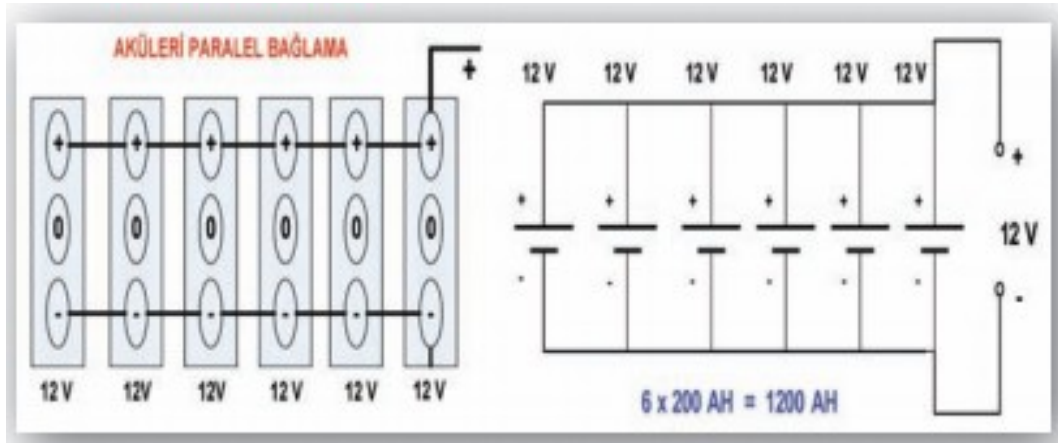

### 3.1.2.2. Akü grubu

Şekil 3.7. Akü grubu

Güneş panel sisteminde akülerin bulunma sebebi, panellerden gerçekleştirilen üretimin elektrik enerjisini depolarlar. Aküler üç tipte görülür. Bunlar; AGM (Absorbed Glass Mat Sealed Lead Acid), Kuru (Flooded Lead Acid) ve GEL (Gelled Electrolyte Sealed Lead Acid). Fotovoltaik sistemler için en çok tercih edilen Kuru tip akülerdir. Akülerin verimleri %90 civarındadır ayrıca akü ömrünü uzun tutmak için kapasite oranı yüzde 50'nin altına düştüğünde şarj edilmelidir. Akü kapasitesi amper-saat olarak ifade edilmektedir. [17]. 12 Voltluk 1200 Amperlik akü  $12V \cdot 1200 \text{ amper-saat} = 14.400 \text{ watt}$  elektrik enerjisi depolar. Depolanan enerjinin yaklaşık %70'den fazlasını kullanmak akü ömrüne zarar vermektedir. Bu yüzden akülerden daha fazla enerji almak için aküler birbirine paralel bağlanır ve akü ömrüde böylece uzun olur. Altı adet 12

voltluk 200 amperlik aküyü paralel olarak birbirine bağlamak mümkündür ancak aküleri birbirine paralel bağlarken dikkat etmemiz gerekir. Hücrelerin Artı (+) kutupları birbirine, eksi (-) kutupları ise birbirine bağlanır. Yani aynı cins plakaların harici bir şekilde birbirine bağlanması gerekir. Altı aküyü birbirine paralel bağladıktan sonra toplam kapasitesi, hücre kapasitesinin hücre adedi ile çarpımı kadar olacaktır. Aşağıdaki şekil 3.6' da görüldüğü gibi altı hücrenin paralel bağlanarak nasıl oluşturulduğu görülmektedir [18].

Şekil 3.8. Akülerin paralel bağlanması

### 3.1.2.3. Akü şarj regülâtörü

Şekil 3.9. Akü şarj regülâtörü

Akülerin deşarj olmasını engellemek için kullanılır. Bununla beraber panelden gelen akımı düzenleyerek aküye iletilmesini sağlayan bileşendir. Akü şarj regülatörü iki çeşittir.

Bunlar; MPPT ve PWM diye adlandırılır. Kısaca özetlenecekse; fotovoltaiik güneş enerjisi sistemleri uzun vadeli bir yatırımdır. Bu yüzden PWM kullanmak yanlış bir durum değildir ancak MPPT regülatörü kullanmak daha verimli olmaktadır diyebiliriz.

Regülatör seçiminde hassas olunması gerek konu, regülatörün gerekli olan maksimum akıma dayanaklılığı ve bataryaların voltajları ile uygun olması gerekir. Sistemlere göre 10A/20A/40A/60A veya 12V/24V/48V gibi regülatör tercih edilmesi gerekir [19]. Regülatörün özelliklerinden biride doğru akımla çalışan cihazlara DC voltaj çıkışı olduğundan direk gerilim verebilirler. Bir diğer özelliği ise regülatörlerin göstergeli olanlarıda mevcuttur. Bu sayede akü ve panel voltajını, akımını ve akülerin şarj durumlarını gösterir. Son olarak GES uygun bir şarj regülatörü seçilirken maksimum akımı mutlaka göz önünde bulundurup tercih edilmesi gerekir. Aşağıdaki çizelgede kullanılan sisteme uygun şarj regülatörü çeşitleri verilmiştir [19].

**Çizelge 3.4.** Şarj regülatörünün panel gücü ve nominal voltaj değerine göre seçimi

Nominal Gerilim Değeri	Panel Gücü	Maksimum Akım
12 V	153 W	9 Amper
	374 W	22 Amper
	544 W	32 Amper
	748 W	44 Amper
	1020 W	60 Amper
24 V	216 W	9 Amper
	748 W	22 Amper
48 V	340 W	5 Amper
	1088 W	16 Amper

#### 3.1.2.4. Evirici (inverter)

**Şekil 3.10.** İnverter (Dönüştürücü)

İnverter, kısacası DC enerjii AC enerjiiye dönüştüren ekipmandır. Aynı zamanda evirici de denilebilir. İnverterlerin gücü seçilirken kullanacağımız cihaz veya makinelerin toplam gücüne göre seçilmelidir. İnverterleri iki grupta inceleyebiliriz.

Birincisi on-grid dediğimiz açık sistemlerdir. Örneğin, enerjinin olmadığı durumlarda depolanmak üzere akü olarak kullanılır. Yani elektriğin olmadığı zaman şebekeden elektrik alabilir. İkincisi ise off-grid dediğimiz kapalı sistemlerdir. Şebekeye bağlı olmadan çalışırlar. Şebeke hattına sahip olmayan köy, dağ, otoyol ve tarla gibi yerlerde güneş veya rüzgârdan faydalanarak elde edilen enerjiiyi dönüştürmek için kullanılır.

### **3.1.2.5. Kablo seçimi**

Doğru akım sistemlerinin hesaplanmasında kullanılan Fotovoltaik sistemlerde kablo seçimi önemli bir husustur. Kablo seçimi önemli görülmediği vakit kablodan ötürü oluşabilecek zararların maliyeti çok yüksek olmaktadır. Örneğin; bir sistemi ele alırsak, sistemin bağlantı parçalarının değeri yaklaşık %5 dir fakat bağlantı ekipmanlarında kalitesiz kablo tercih edildiğinde, sistemde oluşabilecek yangın tehlikesi maddi zarara uğratabilir ve daha önemlisi insan hayatına zararda verebilir. Kablo kesiti hesaplamak için kullanılması gereken formül [20]:

$$A[mm^2] = 0.0175 * 2 * L * P / (fk * U^2)$$

$$A = \text{İletken Kesiti}$$

$$fk [\%] = \text{İletken Kaybı}$$

$$0,0175 = \text{Bakır için spesifik direnç}$$

$$[\text{Ohm} \times mm^2 / m]$$

$$L[m] = \text{Kablo uzunluğu}$$

$$P[W] = \text{Kablo tarafından alınması gereken güç}$$

$$U[V] = \text{Sistem Voltajı}$$

Bu formül sayesinde kablo kesiti rahatlıkla bulunabilir. Kolaylık olsun diye formülde kullanılan veriler hesaplanarak bilgisayar ortamında aşağıda görüldüğü gibi bir tablo oluşturulmuştur. Çizelge incelendiğinde, çeşitli amper ve kablo uzunlukları için stardart olan kablo kesitleri verilmiştir [20].

**Çizelge 3.5.** Solar panel sistemlerinde kablo seçimi

Kablo Uzunluğu (m)	0-1	1-2	2-3	3-4	4-5	5-6	6-7	7-9
<b>Amper (A)</b>	<b>Kablo Kesiti (mm<sup>2</sup>)</b>							
<b>0-20</b>	2,5	6	6	6	10	10	10	10
<b>21-36</b>	6	6	10	10	20	20	20	35
<b>37-50</b>	6	6	10	10	20	20	20	35
<b>51-65</b>	10	10	20	35	35	35	35	35
<b>66-85</b>	20	20	35	35	35	35	35	35
<b>86-105</b>	20	20	35	35	35	35	35	35
<b>106-125</b>	35	35	35	35	35	35	35	35
<b>126-150</b>	35	35	35	35	35	35	35	35
<b>151-200</b>	35	35	50	50	50	50	50	50

### 3.2. Yöntem

**Şekil 3.11.** Ceviz işleme tesisi görünümü

Van'da kurulacak ceviz işleme tesisinin enerji gereksinimi, fotovoltaik güneş enerji sistemiyle tesisin tüm enerji gereksinimi karşılamak için enerji ihtiyacının hesaplanması yapıldı. Tesis içerisinde çalışacak olan makineler günlük 5 saat çalışarak tükettiği enerji ihtiyacına göre analizi yapıldı.

**Çizelge 3.6.** Ceviz işleme tesisinin günlük enerji tüketimi

Cihaz	Enerji Tüketimi (kWh)	Günlük Enerji Tüketimi (kW/9h)
Ceviz Boşaltım Konveyörü	2,2	11
Yıkama Giriş Konveyörü	1,1	5,5
Magnum Yatay Yıkama	2,2	11
Gözle Ayırma Konveyörü	0,75	3,75
Kurutmaya Giriş Konveyörü	1,1	5,5
Kurutma Dağıtım Konveyörü	2,2	11
Kurutma Ön Boşaltma Konveyörü	2,2	11
Bekletme Kasası Açılı Konveyör	1,1	5,5
Çürük Ayırma Makinesi	3	15
Ceviz Kurutma Makinesi	4,08	20,4
Elektrikli Fan (10 adet)	1,8	9
<b>TOPLAM</b>	<b>≈ 22 kWh</b>	<b>≈ 110 kWh</b>

Çizelge incelendiğinde; tesisde yer alan makinelerin enerji tüketim değerleri kilowatt/saat olarak hesaplandı. Günlük enerji tüketimi toplam bazda ortalama 110 kWh olarak hesaplandı.

### 3.2.1. Ceviz işleme tesisinin kurulacak alanı ve konumu

**Harita 3.3.** Tesisin konumu

Ceviz işleme tesisi Van ilinin organize sanayi bölgesinde kurulacaktır. Tesisin toplam alanı 900 m<sup>2</sup> dir. Doğu Anadolu'nun güneş şehri olan Van, güneşlenme süresi olarak da Türkiye ortalamasının oldukça üzerindedir. Güneşlenme süresi doğal olarak yaz aylarında daha fazla görülmektedir.

**Çizelge 3.7. Van ili güneşlenme süresi [13]**

Aylar	Van Potansiyeli	
	Günlük Global radyasyon (kW/m <sup>2</sup> -gün)	Günlük Güneşlenme Süresi (saat/gün)
Ocak	1,91	5,27
Şubat	2,84	6,40
Mart	4,14	7,39
Nisan	5,13	8,50
Mayıs	6,63	10,11
Haziran	6,99	11,55
Temmuz	7,16	11,65
Ağustos	6,05	10,97
Eylül	5,25	10,31
Ekim	3,64	7,65
Kasım	2,31	6,16
Aralık	1,73	4,93
<b>Toplam</b>	<b>1.635,81 kW/m<sup>2</sup> -yıl</b>	<b>3.068,74 saat/yıl</b>

**Çizelge 3.8. FVGS temel verim parametreleri**

Özellik	Veri	Birim
Panel Sayısı	80	Adet
Birim Panel Gücü	400	W
İnvertör verimi	97	%
Kablo kayıpları	6	%
Diğer kayıplar (sıcaklık, gölgeleme, toz vb.)	19	%
Toplam Sistem Verimi	72	%
Toplam Panel Gücü	23	kW
Gerekli aktif panel alanı	300	m <sup>2</sup>

Fotovoltaik güneş sisteminin verim parametreleri incelendiğinde; Kurulan fotovoltaik sistemde toplamda 80 adet Monokristal panel kullanılacaktır. Her bir panelin gücü 400 Watt birimindedir. Fotovoltaik güneş sisteminde invertör, kablo, sıcaklık, gölgeleme, toz vb. gibi kayıpları gözönünde bulundurursak sistemin toplam verimi %72 dir. Bu yüzden 400 W'lık 80 adet panelin gücü 23 kWh olarak bulunur. Tesisin enerji ihtiyacı saatlik 22 kWh olduğu için fotovoltaik sistemin maaliyetlerinde gözönünde bulundurularak tesisin 300 m<sup>2</sup> alanından faydalanılıp fotovoltaik güneş enerji sistemi tesis çatısına kurulacaktır.

#### 4. BULGULAR VE TARTIŞMA

Kurulum yeri için terasa yerleştirilmiş panellerden ortalama elektrik üretimi

**Çizelge 4.9.** Tesisin günlük ortalama elektrik üretimi

Ay	Günlük güneşlenme süresi (saat/gün)	Sistemin günlük ortalama elektrik üretimi (kWh/23kW/gün)
1	5,27	121
2	6,40	147
3	7,39	170
4	8,50	196
5	10,11	233
6	11,55	266
7	11,65	268
8	10,97	252
9	10,31	237
10	7,65	176
11	6,16	142
12	4,93	113

Çizelgeye göre günlük elektrik üretimi değerleri farklılık göstermekle birlikte, en fazla 268 kWh temmuz ayında olması öngörülürken en az ise 113 kWh olarak aralık ayında görülmektedir.

**Çizelge 4.10.** Kurulan sistemin günlük elektrik enerjisi üretimleri ile tesisin enerji ihtiyacının uygunlukları

Aylar	Günlük elektrik üretimi (kWh)	Tesisin günlük ortalama enerji ihtiyacı (kWh)	Yeterlilik Durumu
Ocak	121	110	Yeterli
Şubat	147	110	Yeterli
Mart	170	110	Yeterli
Nisan	196	110	Yeterli
Mayıs	233	110	Yeterli
Haziran	266	110	Yeterli
Temmuz	268	110	Yeterli
Ağustos	252	110	Yeterli
Eylül	237	110	Yeterli
Ekim	176	110	Yeterli

Kurulan sistemin günlük elektrik enerjisi üretimleri ay bazında değerlendirildiğinde tesisin enerji ihtiyacını tüm aylarda karşılandığı görülmektedir. Ancak tesisdeki enerji ihtiyacı günlük 5 saat üzerinden değerlendirildi.

## 5. SONUÇ VE ÖNERİLER

Van ilinin Türkiye'nin fotovoltaik güneş enerjisi bakımından yüksek bir potansiyele sahip olduğu ve şehir güneş tarlası özelliği taşımaktadır. Van ilinin bu potansiyeline dikkat çekmek için çeşitli çalışmalar yapılmaktadır. Ancak yapılan çalışmalara rağmen Van, güneş enerjisi

potansiyeli olarak yüksek olmasına rağmen maalesef yeterli sayıda fotovoltaik güneş enerjisi sistemi bulunmamaktadır. Türkiye’de Van’ın stratejik konumuyla birlikte güneş potansiyelinide göz önünde bulundurursak özel bir konumda olduğu görülmektedir.

Van ilinin global radyasyon değerleri ve güneşlenme sürelerinin Türkiye ortalamasından daha yüksek olduğundan ve tarımsal enerji gereksiniminin ihtiyaçlarından ötürü FVGS’nin tarımda etkin bir şekilde kullanımı mümkün olacaktır. Fotovoltaik güneş sistemi kurulurken, bu sistemden elde edilecek elektrik enerjisinin ihtiyacının önceden bilinmesi önemli bir husustur. Bu hususdan ötürü FVGS’nin kurulacak alanı, güneşlenme süresi, tesisin ortalama elektrik ihtiyacı ve bu ihtiyacın karşılanması için yeterli panel sayısı, panel boyutları ve panel malzemesi belirlenmelidir.

Bu çalışmada, Van ilinde kurulacak olan ceviz işleme tesisinin enerji gereksiniminin, Fotovoltaik güneş sistemiyle giderilmesi için sistem tasarımı yapılmıştır. Amacımız; tarımsal enerji ihtiyaçlarının giderilmesinde, Yenilenebilir enerji kaynaklarına yönelerek hem şehir ekonomisine hem de ülke bazında enerji açığımızı bir nebze de olsa düşürmektir. Ülkemiz güneş enerjisi bakımından Dünya’nın en prestijli ve en zengin bölgeleri arasında yer almasına rağmen FVGS yatırımları oldukça az olarak gözlemlenmektedir. Bu nedenle çalışmamız bölge halkında örnek teşkil edip, mevcut güneş enerjisi potansiyelinide kullanarak yaygınlaştırıp çatı tipi bir FVGS sistem tasarımının nasıl yapılacağı gösterilmek istenmiştir. Böylece fotovoltaik güneş enerjisi sistemiyle ilgilenen kitlelere de faydalı ve örnek bir çalışma olarak hazırlanmıştır.

Sonuç olarak ceviz işleme tesisinin günlük enerji ihtiyacı 110 kWh olarak belirlenmiştir. Tesisin çatı katına kurulan şebekeye bağlı olmayan (Off-Grid) Fotovoltaik güneş sistemi ile sistemin ay bazında günlük enerji üretimi belirlenmiştir. Belirlenen çıkarımlar sonucunda tek vardiya sistemiyle günlük 5 saat çalışan makinelerin toplam enerji ihtiyacı karşılanmıştır.

Tesiste siparislerin yetişmemesi ve yoğunluk gibi durumlardan ötürü ek mesai veya çift vardiya gibi sistemlere geçilirse enerji gereksinimi artar ve üretilen enerji ihtiyaca karşılık vermeyebilir. Bu sebeple önerim, panellerde soğutma sistemi yapılarak panel verimini daha fazla arttırmaya çalışmaktır. Çünkü Panel verimini etkileyen parametreler incelendiğinde, Tablo’ya göre en fazla gölgelenme (%7) ve Sıcaklık (%4,6) parametreleri verimi etkilemektedir. Aşırı ısınma panel verimini önemli ölçüde azaltmaktadır.

Panellerde soğutma sistemi yapılarak verimlilik arttırılabilir.

**Çizelge 4.11. PV verimini etkileyen parametreler**

Parametre	Açıklama	Etki Oranı	Referans
Gölgeleme	Sisteme güç kaynağı yerine yük bağlanmış gibi bir etki oluşturacağından güç tüketimine sebep olmakta ve verim kaybına yol açmaktadır	%7	Rodrigues vd. (2011) Sathyanarayana vd. (2015)
Sıcaklık	Aşırı ısınma panel verimini önemli ölçüde azaltmaktadır	%4,60	Wardowski vd. (1996)
Yansım	Bir foton n tipi ve p tipi malzeme üzerine düştüğünde yasak bant aralığından daha büyük enerjiye sahip olan fotonlar eşit sayıda elektron ve boşluk çifti oluştururlar. Güneşten gelen ışınımın %100'ü kullanılamaz ve bir kısmı geri yansır	%2,50	Navruz (2013)
Tozlanma	Oluşan toz panel üzerine gelen ışınımın azalmasına yol açarak geçirgenliği azaltmakta ve kısa devre akımını etkileyerek verimi azaltmaktadır	%2	Boppana (2015)
Işınım	Enerjinin güneşten tanecik biçiminde yayılmasıdır ve gelen ışınımın %100'ü kullanılamaz, bir kısmı geri yansır	%1,50	Navruz (2013)
Spektrum	Fotovoltaik olayda güneş ışığını soğuracak malzeme yasak enerji aralığı güneş spektrumu ile uyumlu ve elektrik yüklerinin birbirinden ayrılabilmesine izin verebilecek özellikte bir yarı iletken olmalıdır	%1	Grunov vd. (2009)
DC kablo kaybı	Sistemde kullanılan kabloların iç direncinden kaynaklanan kayıplardan kaynaklanır	%5	Deniz (2013)
İnverter	İnverterdeki yarı iletken, manyetik malzeme ve kapasitörlerin iletim ve anahtarlama kayıplarına bağlıdır	%3	Giesler (2010)
AC kablo kaybı	Sistemde kullanılan kabloların iç direncinden kaynaklanan kayıplardır	%1	Deniz (2013)
Uyumsuzluk	Şebekeye bağlı bir sistemde uygun gerilim seviyesine ulaşmak için çok sayıda hücre kullanılır. Bu durum çok sayıda PV hücresinin birbirine seri bağlı olarak aynı DC akımda çalışmasına yol açar	%0,70	Sathyanarayana vd. (2015)

Çizelge incelendiğinde; Fotovoltaik Sistemlerde panel verimliliğini ciddi anlamda etkileyen önemli etkenlerden biri sıcaklık unsurudur. Panelde aşırı ısınma, veriminin olumsuz etkilenmesine sebep olmaktadır. Hücre sıcaklığındaki her 10C artışla üretilen gerilim 0,5 V azalmaktadır [21].

**ÖZET**

Beton bir çok yapı malzemesine göre daha kolay şekil alabilmesi, daha ekonomik olması ve bir çok yapı malzemesine göre daha dayanıklı bir malzeme olması gibi özellikleri sebebiyle günümüzde yapı endüstrisinde sıkça kullanılmaktadır. Betonun kullanım alanına göre çeşitlendirilmektedir. Beton içesine eklenen agregaya boyutu ve çeşitli kimyasallar betonun fiziksel ve kimyasal özelliklerine etki etmektedir. Böylece betonun amacına uygun olarak hazırlanması ve kullanılabilmesi mümkün olmaktadır. Bu çalışmada farklı dane boyutlu agregalar (2 ,4 ve 8 mm) ile 2% boraks katkılanarak hazırlanmış betonların radyasyon geçirgenlik özellikleri 137Cs kaynağı vasıtasıyla 662 keV enerjisinde NaI (Tl) dedektörü vasıtası ile gerçekleştirilmiştir. Hazırlanan bu betonlara ait ineer soğurma katsayısı değerleri ile yarı geçirgenlik değeri, onda bir geçirgenlik değeri ve ortalama serbest yol değerleri deneysel sonuçlar kullanılarak hesaplanmıştır. Elde edilen sonuçlara göre betondaki agregaya dane boyutunun artışı ve boraks katkısının betonda radyasyon soğurma etkinliğinin arttığı gözlemlenmiştir.

**Anahtar kelimeler:** Beton, dane boyutu, boraks, radyasyon soğurma

**COMPARISON OF THE EFFECTS OF AGGREGATE PARTICLE SIZE AND BORAX ADDITIVE ON THE RADIATION ABSORPTION PROPERTIES OF CONCRETE**

**ABSTRACT**

Concrete is easier to shape than many building materials. It is more economical and can be used in many building materials. It is frequently used in the building industry today due to its properties such as being a more durable material than it is diversified according to the usage area of concrete. Aggregate size and various chemicals added to the concrete affect the physical and chemical properties of the concrete. Thus, it is possible to prepare and use the concrete in accordance with its purpose. In this study, the radiation permeability properties of concretes prepared by adding 2% borax with aggregates of different grain sizes (2, 4 and 8 mm) were determined by the NaI (Tl) detector at 662 keV energy by means of a <sup>137</sup>Cs source. The values of the Linear Attenuation Coefficient, Half Value Layer, Tenth Value Layer and Mean Free Path values of these prepared concretes were calculated using the experimental results. According to the results obtained, it was observed that the increase in the aggregate particle size in the concrete and the radiation absorption efficiency of the borax additive in the concrete increased.

**Keywords:** concrete, grain size, borax, radiation absorption

## **1. INTRODUCTION**

Concrete has been used effectively in the construction industry in the last century. In addition to the traditionally used concrete, specially prepared concretes are produced to meet the desired properties and are used in the construction industry. Special concretes vary in terms of materials used, mixing ratios, properties and areas of use (Aydeniz et al., 2012)(KILINÇARSLAN, 2011). There are many types of concrete developed for special purposes for different usage areas. Special purpose concretes are usually obtained by changing the used aggregate and chemical additives or by changing their usage rates (Gan, 1997).

Inorganic materials with different mineral structures such as sand, gravel, crushed stone, which are used with cement and water in the production of concrete, mortar and similar, are called aggregates (Gan, 1997).

Aggregates constitute approximately 3/4 of the prepared cementitious system volume, and in this respect, aggregates are inexpensive materials in the construction of cementitious systems. They reduce the costs of the cement mixture and Aggregates contribute significantly to the technical characteristics of the cementitious system (Gan, 1997).

Aggregates prevent shrinkage in the cement paste. thus, cracks that will occur in concrete during concrete production can be prevented to a great extent. Since aggregates are hard materials, they have a significant effect on the strength of the concrete mixture. It is very important that the aggregate component exhibits a suitable particle size distribution, the air gap in the aggregate will be less in concrete prepared with a well-sized aggregate. therefore, the selection of suitable aggregates will increase the density of the concrete (Aydeniz et al., 2012).

Due to its hardening feature, the substance used in cement making in the construction industry is also used in the waste industry and energy sector. Borax welding powder is widely used in the construction industry (Helmuth, 1987). Powdered borax is white, consists of soft colorless crystals and is readily soluble in water. Some different closely related minerals or chemical compounds in crystalline water content are called borax, but the word usually refers to decahydrate (Krane and Lynch, 1989).

In this study, the effect of different aggregate sizes (2, 4 and 8 mm) in 2% borax added cement on the radiation absorption properties of concrete was investigated. For this purpose, measurements were carried out with the experimental setup prepared with  $^{137}\text{Cs}$  radiation source and NaI(Tl) detector (Kavun et al., 2022). By obtained experimental results, Linear Attenuation Coefficient values and Half Value Layer, Tenth Value Layer and Mean Free Path values were calculated. According to the obtained results, it was observed that the radiation

shielding efficiency of the concrete increased with the increase in the aggregate particle size in the concrete.

## 2. MATERIAL and METHOD

Beer lambert's law is used to determine the amount of radiation interacting with the material as given in Eq. 1 (Eskalen et al., 2020):

$$\mu = \ln\left(\frac{I_0}{I}\right) / (-x) \text{ (cm}^{-1}\text{)} \quad (1)$$

The value that expresses the material thickness that halves the amount of radiation passing through the material is Half Value Layer (HVL) (Eq.2), and the value that expresses the thickness that decreases to one-tenth is Tenth Value Layer (TVL) (Eq.3). MFP specifies the path taken by the radiation in the material (Kavun et al., 2019).

$$\text{Half Value Layer (HVL)} = \frac{\ln 2}{\mu} \text{ (cm)} \quad (2)$$

$$\text{Tenth Value Layer (TVL)} = \frac{\ln 10}{\mu} \text{ (cm)} \quad (3)$$

<sup>137</sup>Cs source and NaI(Tl) (ORTEC® 905-4) detector were used in the experiments. This experimental setup is given in Figure 1(Eskalen et al., 2020).

**Figure 1.** Experimental setup (H. Eskalen et al., 2020)(H. Eskalen et al., 2020).

## 3. RESULT and DISCUSSION

In this study, radiation absorption properties of 2, 4 and 8 mm aggregates in 2% borax added concrete were investigated. According to the experimentally obtained values as seen in Figure 2, the linear attenuation coefficient (LAC) value was 0.05 cm<sup>-1</sup> for 2 mm aggregates and 0.15 cm<sup>-1</sup> for 8 mm aggregates.

**Figure 2.** Linear attenuation Coefficient (LAC) values

**Figure 3.** HVL, TVL and MFP values

In this study, HVL, TVL and MFP values were calculated using LAC. Accordingly, while the HVL value is 12.82 cm at 2 mm aggregate size, the TVL value is 42.58 cm and the MFP value is 18.49 cm. In 8 mm aggregate, these values decreased and were measured as 4.58, 15.22 and 6.61 cm, respectively.

#### **4. CONCLUSION**

In this study, the effects of borax additive and aggregate dimensions on radiation absorption were investigated. Accordingly, when the borax additive was kept at 2%, it was determined that the radiation absorption parameters of the concretes prepared with 2 mm, 4 mm and 8 mm aggregates were positively affected by the increase in aggregate size.

**ÖZET**

Beton agrega, çimento ve su gibi maddelerin karıştırılmasıyla oluşturulur. Bu yapı malzemelerinin oranlarının değişimi de betonun fiziksel ve kimyasal oluşum sürecini etkilemektedir. Özellikle agrega boyutunun değişimi betonun cinsi ve kullanım özellikleri üzerindeki etkileri büyüktür. Ayrıca betondaki agrega dane boyutunun, betonun radyasyon ile etkileşimine de etki etmektedir. Bu çalışmada farklı dane boyutları ile hazırlanmış betonların radyasyon geçirgenlik özellikleri <sup>137</sup>Cs kaynağı vasıtasıyla 662 keV enerjisinde NaI(Tl) dedektörü vasıtası ile gerçekleştirilmiştir. Deneysel olarak elde edilen lineer soğurma katsayısı değerleri ile yarı geçirgenlik değeri, onda bir geçirgenlik değeri ve ortalama serbest yol değerleri hesaplanmıştır. Elde edilen sonuçlara göre betondaki agrega dane boyutunun artışı ile betonun radyasyon soğurma etkinliğinin arttığı gözlemlenmiştir.

**Anahtar kelimeler:** Beton, dane boyutu, radyasyon soğurma

**INVESTIGATION OF THE EFFECT OF AGGREGATE GRAIN SIZE IN CONCRETE  
ON RADIATION ABSORPTION**

**ABSTRACT**

Concrete is formed by mixing materials such as aggregate, cement and water. The change in the proportions of these building materials also affects the physical and chemical formation process of concrete. In particular, the change in aggregate size has great effects on the type of concrete and its usage characteristics. In addition, the aggregate particle size in the concrete also affects the interaction of the concrete with the radiation. In this study, the radiation permeability properties of concretes prepared with different grain sizes were determined by the NaI(Tl) detector at an energy of 662 keV by means of a  $^{137}\text{Cs}$  point radiation source. Experimentally obtained Linear Attenuation Coefficient values and Half Value Layer, Tenth Value Layer and Mean Free Path values were calculated. According to the obtained results, it was observed that the radiation shielding efficiency of the concrete increased with the increase in the aggregate particle size in the concrete.

**Keywords:** concrete, grain size, radiation absorption

## **5. INTRODUCTION**

Concrete is one of the basic building materials in contemporary societies. Various types of concrete are used in many areas such as roads, buildings, bridges, dams and nuclear power plants (Aydeniz et al., 2012). The basis of the active use of concrete is that it can be easily shaped and durable compared to other building materials (Aydeniz et al., 2012). They are also more economical than other building materials. In addition, concrete can be produced with less energy consumption compared to other building materials. Due to such properties, concrete is widely used in the field of construction (Gan, 1997)(ÖZKAN, 2004).

Concrete, which is a composite material containing cement, fine aggregate, coarse aggregate, water and, if necessary, various chemical and mineral wastes, must be covered with cement paste and all coarse aggregate particles with mortar. Here, concrete gains strength as a result of the reaction of cement, which is the binding material, with water (KILINÇARSLAN, 2011).

There are different building materials in concrete. aggregates have an important place among them. Aggregate is a heap of natural, artificial or both dense mineral material with unbroken and/or broken grains of various sizes, usually up to 100 mm (Aydeniz et al., 2012).

Natural Aggregate is the aggregate that exists in nature by natural means and is broken after being taken from nature. Artificial Aggregate; It is the crushed or unbroken aggregate of industrial products such as blast furnace slag stone, smelting slag or slag sand. Natural Mixed Aggregate; It is a mixed aggregate obtained directly from the aggregate quarry, crusher or industry. Aggregates that have been sieved to separate the particles larger than the maximum particle size are also called natural mixed aggregates (Geçten and Gül, 2019). Ready Mixed Aggregate, on the other hand, is interconnected in place during concrete production in a way to ensure a certain particle distribution of fine and coarse aggregates or these aggregates divided into several grain classes (Aydeniz et al., 2012). Aggregate formed by mixing. Most of the sand and gravel used in mortars and concretes are those extracted from sand beds left by water currents such as rivers, streams, streams, and a variety called river sand or ice masses dragged and piled up (Gurler and Akar Tarim, 2012).

There are some important properties sought in aggregates. These; hard, durable and void-free, do not contain weak grains (sea shell, wood, coal, etc.), resistant to pressure and abrasion, do not contain substances that can damage dust, soil and concrete, do not contain flat and long grains, do not react harmfully with cement (Gan, 1997).

The change in aggregate size has great effects on the type of concrete and its usage characteristics. In addition, the aggregate particle size in the concrete also affects the interaction

of the concrete with the radiation. In this study, the radiation permeability properties of concretes prepared with different grain sizes (2, 4 and 8 mm) were determined by the NaI(Tl) detector at an energy of 662 keV by means of a <sup>137</sup>Cs point radiation source. Experimentally obtained Linear Attenuation Coefficient values and Half Value Layer, Tenth Value Layer and Mean Free Path values were calculated. According to the obtained results, it was observed that the radiation shielding efficiency of the concrete increased with the increase in the aggregate particle size in the concrete.

## 6. MATERIAL and METHOD

The Lambert-Beer's law is used to linear attenuation coefficient (LAC) given in Eq. 1 to obtain radiation absorption quantity (H. Eskalen et al., 2020).

$$\mu = \ln\left(\frac{I_0}{I}\right) / (-x) \text{ (cm}^{-1}\text{)} \quad (1)$$

Half Value Layer (HVL) (Eq.2) is the half-pass value of the radiation coming into the material. The value that expresses the transmittance of one tenth is Tenth Value Layer (TVL). The value that expresses the path taken by the radiation in the concrete is the MFP (Kavun et al., 2022).

$$\text{Half Value Layer (HVL)} = \frac{\ln 2}{\mu} \text{ (cm)} \quad (2)$$

$$\text{Tenth Value Layer (TVL)} = \frac{\ln 10}{\mu} \text{ (cm)} \quad (3)$$

<sup>137</sup>Cs was used as the gamma source and the NaI(Tl) (ORTEC® 905-4) detector have been used for measurements. This experimental setup have been given in Figure 1.

**Figure 1.** Experimental Schema of radiation shielding measurements (H. Eskalen et al., 2020; Kavun et al., 2022)

## 7. RESULT and DISCUSSION

In this study, the effects of different (2,4 and 8 mm) grain size aggregates on radiation absorption were investigated. Accordingly, as seen in Figure 2, the linear attenuation coefficient value (LAC) obtained at 2 mm aggregate size is  $0.1162 \text{ cm}^{-1}$ ,  $0.7118 \text{ cm}^{-1}$  for 4 mm aggregate size and  $1.5443 \text{ cm}^{-1}$  for 8 mm aggregate size.

**Figure 2.** Linear attenuation Coefficient (LAC) values of concrete

**Figure 3.** Half Value Layer, Tenth Value Layer and Mean Free Path Values of concrete

The half value layer value, which expresses the material thickness required for half of the incoming radiation amount to pass, starts from 5.967 cm and ends at 0.449 cm. The Tenth Value Layer value, which expresses the material thickness required to reduce the amount of incoming radiation by one tenth, starts from 19.822 cm and end at 1.491. The mean free path, which is the value that expresses the average free path taken by the radiation in the material, starts from 8.609 cm and decreases to 0.648 cm.

## **8. CONCLUSION**

In this study, radiation absorption amounts of concretes prepared with cements containing aggregates of 2, 4 and 8 mm were measured. According to the LAC values obtained from here, the absorption increases as the grain size increases. accordingly, HVL, TVL and MFP values also decrease. According to the results obtained from here, the effect of particle size on radiation absorption is positive.

**ÖZET**

Kaolin kili, yüksek performanslı betonlar üretmek için potansiyel bir alümina silikat kaynağı olan bir malzemedir. Kaolin kili çimentoya katkı malzemesi olarak kullanılmasıyla klinker üretimi azaltılarak CO<sub>2</sub> emisyonlarıyla ilgili çevresel sorun önlenmesinde yardımcı olabileceği öngörülmektedir. Ayrıca, kaolin kilinin yerel kaynak olması nedeniyle kolay temin edilebilmesi yanı sıra ekonomik olarak daha uygun bir malzeme olarak dikkat çekmektedir. Bu çalışma, %10-15-20-25-30 oranlarında kaolin ikame edilen çimento hamuru numunelerinde yayılma tablası, kılcal su emme ve basınç deneyleri yapılmıştır. Daha sonra numuneler 800 C’de 2 saat boyunca yüksek sıcaklığa maruz bırakılarak basınç dayanımlarındaki değişimler incelenmiştir. Elde edilen sonuçlara göre kaolin ikamelili çimento hamurunun yüksek sıcaklığa maruz kalması sonucunda dayanımda azalma oranına anlamlı bir katkı sağlamadığı görülmüştür. Kaolin kil ikamesi kılcal su emme oranını referans numunesine göre artırdığı ve yayılma çapını azalttığı tespit edilmiştir.

**Anahtar kelimeler:** Çimento hamuru, kaolin, basınç dayanımı, yüksek sıcaklık

**INVESTIGATION OF HIGH TEMPERATURE PERFORMANCE OF KAOLIN CLAY  
SUBSTITUTION TO CEMENT PASTE**

**ABSTRACT**

Kaolin clay is a potential source of alumina silicate for producing high-performance concretes. It is predicted that the use of kaolin clay as an additive to cement can help prevent environmental problems related to CO<sub>2</sub> emissions by reducing clinker production. In addition, due to the fact that kaolin clay is a local source, it attracts attention as a more economically suitable material as well as being easily available. In this study, flow-table, capillary water absorption and compressive tests were carried out on cement paste samples with 10-15-20-25-30% kaolin replacement. Then, the samples were exposed to high temperature at 800 °C for 2 hours and the changes in their compressive strength were examined. According to the results obtained, it was observed that the kaolin substituted cement paste did not contribute significantly to the decrease in strength as a result of exposure to high temperatures. It was determined that the kaolin clay substitution increased the capillary water absorption rate compared to the reference sample and decreased the spreading diameter.

**Keywords:** Cement paste, kaolin clay, compressive strength, high temperature

## **1.GİRİŞ**

Çimento esaslı kompozitlerin kullanımının artması klinker üretimi ile CO<sub>2</sub> salınımında artış meydana gelmektedir. Bu salınım insan kaynaklı CO<sub>2</sub> emisyonunun yaklaşık %5-8'ini meydana getirmekte ve Portland çimentosunun 1 ton üretiminde ortalama 0,8-0,9 ton CO<sub>2</sub> açığa çıkmaktadır. Bu CO<sub>2</sub> salınımı azaltmak, evrensel karbon emisyonunu azaltmaya yardımcı olacaktır (Du, Pang, 2020). Çimento yerine belirli oranlarda puzolanik özellikteki malzemelerin kullanımı CO<sub>2</sub> emisyonunu azaltmak için kullanılan yöntemler arasında yer almaktadır (Poudyal, Adhikari, 2021). Bunlar; uçucu kül ve yüksek fırın cürufu (Topçu, Karakurt, 2007), pirinç kabuğu külü (Özdemir, Koçak 2020) bu malzemelerdendir.

Çimentolu esaslı malzemelerden beklenen dayanımın yanı sıra sürdürülebilir olması istenmektedir. Çimento kompozitlerinin sürdürülebilirlik özelliğini etkileyen etkenlerden biriside yüksek sıcaklıktır. Yüksek sıcaklık, betonun mikro ve makro yapısında ciddi bozulmalar meydana getirmektedir (Ma, Qianmin, et al. 2015). Bu etki kalıcı hasar verebileceği için malzemenin hizmet ömründe de azalmalar meydana getirecektir. Çeşitli sıcaklıklarda çimento hamurunda önemli fiziksel ve kimyasal dönüşümler meydana gelir. 100 °C ve altındaki sıcaklıklarda çimento hamuru içerisinde bulunan serbest su buharlaşır ve 100 °C üzerindeki sıcaklıklarda kimyasal bozulmalar meydana gelir (Khoury, 1992). 600 °C 'ye kadar çimento hamurundaki toplam boşluk hacmi artar. Toplam boşluk hacminin artması çimento hamurunun dayanımını azaltmaktadır (Alonso vd., 2003). Çimento esaslı kompozitlerin yüksek sıcaklığa dayanıklılığı üzerine yapılan çalışmalarda farklı malzemeler yöntemler kullanılmıştır. Bunlar; çelik ve karbon fiber (Lau, Anson, 2006), atık mermer tozu ve cam lif (Gökçer vd., 2013), çelik ve/veya polipropilen lifler (Yermak et al., 2017) betonun yüksek sıcaklıktaki davranışını etkileyen malzemeler arasında yer almaktadır.

Bu çalışmada kaolin kilinin %10-15-20-25-30 oranlarında çimento ikamesi olarak çimento hamuru üretilmiştir. 7 ve 28 gün basınç dayanımları sonrasında, 28 günlük numuneler üzerinde kılcal su emme deneyi ile 800 °C'de 2 saat boyunca yüksek sıcaklığa maruz bırakılmıştır. Yüksek sıcaklık sonrası basınç dayanımları belirlenerek kontrol grubu ile karşılaştırılmıştır.

## **2. MATERYAL VE YÖNTEM**

### **2.1 MATERYAL**

#### **Çimento**

Çalışmada çimento hamuru numuneleri üretmek için TS EN 197-1 uygun olarak. CEM I 42.5 R Portland çimentosu kullanılmıştır. Kullanılan çimentoya ait fiziksel ve kimyasal özellikler Tablo 1 'de verilmiştir.

**Tablo 1.** Deneylerde kullanılan çimentoya ait fiziksel ve kimyasal özellikler

KİMYASAL KOMPOZİSYON	%	FİZİKSEL KARAKTERİSTİKLER	DEĞER
TOPLAM $SiO_2$	19,84	45 MİKRON ELEK ÜSTÜ (%)	5,27

## Kaolin

Balıkesir-Sındırgı ilçesinde bulunan kaolin kil yatağından alınıp ticari olarak satışı gerçekleştirilen kaolin kili kullanılmıştır. Kaolinin özgül ağırlığı  $2,63 \text{ gr/cm}^3$  olarak belirlenmiştir. Kullanılan kaolin kilinin fiziksel ve kimyasal özellikleri Tablo 2' de verilmiştir.

**Tablo 2.** Kaolin kilinin fiziksel ve kimyasal özellikleri

Bileşen	Oran (%)
$SiO_2$	69,1
$Al_2O_3$	15,2
$Fe_2O_3$	0,2
CaO	0,1
$Na_2O$	0,03
$K_2O$	11,07
Diğer	4,3

## 2.2 YÖNTEM

### Numunelerin Hazırlanması

Üretilen çimento hamuru kaolin kilinin ağırlıkça farklı oranlarda ikame edilmesiyle hazırlanmıştır. Yapılan ön deneylerde su/çimento oranı 0,35 olarak belirlenmiştir. Şekil 1'de verilen mikser kullanılarak ilk önce çimentoya kuru olarak kaolin kili katılmış ve 60 saniye karıştırılmıştır. Karışım suyu ikiye bölünerek her bir aşama 60 s karıştırmak üzere iki aşamada

eklenmiştir. Karışım suyunun yarısına bağlayıcı maddenin %1 oranında polikarboksilat esaslı süper akışkanlaştırıcı eklenmiştir. Numune kodlamasında kaolin kili “K” ile temsil edilerek katkı oranı yanında belirtilmiştir. Örneğin; K0.10: K; kaolin kili, 0.10; çimentoya ağırlıkça ikame oranını göstermektedir.

**Şekil 1.** Mikser

### **Yayılma Tablası Deneyi**

TS-EN 1015-3 standardına uygun olarak kesik koni kalıp içerisine çimento hamuru eklenir. Kalıp çıkarılıp harç saniyede 1 defa olacak şekilde 15 düşme yapılarak yayılma çapı ölçülür. Kullanılan deney aleti Şekil 2’ de verilmiştir.

**Şekil 2.** Yayılma tablası deneyi

### **Basınç Dayanımı Tayini**

Basınç deneyleri, 50x50x50 mm küp numuneler üzerinde yapılmıştır. Deneyler, sabit yükleme hızında gerçekleştirilmiş ve TS EN 12390-3AC'ye göre 0,4 MPa/s alınmıştır. Kullanılan deney aleti Şekil 3' te verilmiştir.

Şekil 3. Basınç dayanımı deney aleti

#### 2.2.4 Kılcal Su Emme Tayini

Her numune serisine ait 24 saat 70 °C' de etüvde kurulmuş ve 3 adet küp numune alt yüzeylerinden su ile temas ettirilerek kılcal su emme deneyine tabi tutulmuştur. Kılcal yolla emilen su miktarları belirli zaman aralıklarıyla numuneler tartılarak ölçülmüştür.

Şekil 4. Kılcal su emme deneyi

#### 2.2.5 Yüksek Sıcaklık Deneyi

Çimento hamuru 800 °C 'de yüksek sıcaklığa maruz kalması halinde meydana gelen değişimler incelenmiştir. Bu amaçla dijital kontrol panelli, 1200 °C 'ye kadar ısıtma kapasiteli içerisi seramik kaplı yüksek sıcaklık fırını kullanılmıştır.

Şekil 5. Kül fırını

### 3. ARAŞTIRMA BULGULARI

Kontrol ve kaolin katkılı ikameli çimento hamurlarına ait sonuçlar Tablo 3’te verilmiştir.

**Tablo 3.** Kalsine bentonit katkılı çimento hamurlarına ait dayanımlar

NUMUNE	YAYILMA ÇAPI	SU EMME ORANI (%)	BASINÇ DAYANIMI (MPA)					
			7 GÜNLÜK	DEĞİŞİM (%)	28 GÜNLÜK	DEĞİŞİM (%)	800 °C'DEN SONRASI	DEĞİŞİM (%)
<b>Kontrol</b>	21	15	49,1	-	57,1	-	31,6	-45
<b>K0.10</b>	19	19	45	-8	58,2	2	28,9	-50
<b>K0.15</b>	17,5	20	40,6	-17	57,6	0,8	27,4	-52
<b>K0.20</b>	16,5	21	38,4	-22	51,7	-9	30,9	-40
<b>K0.25</b>	15	23	36,7	-25	47,3	-17	18,8	-60
<b>K0.30</b>	13,5	25	30,7	-37	44,5	-22	14,7	-67

Tablo 3’te sonuçları yer alan yayılma çaplarına bakıldığında numunelerdeki kaolin kili miktarı arttıkça yayılma çaplarında azalma meydana getirmiştir. Kil kullanımında su/bağlayıcı oranı sabit kaldığında yayılma özelliğine olumsuz etki yapmıştır (İpek vd., 2003). Kaolin kili miktarı arttıkça yayılma tablası deneyine göre işlenebilirlik azalmaktadır. Artan kaolin ikamesi ile su emme oranında artış meydana gelerek en düşük su emme oranı kontrol grubunda görülmüştür. Bu durum kaolin kilinin su emme özelliğinden kaynaklandığı düşünülmektedir.

Şekil 6. Basınç dayanımı grafiği

Basınç dayanımı sonuçlarına göre artan kaolin kili ikamesi ile 7 günlük basınç dayanımlarında kontrol grubuna göre azalmış, 28. gün basınç dayanımlarında ise düşüş oranı azalarak basınç dayanımı yaklaşık eşit olan %15 kaolin ikameli grupta meydana gelmiştir (Şekil 6). Yüksek sıcaklığa (800 °C) maruz bırakıldıktan sonra kontrol grubunun basınç dayanımında %45’lik azalma gerçekleşirken, %20 kaolin ikameli çimento hamurunda %40 azalma oranı ile basınç dayanımında en düşük azalma meydana gelmiştir.

#### **4.SONUÇLAR**

Ağırlıkça %10-15-20-25-30 oranlarında çimento ikamesi olarak kaolin kilinin taze beton ve sertleşmiş beton deneylerine dayanarak aşağıdaki sonuçlar elde edilmiştir:

- Kaolin kili ikameli numunelerin 7. günde kontrol grubuna göre basınç dayanımlarının azaldığı tespit edilmiştir. Basınç dayanımında azalma oranı kaolin kili ikamesi ile değişkenlik göstermiş, 7. Günde %8 ile %37 arasında azalma meydana gelmektedir. 28. günde basınç dayanımlarında fark azalmakla birlikte K0.15 grubunda katkısız çimento hamuru basınç dayanımı ile yaklaşık aynı değeri almıştır. Bu durum kaolin kilinin puzolanik özellik gösterdiği kanısına varılmıştır.
- Kaolin kili ikameli numuneler üzerinde yüksek sıcaklık deneyi sonrası basınç dayanımında K0.20 grubunda, diğer gruplara göre daha az oranda (%40) düşüş meydana gelmiştir.
- Kaolin kili ikameli numuneler arasında kılcal geçirimsizlik deneyinde 24 saat sonunda en az su emme oranının (%19) K0.05 grubunda hesaplanmıştır. Kaolin kili ikamesinin artması ile su emme oranında artış meydana gelmiştir. Bu durum kaolin kilinin su emme özelliğinden kaynaklandığı düşünülmektedir.

**INVESTIGATION OF THE WIDEBAND BEHAVIOR OF A 2.4 GHz LOW NOISE MICROWAVE AMPLIFIER**

**Prof. Dr. Serhan YAMAÇLI (Orcid ID: 0000-0002-3375-0241)**

Nuh Naci Yazgan University, Faculty of Engineering, Department of Electrical-Electronics Engineering, Kayseri, Türkiye.

**ABSTRACT**

There are various microwave amplifier systems designed and produced for many different frequency bands in the literature. There are also many practical circuits on the market for the 2.4 GHz frequency band, which is the operating frequency of one of the WiFi bands. The 2.4 GHz frequency band finds use in many application areas, including Bluetooth and WiFi, thanks to its license-free use and being suitable for implementation using the standard production technology. In this study, the ZX60-272LN-S+ low noise amplifier (LNA) produced by Mini Circuits is experimentally investigated. The operating frequency range of this amplifier is shown as 2300 MHz - 2700 MHz in its datasheet. On the other hand, both the performance of the utilized microwave integrated circuit and the matching performance of the matching circuits at the input and output ports determine the overall operating frequency range of microwave amplifiers. The performance of the ZX60-272LN-S+ LNA block has been experimentally tested also outside its specified operating frequency of 2300 MHz – 2700 MHz.  $S_{11}$ ,  $S_{21}$ ,  $S_{12}$  and  $S_{22}$  scattering parameters of the ZX60-272LN-S+ LNA circuit were measured for the 10 MHz – 8 GHz range, therefore the performance of this amplifier outside the 2300 MHz – 2700 MHz frequency range is also observed. Considering the obtained scattering parameters, the practical operating frequency range of the ZX60-272LN-S+ LNA circuit is discussed.

**Keywords:** Active microwave circuits, scattering parameters, low noise amplifier.

## **2.4 GHz FREKANS BANDINDA KULLANILAN DÜŞÜK GÜRÜLTÜLÜ BİR KUVVETLENDİRİCİNİN GENİŞ FREKANS BANDI DAVRANIŞININ İNCELENMESİ**

### **ÖZET**

Literatürde çok farklı frekans bandları için tasarlanan ve üretilen mikrodalga kuvvetlendirici sistemleri bulunmaktadır. WiFi bandlarından birinin çalışma frekansı olan 2.4 GHz frekans bandı için de piyasada birçok pratik devre mevcuttur. 2.4 GHz frekans bandı, hem lisans gerektirmeyen kullanımı hem de standart üretim teknolojisiyle üretime müsait olması sayesinde Bluetooth ve WiFi dahil olmak üzere birçok uygulama alanında kullanım imkanı bulmaktadır. Bu çalışmada, Mini Circuits üretimi olan ZX60-272LN-S+ düşük gürültülü kuvvetlendirici (LNA) deneysel olarak incelenmiştir. Bu kuvvetlendiricinin katalog bilgisinde çalışma frekans aralığı 2300 MHz – 2700 MHz olarak yer almaktadır. Mikrodalga kuvvetlendiricilerin çalışma frekanslarında, hem içermiş olduğu mikrodalga entegre devrenin performansı hem de giriş ve çıkışta bulunan uyumlaştırma devrelerinin standart hat empedansı olan  $50 \Omega$ 'a uyumlaştırma performansı belirleyici olmaktadır. Bu çalışmada incelenen ZX60-272LN-S+ LNA bloğunun katalog bilgisinde 2300 MHz – 2700 MHz şeklinde belirtilen çalışma frekansı dışındaki performansı da deneysel olarak incelenmiştir. ZX60-272LN-S+ LNA devresinin  $S_{11}$ ,  $S_{21}$ ,  $S_{12}$  ve  $S_{22}$  saçılma parametreleri 10 MHz – 8 GHz aralığı için ölçülerek bu kuvvetlendiricinin 2300 MHz – 2700 MHz frekans aralığı dışındaki performansı da gözlemlenmiştir. Elde edilen saçılma parametreleri dikkate alınarak ZX60-272LN-S+ LNA devresinin uygulamadaki çalışma frekansı aralığı konusu tartışılmıştır.

**Anahtar Kelimeler:** Aktif mikrodalga devreler, saçılma parametreleri, düşük gürültülü kuvvetlendirici.

## **INTRODUCTION**

Modern telecommunication systems utilize high frequency signals for providing higher bit rates for a better consumer experience. This is achieved by employing wider bandwidth for the carrier signals. In addition, higher frequencies and bandwidths are also required in electronic defence systems for increasing the imaging resolution (pasya et al., 2014; shi et al., 2013; caris et al., 2014). All of these requirements of commercial and military microwave equipments motivate circuit designers to reach the widest bandwidth possible within a technology node.

Microwave amplifiers are indispensable components for microwave systems since the received microwave signals at the receiver side, both for telecommunication and defence systems, have very low power at the order of microwatts (kantur et al., 2014; richter et al., 2009). The amplification stage of microwave circuits generally consist of two stages being the low noise amplifier (lna) section and the power amplifier (pa) section. The power amplifiers are usually employed in the transmitter circuit to increase the transmission power that will be radiated from the antenna. On the other hand, low noise amplifiers are generally used at the receiver part for the amplification of the received signals. Since the received signals have very low power, low noise amplifier provides an appropriate processing by introducing low noise to the already low received power.

The low noise amplifiers are implemented using high electron mobility discrete transistors or monolithic integrated circuits employing high electron mobility semiconductors such as gan (thakur et al., 2020; han et al., 2020). The transistor or integrated circuit choice depends on the requirements of the system, both technically and from the cost point of view. Discrete transistor based designs require impedance matching circuits at the input and output stages while monolithic integrated circuits generally provide the standard 50  $\Omega$  impedance at the input and output ports for the specified operating frequency range. The impedance matching circuits of transistor based low noise amplifier can be implemented using lumped components or microstrip stubs.

There are also different implementation methods for low noise amplifiers. From the practical viewpoint, low noise amplifiers can be implemented on the custom designed printed circuit boards using discrete transistors or monolithic integrated circuits or ready-to-use block level microwave subsystems can be used. Although block level subsystems cost more than the custom designs, they enable a block level design of more complex microwave systems. Apart from the cost factor, the main parameters of these block level subsystems such as the operating frequency range and input power range can also be limiting factors for the microwave system designer. Therefore, it can be stated that there is an obvious trade-off between the ease of use and design flexibility for these block level microwave subsystems.

A widely used low noise amplifier block is considered in this work. The investigated low noise amplifier is produced by mini-circuits and has the part number zx60-272ln-s+ (zx, 2022). According to its datasheet, the operating frequency range is stated as 2300 mhz – 2700 mhz with a 5v single power supply. The scattering parameters namely  $s_{11}$ ,  $s_{21}$ ,  $s_{12}$  and  $s_{22}$  of the zx60-272ln-s+ sample are experimentally measured using a vector network analyzer (vna) as the first step. The actual operating frequency range of this sample is determined from the scattering data. The phase response of the voltage gain is also measured as a function of frequency to interpret the stability of this block. Then, the actual operating frequency limits of the considered lna are discussed.

### 1. THE INVESTIGATED LOW NOISE AMPLIFIER BLOCK: ZX60-272LN-S+

The investigated low noise amplifier block is the Mini-Circuits ZX60-272LN-S+ which is shown in Figure 1.

Figure 1. The investigated ZX60-272LN-S+ block and the experimental setup

According to its datasheet, the ZX60-272LN-S+ provides an average gain of  $G=14$  dB between the operating frequency range of 2300 MHz – 2700 MHz, which is obviously frequency dependent. The block operates with a single supply of 5V and consumes 70 mA of quiescent current (ZX, 2022). The input and output voltage standing wave ratio (VSWR) have been specified dependent on the frequency with having the values of 1.31 and 1.69 for the 2300 MHz operating frequency, which correspond to 17.4 dB and 11.9 dB return loss, respectively. It is worth noting that the values of the electronic processing blocks given in datasheets are typical values therefore it is a good practice to test the blocks practically before utilization in more complex systems. Considering this, the microwave parameters of the ZX60-272LN-S+ sample is experimentally extracted. A Rohde & Schwarz ZVH8 vector network analyzer (VNA) device is used to measure the scattering coefficients. The vector network analyzer is calibrated using 2-port high accuracy calibration procedure using the Rohde & Schwarz Z135 female calibration kit. It is worth noting that the ZX60-272LN-S+ block uses standard female subminiature-A (SMA) connectors but the ZVH8 vector network analyzer has type-N output connectors. Therefore, microwave cables having male N-type connector at one end and standard male SMA connectors at the other end are used during measurements and the Z135 calibration kit has standard female connectors. Therefore, at the end of the calibration procedure, the ZVH8 vector network analyzer and the cables constituted a calibrated measurement setup with male SMA connectors ready to be connected to the device under test, ZX60-272LN-S+ amplifier block.

## 2. MEASUREMENT RESULTS

First of all, the gain of the ZX60-272LN-S+ amplifier block is measured. The input port of the ZX60-272LN-S+ is connected to port 1 and the output port of the ZX60-272LN-S+ is connected to port 2 of the ZVH8 vector analyzer. Therefore, the  $s_{21}$  characteristics shows the gain of the ZX60-272LN-S+. The input power is set as -10 dBm, which is a safe value to prevent saturation according to the datasheet. The ZVH8 has been calibrated for its whole measurement range, 10 MHz – 8 GHz therefore, all measurements were performed in this whole frequency range.

The gain-frequency characteristics of the ZX60-272LN-S+ block is measured by the ZVH8 vector network analyzer as shown in Figure 2.

**Figure 2.** Gain-frequency characteristics of the ZX60-272LN-S+ with markers showing the frequency range where ZX60-272LN-S+ provides gain

The gain-frequency characteristics of Figure 2 shows that ZX60-272LN-S+ provides voltage gain in a wide frequency range. The positions of the markers M1 and M2 are set as the points where the gain of the ZX60-272LN-S+ is above 0 dB. The frequency positions of the markers M1 and M2 show that the ZX60-272LN-S+ provides gain between about 200 MHz – 4.68 GHz. It is worth noting that this frequency range is much wider than the specified operating frequency range of 2300 MHz – 2700 MHz. However, it is imperative to investigate the other scattering parameters  $S_{11}$ ,  $S_{12}$  and  $S_{22}$  for a proper evaluation of the operating frequency range, which is reported in the following pages of this study.

The gain level in the specified frequency range of 2300 MHz – 2700 MHz is also of importance therefore the  $S_{21}$ -frequency characteristics is also obtained with markers M1 and M2 set at the 2300 MHz and 2700 MHz frequency points. This plot is shown in Figure 3.

**Figure 3.** Gain-frequency characteristics of the ZX60-272LN-S+ with markers showing the specified operating frequency range

The markers M1 and M2 in Figure 3 show that the gain of the ZX60-272LN-S+ block is 14.45 dB and 13.47 dB at the 2320 MHz and 2720 MHz borders. It is worth noting that the slight deviation from the 2300 MHz and 2700 MHz is caused from the finite number of frequency points of the vector network analyzer. The gain of the ZX60-272LN-S+ block is given as 14.47 dB and 13.36 dB on the datasheet for the border frequencies therefore, the measurement results verify the datasheet with very small deviations.

The phase response of the  $S_{21}$  characteristics is also obtained as shown in Figure 4. The phase response shows an alternating characteristics and the phase shift between the input signal and the output signal is -165.78 degrees for the lower frequency limit and 127.37 degrees for the upper frequency limit. From the stability point of view, it is worth noting that the 180 degrees phase shift occurs at only one frequency therefore the ZX60-272LN-S+ block can provide unconditional stability except this single frequency point.

The input reflection coefficient ( $S_{11}$ ) measurements are performed as the next step. The variation of the input reflection coefficient with the frequency is shown in Figure 5. It is observed from Figure 5 that the input reflection coefficient has acceptable values (<-10 dB) in

the frequency range of 1.8 GHz – 3.08 GHz. Outside of this range, the input reflection coefficient is greater than -10 dB meaning that the amplifier block reflects most of the incoming

waves, which is not an acceptable situation for 2-port circuits.

**Figure 4.** The phase variation of the S<sub>21</sub> characteristics of the ZX60-272LN-S+ with markers showing the specified operating frequency range

Figure 5. The input reflection coefficient (S<sub>11</sub>) of the ZX60-272LN-S+ with markers showing the range where S<sub>11</sub> < -10 Db

Figure 6. The reverse gain (S<sub>12</sub>) of the ZX60-272LN-S+

The reverse gain, S<sub>12</sub>, vs. frequency is measured as plotted in Figure 6 as the next step. The reverse gain should ideally be zero in order not to have a signal leak from the output port to the input port. The characteristics shown in Figure 6 implies that the reverse gain is less than

-15 dB in the whole frequency range, 10 MHz – 8 GHz, therefore, there does not seem to have any problem with the output-to-input signal leak with the ZX60-272LN-S+ block. In addition, the reverse leak is less than -20 dB for the specified operating range of 2300 MHz – 2700 MHz.

As the next step, the output reflection coefficient,  $S_{22}$ , is measured and plotted as given in Figure 7. The output reflection coefficient has the values less than -10 dB in the specified frequency range of 2300 MHz – 2700MHz, as indicated by the markers M1 and M2 of Figure 7. Other frequency ranges where the output reflection coefficient is less than -10 dB are also shown in another plot as given in Figure 8. It is observed from Figure 8 that the amplifier block provides  $S_{22} < -10$  dB for the frequency range of 1.32 GHz – 3.68 GHz. There is also a narrower high frequency range where  $S_{22} < -10$  dB is maintained and it is determined as 4.68 GHz – 5.60 GHz. Outside of the 1.32 GHz – 3.68 GHz and 4.68 GHz – 5.60 GHz ranges, the output reflection coefficient is not in the acceptable range ( $< -10$  dB).

Figure 7. The output reflection coefficient ( $S_{22}$ ) of the ZX60-272LN-S+ showing the specified frequency range

Figure 8. The output reflection coefficient ( $S_{22}$ ) of the ZX60-272LN-S+ showing the frequency range where  $S_{22} < -10$  dB

The summary of the obtained scattering parameters and their acceptable frequency ranges are shown in Table 1. It is worth noting that the limit values of the scattering parameters of Table 1 are the generally accepted values rather than solid rules. The operating frequency range of the ZX60-272LN-S+ amplifier can be determined as the intersection of the acceptable frequency ranges shown in Table 1. The intersection of these ranges, which is the general operating frequency range of the ZX60-272LN-S+ amplifier, is 1.8 GHz – 3.08 GHz, therefore it can be stated that the scattering coefficients of the ZX60-272LN-S+ amplifier maintain acceptable levels in this frequency range while the amplifier provides gain.

**Table 1.** The acceptable frequency ranges for the four scattering coefficients

Scattering coefficient	Acceptable frequency range
$S_{11}$ (< -10 dB) (Input reflection coefficient)	1.8 GHz – 3.08 GHz
$S_{21}$ (> 0 dB) (Inverse leak gain)	200 MHz – 4.68 GHz
$S_{12}$ (< -15 dB) (Gain)	10 MHz – 8 GHz
$S_{22}$ (< -10 dB) (Output reflection coefficient)	1.32 GHz – 3.68 GHz and 4.68 GHz – 5.60 GHz

### 3. CONCLUSIONS

In this study, the ZX60-272LN-S+ low noise amplifier block from Mini-Circuits is investigated. The ZX60-272LN-S+ is a block level low noise amplifier powered by 5V single supply with a 70mA supply current. The operating frequency range of the ZX60-272LN-S+ is stated as 2300 MHz – 2700 MHz on its datasheet. The all four scattering coefficients of the ZX60-272LN-S+ block is experimentally measured using a vector network analyzer in the 10 MHz – 8 GHz range. It is exposed that the ZX60-272LN-S+ block provides nonzero gain in the frequency range of 200 MHz – 4.68 GHz. In addition, the reverse leak is below -15 dB in the 10 MHz – 8 GHz range. From the reflection point of view, the input and output reflection coefficients are below -10 dB limit for the ranges of 1.8 GHz – 3.08 GHz and 1.32 GHz – 3.68 GHz, respectively. Taking the intersection of the acceptable frequency ranges of the four scattering parameters, it is concluded that the investigated ZX60-272LN-S+ low noise amplifier block can be utilized in the 1.8 GHz – 3.08 GHz with positive gain, as expected from an amplifier.

**NAR KABUĞU UNU ile ZENGİNLEŞTİRİLMİŞ TARHANA ÇORBASI ÜRETİMİ ve KARAKTERİZASYONU**

**Arş. Gör. İkranur FELEK (Orcid ID: 0000-0001-9503-5772)**

Bingöl Üniversitesi, Sağlık Bilimleri Fakültesi, Beslenme ve Diyetetik Bölümü, Toplum Beslenmesi Anabilim Dalı, Bingöl

**Doç. Dr. Ebru AKKEMİK (Orcid ID: 0000-0002-4177-4884)**

Siirt Üniversitesi, Mühendislik Fakültesi, Gıda Mühendisliği Bölümü, Siirt

**ÖZET**

Bu çalışmada geleneksel yöntemler ile üretilen tarhana çorbasını antioksidan açıdan zenginleştirmek ve çorbadaki un miktarını azaltmak için nar kabukları öğütülüp işlem görmeden tarhana üretiminde %5 ve %10 oranlarda un yerine ilave edilmiştir. Tarhana üretimi hamur eldesi, fermantasyon, kurutma ve öğütme olmak üzere 4 aşamada gerçekleştirilmiştir. Elde edilen çorbalarda nar kabuğu unlarının tarhana çorbasının fizikokimyasal, antioksidan ve duyuşal parametreleri üzerindeki etkisi araştırılmıştır. Fizikokimyasal analizleri kapsamında kül, rutubet, pH, su aktivitesi, renk, titrasyon asitliği, toplam karotenoid, toplam diyet lif, protein, tuz ve viskozite analizleri gerçekleştirilmiştir. %10 nar kabuklu tarhana örneğinde toplam karotenoid içeriğinin ve diyet lif içeriğini arttırdığı tespit edilmiştir. Çorba örneklerinde yapılan FRAP, kuprak, demir şelatlama ve ABTS radikalini giderme aktivitesi, nar kabuğu ununun tarhana örneklerini antioksidan açıdan zenginleştirdiğini göstermektedir. Nar kabuğu unu ilave edilen tarhanaların genel tüketici beğenisi analiz edildiğinde kontrol tarhanasına göre daha az beğenildiği tespit edilmiştir.

**Anahtar kelimeler:** Çorba, Karotenoid, Nar Kabuğu, Tarhana

Bu çalışma Siirt Üniversitesi, Bilimsel Araştırma Proje Koordinatörlüğü Tarafından 2019-SİÜFEB-003 nolu proje ile desteklenmiştir.

**PRODUCTION AND CHARACTERIZATION OF TARHANA SOUP ENRICHED  
WITH POMEGRANATE PEEL FLOUR**

**ABSTRACT**

In this study, in order to enrich the tarhana soup produced with traditional methods in terms of antioxidants and to reduce the amount of flour in the soup, the pomegranate peels were ground and added instead of flour at the rates of 5% and 10% in the production of tarhana without processing. Tarhana production was carried out in 4 stages: dough making, fermentation, drying and grinding. The effect of pomegranate peel flours in the soups obtained on the physicochemical, antioxidant and sensory parameters of tarhana soup was investigated. Ash, humidity, pH, water activity, color, titration acidity, total carotenoid, total dietary fiber, protein, salt and viscosity analyzes were carried out within the scope of physicochemical analyses. It was determined that total carotenoid content and dietary fiber content increased in 10% pomegranate peel tarhana sample. FRAP, cuprak, iron chelating and ABTS radical scavenging activity in soup samples showed that pomegranate peel flour enriched tarhana samples in terms of antioxidants. When the general consumer taste of tarhana with pomegranate peel flour was analyzed, it was determined that it was less liked than the control tarhana.

**Keywords:** Soup, Carotenoid, Pomegranate Peel, Tarhana

This study was supported by the Scientific Research Project Coordinator of Siirt University with the project numbered 2019-SIÜFEB-003.

## 1. GİRİŞ

Hazır gıda ve paket ürünlerin kullanımına yönelik talebin giderek artması yüksek kalorili diyetlerin hayatımıza girmesine yol açmıştır. Ancak günümüzdeki birçok hastalığın temelinde sağlıksız beslenmenin yatığı artık bir sır değildir. Bu nedenle artık bilim camiasında insanların dengeli ve düzenli beslenmeye özendirilmesinin yanı sıra besinlerden alınan biyoaktif bileşenleri kullanarak yeni fonksiyonel gıdaların üretilmesi hedeflenmektedir. Böylece bağışıklık sisteminin güçlendirilmesi amaçlanmıştır (Özel, 2015).

Literatürleri incelediğimizde nar kabuğunun son yıllarda birçok fonksiyonel ürüne ilave edildiğini görüyoruz. Orjini İran olan Nar tropik ve subtropik iklimlerde yetiştirilen oldukça eski yenilebilir meyvelerden biridir. Nar latince *Punica granatum* olarak adlandırılır (Schubert ve ark., 1999; Ara ve Raofie, 2016). Ekşilik, Zivzik, Hicaznar, Fellahyemez, Gökmar, Erdemli, Silifke aşısı ülkemizde yetiştirilen nar çeşitleridir (Kurt ve Şahin, 2013). Nar Kabuğu meyvesinin büyük bir kısmını (%30-40) oluşturmaktadır (Kulkarni ve Aradyha, 2005, Topkaya, 2017). Narın kimyasal bileşimi bölgesel farklılığa, iklim koşullarına, bitkisel çeşidine ve depolama şartlarına göre farklılaşmaktadır (Akbarpour ve ark., 2009). Yapılan çalışmalarda nar kabuğunun fenolik bileşik ve besinsel lif açısından önemli bir kaynak olabileceği belirtilmiştir. Nar kabuğunun fenolik bileşik içeriğinin meyvesine oranla 10 kat fazla olduğu saptanmıştır. Bu biyolojik aktiviteleri nedeniyle nar kabuğu birçok çalışmada fonksiyonel ürün olarak kullanılmıştır (El-Said ve ark., 2014; Okumuş ve ark., 2015). Nar kabuğu; probiyotik yoğurt, inek sütü ve soya karışımı ile hazırlanan yoğurt, kek ve dondurma üretiminde fonksiyonel gıda olarak değerlendirilmiştir (Erdoğan, 2013; Topkaya, 2017; Elaltunkara, 2018; Ersöz, 2019). Ancak yapmış olduğumuz literatür çalışmalarında nar kabuklu tarhana ile ilgili bir çalışmaya rastlanmamıştır.

Tarhana Türk diyetinde yaygın olarak yer alan fermente Türk çorbasıdır. Yöreden yöreye değişen çeşitleri mevcut olup genellikle içeriğinde buğday unu, sebzeler (nane, domates, soğan, vb.), maya, baharatlar ve tuz bulundurur (Özdemir ve ark., 2007, Ertaş ve ark., 2009, Çağ Lar ve ark., 2012; Herken ve Aydın, 2015). Tarhana organik asit, serbest aminoasit, mineral, B vitamini içeriğiyle önemli besleyici özelliklere sahiptir. Tarhana yapımı hamur oluşturma, fermantasyon, kurutma ve öğütme olmak üzere temelde 4 üretim aşamasından oluşmaktadır. Tarhana hamuru buğday unu ile yoğurdun farklı oranlarda karıştırılmasıyla elde edilmektedir. Hamur karışımına sebzeler, baharatlar ve ekmek mayası eklenerek 5-10 dakika

yoğrulması sağlanır. Kıvama gelen hamur 1-7 gün 30-35°C’de fermantasyona bırakılır. Tarhanada

fermantasyon yoğurt bakterileri (*Lactobacillus bulgaricus-Streptococcus thermophilus*) ile ekmek mayası (*Saccharomyces cerevisia*) tarafından gerçekleştirilir. Tarhanalar fermantasyon sürecinin sonunda kurutmaya alınır. Kurutma işleminden sonra tarhanalar öğütülerek uygun kuru şartlarda 1 veya 2 yıl saklanabilmektedir. Tarhana düşük pH (3,8-4,2) ve düşük nem (%6-9) içeriği sayesinde uzun süre depolanabilmektedir (Özdemir ve ark., 2007; Herken ve Aydın, 2015). Üretim tipi ve içerisine ilave edilen baklagil, sebze ve diğer gıdalar dikkate alındığında ülkemizde yaklaşık 50 çeşit tarhananın varlığından söz edilmektedir. Tarhana üretimi sırasındaki fermantasyon, hammaddeye göre tarhanaya farklı tat, koku, tekstür ve aroma vermektedir (Coşkun, 2014). Oldukça besleyici olan tarhanayı hayatımıza giren ilk hazır çorba olarak kabul etsek çok da yanlış bir ifade kullanmış olmayız. Tarhana besin değeri, depolama süresi ve kolay hazırlanışı sayesinde birçok araştırmannın konusu olmuştur (Hançer, 2010; Çağ Lar ve ark., 2012; Çevik, 2016; Erol, 2016). Ancak nar kabuklu tarhananın literatürde olmayışı bizi bu çalışmayı yapmaya itmiştir. Bu çalışmada nar kabuklu tarhana üretilerek kalite parametreleri analiz edilmek istenmiştir.

## 2. MATERYAL ve METOT

### 2.1. Materyal

Zivzik nar çeşidi ve tarhana yapımında kullanılan malzemeler Siirt ilinden temin edildi. Nar kabuk unu eldesi için nar meyvesi kabuk kısmından ayıklandı. Nar kabukları temizlendikten sonra kuruması için oda sıcaklığında bekletildi. Kuruyan kabuklar öğütülerek un haline getirildi. Çalışmada kullanılan tüm kimyasallar Sigma Aldrich ya da Emsure ACS, Reag. Ph Eur’dan temin edildi.

### 2.2. Metot

#### 2.2.1. Tarhana Üretim Aşamaları

Tarhana yapımında incelenen literatür sonucunda çeşitli modifikasyonlar yapılarak formülasyonlar oluşturulmuştur (Yalçın ve ark. 2008; Ertaş ve ark. 2009; Demir 2014; Herken ve Aydın 2015 ve Temiz ve Tarakçı 2017). Nar kabuğu unu içermeyen kontrol grubu tarhanası, %5 nar kabuk unlu tarhana (NKT) ve %10 NKT üretilip prosese ait içerikler Tablo 1.’de verilmiştir. İlk olarak tarhana hamuru oluşturulup 10 dakika boyunca yoğuruldu. Daha sonra hamur 30°C’de 3 gün fermente edildi. Fermantasyon tamamlandıktan sonra tarhana

hamuru 2 gün 55°C’de etüvde kurutuldu. Kuruyan tarhanalar öğütücü yardımıyla öğütülerek 0.5 mesh elek ile elendi. Analizlere kadar cam kavanozlarda ağzı kapalı bir şekilde -80°C’de saklandı.

### 2.2.2. Tarhanaların Fizikokimyasal Analizleri

Protein Analizi Siirt Üniversitesi, Bilim ve Teknoloji Uygulama ve Araştırma Merkezi’nde hizmet alımı yapılarak gerçekleştirilmiştir. Örneklerimizdeki protein miktarı dumas yöntemi ile Thermo/Flash2000 cihazı ile tespit edilmiştir (Anonim, 2019). Tarhanaların kül analizi için 3 g örnek tartılıp sabit tartıma getirilen krozelere alınmıştır. Krozeler kül fırınında 550°C’de örneklerin rengi gri beyaz oluncaya kadar bırakılmıştır. Krozeler tartılarak %kül olarak sonuçlar verilmiştir (Kişi, 2015). Rutubet analizi için tarhana örneklerinden 3 g tartılıp petri kapların alınmıştır. Etüvde 105°C’de sabit tartıma getirilen örneklerin ağırlıkları kaydedilerek sonuçlar %rutubet olarak verilmiştir (Yörükoğlu, 2012). Titrasyon asitliği analizi TS 2282’deki yöntem baz alınarak yapılmıştır (Gül, 2010; Anonim, 2004). pH analizi dijital pH metre (Bante İnstument-PHS-3BWMicroprocessor) yardımıyla 3 tekrarlı ölçülerek değerler kaydedilmiştir (Gül, 2010). su aktivite değerleri su aktivitesi cihazı (Novasina Lab Touch-A6-CH8853Lachen-1404022) kullanılarak belirlenmiştir (Lang ve Steinberg, 1980). Tarhana örneklerin tuz analizleri mohr yöntemine göre yapılmıştır (Anonim, 2011). Renk değerlerini belirlemek için pencolor art cihazı (color measurement) kullanılmıştır. Viskozite analizi DV-II pro Brookfield viskozimetre cihazı ile tespit edilmiştir (Anıl ve ark., 2016). Toplam karotenoid miktarını belirlemek için aseton ve petrol eteri kullanılarak ekstraksiyon işlemi gerçekleştirilmiştir. Daha sonra ekstrelerin spektrofotometrik olarak absorbansları

ölçülmüştür (Özel, 2015). Örneklerin toplam diyet lif miktarı Sigma-aldrich-TDF-100A besinsel lif kiti kullanılarak kitin bilgi formundaki yöntem uygulanmıştır (Van Soest ve McQueen, 1973; Trowel, 1974; Trowel ve ark., 1976; AOAC, 1990). Tüm analizler üç tekrarlı olarak yapılmıştır.

### 2.2.3. Antioksidan analizler

Fe<sup>3+</sup> iyonu indirgeyici antioksidan güç (FRAP analizi) Ferrik iyonlarını (Fe<sup>3+</sup>) ferröz iyonlarına (Fe<sup>2+</sup>) indirgeme kapasitesi yöntemine göre belirlenmiştir (Benzie ve Strain 1996). Kuprak analizi (Cu<sup>2+</sup> iyonu indirgeyici antioksidan kapasite); Cu<sup>2+</sup> indirgeme aktivitesi Apak ve ark., (2006)'nın metoduna göre yapılmıştır. Demir şelatlama aktivite analizi Dinis ve ark. (1994) yöntemi ile yapılmıştır. ABTS (Radikal katyon yakalama aktivitesi) radikalini giderme aktivitesi Re ve arkadaşlarının yaptığı çalışmaya göre belirlenmiştir (Re ve ark., 1999).

### 2.2.4. Duyusal Analiz

Duyusal analiz gerçekleştirilmeden önce 05.11.2018 tarihli 03-1 protokol nolu girişimsel olmayan etik kurul raporu alınmıştır. "Katılımcı Bilgilendirilmiş Onam Formu" imzalatılarak duyusal analiz yapılmıştır. Renk, Koku/Aroma, Yabancı tat/koku, Kıvam, Genel Beğeni parametreleri rubrik sisteme göre (1-çok kötü 2-kötü 3-orta 4-iyi 5-çok iyi) puanlandırılarak analiz edilmiştir.

## 3. BULGULAR VE TARTIŞMA

Fizikokimyasal analiz sonuçları Tablo 2'de antioksidan analiz sonuçları Tablo 3'de ve duyusal analiz sonuçları Tablo 4'de bir araya getirilmiştir.

**Tablo 2.** Fizikokimyasal analiz sonuçları

Analizler	Kontrol	%5 NKT	%10 NKT
Protein içeriği	14,30 ± 0,455	10,89 ± 0,252	10,34 ± 0,416
%Kül	5,196	5,125	5,98
%Rutubet	5,44± 0,53	3,5 ± 1,01	5,14± 2,49
%Asitlik Derecesi	20,75± 2,47	21,83± 1,89	44,33± 1,60
pH	4,75± 0,0	4,48± 0,006	4,18± 0,015
Su aktivitesi	0,219± 0,005	0,305± 0,001	0,334± 0,0006
Renk	L*	61,41±10,22	33,38±0,68
	a*	-6,15±0,74	-2,83±0,06
	b*	40,11±5,69	20,44±0,342
Toplam Karotenoid İçeriği (µg/g)	31,70 ± 0,004	171,22 ± 0,02	223,54 ± 0,006
Toplam Diyet Lif İçeriği (%)	14,49	21,58	24,77
%Tuz	4,86 ±0,07	5,27 ±0,7	5,1 ±2,96

Vizkozite (100 rpm dönüş hızında Cp)	926,667±40,414 (52°C)	863,333±5,77 (65°C)	175±5 (85°C)
--------------------------------------	-----------------------	---------------------	--------------

Fizikokimyasal analiz sonuçları incelendiğinde protein içeriğinin üretim aşamasında unun çıkarılmasına bağlı olarak azaldığı, kül miktarının önemli ölçüde değişmediği, rutubet değerinin %5 NKT azalırken %10 NKT’de kontrol ile benzer sonuçlar verdiği, Asitlik değerinin %10’luk NKT’de arttığı tespit edilmiştir. Ayrıca su aktivitesi ve tuz değerinin arttığı, pH’ın ise azaldığı tespit edilmiştir. Toplam karotenoid içeriği ( $\mu\text{g/g}$ ) ve toplam diyet lif içeriği (%) nin ise konsantrasyon bağlı olarak arttığını söyleyebiliriz. Vizkozitenin ise sıcaklığa bağlı olarak değiştiği bu nedenle sabit sıcaklıkta deneyin yapılmasının faydalı olacağı bu şartlar altında kıyaslanmanın doğru olmayacağı söylenebilir.

L\* değeri gıdaların parlaklığı ile ilgili bilgi verir. Kontrole kıyasla tarhana örneklerinin matlaştığı söylenebilir. a\* değeri kırmızı-yeşil renkleri temsil etmektedir. a\* değeri pozitif yönde arttıkça gıda matriksinin kırmızılığında artış, negatif yönde arttığında ise yeşilliğinde artış olduğu bilinmektedir. Örneklerimizin koyu sarı renkte olduğu anlaşılmaktadır. b\* değeri ise sarı mavi koordinatını temsil etmektedir. Pozitif değerler sarılığı, negatif değerler maviliği bildirmektedir. Bütün örnekler pozitif değerlerde olup hepsinin sarı rengin değişen koyuluğuna sahip oldukları belirlenmiştir.

**Tablo 3. Antioksidan analiz sonuçları**

<b>Tarhana Örnekleri</b>	<b>ABTS 30 <math>\mu\text{g}/\mu\text{L}</math> inhibisyon (%)</b>	<b>FRAP (9 <math>\mu\text{g}/\mu\text{L}</math>)</b>	<b>Kuprak 43,9 <math>\mu\text{g}/\mu\text{L}</math></b>	<b>Demir Şelatlama 16,67 <math>\mu\text{g}/\mu\text{L}</math> %</b>

Nar kabuğu unu ilavesinin tarhananın antioksidan özellikleri üzerindeki etkisini tespit etmek için dört farklı deney yapılmıştır (Tablo 3). ABTS radikalinin % inhibisyon değerine baktığımızda konsantrasyona bağlı bir artış olmakla beraber lineer bir etki tespit edilmemiştir. Ancak kontrole kıyasla neredeyse 2,5 katı oranında bir inhibisyon etkisi görüldüğü tespit edilmiştir. FRAP ve kuprak analizlerinde konsantrasyona bağlı olarak lineer bir etki gözlemlendiği ve kontrole kıyasla antioksidan özelliklerin belirgin şekilde arttığını söyleyebiliriz. Demir şelatlama aktivitesinde konsantrasyona bağlı bir artış olmakla beraber lineer bir etki tespit edilmemiştir.

**Tablo 4.** Duyusal analiz sonuçları

Koku	3,17±1,29	3,083±1,24	3,083±1,38
Yabancı Tat/koku	3±1,42	2,71±1,23	2,542±1,21
Aroma	3,5±1,09	2,5±1,28	2,71±1,30
Genel beğeni	3,375±1,12	2,625±1,13	2,83±1,16

Tarhana çorbalarının duyusal analizleri 24 panelist tarafından gerçekleştirilmiştir. Panelistler Tablo 4’de tarhana çorbalarının duyusal özelliklerine ait skorlar verilmiştir. Renk özelliğinde en iyi skoru %10 NKT alırken, koku, yabancı tat/koku ve aroma parametrelerinde her iki tarhana örneğinde önemli bir fark tespit edilmemiştir. Genel beğenide her iki tarhana yakın beğeni almasına rağmen %10 NKT daha çok beğenilmiştir.

#### 4. SONUÇ VE ÖNERİLER

Bütün sonuçlar değerlendirildiğinde nar kabuğu unu tarhananın besinsel özelliklerini etkilemiştir. Nar kabuğu ununun toplam diyet lifi ve antioksidan aktivite özelliklerini önemli açıdan arttırdığı görülmüştür. Duyusal anlamda nar kabuğu ilavesinin yüksek oranlarda olması beğeniye olumsuz etkilese de düşük oranlarda eklenmesiyle nar kabuğunun hem besinsel lif hem de antioksidan aktivitesinden yararlanılabileceği böylelikle endüstriyel anlamda nar kabuğunun değerlendirilebileceği düşünülmektedir.

#### TEŞEKKÜR

Bu çalışma Siirt Üniversitesi Bilimsel Araştırma Koordinatörlüğü Tarafından 2019-SİÜFEB-003 nolu proje olarak desteklenmiştir. Katkılarından dolayı Siirt Üniversitesi Bilimsel Araştırma Koordinatörlüğüne ve hizmet alımı yaptığımız Siirt Üniversitesi, Bilim ve Teknoloji Uygulama ve Araştırma Merkezine teşekkür ederiz.

#### YAZARLARIN KATKISI

Bütün yazarlar eşit katkıya sahiptir. Bu çalışma Dr. Ebru AKKEMİK danışmanlığında İkranur FELEK tarafından hazırlanan “Felek İ, (2019), Bal kabağı ve zivzik nar kabuğu unu ile zenginleştirilmiş hazır tarhana çorbası üretimi, Siirt Üniversitesi, Fen Bilimleri Enstitüsü, Gıda Mühendisliği Ana Bilim Dalı, Siirt, s 90” yüksek lisans tez çalışmasının bir parçasıdır.

**ÖZET**

İnsanlık tarihi boyunca gıdaları uzun süreli muhafaza etmek için çeşitli yöntemler kullanmıştır. Teknoloji ile birlikte bu yöntemler de gelişmiş ve çeşitlilik kazanmıştır. Bozulmaya neden olan biyokimyasal reaksiyonlar ile mikrobiyolojik faaliyetler yüksek su aktivitesi değerlerinde daha kolay gerçekleşmektedir. Meyve ve sebzeler bünyelerinde %75-95 oranında su içermektedir. Dondurarak muhafaza ile bu tür reaksiyonlar minimum değere getirilmektedir. Teknolojik ve ekonomik nedenler dikkate alındığında, meyve ve sebzelerin muhafazası için dondurarak muhafaza yöntemi diğer birçok yöntemle göre avantajlı görünmektedir. Dondurma işlemi sonunda meyve ve sebzelerin sıcaklığı, donmuş ürünlerin depolama sıcaklığına (-18°C) indirilmektedir. Gıda hammaddelerinin yeni bir ürün üretim ve depolama sürecinde sahip oldukları besin öğelerinin korunması hatta zenginleştirilmesi özellikle sekonder metabolitleri oluşturan doğal antioksidan maddelerin kaybının önlenmesi ve korunması istenmektedir. Üniversite-Sanayi işbirliği kapsamında yerel bir firmadan sağlanan hammaddelerle araştırma gerçekleştirilmiştir. Araştırmada fabrikada hem ön işleme hem de IQF uygulaması yapılan hammaddelerden; kiraz, şeftali, biber numuneleri temin edilmiştir. Daha sonraki 6 aylık depolama süreci boyunca meydana gelen kalite değişim ve kayıpları sekonder metabolitler bakımından belirlenmiştir. Çalışmada hiçbir ön işlem uygulanmamış her bir meyve ve sebze numunesi öncelikle kontrol numunesi olarak seçilmiştir ve daha sonrada dondurulmuş meyve sebze numunelerinden her ay numuneler alınıp, ham fenolik ekstraktları hazırlanarak liyofilize edilmiştir. Son olarak bu ekstraktların Folin - Ciocalteu metoduyla toplam fenolik madde içerikleri ve DPPH antiradikal süpürücü aktivite tayin metoduyla antioksidan aktiviteleri belirlenmiştir. Depolama sürecinde bütün numunelerin %inhibisyon değerinin azaldığı tespit edilmiştir. Bunda ön işlem ve gıdanın olgunluk düzeyinin etkisi olduğu belirlenmiştir.

**Anahtar kelimeler:** IQF, Depolama, Toplam Fenol içeriği, DPPH, Sekonder Metabolit

**CHANGES IN THE CONTENTS OF THE SECONDARY METABOLITE DURING THE STORAGE OF IQF APPLIED FOODS; CHERRY, PEACH, PEPPER****ABSTRACT**

Throughout human history, various methods have been used to preserve food for a long time. Along with technology, these methods have also developed and gained diversity. In foods with high water activity values, spoilage occurs more easily with biochemical reactions and microbiological activities. Fruits and vegetables totally contain 75-95% water as a whole. The freeze-preservation method tries to minimize the risk of such spoilage in foods. According to technological and economic reasons, the freeze-preservation method for preserving fruits and vegetables seems advantageous compared to many other methods. At the end of the IQF freezing process, the temperature of the food is adjusted to the storage temperature of the deep-frozen products (-18°C). The aim of this research is to protect and enrich the nutritional elements of food raw materials, especially natural antioxidant substances that make up secondary metabolites, in the production and storage periods. In this study, the raw materials that were both pretreatment and IQF applied; cherry, peach, and pepper samples were supplied from the local factory within the scope of University-Industry cooperation. During the next 6 months of the storage period, the quality changes of food samples were determined in terms of secondary metabolites. In the study, samples of each fruit and vegetable without any pretreatment were known as a control sample, and other proceed samples were selected from frozen fruits and vegetables every month, and crude phenolic extracts were prepared and lyophilized. Finally, the total phenolic content of these extracts was determined by the Folin-Ciocalteu method, and the antioxidant activities were determined by the DPPH antiradical scavenging activity estimation method. The inhibition % of all samples decreased in the storage process. It has been shown that the pre-treatment and the maturity level of the food have an effect.

**Keywords:** IQF, Storage, Total Phenol Content, DPPH, Secondary Metabolite

## 1. GİRİŞ

Gıdaların ve ürünlerinin kalitesi dört özellikten etkilenmektedir: renk/görünüm, tat, doku ve besin değeri. Tüketiciler, gıdaları yemeye karar vermeden önce rengini ve görünüşünü değerlendirmekte, ardından tadı gıdayı tekrar tüketip tüketmeyeceğine karar vermesine yardımcı olmaktadır (Barrett et al., 2010). Taze gıdalar, işleme sırasında orijinal kalitesinden kısmen veya tamamen kaybedebilmektedir. Bu nedenle tüketiciler, yüksek kaliteli ürünler için daha fazla ödemeye isteklidir ve bu da dondurulmuş gıda endüstrisini, taze ve minimum düzeyde işlenmiş ürünlerle rekabet edebilmek için sürekli olarak geliştirmeye teşvik etmektedir (FAO, 2020).

Araştırmalar günlük meyve ve sebze tüketiminin sağlık açısından kanser ve kardiyovasküler hastalıklar gibi dejeneratif bozuklukların yoğunluk ve ölüm oranını azaltmakla pozitif olarak ilişkili olduğunu göstermektedir (Wang et al., 2018). Meyve ve sebzelerin temel mikro besinlere ve fenolik bileşikler dahil diğer biyoaktif bileşiklere kaynak olduğu yapılan çalışmalarla ortaya konmuştur. Bu biyoaktif maddeler, epidemiyolojik çalışmalarda gösterildiği gibi, bitkilerde yaygın olarak küçük miktarlarda bulunan ve insan sağlığında kemo-koruyucu rollere sahip olan “besin dışı” bileşiklerdir (Boeing et al., 2012). Gıda Muhafaza teknikleri, işlenmiş gıdaların kalite ve güvenliğinin sağlanmasında önemli rol oynamaktadır. Bu teknikler arasında dondurma, gıdaların uzun süreli muhafazası ve saklanması için kullanılan temel işlemlerden biri olarak kabul edilmektedir. Dondurma işlemi ile gıdayı muhafaza etme özelliklerine ek olarak, ürünlerin taze gıdalara erişimi olmayan uzak pazarlara taşınmasına ve mevsim dışında da ürünlerinin yıl boyunca tüketicilere sunulmasına olanak tanımaktadır. Donma sıcaklıkları, taze gıdaların yaklaşık %85-90'ını oluşturan suyu kristalleştirmekte böylece su aktivitesini ( $a_w$ ), biyokimyasal değişiklikleri ve mikrobiyal büyümeyi azaltmaktadır. Düşük sıcaklıkların ( $-18^{\circ}\text{C}$  civarında) bazı reaksiyonları hızlandırabileceği öne sürülse de, donma normalde çoğu değişikliğin meydana geldiği hızı azaltmaktadır (Bonat Celli et al., 2016; Paciulli et al., 2015).

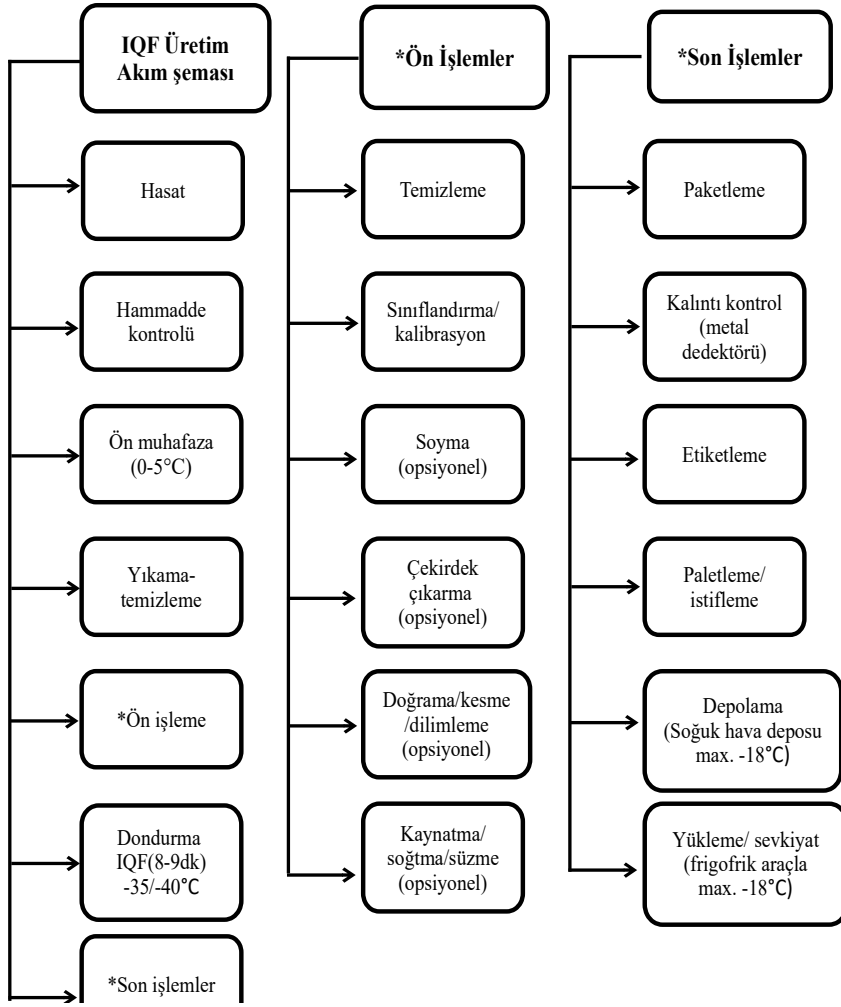

Bu çalışmada yurtdışına ihraç edilen ve endüstriyel ölçekte IQF sistemiyle dondurulmuş kiraz, şeftali, kırmızıbiber, flambe biber ürünlerinin gene endüstriyel ölçekte 6 ay boyunca  $-18$  derecede depoda muhafazası süresince sekonder metabolit niceliklerindeki değişim, fenolik ve antioksidan madde kayıpları düzenli olarak alınan numunelerle belirlenmiştir.

## 2. MATERYAL VE YÖNTEM

Hızlı Dondurulmuş Gıda Maddeleri Tebliği'nde verilen tanıma göre Hızlı dondurulmuş gıda maddeleri: Ürün tipine bağlı olarak mümkün olduğunca çabuk maksimum kristalizasyonun

sağlanması ile hızlı dondurma işlemi uygulanan, ürünün tüm noktalarında termal stabilizasyonun

-18°C veya daha düşük seviyede sağlandığı, bu durumun sürekli korunduğu ve bu şekilde pazarlandığı gıda maddelerini ifade eder (Anonim, 2014). Araştırma hammaddelerinin sağlandığı Bilecik Mapeks Gıda şirketinin IQF sistemi ile dondurmuş olduğu ürünlerde bu prosedüre göre uyguladığı üretim akım şeması şekil 1’de verilmiştir. Sekonder metabolitlerin soğuk depolama sürecindeki değişimini belirlemek üzere çalışma materyali numuneler iki kısımda oluşturulmuştur. Birinci kısım; hasat ve hammadde kontrolünden hemen sonra her bir ürün grubundan ayrı ayrı taze numuneler alınmış, kontrol grubu oluşturulmuştur; kiraz, şeftali, flambe biber, kırmızıbiber. İkinci kısım, ürüne bağlı her türlü ilgili ön işlemi (yıkama, çekirdek çıkarma, sap ayırma, soyma, dilimleme vb.) tamamlamış IQF sistemi ile dondurulmuş ve -18°C depolanan ürünlerden her ay düzenli alınan numuneler oluşturmuştur. Ayrıca depolama sürecinin sekonder metabolitlere etki profilinin belirlenebilmesi için 6 ay boyunca aynı parti numunesinin takibi gerçekleştirilmiştir.

Şekil 1. Fabrika da uygulanan dondurulmuş meyve ve sebze üretim akım şeması

Birinci kısımda alınan hammaddelerin kompozisyon ve olgunluk durumlarının belirlenmesi için A.O.A.C (2002) uygun olarak °Briks, pH, titrasyon, kül, nem, yağ miktarı ve reaktif indeks tayin ve analizleri yapılmıştır. (AOAC, 2002).

### 2.3. Ham fenolik ekstresinin hazırlanması

Antioksidan aktivite ve toplam fenolik madde tayini için kullanılacak fenolik ekstrelerin elde edilmesi için Vega Galvez ve ark. 2009 yılında yaptığı araştırma esas alınarak modifiye edilmiştir. Fenolik ekstraksiyon için uygulamalar Şekil 2’de grafiksel olarak sunulmuştur (Vega-Gálvez et al., 2009).

### 2.2. Toplam fenol miktar tayini

Ekstreler içindeki toplam fenol miktarı tayini Folin-Ciocaltaeu yönteminin Vega Galvez vd.’nin 2012’de yapmış olduğu çalışmanın modifikasyonu ile yapılmıştır (Vega-Gálvez et al., 2012). Standart olarak kullanılan gallik asit ve çalışılan bütün örnekler, %70’lik sulu metanol içinde hazırlanmıştır. Numuneler Folin Ciocaltaeu reaktifi (%10’luk, h/h, suda) ve sodyum karbonat çözeltisi (%20’lik, a/h, suda) ile karıştırılmış, oda sıcaklığında karanlıkta 15 dakika

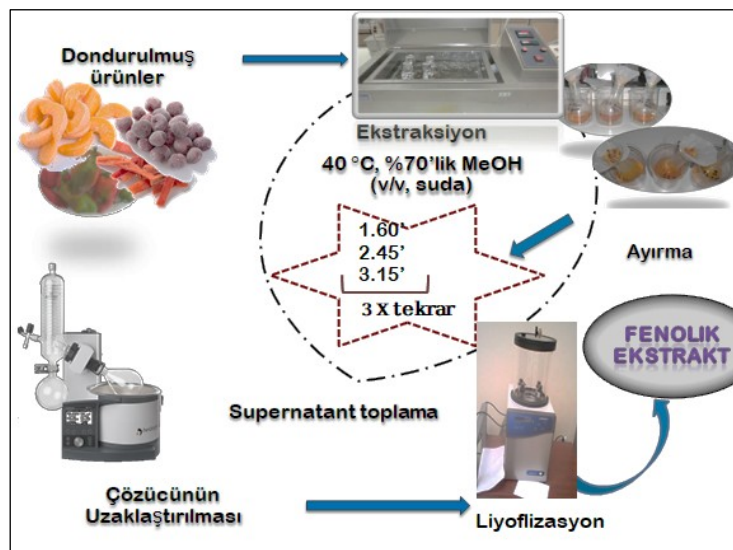

bekletilmiştir. UVvis Spektrofotometrede (Jenway Marka 7315 Model) 725 nm’de absorbans değerleri okunmuştur. Kalibrasyon eğrisi üzerinden toplam fenol miktarları hesaplanmıştır (Şekil 3a).

### 2.3 DPPH üzerinden serbest radikal süpürücü etki tayini

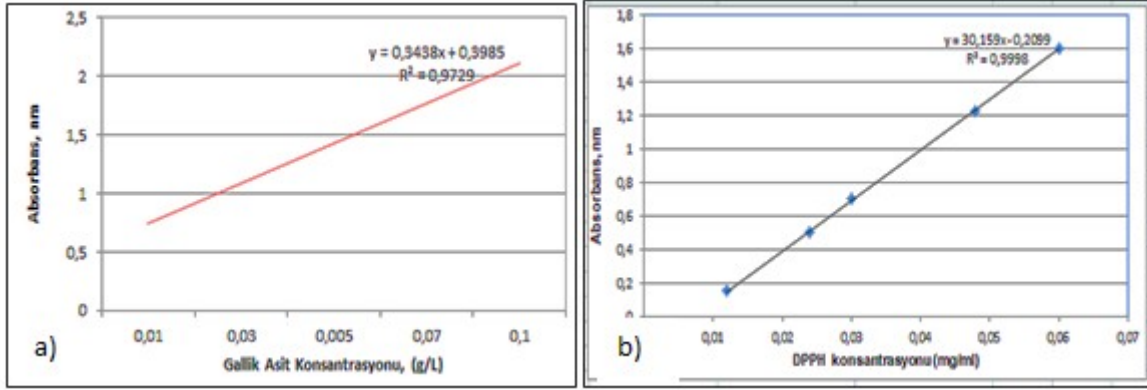

Ekstrelerin serbest radikal süpürücü etkileri 20 dakika içerisinde DPPH’nın (1,1-difenil-2-pikrilhidrazil) %50’sini süpürdüğü konsantrasyon olarak (EC50) hesaplanır (Galvez, 2012). % 70’lik sulu metanol içerisinde hazırlanmış örnek çözeltileri DPPH (0,15 mM) çözeltisi ilave edilerek vortekste karıştırılıp ve oda sıcaklığında karanlıkta 20 dakika bekletilmiştir. Numunelerin 517 nm’de absorbans değerleri okunmuştur. DPPH standardı kullanılarak hazırlanan kalibrasyon eğrisinden elde edilen kalibrasyon denklemi ile reaksiyon ortamındaki DPPH konsantrasyonu (mg/ml) hesaplanmıştır (Şekil. 3b.). 20 dakika sonucunda ortamda kalan DPPH miktarı ise aşağıdaki formül kullanılarak hesaplanmıştır.

$$\% \text{ DPPH}_{\text{kalan}} = (\text{DPPH})_{t=20} / (\text{DPPH})_{t=0} \times 100$$

Sonuçlar DPPH’nın %50’sinin süpürüldüğü (inhibe edildiği) konsantrasyon (EC50 $\mu\text{g/ml}$ ) cinsinden verilmiştir.

Şekil 2. Fenolik ekstraksiyon uygulaması grafiksel tasarımı

Şekil 3. Absorbans Kalibrasyon Eğrileri a) Gallik Asit, b) DPPH

### 3. BULGULAR VE TARTIŞMA

Bu çalışmada hammadde olarak kullandığımız kiraz, şeftali, flambe biber, kırmızıbiberin genel kimyasal özelliklerini değerlendirmek üzere nem, kül, hamyağ, pH ve briks tayinleri yapılmıştır (Tablo1.).

Tablo 1. Hammaddelerin kimyasal özellikleri

NUMUNE ADI	% NEM	%KÜL	*BRIKS	%Yağ	Titrasyon asitliği % (sitrik asit cinsinden)	Olgunluk İndeksi (Şeker/Asit Oranı)	pH
KIRAZ	75,43±3,53	1,16±0,17	22,87±0,34	0,54±0,024	0,12±0,06	14.50	4,85
ŞEFTALİ	90,32±0,16	0,65±0,06	13,00±2,00	0,78±0,46	0,90±0,0	85.48	3,68
FLAMBE BİBER	89,00±1,09	0,50±0,0	7,25±0,25	1,46±0,09	0,16±0,08	56.61	5,1
KIRMIZIBİBER	87,01±1,75	0,32±0,04	6,7±0,20	1,30±0,26	0,13±0,07	41.85	5,11

Çalışmada en yüksek % yağ ve nem oranı ve olgunluk derecesi şeftalide ve flambe biberde tespit edilmiştir. Briks derecesi ve pH asitlik değerleri tüketilmeye ve işlenmeye uygun olgunluk seviyesinin göstergesidir. Aşırı olgunluk, meyvenin işlenebilirlik kalitesini olumsuz etkileyecektir. Bir gıda maddesinin nem miktarının saptanması gıdanın depolama stabilitesinin değerlendirilmesi açısından önemlidir (Dhatt ve Mahajan, 2007; Çurkan et al., 2011; Demiray & Tülek, 2010).

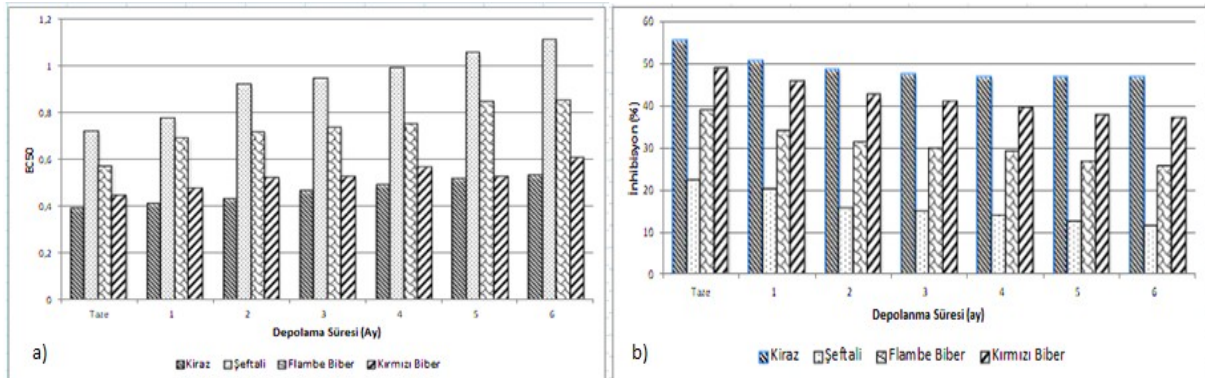

Dondurulmuş hammaddelerin toplam fenol miktarının belirlenmesi amacıyla yapılan çalışmalarda 6 aylık depolama süresinin hammaddelerde değişik oranlarda kayıplara yol açtığı, taze hammaddelerin içerdiği toplam fenol miktarı ile karşılaştırılarak hesaplanmıştır. TP değerleri 6 ay boyunca düşüş göstermiştir. Şekil 4’de sunulan grafiğe göre en fazla TP değerine sahip numunenin kiraz, en düşüğü de şeftali olarak belirlenmiştir. Olgunlaşma, meyvelerin biyoaktif içeriği üzerinde belirgin bir etkiye sahiptir. Bu fizyolojik süreç aynı zamanda hücre duvarı dokusunu ve yapısını değiştirerek taze ürünlerin ticari değerini de etkiler; patojenlere ve

mekanik hasara karşı daha yüksek bir hasat sonrası duyarlılığı ve raf ömründe bir azalmaya neden olduğu da ifade edilmektedir (Murillo et al., 2012; Wu et al., 2010).

Şekil 4. Depolama Süresinin IQF dondurulmuş Ürünlerde Toplam Fenol Miktarına Etkisi

Hammaddelere uygulanan ön işlemler ve IQF dondurma, ürünlerin % inhibisyon güçlerini ve DPPH konsantrasyonunu %50 azaltmak için gereken antioksidan miktarının göstergesi EC50 değerini depolama süresince etkilemiştir (Şekil 5 a ve b).

Şekil 5. Depolama Süresinin IQF dondurulmuş Ürünlerde a) EC50 Değerine ve b) %İnhibisyon Değerine Etkisi

Çalışma da kullanılan numunelerde ilk 3 ay içerisinde daha yüksek %inhibisyon düşüşleri meydana gelirken 3. aydan sonra kayıplarda daha az meydana geldiği tespit edilmiştir.%

inhibisyon en az şeftalide en çok kirazda tespit edilmiştir. Gıdanın sahip olduğu olgunluk derecesi şeftali ve flambe biberde daha fazla antioksidan kapasitede düşmeye ve inhibisyon gücünde azalmaya yol açmıştır. Sağlıklı ve uygun olgunlukta toplanmış kiraz, dondurulmuş depolamada en düşük % inhibisyon kaybı göstermiştir. Bitkisel gıdalarının antioksidan aktivitesi üzerine dondurma işleminin ve dondurulmuş depolamanın etkisi, , bileşim ve yapı vb. içsel faktörlere bağlı olarak değişebilmektedir. Dondurma ve dondurarak depolama sırasında meydana gelen hücre çeperlerinde bozulmalar, antioksidan bileşiklerin salınmasına ve bunların kimyasal, enzimatik oksidasyon reaksiyonları nedeniyle antioksidan kapasitedekayba yol açabilmekte ve bu da kontrol numunesi olan taze ürün numunelerine göre daha düşük bir antioksidan aktivite değerinin belirlenmesine yol açmaktadır (Dawson et al., 2020; Hu et al., 2022; Mokhena et al., 2016; Swallah et al., 2020; Wu et al., 2010).

#### **4. SONUÇ**

Çalışmalar, gıda çeşidinin, hasat öncesi faktörlerin ve olgunluk durumunun, dondurma performansının ürünlerinin fitokimyasal özelliklerine ve kalitesine etkide bulunan faktörler olduğunu göstermektedir. Ancak IQF dondurulmuş ürünlerin tekstürel olarak ve muhafaza sonrasında mikrobiyolojik olarak da analiz edilmesi depolama sürecindeki değişimi daha belirgin ortaya koyacaktır. Aynı parti ürünlerinin farklı dondurma yöntemleriyle işlenmesi hem fitokimyasal özellikler, hemde ekonomik açıdan karşılaştırılması yapılmasını sağlayacaktır ve yöntemin performans değerlendirmesi açısından önemlidir.

**ABSTRACT**

With the rapid development of reliable facial recognition algorithms over the past decade. It requires the face recognition system to be able to automatically detect a face. This paper aims to take facial recognition to the next level by bringing the power of computer vision and the best deep learning techniques with the increasing demand for face recognition technologies and rapid contactless access. Whereas facial recognition is a category of biometric security. In this paper, some deep learning techniques such as "supervised learning" were tested, and we used artificial neural networks to recognize faces. An image database was used to test models whose images were taken with a high-resolution camera. A data set of people was created. The data set was created only to train this system. We created a dataset containing the names of some people and pictures in different poses and shapes. We used at least 15 images per person for better accuracy. When we saved a person's data and photo in our system to create the dataset, deep learning has been applied to test facial features with dimensions of 128 pixels for each face and uploaded them to the Raspberry Pi. Tests on this dataset in deep learning technologies show that the proposed method achieves good results. This model can help many biometric facial recognition systems to recognize a face more accurately. Giving people access to certain parts of their company or facial can also provide a quick, accurate, and hassle-free solution. Businesses can also take advantage of facial recognition on their attendance systems to prevent time fraud and increase employee security as they enter and leave the office.

**Keywords:** Face recognition, Computer vision, Deep learning, Raspberry Pi

## 1. INTRODUCTION

Face recognition and identifying individuals is a problem of great interest, and there are numerous approaches to solving this problem. Face recognition is a branch problem of visual pattern recognition. We recognize visual patterns all the time, and we get visual information through our eyes. Ant This information is recognized by our brain. For a computer, whatever it's a photo or a video, by a matrix of numerous pixels. The computer must figure out what concept a particular piece of data represents in the data. This is an approximate classification problem in visual model recognition. For face recognition, it is necessary to distinguish who the face belongs to in the part of the data that thinks about the face.

Face recognition in a broad sense includes related technologies for building a face recognition system. It consists of face detection, face position, identity recognition, etc. Face detection algorithm is to figure out the coordinate system of faces in image or video. This is the process of scanning the whole image to determine a face. The output of the face coordinate system can be square. The face position is the coordinate position of the face feature in the face detection coordinate system. The deep learning basically implements some good positioning technologies. So, face recognition includes two steps, the first step is to detect faces, and the second step consists of identifying the images of detected faces with the existing database. There are several ways to detect and recognize faces. Facial recognition works either in an appearance-based form that covers the entire facial features or feature-based that covers geometric features such as eyes, nose, eyebrows, and cheeks for facial recognition [1]. Face recognition technology has made great progress, but there is still room for improvement in practical application. In the future, there may be a special camera for face recognition, which can improve image quality, solve image filtering and image reconstruction problems [2],[3].

From the application of face recognition technology, it is most popular used in attendance access control [4], security [5] and finance, while logistics, retail, smartphone, transportation, education, real estate, network information security [6], etc. And other fields are getting involved. It represents a great progress of artificial intelligence technology, which means that we require more accurate, more flexible and more faster recognition technology.

New deep learning methods have made it possible to be very accurate in identifying people through digital imaging. Face recognition through software systems remains a separate issue. Facial recognition systems enable the identification of a person through digital imaging and the handling of large amounts of digital imaging. Deep Neural Networks experimental application, which allows recognition of faces from digital photography and is a solution based on Raspberry

Pi [7]. Recently, deep neural networks and especially convolutional neural networks (CNNs) have shown impressive classification performance in face recognition tasks. By adopting the convolutional neural network (CNN) model, a face recognition system could design and implemented. The system can call the camera to recognize the human face and accurately output the name of the recognized person by uploading the convolutional neural network (CNN) model [8]. It shows that fast and accurate facial recognition can also be achieved on small computers like Raspberry Pi.

## 2. METHODS AND MATERIALS

### 2.1. Deep learning

Deep Learning has proven to be a very powerful tool due to its ability to process large amounts of data. Interest in using hidden layers has outstripped traditional techniques, especially in pattern recognition. One of the most popular deep neural networks is Convolutional Neural Networks (CNN). A deep convolutional neural network (CNN) is an artificial network that consists of one or more convolutional layers followed by one or more fully connected layers, usually given as two separate sets of layers.

CNNs are made up of four layer's types, such as convolutional, pooling, Relu and fully connected (FC) layer. An input image is analyzed in the convolutional layer by a set of filters that produce a feature map. This output is then sent to a layer of pooling, which reduces the map size of the feature. This helps decrease the computation time by condensing the map to the most relevant results. Depending on the network, the convolutional layers and pooling phases are replicated many times, the number of repeats during which the compact function map outputs are sent to a set of FC layers. Such FC layers instead flatten the maps together and compare the probability of each function appearing by the others, before the best classification is calculated. The Rectified Linear Units (Relu) layer is to add non-linearity to a system as the convolution is doing linear operations, it's element wise multiplication and summation.

**Fig.1.** CNN architecture.

Automatically face recognition is an interesting topic but remains a relatively difficult task due to the variation in the face recognition process. For my experiments, we have built CNNs model with various architectures depths with the same filter size, pooling layers, and convolutional layers. CNNs architectures are described in table 1. All of them are used to evaluate the impact of the CNN depth and size filter on face recognition.

**TABLE 1.** Face Recognition Model

Name	Type	Description of output size
Input layer	Input data	50x50x3
Conv1	Convolution + ReLu	32 3x3 filters
Pooling 1	Max pooling +BatchNormalization	2x2
Conv2	Convolution + ReLu	64 3x3 filters
Pooling 2	Max pooling +BatchNormalization	2x2
Conv3	Convolution + ReLu	64 3x3 filters
Pooling 3	Max pooling +BatchNormalization	2x2
Conv4	Convolution + ReLu	128 3x3 filters
Pooling 4	Max pooling +BatchNormalization	2x2
Conv5	Convolution + ReLu	256 3x3 filters
Fc1	Fully Connected + dropout (0.5)	256 units
Fc2	Fully Connected + dropout (0.5)	128 units
Output layer	Softmax	4 classes

The spatial size of the output volume is a function of the input volume  $W$ , the kernel field size  $K$  of the convolutional layer neurons, the stride  $S$ , and the amount of zero padding  $P$  on the border. The number of neurons that "fit" in each volume is then:

$$\frac{W - K + 2P}{S} + 1 \quad (1)$$

The pooling layer usually works independently on each depth or slice of the input and changes its size spatially. We used a max pooling layer with  $2 \times 2$  filters, applied in step 2, which subsamples each depth slice in the input by 2 along both width and height, ignoring 75% of the activations:

$$f_{x,y}(s) = \max_{a,b=0}^1 S^2 x + a \quad 12 Y + b \quad (2)$$

We used the softmax function and the following equation is for softmax function

$$\sigma(z)_i = \frac{e^{\beta_{zi}}}{\sum_{j=1}^k e^{\beta_{zj}}} \text{ for } i = 1, \dots, K. \quad (3)$$

$\sigma$  = softmax

$z$  = input vector

$e^z$  = standard exponential function for input vector

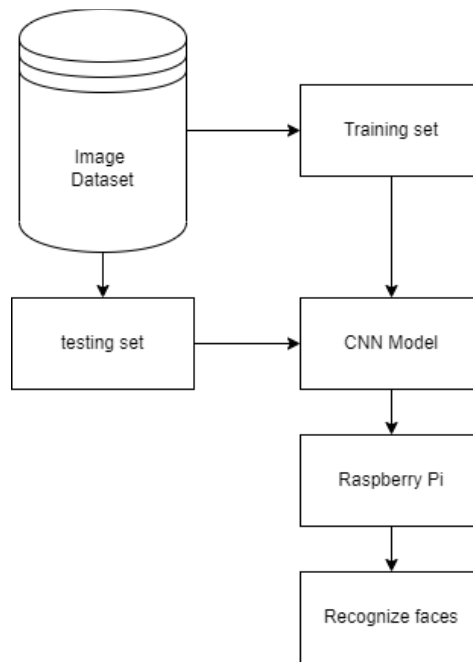

$K$  = number of classes in the multi-class classifier

$e^{z_j}$  = standard exponential function for output vector

## 2.2. Face Recognition System Process

The details of the approach are presented in the following steps:

- a) Select a subset of image samples from an initially labelled dataset and add it to the training set. Create a testing set from the remaining samples.
- b) The training set is then provided to the CNN model for training.
- c) The testing set is then recognized with the above trained network.
- d) The model and algorithm of the system are applied to the raspberry pi
- e) The Raspberry Pi and the camera perform the process of recognizing faces

**Fig.2.** Face recognition system block diagram.

## 2.3. The Dataset

Dataset of people is created before the face recognition process. Dataset was created only to train this system. We utilized the USB camera to generate both test and training sets. We have created a dataset of 4 people which includes their name and images of people in different poses and variations. For 6 individuals with a total of approximately 15 -25 pictures per person. For better accuracy minimum 25 images of each person should be captured.

**Fig.3.** Examples of the training set.

#### 2.4. Raspberry Pi

Raspberry Pi is a tiny, dual-display, desktop computer and robot brains, smart home hub, media center, networked AI core, factory controller, and much more. This is the latest model of raspberry pi, which is released in June 2019, we chose it because it has a credit-card sized computer that plugs into a computer monitor or TV, and uses a standard keyboard or mouse, low cost included. It is a capable little device that enables people of all ages to explore computing, and to learn how to program in languages like Scratch, MATLAB and Python.

**Fig.4.** Raspberry Pi [9].

#### 2.5. USB Web Camera

Webcam or Web Camera is a digital camera connected to the computer so that the user can send images directly from anywhere in the world to another place via the Internet. The technology

also provides other different types of web cameras that can be connected to the computer via USB

ports or via Wi-Fi. In our system, we used Everest SC-HD03 Webcam which has a high resolution and great quality 1080p, as shown in figure 5 the Everest SC-HD03 Webcam.

**Fig.5.** Everest SC-HD03 Webcam.

### 3. EXPERIMENTAL WORK AND RESULTS

The CNNs model proposed in table 1 was build using tensorflow which has many advantages to improve efficiency of the model. we Inputted facial images of people for train. The CNNs model were trained for 100 epochs, after every epoch the accuracy was calculated, which is the count of predictions where the predicted value is equal to the true value, it is typically expressed as a percentage. The input is passed through a pile of convolutional and maxpooling layer, the non-linear activation function (ReLU) was used, in output result we applied a softmax function as shown in table 1, Adam optimizer was used as an optimizer for 100 epochs, following our experiments and from the obtained results as shown in Figures 6-7:

**Fig. 6.** Accuracy of face recognition

**Fig. 7.** Loss of face recognition

As we have applied the architecture of the model described in table 1 for the face recognition and we have got the good results after training the CNN on dataset for 100 epochs, we obtained the results described in table 2:

**Table 2.** Accuracy And Loss Of Model

	<b>FACE RECOGNITION (after 100 epochs)</b>
<b>Accuracy %</b>	<b>96.43%</b>
<b>Loss %</b>	<b>20.48%</b>

After training the model that we worked on to test the system and the percentage of accuracy is good and the percentage of loss function is in decline. The model is selected on faces to make sure of its effectiveness, as shown in figure 8.

**Fig.8.** Examples of face recognition system results.

#### **4. CONCLUSION**

In conclusion, face recognition results, even considering the much smaller size of contemporary unconstrained image sets labeled for face recognition. Second, the simplicity of our model implies that more elaborate systems using more training data may well be capable of substantially improving results beyond those reported here. Finally, as a perspective of this work can be visualized by creating face recognition system based on CNNs as a feature, another perspective would be the tests our approach on other facial datasets. Our approach leads to significant improvements with respect to both speed and accuracy compared to OpenCV and machine learning methods. Thus, recent deep-learning techniques are also applicable on hardware like raspberry pi with limited resources.

**ÖZET**

Mekan, sınırları insan tarafından algılanabilen somut bir alan olmanın ötesinde kullanıcıların, içinde ihtiyaçlarını karşılamaya yönelik eylemlerini gerçekleştirdikleri yer, kimlik, aidiyetlik vb. kavramlarla zenginleştirdikleri, çok yönlü anlamlar içeren bir alan olmaktadır. Bu anlamda mekanı oluşturan, tanıtan ve değişimlerini gerçekleştiren kullanıcının kendisi olmaktadır. Endüstrileşme süreciyle birlikte yaşanan ekonomik, siyasal, sosyal, teknolojik vb. değişimler; gelenek, görenek, inanç ve iklim gibi parametrelere uygun olarak tasarlanmış geleneksel evlerden, belli bir kullanıcı için tasarlanmış, kimliksiz, tip ev diyebileceğimiz modern evlere geçiş sürecine neden olmuştur. Bu sayede, ucuz yöntemlerle daha çok sayıda modern evler inşa edilmiştir. Bu evler, farklı yörelerde benzer plan özelliklerine sahip olabileceği gibi cephe biçimlenişinde ise oldukça farklılık gösterebilmektedir. Bulduğu yöreye özgü cephe karakteri taşımayan modern evler; aynı aksta ya da bitişinde yer alan geleneksel evlerin görsel olarak silüetine zarar vermektedir. Çalışma materyali olarak, geleneksel Tillo Şeyh Nasrettin evi ile bitişinde bulunan modern evin ön cepheleri çalışmaya konu edilmiştir. Farklı duyuların aldığı bilgileri yorumlamaya yönelik olan görsel analiz yöntemi çalışmada uygulanmıştır. Bu yöntemde evlerin cephelerine ait çekilen fotoğraflarla birlikte gözlemci yorumlarına ait bilgilerin elde edilmesi hedeflenmiştir. Geleneksel Tillo Şeyh Nasrettin evi ile bitişinde bulunan modern evlerin ön cepheleri gestalt kuramı ilkeleri ile temel tasar ilkelerine uygunluk açısından incelenmiş olup, elde edilen bulgular ve sonuçlar çalışmada yer almaktadır.

**Anahtar Sözcükler:** Tillo, geleneksel ev, modern ev, görsel analiz, gestalt kuramı, temel tasar ilkeleri

**ANALYSIS OF FACADES IN ARCHITECTURE WITH THE METHOD OF VISUAL PERCEPTION; EXAMPLE OF THE TRADITIONAL TILLO SHEIKH NASRETTIN HOUSE AND THE MODERN HOUSE****ABSTRACT**

Beyond being a tangible space whose boundaries can be perceived by humans, the space is the place where the users perform their actions to meet their needs, identity, belonging, etc. It is a field with multidimensional meanings that they enrich with concepts. In this sense, it is the user himself who creates, introduces and changes the space. Economic, political, social, technological etc. experienced with the industrialization process. changes; It has caused a transition process from traditional houses designed in accordance with parameters such as tradition, tradition, belief and climate to modern houses designed for a specific user, without identity, which we can call a type house. In this way, more modern houses were built with cheap methods. While these houses may have similar plan features in different regions, they may differ considerably in their facade formation. Modern houses that do not have the facade characteristic of the region; It visually damages the silhouette of traditional houses located on the same axis or adjacent to it. As the study material, the front facades of the traditional Tillo Şeyh Nasreddin house and the modern house located at the end are the subject of the study. The visual analysis method, which is aimed at interpreting the information received by different senses, was applied in the study. In this method, it is aimed to obtain information about the comments of the observers together with the photographs taken of the facades of the houses. The traditional Tillo Şeyh Nasreddin house and the facades of the modern houses located at the end of it were examined in terms of compliance with the principles of gestalt theory and basic design principles, and the findings and results are included in the study.

**Keywords:** Tillo, traditional house, modern house, visual analysis, gestalt theory, basic design principles

## 1. GİRİŞ

Geleneksel yapılar, belli bir toplum kesimine ait yer koşulları (hava koşulları, doğal afetler, çevre koşulları vb.) ve kültürel özellikleri (din, gelenek, akrabalık, aile vb.) ile şekillenen ortak bir çevrenin yaşam tarzını yansıtan yapı biçimini ifade etmektedir. Bu yapı biçimi içinde, dini ve sivil yapı örnekleri yer almaktadır. İstatistiklere bakıldığında sivil yapılar içerisinde yer alan evler geçmişte olduğu gibi günümüzde de diğer yapı gruplarıyla kıyaslandığında sayıca öne çıkmaktadır. Bu da geleneksel evlerin geçmişteki kullanıcılarının yaşam tarzını büyük ölçüde yansıtması açısından, önemli bilgiler edinmemize yardımcı olmaktadır.

Görüntüsüyle yaşanmışlık hissi vererek içimizi ısıtan geleneksel evler; sosyal, kültürel, maddi, endüstriyel, yapım teknolojisi gibi nedenlerle günlük hayatımızdan uzaklaşmaktadır. Geleneksel evlerin çağın ihtiyaçlarına yanıt veremeyerek yaşantımızdan birer, ikişer yok olması yeni ev ihtiyacı doğmasına neden olmaktadır. İnsanların doğayla mücadele edebilecekleri teknolojik yöntemler geliştirmeleriyle birlikte geleneksel evler yerini modern evlere bırakmaktadır. Modern evler, günümüzde oluşan kültürel yaşama uygun ihtiyaçları karşılayabilecek bir şekilde tasarlanmıştır.

Yaşadığımız çevre içerisinde bulunan fiziksel uyarıcılar (görüntü, doku, koku, ses, ısı vb.) duyu organlarımız aracılığıyla algılanmaktadır. Bu duyumsal algıdan sonra elde edilen bilgiler kişilerin zihninde sahip oldukları karakter, kültür, inanç, hatıra, değer ve geçmiş deneyimlerle birlikte yorumlanmaktadır. Bu duruma Merleau-Ponty, “Bilinçlilik, bedenin arabuluculuğu üzerinden nesneye yönelmektir. Hareket, beden onu anladığında öğrenilir, yani beden hareketi kendi dünyasıyla birleştirdiğinde birisinin bedenini hareket ettirmesi, onun üzerinden nesnelere ulaşmasıdır ya da bir başka deyişle, nesnelere çağrısına cevap vermesidir” şeklinde yaklaşmaktadır (Merleau-Ponty,1962).

Mekani kurmak için kullandığımız aletin kendi bedenimizden başka bir şey olmadığını belirten Poincare’ye göre de: O halde mekanı ölçmek için bir aletimiz olmasaydı mekanı kuramayacaktık; halbuki her şeyi kendisine nispet ettiğimiz ve içgüdü ile kendisini kullandığımız bu alet kendi bedenimizdir. Dış nesnelere kendi bedenimize göre yerleştiriyoruz ve bizim tasarlayabildiğimiz yalnız bu nesnelere mekani ilişkileri, bedenimizle olan ilişkileridir (Poincare, 1986). İnsan bedeni mekânın fiziksel bir parçasıdır. Bu anlamda duyu organlarımız mekânı tanıma ve şekillendirmede ölçme aletlerimiz olarak işlev göstermektedir.

İnsanların yapıları algılaması ilk aşamada görsel duyum aracılığıyla sağlanmaktadır. Bu durum ağırlıklı olarak yapı cepheleri üzerinde yer alan elemanların tasarımı, malzemesi, uyumu vb. aracılığıyla gerçekleşmektedir. Yapılan bu gözlemler öznel algı sonucu gerçekleştiği için bu

bilimsel bilgi oluşumu için dezavantaj oluşturmaktadır. Bu nedenle çalışma kapsamında, Tillo'da bulunan Şeyh Nasrettin evi ile bitişiğindeki modern evin ön cephe karşılaştırılması birtakım ilkelere göre yapılarak nesnel verilerin elde edilmesi hedeflenmektedir. Ayrıca geleneksel ev cephesinin doğru bir şekilde okunması sağlanarak bundan sonraki süreçlerde; geleneksel evlerin korunması, canlandırılması ve sağlıklılaştırılmasına yönelik doğru müdahale yöntemlerinin geliştirilmesi açısından çalışma önemli olmaktadır.

## **2. MİMARİDE BİÇİMSEL ALGI**

İnsanların sahip olduğu duyular arasında görme duyusu insan algısının oluşumunda büyük bir paya sahiptir. Görme işlevi, gözün açık olması halinden ziyade derinliği olan birçok farklı aşamanın gerçekleştiği bir algı ifadesidir. Algılama basit bir şekilde nesnelere rengi, şekli, konumu vb. olabileceği gibi sağduyu yaklaşımı ile nesneye ait gerçek bilgilere sahip olabilecek şekilde de olabilmektedir. Bu da görmekle bakmak arasındaki sınırın ne kadar önemli olduğunu bize göstermektedir. Görme algımız belli bir amaç doğrultusunda hareket ettiğinde algıladığımız her yapının bir görsel ifade ettiği sonucuna gidilmektedir. Bu görseller sahip olduğumuz zevk ölçüsünde değerlendirilerek olumlu veya olumsuz yorumlar yapılabileceği gibi nesnel karşılığı olan bilgilerin elde edilmesinde de yardımcı olmaktadır.

Gestalt kuramına göre, bütün parçaların toplamından farklı bir anlam ifade eder ve birey, bütünü parçalarına bölerek değil, bütünlük içinde algılar. Örnek olarak; bir yapbozun parçaları tek tek farklı şekiller ifade ederken, tamamlanan yapboz ise parçalardan farklı bir bütünü ifade etmektedir. Tasarımlarda görsel algıyı birinci plana alan gestalt kuramı içerisinde belli ilkeler barındırmaktadır.

Yakınlık ilkesi, birbirine yakın nesnelere bir bütün olarak algılar.

Benzerlik ilkesi, birbirine benzer nesnelere algısal olarak gruplaşır.

Tamamlama (Kapatma) ilkesi, tamamlanmayan nesnelere bir bütün olarak algılanır.

Simetri ilkesi, nesnelere bir merkez noktası etrafında simetrik olarak algılanır.

Ortak Kader ilkesi, nesnelere aynı yörünge üzerinde sıralanmış olarak algılanır.

Devamlılık ilkesi, kesişen iki nesne bir bütün olarak algılanır.

İyi Gestalt ilkesi (Pragnanz ilkesi), düzenli ve sıralı nesnelere bir grup olarak algılanır.

Geçmiş Deneyim ilkesi, mekansal yakınlık ya da yakın zamanda algılanan nesnelere bir bütün olarak algılanır (Zengin, 2020).

Temel tasar ilkeleri ise ana hatları itibariyle bütünlük, farklılık, vurgu, denge, alan, zıtlık, ritim, oran-orantı ilkeleri kullanılarak farklı tasarımlar oluşturulmasını sağlamaktadır (Sağsöz, Aydın Öksüz; 2013).

Mimari yapı cephelerinin sağlam bir zeminde değerlendirilerek, sağlıklı sonuçlara ulaşılması için gestalt kuramı ilkeleri ile temel tasar ilkeleri çalışmada yöntem olarak kullanılmaktadır.

Yapılarda biçimi günlük yaşantımızda yorumlarken anlamdırma sürecinde tasarım ilkelerine uygunluk önemli olmaktadır. Mimarlıkta, bazı yapı biçimlerinin belli bir çevreye ait ve birbirinin tekrarı olduğu tespiti de ilkelere uygunluk bakımından sınırın korunmasına yardımcı olmaktadır.

### **3. ALAN ÇALIŞMASI**

#### **3.1. Geleneksel Tillo Evleri (Cas evler)**

##### **Plan Düzeni**

Genel itibariyle iki katlı olmakla birlikte yer yer üç katlı örneklerine de rastlanılan evlerin zemin katlarında servis birimleri (avlu, mutfak, kiler, tuvalet, yazlık oda) yer alırken üst katta ise çoğunlukla misafirlerin kullanımına ayrılan başoda ve diğer odalar yer almaktadır. Plan düzeninde büyüme oda+sofa şeklinde yatay ve düşey yönde gelişim göstermektedir (Görsel 1).

**Görsel 1.** Geleneksel Tillo evi örnekleri

##### **Sabatlar**

Sabatlar evlerin bitişik nizamda inşa edilmeleri sonucunda karşılaşılan ve şekil olarak sivri, basık ve yuvarlak kemerlere sahip mimari elemanlardır. Sabatlar yayaların sokaklar arasındaki geçişini gerçekleştirmek amacıyla tasarlanmış olup, araçların geçişine izin veremeyecek büyüklüğe sahip olmaktadır (Görsel 2).

**Görsel 2.** Geleneksel Tillo evi sabat örnekleri

### **Mekanlar**

Geleneksel Tillo evlerinde açık mekanlar avlu ve damdan oluşmaktadır. Bu mekanlarda evin içinde gerçekleştirilemeyecek günlük işler (çamaşır kurutma, kış hazırlıkları, yiyecek depolama vb.) yapılmaktadır (Görsel 3).

Geleneksel Tillo evlerinde yarı açık mekan olan revak önemli kişilere ait evlerde rastlanılmakla birlikte diğer evlerde yaygın olarak görülmemektedir (Görsel 4).

Geleneksel Tillo evlerinde kapalı mekanlar oda, işlik, ahır, depo, mutfak, hamam(duş) ve heladan oluşmaktadır.

Fonksiyonlarına göre ayrılmayan odalarda geceleri uyuma ile gündüzleri yeme, dinlenme, duş alma, misafir ağırlama gibi birçok eylem gerçekleştirilmektedir. Başoda ise diğer odalara kıyasla daha büyük, manzaraya hakim ve genel itibarıyla misafir kullanımına ayrılmış evin en gösterişli mekanıdır.

Aynı oda içerisinde duvarlarla bölünmüş, dış cephede penceresi olmayan işliklerde misafirler için servis hazırlıkları yapılabilmektedir. Zemin katın avluya bakan kısmında yer alan yazlık odalar tahıl depolama ile hayvan besleme amaçlarıyla kullanılmaktadır (Görsel 5).

Karasal iklim koşulları nedeniyle yiyeceklerin bozulmasının önüne geçmek amacıyla mutfaklar, güneşin daha az alındığı evlerin arka cephelerinde konumlandırılmıştır. Mutfaklarda havalandırma amaçlı küçük pencereler, evlerin tavanlarına yakın bir şekilde yerleştirilmiştir. Seki altında düzenlenmiş mağsellerde, çirtak'ın dip bölümünde "Hamamuke" denilen küçük bir hamam ile merdiven sahanlığının dip bölümünde yıkanma ihtiyacı karşılanmaktadır. Avlu girişlerinin sağ köşelerinde ise helalara yer verilmiştir (Görsel 6), (Şeker İnalcan, 2021).

**Görsel 3.** Geleneksel Tillo evi avlu ve dam örnekleri

**Görsel 4.** Geleneksel Tillo Şeyh Nasrettin evi revak örneği

**Görsel 5.** Geleneksel Tillo evi oda, işlik ve yazlık oda örnekleri

**Görsel 6.** Geleneksel Tillo evi mutfak, duş ve hela örnekleri

### **Cephe Düzeni**

Simetrik cephe düzeninin yaygın bir şekilde kullanıldığı geleneksel Tillo evlerinde kapı ve pencere yerleşimleri cephe düzenini belirleyen elemanlar olmaktadır.

Evlerin giriş cepheleri kullanıcının maddi durumuna göre sade olabileceği gibi gösterişli de olabilmektedir. Gösterişli evlerin cephelerinde yer alan kapılar sütunlu, kemerli ve tezyinat yazı süslemeli olmaktadır.

İki katlı cephe düzeninde alt katlarda yer alan pencereler güvenlik, mahremiyet ile farklı kullanımlara dayalı pencere ihtiyacının olmaması nedenleriyle daha az sayıda ve küçük ölçülerde olmaktadır. Manzara, güneş vb. yararlanmak ile cepheye gösteriş katmak amaçlarıyla üst kat pencereleri daha fazla sayıda, etrafları işlemeli ve büyük ölçülerde olmaktadır.

Pencere boyutları 1/2 boşluk oranına sahip olup , kapı traversleri pencere üst sınırlarıyla aynı hizada olmaktadır. Başoda içerisinde yer alan cumbalar cepheye hareketlilik katmıştır. Saçak sistemleri ise çok ince ya da bulunmamaktadır (Görsel 7).

**Görsel 7.** Geleneksel Tillo evi cephe örnekleri

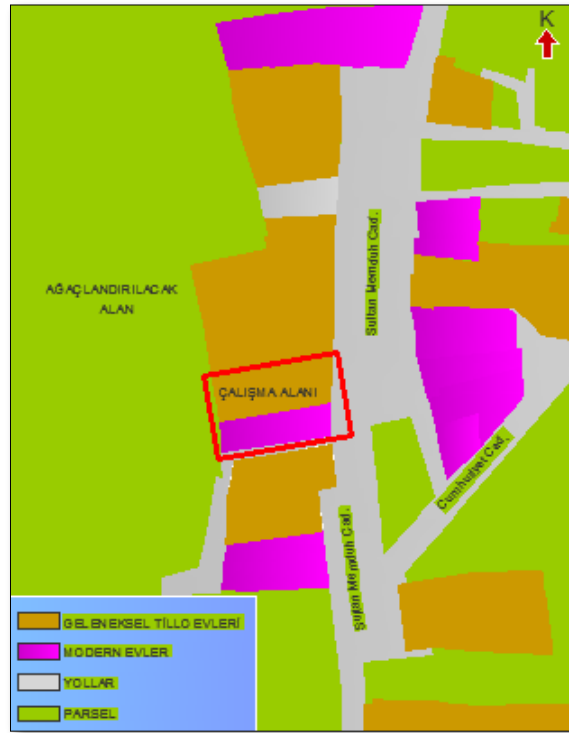

### Yapım Tekniği ve Malzeme

Geleneksel Tillo evlerinde yapım tekniği olarak, yığma taşıyıcı sistem ile iskelet taşıyıcı sistem tercih edilmiştir.

Taş; evlerin taşıyıcı duvarlarında, cas; hem iç hem de dış cephe sıvamalarında, toprak; derz aralarında, ahşap; kapı ve pencere doğramalarında ağırlıklı olarak kullanılmıştır.

### **3.2. Çalışma Alanı**

Çalışma alanı kapsamında Tillo ilçesinde bulunan geleneksel Şeyh Nasrettin evi ile bitişiğindeki modern evin ön cepheleri biçimsel anlamda değerlendirilmiştir. Farklı dönemlerde inşa edilmeleri ile farklı cephe biçimlerine sahip olmaları evlerin tercih edilme nedenleri olmaktadır. Yapıların cephe biçimleri üzerine gerçekleştirilen görsel algı gestalt kuramı ilkeleri ile temel tasarımlarına uygunluk bakımından değerlendirilmiştir (Görsel 8, 9).

Görsel 8. Çalışma alanı

**Görsel 9.** Fakirullah Mahallesi içerisinde incelenen geleneksel Tillo Şeyh Nasrettin evi ile modern ev örnekleme

### **Görsel Analiz Çalışması**

Mimarlık ürünlerinin belli bir işlevi yerine getirme amacı taşımaları gerektiği ile birtakım disiplinlerin tekniklerini içermeleri nedenleriyle sanat olarak görülmeleri mümkün olmamaktadır. Öte yandan bir mimari ürünü ele aldığımızda işlevinden çok görselliği bizi daha çok etkileyebilmektedir. Kolon, kiriş, döşeme, duvar vb. yapıyı meydana getiren elemanlar dışında mimarın yapıya herhangi bir sanatsal değer katıp katmadığı onu anlamlandırabilmemiz için önemlidir.

Geleneksel yapılar var olduğu yöreyi simgeleyen yapı biçimlerini içermektedir. Bu yapı biçimleri tip oluşturarak benzer plan düzenleri ile cephelere sahip olmaktadır. Endüstrileşmeyle birlikte yeni malzeme (beton, çelik, plastik vb.) ile yapım tekniklerin geliştirilmesiyle yapı plan ve cephe biçimlenişinde değişiklikler yaşanmıştır. Bu sayede biçimde özgürleşme yaşanmıştır. Örnek olarak, simetrik cephe düzeni yerini raslantısal biçimlenmiş cephe düzenlerine bırakmıştır. Kullanıcı ihtiyacına öncelik veren yapılaşma anlayışında ‘Biçim işlevi takip eder’ anlayışı ‘işlev biçimi takip eder’ şeklinde değiştirilmiştir. Bu durum yapıların estetik değerlere sahip olmalarına engel olabileceği gibi geleceğe miras bırakılacak yapı örneklerini de azaltmaktadır.

Postmodernizmin öncülerinden Robert Venturi, yapının iç ve dışının birbirinden farklı olarak değerlendirilmesi gerektiği üzerinde durur. Yapının cephesi her ne kadar değişse de yapı içindeki geleneksel dekorasyon aynı şekilde devam edebilmektedir. Bu anlamda değişimin sağlıklı bir şekilde takip edilebilmesi amacıyla yapıların cephe biçimlenişleri daha önemli olabilmektedir (Arslan, 2022).

Endüstri dönemi öncesinde yapı cephelerinin görselliğini artırmak amacıyla plastik sanatlar (resim, mimari, kabartma, hat, tezhip, minyatür vb.) kullanılmaktadır. Günümüzde ise yapılar sadece kullanıcı gereksinimlerini karşılama amacı taşımaktadır. Bu nedenle yapı cephelerini sanatsal anlamda değerlendirmek mümkün görülmemektedir.

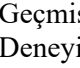

Çalışma alanı kapsamında, örneklem olarak seçilen yapıların farklı mimari dönemlere ait olmaları sonucu, farklı yapı biçimlerine sahip olmaları fikri üzerinde durulmuştur.

Çalışma kapsamında 15 kişiye yapılarla ilgili soru sorulmuştur (Görsel 10).

#### 4. BULGULAR

Alan çalışmasının ilk aşamasında geleneksel ev ile modern evin cephe, avlu, mekan ve konum tasarımlarının görsel olarak değerlendirilmesiyle ilgili 15 kişiye soru sorulmuştur. Kişilerin yorumlarına bakıldığında her iki evin de cephe görselleriyle öne çıktığı tespit edilmiştir. Geleneksel Şeyh Nasrettin evi biçim olarak dikdörtgen formda tasarlanmıştır. Cephe merkezinde, zemin katta eve girişin sağlandığı taç kapı ile üst katta üçüz pencereye sahip başodaya ait cumba bulunmaktadır. Zemin katta simetrik ikiz pencereler ile diğer pencereler bulunmaktadır. Üst katta ise ikiz ve üçüz pencere sistemleri cephede bulunmaktadır. Cephede simetri sadece düşey aksda görülmekle birlikte eve sonradan eklenen birime ait pvc pencere değerlendirmeye alınmamıştır. Geleneksel Şeyh Nasrettin evi; Temel tasarım ilkelerinden bütünlük, vurgu, denge, alan, ritim, oran-orantı ilkelerine uyum göstermekle birlikte farklılık ve zıtlık ilkelerine uyum göstermemektedir. Geleneksel Şeyh Nasrettin evi; Gestalt ilkelerinden simetri, ortak kader ve iyi gestalt (pragnanz) ilkelerine uyum göstermekle birlikte yakınlık,

benzerlik, tamamlama (kapatma), devamlılık ve geçmiş deneyim ilkelerine uyum göstermemektedir. Modern ev biçim olarak dikdörtgen formda

tasarlanmıştır. Cephe merkezinde, zemin katta eve girişin sağlandığı kapı ile üst katlarda yer alan balkonlar cepheye hareketlilik katmaktadır. Zemin katta yer alan kapalı otopark kapısı ile pencere simetri oluşturmamaktadır. Üst katlarda yer alan pencereler ise dişey ve yatay akslarda cephede belli bir simetri oluşturmaktadır.

Modern ev: Temel tasar ilkelerinden bütünlük, vurgu, denge, alan, ritim, oran-orantı ilkelerine uyum göstermekle birlikte farklılık, zıtlık ve oran-orantı ilkelerine uyum göstermemektedir.

Modern ev: Gestalt ilkelerinden simetri ilkesine uyum göstermekle birlikte ortak kader, iyi gestalt (pragnanz), yakınlık, benzerlik, tamamlama (kapatma), devamlılık ve geçmiş deneyim ilkelerine uyum göstermemektedir.

Temel tasar ilkeleri ile Gestalt ilkeleri bağlamında incelenen Şeyh Nasrettin evi ile modern evin ön cephelerinin çoğunlukla; denge, ritim, vurgu, bütünlük ve simetri ilkelerine göre biçimlendiğı görülmektedir. Bu ilkeler, evlerin cephe tasarımıda bütünsel etki ve kompozisyon oluşturarak, düzeni öne çıkaran boyutlar olmaktadır.

## **5. SONUÇ**

Çalışma alanı, Tillo ilçesinin organik yerleşimine göre yüksek bir noktada bulunmaktadır. Örnekleme olarak seçilen, geleneksel Şeyh Nasrettin evi ile bitişindeki modern ev arazi eğimine göre en üst basamakta yer almaktadır. Bu sayede, ilçe sakinleri ve dışardan gelen ziyaretçiler açısından oluşan görüş açıklığı görsel algıyı belirgin bir şekilde arttırmaktadır.

Görsel algı açısından daha estetik ve keyif verici olan geleneksel Şeyh Nasrettin evi yöre mimarisine uyum sağlamaktadır. Bitişik nizamda yer alan modern ev ise bu görsel kompozisyona zarar vermektedir.

Geleneksel Şeyh Nasrettin evi ile modern evin ön cephelerinin bitişik nizamda ve aynı aks üzerinde bulunmaları, modern evlerde tasarlanacak cephe biçimlerinin geleneksel yapılarla uyumlu olması yönünden avantaj sağlamaktadır. Modern evlerin yöreye özgü karakteristik cephe biçimi kazanması ilçenin mimari kimliğini güçlendirecektir. Görsel kaliteyi azaltan birbirinden farklı modern ev cephelerinin daha anlaşılabilir olması, geleneksel evlerin bulunduğu çevreye de değer katacaktır.

Dışarıdan bakıldığında gözlemcilerde görsel bütünlük algısının oluşmasını sağlamak amacıyla, yerleşimler geleneksel konut alanı ve yeni konut alanı olacak bir şekilde tasarlanmalıdır.

Sözelimi, geleneksel evlerin yoğunlukta bulunduğu evlere bitişik veya yakın konumda yer alan modern evlere ait ön cephelerde doğal, doğala yakın veya taklit malzemelerin kullanımı ile

geleneksel ev cepheleri ile benzerlik gerçekleştirilmelidir. Bu tasarım anlayışında geleneksele dönüş sağlanarak geleneksel evlerin tekrardan hayat bulması ile sürdürülebilir olmasına katkıda bulunulacaktır.

Birbirinden bağımsız bir şekilde tasarlanan modern evler ile geleneksel evler arasında bir bütünlük sağlamaya yönelik gerçekleştirilecek bu uygulama, diğer geleneksel yapılara örnek teşkil etmesi bakımından önemli olmaktadır. Geleneğe ve doğaya bağlı olarak, modern evlerde cephe iyileştirmeye yönelik gerçekleştirilecek uygulamaların zenginleştirilmesi kültürel mirasın turizm açısından daha fazla değer görmesine yardımcı olacaktır.

**ABSTRACT**

Recently, some special polynomials become more and more important role in the field of Geometric Function Theory. These polynomials are considered from very different and various viewpoints to solve the problems in Geometric Function Theory. Especially, orthogonal polynomials appear in many areas of mathematics and have been the subject of interest of many mathematicians. In mathematics, Meixner polynomials (also called discrete Laguerre polynomials) are a family of discrete orthogonal polynomials introduced by Josef Meixner (1934). They are given in terms of binomial coefficients and Pochhammer symbol. In this present paper, we introduce and investigate new subclass of the function class  $\Sigma$  of bi-univalent functions defined in the open unit disc. We define this newly subclass using by Meixner-Pollaczek Polynomials. Taylor-Maclaurin coefficients  $|\alpha_2|$  and  $|\alpha_3|$  were also calculated for this subclass. Furthermore, some miscellaneous properties and known consequences are also indicated.

**Keywords:** Analytic functions, Bi-starlike functions, Meixner-Pollaczek polynomials.

## 1. INTRODUCTION

Let  $\mathcal{A}$  indicate the family of functions analytic in the open unit disk  $D := \{z \in \mathbb{C} : |z| < 1\}$  and normalized by the conditions  $f(0) = f'(0) - 1 = 0$  and having the form

$$f(z) = z + \sum_{n=2}^{\infty} a_n z^n \quad (1)$$

Furthermore, let  $\mathcal{S}$  denote the subclass of functions in  $\mathcal{A}$  which are univalent in  $D$  (see for details [9]). From the Koebe  $1/4$  Theorem (for details, see [5]) every univalent function  $f$  has an inverse  $f^{-1}$  satisfying

$$f^{-1}(f(z)) = z \quad (z \in D)$$

And

$$f(f^{-1}(w)) = w \quad (|w| < r_0(f), r_0(f) \geq \frac{1}{4}).$$

In fact, the inverse function  $f^{-1}$  is given by

$$\begin{aligned} g(w) = f^{-1}(w) &= w - a_2 w^2 - (2a_2^2 - a_3) w^3 - (5a_2^3 - 5a_2 a_3 + a_4) w^4 + \dots \\ &= w + \sum_{k=2}^{\infty} b_k w^k. \end{aligned} \quad (2)$$

A function  $f \in \mathcal{A}$  is said to be bi-univalent in  $D$  if both  $f$  and  $f^{-1}$  are univalent in  $D$ . Let  $\Sigma$  denote the class of all bi-univalent functions in  $D$  given by the Taylor-Maclaurin series expansion given by (1).

For detailed information about the class of  $\Sigma$  was given in the references [1],[2],[3],[16] and [19].

The convolution or Hadamard product of two function  $f, h \in \mathcal{A}$  is denoted by  $f * h$ , and is defined by

$$(f * h)(z) = z + \sum_{n=2}^{\infty} a_n b_n z^n, \quad \text{where } f \text{ is given by (1) and } h(z) = z + \sum_{n=2}^{\infty} b_n z^n.$$

For complex numbers  $\alpha_i (i=1, 2, \dots, p)$  and  $\beta_j (j=1, 2, \dots, q)$  where  $\beta_j \neq 0, -1, -2, \dots; j=1, 2, \dots, q$ , the generalized hypergeometric function  ${}_pF_q(z)$  is defined by

$${}_pF_q(z) = {}_pF_q(z) (\alpha_1, \dots, \alpha_p; \beta_1, \dots, \beta_q; z) = \sum_{n=0}^{\infty} \frac{(\alpha_1)_n \dots (\alpha_p)_n}{(\beta_1)_n \dots (\beta_q)_n} \frac{z^n}{n!} \quad (3)$$

where  $p \leq q + 1$ ,

$$(\lambda)_n = \frac{\Gamma(\lambda+n)}{\Gamma(\lambda)} = \begin{cases} 1 & \text{if } n = 0 \\ \lambda(\lambda+1)(\lambda+2)\dots(\lambda+n-1) & \text{if } n \in N = \{1, 2, \dots\}. \end{cases}$$

The series given by (3) converges precisely for  $|z| < \infty$  if  $p < q + 1$  and for  $z$  in the open unit disc  $D := \{z \in \mathbb{C} : |z| < 1\}$  if  $p = q + 1$ . For the values  $\alpha_i$  and  $\beta_j$ , the family of hypergeometric functions  ${}_pF_q$  is proximately cognate to families of analytic and univalent functions. It is well-known that hypergeometric and univalent functions play important part in many different problems passed in applied mathematics, probability and statistics, operations research, signal theory, moment problems, and other different science (e.g., see Exton [6, 7], Miller and Mocanu [15] and Ronning [20]). We establish a new way for studying the connection between classes of hypergeometric and analytic univalent functions and also find some new bounds coefficients.

## 2. PRELIMINARIES

For  $p = q + 1 = 2$ , the series defined by (3) gives rise to the Gaussian hypergeometric series  ${}_2F_1(a, b; c; z)$ . This reduces to the elementary Gaussian geometric series  $1 + z + z^2 + \dots$  if

- (i)  $a = c$  and  $b = 1$
- (ii)  $a = 1$  and  $b = c$ .

For  $\Re(c) > \Re(b) > 0$ , we obtain,

$${}_2F_1(a, b; c; z) = \frac{\Gamma(c)}{\Gamma(b)\Gamma(c-b)} \int_0^1 \frac{t^{b-1} (1-t)^{c-b-1}}{(1-tz)^a} dt.$$

As a special case, we observe that

$${}_2F_1(1, 1; \alpha; z) = (\alpha - 1) \int_0^1 \frac{t^{\alpha-1} (1-t)^{\alpha-2}}{1-tz} dt,$$

and

$${}_2F_1(\alpha, 1; 1; z) = \frac{1}{(1-z)^\alpha},$$

so that

$${}_2F_1(1, 1; \alpha; z) * {}_2F_1(\alpha, 1; 1; z) = \frac{1}{1-z} = {}_2F_1(1, 1; 1; z).$$

The classical Koebe function is a function holomorphic in  $D := \{z \in \mathbb{C} : |z| < 1\}$  and given as follows:

$$k_2(z) = \frac{z}{(1-z)^2} = \frac{1}{4} \left\{ \left( \frac{1+z}{1-z} \right)^2 - 1 \right\} = z + 2z^2 + 3z^3 + \dots, \quad z \in D.$$

The important function  $k_2(z)$  follows from extremality for the familiar Bieberbach conjecture.

The Koebe function is univalent and starlike in  $D$  and maps the unit disk  $D$  onto the

$$\text{complex plane minus a slit } \left( -\infty, -\frac{1}{4} \right].$$

Certain generalizations of  $k_2(z)$  were appeared in the literature. Robertson [19] proved

$$k_{2(1-\alpha)}(z) = \frac{z}{(1-z)^{2(1-\alpha)}} \quad (0 \leq \alpha < 1)$$

is the extremal function for the functions starlike of order  $\alpha$ . The function

$$k_\alpha(z) = \frac{1}{2\alpha} \left\{ \left( \frac{1+z}{1-z} \right)^\alpha - 1 \right\} \quad (\alpha \in \mathbb{R} \setminus \{0\}, z \in D)$$

was well studied by Pommerenke [17], who investigated a universal invariant family  $U_\alpha$ .

The definition of  $k_\alpha$  was extended for a non-zero complex number  $\alpha$  by Yamashita [25].

From the classical result of Hille [10], we see that  $k_\alpha$  is univalent in  $D$  if and only if  $\alpha \neq 0$  is

the union  $A$  of the closed disks  $\{|z+1|\leq 1\}$  and  $\{|z-1|\leq 1\}$ . Making use of the geometric properties,

Yamashita [25] described how  $k_\alpha$  tends to be univalent in the whole  $D$  as  $\alpha$  tends to each boundary point of  $A$  from outside.

On the other hand, The properties of  $\log k'_c$ , where

$$k_c(z) = \frac{1}{2c} \left\{ \left( \frac{1+z}{1-z} \right)^c - 1 \right\} \quad (c \in \mathbb{C} \setminus \{0\}) \quad \text{and} \quad k_0(z) = \frac{1}{2} \log \left( \frac{1+z}{1-z} \right) \quad (z \in D),$$

(4)

were studied by Campbell and Pflatzgraff [4]. Pommerenke [17] studied the special case of (4), that is,

$$k_{iy}(z) = \frac{1}{2iy} \left\{ \left( \frac{1+z}{1-z} \right)^{iy} - 1 \right\} \quad (y > 0, z \in D),$$

for which

$$k'_{iy}(z) = \frac{1}{(1+z)^{1-iy} (1-z)^{1-iy}}.$$

An obvious and consequential extension of (4) was given by below equation.

$$k_c(\theta, \psi, z) = \frac{1}{(e^{i\psi} - e^{i\theta})^c} \left\{ \left( \frac{1 - ze^{i\theta}}{1 - ze^{i\psi}} \right)^c - 1 \right\} \quad (c \in \mathbb{C} \setminus \{0\}; e^{i\psi} \neq e^{i\theta}; \theta, \psi \in \mathbb{R}; z \in D),$$

and for the case when  $c = 0$ ,

$$k_0(\theta, \psi, z) = \frac{1}{(e^{i\psi} - e^{i\theta})} \log \left( \frac{1 - ze^{i\theta}}{1 - ze^{i\psi}} \right) \quad (e^{i\psi} \neq e^{i\theta}; \theta, \psi \in \mathbb{R}; z \in D).$$

We get

$$k'_c(\theta, \psi, z) = \frac{1}{(1 - ze^{i\theta})^{1-c} (1 - ze^{i\psi})^{1+c}} \quad (c \in \mathbb{C}).$$

Analogy

$$k'_{iy}(\theta, \psi, z) = \frac{1}{(1 - ze^{i\theta})^{1-iy} (1 - ze^{i\psi})^{1+iy}}$$

with the generating function for Meixner-Pollaczek polynomial  $P_n^\lambda(x, \theta)$  [11], [14] we get,

$$G^\lambda(x, \theta, -\theta, z) = \frac{1}{(1 - ze^{i\theta})^{\lambda-iy} (1 - ze^{-i\theta})^{\lambda+iy}} = \sum_{n=0}^{\infty} P_n^\lambda(x, \theta) z^n,$$

where  $\lambda > 0$ ,  $\theta \in (0, \pi)$  and  $x \in \mathbb{R}$ .

**Definition 2.1** For  $\lambda > 0$ ,  $\theta \in (0, \pi)$  and  $x \in \mathbb{R}$ .

$$\begin{aligned} zG^\lambda(x, \theta, -\theta, z) &= \frac{z}{(1 - ze^{i\theta})^{\lambda-iy} (1 - ze^{-i\theta})^{\lambda+iy}} = \sum_{n=0}^{\infty} P_n^\lambda(x, \theta) z^{n+1}, \\ &= \sum_{n=0}^{\infty} \frac{(2\lambda)_n}{n!} e^{inx} {}_2F_1(-n, \lambda + ix, 2\lambda, 1 - e^{-2i\theta}) z^{n+1}, \\ &= \sum_{n=0}^{\infty} F_{n+1} z^{n+1} \\ &= z + \sum_{n=2}^{\infty} F_n z^n, \end{aligned}$$

$$(5) \quad \text{where } F_{n+1} = \frac{(2\lambda)_n}{n!} e^{inx} {}_2F_1(-n, \lambda + ix, 2\lambda, 1 - e^{-2i\theta}) \quad \text{and } z \in D.$$

We give some special cases of different values of  $\lambda$ ,  $x$  and  $\theta$ :

$$(1) \quad L_n^\alpha(x) = \lim_{\phi \rightarrow 0} P_n^{\alpha+1} \left( -\frac{x}{2\phi}, \phi \right), \quad \text{called the Laguerre polynomial.}$$

$$(2) \quad H_n(x) = \lim_{\lambda \rightarrow \infty} n! \lambda^{\frac{-n}{2}} P_n^\lambda \left( \frac{x\sqrt{\lambda} - \lambda \cos \phi}{\sin \phi}, \phi \right), \quad \text{called the Hermite polynomial.}$$

$$(3) \quad U_n(x) = \lim_{\lambda \rightarrow 0} P_n^\lambda \left( \frac{x}{2}, \frac{\phi}{2} \right), \quad \text{called the symmetric Meixner-Pollaczek polynomial.}$$

$$(4) \quad P_n^0(x) = \lim_{\lambda \rightarrow 0} P_n^\lambda(x), \quad \text{shows that these polynomials are orthogonal polynomials in a strip } -1 \leq \Im(z) \leq 1.$$

(5)  $W_n(x) = \lim_{\lambda \rightarrow 0} F_n^{\lambda} \left( \frac{x}{2}, \frac{\pi}{2} \right)$  arises as the Mellin transform of odd Hermite orthogonal functions.

For  $\lambda > 0, \theta \in (0, \pi)$  and  $x \in \mathbb{R}$ , using the Generalized Meixner-Pollaczek polynomial [14],

we introduce convolution operator  $F_{x,\theta}^{\lambda} : A \rightarrow A$ , by

$$F_{x,\theta}^{\lambda} f(z) = \left( z G^{\lambda}(x, \theta, -\theta, z) * f(z) \right) = z + \sum_{n=2}^{\infty} F_n \alpha_n z^n, \quad (6)$$

where

$$F_n = \frac{(2\lambda)_{(n-1)}}{(n-1)!} e^{i(n-1)\theta} {}_2F_1(-(n-1), \lambda + ix, 2\lambda; 1 - e^{-2i\theta}) \quad (z \in U). \quad (7)$$

Let  $\Omega$  be the class of analytic functions  $w$ , normalized by  $w(0) = 0$ , satisfying the condition  $|w(z)| < 1$ . For analytic functions  $f$  and  $g$ , we say that  $f$  is subordinate to  $g$  in  $D$ , denoted by  $f \prec g$ , if there exists a function  $w \in \Omega$  so that  $f(z) = g(w(z))$  in  $D$ . In particular, if  $g$  is univalent in  $D$ , then  $f \prec g \Leftrightarrow f(0) = g(0)$  and  $f(U) \subset g(U)$ .

Recently there has been triggering interest to study bi-univalent function class  $\Sigma$  and obtained non-sharp coefficient estimates on initial coefficients. But the coefficient problem for each of the following Taylor-MacLaurin coefficients  $|\alpha_n|$  ( $n \geq 3$ ) is still an open problem (see [1, 2, 3, 12, 16, 23]). Many researchers (see [8, 9, 13, 22]) have recently introduced and investigated several interesting subclasses of the bi-univalent function class  $\Sigma$  and they have found non-sharp estimates on the first two Taylor-MacLaurin coefficients  $|\alpha_2|$  and  $|\alpha_3|$ . Motivated by the work of [18], [19], [21], and [24], the main aim of current investigation is to introduce Yamakawa family involving Generalised Meixner-Pollaczek polynomial operator of bi-univalent function families  $\Sigma$ . we find estimates on the coefficients  $|\alpha_2|$  and for the functions that belong to these Yamakawa family of functions of the class  $\Sigma$ . We need following Lemma 2.1 and Definition 2.2 to derive our main result. The techniques used are same as Srivastava et al. [22].

**Lemma 2.1** [17] Let  $h \in P$  the family of all functions  $h$  analytic in  $D$  for which  $\operatorname{Re}\{h(z)\} > 0$  and have the form

$$h(z) = 1 + p_1z + p_2z^2 + p_3z^3 + \dots \quad \text{for } z \in D.$$

Then  $|p_n| \leq 2$  for each  $n$ .

**Definition 2.2.(Yamakawa)** [24] A function  $f \in T(n)$  is said to be in the class  $T(n, \alpha)$  if it satisfies the following inequality:

$$\operatorname{Re} \left\{ \frac{f'(z)}{zf'(z)} \right\} > \alpha \quad (z \in D)$$

where  $0 \leq \alpha < 1$ .

### 3. COEFFICIENT BOUNDS FOR THE FUNCTIONS CLASS $T_{\Sigma}^{\lambda, \kappa, \theta}(\alpha)$

**Definition 3.1.** For  $0 < \alpha < 1$ , a function  $f \in \Sigma$  given by the series (1) is said to be in the class  $T_{\Sigma}^{\lambda, \kappa, \theta}(\alpha)$  if the following conditions are satisfied.

$$f \in \Sigma, \quad \left| \arg \frac{F_{\kappa, \theta}^{\lambda} f(z)}{z \left( F_{\kappa, \theta}^{\lambda} f(z) \right)'} \right| \leq \frac{\alpha \omega \tau}{2} \quad (z \in D) \quad (8)$$

$$\text{and} \quad \left| \arg \frac{F_{\kappa, \theta}^{\lambda} g(w)}{z \left( F_{\kappa, \theta}^{\lambda} g(w) \right)'} \right| \leq \frac{\alpha \omega \tau}{2} \quad (w \in D) \quad (9)$$

where  $g$  given by (2) is the analytic continuation of  $f^{-1}$  to  $D$  and  $z, w \in D$ .

**Theorem 3.1.** If the function  $f$  given by (1) be in the class  $T_{\Sigma}^{\lambda, \kappa, \theta}(\alpha)$ , then

$$|a_2| \leq \sqrt{\frac{4\alpha^2 + (\alpha-1)F_2^2}{4\alpha(F_2^2 - F_3^2)}}, \quad (10)$$

and

$$|a_3| \leq \frac{4\alpha^2}{F_2^2} - \frac{\alpha}{F_3}, \quad (11)$$

where  $0 < \alpha < 1$  and  $F_2$  and  $F_3$  are given by (7).

**Proof.** It follows from Definition 3.1 be in the class  $T_{\Sigma}^{\lambda, \kappa, \theta}(\alpha)$

$$\frac{F_{x,\theta}^\lambda f(z)}{z \left( F_{x,\theta}^\lambda f(z) \right)'} = [p(z)]^\alpha \quad (12)$$

and for its inverse map,  $g = f^{-1}$ , we have

$$\frac{F_{x,\theta}^\lambda g(w)}{w \left( F_{x,\theta}^\lambda g(w) \right)'} = [q(w)]^\alpha \quad (13)$$

where  $p(z)$  and  $q(w)$  satisfy the following inequalities:

$$\operatorname{Re}(p(z)) > 0 \quad (z \in D) \quad \text{and} \quad \operatorname{Re}(q(w)) > 0 \quad (w \in D). \quad (14)$$

Furthermore, the functions  $p(z)$  and  $q(w)$  have the form

$$p(z) = 1 + p_1 z + p_2 z^2 + p_3 z^3 + \dots \in P \quad \text{and} \quad q(w) = 1 + q_1 w + q_2 w^2 + q_3 w^3 + \dots \in P. \quad (15)$$

Comparing the corresponding coefficients of (12) and (13) yields

$$-F_2 a_2 = \alpha p_1 \quad (16)$$

$$-2F_3 a_3 + 2F_2^2 a_2^2 = \alpha p_2 + \frac{\alpha(\alpha-1)}{2} p_1^2 \quad (17)$$

$$F_2 a_2 = \alpha q_1 \quad (18)$$

$$2F_2^2 a_2^2 - 2F_3(2a_2^2 - a_3) = \alpha q_2 + \frac{\alpha(\alpha-1)}{2} q_1^2. \quad (19)$$

From equations (16) and (18), we get,

$$p_1 = q_1 \quad (20)$$

$$2F_2^2 q_2^2 = \alpha^2 (p_1^2 + q_1^2). \quad (21)$$

Now by adding equations (17) and (19), we get

$$4(F_2^2 - F_3 a_2^2) = \alpha(p_2 + q_2) + \frac{\alpha(\alpha-1)}{2}(p_1^2 + q_1^2),$$

by using (21), we get

$$a_2^2 = \frac{\alpha(p_2 + q_2) + \frac{\alpha-1}{\alpha} F_2^2}{4(F_2^2 - F_3^2)},$$

Applying Lemma 2.1 for the coefficients  $p_2$  and  $q_2$ , we have inequality given by

$$|a_2| \leq \sqrt{\frac{4\alpha^2 + (\alpha-1)F_2^2}{4\alpha(F_2^2 - F_3^2)}}.$$

This gives the bound on  $|a_2|$  as given in Theorem 3.1.

Next, in order to find the bound on  $|a_3|$ , by subtracting (19) from (17), we get

$$-4(a_3 - a_2^2)F_3 = \alpha(p_2 - q_2) + \frac{\alpha(\alpha-1)}{2}(p_1^2 - q_1^2)$$

From (20) we get  $p_1^2 = q_1^2$  and also using (21) we have

$$-4(\alpha_3 - \alpha_2^2)F_3 = \alpha(p_2 - q_2)$$

$$-4\alpha_3 F_3 + 4F_3 \alpha_2^2 = \alpha(p_2 - q_2)$$

$$-4\alpha_3 F_3 = \alpha(p_2 - q_2) - 4F_3 \frac{\alpha^2(p_1^2 + q_1^2)}{2F_2^2}$$

From equation (21)

$$\alpha_3 = \frac{\alpha(p_2 - q_2) - 4F_3 \frac{\alpha^2(p_1^2 + q_1^2)}{2F_2^2}}{-4F_3}$$

We know that  $p_1^2 = q_1^2$ , and if we equate the denominators, we can obtain

$$\alpha_3 = \frac{2\alpha(p_2 - q_2)F_2^2 - 8\alpha^2 F_3 p_1^2}{-8F_2^2 F_3}$$

Applying Lemma 2.1 for the coefficients  $p_1$ ,  $p_2$  and  $q_2$ , we get

$$|\alpha_3| \leq \frac{4\alpha^2}{F_2^2} - \frac{\alpha}{F_3}$$

This completes the proof of theorem.

Enstitüsü, Türk Dili ve Edebiyatı Anabilim Dalı,

### ÖZET

Meşrutiyetten bir yıl önce Selanik'te dünyaya gelmiş olan yazarımız Cahit Uçuk, ilk edebi ürünlerini erkeklerin yazı dünyasına hâkim olduğu bir dönemde; Cumhuriyet'in ilk yıllarında yazmıştır. Doksan bir yıllık ömrünün altmış beş yılını edebiyata ayıran yazar edebi metinlerin neredeyse her alanına imzasını atmıştır. Bilhassa Çocuk edebiyatı alanında Çocuk Esirgeme Kurumu ile beraber çalışarak çocuklar için döneminin en dikkat çekici hikâye ve romanlarını yazmıştır. Bu alanda Türk- Amerikan Derneğinden, Türk Çocuk Vakfından ve TÜYAP Kitap Fuarı'ndan ödüller almıştır. Roman sahasında da aynı başarıyı gösteren Cahit Uçuk'un romanları çok okunmuş ve sevilmiştir. Yazı hayatına hikâye ile başlayan Uçuk'un ilk eseri Yarım Ay gazetesinde yayımlanmıştır. Çeşitli gazete ve dergilerde romanları tefrika edilmiştir. Bu gazete ve dergiler: Cumhuriyet ve Tan gazetesi; Yarım Ay, Resimli Ay, Salon, Yıldız, Perşembe, Çocuk ve Çocuk Duygusu dergileridir. Yazdığı romanlarla bir nesil yetiştirmiş ve halkın her kesimi tarafından desteklenmiş olan Cahit Uçuk, o neslin çocuklarına da masallar, hikâyeler, romanlar yazmıştır. Yazarın romanları; Kirazlı Pınar, Dikenli Çit, Kırmızı Balıklar, Sürü Çıngırakları, Değirmen Taşı, Küçük Ev, Güneş Kokusu, Kanlı Dügün, Siyah Dantelli Şemsiye, Hep Yarın, Sabır Taşı, Gecenin Bu Saatinde, Özlem Şarkısı, Bıraktığı Yerden'dir. Bir de Uçan Su isimli bir romanı vardır ki bu romanın tefrikası kitaplaştırılmamıştır. Romanlarında daha çok aşk, kadın, arkadaşlık, köy, musiki gibi konulara değinmiştir. Yapı unsurlarını kusursuz kullanmıştır. Bu makalede çeşitli türlerde eserler yazmış olan Uçuk'un üç romanına yapı-tema incelemesi yapacağız. Bu romanlar; Siyah Dantelli Şemsiye, Dikenli Çit ve Gecenin Bu Saatinde'dir.

## BUILDING THEME IN CAHİT UÇUK'S THREE NOVELS

### ABSTRACT

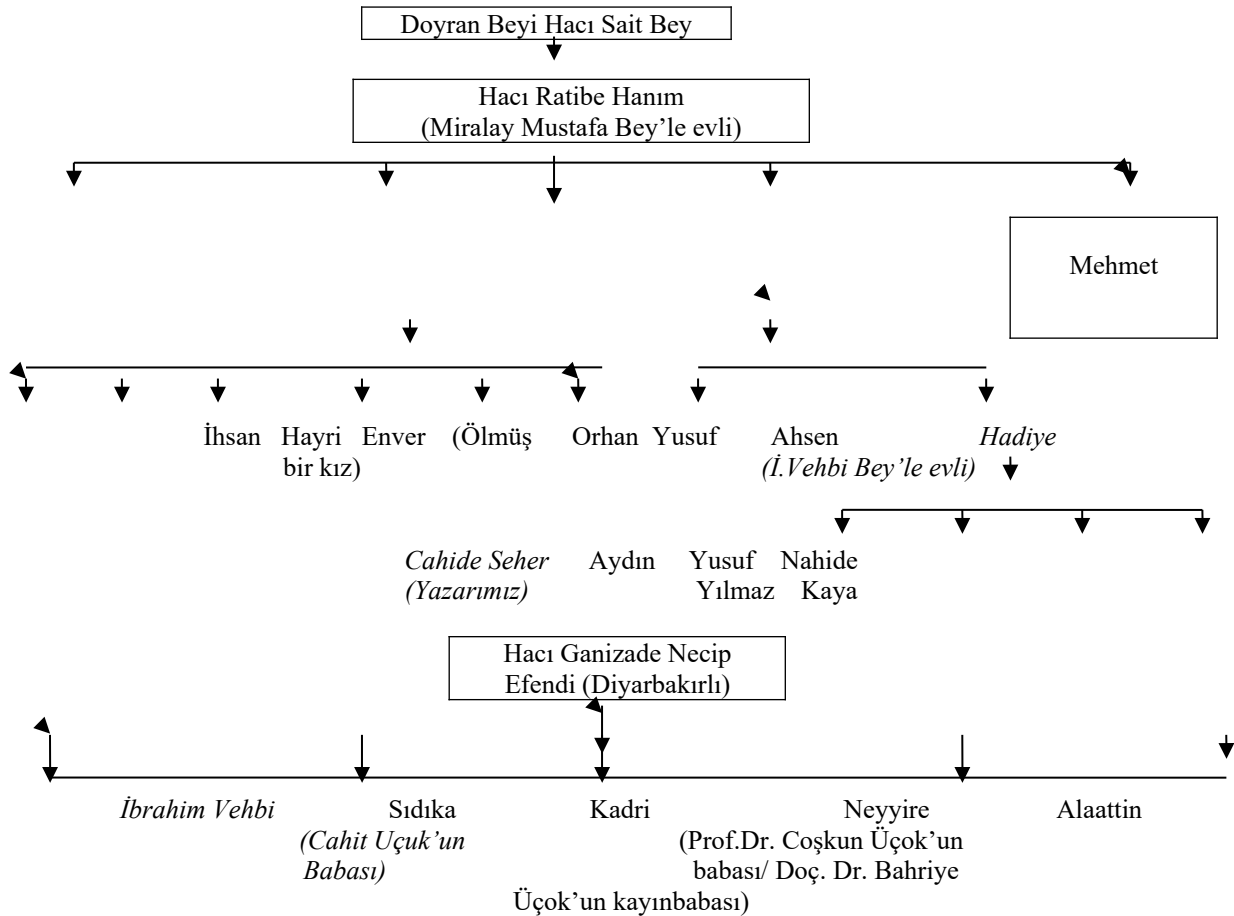

Our writer Cahit Uçuk, who was born in Thessaloniki a year before the Second Constitutional Monarchy, wrote his first literary works at a time when men dominated the world of writing; He wrote in the first years of the Republic. The author, who devoted sixty-five years of his ninety-one-year life to literature, has signed almost every field of literary texts. He wrote the most remarkable stories and novels for children, especially in the field of children's literature, working with the Child Protection Agency. In this field, he received awards from the Turkish-American Association, the Turkish Children's Foundation and the TÜYAP Book Fair. Having the same success in the field of novels, Cahit Uçuk's novels have been read and loved a lot. The first work of Uçuk, who started his writing life with a story, was published in the newspaper Yarım Ay. His novels have been serialized in various newspapers and magazines. These newspapers and magazines are: Cumhuriyet and Tan newspaper; Half Moon, Illustrated Moon, Salon, Yıldız, Persembe, Child and Child Emotion magazines. Cahit Uçuk, who raised a generation with his novels and was supported by all segments of the public, wrote fairy tales, stories and novels for the children of that generation. Author's novels; Cherry Spring, Thorny Fence, Red Fish, Herd Rattles, Millstone, Small House, Sun Scent, Blood Wedding, Black Lace Umbrella, Always Tomorrow, Stone of Patience, At This Time of Night, Longing Song, From Where It Left It. He also has a novel called Flying Water, the serial of this novel has not been published. In his novels, he mostly touched on topics such as love, women, friendship, village and music. He used the building elements perfectly. In this article, we will analyze the three novels of Uçuk, who wrote works in various genres, by structure-theme. These novels; The Black Lace Umbrella, the Prickly Fence, and This Time of Night.

**Keywords:** Cahit Uçuk, Novel, Construction, Theme.

## GİRİŞ

Asıl ismi Cahide Üçok olan yazarımız erkeklerin yazı dünyasında hâkim olduğu bir dönemde yazmaya başladığından dolayı adını Cahit Uçuk diye değiştirmiştir. Biraz da tanınmamak için yaptığı bu değişimde ailesinin Hüseyin Cahit'e duyduğu sevgi de esin kaynağı olmuştur. (Uçuk, 2003: 20) Atatürk ile tanıştırıldığında, bir bayanın erkek ismi taşıması Atatürk'ü de şaşırtmış ve “Neden Cahit?” diye sormuş Atatürk. Cahit Hanım da, “Efendim, siz muallimeyi muallim yaptınız, ‘e’leri kaldırdınız. Ben niçin ismimdeki ‘e’yi kullanayım. Ben de attım.” Demiştir. (Uçuk, 1995: 10)

Selanik'te dünyaya gelen yazar sonraki yıllarda İstanbul, Malatya (Hekimhan), Antalya, Ankara gibi değişik şehirlerde yaşamış ve bu şehirlerin edebiyat camiasında aşına bir yüz olarak bilinmiştir. Anne tarafından Selanikli baba tarafından Diyarbakırlı olan yazar köklü bir soya sahiptir. Bilhassa anne tarafından sanatsever bir muhitin içinde yetişmiştir. Babası Hekimhan, Alanya, Korkuteli gibi ilçelerde kaymakamlık görevinde bulunmuştur. Annesi, musikiye ilgili piyano dersleri almış elişinde becerikli muhitinde tanınan okumayı seven bir kadındır. Anne ve baba tarafından *soyağacı* şöyledir; (Doğan, 1999: 15)

Cumhuriyet'in ilk yıllarında yazı hayatına atılan Cahit Uçuk on beş roman, dokuz hikâye, beş piyes, on çocuk romanı, ondan fazla çocuk hikâye kitabı, ondan fazla masal kitabı, bir destan, bir şiir kitabı ve iki anı kitabının sahibidir. Yazarın gazete ve dergilerde yayınlanmasına rağmen kitaplarına girmeyen hikâyeleri de vardır. (Doğan, 1999: 25) Kendi soyadında bir yayınevi de açmış olan yazar adeta keşfedilmemiş bir yazı makinesidir. Hatta Türk edebiyatında kadın yazarlar arasındaki yazı makinesi de denebilir.

Cahit Uçuk'un dönemindeki en önemli şanslarından birisi de okumayı ve sanatı seven bir anne babaya sahip olmasıdır. Babası resimle annesi musikiyle ilgilenen ve evlerinde büyük bir kütüphane oluşturan kişilerdir. Bu kütüphanede Rus ve Fransız klasiklerinin ve yerli yazarların eserlerinin yeri oldukça geniş yer kaplamıştır. Yedi yaşındayken babasından Abdülhak Hamid Tarhan'ı, Tevfik Fikret'i dinleyen yazar Hamid ile birebir tanışmış hatta Hamid'e şiirini göndererek yorumlamasına da müşerref olmuştur. (Uçuk, 2003: 60) Victor Hugo, Maksim Gorki, Ömer Seyfettin, Reşat Nuri, Faruk Nafiz, Nazım Hikmet, Peyami Safa, Halit Ziya bilhassa Halide Edip gibi isimleri büyük bir tutku ile okur hatta dolabının iç kapağını bu yazarların resimleri süsler. (Uçuk, 1995: 367) Halide Edip'in Sultanahmet Mitinginde de bulunan yazar, annesine mitingle ilgili görüşlerini şöyle belirtir: "Halide Edip Hanım oradakilere enjektörsüz aşı yaptı. Türkleri birleştirme ve coşturma aşısı." (Uçuk, 1995: 295) Edebiyat dünyasına şiirle adım atmış olan Uçuk, ilk şiirini on üç yaşında yazmıştır. Hamid'in de yönlendirmesiyle nesir yazmaya başlamış ve ilk yazısı Yarım Ay dergisinde "Bir Masal Ki Herkes Okumalı!" adıyla yayınlanmıştır. Bab-ı Ali'de artık genç bir kız tanınmaya başlamıştır. İlk altı ay herkes erkek zannetmişse de Halit Fahri Ozansoy'un Oğlu Gavsî Ozansoy'un yaptığı bir röportajla her şey ortaya çıkmıştır. Bab-ı Ali'de bir kadın olarak yaşadığı sıkıntıları Selim İleri ile yaptığı söyleşide şöyle anlatmıştır:

"Yazdıklarım okunuyor ve seviliyordu. Ama bu bir takım çekemezliği durdurmadı. Bir ara bana Adalet Cimcoz taktı; 'Bab-ı Âlimizin sakızlı, eli maşalı George Sand'ı diyor, o kadar şaşırdım, o kadar üzüldüm ki! Ben bir şeyler yapmaya devam ettim. Bu tarz şeylere kayıtsız kalmaya çalıştım. Zaten yazmak benim için bir tutkuydu." (İleri, 1995-1996)

Her yazarın kendine özgü bir çalışma biçimi vardır. Cahit Uçuk da yazmaya başlama aşaması ve gayretiyle farkını ortaya koymuş bir yazardır. Manevi yönü kuvvetli olan yazarımız bunu eserlerine de yansıtmıştır. Bilhassa köylü tiplerini namazında- niyazında tiplerindedir. Ananesi Seher Hanım Bektaşî, annesi Hadiye Hanım ise Nakşibendî tarikatına bağlıdır. Cahit Hanım'ın da şeyhi vardır: Fevzi Baba. Yazıya masasının üzerinde Fevzi Baba'nın bir resmini,

avucuna alıp üzerine okuduğu bir tesbih, bir de küçük Kuran-ı Kerim durmaktaymış. Her yazısının başına Bismillahirrahmanirrahim yazarmış. Öğleden sonra yazmaya başlayıp zamanının çoğunu masada yazarak geçirirmiş. Yazdıklarında tahsise gerek olmadığını direk makineye basıma gittiğini dile getirmiştir yazarın kendisi. (Doğan, 1995: 2)

Yaşadığı dönemde birçok ödüle layık görülmüştür yazar. İlk ödülü Türk İkizleri adlı eseriyle aldığı “Hans Christian Andersen Liyakat Diploması”dır. Türk- Amerikan Derneği’nce bir senenin kadını seçilerek şeref ödülüne layık görülmüştür. 1991 yılında merhum Turgut Özal’ın elinden, çocuk edebiyatına katkılarından dolayı “Türk Çocuk Vakfı Onur Ödülü”nü almıştır. 1995 yılında da on dördüncü TÜYAP Kitap Fuarı’nda 60. yazı yılını kutlamasının anısına şeref ödülüyle onurlandırılmıştır. (Doğan, 1999: 40)

Profesyonel yazı hayatına hikâye ile başlayan yazar nesirde ilk denemesini çocukken annesinin okuduğu romanda küçük değişiklikler yaparak roman yazmayı denemiştir. Yazarın “çok önemsiz şeyler” diye nitelendirdiği bu eser ortada yoktur. İlk romanı Kirazlı Pınar, tefrika şeklinde yayınlanmış ve Uçuk’un dikkatli üzerine çekmesini sağlamıştır. Ahmet Muhip Dıranas eserle ilgili; Kirazlı Pınar ile başladığı bu tarzdaki roman sahasında çalışırsa, Cahit Uçuk edebiyatımız için bir kazanç olur.” demiştir.(Doğan, 1999: 20) İkinci romanı olan ‘Dikenli Çit’ de büyük yankı uyandırmıştır. Bu romanlarla gençler için geçiş dönemi olan -on iki ile on dört yaş arası- ara dönem romancılığında edebiyatımıza büyük katkıda bulunan yazarın romancılığı ile ilgili dönemin önemli gazetecilerinden Vâlâ Nureddin de şunu söylemiştir; “manevi bir körü vazifesini gören mutavassıt bir neşriyat”tır. (Nureddin, 1937: 20) Yaşar Kemal Cahit Uçuk’la karşılaşmasında bu iki meşhur romanı ile ilgili Uçuk’a; “Bacım, bacım; ben seni tanımaz olur muyum? Ben Dikenli Çit’i okudum da yazarlığa heves ettim.” demiştir. (Doğan, 1995: 2)

Yazarın romanları; Kirazlı Pınar, Dikenli Çit, Kırmızı Balıklar, Sürü Çingirakları, Değirmen Taşı, Küçük Ev, Güneş Kokusu, Kanlı Düğün, Siyah Dantelli Şemsiye, Hep Yarın, Sabır Taşı, Gecenin Bu Saatinde, Özlem Şarkısı, Bıraktığı Yerden’dir. Bir de Uçan Su isimli bir romanı vardır ki bu tefrika halinde kaldığı için bulunamamıştır. Romanlarında daha çok aşk, kadın, arkadaşlık, köy, musiki gibi konulara değinmiştir.

Bu makalemizde yazarın üç romanı üzerine eğileceğiz. Bunlar; Siyah Dantelli Şemsiye, Dikenli Çit ve Gecenin Bu Saatinde’dir. Bu romanları yapı unsurları ve temaları bakımından ele alacağız.

## 1. ÜÇ ROMANDA YAPI

Yapı incelemesi bir sistemi meydana getiren, onu oluşturan unsurlar arasındaki ilişki ağının özelliklerini belirlemeyi hedefler. Bu unsurların sistem içinde birim değerini taşıması gerekir. Öyleyse yapı incelemesi sistemi meydana getiren birimlerin belirlenmesiyle başlar. İnsan vücudu bir sistemdir. Dış görünüşüyle bu sistemi oluşturan birimler baş, gövde, kol ve bacaklardır. Bir başka dikkatle bu sistemi iç içe giren sindirim, dolaşım, sinir vb. alt sistemler oluşturur. Her edebî metin de kendi başına bir sistem hüviyeti taşır. Edebî metni yapı bakımından incelemek için metni oluşturan birimlerin belirlenmesi gerekir. (Aktaş, 2015: 140) Metinlerde yapı incelemesini insan vücuduna benzeten Aktaş'ın da aslında metnin en küçük birimine kadar inilmesi gerektiğini vurgulamıştır. Yapı incelemesi yapmak metni mikroskobun altına koymak gibidir. Bu çalışmamızda metni lam ve lamelin arasına koyup ayrıntılarına nüfus edeceğiz.

### 1.1. SİYAH DANTELLİ ŞEMSIYE/ DİKENLİ ÇİT/ GECENİN BU SAATİNDE

#### 1.1.1. Romanın Kimliği

Roman ilk olarak kendilerinin çıkardığı İlhan ve Turhan Selçuk kardeşlerin yönettiği 41.5 adlı mecmuada tefrika edilmiştir. Çıkan anlaşmazlıktan dolayı mecmua kapanınca roman yarım kalmıştır. O sırada yurt dışında olan yazar romanın devamını Zürih'te yazmış ve 17 Haziran 1954'te tamamlamıştır. Eserin basımı 1956 yılında İstanbul'da yapılmıştır. Yüz seksen dokuz sayfadan oluşan kitabın üzerindeki yayınevi bilgisinde İstanbul Matbaacılık tarafından yayına hazırlandığı görülmektedir. Fakat kitapta künye anlamında eksik bilgiler bulunmaktadır.

Kitapta dört tane karakalem çalışması bulunmaktadır. İki Yalçın Çetin ikisi de Suat Yalaz imzalı karakalem çalışmaları eserin muhtevasına ve olayların geçtiği zaman dilimindeki yaşantı tarzlarına uygun çalışmalardır.

Her yazarın tanınmasını sağlayan bir eseri vardır. Dikenli Çit'te Cahit Uçuk için böyle bir eserdir. Hatta Dikenli Çit nesli diye bir de söylem ortaya çıkarmıştır. Unutulmayan bu gençlik romanı 1937 yılında Yarım Ay dergisinde tefrika edilmiştir. Aynı yıl kitap halinde basılmış ve 1967 yılında da beşinci baskısını yapmıştır. (Doğan, 1999: 83)

Yüz doksan sekiz sayfa üç kısımdan oluşan kitap hakkında Vala Nurettin şunları söylemiştir: "Bu son ayların yeni neşriyatları içinde dikkate layık olan eserlerden biri şüphesiz ki Bayan Cahit Uçuk'un 'Dikenli Çit' isimli romanıdır. Bu kitabın yeni bir çığır açtığını söylersek hata etmeyiz. Bahusus Dikenli Çit, Türk edebiyatında bir boşluğu tamamıyor. Küçük çocuklar

İçin 'Tilki Kardeşin Maceraları', 'Güiver'in Seyahatleri' tarzında derece derece kıraat imkânları

vardır; bunlardan kanıksayan bir çocuk, çağı ilerledikçe, münhasıran büyüklere mahsus olması lazım gelen bir edebiyatın içine düşüyor. Arada manevi bir köprü vazifesini gören mutavassıt bir neşriyat yoktur. Hâlbuki mesela; Fransızlarda on iki ile on yedi yaşlar arasındakiler için ne kadar çok romanlar yazılmıştır. Bunlar adeta ayrıca bir kütüphane teşkil ederler. Mevzular daima nezih, nikbin, canlı ve ahlakidir. Araya bir aşk macerası karışmışsa da o da yine saf bir histir. İşte Cahit Uçuk'un bize verdiği numune bunlar biridir. Öyle sanıyorum ki, muharrir, aynı örnekler üzerinde kalemini yürütecek olursa hem gençliğe, hem de edebiyatımıza büyük bir hizmet etmiş olacaktır. Dikenli Çit her sayfasında insana tazelik, gençlik ve adeta bir çiçek kokusu veriyor. Bahar gibi bir kitap!" (Va-Nü, Dikenli Çit, Yarım Ay, No:20, 1937)

İstanbul Matbaası (Servet-i Fünun Matbaacılık) ve Uçuk Yayınları aracılığıyla basılan roman 1966 yılında Siz dergisinde tefrika edildikten iki yıl sonra kitap halinde basılmıştır. Esrin adı başkahramanın annesinin kendisi için kullandığı bir cümleden alınmıştır. Zira başkahraman geç saatte uyumamış olunca ve sığınmak için bir liman aradığında annesinin sesiyle bu cümleyi hafızasından geçirir. Yazar bu cümleyi unutturmayarak aslında başkahramanın masumiyetini de bize göstermiş oluyor.

İçerik olarak kadın merkezli olan bu romanda; yaş olarak oldukça küçük, iyi niyetli, film yıldızı olmak isteyen çok güzel bir kızın başından geçenleri anlatıyor. Yazarın her romanının ana karakteri kadındır (Siyah Dantelli Şemsiye hariç). Gecenin Bu Saatinde adlı romanı da gerek kitap adının farklılığı ile gerek de yazıldığı dönem herkesin dikkatini çekebilecek bir konu seçmesi ile dikkatleri üzerine çekiyor. Tefrika edildikten kısa bir süre sonra kitaplaştırılmış olması da bunun altını çiziyor.

### 1.1.2. Olay Örgüsü

Siyah Dantelli Şemsiye, yazarın diğer romanlarına göre vakası ilginç olan bir eserdir. Yazar bu konuda şunları söylemiştir: "Siyah Dantelli Şemsiye adlı kitabım vardır. Çok güzel bir kitaptır. Kitap o devrin, Osmanlı genç, entelektüel çok kibar bir kuyumcusunun hayatını anlatır. Padişahlar, padişah sofraları, padişahların gizli meclisleri, gizli sohbetler... Mesela, o zaman hünkârın -kendi adını kullanmamış ama- güfteleri var. Eşref Muhip bunları bestelemiş... Gizli davetler oluyor. İhlamur Köşkü'nde, orda burada... Gece âlemleri... O zamanın genç erkeğinin -bugün garsoniyer dediğimiz- 'yuva' dedikleri hanımlarla

buluşukları yerler var... Siyah Dantelli Şemsiye... Esrarengiz bir kadın... Göksu'da, Kâğıthane'de siyah bir araba görünüyor. İçinde siyah dantelli şemsiye olan, yüzünü yarı örten bir hanım... Arabada uçan tül etekler... Bir de Hintli kılığında bir arabacı... İki tane şahane at... Ve bunlar trak trak geziyor... Hanımın

yalnız ayakuçlarını, şemsiye tutan elini görüyorlar ama siyah dantelli şemsiye meşhur oluyor. Romanda bir kadın dört kadın görünüyor. Bu durum, romanın sonuna kadar anlaşılmıyor.” (Doğan, 1995)

Roman üç bölümden oluşmaktadır. Bu üç bölümde kendi içinde alt başlıklara ayrılmış ve olaydaki masalsı hava gerçek bir zemine oturtulmaya çalışılmıştır. Birinci bölüm romana da ismini veren siyah dantelli şemsiyenin ve onu tutan kadının tanıtıldığı uzun bir tasvir pasajıyla başlamıştır. Daha sonra başkişi olan Antikacı Ali Hüsrev'in tanıtımı ile devam etmiştir. Kapalıçarşı'da dükkânı olan nezih bir antikacı (kuyumcu) olan ana kahraman iyi, sevgi dolu, köklü bir ailede yetişmiş iyi eğitim almış (dil, musiki ve din anlamında) birikimli birisidir. Birinci kısım adeta kahramanların tanıtıldığı bölümdür. İkinci kısımda kahramanların üzerindeki efsunlu masalsı hava biraz dağıtılarak birbirlerine yaklaştırılırlar. Üçüncü kısım ise olaylara tam bir gizem havası çöktürülerek düğümlerin çözüldüğü kısımdır.

Yüz seksen dokuz sayfadan oluşan kitap zaman zaman okuyucuyu bir rüya ya da bir masal âlemine götürmektedir. Bir görünüp bir kaybolan, kimliği bir türlü ortaya çıkmayan, ardından koşulan gizemli bir kadın ve tanımadığı bir kıza âşık olup onun peşinden sürüklenen bir erkek... Hıçkırarak ağlayan minyatür bir elma... dört ayrı kadının hikayenin sonunda bir kadında vücut buluş... Masallara özgü bir öykü... Yazar yer yer masal unsurları içeren öyküyü reel hayatın içine oturtmuştur.(Doğan, 1999: 130)

Dikenli Çit romanında vaka yazarın çok sevdiği Antalya ve İstanbul'da geçmiştir. Ayla adlı genç kızın hayal kırıklığı ile sonuçlanan aşk hayatı anlatılıyor:

Arkadaşları arasında sevilen Ayla, babası tarafından zorla kendinden yaşça büyük olan babasının yeğeni mühendis Tevfik ile nişanlandırılmıştır. İhsan'ı seven Ayla kalabalık arkadaş grubuyla İstanbul'a gidip konservatuarda okumak istemektedir. Arkadaşlarının hepsinin konservatuara gidip kendisinin gidememesi Ayla'yı hasta eder ve babası anlayış gösterip nişanı bozar ve Ayla İstanbul'a arkadaşlarının yanına okumak içi gider. Beş gün süren vapur yolculuğunda üniversiteden hocası olacak olan ünlü kompozitör Necip Cevad ile tanışır. Necip Ayla'yı hem müzik anlamında hem dış görünüş olarak beğenir. İstanbul'da arkadaşlarına ve İhsan'a kavuşan Ayla'nın aklı Necip Cevad'ta kalır. İhsan'dan uzaklaşır.

Arkadaşları ile aynı pansiyona yerleşen Ayla Necip Cevad'ın konser daveti ile onu bir daha görür. Ve artık sevgili olarak görüşmeye başlarlar. Necip otuz beş Ayla on dokuz yaşındadır. Birbirlerine 'Ayla nine' ve 'Ustacığım' şeklinde seslenmeleri de bu durum tezadadır. Birlikte İstanbul'un birçok köşesinde buluşarak herkesten uzak aşklarını yaşamışlardır fakat Necip tedirgindir ve Ayla'ya

“Benimle gelersen arkanda bıraktıklarına üzülmez misin?” diye devamlı sormaktadır. Avrupa'ya gitmeyi Ayla'ya teklif eder ve bu Ayla'ya hoş görünür, sevdiği adam için kabul eder. Ayla ile olan randevuları aksatmaya başlayan Necip'in evli olduğu Ayla bir süre sonra öğrenir ve görüşmeyi keser bunu bir mektupla Ustacığınaya söyler. (Aralarındaki mektup trafiği oldukça dikkat çekicidir.) Fakat okuyucu bu durumu ancak kitabın son kısmında Ayla, İhsan'a söyleyince öğrenir. İstanbul'dan Antalya'ya döner ve babasının bahçesine çiftlik şekline getirip orada yaşamaya başlar. Bir yıl geçer yaz gelir ve arkadaşları Ayla'nın yanına Antalya'ya gelirler, İhsan'da tabii ki. Güzel bir yaz geçirirler ve İstanbul'a dönüş vakti gelince İhsan Ayla ile konuşur ve her şeyi öğrenir, okuyucularda her şeyi bu kısımda öğrenir. İhsan'da Ayla'nın yan bahçesini alarak Antalya'da kalır ve bahçelerinin arasında dikenli çit vardır. Ayla son cümleyi söyleyerek kitaba da adını verir adeta: “Aramızdaki dikenli çiti kaldıralım İhsan”. Aslında bu cümlede iki türlü anlam vardır. Hem sevgi anlamında hem de bahçe. Mecaz ve gerçek iç içe geçmiştir. Dikenli çit de Ustacığın ve ona duyduğu geçici sevgidir.

Romanın olay örgüsü hareketli ve basittir. Olay örgüsü işlenirken diyaloglara, mektuplara ve Ayla'nın hatıra defterine başvurulmuştur. Tabiat ve insan tasvirlerini yerlerinde ve bolca kullanmıştır yazar. Olay örgüsün en önemli yerini musiki tutar. Eserde Batı müziği ve Anadolu müziği yan yanadır. Anadolu müziğinin güzelliği ön plana çıkarılmıştır.

Siyah Dantelli Şemsiye romanında film yıldızı olmak için İstanbul Yeşim Çam sokağına giden ve oradan da Beyrut'a uzanan bir yaşam öyküsü anlatılıyor. Düştüğü felaketten kurtulmak isteyen Eda ve onun başına gelenler özellikle mekân merkezli anlatılmıştır. Gerçek ismi Süeda olan başkahraman mutaassıp bir aileye sahip olan ve yaşadığı evi ve ailesini beğenmeyen bir genç kızdır. Gazetede film yıldızı ilanına başvuru yapmak için film şirketine gider, kendini Eda diye tanıtır ve şirket sahibi Fazıl Bey kızı beğenir avans verir. Ailesi ile ilgili her şeyi öğrenir ve tekrar görüşmek istediğini söyleyerek uğurlar. İkinci görüşmelerinde kıza içki içerek onun çıplak fotoğraflarını çeker. Yaşadıklarından dolayı pişmanlık yaşayan Eda'yı fotoğraflarla tehdit ederek Beyrut'a gönderir ve Eda artık Beyrut'ta

bir umumi evdedir. Eda ile birlikte birçok kız kandırılmıştır. Bunlardan Gülsüm ve Nilgün ile yakınlık kurar. Ablanım diye birisi evi yönetir. Ablanım, Eda'yı güzel bulur ve ona herkesle görüştürmeyeceğine dair söz verir. Bir balo ile kızlar Beyrut'un sosyetik çapkın erkeklerine tanıtılır. Suzan'ı Saburi Bey'e ayırmıştır Ablanım ve Saburi ile macerası o akşam başlar Suzan'ın. Kızla evlenmek isteyen Saburi nikâh işlerini halledip umumi evden aldıracaktı fakat Fazıl Bey ortaya çıkıp Suzan'a sahip olmak ister. Suzan kendini balkondan atar ve bacağı kırılır. Saburi ile gecikmeli de olsa nikâhsız bir

yaşama başlar. Yurt dışına giderler güzel günler geçirir, birçok ülkeyi gezerler. Saburi kalp krizi geçirir bir süre hastanede kalırlar. Beyrut'a dönerken kaza geçirirler Saburi ölür ve başkahraman ablanımın eline tekrardan düşmemek için balkon düşünce tedavisini yapan genç doktoru arar (beni arayabilirsin başın sıkışınca demiştir Doktor Suzan'a). Onun yanında işe başlar ve ablanım ile Fazıl Bey artık kötü bir insan olan madde bağımlısı Gülsüm aracılığı ile Suzan'ı bulurlar. Kaçıracakları gece Suzan kaçır ve Doktor Hayri Maslar'a her şeyi anlatır. Doktorda dayısı olan Saburi'nin kendine emanet ettiği Nazan'ın Eda yani Suzan yani Süeda yani olduğunu anlar ve evlenirler.

Mutlu sonla biten romanda gerilimin yüksek olduğu kısımlar vardır ki bunlar vakanın can alıcı noktalarıdır. Vakaların başlangıcında Eda'nın deniz yolculuğunda kızlardan birinin motordan atlayarak balıklara yem olduğu, Beyrut'taki evde Nilgün'ün ölüm sahnesi, Suzan'ı Fazıl Bey'le boğuştuğu, barmenin telefonla Nazan'ı rahatsız ettiği, Gülsüm, Ablanım ve Fazıl Bey'in Nazan'ı kaçırmaya geldikleri sahnelerde gerilim had safhaya ulaşmıştır. (Doğan, 1999: 162)

### 1.1.3. Şahıs Kadrosu

Romanın şahıs kadrosu oldukça kalabalık hatta bir vücutta dört ayrı kadın başka bir vücutta iki ayrı erkek anlatılmıştır. Efsanevi özellikler içeren bu kahraman durumu ayrıntılı tasvirlerle sanki ayrı ayrı kahramanlar oluşturmak istenmiştir. Özellikle baş kadın kahramanımız aynı zamanda tek vücutta birden fazla kahramanı barındırmaktadır:

Hintli kadın

Romandaki kahramanları sıralı şekilde görelim:

-*Antikacı Ali Hüsrev (Eşref Muhib)*: Başkahraman olan Ali Hüsrev'in besteci kimliği Eşref Muhip'tir. Ahu'nun âşık olduğu kişidir. Ahu'ya şiirler yazıp besteleyen kişidir. İyi yetiştirilmiş, kibar, ince ruhlu birisi olan başkahraman dış görünüş olarak da gösterişlidir. Yalçın Çetin tarafından çizilen kara kalem çalışmalarında hayali olarak yansıtılan kahraman anlatılan

dönemin özelliklerini barındıran nazik bir görüntüye sahiptir. (Uçuk, 1956: 17) Ali Hüsrev ise Lakşimi'ye âşıktır. Adeta başkahraman çift kişiliktir. Lakşimi'yi (rakkaseyi) düşünerek oyun havaları besteleyen, Ahu için şiirler yazıp aşk besteleri yapan çift yönlü bir musikîşinas. Kendinin farkında olan ve kendine hayranlık duyan bir baş kahraman; “Yunan heykellerinin tenasüp ve ahengi ile karşısında duran bu genç adam kendisi miydi?.. Yere kuvvetle basan ayakları biçimli, kalınca kolları kuvvetli, elleri kusursuz. İçine dalga dalga gurura benzer bir sevincin sızdığını, bunun peşinde sıcak bir ürpermenin vücudu sardığını hissediyor.”(Uçuk, 1956: 32)

-*Ahu (Lakşimi –rakkase-)*: Bir vücutta dört ayrı kadından bahsedebiliriz. Bu durum hem masalsı bir hava estirmiştir romanda hem ciddi bir gizemle okuyucuda merak uyandırmıştır. Bu dört kahraman; 1.Ahu 2.Lakşimi (rakkase) 3.Dükkâna gelen Hintli kadın 4. Saraçhane'de Konak'taki Hintli hizmetçi kız'dır. İkinci ana kahraman olan Ahu (Bu ismi esasen Ali Hüsrev kurmuştur fakat sonradan enteresan şekilde kızın esas ismi olmuştur.) bir gizem perdesinin arkasındadır roman boyunca; “Beni anlayan lazım Ali Hüsrev!.. Yoksa mucizenin sihri dağılır.” (Uçuk, 1956: 185) Biz kadın kahramanı hep başkahramanın ağzından dinliyoruz. Net olarak romanın sonunca kendini ifade eden cümleler kurduğunu görüyoruz ve gizem, olay örgüsü böylece çözülüyor.

-*Dikran Efendi*: Ali Hüsrev'in arkadaşıdır, benzer bir işle uğraşırlar ve her sırrını Dikran Efendi'ye anlatır. “...iç kapının açılıp antikacı dostu Dikran Efendi'nin içeri girmesi bir oldu. İnce yüzlü, parlak siyah gözlü, sivri beyaz sakallı, çelebi bir adamdı. Daima siyahlar giyer ve her geldiğinde bir sürü iş haberiyle dedikoduyu beraberinde getirirdi.” (Uçuk, 1956: 11) Yazar kişilerin ismini andıktan hemen sonra içsel ve dışsal tasvir yapmıştır. Önce şekilsel

görünüş sonra içsel olarak başkahramanın hayatının neresinde olduğuna dair ayrıntılı tasvir yapmıştır.

*-Kanuni Niyazi Efendi:* Ali Hüsrev'in sırdaşı, hâldaşı... Birbirlerine derin muhabbet duyuyorlar, musiki ikisinin de ortak paydadır. Niyazi ile besteyi hallederler kazancını Hüsrev Niyazi'ye bırakır. "Niyazi Efendi devrin büyük kanun üstatlarındandı. Aynı zamanda usul tedris ederdi. Ali Hüsrev ondan iki sene kadar usul dersi almıştı ki bu iki yıllık çalışma, sazında kemale varmasına yardım ettiği kadar; iki erkeği müstesna dostlukla bağlamıştı. Ali Hüsrev'e saz âlemlerine giden kapları açan o idi. Geniş bir malumata sahip, birkaç dile vakıf ehli dil bir adamdı. Ve Ali Hüsrev'in mahremi esrarıydı. Bestelediği her yeni şarkı 'Eşref Muhib' namı müstearına bürünüp onun vasıtasıyla musiki âlemine ayılırdı." (Uçuk, 1956: 35)

*-Leyla Hanımefendi:* Kocasını kaybedince tüm varlığını oğluna adanmış bir anne tiplemesidir Leyla Hanım. Ali Hüsrev'i yetiştiren ve onun mutluluğu için çabalayan bir anne. Ali Hüsrev'in dilinden annesinin tasvirini dinliyoruz; "Ali Hüsrev içinden 'annem ne kadar genç ne kadar güzel' diye düşündü. Kendisini çocuk denecek bir yaşta doğurmuştu. Parıl parıl yanan iri siyah gözleri, oğluna baktığı zaman parıltısını şefkat buğusu örterdi. Solgun yüzünde bir eşini oğluna verdiği renkli dudaklı büyükçe fakat son derece güzel bir ağzı vardı. Uzun boylu, narin yapılı hayatının her devresinde şık ve zarif olmayı bilen bir kadındı." (Uçuk, 1956: 27) Annesi dini bütün ailesine bağlı, vefat eden eşine karşı duyduğu sevgiyi hala tüm hayatına yansıtan Müslüman bir Türk kadınıdır. Oğlunun sevdiği kadınlardaki gizemi çözen bir sürü kadının aslında tek bir kadın olduğunu bilen tam bir anne öngörüsünü sahip kahramandır.

*-Padişah (Hünkâr)*

*-Yaver Ağa:* Ali Hüsrev'in babadan kalma arabacısıdır. Ağzı var dili yok, işini yapan sessiz bir adamdır. "Mor camadanlı, kırmızı sırmalı cepkenli Yaver Ağa, yanık yüzünün hiçbir hattı kıpırdamadan, dudaklarının aralığından: -Emrin başüstüne paşam!. dedi. Ve bir heykel donukluğuyla karşılara bakmaya devam etti." (Uçuk, 1956: 13)

*-Ruzudil Kalfa:* Ali Hüsrev'de emeği çok olan dadısıdır. Evin hanımının sağ kolu, evin bütün idaresini elinde tutan yardımcısıdır. Bilhassa üzerinde taşıdığı anahtarlar ve evdeki her gizli şeyi bilip hanımını haberdar etmesi kahramanın öne çıkan belirgin tiplemesidir. "Ağarmış saçları tepesinde hotozu, üzerinde konaktan çıkarken hediye edilmiş elmasları, mevsimine göre ipekli, yünlü elbiseleriyle muhafaza ettiği güzelliğine yakışır bir zarafeti vardı. Sözü

sohbeti yerinde hazır cevap -Leyla Hanım ile Ali Hüsrev hariç- herkese karşı amir tavırlarıyla kendini saydırdığı, tatlı dili, nükteleri, menkıbeleri, hikâyeleri, sırasına göre masallarıyla sevdirmesini bilirdi. Otuz yaşına doğru evlendirilmiş fakat huysuz kocası iki sene sonra ölünce, birçok taliplerine rağmen tekrar konağa dönmüş ve bir daha ayrılmamıştı.” (Uçuk, 1956: 34) Ali Hüsrev dadısını çok sever ve ona muhabbetini belli eder.

*-Aşkınız:* Padişahın sevdiği olan Aşkınız, sarayda çekemeyenlerin oyunuyla saraydan uzaklaştırılır. Ali Hüsrev’in annesine denk gelir ve Ali Hüsrev için eve getirilir. Kız olanları Başkahramana anlatır o da yardımcı olur ve padişahla iletişim kurulur kız saraya döner. Aşkınız aynı zamanda padişahın hamiledir. Yazar Aşkınız’ı şöyle tasvir eder: “Haremin kapısını, Ali Hüsrev’in o güne kadar görmediği körpe bir kız açtı... Ürkek bakışları zümrüt yeşili, başak sarısı saçları çift örgülü saz benizli söğüt dalı narinliğinde nazlı bir şeydi.”

*-Fazıl Baba:* Bektaşî şeyhi olan kahraman Ali Hüsrev’in değişim geçirmesini sağlayan manevi liderdir.

*-Hikmet:* Leyla Hanımefendi’nin (Ali Hüsrev’in annesinin) eski akrabalarından olan kahraman aynı zamanda Leyla Hanımefendi’nin evleneceği kişidir. Yurt dışına gitmesinden dolayı bu evlilik olamamış ve Hintli bir kadınla evlenen Hikmet’in doğan kızı Ahu olmuştur. Kızını, kendisi ölünce Leyla Hanımefendi’ye emanet etmek üzere bir mektup yazmış ve olayların gidişatına esrarengizlik katmıştır.

*-Meydancı Dede:* Dergahın sofasında Ali Hüsrev ile Niyazi Efendiyi karşılayan kişidir. Fazıl Baba’nın yardımcısıdır.

*-İsmail Ali Bey:* Konak sahibidir. Padişahın da davetli olduğu bir eğlence düzenleyen ve musikişinasları aynı zamanda tüm sanatkârları davet eden ev sahibidir. Davete katılan diğer sanatkaralar; *-Lem’i Efendi -Nakkaş Eyran Ağa -Bestekâr Agâh Efendi*’dir.

*-Muhipzade Hüsrev Bey:* Ali Hüsrev’in babası olan kahramanın sadece adı geçmektedir. Padişah tarafından başkahramanın tanınması için anılan bir soy göstergesidir.

*-Leyla Hanımefendi’nin annesi:* Ali Hüsrev’in annesi olan Leyla Hanımefendi’nin iyi yetişmesi için emek vermiş bir anne figürü olarak adı anılmıştır.

*-Aşkınız’ın Cariyesi:* Aşkınız tarafından padişahı kontrol etmek ve kendisine bilgi vermek için görevlendirilen ve Ali Hüsrev tarafından yakalanıp Aşkınız’dan yardım istenen bir kahramandır.

Dikenli Çit Romanının Şahıs kadrosu şöyledir; romanın başkahramanı Ayla'dır. Yazarın neredeyse bütün romanlarında (Siyah Dantelli Şemsiye hariç) başkahramanlar kadınlar ve genç kızlardır. Toplumun her kesiminden kadınları romanlarında konu edinmiştir. Neredeyse hepsi İstanbul'da doğmuş büyümüşlerdir. Fakat Ayla farklıdır. Antalya'da yaşayan Ayla hem okumuş, şehir hayatında yaşayabilen hem köy hayatına alışkın bir kahramandır. Güçlü kişilik yapıları ile dikkat çeken kadın kahramanlar yazarın idealizmini de yansıtır. Zira Cahit Uçuk, soyunun kadınlarına hayrandır. Hayat hikâyesinden öğrendiğimize göre ananesi, annesi ve teyzesi çalışkan, cefakâr, fedakâr ve hırslı yönleriyle yazar üzerinde derin etki bırakmışlardır. Roman kahramanlarının güçlü kişilikleri, yazarın hayran olduğu soyunun kadınlarından da izler taşır.(Doğan, 1999: 190)

Erkek kahramanlarının çoğu şehirde yaşamış, tahsilli, belli bir mesleği olan, bazıları varlıklı kişilerdir. Necip Cevad, İhsan, Tekin, Ayla'nın babası, Tefik buna örnektir. Necip Cevad ünlü bir kompozitördür.

Şahısları tek tek inceleyecek olursak;

-*Ayla*: Romanın başkahramanı olan Ayla, çevresi tarafından çok sevilen musiki ile ilgilenen ailesinin tek çocuğu olan kişi duygu düşünce ve davranışları bakımından çok iyi çizilmiştir. Küçük yaşta istemediği biriyle nişanlanıp ayrılması, sonra kendinden yaşça büyük bir adamla girdiği gönül ilişkisinin içine düşmesi ve çıkmaz durumları aşmaya çalışması sırasındaki Ayla çok iyi tasvir edilmiştir. Necip Cevad'ın Ayla Ninesi...

-*İhsan*: Aylan'ın arkadaşları arasında en başka sevdiği kişidir. Çocukluk aşkı denilecek bir karakter. Ayla için fedakârlıklar yapabilecek şekilde tasvir edilmiştir.

-*Necip Cevad*: Ünlü kompozitör ve Ayla'nın tutkulu aşığı... Yaşça Ayla'dan büyük ve evli olan kahramandır. Çok konuşmayan sadece belli buluşmalarda Ayla'ya hayranlığını belirten, Ayla'yı kaybetmekten korkan, Ayla'nın kalabalık müzisyen arkadaşlarının meşhur hocası Necip Cevad'ı karakter tahlilleri oldukça başarılıdır. Ayla'nın Ustacığı...

-*Ayla'nın babası*: Sadece kendi doğruları olan, sert bir babadır. Ayla hasta olunca iyi yönden değişim göstermiştir. Tip gibi görünse de aslında bir karakterdir.

-*Ayla'nın annesi*: Ayla annesinin babasının yanlışlarına ses çıkarmamasına kızar yani romandaki anne eski kadınlardan sessiz ve eşinin her dediğini onaylayan bir kişidir. Bunu da ben senin gibi güçlü ve cesur değilim diye açıklar kızına.

-*Tevfik*: Ayla'nın kendisinden yaşça büyük mühendis nişanlısıdır. Sevilmeyen, mekanik kafaya sahip kişidir. Arkadaşları Ayla'ya yakıştırmaz, Ayla 'da sevmez. Don Kişot takma adını takarlar.

*Ayla'nın kalabalık arkadaşlar topluluğu*: -Tekin –Sevin –Ali –Ahmet –Selime –İclal –Ayşe ve daha ismi anılmamış kişiler. Kitabın girişinde on kız on erkek olmak üzere yirmi kişiden bahsetmektedir. Hepsinin ayrı bir özelliği vardır. Mesela Tekin şakacı ve çok iyi bir müzisyenmiş.

-*Ayşe*: Bahçıvanın kızı, Ayla'nın İstanbul'dan Antalya'ya dönüşünde ona çiftlikte yardımcı olmuş yarenlik yapmıştır.

-*Dilek*: Ayla'nın konservatuardan arkadaşı ve Necip Cevad'ın yeğenidir. Gerçi bilen tek kişidir ve Ayla'ya yasak aşktan dolayı çok üzülmüştür.

-*Tamara*: Tekin'in okuldan beğendiği Rus kahraman.

-*Bahçıvan Mehmet*: Aylaların evlerine bahçelerine bakar ve çiftliğe yardım eder.

-*Bahçıvanın karısı*: tek bir yerde adı geçer, piknik sonrası sofrayı toplamak için Ayla seslenir.

Gecenin Bu Saatinde romanında kalabalık bir şahıs kadrosu vardır. Eda'nın hayatının çevresinde dönen bu kişiler başkahramanın hayatında önemli değişiklikler yaparlar. Kahramanların hepsi tiptir. Karakter özelliği gösteren kahraman yoktur. Fakat tiplmeleri oldukça başarılı işlemiştir. Eda'nın hayatını birebir etkileyen kişiler; Fazıl Bey, Gülsüm, Nilgün, Abla'nım, Muhammed El-Saburi, Doktor Hayri Maslar'dır.

-*Süeda- Eda- Suzan- Nazan*: Romanın başkahramanıdır. Hayatı değiştikçe ismi de değişir. Bu durum bir gerçeği dile getirmektedir. Eda ve onun gibileri, hayatta insanlara bir kez verilen isimlerine bile sahip çıkamamaktadırlar. Küçük yaşta başına büyük olaylar gelen Eda, her türlü anında annesinin, “Gecenin bu saatinde genç kızlar yataklarında olur.” Sözüünü hatırlar, annesinin sesini kulaklarında duyar. Ama artık çok geçtir. Annesinin bu sözünü dinlediği için bu hallere düşmemiş midir?(Doğan, 1999: 163) Eda pasif bir tip değildir. Olaylar karşısında direnir. Örneğin, bu hayattan kurtulmak için intihar etmek ister. İlk gece Saburi tehlikesinden kendini korur. Gülsüm ve Abla'nım'dan kurtulma çarelerini bulup uygular. Eda, daha ziyade duygu ve düşünceleriyle tanıtılmıştır. Başına gelenlerin sürekli olarak muhasebesini yapar. Örneğin, kaza geçirdikten sonra hastanede düşündükleri, Doktor Hayri'nin evinde, aynada kendisiyle konuşması, onun içinde bulunduğu durumun vahametini göstermesi bakımından önemlidir.

-Muhammed El-Saburi: Zengin, iyi ve kurtarıcı Arap iş adamı tiplemesidir. Kötü yola düşmüş kızı kendi annesi de Türk olduğu için -verilmiş söz gibi- kurtarmıştır. Kıza hayatında göremeyeceği maddi manevi güzellikleri sunar. Yaşça başkahramanın dedesi yaşındadır (17-60) Cahit Uçuk kendi hayatında da yaşça kendinden yaşça büyük olan Mahmud Yesari ile evlenmiştir. Bu durumu kahramanlarına da yansıtmıştır diyebiliriz. Yazar bizlere şöyle tasvir ediyor Saburi'yi: “Yanımda uzun boylu bir adam gördüm. Kalın karakaşları altındaki siyah gözleri üstümdeydi. Yüzü çiçek bozuğu... Arap şivesiyle konuşan sıcak bir sesi vardı bu beyi.” (Uçuk, 1968: 66) yazarın eserde yabancı bir erkeğe yüklediği olumlu tavır dikkat çekicidir.

-Doktor Hayri MASLAR: Başkahramanımız olan Eda'nın diğer bir kurtarıcısıdır. Saburi'nin kuzeni ve İstanbul'dan ananesinin ricası ile Beyrut'a gelmiş ananesinin ve dayısının hatırasına hürmetten orayı terk etmemiştir. Eda'nın ya da Suzan'ın (umumi evde iken başkahramanın adı Suzan) umumi evde balkondan atlaması ile ona yardımcı olan doktordur. Daha sonra Ablanım'dan kaçmak isteyince ona yardımcı olmuştur. Dayısının ölüm döşeginde ona emanet ettiği Eda olduğunu öğrenince de zaten sevdiği başkahraman ile evlenir. Başkahramanın ağzından yazar doktoru şöyle tasvir eder: “Uzun boyu, geniş omuzları, biçimli başıyla ne

güzeldi. Yüzü, gözlerinin ifadesi. Belki güzel kelimesi onu anlatabilmek için yetmezdi.” (Uçuk, 1968: 113)

-Anne- Baba- Kardeş: Romadaki anne tiplemesi fedakâr, ailesine düşkün kızını kötülüklerden korumaya çalışan bir Türk annesidir. İstanbul'un fakir semtlerinde eşine maddi olarak yardımcı olmak için evde nakış-dikişle uğraşan masum bir anne. Kızının hayallerinden ve kendilerini beğenmediğinden haberdar olmayan devamlı kızına nasihat eden fakat kızını elinden yitiren bir annedir.

Babası cüzi bir miktara çalışıp ailesini geçindirmeye çalışan, çocuklarını ve eşini seven minik bir yuva kurmuş olan bir baba tiplemesi yapmıştır yazar.

Küçük kardeşle ilgili çok bir ayrıntı yok sadece var olduğu anılmış ve Eda'nın onu çok sevdiği söylenmiştir.

Anne, baba ve kardeş ile ilgili tasvire yer vermemiş yazar sadece üçünü birden bir cümlede anlatmıştır: “Babamın bir tüccar yanında kâtip olduğunu, aldığı parayla geçinemediğimizi, annemin trikotaj işleri yaptığını öğrenmişti... Bir de küçük kardeşim var. Onu da çok severim. Artist olur para kazanırsam ona ben bakacağım.” (Uçuk, 1968: 8)

Anne ve baba tasviri: “Kumral saçları büsbütün ağarmış, güzel yüzlü bir kadın, pencereden aşağıya bakıyor. Gözlerinde tükenmeyen bir bekleyişle kızından kuşkanadından bir habercik uman bir annedir. Akşamları yorgun yorgun yokuşu çıkan erkek. Elindeki filede sarı kızının sevdiği yiyecekleri taşımaktadır. Her günün sonuna kadar süren bir belkinin umuduyla yaşamakta bu erkek.

-*Ablanım (Emine Hanımefendi)*: Eserin kötü kadını olan tiplemedir. Umumi evde abla olarak orayı idare eden kişidir. Yani kızları pazarlama işini yapan tiplemedir. Yazar tasvirini başkahraman ağzından şöyle yapar: “Uzun boylu güzel bir kadın. Sağ kaş alnına kadar kalkık. Gözlerinde kalın sürmeler çekili. Kırmızı boyalı dudaklarında yarısına kadar yanmış bir sigara ilişik. Belindeki kuşağa bir deste anahtar şıkırdayan bir zincir asılıdır. Arap şivesine çalan bir şive ile konuşuyor.” (Uçuk, 1968: 44)

-*Gülsüm*: Başkahramanın yoldaşı, kaderdaşı olan iki arkadaşından birisidir. Gülsüm tiplemesinde dikkat çeken bir unsur var ki bu unsur karaktere ait bir şeyken tiplemde de kullanmıştır yazar. Eserin başında iyi bir insan olan Gülsüm eserin sonun yaşadıklarında dolayı kötü bir insana döner ve Eda’ya kıskançlıktan dolayı (doktorla gönül ilişkileri oluyor ve doktoru elinden Eda- Suzan aldı diye düşünüyor fakat madde kullandığından doktor ondan uzaklaşıyor.) kötülük yapar. Yazar başkahramanın ağzında Gülsüm’ü şöyle tasvir eder: “Sağ kanepede oturan

bir kız vardı. Saçları omuzlarında, gözleri gece, yüzü soluktur. Büyük ağzı, kırmızı kalın dudaklarıyla güzel bir kız. Konuştuğunu hiç duymadım. Sade türkü söylüyor maniler atıyor.”(Uçuk, 1968: 38) Gülsüm türkü barda şarkı söylemeye başlar, umumi evden kurtulunca fakat orada uyuşturucuya alıştırılır ve artık eski Gülsüm değildir. Oysaki başkahraman o evde Gülsüm’ü çok sever ve kendisine bir dayanak olarak görürdü.

-*Nilgün*: Eda’nın kaderdaşlarından ikincisi olan Nilgün on dört yaşında, bir kunduracıyı sevmiş ve ondan hamile kalmış minik kız. Eda, Nilgün’e karşı abla merhameti gösterir ve onu korumaya çalışır. Umumi evdeki adı Fatoş olan Nilgün balo gecesi kendisini bakire sanan bir adamla odaya çıkar ve odada adam onun bakire olmadığını anlayınca kıza zarar verir. Hamile olan Nilgün ölür ve çocuğu kurtarılır. Yazar başkahramanın ağzından şöyle tasvir eder Nilgün’ü: “İncecik bir yüz. Sudaki yıldız benzeri bir çift göz karanlığın içinde yanıyor.” (Uçuk, 1968: 34)

-*Fazıl Bey*: Romanın kötü adamı olan Fazıl Bey, tam Türk filmlerindeki tiplemedir. Erol Taş ile Tecavüzcü Coşkun karışımı bir tiplemedir. Yazar başkahramanın ağzında şöyle betimleme

yapar: “Dokulmuş saçları, kısık kara gözleri, fırça bıyıklarıyla tuhaf hem iyi, hem kötü bir adam tesiri bırakmıştı üstümde. Bakışları burgu benzeri, baktığı yeri delebilirdi sanki.” (Uçuk, 1968: 7)

#### 1.1.4. Mekân

Siyah Dantelli Şemsiye romanında olayların geçtiği mekânların zamana uygunluk gösterdiği dikkat çekmektedir. Geniş- açık mekân İstanbul’dur. Ev içi mekânlar en ince ayrıntısına kadar tasvir edilmiştir. (Doğan, 1999: 131) Teker teker mekân isimleri verilmiş bu mekanların ayrıntılı resimleri çizilmiştir okuyucunun dimağında. Hata eşya tasvirleri bile oldukça ayrıntılıdır. Mesela Ahu’nun evinde hizmetçinin getirdiği meyve tabağı, Ahu’ya verilmek üzere Dikran Efendi’nin Yaptığı küpeler bile en ince ayrıntısına kadar tasvir edilmiştir; “Üzeri zümrüt kakmalı halkaların altını görünmüyordu. Sanki halka maden ve taştan yapılmamış ta bir taze filiz kıvrılmış ve altına güneş ışıklı yeşil yapraklar sırlanmıştı. O kadar güzel, gönül alıcı, zarifiler ki, ancak ‘Ahu’nun pembe sedef kulaklarına layıktılar.” (Uçuk, 1956: 47)

Eserde kullanılan mekânlar:

*Dar- kapalı mekânlar*; Ali Hüsrev’in antikacı dükkânı, Dikran Efendi’nin dükkânı, Niyazi Efendi’nin dükkânı, Saraçhane’deki konak, Ahu’nun faytonu, Ali Hüsrev’in faytonu, Ali

Hüsrev'in köşkü, Ali Hüsrev'in konağı, Ali Hüsrev'in yuvası, eğlencelerin yapıldığı yalı-köşk- konak, saray, Şeyh Fazıl Efendi'nin evi- divanhanesi- dergâhı. Aynı zamanda kapalı mekânların içlerindeki odalar, hamamlar, soğukluklar, sofalar, haremleler de ayrıntılı şekilde tasvir edilmiştir.

*Geniş- açık mekânlar*; İstanbul, Kâğıthane, Saraçhane mesire yeri, Saraçhane'deki evin bahçesi, sahil, Nuruosmaniye Camii avlusu.

Bilhassa 'yuva' adlı evin tasviri dikkat çekicidir; "Üstleri uçuk pembe ipek kumaş kaplı iki koltuk bir kanepeler vardı... sıralı abanoz kitaplık ve nihayet gümüş semaverin durduğu küçük masa ile eşyası tamamlanan genişçe oda; oraya bir aşk yuvasından ziyade, zevkli bir erkeğin dinlenme odası hissini veriyordu." (Uçuk, 1956: 83)

Ahu'nun konağı yani Saraçhane'deki meşhur Billur Sokak Numarayı Cedit 52... Bu konağın tasviri abartılı şekilde yapılmıştır romanda; "Mermer döşeli bir yol ki iki yanı cennet bahçelerine misaldi." (Uçuk, 1956: 14)

Eşya tasvirlerinde ayrıntı fazladır bilhassa kapı tokmakları ön plana çıkarılmıştır. Kristal, bronz, porselen gibi çok farklı ham maddeden değerli şeylerdir bunlar. O zamanın değerlerini ön plana çıkaran basit ama dikkat çekici bir ayrıntıdır. Yazar mekân ve eşya tasvirlerinde oldukça başarılıdır.

Dikenli Çit romanında olaylar Antalya ve İstanbul'da geçer. Antalya'yı 'cennet' olarak nitelendiren ve buraya olan hayranlığını her fırsatta dile getiren yazar, buradaki zengin doğayı ve güzelliklerini başarılı bir şekilde tasvir etmiştir. Portakallıklar mekân olarak seçilir ve olay portakallıklarda başlatılır. Tasvir o kadar başarılı olmuştur ki okuyucu adeta portakalların arasında yürümüş onlara dokunmuştur. İstanbul'da doğduğu şehir olan Antalya'ya tekrar dönen yazar, kendisine mekân olarak bir çiftlik oluşturur. Ve burada yaşadığı sıkıntıları unutmaya çalışır. Yani Antalya'ya kahramanın hayatında güzellikleri içinde barındıran huzur, mutluluk ve kaçış mekânıdır.

İstanbul'un Ayla'nın hayatındaki konumu Antalya'nın tam tersidir. Yorucu, üzücü yönleri vardır. Ayla başta İstanbul'u ve konservatuarı hayalindeki en değerli şey olarak görse de orada yaşadığı gönül macerası Ayla'yı hırpalamıştır. Kendinden yaşça büyük olan evli hocası ile olan ilişkisi Ayla'nın köklerinden kopmasına sebep olmuş bunu gidermek için tekrar özünün mekânı olan Antalya'ya dönmüştür.

Bu iki şehir de yazarın hayatında birebir olan şehirlerdir. Hatta yazar Ayla'da kendisini göstermiş okuyuculara bile denebilir. “Erkekler Dünyasında Bir Kadın Yazar” adlı anı türündeki eserinde İstanbul ve Antalya'nın hayatındaki yerini oldukça açıklayıcı anlatmıştır. Yazar bu iki şehirde Ayla misali yaşadığı için yaptığı tasvirler gözleme dayanmaktadır. Bunda dolayı tasvirler realisttir ve yazar mekân tasviri konusunda oldukça başarılıdır.

Uçuk'un romanlarında; -Köy ve kasabanın mekân olarak / - Şehrin mekân olduğu olarak seçilmiştir. Dikenli Çit'te ikisi de kullanılmıştır. (Doğan, 1999: 206)

*Açık-geniş mekânlar:* Antalya, İstanbul, Boğaz, Haliç, Kalamış, Portakallık, Çiftlik açık mekân olarak eserde yer verilmiştir. Eserde en çok dikkat çeken açık mekân tasviri Antalya için yapılmıştır. Realist ve romantik bir tasvir olan portakallık tasvirin Antalya'nın içinde yer alır. “... bahçenin ortasından akan derenin kıyısına doğru yürüdüler... Ayla sofrayı suyun kıyısındaki büyük kayısı ağacının gölgesine kuruyordu...”

*Kapalı-dar mekânlar:* Antalya'daki ev, İstanbul'daki öğrenci pansiyonu, Dilek'in evi, lokantalar, otomobiller, gemi, çiftlikteki ev kapalı mekân olarak kullanılmıştır. Vakaların cereyan ettiği mekânlar kapalı mekânlardır. Yazar açık mekânları daha çok önemsemiş ve tasvir konusunda açık mekânlara daha cömert davranmıştır. Tabii ki kapalı mekân tasvirleri de vardır fakat açık mekân tasviri daha çok ön plandadır. Kendi odasının tasvirini yaparken kendi içini anlatıyor gibi bir hissiyat uyandırıyor okuyucuda.

Cahit Uçuk, Gecenin Bu Saatinde romanında evrensel bir konu işlemiştir. Böyle bir evrensel konuyu geniş bir coğrafyaya yaymıştır. Olaylar bir zamanlar İstanbul'daki film endüstrisinin merkezi durumunda olan Yeşil Çam sokağında başlar, Beyrut, Londra, Hamburg ve Paris'te devam ederek tekrar Beyrut'ta noktalanır. Mekân tasvirlerinde yazar gerçekçi olmaya çalışmış, bazen de detaylara fazlaca önem vermiştir. (Doğan, 1999: 162)

*Dar- Kapalı Mekânlar:* Açık adres verilerek kapalı bir mekân söylenmiştir. Yeşil Çam'daki film bürosu; Yeşil Çam Sokağı Fındık Apartmanı 3 Numara. Yine Yeşil Çam'da stüdyo olarak kullanılan ev; “Kapıdan girdik. Kapıcı kulübesinde ihtiyar bir adam uyukluyor. Loş koridorun sonundaki kapıyı itti. Geniş beton bir salon. Tavana yakın pencerelerden tozlu bir ışık uzanmış. Dekorlar, kocaman fotoğraf makinaları, projektörler.”(Uçuk, 1968: 12), kızların fotoğraflarının çekildiği ve hayatlarının karardığı kapalı mekândır. Başkahramanın İstanbul'daki aile evi, saf ve temiz mekândır. Özlediği, koparak hata ettiği kapalı mekândır baba evi; “Küçük evimiz ne kadar sevimli imiş. Her yanı derli toplu. Pencerelerinde hafifçe

solmuş basma perdeler üzerinde kreton örtülü karşılıklı divanlar. Masamızın ortasında annemin begonyası. Ufak bahçemizde

babamın diktiği son goncaları açılmağa çabalayan güller, renk renk kasımpatıları. Yazdan kalma bugünün bütün mutluluğunu duyuyorum içimde.”(Uçuk, 1968: 22) Romanın masum kapalı mekânı baba evi ise kötü kapalı mekânı Beyrut’taki umumi evdir; “Geniş, orman benzeri bir bahçe var çevremizde. Otel mi acaba diye düşündüm. Değil, değil. Burası bir evdi. Evdi ama insana ürküntü veren bir ev.”(Uçuk, 1968: 44) Bu iki iyi ve kötü mekânların ortalaması Doktor Hayri Bey’in muayenehanesidir. Umumi evden (birleşme evi) kurtulmuş yeni bir kapalı mekâna yerleşmiştir hemşire Nazan olarak. Bu mekân da baba evi kadar olmasa da koruyucu bir kapalı mekân olarak işlenmiştir.

Diğer kapalı mekânlar; yurt dışında kaldıkları oteller ve Saburi ile Doktor Hayri Maslar’ın lüks evleri diyebiliriz.

*Açık- Geniş Mekânlar:* Yurt için açık mekânı olarak sadece İstanbul kullanılmıştır. Yurt dışında ana mekân Beyrut’tur. Avrupa’nın birçok şehri de kullanılmıştır; Londra, Paris, Hamburg. Avrupa şehirlerindeki tasvirlerde oldukça gerçekçidir. Yazar, gerçek hayatta gezip gördüğü yerleri anlatmıştır, gerçekçi tasvirlerde bu durumun payı yüksektir. Beyrut, evrensel bir konunun işlendiği evrensel bir mekândır. Binbir Gece Masallarının mekânı olan Beyrut, yazarın romanın da bir masal havası yaratmıştır; “Gözlerimi açtığımda, bir yangının alevleriyle tutuşmuş, pembeleşmiş göğü gördüm. Korkunç bir yangın olmalıydı göğün altında. Ürkek bakıyordum göğe. Sonra bir virajı döndük. Uzaklarda yangın değil, parlayan ışıklarıyla koca bir şehir göründü... Öyle ışıklı ki bu şehir. Sanki bayram için donatılmıştı. Bir kıyı yolundaydık. Belki otuz katlı oteller yolun sağında, solda yol boyunca rıhtım. İri iri kayaları döğen beyaz köpüklü denizin gerileri simsiyah.” (Uçuk, 1968: 43)

#### **1.1.5. Zaman**

Romanda zaman kavramı net olmamakla birlikte olayların akışına ve farklı yapıdaki mekânların tasvirine göre tahmin edilebiliyor. Vakaların cereyanına bakılınca zaman Osmanlı dönemidir. Musiki seven şiirle ilgilenen adı verilmemiş bir padişah döneminde geçiyor olaylar. Sadece bir padişah mahlası telaffuz ediliyor ‘Hakani’. Net olmayan uydurma bir mahlas olduğu bilinmekle beraber köşklerde yapılan musiki eğlencelerine bakılınca acaba Lale Devri’ne ait bir vakadan mı bahsediliyor diye zaman tayini yapılabilir. Erkeklerin sevgililerine ‘yuva’ adlı konakları düzenledikleri bir zaman diliminden bahsediliyor.

Net tarihi vakalara göre tahmin etmekle birlikte mevsim, hafta, gün gibi zaman kavramları kullanılmaktadır. Yaz mevsimi bilhassa kullanılıyor eğlence mevsimi olduğu için, ‘Bu yazın

son mehtabı!’ (Uçuk, 1956: 130) tamlaması bize mevsimsel net bir tarih söylüyor. Yine gece, sabah, akşam, düğün- nişan günü gibi zaman kavramları kullanılıyor.

Kozmik zaman kavramını Dikenli Çit için kullanabiliriz. Bu romanda zaman kavramının insanla ilgisi belirgindir. Mevsim kavramları kullanılmıştır belirgin şekilde. Romandaki kahramanlar baharda gelecekle ilgili planlar yaparlar. Bahar mevsiminde neşeliler. Kış mevsimi okul mevsimidir ve sıkıntılı bir dönemdir. Olaylar zaman kavramlarıyla iç içe geçmiştir. Baharın sonu aşkın da sonu olarak verilmiştir. “Baharın sonu, aşkının sonuna rastladı. Bunda bir hayat sonu acılığı var.” (Uçuk, 1937: 174) Yaz mevsimi ve güzel olaylar hep beraber verilmiştir. İhsan ve Ayla güzel günlere adımlarını yaz mevsiminde atmışlardır. Zaman kavramının net olmadığı romanda mevsimin insan üzerindeki etkisi belirgin şekilde verilmiştir.

Gecenin Bu Saatinde romanında hikâye edilen vakanın belli bir zamanı yoktur. Esasen problem, her zaman Eda gibi artist olma hevesiyle yanıp tutuşan kendi başına buyruk pek çok genç kızın başına gelebilecek türdedir. Yazar net bir zaman kullanmamış olmamakla birlikte zaman kavramını içeren kelimeler kullanmıştır; “Kaç gündür yoldayız bilmiyorum. On gün on gece. Belki aylardır.” (Uçuk, 1968: 38)

Uzun bir zaman geçmiş havası yaratılıyor bazı cümlelerde bu romana masalsi bir hava katıyor; “Yarına yüzyıllar var.” (Uçuk, 1968: 275)

“Ben bir hafta komada kalmışım” (Uçuk, 1968: 195) cümlesi yine bir zaman kavramı içeriyor. Mevsim kavramları kullanılmıştır; “Bahar geliyor bahar! Bahar! Bahar!” (Uçuk, 1968: 222)

Romanda yer yer zamanda geriye dönüşlerde görülmektedir ki bu modern romanın belirgin özelliklerindedir. Yazar bu geriye dönüşleri kahramanın geçmişi hayal etmesiyle yapmıştır.

Betimleme yapılan yerlerde zaman kavramı kullanarak an betimlenmiştir; “Akşam iniyor usuldan. Gökten akıyor gökkuşağı renkleri dünyaya.” (Uçuk, 1968: 260)

#### **1.1.6. Bakış Açısı ve Anlatıcı**

Romanda anlatıcı kadar önemli olan bir diğer kavram da bakış açısıdır. Bakış açısı, vaka zincirlerinin, mekân, zaman, şahıs kadrosu gibi unsurların kim tarafından görüldüğü, idrak edildiği ve kime nakledildiği sorularının cevabıdır. Anlatma esasına bağlı edebi eserlerde mühim bir yeri olan ve diğer unsurları çevresinde toplayan vaka zincirinin şekli, başlangıç ve

bitiş noktası, büyük ölçüde bakış açısına bağlıdır. Eserde şahısların teşekkürü ve tanıtılması, mekânın tasviri gibi konularda da üzerinde durulacak unsurlardan biri bakış açısidir. (Aktaş, 2003: 76-78)

Eserde gözlemci bakış açısı baskın şekilde kendini göstermektedir. Fakat olay örgüsünde kahramanlardan bazılarının da bakış açılarına yer verildiği görülmektedir bu durumda çoğulcu bakış açısını ön plana çıkarmaktadır.

Yazar tıpkı diğer romanlarında olduğu gibi Dikenli Çit'te de çoğulcu bakış açısını kullanmıştır. Vakaların gerçekleştiği yerlerde kahraman bakış açısını kullanarak başkahraman öncelikli olmakla birlikte neredeyse bütün kahramanları konuşturmuştur. Geçmişe dönüş yapıldığı ve vakaların dış bir gözlemlerle aktarılmak zorunda kaldığı yerde bazen gözlemci bazen de hâkim bakış açısını kullanmıştır. Eserin kimin ağzından anlatıldığı vaka kadar önemlidir. Bakış açısı okuyucunun esere ilgisini ve eserin anlaşılabilirliğini de etkiler. Başkişinin hatıra defterinden ve mektuplarından alınan kısımlarda kahraman bakış açısı kullanılmıştır. Ustama mektup kısmındaki bir örnek cümleyle bunu görelim; “Sana gelecekmişim gibi içimde tuhaf titremeler duyarak masamın başına oturdum. Söylemek istediklerimin, duyduklarımın yanında, buraya yazdıklarım çok küçük fakat bunları yazabildiğime de seviniyorum çünkü başka bir şey yapamıyorum...” (Uçuk, 1937: 155)

Yazar olayların gidişatında kendini göstermez. Kahraman anlatıcılığı baskın olarak kullanmıştır. Adeta yazar kahraman gibi hissettirerek kullandığı anlatıcılığı başarılı işlemiştir romana. Dış bir anlatıcı yoktur. Roman masalsi bir hava barındırmasından ve evrensel her dönem geçerli olan bir konuyu işlemiş olmasından dolayı anlatıcının kullandığı dil çok önemlidir. Başkahramanın günlüğünden dinliyormuş gibi hissettiğimiz geri dönüşlerin olduğu kısımlarda kahraman uzaktan bir gözle kendi hayatına baktırılmış ve gözlemci bakış açısının özellikleri kullanılmıştır. Eserin diğer kısımlarında birebir olayları kahramanla birlikte yaşamıştır okuyucu. Bundan dolayı kahraman bakış açısı esere hâkimdir.

## 2. ÜÇ ROMANIN TEMATİK İNCELENMESİ

### 2.1 Ferdi ve Sosyal İçerikli Temalar

Yazar, romanlarında işlediği konuları gerçek hayattan alarak adeta döneminin sorunlarına ayna tutmuştur. Aşk, rüşvet, kadın hakları, kadının erkek ve çocuk için önemi, kadının toplum içindeki yeri, çalışan kadının sorunları, ihanete uğrayan kadınların maddi ve manevi

problemleri, anne- çocuk ilişkisi, köy insanının karşılaştığı sorunlar, köy hayatının güzel yönleri, folkloru- gelenek- görenek ve adetleri, insan- hayvan dostluğu, güzel sanatlar gibi pek çok konuyu romantik ve realist bir bakış açısıyla ele almıştır. (Doğan,1999: 176)

İnceleyeceğimiz Siyah Dantelli Kadın, Dikenli Çit, Gecenin Bu Saatinde romanlarında; aşk, kadın, sevgi, aile, arkadaşlık, güzel sanatlar(musiki), köy gibi temaları işlemiştir.

### 2.1.1. Aşk

Cahit UÇUK'un romanlarında işlenen aşk teması görür görmez duyulan bir aşktan ziyade zaman içinde gelişen olgunlaşan bir aşktır. "Aşk mihrabında dize gelenler, bir daha uzun yollar aşamazlar. Onların bedenlerinde, dış âlemin yükünü çekecek derman kalmaz. Secdeye varanlarsa, gözlerini kamaştırın nuru görmüşlerdir, artık gözlerini açsalar bile her yanda, hep aynı ışığı görürler." (Uçuk, 1956: 121) maddi sevginin evrilerek manevi bir sevgiye dönüşü üç romanının da bir yerlerinde muhakkak görülür.

Dikenli Çit'te İhsan ve Ayla'nın arasındaki aşk çocukluktan başlamıştır. Birbirlerini uzun süredir tanıyan ikilinin zamanla gelişen bir bağları vardır. Yine Gecenin Bu Saatinde adlı romanda da aşk duygusu ilk görüşte değil zamanla kişiler birbirini tanıdıkça oluşmuştur. Bu da yazarın aşk konusunda da realist davrandığını gözlemciliği elden bırakmadığını göstermektedir.

Yazar aşk ve fedakârlık temalarını iç içe işlemiştir. Ele aldığımız romanlardaki kahramanlar bilhassa kadınlar aşk için fedakârlık yapan tiplerdir. Dikenli Çit'te Ayla'nın Necib Cevad için yaptığı fedakârlıklar örnek verilebilir: "...Hiç üzülmez, arkanda bıraktıklarını düşünmez misin? –Evet, ustacığım razıyım, üzülmem, düşünmem." (Uçuk, 1937: 63) Ayla, sevdiği adam için herkesi arkasında bırakabilecek kadar fedakar bir kadın tipleridir.

Siyah Dantelli Şemsiye'de başkışı erkek, Gecenin Bu Saatinde'de ve Dikenli Çit'te başkışı kadındır. Fakat üçünün de aşk hissiyatı aynıdır. Erkek tiplerine de bir kadın narinliği verilmiştir aşk mevzusunda. Fedakâr, derin, güzel seven bir tiplerdir Ali Hüsrev.

Süeda'da (Eda- Suzan- Nazan) ve Ayla'da aşkı ilk olarak kendilerinden yaşça büyük hatta babaları ile eşdeğer yaşta adamlarda bulmuşlardır. Dikenli Çit'teki Necip Cevad otuz beş, Ayla ise 19 yaşındadır. Gecenin Bu Saatinde'deki Muhammed el Saburi altmışlı yaşlarda Süeda 17 yaşındadır. Bu aşk duygularında hem olgunluk hem de babasal bir sevgi vardır. Biraz korunma, sığınma ihtiyacı biraz olgunluğa hayranlık vardır. Dikenli Çit'te Ayla Necib arasında geçen bir konuşmada baba sevgisi hissiyatı görülür; "-Korkma Ayla seni paltomun

İçine alırım... - Ben çok küçükken, geceleri uykum gelince, babamın oturduğu koltuğa gider, onun kucağına yerleşir, röbdöşambırının altına kedi gibi sokulurdum. Babamın kucağında onun sıcaklığını baba kokusunu duyarak uyurdum. Şimdi de senin paltonun içine saklanacağım ustacığım...” (Uçuk, 1937: 68)

### 2.1.2. Kadın

Cahit Uçuk, kendisinin de kadın olması hasebiyle kadın kahramanlara daha çok ağırlık vermiştir. Siyah Dantelli Şemsiye adlı romanda başkahraman erkek olsa da olayların gizeminin baskın olduğu kahraman yine kadın olmuştur. Yani erkek başkahramanın ağzından kadın kahramanı yüceltmıştır yazar. Kadını ve kadın problemlerini hiçbir zaman göz ardı etmeyen yazar bunu romanlarına yansıtmıştır. Kadının erkek ve çocuk için önemi, toplum hayatındaki yeri, ihanete uğraması, sevilmesi, anne- çocuk ilişkisi, çalışma ve köy hayatında karşılaştığı sorunlar üzerinde durmuştur. (Doğan, 1999: 177) Tabi ki kadınlara her zaman olumlu yönden bakmamış gerçekçi davranarak eleştirmiştir de bunu Siyah Dantelli Şemsiye romanından bir pasajla inceleyelim: “Kız, kendisini saraydan götürmesi için ne kadar yalvarmıştı. Fakat Ali Hüsrev, onu almamıştı. Ne yapacaktı biçareyi. Güzel fakat kuş beyinli bir kızdı.” (Uçuk, 1999: 85)

Dikenli Çit adlı romanında ise eski kadınların erkeklere kayıtsız şartsız ezik bağılılığını eleştirmiş yazar. Bu eleştiriyi evladın ağzından annesine karşı yaptırmıştır ki karşıdaki erkek figürü de babadır; “Anne yıllarca babamın bu azabına nasıl katlandın?... Anne senin yerinde ben olsam bu kötü yaşayışa katlanmazdım... Bir yandan haklısın anne fakat bir yandan da eski kadınları korkak ve beceriksiz buluyorum.” (Uçuk, 1937: 30) Kadınları eski kadın ve yeni kadın diye ayırıyor. Bu bir nevi Batılı eğitim almış kadın ve almamış kadın ayrımıdır. Cumhuriyet sonrası hastalıklı bakış açısı yazarın zihniyetine de sinmiştir. Eskiye dair birçok şey kötü kadınlar da bunlardan birisidir.

Gecenin Bu Saatinde adlı roman meşhur olma meraklısı kadın karakterlerin çektiği sıkıntılar ve hayatlarının erkeklerin tek elinde olması kahramanlar üzerinden eleştirilmiştir. Yazarımız kadına ve sorunlarına oldukça duyarlıdır ve hemcinslerini eserlerinin neredeyse çoğunun başkahramanı yapmıştır. Kadın yazarların bir elin parmaklarını geçmediği bir dönemde yazarlık yapan Cahit Uçuk’un kadın temasını bu denli işlemesi şaşılmanması gereken bir durumdur. Realiteyi romanlarına taşımıştır diyebiliriz.

Cahit Uçuk'un kadınları genel olarak onurlu, sevecen, yumuşak huylu, iyi niyetli, bazen ihtiraslı kişilik yapısına sahiptir. Tuttuğu işte başarılı olmak, hayatta kalabilmek için mücadele etmek bu kadınların ortak yönüdür. Kadın fedakârdır. Evi, çocuğu ve eşi için her türlü fedakârlığa katlanır. Güçlü kişilik yapıları ile dikkat çeken bu kadınlar yazarın idealizmini de yansıtır. Zira Cahit Uçuk, soyunun kadınlarına hayrandır. Roman kahramanlarının güçlü kişileri, yazarın hayran olduğu soyunun kadınlarından da izler taşır. (Doğan, 1999: 190)

### 2.1.3. Arkadaşlık

Cahit Uçuk, incelediğimiz üç romanda da arkadaşlığa dair mevzulara yer vermiştir ki özellikle Dikenli Çit'te ana kaburgada arkadaşlık teması vardır. Başkahraman Ayla ve arkadaşlarının hayallerini gerçekleştirme üzerine kurulu olan roman. Ayla'nın arkadaşlarının olduğu ortamda kendisi gibi olduğunu ve mutlu olduğunu görürüz. Ayla'nın arkadaşları adeta ailesidir. Gerçek aşkı da bu arkadaşlarının arasında birinde bulur. Çocukluktan beri arkadaş olan İhsan ile Ayla birbirlerine âşık olurlar. Bu da arkadaşlığın her mevzuda ilk adım olduğunu açıklar niteliktedir. Ayla arkadaşlarından uzaklaşıp doğru olmayan bir yola sapınca acılar çeker ve tekrar onların gölgesine neşesine sığınınca mutlu olur. Yazar bu romanda arkadaşlık temasını kutsal bir mabet gibi kullanmıştır.

Siyah Dantelli Şemsiye romanında Başkahramanın iki arkadaşı vardır ve birisi ruhen rehberidir diğeri iş yeri arkadaşı ve yoldaşdır. Ruhen rehberi olduğu arkadaşı ile sonunda aynı şeyhe de bağlanarak ruhdaş olurlar. Yoldaşı olan arkadaşı da popüler arkadaşlıklardaki gibi sevdiği kızla görüşmesini sağlama durumu olmuştur. Yazar bu romanda da arkadaşlık temasının vazgeçilmez olduğunu vurgulamıştır.

Gecenin Bu Saatinde adlı romanda arkadaşlık teması sahte Perihan adında birisiyle başlar. Başkahraman gerçekte olmayan bu sahte arkadaşı kullanarak evden kaçır. Başta sorunlu başlayan bu arkadaşlık teması romanın sonunda da Gülsüm ile sorunlu biter. Başkahramanın aynı batağa düşmüş iki arkadaşı vardır biri Gülsüm diğeri Nilgün'dür. Nilgün acı bir şekilde ölür ardında sahipsiz bir çocuk bırakarak. Gülsüm de uyuşturucu kullanan ve Eda'ya zarar veren bir tiplere dönüşür. Eda Nilgün'ün çocuğuna sahip çıkarak bir nebze arkadaşlık temasını olumluya çevirmiş olsa da roman boyunca sorunlu bir arkadaşlık gözler önüne serilir. Zira kötü yola düşmüş kızı ya arkadaşı o yola düşür ya da o yolda arkadaş bulur demek istemiştir yazar.

### 2.1.4. Musiki

Cahit Uçuk'un hayatında güzel sanatlar oldukça geniş bir yer tutar. Özellikle musikiye olan eğiliminin temelinde çocukluk yaşantısından izler bulunur. O edebiyata ve sanata meraklı olan bir ailenin çocuğudur. Annesi ud, keman, piyano ve flüt çalar; babası da resim yaparmış. Kızlarına da Amasya'da Ermeni bir kadından yaklaşık bir ay kadar piyano dersleri aldirmişlardır. Sanatla alakadar bir aile ortamında büyüyen Cahit Uçuk'ta sanata karşı meylinin olmasını tabii görmek gerekir. (Doğan, 1999: 182)

Gecenin Bu Saatinde romanı hariç incelediğimiz diğer iki romanında da musiki temel unsurlardandır. Gecenin Bu Saatinde musiki ve şiir yan bir kahraman olan Gülsüm ile

özdeşleştirilmiştir sadece. Yazar aynı zamanda manzum eserlerde yazmakta olduğundan bu romanda birebir kendi yazdığı mani tarzı şiirlere de yer vermiştir.

Dikenli Çit adlı romanda vakanın ana kaburgasını musiki oluşturur. Konservatuar okumak için İstanbul'a gitmek isteyen Ayla ve arkadaşlarının hikâyesi anlatılır. Erkek kahramanlardan birisi de konservatuarda hocadır. Yani roman musiki üzerine kuruludur.

Siyah Dantelli Şemsiye'de bestekâr bir başkahraman görüyoruz ki piyano çalan ve besteleriyle meşhur olan birisidir. En yakın arkadaşı da ud çalan meşhur bir musikişinastır. Romanda padişahı da özellikle musiki yönüyle görürüz ki hep musiki toplantıları yaptırır ve padişahın da başkahraman tarafından bestelenen şiirleri vardır. Sevdiği kadın onun sanatsal yönüne hayran kalarak başkahramana âşık olur.

#### **2.1.5. Aile**

Yazarın kendi hayatında aile kutsal bir yer teşkil eder. Ailesine bağlı olan yazar aile kurabilmek için birkaç deneme yapmıştır. Aile içi ilişkilerinde kendisi de fedakâr olan yazar kahramanlarına da bu fedakârlık temasını sindirmiştir. Fedakâr olan iyi tiplere olmayan kötü tiplere olmuştur.

Dikenli Çit'teki Ayla, babası ile başta sorunlu olsa da sonradan yine ailesine sığınmıştır. Yazarın kendi hayatında yaşadığı kötü olaylardan sonra ailesine sığınmasına benzemektedir bu durum. Gecenin Bu Saatinde romanında artist olmak için ailesinden kaçan ve ailesini beğenmeyen Eda sonradan pişman olmuş ailesine dönmek çok istemiş ve onları özlemle hayal etmiştir. Siyah Dantelli Şemsiye'nin Ali Hüsrev'inin annesi ve dadısıdır ailesi. Babasını ötelere uğurlamış olan kahramanın aile olarak gördüğü kişiler kutsaldır ve acılarını o evde o ailede yaşayarak giderir. Şunu çıkarabiliriz buradan; yazarın kullandığı aile teması sığınılacak limandır.

#### **2.1.6. Sevgi**

Yazarın romanlarında sevgi teması oldukça geniş bir yer tutar. Olaylara ve insanlara rindane bir tavırla yaklaşan yazarın, insanları, hayvanları ve bitkileriyle tüm tabiatı, tüm hayatı sevdiğine ve onlarda derin manalar bulduğuna şahit oluruz. Bunda Hekimhan ve Antalya'da doğanın kucağında geçen çocukluk yıllarının ve şeyhi Feyzi Baba'dan aldığı feyzin de etkisi vardır. Yazarda 'Yaradılanı severim Yaradan'dan ötürü' düsturu vardır.

Hayvanlara ve tabiata karşı sevgisini özellikle Dikenli Çit adlı romanında net şekilde görürüz. (Doğan, 1999: 181)

Gecenin Bu Saatinde ve Dikenli Çit adlı romanlarında aşk ve baba sevgisinin birbirine karıştığını görürüz. Yaşça büyük erkeklere âşık olduklarını sanan başkahramanlar aslında aşkla dolu sandıkları betimlemelerinde karşı tarafa baba sevgisinin hissiyatlarını hissetmektedirler.

## SONUÇ

Cahit Uçuk, birçok edebi türden eserler vermiş bir edebiyatçıdır. Fakat roman yazarın hayatında farklı bir yere sahiptir. Bunun nedenleri arasında, yazarın mizacında uzun soluklu yazma tutkusunun var olmasını gösterebiliriz. Roman yazmaya tefrika olarak başlayan yazar daha sonra romanlarını kitaplaştırmaya başlamıştır. On beş roman yazmış olan Cahit Uçuk'un romanlarından birisi kayıptır. Ferdi ve sosyal konuların baskın olarak el alındığı bu romanlarda kadınlar ön plandadır. Kullandığı kadın kahramanların hepsinde yazarın hayatından esintiler görebilmekteyiz. Bu da bize yazarın eserlerinde realizmin baskın olduğunu gösteriyor. Realizm ve romantizmi romanlarında kullanan yazar tasvirlerini realist bir tavırla yapmıştır. Kullandığı mekânların da çoğu kendi hayatında var olmuş mekânlardır. Zaman kavramı romanlarında net olmamakla birlikte günlük olağan akışa dikkat edilmiştir. Mevsimlerle kahramanların ruh hali eş değer ilerlemiştir. Yaz ve bahar mevsimi mutluluğu kış ise sıkıntı ve kederi anımsatmıştır kahramanlarına ki yazar kendisi de anılarında bu şekilde hissetmektedir.

Cahit Uçuk, roman sahasında edebiyatımıza bir kazanç olmuştur (bilhassa ara dönem gençleri -14/ 18 yaş- için yazdığı romanlarıyla) ve on beş romanı edebiyatımıza kazandırmıştır. Bu çalışmamızda Cahit Uçuk'un üç romanını yapı- tema bakımından inceledik.

## AL/VOX/P-Sİ/AL (MOS) YAPISININ ELEKTRİKSEL KARAKTERİZASYONU

**Dr. Yusuf BİLGİN (Orcid ID: 0000-0001-6041-6129)**

Fen Bilimleri Enstitüsü, Fizik Bölümü, Katıhal Fiziği, Batman

### ÖZET

Metal oksit yarıiletken yapılar bir yarıiletken üzerine yalıtkan oksit ve bunun üzerinde de iletken bir tabakanın kaplandığı ve geniş bir kullanım alanı olan yapılardır. Bu çalışmada vanadyum oksit ( $VO_x$ ) filmler sol-jel daldırma yöntemi ile p-Si yüzeylere kaplandıktan sonra buharlaşma yöntemi ile omik ve doğrultucu alüminyum (Al) kontaklar oluşturularak metal oksit yarıiletken tabakası (MOS) elde edilmiştir. Elde edilen MOS tabakalar için elektriksel karakterizasyonu akım-gerilim (I-V) ve kapasite-gerilim (C-V) ölçümleri ile gerçekleştirilmiştir. Al/VO<sub>x</sub>/p-Si/Al (MOS) Yapısının I-V karakteristikleri ile temel elektrik parametreleri tayin edilmiştir. Ayrıca aynı ölçümlerden Cheung metodu kullanılarak yapının seri direnci hakkında sonuçlar elde edilmiştir. C-V ölçümleri de farklı frekanslar altında gerçekleştirilerek yapının kapasite ve iletkenlik değişimleri incelenmiştir. Ölçüm sonuçlarından yola çıkarak teorik hesaplamalarla metal oksitlere dair birçok elektriksel parametre hesaplanmış ve sonuçları tartışılmıştır. Yapılan ölçümler ile elde edilen değerlerden istediğimiz fiziksel parametreleri hesaplayabilmek için  $1/C^2 - V$ ,  $\ln I - V$  ve  $H(I) - I$  grafikleri oluşturulmuştur. Hesaplanan parametrelerin başlıcaları idealite faktörü (n), Seri direnç ( $R_s$ ), potansiyel engel yüksekliği  $\chi_b$ , Fermi enerjisi ( $E_f$ ), alıcı yoğunlukları  $N_a$ , kesme gerilimi ( $V_o$ ), difüzyon potansiyeli ( $V_d$ ), doyma akımı ( $I_o$ ) ve maksimum elektrik alan ( $E_m$ )'dir. Bu parametrelerin hesaplanmasında termiyonik emisyon teorisi, Norde ve Cheung metotlarının kullanılmış ve bu teoremlerin uygulama yöntemleri ve sonuçları irdelenmiştir. Elde ettiğimiz sonuçlar, farklı yöntemler kullanılarak elde edilen sonuçlar arasında küçük sapmaların olduğunu göstermektedir. Bu durum yöntemlerin farklı varsayımlara dayanmasından ve farklı değişkenleri ihmal edip farklı değişkenlere odaklanmasından kaynaklanmaktadır. Elde edilen metal oksit yapılar yüksek seri direnç gerektiren uygulamalara elverişli olacağı düşünülmektedir. Yapılan analizler neticesinde elde edilen yapıda kullanılan VO<sub>x</sub> oksit tabakasının SiO<sub>2</sub>'e alternatif malzemesi yerine aday malzeme olabileceği görülmektedir.

**Anahtar kelimeler:** Metal oksit yarıiletken, Vanadyum oksit, elektriksel özellikler.

**ELECTRICAL CHARACTERIZATION OF AL/VOX/P-SI/AL (MOS) STRUCTURE****ABSTRACT**

Metal oxide semiconductor structures that have a wide usage area are structures on which an insulating oxide and a conductive layer are coated on a semiconductor. In this study, after coating the vanadium oxide (VO<sub>x</sub>) films on p-Si surfaces by the sol-gel dip coating method, a metal oxide semiconductor layer (MOS) was obtained by forming ohmic and rectifying aluminum (Al) contacts via the evaporation process. Electrical characterization for the obtained MOS layers was carried out by current-voltage (I-V) and capacitance-voltage (C-V) measurements. I-V characteristics of Al/VO<sub>x</sub>/p-Si/Al (MOS) Structure and primary electrical parameters were determined. In addition, the series resistance of the structure was obtained by applying the Cheung method to the same measurement results. C-V measurements were performed at different frequencies to examine the capacity and conductivity changes of the structure. Based on the measurement results, many electrical parameters of metal oxides were calculated with theoretical calculations and the results were discussed.  $1/C^2 - V$ ,  $\ln I - V$  and  $H(I) - I$  graphs were generated from the values obtained by measurements in order to calculate the physical parameters. The main calculated parameters are; ideality factor (n), series resistance ( $R_s$ ), potential barrier height  $\phi_b$ , fermi energy ( $E_f$ ), acceptor densities  $N_a$ , cutoff voltage ( $V_o$ ), diffusion potential ( $V_d$ ), saturation current ( $I_o$ ) and maximum electric field ( $E_m$ ). Thermionic emission theory, Norde and Cheung methods were used in the calculation of these parameters, and the application of these methods and results of the theorems were examined.

Our results show that there are small deviations between the results obtained using different methods. This is due to the fact that the methods are based on different assumptions and neglect and focus on different variables. It is thought that the obtained metal oxide structures will be suitable for applications requiring high series resistance. As a result of the analyzes made, it is seen that the VO<sub>x</sub> oxide layer used in the structure obtained may be an alternative candidate material for the SiO<sub>2</sub>.

**Keywords:** Metal oxide semiconductor, Vanadium oxide, electrical properties.

## GİRİŞ

Metal oksitler benzersiz özelliklerinden dolayı birçok alanda ilgi noktası olmuşlardır. Özellikle geçiş metalleri bu özellikleri daha çok sergilemektedirler. Geçiş metallerin atomik boyutta boş d-kabuklarının olması onlara metal fazından yalıtkan faza geçiş yapabilme yeteneği kazandırır ve bu durum onlara farklı özellikler kazandırır [1]. Geçiş metallere olan vanadyumun da bazı oksitleri metal fazdan yalıtkan faza dış etkilerle geçiş yapabilmektedir [2].

MOS yapılar bir metal ile oksit tabakanın birleşiminden oluşurlar. Bu yapılar daha karmaşık yarıiletken aygıtlar üretmek için kullanılırlar [3]. Metal oksitlerin büyük çoğunluğu yarıiletken olarak kabul edilir. Metal oksitler metallere çok daha farklı özelliklere sahiptirler ve batarya, süper kapasitör, sensörler, süper iletkenler, güneş hücreleri gibi birçok uygulamada kullanımları mevcuttur [4].

Bir silikon yüzey üzerine bir metal kaplandığında tam bir kontak oluşmaz ve arada atomik düzeyde bir ara yüz oluşur. Metal - yarıiletken kontaklar hakkındaki bilgimiz Braun'ın 1874'te yaptığı ve bakır ile demir sülfür kontağının beklenmedik doğasını gösteren çalışmaya dayanır [5].

Yarıiletkenlerdeki kusurlar ve yabancı maddeler yasak enerji bandında etkilere neden olur. Benzer etkilere kristal örgü ve simetrisinin önemli ölçüde bozulduğu yarıiletken yüzeyinde de rastlanır. Yüzeydeki değişimden kaynaklı yasak enerji bandındaki bu değişimden yüzey durumları doğar. Yüzeydeki değişime benzer bir durum metal-yarıiletken gibi farklı eklemler oluşturulduğunda da gözlenir ve buna ara yüz durumları denir [6].

Ara yüz durumları iki gruba ayrılabilir. Bu gruplardan ilki metal ile diğeri ise yarı iletken ile etkileşim halindedir. Bu etkileşimler ara yüz durumlarının boşluk ile yarıiletken yasak enerji aralığındaki dağılımını etkiler. Bir MOS yapıda ara yüz bulunması bariyerin transmisyon katsayısını değişmesine, metal ile yarı iletken arasında potansiyel farkı oluşmasına, yarıiletkende difüzyon potansiyelin azalmasına, ara yüzün elektrik yüklenmesine neden olur. Ara yüz durumları ekstra izinli enerji durumları oluştururlar. Her bir ara yüz durumu elektriksel yükte de artışa neden olur. Bu da kapasitansın artması anlamına gelir. Bu sebeple kapasitans uygulana gerilimle ani yükseliş gösterir. Yüksek frekanslarda ara yüz durumları değişen ac sinyale yetişemez [7].

MOS yapılar için parametreleri farklı metotlar ile hesaplanabilmektedir. Bunlardan biri olan Norde metodunda eşitlik 9 ile ifade edilen ve termal emisyon teoreminden gelen Schottky

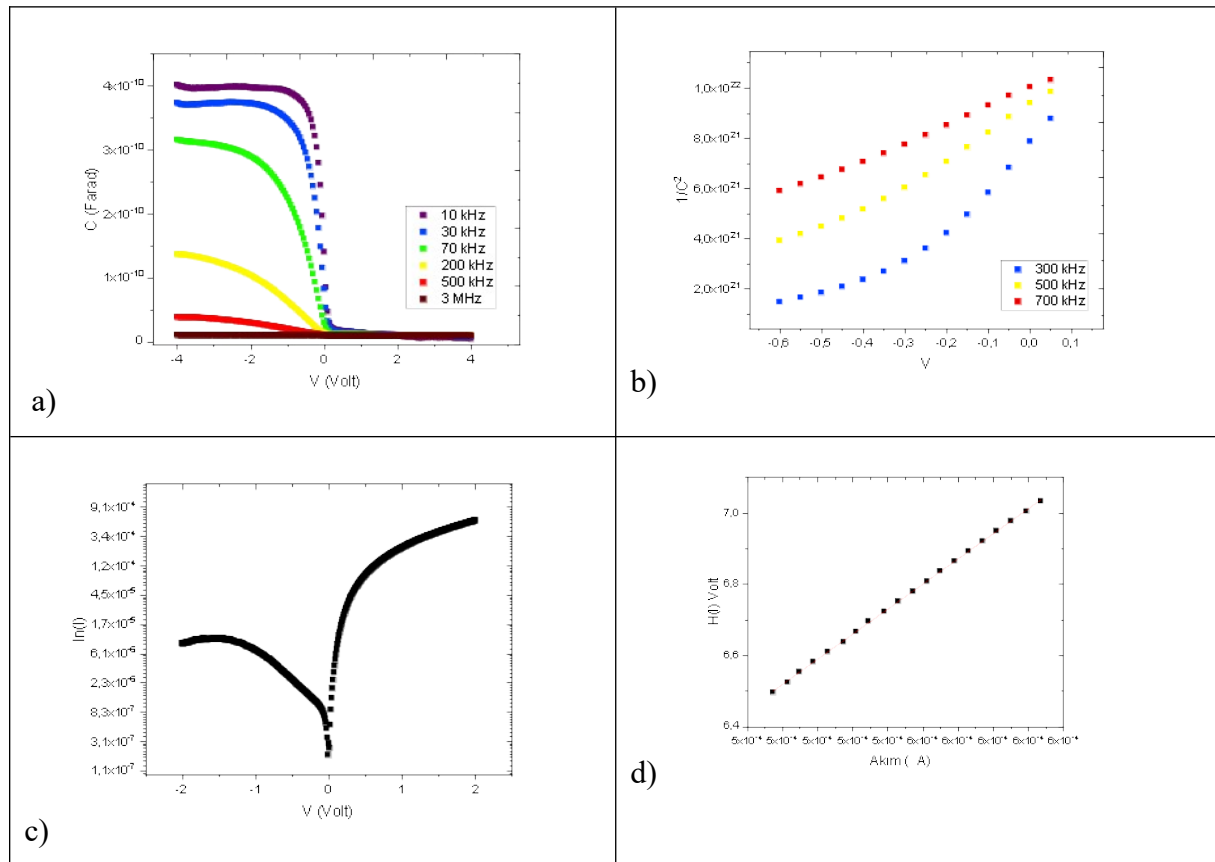

diyot için akım - gerilim denkleminde  $kT/q \ll V \ll IR$  varsayımı kullanır. Bu yöntem ile potansiyel

engel yüksekliği belirlenebileceği gibi alternatif olarak Cheung metodunda ise denklem 1 ile ifade edilen eşitlik kullanılarak potansiyel yüksekliği hesaplanmaktadır [8, 9].

### ARAŞTIRMA VE BULGULAR

Çalışmamızda sol-gel yöntemi ile elde ettiğimiz vanadyum oksit tabakası p-Si tabaka üzerine kaplanmış daha sonra buharlaştırma yöntemi ile omik ve doğrultucu kontaklar oluşturulmuştur. Bu şekilde elde edilen MOS yapıların akım – gerilim, iletkenlik – gerilim ve kapasitans – gerilim ölçümleri prob istasyonu kullanılarak yapılmıştır. Elde edilen sonuçlardan  $1/C^2$  ve  $H(I)$  hesaplamaları yapılmıştır.  $H(I)$  fonksiyonu eşitlik 1 ile ifade edilir ve  $\phi_b$  engel potansiyelini hesaplamamıza imkân sağlar. Bu eşitlikte  $n$  idealite faktörü,  $I$  akım,  $R_s$  seri direnci göstermektedir.

$$H(I) = n\phi_b + IR_s \quad (1)$$

Şekil-1: MOS yapılarla ait a) C-V, b)  $1/C^2 - V$ , c)  $\ln(I) - V$ , d)  $H - I$  grafikleri.

Farklı frekanslarda yapılan ölçümler için elde edilen kapasitans – gerilim grafiği şekil-1a'daki gibidir.  $1/C^2 - V$  grafiğinin geçiş bölgesinin eğiminden alıcı yoğunlukları  $N_a$  değeri  $1,91 \cdot 10^{14} \text{ cm}^{-3}$  olarak elde edilmiştir. Selçuk çalışmasında benzer şekilde alıcı yoğunluklarını  $\text{SiO}_2$  oksit tabakalı MOS yapı için ortalama  $6,24 \cdot 10^{13}$  olarak elde etmiştir [10]. Saloma çalışmasında ise  $1,26 \cdot 10^{14}$  olarak  $N_a$  değerini bulmuştur [11]. Görüldüğü üzere  $\text{SiO}_2$  oksit tabaka kullanılarak elde edilen sonuçlar arasında büyük farklılıklar olabilmektedir ve çalışmamızda vanadyum oksit kullanarak elde ettiğimiz MOS yapılara yakın değerler elde edilebilmektedir. Bu durum oksit tabakanın yarı iletken tabakaya göre oldukça ince bir yapıda elde edilmesi ile ilişkilendirilebilir. Eşitlik 2 kullanılarak Fermi enerjisi 0,28 eV olarak bulunmuştur.  $1/C^2 - V$  grafiğinin eğimi ve eşitlik 3 kullanılarak kesme gerilimi ( $V_o$ ) ve difüzyon potansiyeli ( $V_d$ ) değerleri sırasıyla 0,96 ve 0,99 Volt bulunmuştur. Bu eşitliklerde  $k$  Boltzmann sabitini,  $T$  mutlak sıcaklığı,  $q$  elementer yükü,  $N_v$  p-Si için valans bandındaki durumların yoğunluğunu göstermektedir. Saloma çalışmasında bu değerleri sırasıyla 0,58 ve 0,33 olarak elde etmiştir [11]. Aradaki farklılık oksit tabakanın türünün farklı olmasından kaynaklandığını düşünülmektedir.

$$E_f = \frac{kT}{q} \ln \left( \frac{N_v}{N_A} \right) \quad (2)$$

$$V_d = V_o + \frac{kT}{q} \quad (3)$$

Eşitlik 4 ve eşitlik 5 kullanılarak maksimum elektrik alan ( $E_m$ ) ve Schottky engel alçalması ( $\phi_b$ ) değerleri sırasıyla  $7,63 \cdot 10^3 \text{ V/cm}$  ve  $9,65 \cdot 10^{-3} \text{ eV}$  olarak hesaplanmıştır. Bu eşitliklerde  $\epsilon_s$ ,  $\epsilon_o$  sırasıyla p-Si ve boşluk için dielektrik sabitini göstermektedir. Bu değerler engel yüksekliği hesaplamasında kullanılmıştır.

$$E_m = E(x=0) = \sqrt{\frac{2qN_A V_d}{\epsilon_s \epsilon_o}} \quad (4)$$

$$\Delta \phi_b = \left[ \frac{q E_m}{4\pi \epsilon_s \epsilon_o} \right]^{1/2} \quad (5)$$

Engel yüksekliği ( $\phi_b$ ) değeri eşitlik 6 kullanılarak  $C - V$  değerlerinden 1,27 eV olarak bulunmuştur. Selçuk çalışmasında bu değeri  $\text{SiO}_2$  oksit tabakası için 0,63 ile 1,09 arasında değişen değerlerde bulmuştur [10]. Engel yüksekliğindeki bu farklılık vanadyum oksit filmlerin daha yüksek kesme potansiyeline sahip olması sonucu ile örtüşmektedir.

$$\phi_{b(C-V)} = V_d + E_f - \Delta \phi_b \quad (6)$$

Tüketim tabakası genişliği değeri eşitlik 7 kullanılarak  $2,61.10^{-4}$  cm olarak bulunmuştur. Saloma çalışmasında bu değeri  $1,92.10^{-4}$  olarak bulmuştur [11]. Tüketim tabakasının geniş olması film kalınlığının geniş olması ile ilişkilendirilebileceği gibi difüzyon potansiyelinin daha büyük olmasından da kaynaklandığı düşünülmektedir.

$$W_D = \left( \frac{2 \epsilon_s \epsilon_o V_d}{q N_A} \right)^{1/2} \quad (7)$$

Elde edilen MOS yapıların sıfır beslem kapasitans değeri  $C_o$  ve maksimum kapasitans değeri  $C_{ox}$  sırasıyla  $1,40.10^{-10}$  ve  $4,02.10^{-10}$  Farad bulunmuştur.  $C_{ox}$  maksimum kapasitans değeri filmdeki oksit tabakaya ait olduğu kabul edilir. Eşitlik 8 kullanılarak bu değerlerden oksit tabakanın dielektrik katsayısı  $\epsilon'$  2,86 F/cm olarak bulunmuştur. Bu parametreler maksimum değerinde elde edildiği 10 kHz frekansındaki ölçümlerden elde edilmiştir. Kapasitans eşitliği kullanılarak oksit film tabakasının genişliği ölçülen minimum kapasitans değeri kullanılarak 0,76  $\Omega$  olarak bulunmuştur. Tataroğlu çalışmasında  $SiO_2$  kullanarak elde ettiği benzer yapılar için  $C_{ox}$  değerini frekansa göre 2,66 ile 3 pF arasında değişen değerlerde elde etmiştir [12]. Tataroğlu çalışmasında  $SiO_2$  için dielektrik sabiti değerini 1,69 olarak bulmuştur [13].

$$\epsilon' = \frac{C_{ox}}{C_o} \quad (8)$$

I – V ölçümleri sonuçlarından faydalanılarak logaritmik ölçekteki  $\ln(I)$ -V grafiği şekil-1c'deki gibi elde edilmiştir. MOS yapıya ait  $I_o$  doyma akımı değeri eşitlik 9 ve I – V grafiğinin ön pozitif beslem bölgesinin eğimi kullanılarak  $2,34.10^{-7}$  amper olarak bulunmuştur.

$$\ln I = \ln I_o + \frac{qV}{nkT} \quad (9)$$

MOS yapısına ait sıfır beslem potansiyel engel yüksekliği eşitlik 10 kullanılarak 0,65 eV olarak bulunmuştur. Bu eşitlikte A ve  $A^*$  sırasıyla diyot alanı ve Richardson sabitini göstermektedir.

$$\phi_{bo} = \frac{kT}{q} \ln \left( \frac{A \cdot A^* T^2}{I_o} \right) \quad (10)$$

Bir diyot için ideallikten sapma miktarını gösteren parametre idealite faktörü olarak isimlendirilir [14]. Bu değer eşitlik 9'dan faydalanılarak  $\ln I - V$  grafiğinin eğiminden elde edilir. Elde ettiğimiz MOS yapısına ait idealite faktörü 2,12 olarak bulunmuştur. H(I) fonksiyonunun düşey eksenini kestiği nokta ve  $\phi_{b(CV)}$  değeri kullanılarak idealite faktörü 2,31 olarak bulunmuştur. Farklı oksit tabakalar kullanılarak yapılan literatürdeki çalışmalarda idealite faktörü genellikle 1,5 – 2,5 aralığında bulunurken kimi çalışmalarda değer 4,61'e

kadar yükselmektedir [15]. Elde ettiğimiz idealite faktörü literatürdeki sonuçlar ile uyum içindedir.

Bir metal-oksit kontak için seri direnç değeri kullanılan yarıiletken materyal ve omik kontak ile ilişkilidir [16]. Eşitlik 11'e göre elde edilen grafiğin eğiminden  $R_s$  değeri bulunabilir [17].

Benzer şekilde I – V grafiğinin pozitif bölgedeki eğiminden de  $R_s$  değerini doğrudan elde etmek mümkündür. I – V grafiğinden  $R_s$  değeri 2994,01  $\Omega$  olarak bulunurken  $dV/d(\ln I)$  grafiğinden 2459,81  $\Phi$  olarak bulunmuştur. Saloma, bu değeri elde ettiği  $\text{SiO}_2$  oksit tabakalı MOS yapıları için 1270 ile 3630  $\Phi$  arasından değişen değerlerde elde etmiştir [11]. Elde ettiğimiz değer ideal seri direnç değerlerine göre büyük olmakla birlikte yüksek direnç istenen uygulamalar için uygun olacağı düşünülmektedir.

$$\frac{dV}{d(\ln I)} = I R_s + n \left( \frac{kT}{q} \right) \quad (11)$$

MOS yapılara ait engel yüksekliği Cheung metoduna göre H(I) grafiği ve eşitlik 1 kullanılarak 1,66 eV olarak bulunmuştur.  $\text{SiO}_2$  için yapılan çalışmalarda engel yüksekliği 0,68 ile 0,97 eV arasında değişen değerler bulunmuştur [13, 10].

Seri direnç değerlerinin frekansa bağlı değişimi eşitlik 12 ile hesaplanabilir. Bu eşitlikte  $G_{ma}$ , güçlü birikim bölgesindeki iletkenliği;  $\omega$ , ac sinyalin açısal frekansını;  $C_{ma}$  ise aynı bölgedeki kapasitansı göstermektedir. [18]. Hesaplanan değerler sonucu elde edilen  $R_s$  değerlerinin frekansa bağlı grafiği şekil 2-b'deki gibidir. Grafikte de görüldüğü gibi seri direnç değerleri artan frekansla hızla azalmaktadır.

MOS yapılara ait ara yüz durumları eşitlik 13 ile ifade edilen Card ve Rhoderic metoduyla hesaplanıp eşitlik 14'e ile hesaplanan ara yüz durumlarının enerjisi  $E_{ss}$  ile yarıiletken yüzeyinin en üst valans bant enerjisi  $E_v$  ile farkına karşın grafiği şekil 2-a'daki gibi elde edilmiştir [19]. Grafik incelendiğinde durum yoğunluğunun, enerji farkı ile azaldığı görülmektedir. Tataroğlu çalışmasında benzer bir sonuçla karşılaşmıştır [13].

$$R_s = \frac{G_{ma}}{G_{ma}^2 + (\omega C_{ma})^2} \quad (12)$$

$$N_{ss}(V) = \frac{1}{q} \left[ \frac{\epsilon_i}{\delta} (n(V) - 1) - \frac{\epsilon_s}{W_D} \right] \quad (13)$$

Burada  $\mathcal{M}_i$  ve  $\mathcal{M}_s$  sırasıyla yalıtkan ve iletkenin dielektrik sabitini,  $\underline{\Omega}$  ara yüz yalıtkan tabakanın kalınlığını ve  $W_D$  uzay yük bölgesinin genişliğini ifade etmektedir.

$$E_{SS} - E_v = q(\Phi_b - V) \quad (14)$$

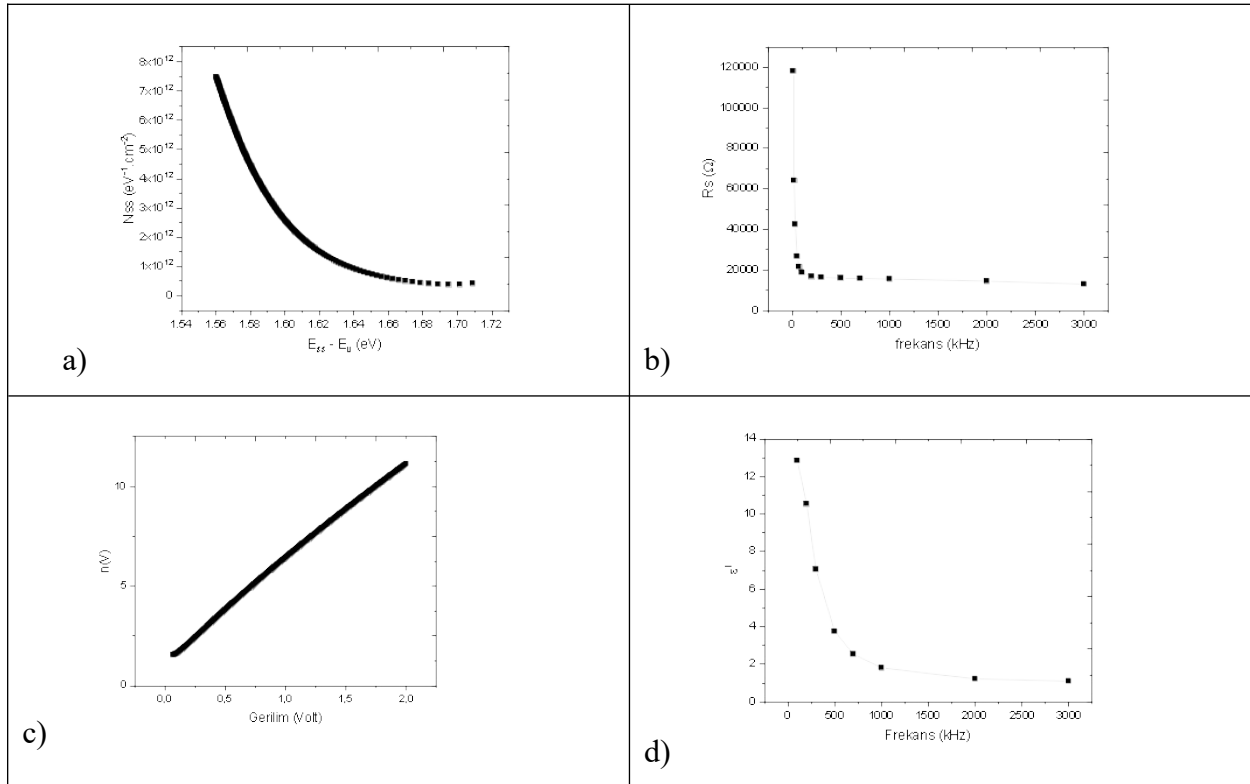

Bu eşitlikte Ess yarıiletkenine ait ara yüz durum enerjisini, E<sub>v</sub> ise valans bandın en yüksek enerjisini ifade etmektedir.

MOS yapılara ait dielektrik sabitleri farklı frekanslar için eşitlik 8 kullanılarak hesaplanmış ve şekil 2-d'deki grafik oluşturulmuştur. Görüldüğü gibi dielektrik değerleri de artan frekans ile benzer bir düşüş göstermektedir. Tataroğlu çalışmasında benzer bir sonuçla karşılaşmıştır [12]. Yazar çalışmasında bu durumu bir dielektrik malzemenin beklenen davranışı olduğunu

belirtmiş ve düşük frekanslarda tüm polarizasyon türlerinin katkı sağladığını, yüksek frekanslarda ise sadece elektronik polarizasyon etkisinin kalmasına bağlamıştır. Ayrıca bu durumun yüksek frekanslarda ara yüzey dipollerinin dış alternatif alanla uyum sağlamada karşılaşacağı zaman sınırı ile ilişkili olduğunu belirtmiştir.

İdealite faktörünün voltaja bağlı değişikliği eşitlik 11 kullanılarak elde edilen eşitlik 15 ile ifade edilebilir [5]. Bu eşitlik ile hesaplanan idealite değerlerinin gerilim ile değişim grafiği şekil 2c'de görülmektedir. Grafikte görüldüğü gibi idealite faktörü artan gerilim değerleri ile eşitlik 15'le uyumlu bir şekilde yükselmektedir.

$$n(V) = \frac{qV}{kt \ln(I/I_0)} \quad (15)$$

Şekil-2: MOS yapılara ait a) Durum yoğunluğu - enerji farkı, b) Seri direnç - frekans, c) İdealite faktörü - gerilim, d) Dielektrik sabiti - frekans grafikleri.

## SONUÇ

Bu çalışmada Al/VO<sub>x</sub>/p-Si/Al (MOS) yapılarının sol-jel yöntemi ile elde edilmesi ve elektriksel özelliklerinin hesaplanma yöntem ve işlemleri gösterilmiştir. Elektriksel özelliklerin belirlenmesi için elde edilen MOS yapılara ait birçok elektriksel parametre hesaplanmıştır. Bu parametrelerden bazıları diğer parametrelerin hesaplanması için gerekli iken bazı parametreler MOS aygıtlar geliştirirken aygıt özelliklerini belirlemede kullanılırlar. Sonuçlara bakıldığından

alıcı yoğunlukları ve tüketim tabaka genişliği değerlerinin literatürde Al/SiO<sub>2</sub>/p-Si üzerine yapılan çalışmalardakine yakın çıktığı görülmektedir. Bu durum bazı parametrelerde yöntem ve oksit tabaka malzemesinin çok büyük etkisinin olmadığını kullanılan metal ve yarıiletken tabaka aynı olduğunda sonuçların yakın çıkacağını gösterir. Difüzyon potansiyeli, engel yüksekliği, sıfır beslem kapasitans değeri ve maksimum kapasitans değeri, dielektrik sabiti, engel yüksekliği parametreleri ise SiO<sub>2</sub> üzerine yapılan çalışmalarda farklı çıkmıştır. Bu parametrelerin kullanılan oksit malzemenin türünden etkilendikleri açıkça görülmektedir.

Elde ettiğimiz MOS yapısına ait kapasitans - voltaj (C – V), Ters kare kapasitans - voltaj (1/C<sup>2</sup> – V), akımın doğal logaritması - voltaj (ln(I) – V), H fonksiyonu - akım (H – I), Durum yoğunluğu - enerji farkı, Seri direnç - frekans, İdealite faktörü - gerilim, Dielektrik sabiti - frekans grafikleri oluşturulmuştur. Grafiklerden elektriksel parametreleri tespit etmede faydalanılmıştır. Grafikler incelendiğinde kapasitansın ve akımın üç bölgeye ayrılacağı görülür. Grafiklerden durum yoğunluğunun enerji farkı ile azaldığı görülür. Seri direnç ve dielektrik sabiti değerlerinin ise artan frekansla hızlı düşüş gösterdikleri anlaşılmaktadır. VO<sub>x</sub> kullanarak elde ettiğimiz MOS yapıların idealite faktörü SiO<sub>2</sub> için yapılan bazı çalışmalarda benzer çıkarken bazı çalışmalarda farklı çıkmıştır. Bu durum idealitenin kullanılan malzemenin çok filmin elde edilme yöntemi ile daha çok ilişkili olduğunu göstermektedir. Aynı durum seri direnç değerleri için de geçerlidir.

Çalışmamızda idealite faktörü, potansiyel engel yüksekliği ve seri direnç değerleri farklı metotlar kullanılarak hesaplanmıştır. Seri direnç değeri I – V ve dv/d(lnI) grafiklerinden iki farklı yöntemle elde edilmiştir. Sonuçlar arasında yaklaşık 500 Ω bir fark görülmektedir. Oran olarak %25'lik bu fark kimi uygulamalarda önemli değişikliklere neden olabilecektir. Ancak yüksek empedanslı bazı uygulamalar için bu değer farkının çok büyük etkisi olmayacaktır ve kolaylıkla tolere edilebilir. İdealite faktörü ise I – V grafiğinden 2,12 olarak bulunurken, H – I

grafiği ve C – V ölçümleri kullanılarak 2,31 olarak bulunmuştur. Sonuçlar arasında çok büyük bir farkın olmadığı söylenebilir. Potansiyel engel yüksekliği değeri ise C – V ölçümlerinden 1,27 olarak hesaplanırken, I – V ölçümlerinden 1,37 olarak bulunmuştur. Bu değerler arasında da çok büyük bir fark olmadığı söylenebilir. Uygulamada hangi değerlerin gerçeğe daha yakın olduğunu tecrübe ile değerlendirmek gerekir.

Sonuç olarak VO<sub>x</sub>/p-Si/Al MOS yapıların kimi özelliklerinin Al/SiO<sub>2</sub>/p-Si MOS yapılarınkine benzerken bazı özelliklerinin farklı olduğu görülmektedir. Bu sonuç elde ettiğimiz MOS yapıların aygıt uygulamalarında potansiyel bir aday olduğu ve bu konuda çalışmaların önünün açık olduğu gösterir.

## VOX TABANLI İNCE FİLMLERİN YAPISAL, YÜZEYSEL VE OPTİKSEL ÖZELLİKLERİNİN İNCELENMESİ

**Dr. Yusuf BİLGİN (Orcid ID: 0000-0001-6041-6129)**  
Fen Bilimleri Enstitüsü, Fizik Bölümü, Katıhal Fiziği, Batman

### ÖZET

Metal oksitler gösterdikleri karakteristik özelliklerden dolayı en temel metal oksit dirençlerden, en karmaşık mikroşlemcilere kadar birçok farklı elektronik aygıt uygulamalarında geniş kullanım alanına sahip yapılarıdır. Çalışmamızda farklı fazlarda elde edilen VOx ince filmler wet chemical yöntemiyle soda-lime camı ve silikon wafer üzerine kaplanmış; XRD ve EDX ile yapısal, SEM ve AFM ile yüzeysel ve UV-VIS ölçümleri ile de optik özellikleri araştırılmıştır. Film eldesinde kullanılan çözücü ve tavlama sıcaklığı değiştirilerek film özelliklerindeki değişimler incelenmiştir. Elde edilen sonuçlar literatür ile karşılaştırılarak raporlanmıştır. Filmlere ait absorpsiyon katsayısı ölçümleri kullanılarak  $(\alpha h\nu)^2 - h\nu$  grafiği elde edilmiş ve grafikten optik bant genişliği tespit edilmiştir. Yapılan XRD analizleri ile filmlerin kristal yapıları tespit edilmiş ve değişen parametrelerin etkileri belirlenmiştir. SEM ve AFM ile filmlere ait yüzey özellikleri ve pürüzlülük değerleri belirlenmiştir. Elde edilen oksit filmlerin XRD analizlerinden kristal yapısını çözümlendiğinden çok altlık değişiminin etkilediği görülmektedir. Öte yandan tavlama sıcaklığının yapı üzerinde önemli etkileri görülmüştür. Filmlerin UV-VIS absorpsiyon grafikleri incelendiğinde morötesi ani absorpsiyon artışlarının 350 nm dalga boyu civarında olduğu gözlemlenmektedir. Optik geçirgenliğin ise 800 nm dalga boyuna ulaşıldığında %85 civarında sabit kaldığı görülmüştür. Filmlerin bant genişlikleri değişen ortam koşullarına göre 1.89 ile 1.98 eV arasında bulunmuştur. Filmlerin hepsi mor ötesi ve görünür bölgede opaklık gösterirken kızıl ötesi bölgede saydam davranmıştır. Filmlere ait bant genişliğinin tavlama sıcaklığındaki artış ile yükseldiğini görülmektedir. Çalışmada literatürde pek rastlanmayan özellikle  $V_8O_{15}$  yapısına ait fiziksel parametreler elde edilmiştir. Vanadyum oksitlerin birçok fazda elde edilebilmesi bu oksitlerde geniş araştırma imkânları vadetmektedir.

**Anahtar kelimeler:** Vanadyum oksitler, optik özellikler, yapısal ve yüzey özellikler.

**INVESTIGATION OF STRUCTURAL, SURFACE AND OPTICAL PROPERTIES OF VOX-BASED THIN FILMS****ABSTRACT**

Due to their characteristic properties, metal oxides are structures that have a wide range of use in many different electronic device applications, from the most basic metal oxide resistors to the most complex microprocessors. In our study, VOx thin films obtained in different phases were coated on soda-lime glass and silicon wafer by wet chemical method; Its structural properties were investigated with XRD and EDX, surface measurements with SEM and AFM, and optical properties with UV-VIS measurements. The changes in the film properties were investigated by changing the solvent and annealing temperature used in the film production. The results obtained were compared with the literature and reported. By using the absorption coefficient measurements of the films, the  $(\alpha h\nu - h\nu_0)^2$  graph was obtained and the optical bandwidth was determined from the graph. The crystal structures and the effect of parameters on crystal structures were determined from XRD analysis. The surface properties and roughness values of the films were determined by SEM and AFM. From the XRD analyzes of the oxide films obtained, it can be seen that the substrate rather than the solution essentially affects the crystal structure. On the other hand, significant effects of annealing temperature on the structure were observed. Examining the UV-VIS absorption graphs of the films, it is observed that in the ultraviolet region around 350 nm wavelength a sudden increase in absorption occurred. It was observed that the optical transmittance remained stable at around 85% when the wavelength of 800 nm was reached. Bandwidths of the films were found to be between 1.89 and 1.98 eV, depending on the different coating conditions. All of the films were opaque in the ultraviolet and visible regions, while they were transparent in the infrared region. It is seen that the bandwidth of the films increases with the increase in annealing temperature. In the study, physical parameters of the  $V_8O_{15}$  structure, which are not frequently encountered in the literature, were obtained. The fact that vanadium oxides have many different phases promises strong research capability for these oxides.

**Keywords:** Vanadium oxide, optical properties, structural and surface properties

## GİRİŞ

Vanadyum oksit filmler özellikle birçok fazda elde edilebilmesi ve kritik sıcaklıklarda yarıiletken veya yalıtkan fazdan metal fazına geçebilmesinden dolayı uzun zamandır ilgi konusu olmuşlardır [1]. Vanadyum farklı oksidasyon durumlarına sahip d geçiş metalidir. Vanadyum  $V_nO_{2n-1}$  ve  $V_{2n}O_{5n-2}$  oksidasyon durumları gösterebilmektedir.  $V_2O_3$  monoklinik yapı gösterirken,  $V_2O_5$  ortorombik yapı göstermektedir. Vanadyum oksitler kromojenik materyallerdir ve bu sebeple optik özellikleri dış etkilerle değişebilmektedir [2]. Vanadyum oksitler benzersiz optik özelliklerinden dolayı birçok optik uygulamaya adaydırlar. Anahtarlama, modülasyon, optik sınırlandırıcı ve optik rezonatörler için ayarlama bunlardan bazılarıdır [3]. Vanadyum oksitler yüksek termal dirençlerinden dolayı bolometre ve mikro bolometre cihazlarında algılayıcı materyal olarak kullanılmaktadırlar. Vanadyum oksitlerin diğer kullanım alanları ise etanol sensörü, redoks akış bataryası, lityum iyon bataryalarda katot materyali olarak sıralanabilir [4].

İnce filmlere ait optik özellikler genellikle yansıtma, geçirgenlik ve absorpsiyon ölçümlerine dayanır. Bütün bu ölçümler gönderilen ışığın dalga boyundan etkilenir. Absorpsiyon yansımaya ve aynı zamanda geçmeyen ışınları ifade etmektedir. Optik sabitler olan kırılma ve sönmüleme katsayısının yanı sıra film kalınlığı da optik ölçüleri etkileyen önemli bir etmendir [5]. Vanadyum oksit filmler için foton enerjisi, absorpsiyon ve bant genişliği arasında eşitlik-1 yazılabilir.

$$\alpha h\nu = A(h\nu - E_g)^n \quad (1)$$

Doğrudan optik bant genişliği için bu ifadeden yola çıkılarak  $(\alpha h\nu)^2 - h\nu$  grafiği çizilir ve grafiğin  $h\nu$  eksenini kestiği noktadan optik bant genişliği elde edilebilir bu modele Tauc ve Davis–Mott modeli denir [6, 7].

X-ışını kırınımı (XRD) ince film karakterizasyonunda vazgeçilmez bir yöntemdir. XRD ile bir yapıya ait kristal fazı, örgü parametreleri, kristallik derecesi, kristal tanelerinin tercih ettiği yönelim, tanecik boyutu, film kompozisyonu, film kalınlığı gibi birçok parametre elde edilebilir [8].

Taramalı elektron mikroskopu (SEM) ince filmlerin topografyası, yapısal özellikleri, kompozisyonu ve ışık emisyonu gibi birçok özelliği hakkında bilgi sağlayan yararlı bir araçtır. SEM genellikle 100 eV ile 30 000 eV aralığındaki enerjiye sahip elektronların materyal yüzeyinde gezdirilmesi ile oluşan ikincil elektronların şiddeti ile topografya bilgisi elde etmede

kullanılır. SEM teknikleri arasında kristal yapı, yanlış kristal yönelimleri, tane sınırları, gerinim ve yapısal kusurlar gibi farklı bilgiler sağlayan EBSD ve ECCI gibi yöntemler de bulunur [9].

Bu çalışmada wet chemical yöntemiyle farklı parametreler kullanılarak soda-lime camı ve silikon wafer üzerine kaplanmış filmlerin XRD, SEM, EDX , AFM ve UV-VIS ile fiziksel özellikleri incelenmiş ve sonuçlar teknolojide geniş kullanım alanına sahip SiO<sub>2</sub> filmlere ait literatürdeki sonuçlar ile karşılaştırılmıştır.

### ARAŞTIRMA VE BULGULAR

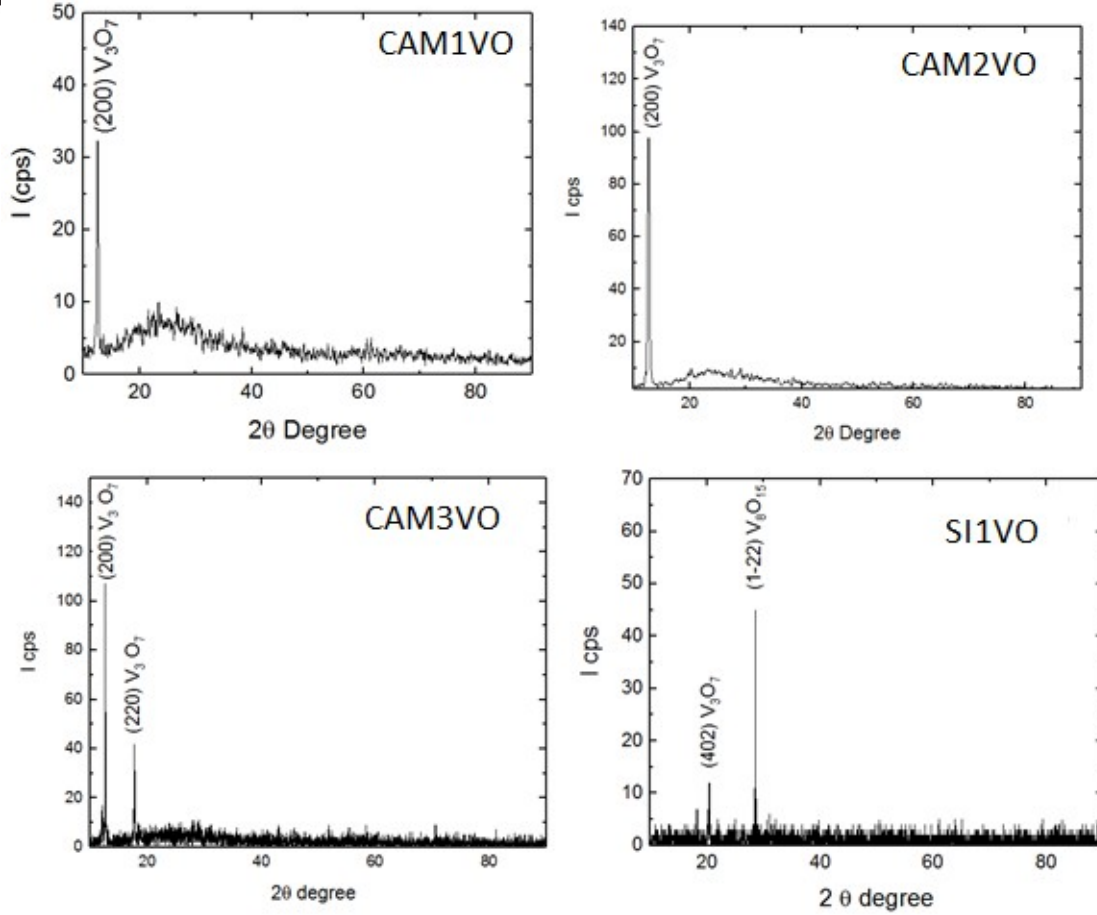

Bu çalışmada ince filmleri elde etmek için vanadyum pentoksit tozu nitrik asit/hidroklorik asit içerisinde çözünerek kaplama çözeltisi elde edilmiştir. Silisyum tabakalar ve soda-lime camı altlıklar bu çözeltiler içerisinde daldırılarak yüzeylerinin kaplanması sağlanmıştır. Kristalleşmeyi sağlamak için her defasında filmler 400 derece de 5 dakikalık sürelerle ara tavlama işlemine tabi tutulmuştur. Bu şekilde filmler 10 kat kaplandıktan sonra yine 400 ile 500 derece arasındaki fırında bir saat son tavlama işlemi uygulanmıştır. Daha sonra filmlere ait ölçümler icra edilmiştir. Farklı parametrelerle elde edilen filmler CAM1VO, CAM2VO, CAM3VO ve SI1VO olarak isimlendirilmiştir. Diğerlerinden farklı olarak CAM3VO 500 derecede tavlansmıştır. CAM1VO dışındaki tüm filmlerde ise çözücü olarak nitrik asit kullanılmıştır. SI1VO filmi ise silisyum altlık üzerine kaplanmıştır.

Cam üzerine kaplanan CAM1VO, CAM2VO, CAM3VO isimli filmlere ait XRD sonuçları şekil 1'deki gibidir. Sonuçlar incelendiğinde 2θ açısının 12.571 ile 12.754 arasında değiştiği görülmektedir. Bu durum referanslar incelendiğinde muhtemel V<sub>3</sub>O<sub>7</sub> kristal yapısının (200) hkl düzlemine işaret etmektedir. CAM3VO filmlerinde ayrıca 17.806 2θ açısıyla aynı kristal yapının (220) düzlemine karşılık gelen yapı görülmüştür. Bu farklılığın nedeni olarak CAM3VO filminin diğerlerinden farklı olarak 500 derecede son ısıl işleme tabi tutulmuş olmasının etkili olduğu düşünülmektedir. Burada CAM1VO isimli film dışındaki tüm filmlerde çözücü olarak hidroklorik asit kullanılmıştır. Sonuçlara bakıldığında bu durumun yapısal özelliklerde çok belirgin bir etki yapmadığı görülmektedir.

Filmlere ait tanecik boyutu XRD verilerinden elde edilmiştir. Elde edilen tanecik boyutu ortalama 3.94 nm olmakla birlikte 500 derece son ısıl işleme tabi tutulmuş CAM3VO isimli

filmde bu boyut ani bir yükselme gösterip 20.88 nm'e yükselmiştir. Bu sonuç son tavlama sıcaklığının tanecik boyutunu belirleme de etkili bir parametre olduğunu gösterir.

Çözücü madde olarak hidroklorik asidin kullanıldığı çözelti kullanılarak p-Si wafer üzerine film kaplanmış ve 500 derece son tavlama işlemi uygulanan yapı SIIVO olarak adlandırılmıştır. SIIVO'a ait sonuçlar incelendiğinde diğerlerinden farklı olarak 20.396 ve 28.678 açılarında pik verdiği görülmektedir. Bu açılar referanslardan  $V_3O_7$  kristal yapısının (402) düzlemi ile  $V_8O_{15}$  yapısının (1-22) düzlemine işaret etmektedir. Bu sonuç kullanılan altlığın kristal yapının oluşumunda son tavlama sıcaklığından daha önemli bir etken olduğunu göstermektedir. Yine tanecik boyutuna bakıldığında SIIVO için 280 nm olduğu görülmüştür ki bu sonuç diğerinden on katından fazladır. Bu sonuç da tanecik boyutunda kullanılan altlığın son tavlama sıcaklığına göre çok daha etkili olduğunu göstermektedir. Assim, çalışmasında  $SiO_2$  filmler için tavlama sıcaklığının etkilerini araştırmış ve benzer bir şekilde tanecik büyüklüğünün tavlama sıcaklığı ile arttığını gözlemlemiştir yazar bu büyümeyi ada birleşimleri ile açıklamıştır [10]. Yarima, çalışmasında ZnO/ $SiO_2$  Nano kompozitleri için tavlama sıcaklığının kristal boyutunu arttırdığını ancak morfolojik boyutu düşürdüğünü gözlemlemiştir [11].

*Şekil 1 CAM1VO, CAM2VO, CAM3VO, SI1VO filmlerine ait XRD sonuçları.*

SI1VO isimli filme ait SEM, AFM incelemeleri yapılmış ve şekil 2'deki sonuçlar elde edilmiştir. SEM ve AFM görüntüleri incelendiğinde tanecikli yapının görece homojen bir dağılım gösterdiği ve incelenen bölgede yarıkların ve boşlukların bulunmadığı görülmektedir. AFM sonuçlarından SI1VO filmimize ait ortalama kök yüzey pürüzlülüğü değeri (RMS) 39.66 nm olarak bulunmuştur. XRD sonuçlarından elde edilen 280 nm tanecik boyutu ile kıyaslandığından yüzeyin %7 civarında bir pürüzlülüğe sahip olduğu söylenebilir. Assim, çalışmasında anodik oksidasyon yöntemi ile Si üzerine SiO<sub>2</sub> filmler büyütmüş ve 3.124 ile 5.482 nm arasında değişen RMS değerleri elde etmiştir [10]. Liu, çalışmasında SiO<sub>2</sub> filmler için 5.8 ile 8.8 nm arasında değişen RMS değerleri elde etmiştir [12]. Orel, çalışmasında sol-jel yöntemi ile cam üzerine vanadyum oksit filmler kaplamış ve 6 ile 11 nm arasında değişen RMS değerleri elde etmiştir. Bu çalışmalardaki sonuçlara bakıldığında elde ettiğimiz filmin görece pürüzlü olduğu görülmektedir. Bu sonuç pürüzlülük gerektiren uygulamalarda bir avantaj sağlarken pürüzsüzlük istenen uygulamalarda literatürdeki yöntemler kullanılarak pürüzlülüğün giderilmesi sağlanabilir [13].

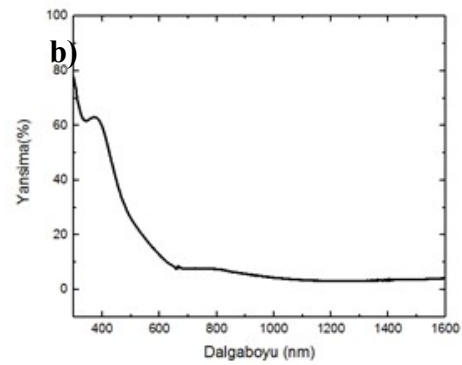

**Şekil 2** CAMIVO, CAM2VO, CAM3VO, SIİVO filmlerine ait a) 135x92  $\mu\text{m}$  SEM, b) 55x37  $\mu\text{m}$  SEM, c) 5x5  $\mu\text{m}$  AFM, d) 1,85x1,85  $\mu\text{m}$  AFM görüntüleri.

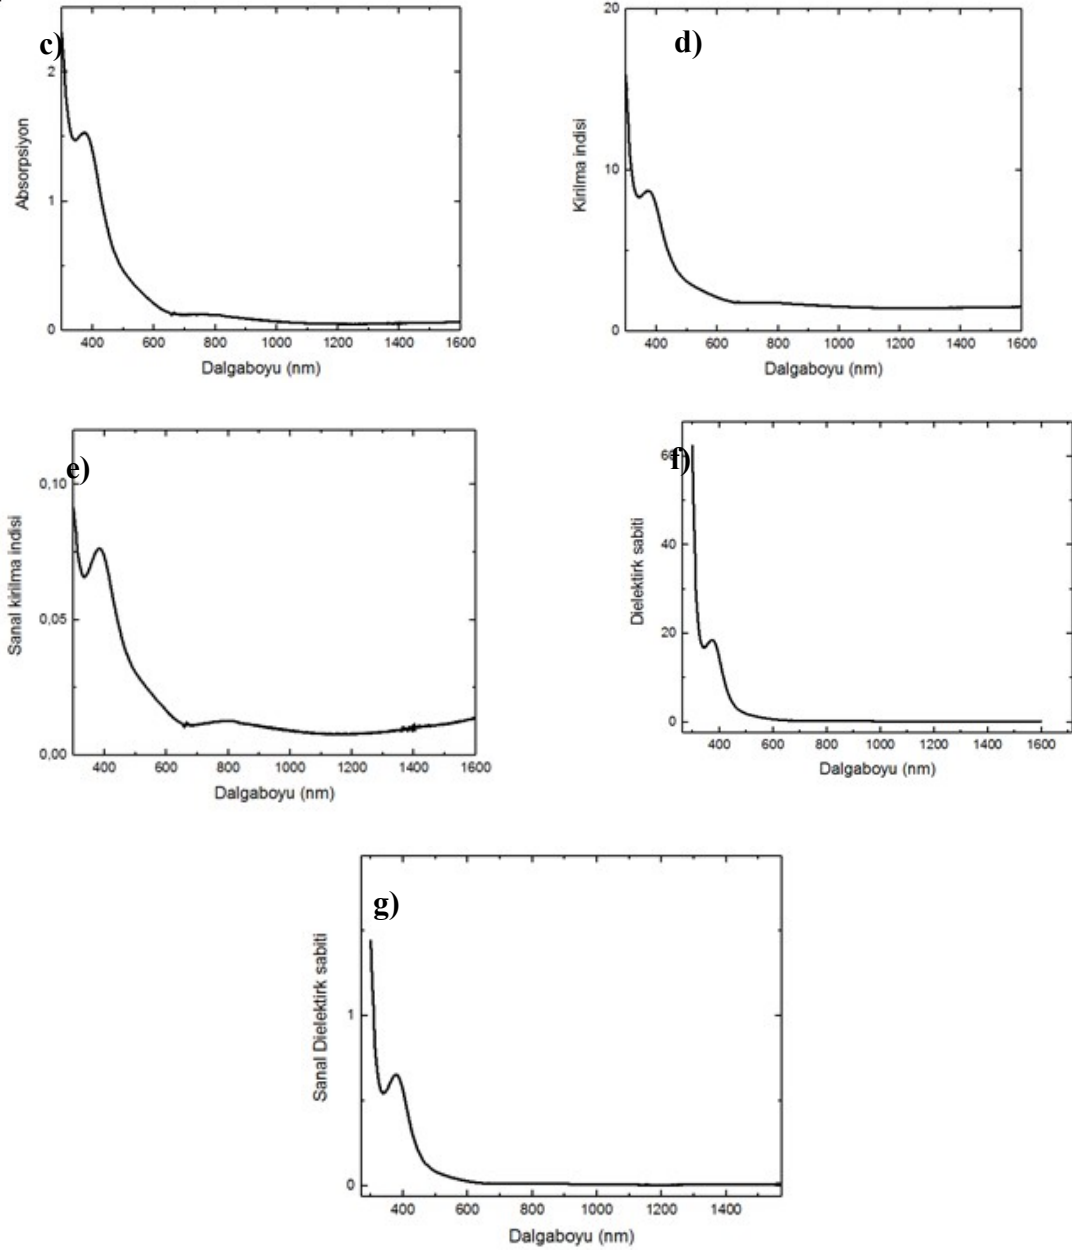

SIİVO filmimize ait EDX analizleri yapılmış ve sonuç şekil 3'deki gibi bulunmuştur. Sonuçlar elde ettiğimiz yapının tabandan kaynaklı olarak %90.55 silisyum, %5.67 oksijen, %3.78 vanadyum içerdiğini göstermektedir. Bu sonuç filmimizin istediğimiz bileşenlerden elde edildiğini göstermektedir.

**Şekil 3** VO4 nolu filme ait EDX histogramı.

CAM3VO filmimize ait yakın kızıl ötesi – mor ötesi bölge optik ölçümler gerçekleştirilmiş olup sonuçlar şekil 4’te paylaşılmıştır. Sonuçlar incelendiğinde filmin 6000 Å dalga boyu altındaki görünür ve mor ötesi bölgede geçirgenliğin düşük olduğu görülmektedir. Bu durum filmlerde gözlenen kahverengiye kaçan renk ile de uyusmaktadır. 6000 Å üzerindeki görünür kırmızı ve yakın kızılötesi bölgeye denk gelen dalga boylarında ise filmlerin yüksek geçirgenlik gösterdiği görülmektedir. CAM3VO filmimize ait yansımaya ve absorpsiyon grafiklerinin geçirgenlik grafiği ile uyum içerisinde olduğu görülmektedir. Kırılma indisinin dalga boyuyla değişimine bakıldığında 3460 Å dalga boyunda birinci minimuma ulaştığı sonrasında küçük bir artış gösterip 3750 Å dalga boyundan sonra hızla düşüş gösterdiği görülmektedir. 6650 Å dalga boyu sonrasında ise neredeyse sabit kaldığı görülmektedir. Benzer davranışlar yansımaya, absorpsiyon ve dielektrik grafiklerinde de görülmektedir. Cam üzerine kaplanan diğer filmler için de benzer sonuçlar elde edilmiştir. Lamsal, çalışmasında  $Al_2O_3$  taban üzerine farklı fazlarda vanadyum oksit filmler için optik ölçümler yapmış bizdeki 3750 Å dalga boyundakine benzer dönüm noktaları elde etmiştir [2]. Tabata, çalışmasında iyon ışını sıçratma yöntemi ile  $SiO_2$  filmler oluşturmuş ve benzer bir şekilde 4000 Å yakınlarında yükselen bir absorpsiyon elde etmiştir [14]. Yazar bu durumu 3260 Å dalga boyuna denk gelen enerjide tetiklenecek oksijenler arasında peroksi bağlarının oluşması ile ilişkilendirmiştir.

**Şekil 12** CAMIVO filmine ait optik ölçümleri; a) Geçirgenlik-dalga boyu b) Yansımada dalga boyu c) Absorbsiyon- dalga boyu d) Kırılma indisi – dalga boyu e) Sanal kırılma indisi – dalga boyu f) Dielektrik sabiti dalga boyu g) Sanal Dielektrik sabiti dalga boyu

Vanadyum oksit ince filmler için optik bant genişliği soğurma verileri ve eşitlik 1 kullanılarak hesaplanmıştır.  $(\alpha h\nu)^2 - hv$  grafiği çizilip grafiğin  $h\nu$  eksenini kestiği noktadan  $E_g$  değeri bulunmuştur. Bu işlem sonucundan CAMIVO3 için  $E_g$  değeri şekil 5'te görüldüğü gibi 2.53 eV olarak bulunmuştur. Optik bant genişliği literatürdeki çalışmalarda  $VO_2$  için 0.6,  $V_2O_5$  için 2.3,  $V_3O_7$  için 2.2,  $V_2O_3$  için 0.66,  $ZnO$  için 3.26,  $ZrO_2$  için 3.26 ve  $SiO_2$  için 1.1 eV olarak bulunmuştur [6, 15, 16, 17, 18]. Bulduğumuz sonuç literatürdeki değerlerle karşılaştırıldığında  $V_3O_7$  ve  $V_2O_5$  için elde edilen sonuçlara yakın olduğu görülmektedir.

Şekil 13 CAMIVO filmine ait  $(\alpha hv)^2 - hv$  grafiği ve bulunan  $E_g$  değeri.

## SONUÇ

Bu çalışmada VOx tabanlı ince filmler ekonomik bir yöntem olan wet chemical yöntemiyle soda lime camı ve p-Si wafer üzerine farklı parametreler kullanılarak kaplanmıştır. Kullanılan çözeltilerde nitrik asit ve hidroklorik asit olmak üzere iki farklı çözücü madde kullanılmıştır. Tüm filmlere aynı parametrelerle ara ısıl işlem uygulanırken son tavlama sıcaklıkları 400 ve 500 olarak değiştirilmiştir. Filmlere ait XRD sonuçları incelendiğinde çözücü farkının belirgin bir etki yapmadığı, son tavlama sıcaklığının ise tanecik boyutunda ciddi değişikliğe yol açtığı görülmektedir. Taban olarak p-Si kullanıldığında ise hem kristal yapının değiştiği hem de tanecik boyutunun katlandığı görülmüştür. Filmlere ait SEM ve AFM sonuçları incelendiğinde tanecikli yapının düzgün yapıda olduğu görülür. AFM sonuçlarından elde edilen RMS yüzey pürüzlülük değeri ise 39.66 nm olarak bulunmuştur. p-Si üzerine kaplanmış filme ait EDX analizleri %90 üzerinde silisyum ve %4'e yakın vanadyum gösterirken %5.67 oranında oksijen

içeriği vermiştir. Cam üzerine kaplanan VOx filmimize ait yakın kızıl ötesi - mor ötesi bölgede optik ölçümler yapılmış ve birçok parametrenin dalga boyu ile değişimi incelenmiştir. Elde edilen sonuçlar literatürdeki benzer çalışmalar ile karşılaştırılmıştır. Optik ölçümler kullanılarak  $(\alpha hv)^2 - hv$  grafiği çizilmiş ve Tauc / Davis–Mott modeli kullanılarak optik bant genişliği bulunmuştur. Bulunan sonuçlar literatürdeki sonuçlar ile karşılaştırılmıştır. Sonuç olarak elde ettiğimiz filmlerin sahip olduğu özelliklerin birçok

yarıiletken aygıt için uygun olduğu ve bu konuda yapılacak çalışmaların önünün açık olduğu anlaşılmaktadır.

**ÖZET**

Refik Halit Karay, yerli meseleleri ve Anadolu insanının yaşam tarzını hikâyeleştiren bir yazardır. Eserlerinde toplumsal yapı, sosyal çözülme ile millî unsurlar kendini gösterirken, eski devir ile yeni devir karşılaştırmalarına rastlarız. Türk toplumunun geçirdiği değişim temasını işlediği eserlerinde batılılaşmanın etkisini eleştirir ve değerlerin kaybolduğundan yakınlıkla millî unsurlara dönmeyi ister. Karay eserlerinde Anadolu insanının özelliklerini ve toplumsal yaşamı tasvir ettiği gibi Anadolu’nun mekânsal güzelliğinden sık sık bahsetmektedir. Toplumsal hareketlilik bağlamında ise; Karay’ın hikâyelerinde kahramanlar realist ve hayatın içinden çıkmıştır. Realist bir yazar olarak aynı zamanda edebiyat anlayışında öze dönük olmayı, milli olmayı kendi değerlerini yaşatmayı ve korumayı ön plana alan bir tavırla hareket etmiştir. O her zaman gelenekten kopmaktan kaçınan bir yazar olmuştur ve millî olmayı her bağlamda dile getirmiştir. Yenilik ve değişimi batılılaşma yönünde kabul etmesi ile birlikte, aynı zamanda geleneğe ve öze bağlı bir zihniyet içinde dönemin eleştirisini yapar. Millî unsurlara, geleneğe ve eskiye karşı her zaman sadakat hissedilen bir yazar olmuştur. Öncelikle *Memleket Hikâyeleri* kitabında yer alan metinler odak noktası alınarak Karay’ın eserlerine yansıyan toplumsal sorunlar çözümlenmeye çalışılmıştır. Dolayısıyla çalışmada Karay’ın eserlerinde hissedilen tecrübelerinin ve gözlemlerinin yaşadığı dönemle ilişkisi değerlendirilerek, Karay’ın eserlerine yansıyan toplum ve onun topluma bakış açısı ve bunun millî unsurlara bağlı kalarak nasıl hikâyeleştirdiği üzerinde durulmuştur.

**THE NATIONAL FACTORS REFİK HALİT KARAY’S IN THE “MEMLEKET  
HİKÂYELERİ” TITLE WORK.**

**ABSTRACT**

Refik Halit Karay is a writer who narrates the local issues and the lifestyle of the Anatolian people. In his Works, while society structure, social disintegration and national factors show themselves, comparisons of old and new periods are encountered. He criticizes the effect of the westernization in his works, in which he deals with the theme of the change that Turkish society has undergone, and would like to return to national factors, complaining that values are lost. Karay often talks about the spatial beauty of Anatolia, as well as describing the characteristics of the Anatolian people and social life in his works. In the context of social mobility; The heroes in Karay’s stories are realistic and come out life. As a realist writer, also acted with an attitude that prioritizes being self-centered in his understanding of literature, being national, keeping his own values alive and protecting them. He has always been a writer who avoids breaking with tradition and has expressed being national in every context. Along with accepting innovation and change in the direction of westernization, he also criticizes the period in a mentality that is based on tradition and essence. He has always been a writer who feels loyalty to national factors, tradition and the past. First of all, the texts in the *Memleket Hikâyeleri* book were focused on and the social problems reflected in Karay’s Works were tried to be resolved. Therefore, in the study, the relationship between Karay’s experiences and observations felt in his works and the period in which he lived, the society reflected in Karay’s Works and his perspective on society and how he narrated it by adhering to national factors were emphasized.

## GİRİŞ

Tarihsel bir varlık olan insanın yaşamı ancak ortak bir dille ifade edilebilir. Dil, duygu ve düşüncelerin taşıyıcısıdır. Dünya üzerinde birçok dil mevcuttur. Milletleri birbirinden ayıran özelliklerin başında dil gelmektedir. Bundan dolayı dil milli varlığın ve benliğinin ayrılmaz bir parçasıdır. Milli dil, ait olduğu milletin hayatını, özlemine, sevincini dile getirir, bu dile getirilişinin en güzel aracı edebiyattır.

"Bizde millî romantik duyuş tarzı millî mücadele ile başlamıştır. Millî hafıza, bu dönemde büyük bir uyanışla harekete geçmiş ve milletin yaşam tarzında, davranışlarında ve eserlerinde kendini göstermiştir. Bu dönemde Türkler üzerinde kurulmaya çalışılan hâkimiyet karşısında bağımsızlığını kaybetme korkusuyla köşeye sıkışan millet, kurtuluşu milli şuurda bulmuştur. “ (TURAL S. , 2000). Bu şuur kazanma durumu, mücadelenin seyrini değiştirir.

Millî mücadele döneminde sanatkarlar eserlerinde halka yönelerek, halkın anlayabileceği bir dille yazarak halkın millî ruhu uyandırmayı amaçlamışlardır. Bu sanatkarların başında Ziya Gökalp, Yahya Kemâl Beyatlı ve Mehmet Akif Ersoy gelmektedir. Gökalp eserlerinde uzak geçmişini anlatarak, bugüne aktarmayı düşünmüştür. Yahya Kemâl, kazanılan zaferlere eserlerinde yer vererek millî hisleri uyandırmayı amaçlamıştır. Mehmet Akif Ersoy da, bozulan sosyal hayatı İslâmî prensiplerle düzeltmeyi arzu etmektedir. Netice itibariyle üç sanatkar da ortak bir ülkü etrafında farklı yöntemlerle bir araya gelmişlerdir. Üçünün de bir tek amacı vardır; millî şuurunu oluşturmak. Bu amaç gerçekleşmiş ve halk millî benliğini tehdit eden esaret zincirini millî bir şuurla kırmış ve yeniden doğurmuştur. Refik Halit Karay da sürgünde olduğu bu yıllarda vatan özlemi ve aşkı ile milli unsurlarla duyuş tarzının ifadesi olan önemli hikâyelere imza atmıştır.

Edebiyat bulunduğu toplumun gelişiminden ve toplumsal oluşumun ruhundan ayrı olması beklenemez. “Her insan bulunduğu çağın insanıdır” sözünden hareketle Refik Halit Karay’ın öze ve milli duruşa dönme çabasının anlatıldığı bu makalede “Memleket Hikâyeleri” eseri üzerinden yola çıkarak millî ve yerli unsurlar üzerine düşüncelerine yer vereceğiz.

### 1) Karay’ın Eserlerinde Anadolu Toplumunu ve Anadolu İnsanı

Memleket Hikâyeleri, yazarın Anadolu toplumu ve insanını betimleyici bir tarzda anlatarak toplumdaki bozulmayı ve yozlaşmayı anlattığı Anadolu insanının özünden ve milli duruşundan uzaklaştığı, çoğunlukla İstanbul’un köhne semtlerinde, Anadolu’nun

kasabalarında ve köylerinde geçen hikâyelerdir. Bu hikâyelerde Karay özellikle bürokratlar üzerinde durmakta

olup söz konusu bürokratlar mevcut bozukluklara, kötü çevre şartlarına, bürokratik koşullara karşı durmaya çalışsalar da ortamın geri kalmışlığı sebebiyle iş yapamaz hale gelmektedir.

Hikâyelerinde Anadolu halkının zaaflarını, meziyetlerini, komik durumlarını, yaptıkları hataları, acınası hallerini yansıtan yazar ayrıntıları iyi biçimde tespit edebilmekte ve dikkatli bir gözlem yapmaktadır. Kişi ve olayları en ince detaylarına kadar izleyen Karay için “muharrir-ressam” diyenler de olmuştur. Yaşadıklarından ve gözlemlediklerinde anılarında da bahseder.

Karay, eserlerinde Anadolu'nun coğrafi ve mekânsal güzelliklerinden söz etmekte, insanların toplumsal yaşamını ve bireysel özelliklerini betimlemektedir. Hikâyelerinin önemli bir bölümünde Anadolu coğrafyası betimlenmekte, mekânların güzelliği ifade edilmektedir.. Kasabaların doğal güzelliği yanında kasaba sakinlerinin işsizliği (tembel manasıyla kullanılmış) dikkat çekici şekilde betimlenir.

Karay bolca betimlemelere yer vererek bu eserinde Anadolu'yu ve Anadolu insanını gözler önüne sermiş.Burada asıl amaç memlekete ve milli unsurlara değinerek öze dönme isteğinden başka bir şey değildir.Bu betimlemelerden en önemlisi olan bu eser ve Anadolu manzarasını bizlere ilk olarak veren yazarlardan birisi olan Karay , ötelenmiş Anadolu insanının ikinci ve üçüncü sınıf insan haline gelmesinden utanç duyarak bu konuya değinen yani öze ve milli olmaya değinen yazar çokça betimlemelere yer verilmiştir.Öyle ki eserin giriş kısmında Prof. Sabri Esad Siyavuşgil'in şu yorumundan Refik Halid Karay'ın milli ve öze dönük çalışmasının nedeni önemli olduğu , Anadolu ve Anadolu insanının tarihteki yerine dikkat çektiği Memleket Hikayeleri adlı eserinin önemini ve değerini vurgulamıştır..

*"Ben Edebiyat'a biraz meraklıyım. Eskiden bu merakım estetiğin sınır içinde kalırdı, şimdi biraz daha derine gidip kitaplardan yazarlarına, yazarlardan çağların düşüncelerine ve toplumların davranışına doğru uzanmak isterim. Mesela çok eskiden büyük üstad Refik Halid'in Memleket Hikâyeleri'ni salt bir güzel yazı okumak keyfi, katkısız bir edebi zevk için ezberlemiştim, şimdi onları yeniden okuyor ve her birinde, o edebi keyfin ötesinde, bambaşka hazineler keşfediyorum. Bana onlar, vatan Anadolu'nun yarım yüzyıl içinde değişen ve değişmeyen davranışlarına en keskin ışığı tutuyor Onlar sayesinde üstad Refik Halid'in öze*

*varmaktaki büyük kudretine ve zamanı yenen eşsiz görüş ve anlayışına bambaşka bir anlayışla hayran oluyorum.*

*Bana o hikâyeler, bugün Anadolu'nun insan ve sosyal hayatı üzerinde ve yazılacak en azametli psikoloji ve sosyoloji eserlerinden daha etraflı, daha derin, daha dolu ve daha gerçek geliyor. Öyle sanıyorum ki bu hikâyeleri okumadan Anadolu'yu anlamanın, anlamaya başlamanın imkânı yok. Bavuluna kamerasını, not defterini, Mahmut Makal ve Fakir Baykurt'un eserlerini doldurarak Anadolu'yu keşfe hazırlananlara, haritaya bakmadan ve yola çıkmadan önce, o yarım yüzyıllık Memleket Hikâyeleri'ni okumalarını salık veririm.*

*Ne yalan söyleyeyim, ben insanları iyi anlatan ve sevdiren edebiyatın taraflısıyım. Olaylara ve zamana, asıl o duru kafa ve engin insan aşkıyla eserler dayanabiliyor da ondan." (Karay, Memleket Hikayeleri, 2012, s. 9)*

## **2) Refik Halit'in Hikâyelerin de Anadolu Kasabaları ve Milli Tipler**

Anadolu'da geçen sürgün yıllarının bir ürünü olan *Memleket Hikâyelerinde* Refik Halit Karay Anadolu kasabaları ve kasaba yaşamı ile ilgili detaylara yer vermektedir. Her yazarın bağlı bulunduğu bir ekol ve sahip olduğu bir dünya görüşü, bir ilham kaynağı vardır. Edebi metinlerde beklenen, yazarın bunu edebi eserin estetiğine zarar verecek ya da gücünü aşacak düzeyde ortaya koymamasıdır.

Karay'ın kasaba tiplerini meydana getiren hikâyeleri arasında “*Yatık Emine*”, “*Şeftali Bahçeleri*”, “*Vehpi Efendinin Şüphesi*”, “*Sarı Bal*”, “*Şaka*” ve kasaba-köy arasındaki bir hikâyeyi içeren “*Boz Eşek*”tir. Adı geçen hikâyelerde yazar temalar, şahıs kadrosu, konular, karakterlerin kişilik özellikleri, sosyal statüleri ve kasaba sosyal yaşamına ilişkin *görüntülere* yer vermektedir. Söz konusu hikâyelerde yer alan “kasaba tipleri”nde olayların genel olarak düşmüş haldeki kadınların çevresinde gelişmesi, gerici ve bağınaz zihniyet ile ağırlaşan geleneksel yapı, klişe haline gelen yargılar ve dinsel cehalet kasabanın temel özellikleridir. Haricen, kasabaya memur olarak gelen kişilerin sosyal yaşamda oluşturduğu yeni duruş, imaj, meşrutiyet öncesi ve sonrasındaki yıllarda idarenin ve yönetimin gözden çıkardığı korkak, tembel, aksiyondan uzak, kadına ve eğlenceye düşkün, toplum problemlerine ve topluma duyarlı olmayan memur tiplerini de kasabalarda ortak özellik olarak ortaya konmaktadır.

Karay her ne kadar Anadolu kasabalarını realist bir yaklaşım ve gözlemle ortaya koymakta ise de söz konusu hikâyelerde dahi Anadolu insanına ulaşılammış, merkeze alınamamıştır. Bu nedenle Refik Halit sonrasında Anadolu kasabaları dini ve din yaşamını belirtmek için “hırpalanmıştır.”

Refik Halit Karay ile birlikte kasabalar eşraf olgusu ile anılır hale gelmiş ve edebiyatta ağa-eşraf tiplmesi yerleşmiştir. Bu hikâyelerde eşraf tipleri iki biçimde görülmektedir. Anadolu kasabalarında görülen, küçük esnaf iken ticarete atılmış, topraktan kopmuş, bir açıdan “kasaba ağası” veya “türemiş zengin” olarak adlandırılabilir, çoğunlukla kötülük ve zorbalık ile tiplenen eşrafın yanında; ekonomik açıdan güçlü, kökleri geçmişe dayanan, siyasi otorite ve yönetime nüfuzları dayanan, kasabadaki sosyal hayata yön veren eşraf tiplmesi mevcuttur. İnsan ve toplum merkezli hikâyeye anlayışına sahip olan Karay, realizm gereği toplumun kötücül ve hastalıklı taraflarını, kötümser bir yaklaşım ile toplum için aktarmaktadır.

Bu noktada özellikle şu belirtilmelidir: Karay’ın insan-mekân ve toplum üçgeninde, yerli yerinde kullandığı düşmüş kadın unsuru, Cumhuriyet dönemine ait eleştirel gerçekçi veya sosyal gerçekçi yazarlar tarafından farklı algılanarak siyasi bir unsur olarak kullanılmıştır.

### **3) Milli Tarihimiz ve İnsanımız**

Edebiyat ve tarihin kesişimin de milli romantizm mevcuttur. Milli romantik duyuş tarzı ile yazar tarihsel bir olaydan yola çıkar ve onu edebi çerçevede yeniden biçimlendirir. Ortaya çıkan eser artık tarihi değil edebi bir eserdir. Yazarın temel amacı, edebi eserin duyuş dünyasından geçirdiği bireyde milli bir heyecan meydana getirmektir. Böylelikle estetik heyecanla oluşan haz ile bireyde mensubiyet şuuru oluşturulması istenmektedir. Karay da eserlerinde bu amaca sahiptir.

Karay, maruz kaldığı sürgünler sonucunda başka bir yaşamı görmüş, vatana farklı bir gözle bakma yetisi kazanmıştır. Milli romantik duyuş tarzı ile eserlerini kaleme alan Karay, bireyi edebi ve tarihi metinlerin arasında bir yolculuğa çıkarmaktadır. I. Dünya Savaşı’ndan tükenmiş, güçsüz, bitmiş ve yorgun biçimde çıkan millet ve insanlar yok olma tehlikesi ile karşı karşıya kalmış, hasta bir insan misali her şeyden elini ayağını çekmiş durumdadır. Savaş sonrasında halk sahipsizlik ve kimsesizlik karşısında bir savaş vermek zorunda kalmıştır.

Açlık ve yoksulluğun yanında bir de ahlaki çöküntü ortaya çıkmıştır. Milli mücadelenin başlaması ile birlikte ülkede bir kurtuluş umudu filizlenir. Parça parça haldeki bu umut birleşerek milli bir harekete dönüşür. Bu döneme ait yaşantılar Karay’ın “Memleket Hikâyeleri”nde gözler önüne serilmektedir.

Refik Halit Karay tarafından kaleme alınan “Bir Saldırı” ile “Garip Bir Hikâye”, ilk sürgün dönüşünde yazılmış olup savaştan dönen iki yedek subayın çaresiz ve yoksul hallerini anlatmaktadır. Savaştan sonra millet, kazanan devletlerarasında paylaşılmak ve bu devletler tarafından parçalanmak istenmiştir. Yenik haldeki halk yabancı askerlerin zulmüne uğramış, hakir görülmüştür. Örneğin “Kuvvete Karşı” adlı hikâyede Amerikan askerlerinin şımarıklığı, görgüsüzlüğü, azgınlığı anlatılmaktadır.

Milli romantik duyuş biçimi ile Anadolu insanına yönelen Karay, halkın yaşantısını bütün gerçekliği ile kelimelere dökmüş, ananelere ait unsurlara da yer vermiştir. Milli romantizm için tarihi ve folklorik malzemenin değeri inkâr edilemez.

Anadolu insanının ezilişini ve acılarını anlatan Refik Halit milletin yüceliğini de ifade etmiştir. Buna göre bir Türk ahlak dışı davranışlarda bulunamaz. Buna iltifat edenlerin azınlık kimlikleri ile öne çıkması önem taşımaktadır.

Tarihi olmadan bir milletin ilerlemesi mümkün değildir. Geçmişini önemsemeyen ya da görmezden gelen bir milletin geleceği olması da mümkün değildir. Refik Halit, topluma ait olan tüm değerleri geçmiş ile hal arasında bağ kurarak ustalıkla işlemiştir.

### 3) Sürgünde Milli Duruş Tarzı

Refik Halit, Anadolu’yu gözler önüne sermiş usta bir kalemdir. Bunu bu kadar ustalıkla yapmasındaki etkenlerden biri de yaşadığı sürgünlerdir. Dönemin siyasi durumundan dolayı uzun süre sürgün hayatı yaşayan Karay, vatan toprağı denilen coğrafyayı keşfetme imkânını bulmuştur. Toprak ve insan bütünlüğünü gören Karay, Memleket Hikâyeleri ile edebiyatın Anadolu’ya açılmasına öncülük etmiştir.

Sürgün yılları Karay’ı görmediğı mekânlara, karşılaşmadığı insanlara ve hayatlara götürmüştür. Bu yüzden “Memleket Hikâyeleri”nde geleneksel, mahalli ve milli hayatın yaşandığı yerleri işlemiştir. Karay, *"Anadolu’yu bir köylü olarak değil varlıklı bir şehir delikanlısı olarak gördüm ve anlattım"* diyor. (Mert, s. 68) İnsanın yaşadığı mekânın tarihi ile coğrafyası arasında bir bütünlük vardır. Anadolu coğrafyasını ve insanını milli duyuş tarzı ile ele alan yazar da bu bütünlüğün farkına varmıştır. Memleket Hikâyelerinde mekân Anadolu coğrafyası ve İstanbul’dur. Karay, Anadolu insanını anlatırken dar bir mekânda sıkışmış olan insanın ruh halini betimlemektedir.

Dönemim siyasi şartlarının da etkisiyle halk, bu dar mekânlara kısıtılıp sürgün hayatı yaşıyordu. Millet, kendi topraklarında sürgündü. Toprağı özgür olmayan bir milletin kendisinin de özgür olması düşünülemezdi. Burada yaşayanlar çevresiyle ilişki kuramayan, kendi dünyalarında yaşayan insanlardır. Halk mecburi bir kabulleniş ile bu hayatı yaşıyordu.

"... Sanki buraya insanlar yokuşları tırmana tırmana değil, gökten serpilerek gelmişler ve inmeğe iz bulamayarak öyle dünyaya ilgisiz bir küme halinde kalmışlardı." (Karay, Memleket Hikayeleri, 2012, s. 12)

Aynı ortamda büyüyen insanlar arasında çok sıkı bir bağlantı vardır. "Yatık Emine"de insanlar sevmeyi, sevmeyi. Hoşgörüyü, empatiyi bilmediği için birbirlerini kıskanır. "Şeftali Bahçeleri" eserinde ise zengin, fakir herkes eğlenceden payını aldığı için kimse kimseyi kıskanmaz. Buda yazarın kendi has bakış açısı ve yazma tekniğiyle ilgilidir.

Milli romantik doğa anlayışının karşısına çıkarılan mekân İstanbul'dur. İstanbul yalılarını, köşkerlerini, mekânların eğlence hayatının olduğu bir güzelliştir. Bunu çok iyi bilen Karay, İstanbul'a özlem duymaktadır. İstanbul, Anadolu'nun aksine saflığını, temizliğini, dürüstlüğü yitirmiştir. Berbat bir hale gelmiş ve yaşanılmaktan çok tiksiniyen bir mekân haline gelmiştir. Anadolu'da milli ve mahalli değerlerle yaşayan insanlar, İstanbul'a gelince ilk değişimi kılık kıyafetinde yaşamıştır. Batılılar gibi giyinip kuşanıp, onlar gibi bir hayat sürmeye özenmişleridir. Bir eserinde geçen şu cümleler bize her şeyi özetliyor aslında "*Nebile babasındaki değişikliğin farkına vardı: Kasketi atmış, başına siyaha yakın, kadifemsi bir şapka geçirmişti; pantolonu baldırından kopçalı ve büzmeli değildi artık... Mintanı da bırakmış kravatlı gömlekle giyiyordu. Ayakkabıları iki renkli, pırıl pırıldı.*" (Karay, Memleket Hikayeleri, 2012, s. 179)

Sonuç itibariyle toprak, bir milletin varlığının göstergesidir. İnsan yaşadığı mekânla ve torağıyla vardır. Mekân yoksa millet de yoktur. Karay, yaşadığı sürgünlerden sonra toprağa farklı bir gözle bakmış ve hikâyelerinde milli romantik bir duyuş tarzı sergilemiştir. Bundan dolayı eserlerinde milli duruş sergilemesi öze dönmek istemesi gördüğü, değerlendirdiği toplum üzerinden yola çıkarak ulaşılmış sonuçlar silsilesidir.

Anadolu'nun ve Anadolu halkının Türk hikâyesinde işlenmeye başlaması ve yer edinmesi noktasında önemli katkıları olan Refik Halit Karay, Anadolu'daki sürgün hayatının izlerini taşıyan ve 1919'da yayımlanan "Memleket Hikâyeleri"yle edebiyatın Anadolu coğrafyasına açılmasına katkı sağlamıştır.

#### 4) Milli Duruş ve Lisan

Bir toplumun varlığının, yükselmesinin ve kendisini kabul ettirmesinin ana malzemesi olarak dil görülür. Bir milletin fende ve edebiyatta bir yerlere gelmesi, yine dil ile hayata geçecektir.. Ancak, bu dil milli bir dil olmalıdır.

Karay bulunduğu topluluğun aksine eserlerinden yalın ve sade bir dil kullanarak Anadolu'ya ve halkına ulaşmayı amaçlamıştır. Yazar sade ve anlaşılır diliyle halkın sesi haline gelmiştir ve Türkçe de ki sadeliğin ve yalınlığın öncüsü karakter olmuştur. Öyle ki Ziya Gökalp "Türkçeyi en iyi yazan muharrir Refik Halit'tir." demiştir.

Refik Halit Karay, Türk dilinin, ona gönül vermiş en usta işçisidir. İlk kez özentisiz bir dil kullanan Karay, kıvrak üslubu ve canlı tasviriyle edebiyatımızda bir ilke imza atmıştır. Ve "Öz Türkçe" hareketini destekleyenlerinin başında yer almıştır. Karay, hikâyelerin ve bu hikâyelerdeki kahramanların isimlerini bilinçli bir şekilde seçmiştir. Bunlar, halkın günlük dilde kullandığı sıradan isimler olarak Türk kimliğini temsil ederler.

Milli duruşu ve bilinci uyandırmayı amaçlayan Karay, halka yönelerek onların kullandığı dil ile hikâyelerini kaleme almıştır. Öykülerinin gücünü sağlayan baş etken dildir. "Cer Hocası"nda başkışı Asım, vaaz etmek üzere ilk olarak köylünün karşısına çıktığı zaman o güzel Türkçesinin halim, tatlı ahengiyle konuşmaya başlar. Halk ilk başta şaşırır daha sonra bu sözleri anlayarak, anladığı için de beğenerek kendinden geçer. Asım, tatlı konuşmasıyla bütün köye kendini sevdirebilir. Daha sonra ise o yalın Türkçesiyle uysal, sevimli sesi ile vaaza başlar;

*"Her zamanki gibi o ilk anlaşmazlık burada da görüldü; "yüzler şaşkınlıkla kırıştı. Bir süre bu halde kaldı; sonra kırışıklar açıldı, açıldı, merak içinde kalmış bir yüz durumu aldı. Köyün muhtarı, çuha şalvarlı adam, gözlerini kapamış, her beğendiği, iyi anladığı sözün arkasından başını sallıyor, içini çekiyordu."* (Karay, Memleket Hikayeleri, 2012, s. 157)

İşte bu Cer Hocası bir bakıma Karay'ın ta kendisidir. Onun çok temiz ve çok güçlü bir Türkçesi vardır. Sözcük dağarcığı çok zengindir ve sözcükleri yerli yerinde kullanır. Karay'ın eserlerinde aslında kendi benliğini, kendi işleyiş tarzını karakterlere yansıtarak adeta yaşamış ve eserde öze dönük çalışmanın insanın kendisinden başlayarak topluma ve halka yayılması gerektiğinin, farkındalığın oluşmasının insanın kendisinden başlayacağına en iyi örneklerden birisidir.

İstanbul Türkçesinin bütün inceliğine ve şiiriyetine, naifliğine vakıf olan yazar, halk ağzından aldığı sözlü anlatım şekillerinden geniş ölçüde yararlanmıştır. Şu sözlerle bunu

destekleyebiliriz; *“Babasının sesini işittikçe garazdan yüreği burkularak ve öğrendiği İstanbul lehçesini unutarak memleket ağzıyla söyleniyordu.”* (Karay, Memleket Hikayeleri, 2012, s. 183)

Bir dil devrimcisi olan Refik Halit Karay, hikâyelerinde ustalıkla Türkçeyi kullanmış ve milletin bilinçlenmesinde öncülük etmiştir. Milletin birlik ve beraberliğe ihtiyacı olduğu bir dönemde, milletin diliyle eserlerini veren Karay, Milli dil ile Milli benliğe ulaşmıştır. Onun kullandığı dil, geleceği müjdeleyen, pürüzsüz, sade ve kıvrak bir Türkçedir.

## SONUÇ

Refik Halit Karay toplumsal ve politik yazıları nedeniyle defalarca Anadolu'ya ve Anadolu'dan uzak yerlere sürgün edilmiş, bu geçen zamanda yazmaktan vazgeçmemiş, yaşadığı deneyimleri anlatmış, önemli eserler kaleme almış bir yazardır. Sürgün yılları Karay'ın eserlerinin gelişmesinde ve ortaya çıkmasında büyük rol oynamıştır. Meşrutiyet ve Cumhuriyet dönemlerinin yakın şahitlerinden biri olan Karay, gözlem gücü yüksek bir yazardır. Etrafındaki gelişmelerle ilgili kayıt tutan bir mukayyit, aynı zamanda yaşadığı dönemin de güçlü bir tanığı konumundadır. Zengin bir kelime dağarcığına sahip olan yazar kelimeleri yerli yerinde kullanmakta, sade bir üslup kullanmaktadır ve çağdaşlarından da bu yönüyle ayrılmaktadır. Ortaya koyduğu memleket tasviri kendine has bir tarza sahiptir. Sade üslubu, mükemmel betimleyici özelliği, dil zenginliği ve ince işçiliği ile eserlerini özenle işlemiştir.

Milli romantizm, bireyin kendisinden başlayarak topluma ait değerler ışığında geçmiş ile şimdi arasında bağ kurarak geleceğini şekillendirmesi hareketidir. Sanatçı, ait olduğu milletin tarihi, coğrafi ve kültürel değerlerini kendi ruh ve hayal dünyası ile yorumlayıp halkın milli benliğe erişmesine öncülük eder. Milli romantikler, güçlerini milletin yaşadığı coğrafya ve yarattığı kültürel değerlerden alırlar.

Milli unsurlar ile yazdığı hikâyelerde yönünü millete çevirip onların anlayabileceği bir dille yazarak Türk edebiyatında milli bir edebiyatın oluşmasını sağlamıştır. Karay, hikâyelerin de tarihe değinerek millette var olan değerleri devam ettirmeyi amaçlamıştır. Savaştan çıkan perişan bir milletin yok olma ile karşı karşıya kaldığı bir dönemde yeniden diriliş için toplumun uyanması gerekiyordu. Bunun için bu dönem sanatçıları eserlerini verirken buna özen göstermişlerdir.

Refik Halit Karay da bu sanatçılar arasında olup, eserlerinde bunu mükemmel işlemiş ve halka ulaşmayı başarmıştır. Tarihi olaylar onda halkın bilincini uyandırma da amaç ve araçtır. Millete ait olan tarihe, kültürel değerlere, inançlara ve bunların insanın beyninde, kalbinde oluşturduğu etkiye dayanarak eserlerini ortaya çıkartan Karay ayrıca mekân, insan ilişkisini gözler önüne

sermiş ve mekânın hayatları nasıl değiştirdiğini ve milli bir kimlik oluşturmadaki önemine değinmiştir.

Mekânlar, insanın ruh dünyasını ve yaşam koşullarını belirler. Kişi, önce kendi mekânında daha sonra topluma ait ortak bir mekânda hayatını idame ettirir. Sanatçı, eserlerindeki milli romantik tabiat anlayışıyla doğanın muhteşemliği karşısında insanın tepkisini ölçmektedir.

Bunları yaparken milli dili kullanan yazar, milli dilin milli kimliği oluşturma da önemli bir yere sahip olduğunu gözler önüne sermiştir. Toplumların tarihi, ortak bir dille yazılmıştır ve toplum bu ortak dili kullanarak tarihini öğrenmiştir. Milli bir dille var olan toplum, yine milli bir dil ile geleceğini oluşturacaktır. Türkçenin bütün güzelliklerini ve muhteşemliğini eserlerinde sergileyerek öz Türkçe hareketinin öncüsü olmuştur.

Milli unsurlar ile değerlendirdiğimiz Refik Halit Karay, gerek dönemin siyasi, gerekse sosyal şartlarını göz önünde tutarak, Anadolu'ya ve Anadolu halkına yönelmiş ve halkın milli bilincini harekete geçirerek, geleceğe ışık tutan usta kalemlerden biri haline gelmiştir.

### **ABSTRACT**

The effects of global climate change on hydro-meteorological parameters vary on a regional basis. For this reason, regional surveys are important and necessary to determine the effects of global climate change. In addition, surveys on climate parameters are needed for regional planning. In this study long-term trend analysis of precipitation series are determined in the Hirfanlı dam basin of Turkey. Records are acquired from the Turkish State Meteorological Service for the period of 1968 to 2017 for Gemerek, Kayseri, Kirsehir, Nevsehir, Sivas, and Zara. Mann-Kendall and Spearman's Rho are used for trend analysis with 95% confidence levels. The results of Mann-Kendall and Spearman's Rho are similar. According to the results of the precipitation series increase was determined but statistically significant trends couldn't be determined at 95% confidence levels.

**Keywords:** Precipitation, Mann-Kendall, Spearman's Rho, Climate Change

## **1. INTRODUCTION**

Global climate change has become an important problem affecting civilization around the world. Global climate change manifests itself to different degrees in various geographies in Turkey. These effects were investigated using hydro-meteorological climate parameters (Yu et al., 1993; Cooley and Chan, 2017; Yacoub and Tayfur, 2019; Coloiera, 2020; Singh and Kumara, 2021). Studies on climate and climate componenets have reported that temperatures have increased and precipitation has decreased in recent years (Kuyucu et al., 2017). As can be seen in the literature, the effects of global climate change on various hydro-meteorological parameters are being investigated for Turkey (Turkes, 1996; Kadioglu, 1997; Partal and Kahya 2006; Kizilelma et al., 2015; Dogan et al., 2015; Topuz et al., 2020; Bacanli and Tanrikulu, 2017; Ay and Kisi, 2017; Keskin et al., 2018; Zeybekoglu and Karahan, 2018; Ceribasi, 2018; Ulke Keskin and Ozkoca 2018; Abbasnia and Toros, 2020; Terzi and Ilker 2020).

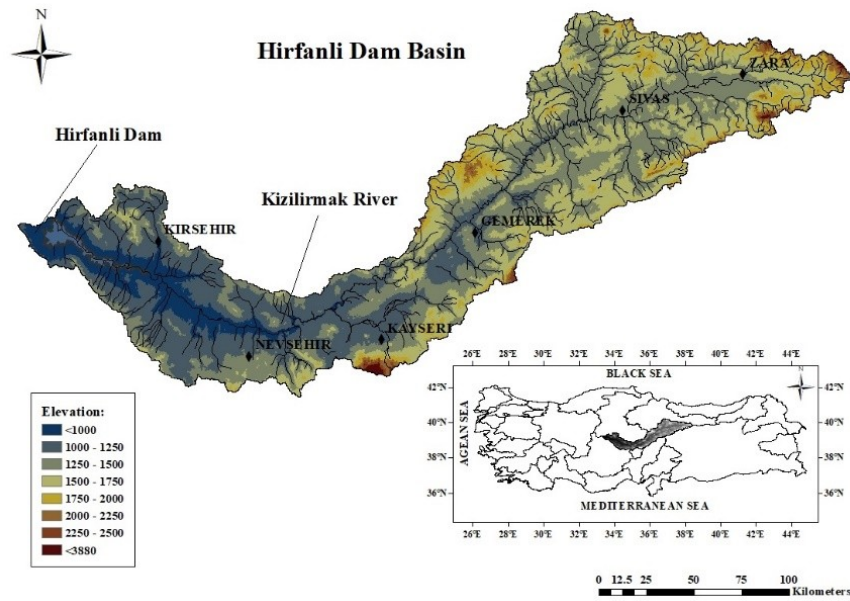

In this paper, Hirfanli Dam basin, which is located in the semi-arid climate region where climate change can be seen due to its location, was chosen as the study area. Precipitation series analyzes were made by using Mann Kendall (MK; Mann, 1945; Kendall, 1975) and Spearman's Rho (SR; Sneyers, 1990; Yue et. Al, 2002; Yenigun et al., 2008).

## **2. STUDY AREA**

The sub-basin that feeds Hirfanli Dam, which is located between the longitudes of 33.3°E and 38.7°E and the latitudes of 38.3°E and 40.1°N, is in Kizilirmak River basin. Its surface area is approximately 26700 km<sup>2</sup>. With its 1355 km length, the Kizilirmak river is one of the major water resources of Turkey. Hirfanli Dam was built on Kizilirmak River in 1959 to control floods and for hydropower use. Hirfanli Dam basin has high topographic features with a mountainous plateau. The altitude varies between 799-3880 m (Fig. 1) and decreases from the east to the west in the basin. In the west of the basin, plateaus and meadows are more

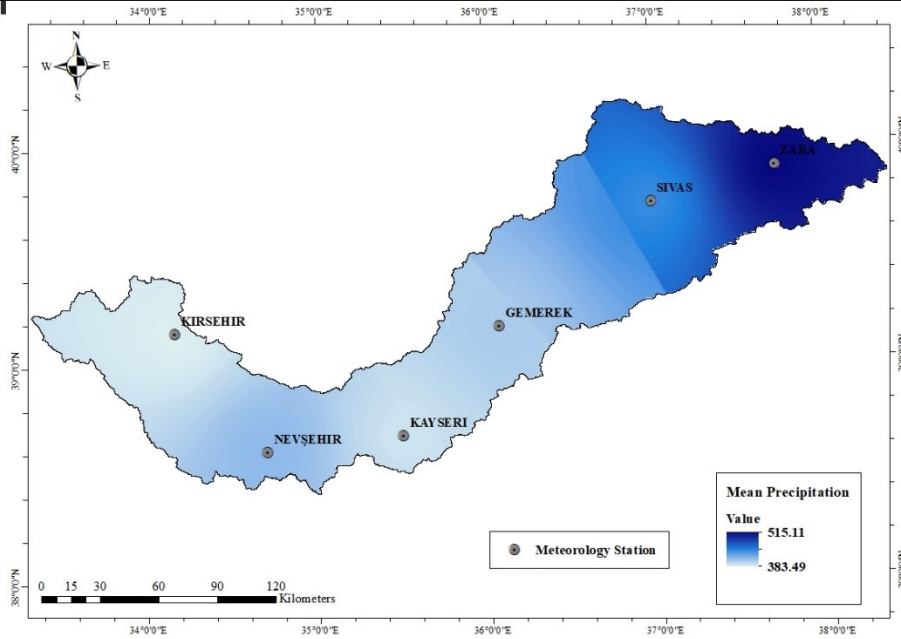

common. Volcanic mountains are also found in this area with wide plains around them.

Erciyes Mountain is among the most important volcanic mountains in the basin. The Eastern basin has high, rugged and mountainous plateaus, and the low hills in the area are the most important surface elements. In the basin, a typical dry climate is dominant, and the Hirfanli Dam basin covers plateaus, meadows, and pastures for animal grazing and wide plains for agricultural activities. For this reason, agriculture is a major economic factor in the basin (Yildiz, 2009, 2014; Oguzturk and Yildiz, 2016).

**Figure 1.** The geographical and Topographical Situation of the Hirfanli Dam Basin, Turkey. (Zeybekoglu and Akturk, 2021)

Precipitation records between 1968 and 2017 were obtained from the Turkish State Meteorological Service (TSMS). The mean precipitation of the basin is 424.82 mm. In addition, geographical and meteorological details of the stations are given in Table 1. Precipitation in the basin increases from west to east. The spatial distribution of precipitation is given for the basin in Figure 2.

**Figure 2.** Spatial Distribution of Annual Precipitation in the Hirfanlı Dam Basin (Zeybekoglu, 2022)

**Table 1.** Geographical and Statistical Information of Stations and Data

Stations	Latitude (N)	Longitude (E)	Elevation (m)	P <sub>min</sub> (°C/year)	P <sub>max</sub> (°C/year)	P (°C/year)
Gemerek	39.11	36.04	1173	276.00(2013)	681.50(2010)	403.31
Kayseri	38.44	35.29	1093	202.70(2016)	614.10(1988)	390.13
Kirsehir	39.09	34.10	1007	254.20(2013)	541.90(1987)	383.49
Nevşehir	38.35	34.40	1200	281.00(2013)	589.00(1987)	413.20
Sivas	39.45	37.01	1285	284.80(1973)	587.10(2012)	443.70
Zara	39.54	37.45	1348	329.20(2013)	700.30(1988)	515.11

### 3. FINDINGS

The MK and SR were applied to identify the tendency in the Hirfanlı Dam Basin stations recorded by TSMS in the period of 1968-2017. The results of the precipitation analyzes performed at 95% confidence levels are shown in the Tables 2.

**Table 2.** Results of MK and SR

Stations	Z <sub>Cr</sub>	Z <sub>MK</sub>	Trend	Z <sub>SR</sub>	Trend
Gemerek	±1.96	-0.08	Downward	-0.03	Downward
Kayseri	±1.96	1.14	Upward	1.05	Upward
Kirsehir	±1.96	-0.36	Downward	-0.25	Downward
Nevşehir	±1.96	-0.23	Downward	-0.19	Downward
Sivas	±1.96	0.86	Upward	0.79	Upward
Zara	±1.96	-1.70	Downward	-1.72	Downward

According to trend analyses results (Table 2), a significant upward/downward trend ( $Z > |Z_{Cr}|$ ) could not be determined. An upward trend detected Kayseri and Sivas. Gemerek, Kirsehir, Nevsehir and Zara have downward trend. The findings of precipitation results, obtained by MK and SR methods for the Hirfanli dam basin, show parallelism.

#### 4. CONCLUSION

In this study, the effect of global climate change on the precipitation series in the Hirfanli Dam Basin was investigated. The precipitation data measured by TSMS in the period 1968-2017 were used. In the precipitation series of the stations in the basin, a downward trend was detected in four of the six and an upward trend in two of them. As a result of global climate change, drought in the basin is expected to increase even more in the future. Activities related to the efficient use of water resources should be carried out. Information, prevention and sustention activities should be carried out against possible negative effects in agricultural activities. Existing urban green spaces should be protected and afforestation activities should be increased.

## **1. INTRODUCTION**

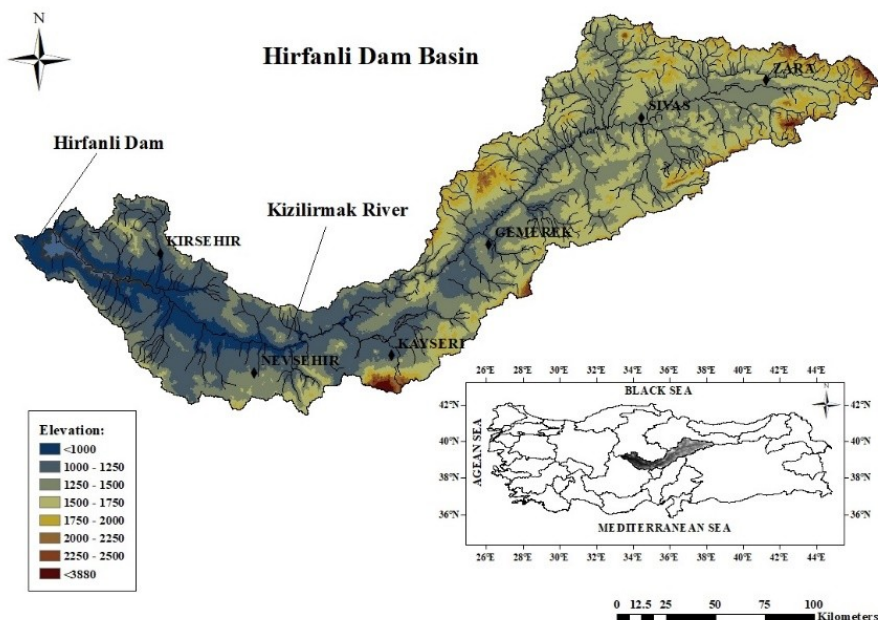

Global climate change has become an important problem affecting civilization around the world. Global climate change manifests itself to different degrees in various geographies in Turkey. These effects were investigated using hydro-meteorological climate parameters (Yu et al., 1993; Cooley and Chan, 2017; Yacoub and Tayfur, 2019; Coloiera, 2020; Singh and Kumara, 2021). Studies on climate and climate componenets have reported that temperatures have increased and precipitation has decreased in recent years (Kuyucu et al., 2017). As can be seen in the literature, the effects of global climate change on various hydro-meteorological parameters are being investigated for Turkey (Turkes, 1996; Kadioglu, 1997; Partal and Kahya 2006; Bacanli and Tanrikulu, 2017; Ay and Kisi, 2017; Zeybekoglu and Karahan, 2018; Ceribasi, 2018; Ulke Keskin and Ozkoca 2018; Abbasnia and Toros, 2020; Ilker and Terzi, 2021).

In this paper, Hirfanli Dam basin, which is located in the semi-arid climate region where climate change can be seen due to its location, was chosen as the study area. Temperature

series analyzes were made by using Mann Kendall (MK; Mann, 1945; Kendall, 1975) and Innovative Trend Analysis (ITA; Sen, 2012, 2015, 2017).

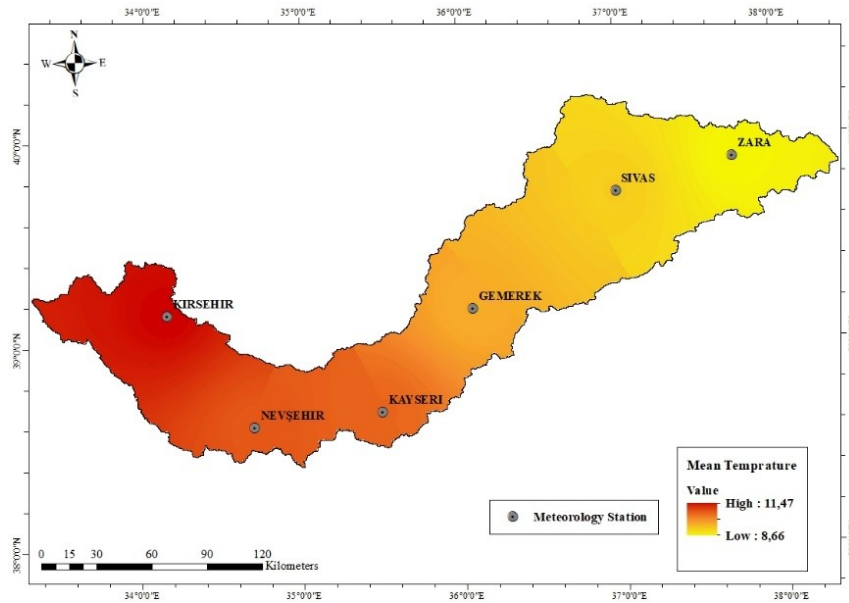

## 2. STUDY AREA

The sub-basin that feeds Hirfanli Dam, which is located between the longitudes of 33.3°E and 38.7°E and the latitudes of 38.3°E and 40.1°N, is in Kizilirmak River basin. Its surface area is approximately 26700 km<sup>2</sup>. With its 1355 km length, the Kizilirmak river is one of the major water resources of Turkey. Hirfanli Dam was built on Kizilirmak River in 1959 to control floods and for hydropower use. Hirfanli Dam basin has high topographic features with a mountainous plateau. The altitude varies between 799-3880 m (Fig. 1) and decreases from the east to the west in the basin. In the west of the basin, plateaus and meadows are more common. Volcanic mountains are also found in this area with wide plains around them. Erciyes Mountain is among the most important volcanic mountains in the basin. The Eastern basin has high, rugged and mountainous plateaus, and the low hills in the area are the most important surface elements. In the basin, a typical dry climate is dominant, and the Hirfanli Dam basin covers plateaus, meadows, and pastures for animal grazing and wide plains for agricultural activities. For this reason, agriculture is a major economic factor in the basin (Yildiz, 2009, 2014; Oguzturk and Yildiz, 2016).

**Figure 1.** The geographical and Topographical Situation of the Hirfanli Dam Basin, Turkey. (Zeybekoglu and Akturk, 2021)

Temperature records between 1968 and 2017 were obtained from the Turkish State Meteorological Service (TSMS). The mean temperature of the basin is 10.03°C. In addition, geographical and meteorological details of the stations are given in Table 1. The temperatures in the basin decrease from west to east. The spatial distribution of temperature is given for the basin in Figure 2.

**Figure 2.** Spatial Distribution of Mean Temperatures in the Hirfanli Dam Basin (Zeybekoglu, 2022)

**Table 1.** Geographical and Statistical Information of Stations and Data

Stations	Latitude (N)	Longitude (E)	Elevation (m)	T <sub>min</sub> (°C/year)	T <sub>max</sub> (°C/year)	T <sub>mean</sub> (°C/year)
Gemerek	39.11	36.04	1173	6.94 (1992)	11.77 (2010)	9.64
Kayseri	38.44	35.29	1093	8.41 (1992)	13.23 (2010)	10.54

**Figure 3.** Graphical Results of ITA

According to temperature results (Table 2 and Figure 3), increasing trends were determined at all stations. As stated by MK results statistically significant upward trends ( $Z > Z_{Cr}$ ) were determined in the Gemerek, Kayseri, Kirsehir, Nevsehir and Sivas. On the other hand, the ITA results of basin, a significant upward trend could not be determined but stations have upward trend. The findings of this results, obtained by MK and ITA methods for the Hirfanli Dam basin, show parallelism for temperature series.

#### 4. CONCLUSION

In this study, the effect of global climate change on the temperature series in the Hirfanli Dam Basin was investigated. The temperature data measured by TSMS in the period 1968-2017 were used. An upward trend has been determined throughout the basin. As a result of global climate change, drought in the basin is expected to increase even more in the future. In line with this expectation, it is important to identify risks and hazards, take all necessary precautions, take responsibility for disasters and to raise awareness in order to prevent and

---

reduce damages within the scope of the modern disaster management (Karaman, 2016) approach (Gunduz, 2022).

## MATERYALİST DEĞERLERİN STATÜ TÜKETİMİ İLE İLİŞKİSİ: AMİSH TOPLULUĞU ÖRNEĞİ ÜZERİNDEN BİR DEĞERLENDİRME

**Doç. Dr. Aybike Tuba ÖZDEN (Orcid ID: 0000-0002-3133-3620)**

Ondokuz Mayıs Üniversitesi, Samsun Meslek Yüksekokulu, Pazarlama ve Reklamcılık Bölümü

### ÖZET

Materyalist tüketiciler, mutluluğu maddiyatta yani sahip olduklarında aramaktadırlar. Statü tüketimi ise tüketicilerin statü göstergesi olan ürünleri satın almalarıdır. Dolayısıyla bu tüketicilerde amaç, gösteriş amaçlı tüketim yapmaktan önce satın aldıklarıyla statü kazanmaktır. Bu çalışmanın temel amacı, materyalizm ile statü tüketimi arasında ilişki olup olmadığını ele almaktır. Araştırmada ayrıca tüketicilerin meslekleri ile materyalist değerleri ve statü tüketimleri arasında bir farklılık olup olmadığına da bakılmıştır. Son olarak bu çalışmada tüketicilere Amishler gibi günümüz koşullarında bile hala geleneksel hayatlarına devam eden bir topluluğun üyesi olmak isteyip istemeyecekleri de sorulmuştur. Böylece geleneksel yaşamlara öykünen tüketicilerin materyalist ve statü tüketimi eğilimleri de incelenmiştir. Bu amaçlar doğrultusunda anket yöntemi ile 439 katılımcının cevabı değerlendirilmiştir. Araştırmada elde edilen bulgulara göre materyalizm ile statü tüketimi arasında anlamlı bir ilişki bulunmaktadır. Bir başka deyişle materyalist eğilimi artan tüketicilerin statü tüketim eğilimleri de artmaktadır. Ayrıca tüketicilerin statü tüketimleri mesleklerine göre farklılaşmaktadır. İş yeri sahibi, öğretmen ve doktor tüketicilerin statü tüketimi eğilimleri daha yüksektir. Doktor, iş yeri sahibi ve öğrencilerin materyalizm puanlarının çok yüksek olduğu görülmektedir. Amish Topluluğu'nun üyesi olmayan tüketicilerin bu sonuca paralel şekilde doktor, iş yeri sahibi ve öğrenciler olduğu görülmektedir. Amish Topluluğu'na üye olmak istemeyen tüketicilerin ise (öğretmen, emekli, işçi ve akademisyen) materyalizm puanları düşüktür. Bu çalışma, kapsamlı meslek gruplarını ele alarak statü tüketimi ve materyalizm arasındaki ilişkiyi incelemiş olması açısından önemlidir. Ayrıca bu tüketicilerin geleneksel yaşama bakış açıları da ele alınmıştır. Dolayısıyla bu tüketicilerin statü tüketim eğilimleri ve materyalist eğilimlerinin değerlendirilmesiyle gelecek araştırmalara ışık tutmak hedeflenmektedir. Araştırmada elde edilen bulgularla araştırmacılara ve işletmelere çeşitli öneriler sunulmuştur.

**Anahtar Kelimeler:** Materyalizm, Statü Tüketimi, Tüketici Davranışı, Meslekler, Amish Topluluğu

**THE RELATIONSHIP OF MATERIALIST VALUES AND STATUS  
CONSUMPTION: AN EVALUATION ON THE CASE OF THE AMISH  
COMMUNITY**

**ABSTRACT**

Materialist consumers seek happiness in material things, that is, in what they have. Status consumption, on the other hand, is when consumers buy products that are status indicators. Therefore, the aim of these consumers is to gain status with what they buy before conspicuously consuming. The main purpose of this study is to examine whether there is a relationship between materialism and status consumption. In the study, it was also examined whether there is a difference between the professions of consumers, their materialistic values and their consumption of status. Finally, in this study, consumers were also asked whether they would like to be a member of a community such as the Amish, who still continue their traditional lives even in today's conditions. Thus, the materialist and status consumption tendencies of consumers who emulate traditional lives were also examined. In line with these purposes, the answers of 439 participants were evaluated with the questionnaire method. According to the findings of the research, there is a significant relationship between materialism and status consumption. In other words, the status consumption tendencies of consumers whose materialistic tendencies increase also increase. In addition, the status consumption of consumers differs according to their professions. Business owner, teacher and doctor consumers tend to consume higher status. It is seen that the materialism scores of doctors, business owners and students are very high. In parallel with this result, it is seen that the consumers who do not want to be a member of the Amish Community are doctors, business owners and students. Consumers who do not want to be members of the Amish Community (teacher, retired, worker, and academic) have low materialism scores. This study is important in that it examines the relationship between status consumption and materialism by addressing comprehensive professions groups. In addition, the perspectives of these consumers on traditional life are also discussed. Therefore, it is aimed to shed light on future research by evaluating the status consumption tendencies and materialistic tendencies of these consumers. Various suggestions were presented to researchers and businesses with the findings obtained in the study.

**Keywords:** Materialism, Status Consumption, Consumer Behavior, Professions, Amish Community

## 1. GİRİŞ

Ürün çeşitliliği ile birlikte alım gücünün artması, sosyal medya aracılığıyla tüketim alışkanlıklarının teşhiri ve mütevazılığın yerini gösterişin alması, materyalizmin tüketici hayatlarına ne derece etkili olduğunun göstergeleridir. Nitekim maddiyat ve mülk edinme gücü materyalist tüketicileri mutlu edebilen öğelerdir. Maddiyatın mutluluk getirmediğine yönelik geleneksel bakış açısı günümüzde şekil değiştirmektedir. Maddi gücü olan tüketicilerin konforu, internetle birlikte daha göz önünde olmaya başladıkça tüketicilerin bazıları mutluluğu maddiyatta aramaya başlamışlardır. Örneğin Kamal (2013), sosyal medya ile materyalizm arasında anlamlı bir ilişki olduğunu belirtmektedir. Maddiyat bu tüketiciler için sadece mutluluk getirmemekte aynı zamanda onlara statü de kazandırmaktadır.

Tüketim, aynı zamanda bir iletişim biçimidir. Bu nedenle tüketim kültürünün yaygınlaşması ile birlikte ürünler yeni anlamlar kazanmaya başlamıştır. Tüketiciler satın aldıkları ürünlerle kendilerini tanımlamakta, toplumda yer edinmekte, sosyalleşmekte ve statü kazanmaktadırlar. Dolayısıyla materyaller, salt maddi öge olmaktan öte anlamlar kazanmışlardır. Bu maddi ürünler, tüketicilere işlevsel faydalar sağladığı gibi statü de kazandırabilmektedir. Statü, tüketicilerin ait oldukları grupta konumlandıkları yer olarak tanımlanabilir. Her bireyin toplumda bir statüsü bulunmaktadır. Toplum nezdinde ne kadar yüksek statüde olunursa birey bunu bir kazanım olarak görebilir. Statü kazanmak veya göstermek adına yapılan tüketim şekli de statü tüketimidir. Yani tüketiciler, toplumda bir konum edinebilmek için ürünler satın almaktadırlar. Hele ki tüketimin, lüksün ve gösterişin giderek popüler olduğu dünyamızda statü kazanmak tüketimle çok daha ilişkili hale gelmeye başlamıştır. Nitekim Topçu vd. (2020), materyalizm ile gösterişçi tüketim arasındaki ilişkide sosyal statü gösteriminin aracılık etkisi olduğunu belirtmektedirler. Zengin ve Döngül (2022) ise statü tüketiminin gösteriş tüketimini pozitif yönde etkilediğini tespit etmişlerdir. Bu araştırmada statü tüketimi ile materyalizm arasındaki ilişki incelenecektir. Bu ilişki ele alınırken tüketicilerin meslekleri ile statü tüketimleri ve materyalist eğilimleri arasındaki ilişki de ele alınacaktır. Her iki durum, Amish toplulukları gibi geleneksel yaşam koşulları olan toplulukların bir üyesi olma istekliliğiyle birlikte değerlendirilecektir. Böylece günümüz koşullarında statü tüketimi ve materyalist eğilimleri olan tüketicilerin geleneksel yaşam koşullarına ilişkin düşüncelerine dair fikir edinilmeye çalışılacaktır. Nitekim Amsihler, Amerika'nın bazı eyaletlerinde yaşayan, güçlü kültürel ve dini inançları sayesinde ayrı ve biyolojik olarak izole edilmiş bir topluluk oluşturmuşlardır (Patton, 2009). Bu topluluk yaşam tarzlarıyla diğer topluluklardan farklılaşmaktadır. Amishler, lüzumsuz gördükleri her şeyin tüketimini reddederler, bu yaşam

biçiminde hayatın tadını çıkarmaya yönelik aktiviteler çok azdır ve son derece disiplinlidirler (Yayla, 1997). Bu çalışma, geleneksel yaşam tarzına bakış açısı örneği üzerinden statü tüketimi ve materyalist eğilimi ele alması ve mesleklerle bu tüketim şekilleriyle ilişkisine bakılması açısından özgün bir araştırmadır. Elde edilen sonuçlarla hem ilgili literatüre değerli bir katkı sunulması hem de uygulayıcılara öneriler geliştirilmesi hedeflenmektedir.

## **2. STATÜ TÜKETİMİ**

Statü, bir tüketicinin toplum içerisinde yer aldığı konumudur (TDK, 2022). Bu konum; tüketicilerin eğitimi, mesleği, geliri, yetenekleri, başarıları veya makamı gibi özellikleriyle kendisini gösterebiliyorken tüketicilerin satın aldıkları ürünlerin nitelikleriyle de olabilmektedir. Satın alınan ürünle statü kazanma arzusu ise statü tüketimini ifade etmektedir. Tüketilen ürünler bu özelliklere sahip olduğuna dair birer done oluşturduğundan tüketiciler statü kazandıran ürünleri satın alma eğilimi taşıyabilmektedirler. Statü tüketimi yapan tüketiciler, satın aldıkları ürünlerle statülerini yükseltmek ve itibar kazanarak farklılaşmak istemektedirler (Clark vd., 2007; Mai ve Tambyah, 2011).

İlgili literatürde statü tüketimi ile gösteriş tüketimi kavramlarının birbirleri yerine kullanıldığı görülmektedir (Truong vd., 2008). Ancak statü tüketimi ve gösteriş tüketimi farklı kavramlardır (Eastman vd., 1999). Gösteriş tüketimi, tüketicilerin lüks ve pahalı ürünler satın alarak toplumdaki diğer bireylere gösteriş yapmak amacıyla yaptıkları bir tüketim biçimidir. Statü tüketiminde ise statü kazanmak adına yapılan bir tüketim söz konusudur. Yani statü temsil eden bir ürünü satın alma isteği statü tüketimidir ve tüketici statüsünün toplum tarafından onaylanmasını arzulamaktadır, lüks bir ürünü başkasına gösterme arzusuyla satın almak ise gösteriş tüketimidir (Gökalliler vd., 2011). Statü tüketiminde ürünün diğer tüketiciler tarafından görünmesi öncelikli bir arzu değilken gösteriş tüketiminde ürünün diğer tüketiciler tarafından görünmesi öncelikli bir arzudur (O’Cass ve McEwen, 2005). Statü tüketiminde statü göstergesi olan ürünlere sahip olabilmek önemlidir (Türkmen ve Erten, 2020). Statü tüketimi, gösteriş tüketiminin bir boyutudur (Marcoux vd., 1997) ve statü tüketiminde tüketicilerin satın aldıkları üründen bireysel haz almaları ve benlik saygısı kazanmaları söz konusudur (Truong vd., 2008). Nitekim Yapraklı ve Özkan (2021), benlik algısının statü tüketimi üzerinde pozitif yönde bir etkisi olduğunu belirtmektedirler. Aynı zamanda statü tüketimi yapan tüketiciler, gösterişçi bir biçimde tüketim yaparak toplum tarafından saygı görme arzusu duyabilirler (Boğa ve Başçı, 2016).

Statü tüketimi ve materyalist eğilimle ilgili yapılmış çeşitli araştırmalar mevcuttur. Eastman vd. (1997), Amerikalı, Çinli ve Meksikalı tüketicilerin materyalist eğilimlerinin farklılaştığını ancak statü tüketimi açısından anlamlı bir farklılık olmadığını belirlemişlerdir. Yapılan araştırmalarda statü tüketimi ile materyalist eğilim arasında anlamlı bir ilişki olduğu (Wang ve Wallendorf, 2006; Goldsmith ve Clark, 2012; Lertwannawit ve Mandhachitara, 2012) ve materyalizmin statü tüketimi üzerinde etkisi olduğu ortaya konulmuştur (Fitzmaurice ve Comegys, 2006; Riquelme vd., 2011; Aslay vd., 2013; Ajitha ve Sivakumar, 2017; Bozbay ve Başlar, 2019; Türkmen ve Erten, 2020; Eşitti ve Erdem, 2021).

### **3. MATERYALİZM**

Türk Dil Kurumu'nda materyalizm, maddecilik olarak tanımlanmıştır (TDK, 2022). Dolayısıyla tüketicilerin maddiyata ve dünyevi şeylere verdikleri önem düzeyi materyalist eğilimi ifade edebilir. Richins ve Dawson (1992), materyalizmi değer ve inanç olarak tanımlamaktadırlar. Araştırmacılara göre materyalist tüketiciler, daha yüksek gelir düzeyine ulaşmak istemektedirler, kişilerarası ilişkilere göre finansal güvenliğe daha çok önem vermektedirler, başkaları için değil kendileri için alışveriş yapmayı tercih etmektedirler ve hayatlarından daha az memnundurlar.

Ward ve Wackman (1971), tüketicilerin materyalizmi sosyalleşme aracı olarak gördüklerini belirtmektedirler. Materyalist eğilimi olan tüketicilerin daha iyi bir statüde görünmeye ve maddi öğelere ulaşabilme başarılarıyla toplum içinde yer edinmeye çalıştıkları söylenebilir. Odabaşı (2017), materyalist tüketicilerin hayatlarının merkezinde mülk edinme olduğunu, mülk sahibi olmayı başarı olarak gördüklerini ve bu şekilde mutlu olacaklarına inandıklarını belirtmektedir. Materyalist eğilimi olan tüketiciler için edinmiş oldukları mülkiyet bir başarı sembolüdür (Dingus, 2014). Holt (1995) ve Browne ve Kaldenberg (1997) materyalizmin bir kişilik özelliği olduğunu belirtmektedirler. Belk (1984) ise materyalist tüketicilerin kıskanç, cimri ve mülkiyetçi olduklarını söylemektedir.

Materyalizm, dünyevi ürünlere yönelik sahip olma arzusu içerdiğinden doğrudan tüketimle ilişkilidir ve bu konuda yapılmış çeşitli araştırmalar mevcuttur. Ger ve Belk (1996), materyalist eğilimin kültürden kültüre değişiklik gösterdiğini belirtmektedirler. Araştırmada elde edilen sonuçlara göre materyalizm ne Batı'ya özgüdür ne de doğrudan refahla ilgilidir. Örneğin Rumenler Amerikalılara göre daha materyalistlerdir. Materyalizmin, moda giyim üzerinde etkisi olduğu tespit edilmiştir (O'Cass, 2001). Materyalist tüketiciler, satın

alımlarında daha stratejik davranarak maddi öğelerle mutlu olmak için satın alım yapmaktadırlar (Xu, 2008).

Balıkçioğlu ve Volkan (2016), yapmış oldukları araştırmada materyalist eğilim arttıkça gösteriş tüketimi eğiliminin arttığını, sosyal medyanın, akran iletişiminin materyalist eğilim düzeylerinde etkili olduğunu tespit etmişlerdir. Danacı (2020), materyalist eğilimin hedonik tüketim ve kompulsif satın almada etkili olduğunu belirtmektedir. Akkaya vd. (2021), materyalizm ve marka sadakati arasında anlamlı bir ilişki olduğunu göstermişlerdir.

#### 4. AMİSH TOPLULUĞU

Amishler, tarihi 1600'lü yıllara dayanan bir topluluktur (Tharp, 2007). Bu topluluk, Kuzey Amerika'nın kırsal kesimlerinde yaşayan İsviçreli/Alman, Anabaptist-Hıristiyan bir halktır (Anderson ve Potts, 2020). Benzersiz ve disiplinli yaşam biçimleriyle birçok araştırmacının ilgisini çeken bu topluluk günümüz modern dünyasından yalıtılmış bir yaşam sürmektedir. Amishler, Jacob Ammann isimli bir kilise liderinin liderlik yaptığı Anabaptist hareketinin en muhafazakar mezhebini oluşturmaktadırlar ve Kutsal Kitap'a geri dönüş yapılması gerektiğini savunmaktadırlar (Çavuş vd., 2021). Dolayısıyla Katolik ve Protestanların öğretilerinden farklılaşan bir inanç sistemleri vardır. İnanç sistemleri çok katıdır ve kilise doktrinine uymayan üyeler Amish yaşam tarzını yerine getirmediklerinden diğer üyeler tarafından Meidung'u (kaçınma) uygulanır (Kraybill, 2001).

Amishler, dini inançları ve inançlarının gereklilikleri olan yaşam kurallarını uygulayarak kendilerini modern dünyadan kasıtlı olarak soyutlamış olan bir toplumsal alt gruptur (Fuchs vd., 1990). Bu topluluk üyeleri genellikle çiftçilik yaparak geçinmektedirler. Bazıları küçük işletmeler kurarak mobilya, mobil evler veya ahırlar inşa etmekte veya el sanatları yapıp satarak veya gıda maddeleri üreterek geçimlerini sağlamaktadırlar (Howley vd., 2008). Bu geçim tarzları, hem dini ilkelerine hem de yaşam biçimlerine uygun bir geçim şeklidir (Hostetler, 1993). Günümüz teknolojik aletlerini kullanmayı reddetmektedirler. Aslında teknolojiye karşı bu reddedişlerinin arkasında dini gerekçeleri dışında kültürel bir tavır da bulunmaktadır. Nitekim alçakgönüllülük, eşitlik ve sadelik gibi değerleri destekleyen teknolojileri seçmektedirler ki bu çok sınırlıdır, örneğin onlar için otomobiller çekicidir, hızlıdır ve mütevazı değildir ancak at arabaları öyle değildir (Wetmore, 2007). Amishlerin modern dünyanın yaşam şeklini reddetmeleri, benzersiz kimliklerini korumaya yardımcı olmaktadır (Wetmore, 2007).

Amishlerin karakteristik bazı yaşam ilkeleri şu şekilde özetlenebilir (Yayla, 1997; Öztürk, 2010): Şiddete karşı çıkan Amishler askerlik yapmayı reddederler. Dünyevi şeylerden uzak kalmak istediklerinden elektrik veya telefon gibi şeylerden uzak kalmaktadırlar. Zorunda kaldıklarında ankesörlü telefon kullanmaktadırlar. Çalışkan olmak, sade yaşamak, dürüstlük

önemli ilkeleri arasındadır. Güneş doğmadan çalışmaya başlarlar ve güneş battıktan kısa bir süre sonra yatarlar. Eğlence gibi aktiviteler hayatlarında yer almaz ve çocuklar sıkı bir disiplinle yetiştirilmektedir. Gereksiz harcamalardan kaçınırlar. Oy vermeyi reddetmektedirler. Genellikle siyah veya beyaz renklerde ve sade giyimi tercih etmektedirler. Bu araştırmada, günümüz koşullarına adapte bir şekilde yaşayan tüketicilerin Amish topluluğunun (basit, sade ve disiplinli yaşam şekilleri çerçevesinde) bir üyesi olmak isteyip istemeyecekleri üzerinden yürütülmüştür. Dini inançlardan bağımsız, Amish topluluğunun yaşam ritüelleri sözlü ve görsel olarak aktarılan tüketicilere bu şekilde yaşamak isteyip istemeyecekleri sorulmuştur. Böylece bu tüketicilerin materyalist eğilimleri ile statü tüketimleri arasındaki ilişki incelenmiştir. Sonuç olarak, tüketicilerin günümüz teknolojik koşullarına ve tüketim davranışlarına rağmen geleneksel yaşam biçimleri üzerine bir bakış açısı ortaya konulmaya çalışılmıştır.

## 5. ARAŞTIRMA ve BULGULAR

### Araştırmanın Amacı

Bu çalışmanın amacı; tüketicilerin materyalist eğilimleri ile statü tüketimleri arasındaki ilişkiyi incelemektir. Bu ilişki ele alınırken Amishler örneği üzerinden tüketicilerin; basit, sade ve geleneksel bir yaşam tarzına olan bakış açıları ele alınacaktır. Araştırmada ayrıca bu tüketicilerin meslekleri ile materyalist eğilimleri ve statü tüketimleri arasındaki ilişki değerlendirilecektir. Elde edilen sonuçlar doğrultusunda işletmelerin pazar bölümlendirmede daha isabetli hedef kitleye ulaşabilmeleri ve tutundurma çalışmalarında bu doğrultuda stratejiler geliştirmeleri hedeflenmektedir. Araştırma sonuçları ile ilgili literatüre ve araştırmacılara katkıda bulunulacaktır.

### Araştırmanın Önemi

Demografik özellikler pazar bölümlendirmenin önemli bir ölçütüdür. Belirli bir geliri ve yaşam tarzını temsil etme özelliği olan meslekler, bu ölçütler arasında önemli bir yere sahiptir. İlgili literatüre bakıldığında tüketicilerin meslekleri ile statü tüketimleri ve materyalist eğilimleri arasındaki ilişki ile ilgili çok az çalışma olduğu görülmüştür. Bu nedenle materyalist eğilim ve statü tüketiminin tüketicilerin meslekleri ile ilişkisi tespit

edilerek bu mesleklere yönelik, işletmelerin spesifik stratejiler geliştirebilmeleri ve dolayısıyla emek, zaman ve masraftan tasarruf edebilmeleri önemlidir. Tüketicilerin materyalist eğilimleri ile statü tüketimleri arasındaki ilişki, özellikle bu yönde pazarlama faaliyeti yürüten işletmeler açısından pazarlama

politikalarını yönlendirebilmeleri için önem taşımaktadır. Bu çalışma sonucunda elde edilen verilerle hem işletmelere öneriler geliştirilecek hem de literatüre katkı sunulacaktır.

### **Araştırmanın Örnekleme**

Araştırmanın evreni, Türkiye'deki 18 yaşından büyük tüketicileri kapsamaktadır. Kolayda örnekleme yöntemi ile 452 katılımcıya ulaşılmıştır. Bu örnekleme yöntemi, araştırmanın hedef kitlesinin olabileceği yerlerden keyfi olarak birimlerin seçildiği birimlerle yapılmaktadır (Şahan ve Özgenel, 2021). Örneklemin büyüklüğü hesaplanırken hata payı %5 alınmıştır, güven aralığı ise %95 olarak belirlenmiştir. Anketler, 15 Temmuz-15 Eylül 2022 tarihleri arasında yüz yüze uygulanmıştır. Yüz yüze anketler, Samsun ve Ankara'da yer alan dernek, hastane, belediye, okul, sendika, üniversite, lokâl ve kültür merkezlerinde uygulanmıştır. Ankara Türkiye'nin gelişmiş ve kozmopolit bir şehridir. Samsun ise Karadeniz Bölgesi'nin en gelişmiş şehridir ve araştırmacının görev yaptığı kurum bu şehirde yer almaktadır. Yanlış veya eksik doldurulmuş 13 anket değerlendirmeye alınmamıştır. Toplam 439 anket değerlendirmeye alınmıştır.

### **Veri Toplama Yöntemi ve Aracı**

Çalışmada kullanılan anket, dört bölümdür. İlk olarak anketler uygulanmadan önce katılım sağlamak isteyen tüketicilere Amish topluluğunun yaşam tarzını aktaran kısa bir video içeriği izlettirilmiştir. Daha sonra, tüketicilerin basit, sade ve tüketimden uzak bir yaşamı zihinlerinde canlandırabilmeleri için yazar tarafından bir senaryo kurgulanmıştır. Tüketicilere aktarılan senaryo şu şekildedir "Amish Topluluğu Amerika'nın Doğu yakasındaki çeşitli eyaletlerde yaşayan 200 bin kişiden oluşan bir topluluktur. Bu topluluk yaşam tarzlarıyla diğer topluluklardan farklılaşmaktadır. Yaşamlarını birtakım kurallarla şekillendirmektedirler. Örneğin sadece siyah ve beyaz renkte giyinmekte, gösterişli olduğunu düşündükleri için kıyafetlerinde düğme kullanmamakta, teknolojik ürünleri kullanmayı reddetmektedirler. Genellikle çiftçilik yaparak geçinen bu topluluk üyeleri tarlalarını hayvan ve insan gücüyle sürmektedirler. Şiddetten uzak, sade, çalışkan ve dürüst bir yaşamı benimseyen Amishler, güne güneş doğmadan başlarlar ve güneş battıktan kısa bir süre sonra yatarlar. Topluluk bireyleri lüzumsuz gördükleri her şeyin tüketimini reddederler, hayatın tadını çıkarmaya

yönelik aktiviteler çok azdır ve son derece disiplinlidirler. Okuduğunuz bu bilgiler doğrultusunda elinizde Amish Topluluğu'na benzer bir topluluğun üyesi olma imkânınız olduğunu düşünün. Bu senaryodaki gibi yaşama ihtimalinizi hayal ederek lütfen aşağıdaki soruyu yanıtlayın.” Senaryo tekniği, eş zamanlı yanıt alabilme imkânı verdiği için ve daha gerçekçi sonuçlara ulaşmayı sağladığından etkili bir yöntemdir (Marta vd., 2003). Bu bölümde tüketiciler, Amishler gibi bir topluluğun üyesi olmayı isteyip istemediklerini belirtmektedirler. İkinci

bölümde tüketicilerin materyalist eğilimlerini ölçmek için Richins and Dawson (1992) tarafından geliştirilen 18 ifadeli ölçek kullanılmıştır. Üçüncü bölümde ise statü tüketimi eğilimi için Kilsheimer (1993) tarafından geliştirilen 14 ifadeli ölçek kullanılmıştır. Her iki ölçek de tek faktörlüdür. Ölçekte yer alan ifadeler, 5'li Likert ölçeğinde sorulmuştur (1-Kesinlikle Katılmıyorum, 2-Katılmıyorum, 3-Kararsızım, 4-Katılıyorum, 5-Kesinlikle Katılıyorum). Dördüncü bölümde ise katılımcıların cinsiyet, yaş, eğitim, gelir durumları ve mesleklerin olduğu demografik bilgileri içeren sorular yer almaktadır. Araştırma kapsamında ankete dahil edilen meslek grupları literatür taranarak belirlenmiştir (Aslay vd., 2013; Keskin ve Baş, 2015; Özden, 2019). Meslek grupları şu şekildedir; doktorlar, öğrenciler, iş yeri sahipleri, öğretmenler, emekliler, işçiler ve akademisyenler.

#### **Araştırmanın Hipotezleri ve Modeli**

Materyalist eğilim ile statü tüketimi arasında anlamlı bir ilişki olduğu sonucuna ulaşan araştırmalar mevcuttur (Heaney vd., 2005; Goldsmith vd., 2010; Podoshen ve Andrzejewski 2012; Chan vd., 2015; Tokgöz, 2018). Fitzmaurice ve Comegys (2006) materyalist eğilimi yüksek olan tüketicilerin statü sahibi ürünlere yöneldiklerini belirtmektedirler. Bu doğrultuda aşağıdaki hipotez geliştirilmiştir:

H1. Tüketicilerin statü tüketimleri ile materyalist eğilimleri arasında anlamlı bir ilişki bulunmaktadır.

Günümüzde bazı tüketicilerde eski günleri veya geleneksel yaşam tarzını özleme duygularının geliştiği söylenebilir. Vintage (geçmişe ait modanın günümüzde birebir kullanılması) veya retro (en az 20 yıl önceki döneme ait şeylerin moda tasarımında kullanımı) gibi moda akımları geçmişe ve eskiye özlem ve bu zamanları anma duygularının sonucunda gelişmiştir (Yetmen, 2011). Sürekli değişime maruz kalan tüketicilerin geçmişe özlem duymaları ve eski anlamları yeniden yaşama arzuları olağan bir süreçtir (Pınarbaşı ve Aysuna, 2017). Bu doğrultuda aşağıdaki hipotezler geliştirilmiştir:

H2. Amish toplumunun bir üyesi olmak isteyen ve istemeyen tüketicilerin materyalist eğilimleri farklılık göstermektedir.

H3. Amish toplumunun bir üyesi olmak isteyen ve istemeyen tüketicilerin statü tüketimleri farklılık göstermektedir.

Çolak ve Görkem (2019), öğrencilerin maddi gelirleri ve yaşları nedeniyle materyalist eğilimlerinin düşük olduğunu belirtmektedirler. Özden (2019), tüketicilerin yaşam tarzları ve meslekleri ile statü tüketimleri arasında anlamlı bir ilişki olduğunu tespit etmiştir. Bu çalışmada aynı zamanda tüketicilerin meslekleri ile statü tüketimleri arasında anlamlı bir ilişki olduğu

görülmüştür. Eşitti ve Erdem (2021), tüketicilerin meslekleri ile statü temelli turizm tüketimi arasında anlamlı bir ilişki olduğunu tespit etmişlerdir. Bu doğrultuda aşağıdaki hipotezler geliştirilmiştir:

H4. Tüketicilerin meslekleri ile materyalist eğilimleri arasında anlamlı bir ilişki bulunmaktadır.

H5. Tüketicilerin meslekleri ile statü tüketimleri arasında anlamlı bir ilişki bulunmaktadır.

Bu hipotezler doğrultusunda geliştirilen araştırmanın modeli Şekil 1'deki gibidir.

Şekil 1. Araştırmanın Modeli

### Verilerin Analiz Yöntemi

Veriler IBM SPSS V23 ile analiz edildi. Normal dağılıma uygunluk Kolmogorov-Smirnov ve Shapiro-Wilk testleri incelendi. İkili gruplara göre normal dağılmayan verilerin karşılaştırılmasında Mann-Whitney U testi kullanıldı. Mesleklere göre normal dağılmayan ölçek puanlarının karşılaştırılmasında Kruskal Wallis testi kullanıldı ve çoklu karşılaştırmalar Dunn testi ile incelendi. Normal dağılmayan veriler arasındaki ilişkinin incelenmesinde Spearman's rho korelasyon katsayısı kullanıldı. Açıklayıcı faktör analizinde faktör çıkarımı

çin temel bileşenler analizi metodu ve döndürme işlemi için de varimax yöntemi kullanıldı.

Analiz sonuçları nicel veriler için ortanca (minimum – maksimum) şeklinde kategorik veriler frekans ve yüzde olarak sunuldu. Önem düzeyi  $p < 0,050$  olarak alındı.

## BULGULAR

Açıklayıcı faktör analizinde faktör çıkarımı için temel bileşenler analizi metodu ve döndürme işlemi için de varimax yöntemi kullanılmıştır. KMO değeri 0,701 ve Bartlett testi kıkare değeri de 1042,496 ( $p < 0,001$ ) olarak elde edilmiştir. Bu değerler veri setinin faktör analizi için uygunluğunu ortaya koymaktadır. 14 maddeden oluşan ölçeğin Extraction değerleri incelendiğinde madde 11'in 0,271 olarak elde edilmiş olup 0,3 aşağısında olduğu için ölçekte

çıkarılmıştır. Ölçekten çıkarıldıktan sonra analiz tekrarlanmıştır. Exctaction değeri 0,3 üzerinde ve Anti-image korelasyon matrisinde de köşegen değerlerinin tamamının 0,5'in üzerinde olduğu elde edilmiştir. Döndürülmüş bileşenler matrisinde faktör yükleri incelendiğinde bazı maddelerin birden fazla faktör altında yer aldığı elde edilmiştir. Bir maddenin iki farklı faktör altında yer alması faktör analizi için kabul edilebilir bir durum olmadığından ve bir maddenin farklı faktörler altındaki değerleri arasındaki farkın 0,1'den küçük olması durumuna ölçekten çıkartılması gerekmektedir. Madde 2, 6, 4 maddeleri başka faktörler altında da yer aldığı için bu maddeler ölçekten çıkarılmıştır. Toplamda 4 madde ölçekten çıkarılmıştır. Bu maddelerde ölçekten çıkarıldıktan sonra elde edilen sonuçlar Tablo 1'de sunulmuştur.

**Tablo 1.** Statü Ölçeği'nin açıklayıcı faktör analizi

	Faktör 1	Faktör 2	Faktör 3	Extraction (Çıkarım)
Sosyal gruplara katılmaktan hoşlanırım*	-0,778			0,611
Sosyal bir insan olduğumu düşünmüyorum	0,755			0,589
Sosyal etkinliklerden hoşlanmam	0,729			0,538
Yeni insanlarla tanışmaktan hoşlanmam	0,716			0,514
Yalnız olmayı başkalarıyla olmaya tercih ederim	0,572			0,334
Statüsü olan yeni ürünlerle ilgilenirim		0,778		0,609
Bir ürün gösterişli ise benim için daha değerlidir		0,678		0,471
Statüye sahip olan ürünler için daha fazla para ödeyebilirim		0,676		0,465
Ürünleri yalnızca fonksiyonel amaçları için satın alırım*			-0,848	0,719
Göstermelik nedenlerle ürün satın alırım			0,825	0,705
Öz-değer	2,557	1,554	1,445	
VAO	25,575	15,536	14,452	
KVAO	25,575	41,111	55,564	

Madde çıkarma işlemleri gerçekleştirildikten sonra KMO değeri 0,689 ve Bartlett testi kıkare değeri de 742,054 (p<0,001) olarak elde edilmiştir. Bu değerler veri setinin faktör analizi için uygunluğunu ortaya koymaktadır. Analiz sonucunda 3 faktörlü bir yapı ortaya konmuştur. Toplamda 3 faktör ile toplam varyansın %55,56'lık kısmı açıklanmaktadır.

Faktör 1'e ait ölçek ifadelerinin, diğer tüketicilerle ilişkiler üzerine olduğu görülmüş ve bu faktöre "sosyal faktör" adı verilmiştir. Faktör 2'ye ait ölçek ifadelerine bakıldığında statüsü olan ürünlere kişisel olarak öncelik verme üzerine olduğu görülmüş ve bu faktöre "kişisel faktör" ve son olarak faktör 3'e ait ifadelerin statüsü olan ürünlere ayrılan bütçe ile ilgili olduğundan bu

faktöre "finansal faktör" adı verilmiştir. Materyalizm Ölçeği'nin açıklayıcı faktör analizi Tablo 2'de sunulmuştur.

**Tablo 2.** Materyalizm Ölçeği'nin açıklayıcı faktör analizi

Statü Ölçeği genel puan	3,17	0,50	3,00	2,20	4,60

Materyalizm puan ortalaması 3,29, Statü Ölçeği'nin sosyal faktör ortalaması 1,92; kişisel faktör ortalaması 4,55 ve finansal faktör ortalaması 4,21 olarak elde edilmiş olup Statü Ölçeği genel puan ortalaması 3,17 olarak elde edilmiştir. Materyalizm Ölçeği ile Statü Ölçeği arasındaki ilişkinin incelenmesi Tablo 8'de sunulmuştur.

**Tablo 8.** Materyalizm Ölçeği ile Statü Ölçeği arasındaki ilişkinin incelenmesi

	Materyalizm puanı	
	r	p
Sosyal Faktör (Statü Ölçeği)	0,158	<b>0,001</b>
Kişisel Faktör (Statü Ölçeği)	0,346	<b>&lt;0,001</b>
Finansal Faktör (Statü Ölçeği)	0,017	0,715
Statü Ölçeği genel puan	0,233	<b>&lt;0,001</b>

r: Spearman's rho korelasyon katsayısı

Materyalizm ile statü tüketiminin sosyal faktörü arasında istatistiksel olarak anlamlı pozitif yönlü çok zayıf bir ilişki bulunmuştur ( $r=0,158$ ;  $p=0,001$ ). Materyalizm ile statü tüketiminin kişisel faktörü arasında istatistiksel olarak anlamlı pozitif yönlü zayıf bir ilişki bulunmuştur ( $r=0,346$ ;  $p<0,001$ ). Materyalizm ile statü tüketiminin finansal faktörü arasında istatistiksel olarak anlamlı pozitif yönlü zayıf bir ilişki bulunmuştur ( $r=0,233$ ;  $p<0,001$ ). Bu doğrultuda “H1. Tüketicilerin statü tüketimleri ile materyalist eğilimleri arasında anlamlı bir ilişki bulunmaktadır.” hipotezi reddedilememiştir. Amish Topluluğu'nun bir üyesi olmayı isteme ve mesleklere göre ölçek puanlarının karşılaştırılması Tablo 9'da sunulmuştur.

**Tablo 9.** Amish Topluluğu'nun bir üyesi olmayı isteme ve mesleklere göre ölçek puanlarının karşılaştırılması

\*Kruskal Wallis testi, \*\*Mann-Whitney U testi, a-d: Aynı harfe sahip meslekler arasında bir fark yoktur, ortanca (minimum – maksimum)

Amish Topluluğu'nun bir üyesi olmayı istemeye göre materyalizm puan ortancaları arasında istatistiksel olarak anlamlı bir fark bulunmuştur ( $p<0,001$ ). Üye olmak istemeyenlerin ortancası 4,44 iken üye olmak isteyenlerin ortancası 2,17 olarak elde edilmiştir.

Bu doğrultuda “H2. Amish toplumunun bir üyesi olmak isteyen ve istemeyen tüketicilerin materyalist eğilimleri farklılık göstermektedir.” hipotezi reddedilememiştir.

Amish Topluluğu'nun bir üyesi olmayı istemeye göre statü tüketiminin kişisel faktör puan ortancaları arasında istatistiksel olarak anlamlı bir fark bulunmuştur ( $p<0,001$ ). Üye olmak istemeyenlerin ortancası 5,00 iken üye olmak isteyenlerin ortancası 4,67 olarak elde edilmiştir. Amish Topluluğu'nun bir üyesi olmayı istemeye göre diğer puan ortancaları arasında bir farklılık elde edilmemiştir ( $p>0,050$ ).

Bu doğrultuda “H3. Amish toplumunun bir üyesi olmak isteyen ve istemeyen tüketicilerin statü tüketimleri farklılık göstermektedir.” hipotezi reddedilememiştir.

Mesleklere göre materyalizm puan ortancaları arasında bir farklılık vardır ( $p<0,001$ ). Akademisyenlerin ortancası 2,28, doktorların ortancası 4,39, emeklilerin ortancası 1,83, iş yeri sahiplerin ortancası 4,72, işçilerin ortancası 2,44, memurların ortancası 1,72, öğrencilerin ortancası 4,33, öğretmenlerin ortancası 2,31 olarak elde edilmiştir. Bu farklılık doktorlar, iş yeri sahipleri, öğrenciler ile diğer meslek grupları arasındaki iken bu üç meslek grubu arasında bir farklılık yoktur.

Bu doğrultuda “H4. Tüketicilerin meslekleri ile materyalist eğilimleri arasında anlamlı bir ilişki bulunmaktadır.” hipotezi reddedilememiştir.

Mesleklere göre statü tüketiminin sosyal faktörü puan ortancaları arasında bir farklılık vardır ( $p<0,001$ ). Akademisyenlerin ortancası 1,80, doktorların ortancası 1,60, emeklilerin ortancası 2,00, iş yeri sahiplerin ortancası 2,20, işçilerin ortancası 1,60, memurların ortancası 1,60, öğrencilerin ortancası 1,40, öğretmenlerin ortancası 1,70 olarak elde edilmiştir. Mesleklere göre statü tüketiminin kişisel faktörü puan ortancaları arasında bir farklılık vardır ( $p<0,001$ ). Akademisyenlerin ortancası 5,00, doktorların ortancası 5,00, emeklilerin ortancası 4,33, iş yeri sahiplerin ortancası 5,00, işçilerin ortancası 4,67, memurların ortancası 4,33, öğrencilerin ortancası 4,67, öğretmenlerin ortancası 4,67 olarak elde edilmiştir. Mesleklere göre statü tüketiminin finansal faktörü puan ortancaları arasında bir farklılık vardır ( $p<0,001$ ). Akademisyenlerin ortancası 4,50, doktorların ortancası 4,50, emeklilerin ortancası 4,00, iş yeri sahiplerin ortancası 4,50, işçilerin ortancası 4,50, memurların ortancası 4,50, öğrencilerin ortancası 3,00, öğretmenlerin ortancası 5,00 olarak elde edilmiştir. Mesleklere göre Statü

Ölçeği genel puan ortancaları arasında bir farklılık vardır ( $p<0,001$ ). Akademisyenlerin ortancası 3,00,

doktorların ortancası 3,20, emeklilerin ortancası 3,00, iş yeri sahiplerin ortancası 3,40, işçilerin ortancası 3,10, memurların ortancası 3,00, öğrencilerin ortancası 2,70, öğretmenlerin ortancası 3,30 olarak elde edilmiştir. Meslek gruplarına ait çoklu karşılaştırma sonuçları ise Tablo 7’de harflendirme ile gösterilmiştir.

Bu doğrultuda “H5. Tüketicilerin meslekleri ile statü tüketimleri arasında anlamlı bir ilişki bulunmaktadır.” hipotezi reddedilememiştir.

## SONUÇ

Statü tüketimi, ürün ve marka tercihinde önemli bir faktördür (Tsai, 2005; Nelissen ve Meijers, 2011). Bu nedenle statü tüketimi ile ilgili araştırmaların ve etkileyen faktörlerin ele alınması önem taşımaktadır. Bu araştırmada öncelikle tüketicilerin materyalist değerleri ile statü tüketimleri arasındaki ilişki ele alınmıştır. Elde edilen bulgulara göre tüketicilerin materyalist değerleri ile statü tüketimleri arasında anlamlı bir ilişki olduğu görülmüştür. İlgili literatürde yapılan araştırmalarda da benzer sonuçlara ulaşıldığı görülmektedir (Heaney vd., 2005; Goldsmith vd., 2010; Podoshen ve Andrzejewski 2012; Chan vd., 2015; Tokgöz, 2018). Materyalist değerlere sahip tüketiciler, maddiyata fazla önem vermektirler. Bu bireylerin statü tüketimi yapma eğiliminde olmaları şaşırtıcı değildir. Materyalist bireylerin, diğer tüketicilere statülerini göstermek ve sahip olduklarını ifşa etmek eğiliminde oldukları düşünülebilir.

Araştırma kapsamında tüketicilerin materyalist değerleri ile statü tüketimleri arasındaki ilişki ele alınırken tüketicilerin Amish Topluluğu’nda yaşamak isteyip istemeyecekleri de sorulmuştur. Amishler gibi bir toplulukta yaşamak istemeyen tüketicilerin materyalist eğilimleri ve statü tüketimleri diğer tüketicilere göre daha düşük çıkmıştır. Geleneksel bir yaşam özleminde olan tüketicilerin, materyalist değerlerinin ve statü tüketimi eğilimlerinin düşük olması beklenilebilir. Ancak bu araştırmada şaşırtıcı olan tüm katılımcıların materyalist eğilimlerinin statü tüketimi ile çok yakın ortancalara sahip olduğu tespit edilmiştir. Amish topluluğunda yaşamak isteyebilecek tüketicilerin materyalizm puanları düşük olduğu halde statü tüketimi eğilim puanlarının daha yüksek olduğu görülmektedir. Dolayısıyla tüketiciler, Amish topluluğu gibi geleneksel bir topluluğun parçası olmak isteseler dahi statü tüketimi eğiliminde olabilmektedirler. Bu durum, sosyal medya gibi platformların da etkisiyle tüketim ve gösterişe yönelik ilginin artmasından kaynaklandığı düşünülebilir. Ayrıca yaşam

standartlarının artmasının tüketicileri gösterişe sevk ettiğinden bu duruma sebep olduğu düşünülebilir (Kastanakis ve Balabanis, 2012).

Araştırmada son olarak tüketicilerin meslekleri ile statü tüketimleri ve materyalist eğilimleri arasında bir farklılık olup olmadığı ele alınmıştır. Elde edilen sonuçlara göre doktor, iş yeri sahibi ve öğrencilerin materyalizm puanları akademisyen, emekli, işçi, memur ve öğretmenlere göre daha yüksektir. Akademisyen, emekli, memur ve öğrencilerin statü tüketim eğilimleri ise doktor, iş yeri sahibi ve öğretmenlere göre daha düşüktür. Elde edilen bulgulara göre tüketicilerin mesleklerine göre statü tüketim eğilimleri arasında farklılık bulunmasına rağmen statü tüketimi genel puan ortancalarına bakıldığında puanların birbirlerine çok yakın olduğu görülmektedir. Dolayısıyla az önce de söylendiği gibi materyalist puanları düşük ve geleneksel yaşamlara özlem duyan tüketicilerin bile statü tüketim eğilimleri düşük değildir. Bu durumun günümüz tüketim toplumlarının bir göstergesi olduğu düşünülmektedir. Yapılan araştırmalarda çalışan tüketicilerin emekli ve işsiz tüketicilere göre ve öğrencilerin işsiz tüketicilere göre daha yüksek statü temelli turizm tüketimi yaptığı görülmüştür (Eşitti ve Erdem, 2021).

Elde edilen bu bulgulara göre uygulayıcı ve araştırmacılara aşağıdaki öneriler geliştirilmiştir:

- Materyalist değerler ile statü tüketimi arasında bir ilişki olduğundan maddiyatın önemine vurgu yapan özellikle lüks işletmeler, statü kazanımına yönelik tutundurma çalışmaları yapabilirler.
- Materyalist değerleri daha yüksek olan doktor, iş yeri sahibi ve öğrenci gruplarına yönelik yapılacak tutundurma faaliyetlerinde mutluluk, sahip olma, başarı, imaj, mülkiyet veya popülerlik gibi kavramlar üzerinde durulabilir.
- Akademisyen, öğretmen, memur, emekli ve işçi meslek gruplarına yönelik daha geleneksel temaların olduğu tutundurma faaliyetleri yapılabilir.
- Gelecekteki araştırmalar, materyalist eğilim ve statü tüketimi arasındaki ilişkiyi teknolojik ürünler, beyaz eşya veya hazır giyim gibi farklı sektörlerde ele alabilirler.

Bu araştırmanın sadece maddi ve zaman faktörleri nedeniyle Ankara ile Samsun'da yürütülmüş olması ve 439 tüketiciye ulaşılmış olması nedeniyle kısıtları bulunmaktadır. Gelecekteki araştırmaların Türkiye'nin farklı şehirlerinde, daha çeşitli meslek gruplarıyla ve daha geniş bir katılımcı sayısı ile daha kapsamlı olması sağlanabilir.

## **MATEMATİK ÖĞRETİMİNİ PLANLAMAYA DAİR ÖĞRETMEN GÖRÜŞLERİNİN ÇEŞİTLİ DEĞİŞKENLERE GÖRE ANALİZİ**

**Ömer PEKTAŞ (Orcid ID: 0000-0003-4287-2598)**

Siirt Milli Eğitim Müdürlüğü

**Prof. Dr. Burhan AKPINAR (Orcid ID: 0000-0003-3509-0475)**

Fırat Üniversitesi, Eğitim Fakültesi

### **ÖZET**

Matematik öğretimi, bilim ve teknoloji ile doğrudan alakalı bir disiplindir. Çağımızda endüstri ve ekonominin bilim ve teknoloji tabanlı olması, matematik öğretimini her zamankinden daha önemli kılmaktadır. Etkili ve verimli bir matematik öğretiminde ise planlama çok önemlidir. Bu itibarla matematik öğretmenlerinin öğretimi planlama bilgi ve becerisine sahip olmaları önemli bir gerekliliktir. Bu araştırmanın amacı matematik öğretmenlerinin, öğretimi planlamaya dair görüşlerini belirlemek ve bunları çeşitli değişkenlere göre değerlendirmektir. Tarama modelinde yürütülen araştırmanın evreni, Siirt ilindeki resmi ortaokul ve liselerde görevli matematik öğretmenleridir. Örneklem ise bu evrenden amaçlı örnekleme ile belirlenmiş, gönüllü 118 matematik öğretmeninden oluşturulmuştur. Araştırma verileri anket formu ile toplanıp, SPSS paket programı aracılığıyla betimsel istatistiki teknikler kullanılarak çözümlenmiştir. Analizler sonucu, matematik öğretmenlerinin, etkili bir matematik öğretimi için planlamanın önemine inandıkları ve bu konudaki rol ve sorumluluklarını benimsedikleri anlaşılmıştır. Ancak bu sorumluluklarının yasal zemine dayandırılmasını benimsememişlerdir. Bu öğretmenlerin öğretimi planlamada referans aldıkları değişkenler; öğrenciler, öğretim programı, ders kitabı, merkezi sınavlar ve yöneticiler şeklinde sıralanmaktadır. Ancak bu öğretmenler, planlamada velileri dikkate almayı reddetmişlerdir. Araştırmaya katılan öğretmenler, öğretimi planlamada kendilerini yeterli görmekte olup; bu konuda çoğunlukla internette yararlanmaktadırlar. Bu durum, katılımcı öğretmenlerin çoğunlukla, teknolojik ortamda doğmuş olan Y Kuşağına mensup olmalarıyla ilişkilendirilmiştir. Araştırmada son olarak katılımcı matematik öğretmenlerinin, planlamada ilerlemeci ve yapılandırmacı yaklaşım ile esasici yaklaşım arasında kaldıkları ve bunun da Türkiye'deki eğitimin, öğretim programı ile merkezi sınavlar ikilemi arasında kalmasına bağlı olabileceği sonucuna varılmıştır.

**Anahtar Kelimeler:** Öğretimi Planlama, Matematik Öğretimi, Matematik Öğretmenleri, Etkili Matematik Öğretimi.

**ANALYSIS OF TEACHER'S OPINIONS ON PLANNING MATHEMATICS  
TEACHING ACCORDING TO VARIOUS VARIABLES**

**ABSTRACT**

Teaching mathematics is a discipline directly related to science and technology. The fact that industry and economics are based on science and technology in our times makes mathematics teaching more important than ever. Planning is very important for effective and efficient mathematics teaching. In this respect, it is an important requirement for mathematics teachers to have the knowledge and ability to plan teaching. The aim of this research is to determine the views of mathematics teachers on teaching planning and evaluate them according to various variables. The universe of the research carried out in the scanning model is mathematics teachers on duty in official secondary and high schools in the province of Siirt. The sample was created from 118 volunteer mathematics teachers determined by purposeful sampling from this universe. The research data were collected with a questionnaire form and analysed using descriptive statistical techniques through the SPSS package program. As a result of the analyses, it is understood that mathematics teachers believe in the importance of planning for effective mathematics teaching and adopt their roles and responsibilities in this regard. But they have not adopted the basis of these problems on the legal ground. The variables referenced by these teachers in teaching planning are listed as students, curriculum, textbook, central exams and administrators. But these teachers refused to take into account parents in planning. Teachers participating in the research consider themselves adequate in planning the teaching and most often use the Internet in this regard. This situation has been associated with the fact that the participating teachers are mostly of Generation Y, who were born in the technological environment. In the research, it was concluded that the participating mathematics teachers are between the progressive and constructivist approach in planning and the basic approach, which may depend on the fact that education in Turkey remains between the curriculum and the central exams dilemma.

**Keywords:** Teaching Planning, Mathematics Teaching, Mathematics Teachers, Effective Mathematics Teaching.

## **GİRİŞ**

Bilim ve teknolojinin çağa damgasını vurduğu günümüzde matematik öğretimi her zamankinden fazla önem kazanmıştır. Çünkü matematik, teknolojinin temel girdileri arasında sayılmaktadır. Teknoloji ise hâlihazırda toplumların ekonomik ve sosyal gelişmişliğinin en belirgin göstergeleri arasında kabul edilmektedir. Hatta Göker (1997) ve Özen'e (2004) göre, günümüz bilim ve teknolojisi matematiğin bir eseridir (Aktaran: Tangül, 2017). Nitekim bu öneme binaen 2000 yılı “Dünya Matematik Yılı” olarak ilan edilmiş (Ersoy, 2003) ve matematiğin bu yükselişinin ciddi yansımaları olmuştur. Bu yansımaların neticesi olarak da gelişmiş ülkelerin eğitim programlarında matematik dersi önemli bir yer tutmaktadır. Benzer şekilde Türkiye’de de matematik dersi tüm eğitim kademelerinde önemli ağırlık teşkil etmektedir (Tuncel ve Kuzu, 2019; Baş, 2019). Bu durumun, ülkemizin bilimsel ve teknolojik bakımından gelişimi için önemi tartışılmazdır. Ancak tartışılması gereken, bilimsel, teknolojik, ekonomik ve sosyal gelişim için ne denli önemli olan matematik öğretiminin etkililiğidir.

Matematik öğretiminin etkililiği, öğretmen ve öğrenci niteliği, program, yönetim, aile ve çevre gibi birçok değişkene bağlıdır. Bunlardan öğretim programı (müfredat), uygulamadaki öğretim sürecinin temel belirleyicisi olarak öne çıkmaktadır. Çünkü etkili bir matematik öğretimi, her şeyden önce nitelikli bir öğretim programı ve bunun doğru uygulanmasına bağlıdır. Matematik öğretim programının doğru uygulanması ise ancak isabetli planlama ile mümkündür. Çünkü planlama olmadan, sürdürülen bir öğretme ve öğrenme faaliyetinin başarı şansı yoktur. Zira öğretim, planlama ile yapılacak bir süreçtir (Akpınar ve Özer, 2008: 122). Bu yüzde, öğretimi planlama, etkili matematik öğretimi için olmazsa olmazlar arasındadır. Bundan olsa gerek, eğitim literatüründe ve birçok ülkedeki uygulamalarda öğretimi planlama, temel öğretmenlik becerileri veya “öğretimsel beceriler” (Bayındır, Çavdar ve Gökçe, 2016) arasında sayılmaktadır. Bu itibarla birçok ülkede olduğu gibi Türkiye’de de öğretimi planlama resmi yükümlülük ve pedagojik bir gereklilik olarak kabul edilmektedir.

Matematik öğretimini planlama, öncelikle bu programın anlaşılmasını, yani program okur-yazarlığı bilgi ve becerisini gerektirir. Bunun yanında, okuldaki yöneticiler ve meslektaşlar başta olmak üzere, öğrenciler ve öğrenci velileri gibi gruplarla ekip çalışmasına dayanır. Her ne kadar resmi işleyişi ile temel alınan eğitim felsefesine göre değişebilse de, çağdaş anlayışta, öğretimi planlamada öğrenci, program, ders kitabı, öğretmen, aile ve çevrenin dikkate alınması beklenir (Akpınar, 2017). Etkili bir matematik öğretimi için bu faktörlerin

dikkate alınması kritik öneme sahiptir. Ancak uygulamada matematik öğretmenlerinin sözü geçen bu faktörleri ne denli dikkate aldıkları tartışmalıdır. Bu tartışmalara veri sağlamak bakımından matematik

öğretmenlerinin, öğretimi planlama algı, görüş ve uygulamalarına dair araştırmalar önemlidir. Dolayısıyla amacı, matematik öğretimini planlamaya dair öğretmen görüşlerini çeşitli değişkenlere göre analiz etmek olan bu araştırmanın literatüre katkı sağlaması beklenebilir.

## YÖNTEM

Betimsel nitelikteki bu araştırma, tarama (survey) modelinde yürütülmüştür. Literatürde betimsel tarama veya tarama olarak adlandırılan bu model, belirlenmiş olan bir grup üzerinde yürütülen, bu gruptakilerin çalışmayla ilgili görüş, düşünce ve tutumlarını belirlemeyi amaçlayan çalışmalardır (Karakaya, 2012). Bu araştırmada tarama modeli, resmi ortaokul ve liselerde görev yapan matematik öğretmenlerinin planlama ile ilgili mevcut durumlarını betimlemek amacıyla kullanılmıştır.

## Evren ve Örneklem

Araştırma evrenini, 2022-2023 eğitim öğretim yılı güz döneminde Siirt ilindeki resmi ortaokul ve liselerde görev yapan toplam 476 (296 ilköğretim +180 Lise) matematik öğretmeni (<http://siirt.meb.gov.tr/>) oluşturmaktadır. Örneklem ise, amaçlı örnekleme yoluyla bu evrende ulaşılabilen ve araştırmaya katılmaya gönüllü toplam 118 matematik öğretmeninden oluşmaktadır. Literatürde konuyla ilgili farklı bilgiler olmakla birlikte, anket veya ölçekteki madde sayısının en az iki katı (Kline, 1994 Aktaran Büyüköztürk, 2022) veya soru sayısının, 5, 10 tercihen de 20 katı kişiden veri toplanması gerektiği yönünde çalışmalar vardır (Terzi, 2019; Güngör, 2016; Karakoç ve Dönmez, 2014). Araştırmada veri toplama aracı olarak kullanılan anket (questinaire) toplam 23 maddeden müteşekkil olduğu için çalışmaya gönüllü katılım sağlayan 118 öğretmen, örneklem için yeterli kabul edilmiştir.

**Tablo 1:** Örneklemi Teşkil Eden Öğretmenlerin Demografik Bilgileri

Değişkenler		f	%
Cinsiyet	Kadın	61	51.7
	Erkek	57	48.3
Mezun Olunan Fakülte	Eğitim	88	74.6
	Fen-Edebiyat	30	25.4
Öğrenim Durumu	Lisans	99	83.9
	Lisansüstü	19	16.1
HİE Alma Durumu	Evet	57	48.3
	Hayır	61	51.7
	1-5 Yıl	53	44.9

Kıdem	6-10 Yıl	26	22.0
	11-15 Yıl	11	9.3
	16-20 Yıl	15	12.7
	21 ve üzeri	13	11.0
Toplam		118	100

### Veriler ve Analizi

Bu araştırmada veriler, araştırmacılar tarafından geliştirilen “Matematik Öğretimini Planlamaya Dair Öğretmen Görüşleri Anketi” (ÖPÖGA) ile toplanmıştır. Anketin geliştirilmesinde Büyüköztürk’ün (2022) önerdiği; sorunun tanımlaması için literatür taraması, taslak soruları yazma ve bu soruları uzman görüşüne göre gözden geçirme şeklindeki sistematik izlenmiştir. Uzmanlardan (ikisi eğitim bilimci akademisyen ve üçü matematik öğretmeni) alınan dönütler doğrultusunda, taslak sorular, araştırma konusuna uygunluk, açıklık ve anlaşılabilirlik bakımlarından düzeltmeye tabi tutularak toplam 23 maddelik ÖPÖGA’ne son şekli verilmiştir. Ankette yer alan maddeler “3 *Evet*”, “2 *Kısmen*” ve “1 *Hayır*” olmak üzere üçlü şekilde derecelendirilmiştir. Bundan sonra, ÖPÖGA gönüllülük esasına göre, Siirt ilinde ortaokul ve lise matematik öğretmenlerine dağıtılmıştır. Bir haftalık süreden sonra okullardan geri dönen toplam 121 anket formundan üçü uygun olmayan ve eksik doldurma sebepleriyle elenerek, geriye kalan 118 anket formu analiz için değerlendirmeye alınmıştır. Analizlerde SPSS paket programı kullanılarak, betimsel istatistiki tekniklerden frekans ve yüzde alma testleri; öğretmen görüşlerinin demografik değişkenlere göre analizinde ise Ki-kare testi kullanılmıştır. Analizlerde anlamlılık düzeyi olarak  $p=0.05$  kabul edilmiştir.

### 3. BULGULAR ve YORUMLARI

#### 3.1. Matematik Öğretiminde Planlamanın Öneme Yönelik Öğretmen Görüşleri

Araştırmaya katılan matematik öğretmenlerinin, öğretimde planlamanın önemine dair görüşleri Tablo 2’de yer almaktadır.

**Tablo 2:** Matematik Öğretiminde Planlamanın Öneme Dair Öğretmen Görüşleri

No	Görüşler	Evet		Kısmen		Hayır	
		f	%	f	%	f	%
1	Etkili bir matematik öğretiminde planlama gerekli midir?	110	93.2	7	5.9	1	.8
2	Matematik öğretiminde planlama pedagojik bir gereklilik midir?	99	83.9	18	15.3	1	.8
3	Matematik öğretiminde planlama yasal olarak zorunlu olmalı mıdır?	41	34.7	53	44.9	24	20.3
4	Öğretimi planlama öğretmenin temel görevlerinden birisi midir?	79	66.9	37	31.4	2	1.7
5	Öğretimi planlama, temel bir öğretim becerisi midir?	82	69.5	34	28.8	2	1.7

6	Sızce, matematik öğretiminde planlama aslında kırtasiye midir?	13	11.0	51	43.2	54	45.8
7	Planlama olmadan da etkili matematik öğretimi yapılabilir mi?	14	11.9	70	59.3	34	28.8

Tablo 2 incelendiğinde; araştırmaya katılan matematik öğretmenlerinin, etkili bir matematik öğretimi için planlamayı çok büyük oranda (%93.2; n=110) gerekli gördüğü anlaşılmaktadır. Bu öğretmenler, matematik öğretiminde planlamayı, yine büyük oranda (%83.9; n=99) pedagojik bir gereklilik olarak görmekte ve öğretimi planlamayı da temel bir görev (%66.9; n=79) ve öğretim becerisi (%69.5; n=82) olarak kabul etmektedirler). Benzer araştırmalar (Öztürk ve Akyüz, 2016) tarafından da desteklenen bu bulgular, araştırmaya katılan matematik öğretmenlerinin, öğretimde planlamaya dair olumlu görüşlere sahip oldukları biçiminde yorumlanabilir. Öğretmenlerin konuyla ilgili olumlu görüşlere sahip olması, etkili bir matematik öğretimi için çok önemlidir. Çünkü etkili öğretimin çıktısı ve göstergesi sayılabilecek öğrencilerin aktif öğrenmelerinin, dersin planlanmasıyla ilişkili olduğu (Vural, 2004 aktaran: Günhan, 2006) belirtilmektedir. Bundan olsa gerek, ülkemizde ilkokullarda matematik dersine yönelik denetimlerde müfettişlerin en fazla planlama çalışmalarına önem verdiği (Mermer, 2012) belirlenmiştir.

Ancak matematik öğretiminde planlamaya bu denli olumlu bakan aynı öğretmenlerin, öğretimi planlamanın yasal zorunlu olmasına fazlaca olumlu bakmamaları (“Evet” (%34.7; n=41) ve “Kısmen” (%44.9; n=53) ve planlama yapılmadan da etkili matematik öğretimi yapılabileceği şeklindeki maddeyi de “Kısmen” (%59.3; n=70) benimsemiş olmaları dikkat çekicidir. Olumlu bakış açısıyla bu bulgu, araştırmaya katılan öğretmenlerin, temel bir öğretim becerisi olarak kabul ettikleri pedagojik bir gerekliliği, yasal zorunluk olarak değil de, sorumlulukları gereği yerine getirmeye meyilli oldukları şeklinde yorumlanabilir. Kuşkucu bir bakış açısıyla ise bu bulgu, araştırmaya katılan öğretmenlerin, pedagojik yeterlilikler bakımından yasal yükümlülük ve denetime mesafeli tutumlarıyla da ilgili olabilir. Ancak çağdaş ülkelerde öğretmenlerin alan ve pedagojik yeterlilikler bakımından belirli standartlara tabi tutuldukları (Elçiçek ve Yaşar, 2016) dikkate alındığında, öğretmenlerin bu mesafeli tutumlarının etkili bir matematik öğretimi için önemli bir eksilik olduğu değerlendirilebilir.

Matematik öğretmenlerinin Tablo 2’de yer alan maddelere yönelik görüşleri arasında demografik değişkenlere göre anlamlı fark olup olmadığını belirlemek üzere Ki-kare ( $X^2$ ) testi uygulanmıştır. Test sonucunda öğretmen görüşleri arasında cinsiyet, mezun olunan fakülte, öğrenim durumu ve kıdeme göre anlamlı farklılık bulunmazken; HİE alma durumuna göre 7. maddede anlamlı fark ( $X^2_{(df=2)}=6.612$ ;  $p=0.048$ ) olduğu belirlenmiştir. Buna göre, HİE alan matematik öğretmenleri (Hayır %64.7; n=22), planlama olmadan etkili matematik öğretimi yapılamayacağı görüşünü, bu eğitimi almayanlara (Hayır %35.3; n=12) göre daha fazla benimsemişlerdir. Bu durum, HİE’in öğretimi planlama gibi temel öğretim becerisi

konusundaki başarısı olarak yorumlanabilir. Nitekim ilgili araştırmalar (Özmantar ve Önala, 2017) matematik öğretmenlerinin HİE’i kısmen verimli olarak gördüklerini göstermiştir. Ancak HİE’in öğretmenlerin temel öğretim becerilerine katkı sağladığı (Önen, Mertoğlu, Saka ve Gürda, 2009) şeklindedir.

### 3.2. Matematik Öğretiminde Planlama Uygulamalarına Yönelik Öğretmen Görüşleri

Araştırmaya katılan matematik öğretmenlerinin, öğretimde planlama yapmalarına dair görüşleri Tablo 3’te yer almaktadır.

**Tablo 3:** Matematik Öğretiminde Planlama Uygulamalarına Dair Öğretmen Görüşleri

No	Görüşler	Evet		Kısmen		Hayır	
		f	%	f	%	f	%
8	Öğretimde planlama, öğretim programına göre mi yapılmalıdır?	68	57.6	44	37.3	6	5.1
9	Öğretimde planlama, ders kitabına göre mi yapılmalıdır?	27	22.9	66	55.9	25	21.2
10	Öğretimde planlama, öğretmene ait bireysel bir iş midir?	52	44.1	45	38.1	21	17.8
11	Öğretimde planlama, zümre kurulunca mı yapılmalıdır?	41	34.7	52	44.1	25	21.2
12	Öğretimi planlamada okul yöneticilerinin de rolü olmalı mıdır?	22	18.6	52	44.1	44	37.3
13	Sizce, matematik öğretim planları esnek mi olmalıdır?	84	71.2	31	26.3	3	2.5
14	Matematik öğretim planları merkezi sınavlara göre mi yapılmalıdır?	30	24.5	60	50.8	28	23.7
15	Matematik öğretim planları velilerin talebine göre mi yapılmalıdır?	5	4.2	16	13.6	97	82.2
16	Matematik öğretim planları öğrencileri dikkate almalı mıdır?	70	59.3	41	34.7	7	5.9

Araştırmaya katılan matematik öğretmenlerinin, planlama uygulamalarına dair görüşlerinin yer aldığı Tablo 3 incelendiğinde; öğretmenlerin, planlamada dikkate aldıkları unsurlar şu şekilde sıralanabilir. Öğrenciler (%59.3; n=70), öğretim programı (%57.6; n=68), ders kitabı (%55.9; n=66) ve merkezi sınavlar (%50.8; n=60). Öğretimi planlamada yöneticilerin rolünü Kısmen (%44.1; n=52) benimseyen öğretmenler, bu süreçte öğrenci velilerini dikkate almayı ise büyük çoğunlukla (Hayır %82.2; n=97) benimsememişlerdir. Matematik dersi planlarının esnek olması (%71.2; n=84) yönünde görüş belirten öğretmenler, bu yükümlülüğün zümre kurulundan (Kısmen%44.1; n=52) ziyade, düşük oranla da olsa bireysel olduğu (Evet %44.1; n=52) görüşündedirler. Araştırmaya katılan matematik öğretmenlerinin, öğretimi planlama uygulamalarını gösteren bu bulgular, ülkemiz eğitimine özellikle de 2005 yılından sonra önemli yansımaları olan İlerlemeci (Ulubey ve Aykaç, 2017) ve yapılandırmacı yaklaşımlara uygundur. Zira bu yaklaşımlarda öğretim süreci, esas olarak öğrenci ve öğretim programına göre planlanıp, uygulanmaktadır. Ancak öğretmenlerin, planlamada öğrenci velilerini dikkate almayı büyük oranda reddetmeleri, ülkemizde okul ile aile ilişkisinin henüz istenilen düzeyde

olmadığı şeklinde yorumlanabilir. Oysaki araştırmalar, eğitimde veli/aile katılımının öğrencinin akademik, sosyal ve kişisel gelişiminde pozitif yönde etkilediğini göstermektedir (Ardakoç, 2020). Bu itibarla, etkili bir matematik öğretimi için okul ile öğrenci velileri arasında sağlam bir ilişkinin kurulması önemlidir (Erdoğan, 2000). Dolayısıyla araştırmaya katılan öğretmenlerin bu konuda farkındalık düzeylerinde eksiklik olduğu yorumu yapılabilir. Öğretmenlerin Tablo 3'te yer alan maddelere yönelik görüşleri arasında demografik değişkenlere göre anlamlı fark olup olmadığını belirlemek üzere yapılan Ki-kare ( $X^2$ ) testinin sonuçlarına göre, öğretmen görüşleri arasında cinsiyet, kıdem ve HİE alma durumuna göre anlamlı farklılık belirlenmemiştir. Ancak öğrenim durumuna göre öğretmen görüşleri arasında 10. ( $X^2_{(df=2)}=6.245$ ;  $p=0.044$ ) maddede anlamlı farklılık belirlenmiştir. Buna göre, “Öğretimde planlama, öğretmene ait bireysel bir iş midir?” maddesini, lisans mezunu öğretmenler (Evet %90.4;  $n=47$ ), lisansüstü mezunlarına (Evet%9.6;  $n=5$ ), göre daha çok benimsemişlerdir. Bunun anlamı, lisansüstü eğitimi almış öğretmenlerin, öğretimde planlamayı bireysel olarak görmeyip, takım çalışması olarak gördükleri şeklinde yorumlanabilir. Nitekim araştırmalar (Göksoy ve Yenipınar, 2015) grupta (zümre) çalışmanın, eğitim ve öğretim çalışmalarının başarısında önemli bir işlevi olduğunu göstermiştir. Lisansüstü mezunu matematik öğretmenlerinin buna dair olumlu farkındalıkları, bu düzeyde aldıkları eğitime bağlanabilir. Fakülte değişkenine göre öğretmen görüşleri arasında, 11. ( $X^2_{(df=2)}=6.791$ ;  $p=0.034$ ) ve 13. ( $X^2_{(df=2)}=6.672$ ;  $p=0.036$ ) maddelerde anlamlı farklılık belirlenmiştir. Buna göre, “Öğretimde planlama, zümre kurulunca mı yapılmalıdır?” görüşünü, eğitim fakültesi mezunu öğretmenler (Evet%61.0;  $n=25$ ), fen-edebiyat fakültesi mezunlarına (Evet%39.0;  $n=16$ ), göre daha çok benimsemişlerdir. Benzer şekilde, “Sizce, matematik öğretim planları esnek mi olmalıdır? “görüşünü de, yine eğitim fakültesi mezunu öğretmenler (Evet%79.8;  $n=67$ ), fen-edebiyat fakültesi mezunlarına (Evet%20.2;  $n=17$ ), göre daha çok benimsemişlerdir. Bu bulgular, matematik öğretimini planlamada esneklik ve grup çalışması konularında, eğitim fakültesi mezunu öğretmenlerin, fen-edebiyat fakültesi mezunlarına göre farkındalık düzeylerinin daha yüksek olduğu biçiminde yorumlanabilir. Zira okul amaçlarının gerçekleştirilmesinde zümre çalışmaları (Sertkaya, 2016) ile planlamada esnekliğin öğretmen özerkliği (Öztürk, 2012) bakımından önemli olduğu bilinmektedir.

### **3.3. Matematik Öğretimini Planlamada İhtiyaç ve Yeterliliğe Yönelik Öğretmen Görüşleri**

Araştırmaya katılan matematik öğretmenlerinin, öğretimde planlama konusundaki ihtiyaç ve yeterliliklerine dair görüşleri Tablo 4'de yer almaktadır.

**Tablo 4:** Matematik Öğretimini Planlamada İhtiyaç ve Yeterliliklerine Dair Öğretmen Görüşleri

No	Görüşler	Evet		Kısmen		Hayır	
		f	%	f	%	f	%
17	Öğretimi planlama konusunda kendinizi yeterli görüyor musunuz?	66	55.9	51	43.2	1	.8
18	Öğretimi planlama konusunda hizmet-içi eğitim aldınız mı?	26	22.0	30	25.4	62	52.5
19	Fakültede aldığınız dersler, öğretimi planlamada size katkı sağladı mı?	45	38.1	52	44.1	21	17.8
20	Planlamada yöneticilerden destek almaya ihtiyacınız var mıdır?	8	6.8	48	40.7	62	52.5
21	Öğretimi planlama konusunda yöneticilerden destek almakta mısınız?	6	5.1	38	32.2	74	62.7
22	Planlamada meslektaşlarınızdan destek almaya ihtiyacınız var mıdır?	34	28.8	61	51.7	23	19.5
23	Planlamada meslektaşlarınızdan destek almakta mısınız?	36	30.5	56	47.5	26	22.0
24	Öğretimi planlama konusunda internetten destek almakta mısınız?	64	54.2	48	40.7	6	5.1

Tablo 4 incelendiğinde, araştırmaya katılan matematik öğretmenlerinin, öğretimi planlama konusunda kendilerini yeterli gördükleri(%55.9 Evet ve %43.2 Kısmen) ve bu konuda HİE almadıkları (%52.5 Hayır) anlaşılmaktadır. Katılımcı öğretmenler, fakültede alınan derslerin öğretimi planlamaya “kısmen” katkı sağladığı (%38.1 Evet ve 44.1 Kısmen) görüşündedirler. Bu durumda, öğretmenlerin öğretimi planlama yeterliliğini mesleklerini icra ederken kazandıkları iddia edilebilir. Öğretmenlerin bu deneyimlerinin kaynağını belirlemek için araştırmaya eklenen ilgili maddelere verilen cevaplardan şu yorum yapılabilir: Araştırmaya katılan öğretmenler, öğretimi planlama konusunda yöneticilerden beklenti duymamakta (%52.5 Hayır) ve destek de görememektedirler (%62.7 Hayır). Bu konuda meslektaşlarından Kısmen” (%51.7) destek beklentisi içerisinde olan bu öğretmenler, bu desteği yine “Kısmen” (%47.5) görmektedirler. Öğretimi planlamada öğretmenlerin büyük çoğunluğunun (%54.2 Evet ve %40.7 Kısmen) internetten destek aldığı anlaşılmaktadır. Bu bulgulara dayalı olarak, araştırmaya katılan matematik öğretmenlerinin, öğretimi planlama konusundaki yeterliliklerinin, okul yönetimi veya meslektaşlardan ziyade internet kaynaklı olduğu yorumu yapılabilir.

Öğretmenlerin Tablo 4’de yer alan maddelere yönelik görüşleri arasında demografik değişkenlere göre anlamlı fark olup olmadığını belirlemek üzere yapılan Ki-kare ( $X^2$ ) testi, öğrenim durumu ve HİE alma durumuna göre anlamlı farklılık olmadığını göstermiştir. Ancak cinsiyet, mezun olunan fakülte ve kıdem değişkenlerine göre öğretmen görüşleri arasında anlamlı farklılık bulunmuştur. Cinsiyete göre öğretmen görüşleri arasında  $17.(X^2_{(df=2)}=8.723;$

$p=0.013$ ) ve  $24.(X^2_{(df=2)}=8.603; p=0.014)$  maddelerde anlamlı farklılık belirlenmiştir. Buna göre, erkek matematik öğretmenleri (%59.1;n=39), kadınlara (%40.9;n=27) göre, öğretimi

planlama konusunda kendisini daha yeterli görmektedir. Ancak öğretimi planlamada kadın öğretmenler (%64.1;n=41), erkeklere (%35.9; n=23) göre internetten daha fazla yararlanmaktadırlar. Bu bulgular, matematik dersinde öğretimi planlama konusunda cinsiyetin önemli bir değişken olduğu şeklinde yorumlanabilir.

Mezun olunan fakülte değişkenine göre öğretmen görüşleri arasında  $19.(X^2_{(df=2)}=8.257; p=0.016)$  maddede anlamlı farklılık belirlenmiştir. Buna göre, eğitim fakültesi mezunu matematik öğretmenleri (%73.3;n=33), öğretimi planlamada yöneticilerden destek almaya, fen-edebiyat fakültesi mezunlarına göre (%26.7;n=12) daha çok ihtiyaç duymaktadırlar. Eğitim fakültesi mezunu matematik öğretmenlerinin lisansta öğretimi planlama ile ilgili dersler aldıkları; fen-edebiyat fakültesi mezunlarının ise buna yönelik dersleri pedagojik formasyon kursunda aldıkları dikkate alındığında, bu bulgu oldukça dikkat çekicidir. Bu durum iki olasılığa bağlı olabilir. Birincisi, öğretmen adaylarına öğretimi planlama bilgi ve becerisi kazandırma konusunda, pedagojik formasyon kursunun, eğitim fakültesi lisans eğitiminden daha etkili olması. İkincisi ise, öğretmen olmak amacıyla eğitim fakültelerini tercih eden ve yaklaşık dört yıl boyunca öğretmenliğe dair dersler alan eğitim fakültesi mezunu matematik öğretmenlerinin, öğretimi planlama konusunda, “bilim adamı ve öğretmen yetiştirmek gibi ikili amaca sahip fen-edebiyat fakültesi” (Yüksel, 2011) mezunu öğretmenlerden daha duyarlı olması ve kendilerini geliştirme konusundaki farkındalıklarının daha yüksek olması.

Kıdem değişkenine göre öğretmen görüşleri arasında  $20.(X^2_{(df=8)}=16.884; p=0.031)$  maddede anlamlı farklılık belirlenmiştir. Buna göre, “Planlamada yöneticilerden destek almaya ihtiyacınız var mıdır?” maddesini, 1-5 yıl kıdemli öğretmenler, “Kısmen” derecesine göre %54.2 (n=26) oranında, benimserken; bu oran 21 yıl ve üzeri kıdemlilerde %0.4’te (n=2) kalmıştır. Bu bulgu, mesleğe yeni başlayan matematik öğretmenlerinin, öğretimi planlamada yöneticilerden destek almaya, kıdemli öğretmenlerden daha fazla ihtiyaç duyduğu şeklinde yorumlanabilir. Nitekim kıdemli öğretmenlerin zaman içerisinde öğretimi planlama bilgi ve becerilerini geliştirdiği belirtilebilir.

## **SONUÇ VE ÖNERİLER**

Öğretimi planlama, sistem açısından ele alındığında etkili öğretimin sacayakları arasındadır. Planlama, sistemin formel yol haritası olan öğretim programı açısından ele alındığında,

programının uygulanma aşaması olan öğretim sürecinin temel belirleyicilerinden birisidir.

Öğretmen nitelikleri açısından ele alındığında ise öğretimi planlama, temel öğretim becerileri arasında sayılmaktadır. Bütün bunlardan hareketle, adeta insan yetiştirmede zihin inşa etme

projesi olan öğretimi planlamanın, eğitim ve öğretim kalitesi bakımından yaşamsal öneme sahip olduğu söylenebilir. Zira günümüz dünyasında ülkelerin kaderi ile eğitim ve öğretim kalitesi oldukça ilişkili hale gelmiştir. Bu durum, bilim ve teknoloji ile doğrudan alakalı matematik öğretiminin niteliği için de geçerlidir. Bu itibarla, matematik öğretiminde planlama, aslında sadece eğitim ve öğretim niteliği için değil, dolayısıyla Türkiye'nin bilimsel ve teknolojik kalkınması için de kritik öneme sahiptir. Matematik öğretiminin planlanmasına dair öğretmen görüşlerini irdeleyen bu çalışmada ulaşılan sonuçlara aşağıda yer verilmiştir:

Matematik öğretimi doğru planlamanın öncülleri öğretmenlerin bu konudaki bilişsel birikimleri kadar duyuşsal özelliklerine de bağlıdır. Birçok öğretim modelinde belirtildiği üzere, öğretimin kalitesinde inanç ve niyet (Akpınar, 2017) gibi duyuşsal özelliklerin belirleyici olduğu hatırlandığında, bu konuda olumlu tutuma sahip olmayan bir öğretmenin, bu çağa ve bu çağın mevcut öğrencilerine yönelik uygulanabilir bir planlama yapması beklenemez. Araştırmada buna yönelik maddelere dair bulgular Tablo 2'de yer almaktadır. Buna göre, araştırmaya katılan matematik öğretmenlerinin, etkili bir matematik öğretimi için planlamanın önemine inandıkları ve bu konudaki rol ve sorumluluklarını benimsedikleri anlaşılmaktadır. Bu durum matematik öğretiminin niteliği bakımından çok önemlidir. Zira planlama, öğretmenlerin bilişsel potansiyelinin yansıdığı temel öğretim enstrümanlarından (Rowland, 2009'dan aktaran: Tanışlı, Ayber ve Karakuzu, 2018). Aynı öğretmenlerin, bu rol ve sorumluluklarının yasal bir temele dayandırılmasına mesafeli bir tavır takınmaları, dikkat çekicidir. Buradan hareketle, araştırmaya katılan matematik öğretmenlerinin, öğretimi planlama konusundaki duyuşsal özelliklere sahip olmalarına rağmen, konuyla ilgili yasal denetim ve standartlara mesafeli oldukları sonucuna varılabilir. Bu mesafeli tavrın arka planın, yasal denetimle gerekli standartlara sahip olmama korkusunun tetiklediği iş güvencesi veya ekonomik kaygılar olabilir.

Araştırmaya katılan matematik öğretmenlerinin, öğretimi planlamanın önemi konusundaki görüşleri demografik değişkenler açısından ele alındığında, bu öğretmenlerin ilgili duyuşsal farkındalıklarının HİE ile arttığı sonucuna varılmıştır.

Etkili bir matematik öğretimi, her şeyden önce buna dair öğretimi planlamanın doğru yapılmasına bağlıdır. Öğretimin doğru planlanması, esas alınan felsefe ve anlayışlara göre

değişebilmektedir. Dolayısıyla öğretmenlerin planlamada referans aldıkları kaynaklar, aslında onların felsefi ve pedagojik zihinsel arka planını göstermektedir. Araştırmada buna yönelik öğretmen görüşlerine dayalı veriler Tablo 3'te yer almaktadır. Bu veriler analiz edildiğinde, katılımcı öğretmenlerin öğretimi planlamada referans aldıkları değişkenlerin; öğrenciler, öğretim programı, ders kitabı, merkezi sınavlar ve yöneticiler şeklinde sıralandığı

anlaşılmaktadır. Buradan hareketle, ders kitabı ve merkezi sınavlar hariç tutulduğunda, araştırmaya katılan matematik öğretmenlerinin ilerlemeci ve yapılandırmacı yaklaşımları özümstedikleri sonucuna varılabilir. Zira Türkiye'de özellikle 2005 yılından sonra eğitimde ilerlemeci ve yapılandırmacı yaklaşımın esas alındığı bilinmektedir. Öğretmenlerin planlamada, ders kitabı ve merkezi sınavları referans almaları konu odaklı esasici eğitim felsefesini (Akpınar, 2017) çağırırsa da durum farklı olabilir. Şöyle ki, Türkiye'de resmi olarak okullarda öğrenci merkezli ilerlemeci ve yapılandırmacılık egemen olsa da, merkezi sınavlar ağırlıklı olarak konu merkezli bir yaklaşımla yapılmaya devam etmektedir. Dahası, Türkiye kamuoyunda mevcut konjektürde eğitim ve öğretmen kalitesi bu merkezi sınavlara bağlı olarak değerlendirilmektedir. Dolayısıyla araştırma katılan öğretmenlerin, öğretimi planlamada öğrenci ve öğretim programını referans almaları ilerlemeci ve yapılandırmacılıkla ilgili olsa da, ders kitabı ve merkezi sınavları referans almaları ise, bunların esasiciliğe yakınlığından ziyade, Türkiye'de ki sözü edilen konjektürle alakalı olduğu iddia edilebilir. Araştırmaya katılan matematik öğretmenlerinin, öğretimi planlamada, öğrenci velilerini dikkate almayı büyük oranda reddetmeleri ise iki sonuca bağlı olabilir. Birincisi, daha önce değinildiği gibi öğretmenlerin denetim ve gözetime mesafeli tavırları olabilir. İkinci ise, bu öğretmenlerin, eğitim niteliği için okul ve aile işbirliğinin öneminde yönelik farkındalıklarının düşük olması olabilir. Öğretmenlerin, öğretimi planlamayı zümre kurulunca yapmayı kısmen benimsemeleri, bunların öğretimsel faaliyetleri takım çalışması olarak değil de, bireysel bir etkinlik olarak görmelerine bağlı olabilir. Oysa, öğretmenlerin planlamayı birlikte yapmaları onlara hem güven verebilir ve hem de gelişimlerini destekleyebilir (Tanışlı, Ayber, ve Karakuzu, 2018).

Araştırmaya katılan matematik öğretmenlerinin, öğretimi planlamada referans aldıkları değişkenler konusundaki görüşleri demografik değişkenler açısından ele alındığında, bu öğretmenlerin ilgili bilişsel ve duyuşsal farkındalıklarının, lisansüstü eğitim ve mezun olunan fakülte (eğitim fakültesi lehine) gibi değişkenlere bağlı olarak yükseldiği sonucuna varılmıştır.

Etkili bir matematik öğretiminin doğru planlama ve doğru planlamanın ise, okul yönetimi, konjektürel ve çevresel koşulların yanında, öğretmenlerin duyuşsal farkındalık ve bilişsel potansiyeline de bağlı olduğu bilinmektedir. Bunlardan duyuşsal farkındalıkla ilgili sonuçlara yukarıda temas edilmiştir. Bu konuda araştırmaya katılan öğretmenlerin bilişsel potansiyeline yönelik görüşlerine dayalı veriler Tablo 4’te yer almaktadır. Buradan hareketle, araştırmaya katılan matematik öğretmenlerinin, öğretimi planlama konusunda kendilerini yeterli gördükleri anlaşılmaktadır. Ayrıca, konu ile ilgili beyanlardan, araştırmaya katılan matematik öğretmenlerinin, öğretimi planlama konusundaki yeterliliklerinde, okul yönetimi veya

meslektaşlardan ziyade interneti referans aldıkları belirtilebilir. Araştırmada bu durumun, beş olasılığa bağlı olabileceği değerlendirilmiştir. Birincisi, okul yöneticilerinin görevleri arasında olan öğretmene rehberlik işlevini (Gülbahar, 2014) tam olarak yerine getirmemeleri. İkincisi, göreve yeni başlayan öğretmenlere atanan danışman öğretmenlerinin benzer şekilde rehberlik görevlerini (Topsakal ve Duysak, 2017) tam olarak yerine getirmemeleri. Üçüncüsü, öğretimi planlamada takım çalışması (Yenipınar, 2019) ve meslektaş istişaresi anlamı da olan zümre öğretmenler kurulunun işlevsel olmaması. Dördüncüsü, katılımcı öğretmenlerin, 1980 ile 2000 yılları arasında teknolojinin içinde doğmuş olan Y Kuşağının (Şahin, Turan ve Karadeniz, 2021), bilgi ve becerilerini geliştirmede öncelikle internete başvurmalarıdır. Araştırmaya katılan öğretmenlerin çoğunlukla (%66.9) 1-10 yıllık kıdeme sahip genç katılımcılar olması, bu olasılığı desteklemektedir. Beşinci olasılık ise, araştırmaya katılan öğretmenlerin, araştırma, istişare ve çaba göstererek plan yapma yerine, kolaycılığı tercih ederek internetten hazır planları alıp, kendilerine uyarlamaları olabilir.

Araştırmaya katılan matematik öğretmenlerinin, öğretimi planlama yeterliliğine dair görüşleri demografik değişkenler açısından ele alındığında, matematik dersinde öğretimi planlama konusunda cinsiyetin önemli bir değişken olduğu, eğitim fakültesi mezunu ile mesleğe yeni başlayan öğretmenlerin, öğretimi planlamada kendisini geliştirmeye daha açık olmaları sonucuna varılmıştır.

Son tahlilde, araştırmaya katılan matematik öğretmenlerinin, öğretimi planlama konusundaki tutumları ile uygulamaları tam anlamıyla tutarlılık göstermemektedir. Bunun olası birçok nedeninden söz edilebilir. Bunlar arasında, araştırmada ortaya çıkan, Türkiye’de mevcut öğretim programlarının referansları ile merkezi seçme ve yerleştirme sınavları gibi uygulamadaki konjektürel durumlar arasındaki tutarsızlık önemlidir. Bu durumda öğretmenler, ilerlemeci ve yapılandırmacı okul ile esasici merkezi sınavlar ikilemi arasında kalmakta ve bu durum onların öğretim programlarına da yansımaktadır.

Araştırma bulguları ve bu bulgulara dayalı olarak ulaşılan sonuçlardan hareketle aşağıdaki önerilere yer verilmiştir:

- Öğretmen yetiştiren eğitim, ilahiyat ve diğer fakülte programları ile pedagojik formasyon programlarına öğretimi planlama ile ilgili dersler eklenmelidir.
- Öğretmen yetiştiren eğitim, ilahiyat ve diğer fakülte programları ile pedagojik formasyon programlarında çeşitli dersler bağlamında verilen öğretimi planlama konuları uygulamalı olarak işlenmelidir.
- İl milli eğitim müdürlükleri ile üniversiteler koordineli olarak öğretmenlere yönelik, öğretimi planlama farkındalığı, bilgisi ve yeterliği kazandıracak etkinlikler düzenlemelidir.
- Okullarda zaman zaman gerçekleştirilen denetimlerde öğretim planları daha detaylı olarak sorgulanmalıdır.
- Okul yöneticileri, öğretimi planlamadaki denetim, kontrol ve rehberlik gibi rol ve sorumluluklarını daha etkili şekilde yerine getirecek adımlar atmalıdırlar.
- Okul yöneticileri, öğretimi planlamada takım çalışması bağlamında, zümre veya şube öğretmenler kurulunu daha işlevsel hale getirecek önemleri almalıdırlar.
- Üniversitelerin eğitim bilimleri alanındaki lisansüstü programlarında öğretimi planlamaya daha fazla ağırlık verilmelidir.

## **DUYGULARIN ALGIYA TESİRİ -MERSİYE ÖRNEĞİ-**

**Arş. Gör. Merve GÜVEN (Orcid ID: 0000-0002-4870-2680)**  
Ankara Üniversitesi, İlahiyat Fakültesi, Türk-İslâm Edebiyatı Anabilim Dalı

### **ÖZET**

Duygu ve düşüncelerini etkili bir biçimde okuyucuya sunma gayesini taşıyan şair, seslerin uyum ve ahenginin yanı sıra sözcüklerin anlam zenginliği ve derinliğinden de istifade eder. Bu yolla az sözle çok şey ifade edebilme imkanı bulduğu gibi okuyucuya kendi ruh dünyasının kapılarını da açar. Şairin edebi sanatlarla bezediği her mısra onun varlığı anlamlandırma şeklini, hayata bakışını, çevreyi neden ve nasıl yorumladığını kısaca iç dünyasını ortaya koyar. Zira şair; içinde bulunduğu ruh hâlinin etkisiyle insanların günlük yaşamında sıkça karşılaştığı pekçok gerçeği yeniden anlamlandırır, kavramlara yeni manalar yükler, varlıklar arasında yeni ilişkiler kurar. Bu nedenle edebi sanatları, sanatkarın iç dünyasının birer yansıması olarak kabul edip değerlendirmek gerekir. Biz bu bakış açısıyla klasik şiirin en içten, en samimi ifadelerini bulabileceğimiz mersiye türünü yine duyguların en orijinal yansıması olarak kabul edebileceğimiz hüsn-i ta'lîl ve tecâhül-i ârif sanatları çerçevesinde ele aldık. Farklı bakış açılarını ortaya koyabilmek, aynı varlığın başka zihinlerde değişik şekillerde anlamlandırılışını özgün örnekleriyle sunabilmek adına bir dönem sınırlaması yapmamayı tercih ettik. Türün inceleme imkanı bulduğumuz metinlerinden bir seçme yapma yoluna gittik.

**Anahtar Kelimeler:** Türk İslam Edebiyatı, Mersiye, Hüsn-i ta'lîl, Tecâhül-i ârif

## **THE INFLUENCE OF EMOTIONS ON PERCEPTION -EXAMPLE OF ELEGY-**

### **ABSTRACT**

The poet, who aims to present his feelings and thoughts to the reader effectively, benefits from the semantic richness and depth of the words as well as the harmony and harmony of the sounds. In this way, he not only has the opportunity to express a lot with few words, but also opens the doors of his own spiritual world to the reader. Each verse that the poet adorns with literary arts reveals his way of making sense of existence, his view of life, why and how he interprets the environment, briefly his inner world. Because the poet; With the influence of the mood he is in, he reinterprets many facts that people frequently encounter in their daily lives, gives new meanings to concepts, and establishes new relationships between beings. For this reason, it is necessary to accept and evaluate literary arts as a reflection of the artist's inner world. From this point of view, we discussed the elegy genre, in which we can find the most sincere and sincere expressions of classical poetry, within the framework of the arts of hüsn-i ta'lıl and tecâhül-i arif, which we can consider as the most original reflection of emotions. We chose not to limit a period in order to present different perspectives and to present unique examples of the meaning of the same entity in different ways in other minds. We chose to make a selection from the texts of the genre that we had the opportunity to examine.

**Keywords:** Turkish Islamic Literature, Elegy, Hüsn-i ta'lıl, Tecâhül-i ârif

## **GİRİŞ**

Ölüm hayattaki en önemli gerçeklerden ve tarih boyunca insanoğlunun zihnini en çok meşgul eden olgulardan biridir. Böylesine önemli bir olgunun sanata dolayısıyla edebiyat ve şiire yansımaları da kaçınılmazdır. Öyle ki sevilen birinin yitirilmesi karşısında deruni bir elemin dışa vurumu olarak dile getirilen manzumelerin, şiir türünün ilk örnekleri olduğu ifade edilmektedir.<sup>10</sup>

Klasik edebiyatta birinin ölümü nedeniyle duyulan acıyı anlatmak üzere yazılan şiirlere mersiye denir.<sup>11</sup> Klasik mersiyede üç ana bölüm vardır. Bunlardan ilki ölen kişinin erdemlerinin anlatıldığı övgü bölümüdür.<sup>12</sup> Övgü, mersiyelerde kullanılan temel üslup olarak kabul edilebilir.<sup>13</sup> Bu övgü genellikle mübalağalı bir biçimde sunulur.<sup>14</sup> Övgü bölümünde ölenin olumlu özelliklerini anlatarak değerini vurgulayan şair,<sup>15</sup> ikinci bölüm olan ağlama bölümünde ise arkasında bıraktığı acıyı içten ve duygusal bir üslupla dile getirir. Üçüncü ve son bölümde de geride kalanlara, yaşanan kayıp sonrası duyulan acıya sabretmeleri tavsiye edilir. Mersiyeler, hüznün ve kasvetli ifadelerle dolu olmalarına ve çok defa tekdüze bir üslup taşımalarına rağmen dil ve sanat bakımından oldukça zengindir. Mersiyelerin övgü ve ağlama bölümleri beyan sanatlarının en çok kullanıldığı kısımlardır.<sup>16</sup> Bu bildiride duyguların algıya tesiri, mersiye türünün ağlama bölümünden örneklerle, hüsn-i ta'lîl ve tecâhül-i ârif sanatları çerçevesinde ele alınacaktır.

## **Kainatta Yas: Şairin Kalemde Matemin Ahengi**

Kıymet verilen kişinin yitirilmesi sonucu duyulan acı ve üzüntünün dile getirildiği mersiyelerde şair, teşhis sanatı vasıtasıyla yasa tüm kâinatı dâhil eder. Hüznünü çevresiyle bütünleştirir ve dış dünyada gerçekliği olan hadiseleri, içinde bulunduğu ruh hâlinin etkisiyle,

herkesçe bilinen gerçek sebebinin dışına çıkarak<sup>17</sup> kaybedilenin hüznüyle açıklar. Nitekim insan, psikolojik bir gerçeklik olarak çevresini içinde bulunduğu hâlet-i rûhiyyeye göre yorumlar. Şairler bunu sanatkârane bir buluşla ifade eder. Varlıklar arasında yeni ilişkiler kurar, sıra dışı tablolar çizer. Hüsn-i ta'lîl sanatı vasıtasıyla hakikati imha edip yerine orijinal bir hayal yerleştirir.<sup>18</sup> Kozmik

unsurları, bitkileri ve hayvanları, mevcut ve tabii niteliklerini kullanarak, birer matemzedeye dönüştürür. Bu genelde kapalı istiare yoluyla yapılır ve şair kendisine benzetilene açıkça zikretmezken onu hatırlatacak, onunla ilgili bir unsuru kullanır. Ağlamak, feryat etmek, göğsü yumruklamak, saçları yolmak, karalar giymek, gözyaşı dökmek, boyun bükme gibi insana has mateme yönelik eylemleri ay, güneş, yıldız gibi kozmik unsurlara; gül, lale, menekşe gibi bitkilere; bülbül, kumru, kartal gibi kuşlara yükleyerek teşhis sanatına yer verir. Teşbih ve teşhis sanatları şairin hayalini inşa etmesi için birer basamak olurken, asıl gaye mevcut gerçeği hayalî bir sebep ile açıklamak ve ifadeye güzellik katmaktır. Aynı ilginin istifham yani soru sorma yoluyla sunulduğu ifadelerde ise hüsn-i ta'lîl yerini tecâhül-i ârife bırakır. Burada üzerinde durulması gereken her iki sanatın da mevcut durumun yarattığı hissin dolayısıyla hüznün dışı vurumu olmasıdır.

Ay, yüzeyindeki kelef tabir edilen lekeleri ve ayın ilk günlerinde aldığı yay/hilâl şekli ile; güneş ise rengi dolayısıyla şairlerin hayal dünyasındaki yerini alır. Şeyhî (öl. 832/1429) *Zerd oldı âfitâb yüzün tırmaladı mâh*<sup>19</sup> mısraında kapalı istiare yoluyla güneş ve ayı Germiyanoglu Yâkup Bey'in (öl. 831/1428) ölümü üzerine yas tutan iki insana benzetir. Güneşin rengini bu üzüntü ile sararıp solmasına, ayın yüzeyindeki lekeleri ise bu acıyla yüzünü parçalamasına bağlar.

Aynî Efendi (öl. 1253/1837), Sultan Selim Han'ın (öl. 1223/1808) vefatı sonrası güneşin üzüntüden sarılık hastalığına yakalandığını belirtir. Ayın hilal hâlini de bu dertten dolayı zayıflık, düşkünlük yaşamasına bağlar:

*Âfitâba bu marazdan sarılık itdi eser*

*Mâh-ı nev her ay başında böyle bir za'fı çeker*<sup>20</sup>

Revânî (öl. 930/1523-24) aynı his ve hayal ile bağlantılı sorular sorar. Bu sorular şairin cevap almak için sorduğu sorular değil âdeta kendi kendine konuşması sayılabilecek, samimi ifadeleri olarak karşımıza çıkar:

<sup>17</sup> M. Yekta Saraç, *Klasik Edebiyat Bilgisi: Belagat* (İstanbul: Gökkuşbu Yayınları, 2018), 230.

<sup>18</sup> Bahir Selçuk, "Hakikati İmhâ Hayâlî İnşâ: Redde Dayalı Hüsn-i Ta'lîl Sanatı Üzerine", *Fırat Üniversitesi Sosyal Bilimler Dergisi* 31/1, 61.

<sup>19</sup> Mustafa İsen – Cemal Kurnaz, *Şeyhî Divanı* (Akçağ Yayınları: Ankara, 1990), 92.

<sup>20</sup> Mehmet Arslan, *Antepî Aynî Divanı* (İstanbul: Kitabevi Yayınları, 2004), 496.

*Göge boyatsa n'ola câmesini mâh-ı münîr*

*Güneşün tutsa ne var yüzini gamdan yerekan<sup>21</sup>*

Bosnalı Asım'ın (öl. 1122/1710) mersiyesinde hilal, Faiz Efendi'nin ölümünden dolayı yas tutan dünyanın, kendisini parçalamak için kullandığı elmas renkli kılıç olur:

*Degüldür mah-ı nev bir hançer-i elmâs-gûn almış*

*Eline itmek ister kendüyi gerdûn sad-pâre<sup>22</sup>*

Diyarbakırlı Hâmî Ahmed (öl. 1160/1747), Diyarbakır Valisi Köprülüzâde Abdullah Paşa'nın eşinin vefatı vesilesiyle kaleme aldığı mersiyesinde, ayın hilal hâlini şekil itibariyle tırnağa benzetir. Gökyüzü bu yastan dolayı bir matemzede gibi hilal tırnaklarıyla yüzünü parçalamış ve bizim şafak zannettiğimiz kızılık ortaya çıkmıştır:

*Şafak degül görinen nâhun-ı hilâl ile çerh*

*Boyandı kanına itdükte hâriş-i ruhsâr<sup>23</sup>*

Revânî, II. Bayezid'in (öl. 918/1512) genç yaşta vefat eden oğlu Şehzade Mahmud (öl. 912/1507) için kaleme aldığı mersiyesinde şafağın kızılığını feleğin üzüntüsünden kan ağlamasına bağlar. Feleği, ağlamaktan gözüne kan oturmuş bir matemzede olarak kişileştirir:

*Gûşe-i çarhda sanman ki şafakdur görinen*

*Ağlamakdan felegün gözine oturmuş kan<sup>24</sup>*

Revânî, başka bir mersiyesinde feleğin, II. Bayezid'in diğer oğlu Şehzade Alemşah (öl. 909/1503) için yas tutup, ateşli ahlar çektiğini belirtir. Şairin bu istiareyi kullanmasına şimşekle gök gürültüsü zemin hazırlar ve şair tabii hadiselerle gerçek dışı sebepler üretir. Aynı mersiye de gece bir matemzede gibi karalar giymektedir:

*Şimşek degül durur görinen bang-i ra'd ile*

*Bir odlu âhidur felegüñ k'olmuş âşikâr*

*Şeb aldı egnine yine kara libâsını*

*Şeh-zâdenüñ meger tutar ol dahı yasını<sup>25</sup>*

<sup>21</sup> Ziya Avşar, *Revânî Dîvânı* (PDF: Kültür ve Turizm Bakanlığı Yayınları, 2017), 53.

<sup>23</sup> Kadri Hüsnü Yılmaz, *Diyarbakırlı Hâmî Ahmed Divanı* (PDF: Kültür ve Turizm Bakanlığı Yayınları, 2017), 236.

<sup>24</sup> Avşar, 53.

<sup>25</sup> Avşar, 48-49.

Zâtî'nin (öl. 953/1546) hayal dünyasında ise Müeyyedzâde'nin (öl. 922/1516) yasını tutan gece, tıpkı bir matemzede gibi saçlarını kesmektedir. Kapalı istiare ile insana benzetilen gecenin, saçlarını kesmek için kullandığı kesici alet ise doğuşu ile gecenin karanlığını bir kılıç gibi kesip ortadan kaldıran güneştir. Aynı dertten muzdarip olan güneş de sarı saçlarını çözmüş, dağıtmış kan ağlamaktadır:

*Şeb tîğ-ı âftâb ile gîsûsın itdi kat*

*Kan ağladı çözüp saçını mihr-i subgâh<sup>26</sup>*

Kemâlpaşazâde (öl. 940/1534) ise gökyüzünü Yavuz Sultan Selim'in (öl. 926/1520) yası nedeniyle eline ay ve güneş taşlarını almış, durmadan sinesini döğen bir insana benzetir. Dünyanın kendi eksenini etrafında dönmesi sonucu gece ve gündüzün birbirini takip etmesini şairane bir sebeple izah eder. Aynı mersiyede feleği kederden beli bükülmüş bir ihtiyara benzetirken, zamana da annelik vasfını yükler. Kar ve yağmur feleğin gözünden dökülen yağ olur:

*Mihr ü mehdên elinde iki taş*

*Durmadan çarh sînesini döger*

*Beli bükildi pîr-i gerdûnun*

*Mâder-i dehr itdi derd ile âh*

*Berf ü bârân degül-durur felegin*

*Gönli gözi yanar ü aglar anı<sup>27</sup>*

Yıldızlar yasa dâhil edilirken kişileştirilen yine gökyüzüdür. Enerji üreten ve yoğun ışık saçan bu plazma kütleleri şekil ve renk itibarıyla şairlerin hayal dünyasındaki yerini alır. Necâtî Bey (öl. 914/1509), Şehzade Mahmud için kaleme aldığı mersiyesinde redde dayalı hüsn-i ta'lîl sanatını kullanır ve yıldızlar bu keder neticesinde gözyüzünün çektiği ateşli âh olur:

*Yılduz degüldür atılan illâ ki âsumân*

*Her gice odlu odlu ider bî-şümâr âh<sup>28</sup>*

Tâcîzâde Câfer Çelebi'nin (öl. 921/1515) II. Bayezid için kaleme aldığı mersiyede ise yıldızlar zamanın gözünden dökülen gözyaşlarıdır:

*Yılduz degül düşen giceler gözyaşdır ol*

*Çeşm-i zamâne derd ile olmuştur eşk-bâr<sup>29</sup>*

<sup>26</sup> Orhan Kurtoğlu, *Zâtî Dîvânı* (PDF: Kültür ve Turizm Bakanlığı Yayınları, 2017), 265.

<sup>27</sup> M. A. Yekta Saraç, *Şeyhülislâm Kemâlpaşazâde* (İstanbul: Şûle Yayınları, 1999), 80, 82.

<sup>28</sup> Ali Nihad Tarlan, *Necâtî Beg Divanı* (İstanbul: Millî Eğitim Basımevi, 1963), 112.

<sup>29</sup> İsmail Erünsal, *Tâcîzâde Câfer Çelebi Dîvânı* (PDF: Kültür ve Turizm Bakanlığı Yayınları, 2018), 297.

Şairler bu yasa yalnız kozmik unsurları dâhil etmez. Tabiat da bu dertten nasibini alır.

Edebiyatımızda gençliği, canlılığı, tazeliği, neşeyi ilkbahar temsil ederken; hastalığın, hüznün, ölümün, matem-in sembolü hazandır. Sonbaharda, güneşli gün sayısının azalıp kapalı ve kasvetli havanın hâkim olması, soğuk ve sert esen rüzgarın etkisiyle ağaçların yapraklarını dökmesi, çiçeklerin solması, şairlerimiz için yasa uygun atmosferi hazırlar. Zira hüznün de insanın gönül bahçesini soldurur ve ruhunda kasavet hakimiyetini kurar. Tabiatla matem, rüzgar habercisinin kara haberi soğuk esintisi ile getirmesinin ardından başlar. Bu haber sonrası saçlarını yolan ağaçlar, hemen renkli giysilerinden soyulup kara çullar giyer:

*Fürkat zamânı gibi irişdi dem-i hazân*

*Âşık yüzi gibi yine zerd oldı bostân*

*Encüm gibi döküldi yire berd-i şâhsâr*

*Rûz-ı kıyâmet irdi gülistâna nâgehân*

*Soydı çıkardı câmelerini ecel gibi*

*Eşcâr-ı bâga fasl-ı hazan eyledi ziyân*

*Dünyâsını değışdürüben fasl-i nev-bahâr*

*Bu gam gumâmı ile karardı kamu cihân*

*Kanı ol dem ki şenliğı var idi gülşenün*

*Saçın yolar şecer kara çullar geyüp hemân*

*Âfet irüp çiçeklere yumuldu gözleri*

*Gösterdi rûy-ı serdini mirât-ı âsumân*

*İrgürdi bu sovk haberi var ise sabâ*

*Zerd ü nizar olup bozuldu düşdi bostân*

*Yırtup yüzini agladı mâh-ı felek-zede*

*Meşgûl oldı mâtem-i Sultân Mehemmede<sup>30</sup>*

Muini de Şehzade Mustafa için yazdığı mersiyesinde kara haberi bahçeye saba ile ulaştırır. Rüzgarın etkisi ile ağaçların salınmasını ve çiçeklerini dökmesini bu üzücü habere bağlar.

<sup>30</sup> Mehmed Çavuşoğlu, *Yahyâ Bey Dîvanı* (İstanbul: İstanbul Üniversitesi Edebiyat Fakültesi Yayını, 1977), 159.

Servi ve çınar aldıkları haber ile aklını yitirmiş, divane salınmakta ve tüm varlıklarını etrafa saçmaktadır:

*Salar başını vü karsar elini gülşende*

*Meger ki serv ü çınâra cünûn kâr itdi*

*Delürdi bu gam ile bâğa çekdiler suyu*

*Girince bâğa söğüt bir zamân karâr itdi*

*Çemende hâr çeküp gonca üstine hançer*

*Tebessüm eyledüğine bu demde âr itdi*

*İştdi cümle şecerler zih itdi endâmı*

*Sabâ çü bâğa bu peygâm ile güzâr itdi*

*Şükûfe akçesini saçdı yire hep eşcâr*

*Ki yani rûhı için varını nisâr itdi<sup>31</sup>*

Behiştî (öl. 979/1571) de Kerbela konulu mersiyesinde; nergisin, menekşenin, lalenin, sünbülün ve susenin mevcut bitkisel özelliklerini kullanarak bağda bir matem atmosferi inşa eder:

*İrişdi gülşene bâd-ı sabâ peygâm-ı mâtemle*

*Gam u gussayla ezhâr-ı çemen hep kıldı vâveylâ*

*Sarardı nergisüñ beñzi benefşe boynunu bükdi*

*Derûnuñ lâlenüñ yakdı bu gam itdi tenin ifnâ'*

*Dögünüp gömgök itdi cismini sünbül bu mihnetle*

*Düşüpdür hançere sûsen idüp gam resmini icrâ*

*Gülistânuñ sanevber kadleri hep ser-nigûn oldı*

*Esince bâd-ı mâtem şiddet-i bâd-ı semûm-âsâ<sup>32</sup>*

Sonbaharın rüzgarı, kara haberi tabiata ulaştırmakla kalmaz, ara ara yaslarını tekrar hatırlamaları ve feryat etmeleri için ağaçları tahrik eder. Yerden toprak alır ve başlarına saçar. Şair, sonbaharda şiddetle esen rüzgarın toprağı havalandırıp etrafa saçmasını şairane bir sebeple izah eder:

*Dem-be-dem feryâdlar eylen diyü tahrîk idüp*

<sup>31</sup> Ayhan Gültaş, "Bilinmeyen Şehzâde Mustafa Mersiyeleleri", *Kubbealtı Akademi Mecmuası* 18/3 (Temmuz 1989), 42.

<sup>32</sup> Yaşar Aydemir, *Behiştî Dîvânı* (PDF: Kültür ve Turizm Bakanlığı Yayınları, 2018), 83.

*Her dirahıtun başına toprak saçar bâd-ı bahâr<sup>33</sup>*

Gül bu derd ile kana boyanır, lalenin bağıryanar. Menekşe boynunu bükerek, sünbül saçların yolar:

*Bu derd kana boyadı ruhsârını gülün*

*Burdı bu gussa boynını miskîn beneşşenün*

*Yoldı bu derd saçların âşüfte sünbülün*

*Yandurdu bağını bu belâ nârı lâlenün<sup>34</sup>*

Nergisin gözüne kederden uyku girmez olur. Bu dertten perişan olmuş, solmuş gülü kendine getirmek isteyen şebnem gülün ağzına su damlatır:

*Gülün ağzına şebnem tamzurur su*

*Gözine nergisün girmezdi uyhu<sup>35</sup>*

Yapısı itibarıyla göz yaşına benzeyen şebnem, kimi zaman da nergisin gözünden yas ile dökülen yaş olur:

*Olur pür-nem çemende çeşm-i nergis eşk-i şebnemle*

*Görüp her subh-dem hûnîn-şafak hurşîd-i rahşânî<sup>36</sup>*

Divan şiirin âşık kuşu bülbül de bağı gelen kara haberden etkilenir ve artık güle sevdasından ötmez de bir mersiyehan olur:

*Meger bülbül çemende mersiye-hân oldu ezhâre*

*Perişân hâl-i sünbül gonçeler mebhût u ebkemdür<sup>37</sup>*

Kumru inleyerek; kartal karalar giyerek; doğan kendine zarar vererek bu mateme iştirak eder:

*Bâz-ı devlet yoldı bâlin andelib efgân ider*

*İniler kumrı anançün karalar geydi ukâb<sup>38</sup>*

Bu âh u efganları işiten deniz, aldığı acı haberle bir matemzede gibi ellerini birbirine vurur:

*Deryâ kulağına irecek nâle vü figân*

*Keffin biri birine urup acıdı heman<sup>39</sup>*

Dağlar karalar giyer, bağına taş basar; nehirler deli divane olup başlarını taştan taş vurur:

*Tag üzre sanmañuz görinenler bulut durur*

*Dîvâne oldı taşlar ile döginüp yürür  
Başı açuk yalıñ ayak âb-ı revân dahi<sup>41</sup>*

*Gezer gülşende zencîrin sürür mecnûn olup cûlar  
Beneşşe ser-fikende bâr-ı sad endûh ile hamdur<sup>42</sup>*

Revânî, ağaçları ve ırmağı duaları ile yasa dâhil eder. Kapalı istiare yoluyla ırmağı tesbih çeken, ağaçları ise el açmış dua eden bir insana benzetir. Suyun yüzeyindeki hava kabarcıkları ve ağaçların dallarının yukarı doğru oluşu bu istiareye zemin hazırlar ve şair tabii hadiseleri orijinal bir hayal ile okuyucuya şöyle sunar:

*Tesbîh idüp habâbı geçürsin ko cûybâr  
Kulsun du'âyı rûhına el kaldurup çenâr<sup>43</sup>*

Şairlerin benzer ilgileri “neden” “niçin” gibi soru zarfları ile ortaya koyması ise hüsn-i ta'lîl-i ortadan kaldırmakta ve tecâhül-i ârifî devreye sokmaktadır. Ancak her ikisi de aynı hissin aynı hüznün tezahürüdür:

*Bâ'is ne hayret ile salar serv başını  
Mûcib nedür ki suya atar tâcını habâb*

*Hikmet nedür ki bülbül ider dâyimâ figân  
Bu nice sır durur ki giyer karalar gurâb<sup>44</sup>*

*Beneşşe göğe boyanmış nedendür  
Yüreği lâlenün yanmış nedendür*

*Nedendür goncanun bağı dolu kan  
Nedendür hâtır-ı âlem perîşân<sup>45</sup>*

*Aceb mi şâh-ı gül pür-dâg iderse şimdi bâzûsın  
N'ola hûnîn âlem kaldursa lâle vakt-i mâtemdür<sup>46</sup>*

## SONUÇ

Mersiyeler, sevilen birinin kaybedilmesi sonucu yaşanan üzüntünün dile getirildiği manzumelerdir. Ölenin iyiliklerini sayarak değerini vurgulamak, geride kalanların acılarını dile

getirmek ve onlara sabır telkin etmek maksadıyla yazılan mersiyeler edebî sanatlar açısından oldukça zengin metinlerdir.

Mersiyelerde hüznün yoğun bir şekilde dile getirildiği ağlama bölümünde şairler yaşadıkları acıyı çevresi ile bütünleştirir ve bütün kâinat bu yasa iştirak eder hâle gelir. Ay, güneş, yıldız gibi kozmik unsurlar; gül, lale, menekşe gibi bitkiler; bülbül, kumru, kartal gibi kuşlar birer matemzede olarak karşımıza çıkar. Tıpkı bir insan gibi ağlar, ağlamaktan gözlerine kan oturur, karalar giyer, yaşadığı acı neticesinde kendisine zarar verir hâle gelir. Şair bu hayali kurarken sözkonusu unsurların mevcut özelliklerinden istifade eder. Hayalini inşa ederken teşbih ve teşhis sanatlarını birer basamak olarak kullanır. Bu yolla okuyucuyu kurduğu hayale ikna eder ve gerçeği şairane bir sebeple izah eder.

İçinde bulunduğu durumun tesiriyle bilinen bir hususu bilmiyormuşcasına ifade eden şair aynı his ve hayal ile bağlantılı sorular sorar. Bu sorular şairin cevap almak için sorduğu sorular değil adeta kendi kendine konuşması sayılabilecek, samimi ifadeleri olarak karşımıza çıkar. Bu ifadeler tecâhül-i ârif ve ona bağlı bir sanat olarak ifade edilebilecek olan istifhamın en güzel örneklerini ortaya koyar. Şairler bu yolla arştan ferşe uzanan bir matem atmosferi inşa eder ve hüznünü okuyucuya etkili bir biçimde sunar.

**ÖZET**

Bu çalışmanın amacı Mustafa Kemal hayattayken Ortadoğu basınında hakkında çıkan haberlerin analiz edilerek değerlendirilmesidir. Çalışmada yer alan gazete haberleri resmi devlet arşivlerine dayanmaktadır. Ortadoğu, en eski uygarlıklara ev sahipliği yapan ve çok çeşitli medeniyetlerin gelip geçtiği; coğrafyanın ötesinde ortak tarihi, kültürü ve ekonomisiyle öne çıkan özgün yapıda bir bölgedir. Haberleri analiz edilecek gazeteler Kahire, Beyrut, Mumbai, Filistin ve diğer Ortadoğu şehirlerinde yayınlanmış ya da farklı ülkelerde yayımlansa dahi bu coğrafya ile ilgili haberleri içeren yayınlardır. Ortadoğu, Türkler ve Atatürk ile ilgili genelden özele bir kronoloji çalışmasının ardından, gazete haberlerine dair içerik analizi yöntemi uygulanmıştır. Gazete haberlerinin geneline bakıldığında yaklaşık 400 yıl Osmanlı hakimiyetiyle yönetilen Ortadoğu'da Türkiye Cumhuriyeti'nin takip edildiği kolaylıkla anlaşılmaktadır. Analize göre Türkiye Cumhuriyet ve Atatürk, tüm dünyada olduğu gibi Ortadoğu'da da yakından takip edilmiş ve olumlu ya da olumsuz ayırt edilmeksizin Atatürk'ün karizmatik liderliği ve kısa sürede tüm dünyada ses getiren inkılap ve reformları Ortadoğu'da fark edilmiştir. Bu durum, Mustafa Kemal Atatürk'ün askeri dehası ile başlayan tanınırlığının devlet yönetiminde devam ettiğini ve dış dünyada yakından takip edildiğini göstermektedir.

**Anahtar Kelimeler:** Ortadoğu, Atatürk, Dış Basın

**ACCORDING TO THE STATE ARCHIVES, AN EVALUATION ON THE  
NEWSPAPER IN THE MIDDLE EAST PRESS ABOUT MUSTAFA KEMAL  
ATATÜRK BEFORE Her DEATH**

**ABSTRACT**

The aim of this study is to analyze and evaluate the news about Mustafa Kemal in the Middle East press when he was alive. Newspaper news are based on official state archives. The Middle East is a home to the oldest civilizations and a wide variety of civilizations have passed; It is a region with a unique structure that stands out with its common history, culture and economy beyond geography. The newspapers whose news will be analyzed are those that were published in Cairo, Beirut, Palestine and other Middle Eastern cities, or even if they are published in different countries, they contain news about this geography. After a general chronological study about the Middle East, Turks and Atatürk, content analysis method was applied to newspaper news. When the newspaper news are assessed generally, it is easily understood that the Republic of Türkiye is followed in the Middle East, which had been ruled by the Ottoman domination for about 400 years. According to the analysis, the Republic of Türkiye and Atatürk were followed closely in the Middle East as well as the rest of the world, and Atatürk's charismatic leadership and his reforms, which made an impression all over the world in a short time, were noticed in the Middle East, regardless of whether they were positive or negative. This shows that the recognition of Mustafa Kemal Atatürk, which started with his military genius, continues in the state administration and is closely followed in the outside world.

**Key Words:** Middle East, Atatürk, Foreign Press

## **1. GİRİŞ**

Türkiye Cumhuriyeti'nin kurucu lideri Mustafa Kemal Atatürk askeri, siyasi ve devlet yönetim dehası ile Türk basınında olduğu kadar tüm Dünya basınında geniş yer bulmuştur. Özellikle yaklaşık 400 yıl Türk hâkimiyeti ile yönetilen Ortadoğu'da çıkarılan gazetelerde Türkiye ve Mustafa Kemal ile ilgili haberler geniş şekilde yer almıştır.

Bu çalışmanın amacı, Atatürk hayattayken Ortadoğu basınında hakkında çıkan gazete haberlerini çözümlmek ve değerlendirme yapabilmektedir. Çalışmada Ortadoğu ülkelerinde yayınlanan ve devlet arşivinde yer alan çeşitli gazetelerin haberleri derinlemesine incelenmiştir. İçerik analizi ve değerlendirme öncesinde Ortadoğu ve Türklerin yolunun kesişmesinden, Ortadoğu'da hakimiyet kuran devletler ve Atatürk'ün Ortadoğu'da görev yaptığı yıllara kadar kronolojik bir özet çalışması yapılmıştır.

## **2. ORTADOĞU**

### **2.1. ORTADOĞU VE TÜRKLER**

Ortadoğu insanlığın doğuşundan itibaren bilinen en eski medeniyetlerin beşiği olmuş, hakimiyet kurmak isteyen uygarlıklar arasında paylaşılmayan bir bölge olarak çok sayıda devletin hükümlanlık sürdüğü ve hakimiyet kuranların rekabet gücünü artırdığı verimli ve stratejik topraklarıdır. Mısır, Mezopotamya ve Anadolu uygarlıkları tarihin bilinen en eski uygarlıkları olup insanlığın gelişimindeki kritik aşamalara ev sahipliği yapmışlardır. Nil deltasından İran topraklarına ve Doğu Akdeniz kıyılarına, Anadolu'dan Arap Yarımadası'na kadar uzanan geniş bir coğrafya tarihten günümüze Ortadoğu olarak anılmaktadır. Kozmopolit yapısıyla çok kültürlülüğü, çok dinliliği, aynı din içerisinde yer alsada dahi çok sayıda mezhebe sahip olması, zengin yer altı ve yer üstü kaynaklara sahip olması, doğu-batı ve güney-kuzey arasında stratejik bir konumda olması bölgeye özgü özelliklerdir. Bölgenin karakteristiğini etki eden en önemli gelişmeler eski uygarlıkların varlığı, İslamiyet'in ortaya çıkması ve yayılması, farklı Türk devletlerinin etkinliği ile istikrarlı ve uzun vadeli Osmanlı İmparatorluğu hakimiyetidir.

Abbasiler döneminde Türk komutanların önemli görevlere getirilmesi ve özellikle 751 yılında Çinlilere karşı yapılan Talas Savaşı'nda Türklerin İslam'ı yakından tanıma şansı yakalaması ve birçok kaynağa göre Türklerin İslamiyet'e geçmesi Ortadoğu'nun kaderini değiştirecek önemli gelişmelerdir. Bağdat'tan Hassa alayına gönderilen Türk Valisi Ahmet Bin Tulun'un bağımsızlığını ilan ederek bugün Tulunoğulları olarak anılan Mısır'da kurulan ilk Türk ve Müslüman devleti kurması Ortadoğu ve Türkler açısından önemli bir siyasi gelişmedir

Osmanlı İmparatorluğu'na kadar Gazneliler, Büyük Selçuklular, Harzemşahlar, Memlûklüler gibi farklı Türk devletlerinin hüküm sürdüğü Ortadoğu saldırılara açık yapısı ve hükmedeni güçlü kılan stratejik konumu nedeniyle istikrarın zor sağlandığı bir bölge olmuştur.

## **2.2. ORTADOĞU VE OSMANLI İMPARATORLUĞU**

Osmanlı İmparatorluğu'nda doğu seferleri ile bilinen ve tamamlanmayan Anadolu birliğini tamamlamaya çalışan Yavuz Sultan Selim, devletinin Ortadoğu'da ilerlemesinde en önemli katkıları sunan padişahlardandır. Yavuz Sultan Selim (1512-1520) ve Kanuni Sultan Süleyman (1520-1566) devirlerinde Osmanlı Devleti'nin Ortadoğu hâkimiyetini belirleyen dört büyük harekât yapılmıştır, bunlar; İran (Doğu) Seferi; Suriye- Mısır Seferi, Irakeyn Seferleri ve Hind- Yemen Seferleri'dir (Alkan, 2016). Büyük Mısır Seferi sonucunda, Memluk devletinin yıkılması, Osmanlı'nın İslam dünyasında lider olması, kutsal emanetlerin İstanbul'a getirilmesi ve nihai olarak Suriye, Filistin, Lübnan, Ürdün, Hicaz ve Mısır'ın Osmanlı hakimiyetine geçmesi Osmanlı İmparatorluğu'nun Ortadoğu'daki gücünü ve istikrarını perçinlemiştir. Kanuni Sultan Süleyman döneminde Tebriz'in ve sonrasında donanma güçleri ile Kuzey Afrika'nın tamamen fethedilmesiyle birlikte Osmanlı İmparatorluğu Ortadoğu ve Afrika'da en geniş sınırlarına ulaşmıştır.

Gerileme ve dağılma döneminde Ortadoğu ve Kuzey Afrika'da kaybedilen topraklara rağmen I. Dünya Savaşı'na kadar Ortadoğu büyük ölçüde Osmanlı hakimiyetinde kalmıştır.

## **2.3. ORTADOĞU VE ATATÜRK: İLK GÖREV YERİ VE ASKERİ BAŞARI**

Mustafa Kemal'in Harp Akademisi'ni bitirdikten sonra Kurmay Yüzbaşı olarak merkezi Şam'da bulunan 5. Ordu'ya atanması ve bu şekilde ilk görev yerinin Ortadoğu oluşu bölgeyi yakından tanınmasına ve tanınmasına sebep olmuştur. Mustafa Kemal'in erken dönem askeri başarısının pekişmesinde önemli bir yeri olan ve Osmanlı ile İtalyan Krallığı arasında 1911 yılında gerçekleşen Trablusgarp Savaşı bugünkü Libya olarak anılan bölgede gerçekleştirilmiştir. Savaş sırasında Binbaşı rütbesi ile aktif rol oynayan Mustafa Kemal, Tobruk muharebesini yönetmiştir.

## **2.4 ORTADOĞU VE I. DÜNYA SAVAŞI**

Önceki bölümde bahsedildiği üzere Mustafa Kemal'in Osmanlı ordusundaki önemi ve liderliği Trablusgarp ve Balkan Savaşları'nda artmıştır. 1905 yılında Suriye bölgesinde genç bir subayken, I. Dünya Savaşı esnasında Çanakkale cephesinde lider ve belirleyici komutan konumuna kısa sürede yükselmiştir ve bu yükseliş 19 Mayıs 1919 yılında Bandırma Vapuru ile Samsun'a çıkılan bağımsızlık mücadelesi yolunda Anadolu'nun kaderini belirlemiştir.

Osmanlı'nın son döneminde tekrardan yükselişi için birçok fikir akımı ortaya çıkmıştır. İttihat-ı İslam olarak ilk kez 1869 yılında kullanılan ve sonrasında ilk kez 1875 yılında Pan-İslamizm

olarak kullanılan akıma göre Osmanlı hilafet gücünü kullanarak tüm dünyadaki Müslümanlar üzerinde bir güç ve liderlik sağlayabilir ve düşmanlara karşı rekabet edebilirdi (Hülagü, 2006). I. Dünya Savaşı'nda Ortadoğu cephelerinde verilen mücadelede Pan-İslamizm'in bir kurtuluş yolu olmadığı anlaşılmıştır. Irak, Suriye-Filistin ve Hicaz-Yemen cephelerinde Osmanlı ağır yenilgiler almış ve Müslüman Arapların yanında yer almadığını deneyimlemiştir. I. Dünya Savaşı esnasında Ortadoğu cephelerinde Osmanlı açısından önemli kayıplar yaşanmış, bölge halkı başta İngilizler olmak üzere İtilaf devletleri ile sıkı biçimde işbirliği yapmışlardır.

### 3. MUSTAFA KEMAL ATATÜRK HAYATTEYKEN ORTADOĞU BASININDA HAKKINDA YER ALAN HABERLER

#### 3.1. ORTADOĞU GAZETELERİ

Bu çalışmada 1930 ile 1937 yılları arasında Ortadoğu'da yer alan çeşitli illerde basılan gazetelerdeki Mustafa Kemal Atatürk ile ilgili haberler incelenmiştir.

Farklı tarih ve sayılı pek çok gazete haberi incelenmiş ve bu haberler konularına göre tasnif edilerek ele alınmıştır. Aşağıdaki tabloda inceleme gerçekleştirilen gazete haberlerine yer verilmiştir.

**Tablo 4:** Ortadoğu Gazeteleri

GAZETE ADI	YAYINLANDIĞI YER	YAYIN TARİHİ
El İkbal	Beyrut	15.01.1930
El Ahrar	Beyrut	01.10.1930
El Mukattam	Kahire	14.11.1931
El Mukattam	Kahire	18.11.1934
Bombay Chronicle	Hindistan (Haber Filistin Hakkında)	20.08.1937

#### 3.1.1 EL İKBAL (15.01.1930 TARİHLİ GAZETE HABERİ)

El İkbal gazetesi Beyrut'ta yayınlamaya başlayan ve Ortadoğu basınında o dönem için yer tutan bir gazetedir. I. Dünya Savaşı esnasında Araplar arasında Osmanlı'ya karşı oluşan kara propagandayı karşılamak ve tersine çevirmek adına Suriye cephesinde görevli Ahmet Cemal Paşa tarafından Ortadoğu'da gazetelerinde muhabir olarak görevlilerin çağrılarak verilen

bilgilerle onlar tarafından yazılan “El-Bi‘setu’l-‘İlmiyye ilâ Dar’il-Hilafeti’l-İslamiyye” isimli hatıra kitabının yazarlarından biri de El İkbal gazetesi yazarıdır (Şanverdi & Dağbaşı, 2022). Gazete haberi aşağıdaki gibidir (El İkbal, 1930). “Başvekalet; *Türkler yağmur duasına çıkıp duaları kabul olunuyor.*

*“Kahirede Türkçe çıkan Musavat gazetesinin neşrettiği bir makalede Mustafa Kemal Paşa ile İsmet Paşa ve bazı vekiller arasında ihtilaflar mevcut olduğundan İsmet Paşa’nın ajanlar vasıtasıyla ilan ettiği tekzibe rağmen tekit etmiş ve bu meyanda mezkur makalede zikrettiği delillerden “Lazikiye” refikimizin tercüme ettiği şu garip hadiseyi serdetmiştir:*

*Ankara ve havalisine hayli müddetten beri yağmur yağmadığından Dini hürriyetlerine malik olmayan ahaliden mürekkep bir heyet İsmet Paşa’ya müracaat edip milletin yağmur duasına çıkmalarına müsaadesini talep etmişlerdir. İsmet Paşa’nın mezkur heyetin talebine karşı hiddetle verdiği cevapta (bilinmeyen kısım)...*

*Biz sizi yüksek ve medeni milletlerin arasına geçirmek için çalışırken sizin hala irticanızı ve hurafet kabilinden itikadınızı gittikçe arttığını görüyoruz. Duanın yağmura ne münasebeti vardır? Demiş ve onları kovmuştur. Meyusen çıkan heyet Cenabı hakkın bu Ladinileri kendilerine nasıl musallat ettiğini düşünerek ikinci bir tedbir hatırlarına gelmiş ve Mustafa Kemal Paşa’ya gidip ondan müsaade almak keyfiyetini beyinlerinde kararlaştırmışlardır. Müşarünileyhin huzuruna azimet ederek meseleyi kendilerine arz ederek İsmet Paşa’ya daha evvel bu husus hakkında müracaat ettiklerinden ondan gördükleri hakareti de söylemişlerdir. Bunun üzerine Mustafa Kemal Paşa kendilerine müsaade vermiş ve evet ne demek, duanın tesiri olmaz mı? Ben kimsenin itikadına müdahale etmem, siz hürsünüz. Benim Ladini olduğumu size kim söylemiştir. Demek milletin benden nefretini mucip olacak bu gibi desiselerde hala bulunanlar vardır. Haydi efendiler duaya çıkınız ve benim için Cenabı haktan merhamet isteyiniz demiştir. Ertesi gün duaya çıkmak için millet toplanmış ve mekteple talebesi ve gençler önde oldukları halde erkekler ve kadınlar alay halinde tekbir okuya okuya şehir haricindeki sahraya çıkmışlardır. Orada bir Hoca tarafından okunan şu “yarabbi yağmur göndermek suretile bizim dünyamızı kabul etmeyecek olursan üzerimize yıldırımlar indir, bizi mahvet ve yağmursuz bizi geri iade etme” Duaya Milet amin dedi. Hocanın mezkur duası ikmal olmadan Cenup tarafından küçük bir bulut zuhur etmiş ve büyüye büyüye Ankara’nın ufkunu örtmüş şimşekler ve gök gürültüleri başlamış ve birazdan sonra sel gibi yağmurlar yağmıştır.”*

Gazete haberinde Atatürk’ün milletin dini itikat ve duygularına ne kadar saygı duyduğu ve empati ile yaklaştığı açıkça görülmektedir. Milletten uzak ya da onların duygu, düşünce ve

inançlarından bağımsız bir lider olmadığı belirtilmiş, bu gibi asılsız iddiaların kendisine sıklıkla yapıldığı anlaşılmaktadır.

### 3.1.2 EL AHRAR GAZETESİ (01.10.1930 TARİHLİ GAZETE HABERİ)

El Ahrar gazetesi o dönemde Beyrut'ta yayın hayatına başlamış ve çok meşhur olamadan yayın hayatını tamamlamış bir Ortadoğu gazetesidir.

“

Türkiye Kabinesi'nin Değiştirilmesinde Ne Hikmet Var? (Ahrar, 1930)” başlıklı haberde halkın Mustafa Kemal Atatürk'ten memnun olup olmadıkları üzerine görüşler yer almakta ve Mustafa Kemal Paşa ve İsmet Paşa arasında olduğu iddia edilen siyasi bir çekişmeden bahsedilmektedir.

### 3.1.3 EL MUKATTAM GAZETESİ

El Mukattam gazetesi 1888 yılında Faris Nimr tarafından Kahire'de yayın hayatına başlatılmış bir gazetedir. Mısır devleti tarafından 1954 yılında kapatılana kadar yayın hayatına devam etmiştir. Milli Mücadele ve Mustafa Kemal Atatürk'ü destekleyen El Ahbar ve nispeten tarafsız kalan El Ahram'ın aksine İngiliz yanlısı bir tutum izleyen El Mukattam, I. Dünya Savaşı esnasında İtilaf devletlerine karşı olmayan nadir Mısır yayınlarından (Yılmaz M. S., 2009). Milli Mücadele ve Atatürk'e karşı yaptığı ilk yayın 1919 yılında yayınlanmış ve genelde kullandığı argümanlar İngilizler ile uyumlu olarak İstanbul hükümeti ve azınlıkları önceleyen bir tutum olmuştur (Mukattam, 1919). Ayrıca devamındaki yıllar yaptığı haber ve yayınlarda Mustafa Kemal ve Ankara hükümeti ile İstanbul hükümeti ayrımını güden ve tarafını ikinciden yana kullanan bir üslup tercih etmiştir (Pürmüşlü, 2015).

#### 3.1.3.1 (14.11.1931 TARİHLİ GAZETE HABERİ)

Araştırmaya konu devlet arşivinde yer alan “Gazi Mustafa Kemal'in güzel bir rüyası” isimli haberde Atatürk Orman Çiftliği ile ilgili görüşlere yer verilmiştir (Mukattam, Mustafa Kemal'in Güzel Bir Rüyası, 1931).

*“Kahire'de çıkan El Mukattam gazetesinin İstanbul muhabirinden gönderilmiş olup mezkur gazetenin 24.10.1931 tarihli nüshasında intişar eden makalenin Türkçeye mütercem sureti leffen takdim edilmiştir. Efendim Hazretleri:*

*Gazi Mustafa Kemal'in, Ankara'ya yakın bir numune çiftliği vardır. Bu çiftlik de her türlü zirai teşrubeler yapılmakta ve ormanlar için fidanlıklar vücuda getirilmektedir. Kup kuru tepelikleri, az bir zaman içinde cennetasa bir hale ifrag edilmiş olan bu çiftlikte Marmara'yı ve Karadeniz'i andırır göller yapılmış ve bu göllerin etrafında köşkler inşaa edilmiştir. Gazi, bu çiftliği çok ziyaret eder, her ziyaretinde çiftlikte saatlerce kalır, çiftliğin işlerini idare ve bu idaresi neticesinde taktik eyler. B.M.Meclisi azasından bir zat karanlık bir gecenin pek geç*

*bir vaktinde Gazi hazretlerini Marmara gölünün sahili üzerindeki köşklerinden birind, dalgın bir halde durmuş ve biraz uzakta duran yaverinin de dehşet içinde Gazi'ye bakmakta ve müşarünileyhin uzun süren rüyasının neticelenmesini beklemekte bulunduğunu görür. Mebus bey, yaklaşarak Gazi'yi rüyasından uyandırır. Gazi, Marmara'ya bakarak Balkan ve Balkanlıların müstakbel hallerini düşünmekle geçen bu vaziyetinin ne kadar devam ettiğini bilmediğini itiraf eder.*

*“Sana rüyamı nakledeyim” der ve Mebus Bey'e şu beyanatta bulunur: Türk Milleti'nin bütün Balkanı istila ettiğini, siyasi ve medeni hadiseler bir müddet için kanı bastırır fakat nihayette kan her şeyin üstüne çıkar ve her şeyde en büyük kubbesi terkibiye halini alır. Bu böyle olduğu için burada durup Türk Milletinin ıslattığı Balkanın intibahini bekleyerek rüya halinde kendi kendine şunu gördüm ki, Balkanlılar ne vakte kadar bir birlerinden ayrı yaşayacakları gizli olan kanı hakikati ne vakit yükselip Balkan milletlerini birleştirecektir? Önümüzdeki intihapta riyaseti olunmasını ve bu suretle bütün işlerinin vasıtası ile bitirdiğin Fırkanın başında serbest kalımını dilerim. Zira bu gece gördüğüm rüyanın bir hakikati olarak Meydana çıkmasını isterim. Arkadaşlarımdan bir iki zatla birlikte Balkan hükümetleri merkezi olan Atina ve Belgrad'a gidecek Balkan liderlerinin her biriyle ayrı ayrı görüşerek Balkan 'daki bu ayrılığın ne vakte kadar devam edeceğini kendilerinden soracağım. Liderler, bana mikni bir cevap veremeyecek, o vakit ben, kendilerine hakikati ve bu bapta kanaatlerini anlatacak ve mütemadi teşebüsatla müttahip Balkan rüyasını bir hakikat haline çevireceğim. Gazi Hazretlerinin Mebus Bey'e naklettikleri rüyanın hülasası budur. Rüya filvaki çok güzel bir rüyadır. Zaten Gazi bir rüya gördümü derakap faaliyete başlar. Türkiye-Yunan ittiyadi bu faaliyetlerden biridir. Fakat Gazi'nin bu rüyası daha geniş bir ittiyadi istihdaf etmektedir. Bunun için Gazi'nin, bu ittiyadi programını...*

Haberden anlaşıldığı üzere Mustafa Kemal Atatürk sadece ülke meselelerinde değil uluslararası meselelerde de etkin ve belirleyici bir tutum izlemekte ve bu tüm dünya tarafından dikkatle izlenmektedir. Böylesine bir haberin Mısır yayınında yer alması Atatürk'ün diplomatik konulardaki karizması ve tanınırlığı ile örtüşmektedir.

### **3.1.3.2 (18.11.1934 TARİHLİ GAZETE HABERİ)**

18 Kasım 1934 tarihli “Türkler Niçin Gazi'yi Seviyorlar ve Gördüğüm Mustafa Kemal ve Muşaruleneyhin Evsaf ve Sadeliği” isimli haberde yapılan bir mülakatta Atatürk'ün ülkeyi ecnebi işgalinden kurtardığı ve İtilaf devletlerinin tüm Suriye ve Arap topraklarını alsa dahi Türk topraklarına dokunamayacağı ifade edilmiştir; işgal sonrası ülkenin kalkınması ve

çiftçiler, köylüler ve esnafa yapılan desteklerle halkın yararına yapılan diğer uygulamalardan övgü ile bahsedilmiştir (Mukattam, Türkler Niçin Gazi'yi Seviyorlar ve Gördüğüm Mustafa Kemal ve Muşaruleneyhin Evsaf ve Sadeliği, 1934).

### 3.1.4 BOMBAY CHRONICLE (20.08.1937 TARİHLİ GAZETE HABERİ)

Bombay Chronicle 1910 yılında Pherozeshah Mehta tarafından Hindistan'ın Mumbai şehrinde kurulmuş ve 1959 yılına kadar yayın hayatına devam etmiş bir gazetedir. Sıklıkla Ortadoğu

hakkında haberler yayınlayan gazetenin araştırmaya konu bu haberinde Atatürk'ün Filistin uğruna yapabilecekleri ve Avrupa'yı ihtar etmesi yer almaktadır (Bombay Chronicle, 1937).

*Baş Vekalet Yüksek Makamına*

*Bombay Chronicle gazetesinin 27/VII/937 tarihli nushasında "Filistin'e el sürülemez, Kemal Paşa Avrupa'ya ihtar ediyor" başlığı altında bir yazı intişar etmiştir. Bu yazının Türkçe örneği ilişik olarak sunulmuştur. Bu vesile ile saygılarımı tekrarlarım.*

*Dahiliye Vekili Bombay Cronicin 7.7.937 Filistin'e el sürülemez. Kemal Paşa Avrupa'ya ihtar ediyor. Türkler mukaddes topraklarda yabancı Hakimiyetine tahammül etmeyeceklerdir. Türkçe hakimiyeti milliye gazetesi Kemal Atatürk'ün Türkiye millet meclisinde irad etmiş olduğu bir nutuktan bahsediyor. Aşağıdaki satırlar bu nutkun Filistin'e taalluk eden kısmından alınmıştır. "Arapların Avrupa... (okunamayan kelime) nüfuz edemeyip bu Sözde istiklal kelimesine inandıkları ve bu uğurda Arap memleketlerini Avrupa emperyalizmine esir kıldıkları çok şayanı teessüftür Kemal Atatürk'ün, Filistin'in, Arabistan'da vuku bulacak hareketin merkezini teşkil ettiği takdirde bura Araplarına yapılacak herhangi bir fenalığa Türklerin de tahammül edemeyeceğini söylemektedir.*

*"Arapların arasında mevcut olan karışıklığı ve hoşnutsuzluğu kimse bizim kadar bilemez. Biz vakıa birkaç sene Araplardan uzak kaldık. Fakat şimdi kendimize kafi derecede güvenip ve kudretimizi bildiğimiz için İslamiyetin mukaddes yerlerini Musevilerin ve Hristiyanların nüfuzunun altına girmesine mani olacağız. Binaenaleyh şunu söylemek istiyoruz ki buraların Avrupa emperyalizminin oyun sahası olmasına müsaade etmeyeceğiz. Biz şimdiye kadar dinsiz ve İslamiyet'e lakayt olmakla ittiham edildik. Fakat bu ittihamlara rağmen peygamberin son arzusunu yani, mukaddes toprakların daima İslam hakimiyetinde kalmasını temin için hemen bugün kanımızı dökmeğe hazırız. Cedlerimizin, Selahaddin'in idaresi altında, uğruna hristiyanlarla mücadele ettikleri topraklarda.*

Haberden anlaşılacağı üzere Mustafa Kemal Atatürk'ün uluslararası meselelerdeki belirleyici ve net tutumu Ortadoğu ve Hindistan basını tarafından takip edilmektedir.

#### **4. SONUÇ**

Bu çalışmada, devlet arşivinden edinilen Mustafa Kemal Atatürk hayattayken Ortadoğu basınında hakkında yer alan haberler incelenmiş ve içerik analizi yapılmıştır. İçerik analizi öncesinde Türkler, Mustafa Kemal Atatürk ve Ortadoğu hakkında genelden özele bir kronoloji çalışması gerçekleştirilmiştir. Kahire, Beyrut ve Mumbai’de basılan El Mukattam, El Ahrar, El

İkbal ve Bombay Chronicle’da yer alan Mustafa Kemal Atatürk haberlerindeki ortak özellik Atatürk’ün belirleyici ve etkin ulusal ve uluslararası tutumunun yakından takip edilmesidir. Genel olarak İngiliz yanlısı bir gazete olmasına rağmen El Mukattam gazetesi dahil tüm gazetelerde Mustafa Kemal Atatürk ve Türkiye ile ilgili olumlu bir imajın oluşu dikkat çekmektedir. Ayrıca Mustafa Kemal Atatürk’in ulusal meselelerin yanı sıra beynelmilel gelişmelerde de etkin, kararlı ve dikkat çeken bir politika izlemesi Ortadoğu basınından anlaşılmaktadır.

**ÖZET**

Günümüzde aynı sektörlerde kaliteli ürün veya hizmet ortaya koyan binlerce firma, kendi ürünlerini, hizmetlerini ön plana çıkarmak için farklı uygulamalara başvurumaktadırlar. Reklam, halkla ilişkiler, sponsorluk, tüketicinin ödüllendirilmesi gibi birçok faaliyeti içine alan bu etkinlikler artan rekabet ortamında firmalar için artık bir zorunluluk olarak karşımıza çıkmaktadır. Bu uygulamalardan birisi olan ödüllendirme ile firmalar ürünlerini tanıtmak, satışlarını arttırmak ve müşteri sadakatini sağlamak gibi birçok amaçla ödül uygulamalarını kullanmakta ve daha çok müşteriye hitap etmeyi amaçlamaktadırlar. Öğrenme en basit tanımıyla kişi de kalıcı ve istendik davranışın oluşmasıdır. Öğrenmenin gerçekleşmesi için de ortaya atılan çok sayıda kuram vardır. Skinner tarafından ortaya konulan edimsel koşullanma kuramı ise ödül ve ceza ile öğrenmenin sağlanacağını yani kalıcı ve istendik davranışın gerçekleşeceğini savunmaktadır. İşte bu noktada reklamcılar devreye girmekte ve ödüle giden yolu nihai hedef kitleye aktarmaktadır. Ödülden reklamlarla haberdar olan tüketici istenen davranışı gerçekleştirmekte ve ödülü almaktadır. Sürekli veya belirli aralıklarla ödüllendirilen davranış yani satın alma, harcama yapma alışkanlığına dönüşmektedir. Reklamlarla duyurulan süreçte firmalar açısından varılmak istenen nokta da tam olarak budur yani sıradan bir davranışın alışkanlığa dönüşerek sürekli hale getirilmesi ve müşteri sadakatinin sağlanmasıdır.

Bu çalışmada literatür tarama yöntemi kullanılarak reklamlarla öğrenilen ödül uygulamalarından örnekler verilecek ve bu uygulamaların tüketici üzerinde ne derece etkili olduğu ortaya konmaya çalışılarak ödül uygulamalarının öğrenme, yani kalıcı davranış oluşturmadaki etkisi incelenecektir.

**Anahtar Kelimeler:** Ödül, pazarlama, edimsel koşullanma, alışkanlık, öğrenme, müşteri sadakati

**PRACTICE CONDITIONING APPLICATIONS WITH THE REWARD DIMENSION  
USED IN ADVERTISEMENTS AND THE EFFECT OF THESE APPLICATIONS ON  
CONSUMERS**

**ABSTRACT**

Today, thousands of companies that offer quality products or services in the same field apply to different methods in order to highlight their own products and services. These activities such as advertising, public relations, sponsorship, and rewarding the consumer, are now a necessity for companies in an increasingly competitive environment. With rewarding the consumers, which is one of these applications, companies use this application for many purposes such as promoting their products, increasing their sales, ensuring customer loyalty, and thus they aim to appeal to more customers. Learning, in its simplest definition, is the formation of permanent and desired behavior in the person. For the realization of learning there are many theories put forward. Practice conditioning theory put forward by Skinner, argues that reward and punishment will undergo learning, thus occurrence of permanent and desired behavior. It is at this point where advertisers transfer and clear the final destination of the reward to the target audience. The consumer, who is aware of the reward through advertisements, performs the desired behavior to receive the reward. Behavior that is rewarded continuously or periodically, which is purchasing, turns into a habit of spending. This is exactly the point that companies aim to reach in the process of advertisements, which is turning an ordinary behavior into a habit and ensuring customer loyalty. In this study, using the literature review method, examples will be given of rewards learned through advertisements, and the effect of reward practices on learning, which is creating permanent behavior, will be examined by trying to reveal how effective these practices are on the consumer.

**Keywords:** Reward, marketing, practice conditioning, habit, learning, customer loyalty.

## **1 GİRİŞ**

İnsan farklı amaçlar için sürekli öğrenen bir varlıktır ve bu öğrenme süreci doğduğumuz ilk andan başlayarak yaşamın sonuna kadar devam eder. Doğduğu ilk andan itibaren etrafını gözleyen insan zamanla yürüme, konuşma, iletişim kurma, kültürel öğeleri, insanlarla ilişkilerini düzenleyen her türlü detayı yaşantıları sonucu öğrenir. Bu süreçte insan iletişim araçları olarak nitelendireceğimiz araçlardan da birçok şey öğrenir. Televizyon, radyo, basılı materyaller, reklam afişi vb. olarak sayabileceğimiz bu araçlar insanlara tüketim alışkanlıkları oluşturma, satın alma davranışları konusunda da bilgiler verir.

Bu öğrenme sürecinde insan birçok farklı detaydan beslenirken firmalarda ürünleriyle ilgili birçok özelliği, yeniliği iletişim araçları vasıtasıyla oluşturulan reklamlar aracılığıyla insanlara aktarırlar. “ Öğrenme kavramı bir psikolojik faktör olarak tüketici davranışlarının şekillenmesinde ve açıklanmasında etkili olmakta ve reklamcıların reklamın izleyici kitlesi olan bireylerin reklama yönelik algılamalarında ve reklamı değerlendirmelerinde önemli bir etken olarak dikkati çekmektedir. Bu bağlamda bir kavram olarak öğrenme ve öğrenmenin insan tarafından nasıl gerçekleştirildiğini açıklayan öğrenme kuramları da hedef kitle davranışlarının belirlenmesi ve hedef tüketici kitlenin etkileneceği reklamların oluşturulmasında dikkate değer bir önem kazanmaktadır.(Elden, 2003:29)

Ödül ve ceza uygulamalarıyla davranışların yönlendirilebileceğini savunan edimsel koşullanma da reklamlarda ödül uygulamalarından haberdar etme noktasında sıklıkla kullanılmaktadır.

Reklamlar insanların hayatının her alanında karşı karşıya kaldıkları bir olgu olarak karşımıza çıkmaktadırlar. Evinde televizyon izleyen, radyo dinleyip gazete okurken reklamlarla karşı karşıya kalan insanlar evlerinden çıktıklarında açık hava reklamları ile karşılaşmaktadırlar. Reklam unsurlarının bu kadar hayatımızda olması reklamlardan birçok şey öğrenmemizle sonuçlanmaktadır. Reklamlar ürünler, hizmetler, firmalar hakkında bilgi verirken insanların tüketim alışkanlıklarını şekillendirmede de etkili olarak kullanılmaktadır. Satın alma ve ikna davranışının oluşmasında etkili olan reklamlar da birçok yöntem kullanılırken ödüllendirme uygulamaları da kullanılan yöntemler arasında yer almaktadır.

## **2. EDİMSSEL KOŞULLANMA ve REKLAM**

Bir davranışın sonuçlara bağlı olarak değişikliğe uğraması olarak tanımlanabilecek edimsel koşullama, B.F. Skinner’ın çalışmalarıyla elde edilen sonuçlara dayalı olarak ortaya

konmuştur. Kişi olumlu sonuçlara neden olacak davranışları gerçekleştirirken, olumsuz sonuçlar söz konusu olduğunda kaçınmaktadır. Skinner'a göre, belirli çevresel uyarıcılara karşılık ortaya

çıkan tepkiler koşullanabildiğine göre, çevresel uyarıcılardan bağımsız ve içten gelen hareketler ortaya çıkan edimler de koşullanabilir. Davranışların öğretilmesi ya da biçimlendirilmesi için edimsel koşullamadan yararlanılabilir. (Özabacı, Özmen, 2005:138)

Skinner'in edimsel koşullamayı ortaya koyarken birçok deneye başvurmuştur. Bunlardan en bilineni fareler ile yaptığı deneydir. Skinner'in fareler üzerinde yaptığı kafes deneyi şu şekilde gerçekleşmiştir. Deneyde, aç bırakılan bir fare, düzeneği önceden hazırlanmış deney kutusuna bırakılır. Deney kutusunda, istenildiğinde yakılabilen ışık, dokunulduğunda kutuya peynir düşüren bir manivela ve ayrıca kutunun tabanında elektrik şoku düzeneği vardır. Fare kutunun içinde dolaşırken “tesadüfen” manivelaya dokunur ve bunun üzerine kutuya bir parça peynir düşer. Birkaç benzer davranıştan sonra farenin kafes içindeki dolaşma alanı daha çok manivelanın olduğu bölgede yoğunlaşır. Daha sonra fare manivela ile peynir arasında bağlantıyı kurarak, istediği zaman peynire ulaşmayı öğrenir. (<https://eksiegitim.blogspot.com/E.T.12/9/2022>).

Skinner'in fare deneyide ortaya koyduğu bu durum birçok başka hayvanın eğitilmesinde de kullanılmıştır. Örneğin görme engelliler için eğitilen köpekler, sirklerde çeşitli gösterilerde kullanılan hayvanlar edimsel koşullanma kullanılarak eğitilmektedirler (Kasapoğlu, 2005:63-64)

Pekiştirmenin gücüne vurgu yapan bu kuramın iddiasına göre pekiştirmeyi kontrol eden kişi aynı zamanda davranışı da kontrol etmiş olmaktadır. Zaman içinde edimsel koşullanmaya bazı eleştiriler getirilmiş olsa da davranışların kontrol edilip edilmeyeceği asla sorgulanmamıştır. Tartışma konusu olan davranışı kimin ya da neyin kontrol edeceği. Bu konuda, ebeveynler, eğitimciler, hükümet ve siyasal gruplar, reklamcılar hatta terör örgütleri bile kullanıcı konumundadır. Bir bireyin davranışlarını kontrol etmek demek onun hayatına yön vermek anlamına gelmektedir. Etik boyutlarını bir yana bırakırsak bunu başarmak oldukça zordur fakat edimsel koşullanma bunun mümkün olabildiğini iddia etmekte ve tavsiyelerde bulunmaktadır. (Karaman, 2020:128)

### **3- REKLAMLARDA KULLANILAN EDİMSSEL KOŞULLANMA UYGULAMALARI**

Ödüllendirme günümüzde özellikle müşteri sadakati sağlama adına oldukça yaygın bir şekilde kullanılmaktadır. Özellikle market, ulaşım, havayolu, bankacılık, eğitim, yiyecek içecek gibi

sektörlerde tüketici sürekli farklı şekillerde ödüllendirilmektedir. Bu ödüllendirmeler yapılırken reklamlar da bu ödüllerin duyurulması noktasında etkin bir şekilde kullanılmaktadır.

Satın alma davranışı sıradan bir davranış gibi görünse de özellikle memnuniyet yaratan boyutuyla haz ve tatmini beraberinde getirebilmektedir. Edimsel koşullanma boyutuyla bakılırsa kişinin yaptığı alışverişten haz alması bir bakıma kişinin davranışı sonucu ödüllendirilmesidir. Bu durum pazarlamacılar açısından son derece önemli bir durum olarak karşımıza çıkmaktadır (Umud, 2019)

“Reklamda kepek sorunu, renkli giysilerdeki zorlu kirler, yaşlanma korkusu, karşı cins tarafından beğenilme, istediği bir sorununa çözüm getiren ya da bir beklentisine cevap bir ürünle karşılaşan tüketici bu ürünü aldığı ve kullandığında da reklamda dile getirilen tatmine ulaşırsa, o marka bu ürünü tekrar kullanacaktır. Bu nedenle reklamlarda tüketicilerin sorun ve beklentileri dile getirilerek bu sorunların nasıl giderildiği ve beklentilerin nasıl karşılandığının ifade edilmesi tüketiciye söz konusu marka ürünü kullandığında nasıl bir olumlu pekiştirici yani ödülle karşılaşacağını gösterecektir. Bu durum edimsel koşullanma ile açıklanmaktadır. Ancak bu ödüllerin alışkanlık yaratacak şekilde sürekli tekrarlanması yerine belli dönemlerde (yılbaşı, bayram, belli bir dönem gibi) veya belli bir alışveriş tutarı üzerinden ödüllendirmeye gidilmesi ve ödülün anında tüketiciye sunulması (mağazada alışveriş sonrası hemen sunulan indirim ya da armağan gibi) davranışın pekiştirilerek öğrenmenin gerçekleşmesinde daha etkili olacaktır.” (Elden, 2003:19).

Şampuan almak için bir markete girdiğimizde ve tercih ettiğimiz şampuanın yanında aynı markanın farklı bir ürünün hediye olarak verilmesi insanları mutlu eder. Şampuan alma sıradan bir davranışken ödüllendirildiğinde firma ve alışveriş yapan insan için farklı boyutlara ulaşır. Firma için tüketiciyi ödüllendirdiği için şampuan alma davranışının tekrarlanma ihtimalinin artması veya müşteri sadakatinin artırılması olarak karşımıza çıkan bu durum tüketici için de ödülle doyuma ulaşan psikolojik bir faktör ve tekrarlanan davranışlar olarak karşımıza çıkmaktadır.

Edimsel koşullanmanın bir boyutu olarak düşüneceğimiz ödüllendirme uygulamaları özellikle bankalar tarafından da sıklıkla ve çok boyutlu olarak kullanılmaktadır. Banka ve kredi kartlarıyla tüketici her alışveriş yaptığı zaman ödüllendirilmekte ayrıca belirli kez tekrarlanan alışverişte de toplu puan verilerek tüketici ödüllendirilmektedir. Bankaların uyguladığı taksit uygulamaları da ödül uygulamasının bir boyutudur. Tek seferde yüklü bir ödeme

yapacak olan bu ödemeyi farklı ödeme seçenekleriyle yapmakta ve bu durum tüketiciyi rahatlatmaktadır. Herkesi kapsayan bu uygulamalar günümüzde harcama sektörleri analiz edilerek artık kişiye özel olarak da uygulanabilmekte ve müşterilere özel ödül teklifi, ödül uygulamaları bankacılık

sektörü tarafından sıklıkla kullanılmaktadır. Bankacılık ve havacılık sektörünün kullandığı mil uygulaması ise başka bir ödül uygulamasıdır.

Ödüllendirme uygulamalarını etkili bir şekilde kullanan başka bir sektör ise meşrubat firmalarıdır. Yılbaşı, bayram, ramazan ayı gibi özel dönemlerde sıklıkla ödüllendirme uygulamalarını uygulayan meşrubat firmaları çok farklı ve özgün ödüllendirme şekilleriyle hedef kitlelerini daha fazla satın almaya ikna etmeye çalışırken aynı zamanda firmalarına olan sadakati arttırmaya çalışmaktadırlar. Reklamlarda kullandıkları kutup ayısı karakterini bir süre sonra oyuncak haline getirerek belirli kez yapılan alışverişten sonra alıcılara hediye olarak veren firma ayrıca belirli sayıda kapak toplayan müşteriye basketbol topu, bardak, tepsi, kavanoz ve bol miktarda meşrubat hediye etmektedir.

Ödül uygulamalarında reklamın yeri ise genelde haber verme noktasında devreye girmektedir. Tüketiciyi ödüle götüren yol ilk olarak reklamlarda dile getirilmektedir. Yeni yıla özel, bayrama özel diyerek başlanılan sözler beş alışverişe şu kadar ödül verilecek ile devam etmekte ve çarpıcı görseller, mizah, ihtiyaçlar kullanılarak tüketiciler reklamlarla ödülünden haberdar edilmektedir.

“Reklama verilen olumlu tepki pekiştirme ve ödüllendirme ile arttırılabilir. Basılı bir reklamda yeni bir temizlik ürünüyle yapılan fırın temizleme gibi ufak tefek fakat hoşlanılmayan bir ev işi gösterilebilir. İnsanlar bu reklamda şu kadar indirimle bu ürünü X alışveriş merkezinden edinebileceklerini öğrendiklerinde, elde edecekleri indirimin ortaya koyduğu ödülü almak için harekete geçeceklerdir. Ürünün bir kez denenmesi ve memnun kalındığı takdirde tekrar satın alınması yoluyla oluşan bir süreç söz konusu olduğu için deneme-yanılma yoluyla öğrenme olarak da adlandırılan edimsel koşullanmada, reklamı yapılan üründen istediği yönde tatmin elde eden bir tüketici olumlu yönde pekiştirme gerçekleştirmiştir.” (Elden,2003:21). Bu şekilde olumlu yönde pekiştirilen yani ödüllendirilen bu davranışın tekrarlanma ihtimalinin yükseldiğini şu noktada söylemek mümkündür.

Firmalar ödüllendirme uygulamalarını her yaşta insan için uygulamakta ve sağdık müşteri kitlelerini arttırma adına özellikle çocuklara yönelik ödül uygulamalarına da sıklıkla başvurmaktadırlar. Özellikle özel günlerde bir mağazaya giren çocuklara üzerinde kendi

markalarının ve logolarının olduğu balonlar, oyuncaklar gibi hediyeler vererek o çocukların büyüdüklerinde kendi ürünlerini almaları için temelleri atmaktadırlar. Birçok firmanın yiyecek menüleri içinde çocuklara yönelik menüler vardır. Bu menülerden alındığında yanında hediye oyuncaklarda çocuklara ek bir ücret ödemedi verilir. Bu şekilde çocuklar tekrar tekrar ödüllendirilirler. İstendik davranışların oluşması ve sadık müşteri kitleleri oluşturmak için

henüz sağlıklı kararlar verip uygulayamayan çocuklara yatırım yapmak firmalar için çok akıllıca bir yatırım olarak görülmekte ve bir çok firma ödül uygulamalarıyla çocukları hedef alabilmektedir.

#### 4- SONUÇ

Edimsel koşullanmanın ödül boyutuyla reklamlarda kullanılmasının hem firmalara hem de tüketicilere sağladığı bazı faydalar vardır. Tüketici açısından ödül, kupon, indirim olarak somut bir şekilde değerlendirebileceğimiz faydalar zamanla firmaya ürüne karşı oluşacak duygusal bağlarla çok farklı boyutlara ulaşabilmektedir.

Ödül uygulamalarının temel amacı olan sadık müşteri kazanımı, yapılan araştırmalara göre rekabet ortamında hayatta kalmaya çalışan işletmeler için pazar paylarını koruyabilmelerine yardımcı olmaktadır. Etkili bir ödül programı ile müşteri sadakatini arttırmak, sadık müşterilerin fiyat hassasiyetini azaltmak, müşterilerle ilgili önemli bilgilere ulaşmak, ortalama satışları yükseltmek, özel bölümlendirme stratejileri yapabilmek ve markaya karşı tutumu güçlendirmenin mümkün olduğu belirtilmiştir. Bunun yanında, ödül ve başka uygulamalarla oluşturulan sadık müşteriler işletmeye artan ve sıklaşan satışlar, düşen maliyetler ve olumlu tavsiyeler gibi birçok avantaj sağlamaktadır. Ödül programlarının işletmelere sağladığı faydaları tatmin, bağlılık, satın alma eğilimi, fiyat hassasiyeti, daha fazla ödeme eğilimi, ziyaret etme sıklığı, olumlu yorum ve tavsiyeler ile veri sağlama olarak sıralayabiliriz (Atay,2020:26)

Ödül uygulamalarından haberdar eden reklam ise bu noktada hayati öneme sahip olmaktadır. Ödülden farklı mecralarda yer alan reklamlarla haberdar olan tüketici firmayla ve ürünle buluşmakta firma ve tüketicinin buluşması gerçekleşmektedir.

Skinner'in öğrenme kuramında yer alan pekiştirme davranışta bulunan kişinin ödüllendirmesi olarak ele alınmakla birlikte burada kişinin davranışının farkında olması edimsel koşullanmayı çok güçlü bir konuma getirmektedir. Davranışının farkında olan birey bilerek ve isteyerek satın alma davranışı göstermekte ve bilinçli bir eylem gerçekleştirmektedir.

Yapılan çalışmalarda göstermiştir ki edimsel koşullanmanın yani ödül uygulamalarının öğrenmeye etkisi tartışılmaz bir gerçektir. Satın alma, tüketici olma gibi ayrıntılar da insanlar tarafından reklamlarında etkisiyle öğrenilen durumlar arasında yer almaktadır. Ödüllerin hem tüketiciye hem de firmalara sağladığı faydalar düşünüldüğünde, edimsel koşullanmanın, öğrenmenin, ödülün ve reklamın, hem firmalar hem tüketiciler için ihtiyaçtan öte bir durum olduğu görülmektedir.

**ÖZET**

İnsanları eğlendiren, rahatlatan, aynı zamanda düşündüren mizah insanlık tarihi kadar eski bir geçmişe sahiptir. Birçok unsuru olan mizahın çok eski zamanlardan bu yana kullanılan türleri olduğu gibi sosyal medyayla birlikte ortaya çıkan türleri de olmuştur. Mizah insanlar tarafından eğlence için değerlendirilirken birçok alan da mizah ve unsurlarını farklı amaçlarla kullanmıştır. Siyasetçiler ve siyasal iletişim profesyonelleri de mizahı hedef kitlelerini etkilemek, ikna etmek ve sempati uyandırma gibi amaçlarla kullanmakta ve bu alanda yaratıcı çalışmalar yapmaya özen göstermektedirler. Bu çalışmada siyasal İletişim çalışmalarında oldukça eski bir geçmişe sahip olan siyasal karikatürler ve sosyal medya araçlarının ortaya çıkmasıyla görülmeye başlanan ‘caps’ler 31 Mart ve 23 Haziran Tarihinde yapılan İstanbul Büyükşehir Belediye Başkanlığı seçimleri üzerinden ele alınacaktır. Karikatür ve capslerde görülen anlamların dışında görünmeyen örtük mesajların olacağı düşüncesiyle göstergebilimsel çözümleme tekniği kullanılmıştır. Yapılan bu çalışmayla karikatür ve caps gibi gülmece unsurlarının nasıl bir siyasal iletişim aracına dönüştüğü, güldüren ve düşündüren karikatür ve capslerin hedef kitlelerini ikna sürecinde nasıl kullanıldığı 31 Mart ve 23 Haziran tarihinde İstanbul Büyükşehir Belediye Başkanlığı seçimleri üzerinden ele alınacaktır. Evren

olarak internet ortamı kullanılmış, çalışma için iki adet karikatür ve iki adet caps kullanılmıştır.

**Anahtar Kelimeler:** Siyasal İletişim, Karikatür, Caps, Gülmece, İstanbul Büyükşehir Başkanlığı Seçimi (31 Mart -23 Haziran 2019)

**USE OF CARTOON AND CAPS AND HUMOR IN POLITICAL COMMUNICATION  
CAMPAIGNS: THE CASE OF ISTANBUL METROPOLITAN MUNICIPALITY  
ELECTIONS (31 MARCH -23 JUNE 2019)**

**ABSTRACT**

The history of humor that entertains, breaks boundaries and let people wonder is as old as humanity itself. Humor, which has been used since ancient times, consisted of many types and components, as well as new types that emerged with modern social media. While humor is used by people for entertainment, many other fields have used humor and its elements for different purposes. Politicians and political communication professionals also use humor to influence and persuading their target audiences and arousing sympathy, and they work to carry out creative studies in this field. In this study, with an old history in political communication and with the emergence of modern social media, political caricatures and ('caps'/memes) which have been widely popular in the recent times, will be discussed in the example of Istanbul Metropolitan Municipality elections held on March 31 and June 23. Semiotic analysis technique has been used with the thought that there are invisible messages beyond the shown meanings in the caricatures and ('caps'/memes). In this study, it will be discussed how instruments such as caricatures and ('caps'/memes) turn into a political communication tool, how they have been used to make people laugh and think are used in the process of persuading their target audiences will be discussed through the Istanbul Metropolitan Municipality elections held on March 31 and June 23. For this study, two caricatures and two ('caps'/memes) were used that have been published on online.

**Keywords:** Political Communication, Caricature, 'Caps', 'Gülmece', Istanbul Metropolitan Municipality Elections (31 March -23 June 2019)

## **1 GİRİŞ**

Tarihi çok eski dönemlere dayanan mizah tarih boyunca farklı amaçlarla halk içinde çok yaygın bir şekilde kullanılmıştır. Düşündürten eğlendiren mizah aynı zamanda haksızlığa uğrayan halk için dönem dönem bir silah olarak da kullanılmıştır. Mizah unsurları arasında yer alan karikatür ise çizgilerle oluşturulan ve insanların daha çok komik yönlerine ve eksikliklerine yönelen gülmece unsurları olarak karşımıza çıkmaktadır. Karikatürün duygu, düşünce, gibi unsurları geniş kitlelere kolaylıkla ve eğlendirerek ulaştırması güçlü yönlerinden bir tanesi olarak değerlendirilmektedir. Caps uygulamaları ise karikatüre göre çok daha yeni bir uygulamadır ve Capsler basit bilgisayar uygulamaları ile bir fotoğrafın altına yazılar yazıp bu yazıların renklendirilmesi ile oluşturulur. Ancak fotoğraf ve yazı bir araya geldiğinde bir gülmece unsuruna dönüşmektedir.

Aziz siyasal iletişimi, “siyasal aktörlerin belli ideolojik amaçlarını, belli gruplara, kitlelere, ülkelere ya da bloklara kabul ettirmek ve gerektiğinde eyleme dönüştürmek, uygulamaya koymak üzere çeşitli iletişim tür ve tekniklerini kullanmaları” olarak tanımlamaktadır (Aktaran; Demir,2018:89). Belli grupları kitleleri etkilemek ve istendik davranışlar oluşturmak için siyasal iletişimde birçok teknik kullanılmaktadır. Mizah ise siyasetçilerin ve siyasal iletişimi dizayn eden profesyonellerin de oldukça yaygın bir şekilde kullandıkları unsur olarak son yıllarda yoğun bir şekilde karşımıza çıkmaktadır.

Literatürde mizah unsuru olan karikatür üzerine oldukça fazla çalışmaya rastlanmıştır. Karikatürle ilgili çalışmalarda ise gerçekleşen bir seçim ele alınarak seçim sürecinde çizilen karikatürler farklı başlıklar altında irdelenmiştir. Özellikle internet ortamı, yeni medya gibi unsurlar değerlendirildiğinde ise caps çalışmalarının siyasal iletişim çalışmalarında oldukça yoğun olarak kullanıldığı görülmüştür. İnternet ortamında yer alan karikatür ve capslerin özellikle yeni medya araçlarıyla kitlelere hızlı ve etkili bir şekilde ulaştığı görülmüştür.

Yapılan bu çalışmayla karikatür ve caps gibi gülmece unsurlarının nasıl bir siyasal iletişim aracına dönüştüğü, güldüren ve düşündüren karikatür ve capslerin hedef kitlelerini ikna sürecinde nasıl kullanıldığı 31 Mart ve 23 Haziran tarihinde İstanbul Büyükşehir Belediye Başkanlığı seçimleri üzerinden ele alınacaktır.

## 2 MİZAH NEDİR.

Batı kaynaklı görüşlere göre mizahın geçmişi milattan önce 4. Ve 5. Yüzyıl Yunan şehir devletlerine kadar ulaşmaktadır. Hititlerde adı Prurilli Ayinleri olan Yunanlılarda ise Dionysos

şenlikleri mizahi içerikleri olan eğlence şekilleridir. Antik dönemlerde iyi ile kötünün sürekli bir çatışma halinde olduğuna inanılırdı. İyinin ve kötünün mücadelesi sonucu kötüye karşı iyinin galip gelmesi üzerine eğlenceler düzenlenirdi. Kötü güçlerin insanlar üzerinde oluşturduğu korku ve yılgınlık bu tür eğlencelerle aşılmaya çalışılmış ve mizah ortaya çıkmıştır(Yardımcı, 2010, 3)

Mizah, fikirleri düşünceleri şaka ve nüktelerle çeşitlendirerek aktaran yazı türü olarak tanımlanmakla birlikte zamanla daha farklı ve ağır türleri de içine alan bir terim olarak karşımıza çıkmaktadır. Temel amacı güldürme olarak tanımlansa da mizahın farklı amaçları da vardır. Mizah insanları güldürürken insanlarda ve toplumda var olan aksaklıkları, olumsuzlukları, eleştirme ve iğneleme, düzeltme gibi amaçları da bünyesinde örtük bir şekilde barındırmaktadır. Mizah halk zekasının bir ürünüdür ve kin ve intikam duygusu yoksa mizahta küçük düşürme amacı yoktur. (<https://islamansiklopedisi.org.tr/> E. T. 13/10/2022).

Filozoflarca da tanımlanan mizah Aristoteles'e göre ahlak sanat ve dini aşağılayan bir tavır iken Platon'a göre kıskançlıktan kaynaklanan talihsiz bir kendini tanımama durumudur. Gerçekliğe gülünç sıra dışı, eğlenceli, bir şekilde yaklaşan mizahın ana çatısını eleştirel olması oluşturur. Mizahta temel amaç insanları aşağılamak ve değerleri küçümsemek olmasa da insanlarda ve olaylarda yer alan bir takım uyuşmazlık, çarpıklık ve gülünçlükleri açığa çıkarma ve göz önüne getirme olarak açıklanabilir. Mizah ezilenin ezene karşı kullandığı bir sanatsal silah olarak ifade edilse de bunun tersi durumlarda tarihte gözlenmiştir. Mizahın sorunları görünür hale getirmesi onu popüler muhalefet biçimlerinden birisi haline getirmiştir. Mizah sayesinde kahramanlar üretilerek eleştirilmek istenen kişilere, kurumlara mesajlar aktarılmış, topluma verilmek istenen çok sayıda mesaj mizahın gösterişli ve komik üslubu içinde hedefe gönderilmiştir(Nisan &Şeker; 2017:317,318)

Mizah eski türk devletlerinde ve Osmanlı da sözlü eserlerle kendine yer bulmuştur. Karadeniz fıkraları, Nasrettin Hoca fıkraları, Keloğlan fıkraları, Bektaşî fıkraları, Karagöz, Ortaoyunu, Meddahlar sözlü mizahımızın önemli unsurlarını oluşturmaktadır. Osmanlı döneminde Tanzimat'la birlikte yazılı eserler de görülmeye başlar. Bu durumu ilk örnekler batı edebiyatının da etkisiyle mizah dergileri olmuştur. Siyasal konularında işlendiği bu dergilere en güzel örnek Diyojen dergisidir. İlk olarak bir karikatür de Diyojen dergisin de yer almıştır. Diyojen dergisi dönemin yönetimi aleyhine yayınladığı birçok karikatürden dolayı defalarca kapanmıştır. Osmanlının son döneminde ve Cumhuriyetin ilk yıllarında karikatür, Gülyeryüz, Karagöz gibi birçok dergi yayın hayatına başlar. Cumhuriyetin kuruluşundan günümüze ise Türk Mizah hayatında birçok dergi ve anlayış kendisine yer bulur. Bunlardan Marko Paşa dergisi, Cemal

Nadir'in yarattığı Amcabey Karakteri, Rıfat Ilgaz'ın Hababam Sınıfı serisi, Turhan Selçuk'un Abdülcanbaz Karakteri, 1980 sonrası ise Gırgır dergisi Türk mizah hayatının önemli temsilcileri olarak değerlendirilebilir (Güder, F. Z. 2012:50-59)

### 3. SİYASAL İLETİŞİMDE MİZAH

“Mizahın tarihçesi geçmişte Atinalılara kadar uzansa da mizah ve liderlik konusu 1940'lı yıllardan beri akademik çalışmalara konu olmuş olup her geçen gün daha çok gündeme gelmekte ve tartışılmaktadır. Ancak yine de bu alanda yapılan çalışmaların yeterli olduğu söylenememektedir. Türkiye'de mizah konusu daha ziyade liderler hakkında yapılan mizah ve çizilen karikatürler bağlamında ele alınmıştır” (Devran ve Gül, 2016:380)

Mizah, sosyal medya ve yazılı basın aracılığıyla kolayca hedef kitlelere ulaşması ve takip edilmesi nedeniyle toplumu etkilemek için sık sık tercih edilmiştir. İş adamları, politikacılar, sanatçılar toplumun beğenisini kazanmak için mizaha başvurmuşlardır. Mizah savaş dönemlerinde bile düşmanı küçük düşürmek, alay etmek için kullanılmıştır. Mizah sosyal ve siyasi çalkantıların, kavganın ve basıların arttığı dönemlerin enstrümanıdır (Taşçıoğlu & Çavdar, 2017:388)

Mizah çarpıklıkların, düzensizliklerin gösterilmesin de çok etkili bir silah olarak karşımıza çıkmaktadır. Siyasetçiler ise muhalefet olsun iktidar olsun karşı tarafta yer alan eksilikleri, aksaklıkları mizahı kullanarak her daim hedef kitleleri önünde tutmaya çalışmışlardır. Ayrıca mizahı, mizahi dili iyi kullanan siyasetçiler halk tarafından sempatik bulunmuştur. Siyasetçilere sağladığı bu tür faydalardan ötürü ve yeri geldiğinde iktidarı, muhalefeti zor durumda bırakan bir silah olmasından dolayı mizah siyasetçilerce ve siyasal iletişim

çalışmalarında yer alan profesyoneller tarafından sık sık kullanılan bir unsur olarak arşımıza çıkmaktadır.

Türk siyasetin de de mizahı ustaca kullanan ve hazırcevaplığıyla öne çıkan birçok siyasetçi vardır. Bunlardan gazeteci kimliğiyle de tanınan Osman Yüksel Serdengeçti renkli kişiliğiyle ve hazır cevaplarıyla Türk siyasal mizah hayatına renk katmıştır. Milletvekili olarak meclise giren Serdengeçti bir zorunluluk olarak mecliste kravat takması istenildiğinde önce kravat takmamış daha sonrasında ise kravatı beline takarak meclise girmiştir. Bu durumu ise yasalarda kravatın nereye takılacağı ifade edilmiyor sonuçta kravatla meclise geldim diyerek olayı eleştirirken mizahı da etkili bir şekilde kullanmıştır (<https://tr.wikipedia.org/> E.T. 13/10 /2022)

Türk siyasal tarihinde mizah denince akla gelen bir diğer siyasetçi ise Süleyman Demirel'dir. Demirel yaptığı konuşmalarda ve karikatürlerde yer alması ile mizahi bir unsur olarak her zaman yer almıştır. Özellikle söylemleriyle karikatürlere bile konu olan Demirel gazeteci Tan Oral tarafından 12 Eylül 2005 tarihinde açılan "Demirel ve Demokrasi" adlı karikatür sergisini

gezerken kendi söylemlerinin karikatürleştirilmesine kendisi de gülerken tepki vermiştir. Karikatür de ise Demirel'in "Enflasyon düşüyor da biz mi tutuyoruz" cümlesi kullanılmıştır (<https://www.milliyet.com.tr/gundem/kendi-karikaturu-demireli-guldurdu-253764>)

#### 4. BİR GÜLMECE UNSURU OLARAK KARİKATÜR VE CAPS

Karikatür insanlığın ilk dönemlerinden bu yana kullanılan bir iletişim aracı olarak karşımıza çıkmaktadır. Antik dönemde Roma İmparatorluğu bünyesinde yer alan Pompei şehrinde çıkarılan vazolarda karikatür denebilecek çizimlere rastlanmıştır. Karikatür kelimesi İtalyanca yer alan "caricare" sözcüğünden türemiştir. Caricare sözcüğü ise Fransızca'da çarpıtılmış çizim, hücum etmek anlamında kullanılmaktadır. (Yavuz, 2009:108)

"Karikatür muhaliftir. Siyasal alanda da kendisini gösterir. Özellikle iktidar söz konusu olduğunda iktidarın yanlışlarını ele alarak bir bombardımana başlar. Karikatürün ulaşımının kolay olması ve görsel olarak kısa net ve anlaşılır olması, karikatürün siyasal iletişim sürecinde ele aldığı konulara nokta atışı yaparak seçmenin kararlarını etkilemekte, onda istedik yönde değişiklikler meydana getirmektedir. Politik karikatürün, sadece iktidarı hedef aldığını söylemek en büyük yanlışlardan birisidir. Politik karikatür, muhalefet yanlış yaptığı zaman muhalefeti de eleştirmektedir. Burada karikatüristin, hangi ideolojik görüşe bağlı olan

gazete, dergi gibi mecralarda çizimler yaptığı ise önemli bir husustur.” (Taşçıoğlu & Çavdar, 2017:388-389)

Eğlendirmek amacıyla ortaya çıkarılan görsellere günümüzde “caps denmektedir. İngilizce yakalamak anlamında gelen “capture” kelimesinden türeyen sözcük kullanıcılarca internetten elde ettikleri ve bilgilendikleri fotoğrafları tanımlamak için kullanılan kelimelerdir. Yapılan işlemde yakalamak ifadesiyle belirtilmek istenen hareketli sahneden istenen karenin yakalanması işidir. Yapılan bu uygulama yakalanan fotoğrafların güldürü öğeleri içeren şekillere dönüştürülmesiyle orijinal ya da üzerinde oynanmış fotoğraflara yazılar eklenmesi ile eğlenceye yönelik mizahi bir anlatım türüne dönüştü. İlk başlarda film veya video kullanılarak oluşturulan bu görseller için günümüzde her türlü görsel kullanılmaya başlanmıştır. Bir nevi fotomontaj olarak değerlendirilebilecek “caps”ler yazılarla desteklenerek sunulan güldürü unsurlarıdır. Uygun bulunan fotoğraf basit bir bilgisayar programıyla istenildiği şekilde düzenlenerek ve uygun yazılarla birlikte gülmece unsuruna dönüştürebilir. “Capsler oluşturulurken verilecek mesaja göre fotoğraf sayıları da arttırılabilir. İdeolojik herhangi bir düşüncüyü aktarmak, reklam yapmak, eğlendirmek, korkutmak gibi birçok amaçla hazırlanan

caps”ler oldukça kolay ve hızlı hazırlanmasıyla da günümüzde yaygın bir şekilde kullanılmaya başlanmıştır(Güvenç, 2017:110)

## 5. SİYASAL İLETİŞİMDE KULLANILAN KARİKATÜR VE CAPS ÖRNEKLERİ

İnsanları eğlendirmek ve rahatlatmak için kullanılan mizah birçok boyutuyla eski ve yeni medya araçlarında yaygın olarak kullanılmaktadır. Bu araçlardan olan karikatürler siyasal iletişim çalışmalarında epey bir geçmişe sahipken ‘caps’ uygulamaları bu alana yeni girmiş bir tür olarak karşımıza çıkmaktadır. Mizah ve unsurlarını siyasal iletişim anlamında ülkemizde hem muhalefet partileri hem de iktidar partisi sık sık kullanmaktadır. Bu çalışmada 20 yılında siyasal anlamda kullanılan karikatür ve ‘caps’lerden örnekler sunularak bu çalışmalar gösterge bilimsel analiz yöntemiyle irdelenecektir. Caps ve karikatür seçiminde her iki parti ve aday lehine ve aleyhine olmak kaydıyla iki adet capse ve iki adet karikatüre yer verilmiştir. Kullanılan caps ve karikatür örneklerinin seçim döneminde yayınlanmasına dikkat edilmiş ancak seçimden daha önce üretilen ve seçim döneminde de kullanılan çalışmalara da yer verilmiştir. Örneğin Sözcü Gazetesinde 2016 yılında yer alan “Binali diyeceğim bineceksin, inali diyeceğim ineceksin” yazılı caps, sosyal medya da İstanbul Büyükşehir

Belediye Başkanlığı seçim dönemin de de kullanılmıştır. İnternette yer alan verilerin paylaşılması ve uzun süre kaybolmaması ve farklı zamanlarda tekrar tekrar kullanılabilmesi ve etkili olması bu kullanıma gerekçe olarak değerlendirilebilmektedir.

## 5.1.CAPS ÖRNEKLERİ

### Caps: 1

Kaynak: <https://twitter.com/misvakcaps>

**Gösterge:** İstanbul Büyükşehir Belediye Başkanlığı Seçimi Caps

**Gösterenler:** Binali Yıldırım, Ekrem İmamoğlu, Kıbrıs Anıtı, Caps Yazıları

**Gösterilenler:** Rekabet, Başarı, Uzmanlık, Heykel, Anıt, Rum Sempatisi

**Göstergebilimsel Çözümleme:** Caps,te iki ayrı fotoğraf vardır. İlk fotoğrafta Binali Yıldırım konuşma yapar şeklinde yer almaktadır. Binali Yıldırım kask takmış vaziyette ve çalışanların giydiği uyarıcı yelekle fotoğrafta yer almaktadır. Fotoğrafın altında ise “Binali Yıldırım Deyince Aklıma Yaptığı Hizmetler” yazısı yer almaktadır. Binali Yıldırım elleri, duruşu ve surat ifadesiyle konuya hakim bir konuda konuşuyor şeklinde fotoğrafta görünmektedir.

Alt tarafta yer alan Fotoğrafta ise Ekrem İmamoğlu Kıbrıs Anıtı olarak açılan anıtın önünde yer almaktadır. Ekrem İmamoğlu'nun arka tarafında suratları parçalanmış heykeller görülmektedir. Ekrem İmamoğlu'nun surat ifadesi ciddi görünümündedir. Ekrem İmamoğlu'nun yer aldığı fotoğrafın altında ise “Ekrem İmamoğlu Deyince Kırık Makarios Heykeli Gelir” yazısı yer almaktadır.

**Söylem Çözümlemesi:** Ele alınan bu capste İstanbul Büyükşehir Belediye Başkan adayı Binali Yıldırım çalışan emek veren üreten bir işçi gibi gösterilmiş ve yaptığı hizmetlerle hatırlanan bir karakter olarak ortaya konmaya çalışılmıştır. Ulaştırma Bakanlığı yapan Binali

Yıldırım fotoğrafın arkasında yer alan metro inşaatı fotoğraflarıyla capste yer almış turuncu kıyafetiyle aktif bir görüntüyle hedef kitleye aktarılmaya çalışılmıştır. Capste Yıldırım çalışkanlığı ile ön plana çıkartılmış ve yaptıkları ortaya konulmaya çalışılmıştır. Ekrem İmamoğlu ise Beylikdüzü Belediye Başkanlığı döneminde açılışını yaptığı Kıbrıs Anıtı resmiye yer almaktadır. Ekrem İmamoğlu bu anıtın yan tarafında 1959 da kurulan Kıbrıs Cumhuriyeti'nin ilk cumhurbaşkanı olan Başpiskopos III. Makarios'un rölyefinin bulunduğu kısım ile gösterilmiştir. Bu rölyef bir kesimin tepkisini çekmiş ve yunan psikopos ve diğer kişilerin heykelleri parçalanmıştır. Parçalanan Makarios Heykelinin ön tarafında poz veren Ekrem İmamoğlu açtığı ve sonrasında önünde poz verdiği heykel ile birlikte gösterilmiştir. Yapılan çalışmayla seçmene başarılarıyla ön plana çıkan Binali Yıldırım ile heykeller diken ve bu heykellerde Rum bir din adamına yer veren Ekrem İmamoğlu arasında seçim yaparken başarılı olan Binali Yıldırımı tercih etmesi telkin edilmektedir. Caps'te heykelin sağlam halinin değil de kırık halinin kullanılması, din adamı olan Makarios'un vurgulanması da muhafazakâr seçmene niye Ekrem İmamoğlu'na oy vermemesi gerektiği yönünde bir mesaj olarak değerlendirilebilir.

## Caps:2

Kaynak: [https://www.sozcu.com.tr/2016/gundem/sosyal-medyayi-sallayan-binali-capsleri-1241773/?\\_szc\\_galeri=1/6/](https://www.sozcu.com.tr/2016/gundem/sosyal-medyayi-sallayan-binali-capsleri-1241773/?_szc_galeri=1/6/)

**Gösterge:** İstanbul Büyükşehir Belediye Başkanlığı Seçimi Caps

**Gösterenler:** Binali Yıldırım, Recep Tayyip Erdoğan, Caps Yazıları

**Gösterilenler:** Otorite, Yönlendirme, Yönetme,

**Göstergebilimsel Çözümleme:** Caps'ın düz anlamı Recep Tayyip Erdoğan ile konuşan Binali Yıldırım'ın R. T. Erdoğanı dinlemesidir. Etkinliklerde protokol en önde ve yan yana oturmakta ve bu süreçte siyasetçiler sohbet etmektedir. Bu fotoğrafta da iki siyasetçi yan yana yer almaktadır. Ortamın gürültülü olması veya konuşulanların duyulmasının istenmediği düşünülürse Binali Yıldırım, R. T. Erdoğan'a doğru eğilerek söylenenleri dinlemektedir. İki siyasetçinin arkasında ise başka kişiler oturmakta bu kişilerden suratı net görünen kişinin surat ifadesi ise ciddidir.

**Söylem Çözümlemesi:** Caps te Konuşan Recep Tayyip Erdoğan ve onu ilgiyle dinleyen Binali Yıldırım yer almaktadır. Altta yer alan yazı da ise “*Binali diyeceğim bineceksin, İnalı diyeceğim ineceksin*” yazmaktadır. Ulaştırma bakanlığı, Başbakanlık, Meclis Başkanlığı gibi farklı görevler alarak Erdoğan ile uzun yıllar çalışan Binali Yıldırım'ın Erdoğan'a bağlı olarak çalıştığı, onun sözünden çıkmadığı, çıkamayacağı, mizahi bir şekilde vurgulanmak istenmiştir. Seçmene verilmek istenen mesaj ise Binali Yıldırım'ın bağımsız olmadığı ve çalışamayacağı şeklindedir. Ayrıca R. T. Erdoğan'ı otoriter bir tutumla gösteren caps CHP'nin zaman zaman dile getirdiği diktatör söylemine destek verir şekilde capster yer almaktadır.

## 5.2. KARİKATÜR ÖRNEKLERİ

**Karikatür:1**

Kaynak : <https://twitter.com/misvakcaps>

**Gösterge:** İstanbul Büyükşehir Belediye Başkanlığı Seçimi Karikatür

**Gösterenler:** CHP genel başkanı Kemal Kılıçdaroğlu, Ekrem İmamoğlu, Konuşma Balonları

**Gösterilenler:** Düşünceli hal, Endişelenme rahat ol telkini

**Göstergebilimsel Çözümleme:** Karikatürde Ekrem İmamoğlu ve Kemal Kılıçdaroğlu birlikte konuşurken gösterilmiştir. İmamoğlu düşünceli şekilde gösterilirken Kılıçdaroğlu sırtarak resmedilmiştir. İki karakterinde elleri cebindedir. Ancak İmamoğlu'nun bir eli cebindeyken Kılıçdaroğlu'nun iki eli cebindedir.

**Söylem Çözümlemesi:** Karikatürde gösterilen İmamoğlu kendinden emin olmayan bir tavırla ve düşünceli bir şekilde yer almaktadır. İstanbul'u yönetebileceğinden emin olmadığını ifade eden balon yazısında CHP genel başkanı Kılıçdaroğlu'na "Sence ben İstanbul'u Yönetebilir miyim" diye sormaktadır. Kılıçdaroğlu ise "Dert ettiğin şeye bak... Sanki İstanbul'u ben yönetiyorum" diyerek cevap vermektedir. Karikatürdeki söylemler değerlendirildiğinde kendinden emin olmayan başaramayacağını inanan İmamoğlu net bir şekilde görülmektedir. Kılıçdaroğlu'nun verdiği cevap ile aslında CHP'yi biz yönetmiyoruz başka güçler tarafından yönetilen bir parti izlenimi verilmeye çalışılmıştır. Genel olarak karikatüre bakıldığında hedef

alınanın İmamoğlu, Kılıçdaroğlu ve Cumhuriyet Halk Partisi olduğu anlaşılmaktadır.

Seçmene verilen mesaj partitini yönetemeyen, yönetmeyen genel başkan ve onun partisinden aday olan ve kendine güvenmeyen bir adaya oy verme mesajı vardır.

### Karikatür: 2

Kaynak: [https://yandex.com.tr/gorsel/search?text=binali%20y%C4%B1ld%C4%B1r%C4%B1m%20karikat%C3%BCr&lr=103833&pos=4&img\\_url=https%3A%2F%2Fpbs.twimg.com%2Fmedia%2FD7i7h13X4AApseh.jpg&rpt=simage](https://yandex.com.tr/gorsel/search?text=binali%20y%C4%B1ld%C4%B1r%C4%B1m%20karikat%C3%BCr&lr=103833&pos=4&img_url=https%3A%2F%2Fpbs.twimg.com%2Fmedia%2FD7i7h13X4AApseh.jpg&rpt=simage)

**Gösterge:** İstanbul Büyükşehir Belediye Başkanlığı Seçimi Karikatür

**Gösterenler:** Binali Yıldırım, Mikrofon uzatan bir kol, Konuşma Balonları

**Gösterilenler:** Endişe, soruyu ciddiye almama, konuyu dağıtma

**Göstergebilimsel Çözümleme:** Karikatürde Binali Yıldırım ve ona mikrofon uzatan bir televizyon muhabirinin kolu görülmektedir. Karikatürün doğası gereği karakterler abartılı çizimlerle karikatürlerde yer alır. Burada da Binali Yıldırım bedensel hatlarıyla daha abartılı şekilde çizilmiştir. Binali Yıldırım karikatürde daha kilolu ve burnu olduğundan daha büyük resmedilmiştir.

**Söylem Çözümlemesi:** Karikatürde yer alan konuşmalara bakıldığında muhabirin sorduğu “İmamoğlu ile ne zaman canlı yayına çıkacaksınız Sayın Yıldırım” sorusuna Binali Yıldırım “yatcaz kalkcaz” sözünü tekrarlayarak cevap vermektedir. Burada Binali Yıldırım’ın soruya verdiği cevap boyutuyla baktığımızda Yıldırım’ın soruyu savuşturan ve rakibiyle buluşmadan kaçır şekilde cevap verdiği görülmektedir. Ayrıca CHP genel başkanı tarafından siyasi düelloya davet edilen bu davete olumlu cevap vermeyen Erdoğan üzerinden Yıldırım ve partisi zor duruma düşürülmeye çalışılmaktadır.

Seçmene verilen ana mesaj Yıldırımın, aynı Erdoğan gibi siyasi düellodan kaçtığı şeklindedir. Verilmeye çalışılan bir diğer mesaj ise, Yıldırım’ın “yatcaz kalkcaz” cevabı üzerindedir. Verilen bu cevapla Yıldırım’ın konuşma üslubuna gönderme yapılmaktadır. Yavaş konuşan Yıldırım konuşma üslubu karikatürde argo konuşurularak daha da olumsuz bir noktaya taşınmaya çalışılmıştır. Ayrıca partisi tarafından çalışkanlığı ile ön plana çıkartılan Yıldırım karikatürde sürekli “yatcaz kalkcaz” diyerek yalnızca yatan ve kalkan bir karakter olarak resmedilmiş bu şekilde seçmene aslında çok da çalışkan olmadığı mesajı verilmeye çalışılmıştır.

## 6. SONUÇ

Mizah toplumu rahatlatan ve stersini atan yönüyle son derece önemli bir unsur olarak hayatımızda yer almaktadır. Ancak mizahın da sınırları ve kırmızı çizgileri olmalıdır. Hedef alınan kimse nasıl olsa bu bir mizah çalışması diyerek kişinin temel değerlerini ayaklar altına almamalıdır. İncelenen karikatür ve capslerde bu durumun gözetildiği görülmektedir. Rakip olan ve yoğun bir rekabet ortamında seçime giren iki aday için seçilen çalışmalar farklı mesajlar içerse de aşırıya kaçan ve insan onurunu zedeleyen şekliyle düzenlenmemiştir.

Karikatür ve caps gibi gülmece unsurları çoğunlukla gergin ve stresli geçen seçim dönemlerinde bu ortamı yumuşatan ve rahatlatan unsurlar olarak karşımıza çıkmaktadır. Burada incelenen bu çalışmalarda da bu durum gözlenmektedir. Rakipler birbirleriyle ilgili mesajlarını çizginin gücüyle hedef kitlelerine aktarmışlar ve seçim çalışmalarında mizahı kullanarak hem istedikleri mesajları iletmişler hem de güldürerek eğlendirerek ortamın yumuşamasına katkıda bulunmuşlardır.

Seçilen karikatür ve capslerde görüldüğü gibi bir resim ve birkaç cümleden oluşan bu çalışmalardan görünen anlamın dışında çok daha fazla anlam çıkmaktadır. Ağır bir havada geçen seçim dönemleri mizahı kullanan bu tür çalışmalarla bir nebze olsa farklı bir havaya

bürünmektedir. Nitekim Binali Yıldırım ile ilgili haberler incelendiğinde Yıldırım'ın hakkında çıkan capslerle ilgili torunları tarafından “dede hakkındaki capsleri gördüm” sözleriyle bilgilendirildiği ve Yıldırım'ın bu durumu röportajlarda ifade ettiği görülmektedir. Bir başka haberde ise Yıldırım'ın sosyal medya hakkında konuşarak kendisiyle ilgili capsler için gençlere teşekkür ettiği anlaşılmaktadır.

Sonuç olarak sosyal medyanın da yaygın bir şekilde kullanılmasıyla artık herkes elinde medya araçlarıyla dolaşmakta ve mesajlar anında milyonlarca kişiye ulaşmaktadır. Geline nokta her alanda olduğu gibi siyasal iletişim çalışmalarında mizah unsurlarının kullanılması siyasiler için getireceği faydalar düşünüldüğünde, bir tercih olmaktan çıkarak siyasal iletişim çalışmaları için bir zorunluluk halini almıştır.

**WALTER BENJAMİN'İN SİYASET DÜŞÜNÇESİ:  
KAMUSAL ALANI DENEYİM ZEMİNİNDE DÜŞÜNMEK**

**Doç. DR. Salih AKKANAT (Orcid ID: 0000-0002-8766-9238)**

Gümüşhane Üniversitesi, İİBF, Siyaset Bilimi ve Kamu Yönetimi, Gümüşhane

**ÖZET**

Walter Benjamin genellikle bir kültür eleştirmeni olarak dar bir kapsamda yorumlanır. Oysa çalışmalarının politik müdahaleleri en azından Frankfurt Okulu'nun diğer düşünürlerinden daha belirgindir. Özellikle 1930'lardan itibaren kültür eleştirisi bağlamındaki ilk dönem yazıları, epistemolojik ve estetik bir doğrultu taşısa da, politik-tarihsel bir düşünce ekseninde şekillenmektedir. Benjamin için deneyim kavramı, sadece kapitalist üretim ve mülkiyet ilişkilerinin, modernitenin gelişmesiyle paralel olarak, toplumsal ve kültürel sonuçlarının analiz edildiği sosyolojik bir kavram değildir. Deneyim aynı zamanda, modernitenin kitleselleştiren ve tekillikleri şeyleştirilen, modern toplumun tecrit edici ve topluluk duygusunu körelten yönü itibarıyla bellek, hatırlama ve düşünme gibi zihinsel faaliyetler üzerindeki etkilerinin incelenebileceği bir ekrandır. Benjamin, bu nedenle, siyaseti deneyimden hareketle düşünmeye çalışır. Deneyim bilgisine soyutlama ve genelleştirme yoluyla ulaşmak ya da deneyimin kavrama tabi kılınması; deneyimin üretildiği bağlamın gözden kaybolması anlamına gelmektedir. Nitekim felsefe tarihinde maddi yaşam ve zihinsel yaşam arasında bir ayırım yapılırken; maddi, somut, pratik deyim alanı, düşünce evreni karşısında değersizleştirilmiştir. Benjamin, Dilthey'den itibaren yaşam filozoflarının da şiire, saflıkla özdeşleştirilen doğaya ve mitoslara göndermede bulunarak, hakiki deneyime ulaşmaya çalıştıklarını söyler. Bu bildiri, Benjamin'in estetik ve siyaset düşüncesi bağlamında deneyime dayanan bir kamusal fikrine nasıl ulaşılabileceğini göstermeyi amaçlıyor. Kamusal alanı, deneyim kavramının ışığında düşünmek; güç ve iktidar ilişkilerini vurgulayan, maddi ve somut çıkarların bilgisi üzerinde yapılanmış, tarihte ve bugün egemen kamusal biçimiyle ilişkisinde, farklı nedenlerle damgalanarak kamusal tartışmadan dışlanmış olanların katılımına açık bir kamusal-alan anlayışı geliştirmeyi mümkün kılabilir.

**Anahtar Sözcükler:** Kamusal alan, deneyim, Walter Benjamin, siyaset

**WALTER BENJAMIN'S POLITICAL THOUGHT: THINKING OF THE PUBLIC SPACE ON THE BASIS OF EXPERIENCE**

**ABSTRACT**

Walter Benjamin is often interpreted narrowly as a cultural critic. Yet the political implications of his work are at least more pronounced than those of other thinkers of the Frankfurt School. Especially since the 1930s, his early writings in the context of cultural criticism are shaped on an axis of political-historical thought, even though they have an epistemological and aesthetic direction. For Benjamin, the concept of experience is not just a sociological concept in which the social and cultural consequences of capitalist production and property relations are analyzed in parallel with the development of modernity. Experience is also a screen where the effects of modernity on mental activities such as memory, remembering and thinking can be examined in terms of the massifying and reifying singularities, the isolating aspect of modern society and dulling the sense of community. Benjamin, therefore, tries to think of politics from experience. Reaching the knowledge of experience through abstraction and generalization or subordinating experience to the concept means the disappearance of the context in which the experience is produced. As a matter of fact, while making a distinction between material life and mental life in the history of philosophy material, concrete, practical idiom field has been devalued in the face of the universe of thought. Benjamin says that since Dilthey, philosophers of life have also tried to reach true experience by referring to poetry, nature identified with purity, and myths. This paper aims to show how an experience-based idea of publicity can be reached in the context of Benjamin's aesthetic and political thought. To think of the public sphere in the light of the concept of experience, it can make it possible to develop an understanding of public-sphere that emphasizes power and power relations, is structured on the knowledge of material and concrete interests, and is open to the participation of those excluded from public discussion by being stigmatized for different reasons in relation to the dominant form of publicity in history and today.

**Keywords:** Public sphere, experience, Walter Benjamin, politics

## 1. GİRİŞ

Walter Benjamin genellikle bir kültür eleştirmeni olarak dar bir kapsamda yorumlanır; oysa çalışmalarının politik yönelimleri en azından Frankfurt Okulu'nun diğer düşünürlerinden daha belirgindir. Özellikle 1930'lardan itibaren kültür eleştirisi bağlamındaki ilk dönem yazılarının bilgi kuramsal ve estetik zemininde, politik-tarihsel bir düşünce ekseninde çalışmaya başladığı görülür.

Tecrübe kavramı Benjamin için sadece kapitalist üretim ve mülkiyet ilişkilerinin modernizmin gelişmesiyle paralel olarak ilerleyen toplumsal ve kültürel sonuçlarını analiz etmekte açıklayıcı bir kavram olarak kullanılmaz. O aynı zamanda modern toplumun kiteselleştiren, farklılıkları şeyleştirilen, bireyler arasındaki ilişkileri yarar maksimizasyonuna indirgeyen, kişiyi emek sürecine yabancılaştıran ve emeğinin bireysel ve toplumsal kullanımı üzerindeki tasarruf hakkını elinden alarak bu durumu doğallaştıran bir siyaset ve bilim anlayışı üreten modern toplumun izolasyonist ve dışlayıcı yapısını eleştirmekte ve ona karşı direnmekte nesnel bir zemin oluşturmak amacıyla da kullanılır.

Benjamin'in önemi siyasetin olanaklılık koşulları üzerinde düşünmesi ve bu nedenle de liberal, sosyal demokratik “gerçekçi” siyaset vizyonlarının sistem odaklı ve kurumsalcı ilerleme ve gelişme nosyonlarına karşı direnmesidir. Siyasetin olanaklı olabilmesi için her şeyden önce doğru düşünmek ve doğru yargılarda bulunmak gerekir. Doğru yargıda bulunmak ise anımsama ve geleneğin sağladığı düşünümsellik içinde mümkündür. Düşünümsellik tecrübenin bilgisine dayanmak anlamına gelir. Dolayısıyla siyaset, öznelere kendi tarihleriyle ve kolektif geçmişleriyle diyalektik bir ilişki içinde “kim” olduklarını hatırlayacakları ve bunu şimdi hayata geçirebilecekleri bir anda gerçekleşir. Eğer özne böyle bir “düşünümsel” ve “empatik” deneyim ufkundan mahrumsa, politik yargılarda bulunması ve siyasal alana müdahale etmesi de mümkün değildir.

Benjamin siyasetin temeline tecrübeyi koyar ve tecrübelerin kendi deneyimlerinin bilgisi içinden konuşabilecekleri kanallar oluşturabilmenin önemine dikkat çeker. Tecrübenin bilgisine soyutlama yaparak genelleştirme yoluyla ulaşılması ve tecrübenin kavrama dönüştürülmesi, tecrübenin üretildiği bağlamın gözden kaybolmasını sağlayacaktır. Kaldı ki her soyutlama, soyutlama yapanın imgelemine bağlı kalacağından egemen düşünce ve iktidar yapılarıncı manipüle edilme olasılığı yüksektir. Kurumsalcı düşünce biçiminin rasyonelitesi evrensel bir konuşma ve düşünme dilini, tarihin ve toplumsal ilişkilerin yorumlanmasında genel ve homojen bir bakış açısını zorunlu kıldığı ölçüde tikellerin tecrübesi bastırılmış olur.

Benjamin Tecrübeyi siyasetin merkezine koyarken, geç kapitalizm koşullarında politik öznellik

biçimlerinin oluşturulabileceğine dair güçlü bir inanç besler. Bu bakımdan, modernizmin doğurduğu olumsuz sonuçlar karşısında özgürleşim ve anlam arayışını en fazla estetik bir deneyim sürecine tabi kılarak erteleyen modernizmin diğer yorumcularından ayrı düştüğü söylenebilir. Bu hakim modernist eleştiri içinde, modernizmin yarattığı kırılmaya genellikle bir ‘yas’ duygusu, ‘kaybolmuşluk’ hissi, ‘yönsüzlük’ düşüncesi eşlik eder. Geçmiş deneyim, kimi zaman romantik ve naif kimi zaman da eleştirel bir özlemle anılarak modernizm sürecinin sorgulanmasına vesile olur; ancak modern toplum yapısının çift-yönlülüğü ya da çift-değerliliği pek dikkate alınmaz. Adorno ve Horkheimer en çok da bu konuda Benjamin’le ters düşer. Çünkü Adorno’nun dediği gibi modern gerçekliğin özü dehşettir ve onunla uzlaşma felaketle sonuçlanır.

Öte yandan Habermas, Benjamin’in siyasete duyduğu güveni paylaşır; “tarihte yeni bir başlangıcın imkanı olarak” moderniteyi önemsemesi büyük önem taşır. O’nun kamusal alan analizinin ve iletişimsel eylem kuramının temel özelliği, endüstriyel-ticari gereksinimlerin esasını oluşturduğu modern siyaset anlayışını yeniden “yaşam dünyalarının” gereksinimleri doğrultusunda temellendirmeye çalışmaktır. Benjamin’in “Tecrübe”siyle Habermas’ın “Yaşam Dünyası” kavramları arasında, modern toplum koşulları altında siyasete merkezi bir rol vermek işlevi bakımından benzerlikler kurulabilir. Ancak tecrübenin siyasal-kamusal alana nasıl aktarılması gerektiği, siyasal-kamusal alanla tecrübe arasında nasıl bir ilişki kurulabileceği ve en önemlisi tecrübenin siyasal-kamusal alan için nasıl bir anlam ifade ettiği konusunda aralarında çok temel farklılıklar olduğu söylenebilir. (Habermas’ın kamusal alan düşüncesinin Benjamin’in Tecrübe kuramı açısından sınırlarına aşağıda değinmeye çalışacağım)

## **2. KURAMSAL BOYUT: BENJAMİN’İN DÜŞÜNCESİNDE MODERNİZM VE TECRÜBE**

Benjamin’in siyasal düşüncesinin odağında yer alan Tecrübe kavramının bilgi kuramsal temelleri, onun çok geniş bir alana yayılan sanat ve edebiyat eleştirisi bağlamında erken dönem Alman romantizminin de etkileriyle geliştirmiş olduğu kavramsal yapı üzerine oturur. Benjamin’in Tecrübe analiziyle karşıt ve alternatif bir kamusal alan arasındaki ilişkinin nasıl kurulabileceğine dair varsayımlara geçmeden önce onun Tecrübe anlayışının açıklık kazanması gerekir. Özbek’in dediği gibi, ‘bu aynı zamanda modern tecrübenin tarihsel

yapısına bakmak' demektir (Özbek, 2000: 113). Benjamin'in Tecrübe analizi özellikle Baudelaire üzerinden sanatın modern toplumda geçirdiği dönüşümün izlerinin sürülmesiyle başlar. Baudelaire, modern toplumda lirik şiirin alımlanmasının istisnai hale geldiğini, bunun nedenlerinin de

okuyucunun yaşam tecrübesindeki değişimle açıklanabileceğini söyler. Bu açıdan Benjamin 'Baudelaire üzerine Bazı Motifler' gibi yazıların da Bergson, Proust ve Freud'un düşüncelerinden yararlanarak bir Tecrübe kuramı geliştirir. Eleştirel Kuram'ın genel yönelimlerini takip ederek, modernlik altında tecrübenin değişen yapısını, yaşam felsefesinden ve psikanalizden yararlanarak Marksist bir çerçeve içinden kavramaya çalışır.

Benjamin, modernizmin sonucu olarak ortaya çıkan yaşam tecrübesinin nasıl değiştiğini anlamak için felsefeden yararlanılamayacağını söyler; çünkü tecrübeyle ilgilenen yaşam felsefesi alanı, "insanın toplum içindeki varoluşundan yola çıkmaz". Kitlelerin yapaylaşmış ve standartlaşmış varoluşuna karşı, "hakiki" tecrübeye ulaşmak için girilen çabaların ürünüdür, "yaşam felsefesi". Arendt'in Felsefede Platon'dan beri yapılageldiğini söylediği bir ikili kavrayış sözkonusudur yaşamı: maddi yaşam ve zihinsel yaşam arasında bir ayrım yapılırken, maddi, somut, pratik tecrübenin alanı düşünce evreni karşısında değersizleştirilir. Benjamin, Dilthey'den itibaren yaşam filozoflarının da şiire, saflıkla özdeşleştirilen doğaya ve mitoslara göndermede bulunarak hakiki tecrübeye ulaşmaya çalıştıklarını söyler. Bergson ise diğerlerinden farklı olarak, *Madde ve Bellek* isimli yapıtında, "biyolojiye göre düzenlenmiş olgusal araştırmalara dayanarak belleğin yapısının tecrübenin felsefi olarak anlaşılmasında belirleyici bir rolü olduğunu öne sürer". Bu bakımdan Benjamin Bergson'u önemser. "Gerçekten de tecrübe, hem kolektif hem de özel yaşamda bir gelenek işidir...biriktirilmiş, çoğu kez bilincine varılmamış, ancak bellekte birbiriyle kaynaşmış verilerden oluşur" (Benjamin: 1992e). Ancak yine de Bergson tecrübeyi tarihselleştirmez; "büyük sanayi çağının köreltici tecrübesine" başka bir deyişle "belleksizleşme sürecine" bakmaktan kaçınır.

Bergson tarafından tecrübenin özünün bellekle ilişkilendirilmesi, Proust tarafından uygulamaya geçirilmiştir. Proust, günlük deneyimi hakiki tecrübeye (erfahrung) sentetik yoldan da olsa dönüştürmenin yolunu bulmuştur. Proust'un tecrübe konusunda getirdiği yenilik "iradi bellek ve iradedışı bellek" ayrımına dayanır. Bergson'un kuramındaki "saf bellek", Proust tarafından "iradedışı bellek" olarak ele alınır. Proust'a göre "iradi belleğin" günlük olaylara ilişkin sağladığı bilgi geçmişten hiçbir iz taşımaz; iradi bellek aracılığıyla geçmiş bugüne taşınamaz. Geçmişin izleri hiç beklenmedik anlarda, bir koku, bir görüntü ya da bir tad gibi duyular aracılığıyla elde edilir. Dolayısıyla Proust'a göre "kişinin kendi

hakkında bir imgesi olması ya da kendi tecrübesine hükmetmesi” rastlantısal bir hale gelmiştir. Bu tarihsel durum, insanın kendini çevreleyen yaşam verilerini artık tecrübe aracılığıyla özümseyemediği için ortaya çıkmıştır. Gazeteler ve olup biteni başkasına aktaran gazeteye özgü enformasyon, bu sürecin kanıtlarından yalnızca biridir. Gazetelerin amacı, “olayları okurun deneyimiyle ilgili olabilecek

alandan ayrı tutmaktır”. Gazeteye özgü enformasyon üretim ilkeleri olan, yeni olma, kısalık, anlaşılabilirlik, ve en önemlisi tek tek haberler arasındaki bağıntının yokluğundan, sayfa düzeni ve kullanılan dil üslubuna kadar her şey, enformasyonla tecrübenin birbirinden ayrılmasını destekler. “Bu ayrılmanın bir diğer nedeni de enformasyonun geçiciliği ve kitlesel üretimi nedeniyle “geleneğe” girmemesidir”. Bilincin nesnesini kavraması artık bir dizi mekanik araçlar yoluyla olmaktadır. Bunlar bilinci aslında artan bilgi bombardımanına karşı koruyucu bir işleve de sahiptirler ancak Frederic Jameson’un dediği gibi bunun karşılığında önemli bir bedel ödenir: “Bunlar bizi koruyarak, ama aynı zamanda bize gerçekte ne olduğunu özümleme ya da duyularımızı gerçek kişisel yaşantıya dönüştürme olanağından yoksun bırak(ırlar)” (Jameson, 1997: 69-70). Tarihsel olarak “eski haber etmenin yerini enformasyonun, enformasyonun yerini sansasyonun alması tecrübenin gittikçe daha da köreltiğini” gösterir (Benjamin: 1993). Sayılan bu iletişim biçimlerinin hepsi, en eski anlatı biçimi olan hikayeden ayrılırlar. Hikaye, olup biteni “anlatıcısının hayatının içine gömer ki bir tecrübe olarak dinleyenlere aktarılabilir.” Proust’un başarısı, “günümüz koşullarında pek çok açıdan yalıtılmış durumdaki bireyi iradedışı bellek aracılığıyla, hikaye anlatıcısı figürünü olabildiğince onarma çabasını” (Özbek, 2000. 116) simgeler.

Hakiki anlamda tecrübede ise, bireyin geçmişine ait bazı içerikler kolektif geçmişle birleşirler. Törenleri ve festivalleri ile ritüeller, belleğin bireysel ve kolektif yönlerinin tekrar tekrar içi içe geçmesini sağlayarak, yaşamboyu belleğin vasıtası olurlar. Benjamin saf tecrübe için geleneğin gerekli olduğunu savunmuştur. Bugünle geçmiş arasında, süreklilik ve ilişkilendirme şarttır. Tecrübe tek bir bireye ait olamaz; gerçek bir topluluk yaşantısı içindeki bireyle ilişkili bir şeydir, yalıtılmışlıkla değil. Kapitalist toplumda birey izole edilmiştir. Benjamin geleneksel toplumlarda birey ile kolektif topluluk; bireyin geçmişi ile kolektif geçmiş arasında bir bütünlük olduğunu söyler. Tecrübe, belleği canlı tutan tekrarlar içinde (masallar, şarkılar, öyküler, efsanelerle), yüzyılların kalıpları içinde, kuşaklar arasında aktarılır.

Benjamin metalaşmış çevrenin aşırı yüklemesinin ve kapitalist üretimin hızının ve gelenek yıkıcılığının, bir şok yaşantısı yarattığını söyler. Sadece kapitalist yapılanmanın bütünlüklü

gelenegi parçalanmasından dolayı değil; her yeniden yapılanma da kendini gösteren bir şok yaşantısıdır bu. “İnsan sürekli yıkılan ve değişen nesnelere ve olaylar; ve artan bir kitlelilik içeren, karmaşıklaşmış bir çevrede yaşamının ortaya çıkardığı bir uyarılar seline maruz kalır”. Georg Simmel, kapitalizme geçişle birlikte giderek tarihsel bağlarından kopan birey açısından “metropol ve zihinsel yaşam” ilişkisinde Benjamin’in alıntılıdığı önemli bir düşündürür. Simmel şöyle der: “Modern yaşamın en büyük sorunları, toplumun egemen güçlerine karşı,

tarihsel mirasın, dış kültürün ve yaşam tekniğinin ağırlığına karşı, bireyin kendi varoluş bağımsızlığını ve bireyselliğini koruma çabasından doğar” (Simmel, 1991: 83-84). Modern toplumla birlikte ortaya çıkan şok deneyimi Benjamin’in iki deneyim biçimi arasında ayrım yapmasını kolaylaştırır: tamalgı yeteneği içeren, bellekle iç içe geçmiş ve “süre” içinde tanımlanan hakiki tecrübe olarak *Erfahrung* ile modern toplumsal koşullar altında ancak belli zaman aralıklarında oluşan *Erlebnis*. “*Erfahrung*, kavramının Almanca kökeni olan “*fahren*” (sürmek, yolculuk etmek), hareketlilik, seyahat etmek, etrafta dolanmak ya da seyrü sefer etmek manasını taşıyor. Böylece *Erfahrung*, hem zamana ilişkin bir boyut, yani süre, alışkanlık, tekrar ve dönüş iması yapıyor; hem de tecrübe eden öznenin bir derece risk aldığı ima ediyor...bu yananamlar *Erfahrung*’u daha nötr ve münferit bir oluş olan (İngilizce *Experience*’ın da içerdiği) *Erlebnis*’ten (olay, macera) ayırıyor” (Hansen, 1993: 187). Dolayısıyla ilki normatif bir içeriğe sahipken ikincisi olgusal bir anlama işaret ediyor (Özbek, 2000: 117). Ancak *Erfahrung*’un en önemli özelliği normatif ve olgusal kutuplar arasında gidip gelen bir kavram olmasıdır. *Erfahrung* olarak tecrübe, “ bir yandan, tecrübe sahibi olma ve düşünümsellik, ilişkiler ve bağlantılar görebilme, gerçeklik ve fanteziyi el çabukluğuyla birbirine geçirebilme, bellek ve başka bir geleceği tahayyül edebilme yeteneklerine dayanır. Öte yandan tam da bu yeteneklerin, endüstrileşme, kentleşme ve modern tüketim kültürünün saldırısı altında tarihsel olarak parçalanmasına ve saldırısına ve dönüşümüne işaret eder”. Böylece bu iki boyutun diyalektiği içinde tecrübe, “tarihsel parçalanmanın, kaybın, kopuşun ve değişimin etkilerini kaydedebilme ve bunlarla baş edebilme yeteneğini içeren bir kavram olarak ortaya çıkar” (Hansen, 1993: 188). Baudelaire’in şiirinde, Proust’un romanında ya da Bergson’un felsefesinde modern parçalanmışlığın ve kaybın etkileri kaydedilmekte ve tartışılmaktadır ancak bütün bunlarla baş edebilmenin yollarının gösterildiği söylenemez. Benjamin’i önemli kılan ise, tüm düşünsel uğraşının diyalektik bir *Erfahrung* kavrayışını somutlaştırmak olduğu söylenebilir.

*Erfahrung* olarak tecrübe anlayışı, modern toplumun koşulları altında direniş için yeni imkanlar sunar demiştik. Bunlardan en önemlisi, kitle iletişim araçlarının içerdiği bazı

özelliklerin, montaj gibi yöntemlerle geçekliğin algılanışında alternatif bir anlam çerçevesi üretebilmesi ve böylece anımsama ve düşünömsellik gibi yetiler aracılığıyla ulaşılan sonuçlara benzer etkiler yaratarak kolektif bilinci örgütleyebilmesidir. Benjamin'in teknolojiye karşı köktenci olmayan bu tutumu onun, mekanik üretim çağında sanat yapıtının niteliği üzerine yazdıklarından yola çıkılarak saptanabilir.

### **3. POLİTİK BOYUT: KAMUSAL ALAN VE TECRÜBE**

Habermas'ın kamusal alan modelinin sınırları üzerinde düşünerek demokrasinin ve meşruiyet ilkesinin yeniden kavramlaştırılmasını sağlamaya çalışmak mümkündür. Özellikle Habermas'ın burjuva birey ve insan anlayışının evrenselleştirilmesini dayanak yapan iletişimsel eylem rasyonelitesi dışlayıcı bir işleve sahip olma özelliği nedeniyle tecrübe kuramı açısından sorunludur. Bunu anlayabilmek için Habermas'ın burjuva kamusal alanının yapısal dönüşümüne ilişkin olarak söylediklerini hatırlamak gerekir.

Habermas bir “yapısal dönüşüm” sürecinden bahsederken, başlangıçta kamusal alanının “herkese açık ve herkesçe erişilebilen; özel yurttaşların kamu yararına meseleleri özgürce, rasyonel ve eşit biçimde tartışabildikleri bir alan” (Hansen, 2004: 161) olma özelliğine vurgu yapar. Ancak bu forum alanında toplumsal ve ekonomik çıkarların paranteze alınması bu alanda iktidar ve çıkar ilişkilerinin sürmekte olduğu gerçeğini maskeleymektedir. Bu nedenle kamusal söz söyleme alanında sınıfsal kökenlerin gizlenerek söz'e evrensel ve tümel bir yargı niteliği verilmesi kamusal alan'ın hegemonyayı ve baskıyı meşrulaştırma potansiyelini ortaya koyar. Habermas burjuvanın insanla, mülksahibi/ataerkil'in ise insanoğluyula özdeşleştirilmesi yoluyla burjuva kamusal alanının üzerine temellendiği insanlık fikrinin, belli bir sınıfın öznelliğini genel olarak insan diye doğallaştıran bir ideolojiye dönüşmesini, kamusal alanının parçalanması ya da çözülmesi olarak yansıtır. Dolayısıyla Habermas burjuva kamusal alanının çelişkili doğasını bir çeşit bozulma ya da yozlaşma olarak görme eğilimine girerken bu çelişkileri burjuva kamusal alanının kökenine ilişkin bir sorgulama yönünde genişletmez. Oysa burjuvazinin tarihsel olarak gereksindiği biçimiyle kamusal alan ilkesi üzerinde durmak gerekir. Burjuvazinin kendi çıkarını herkesin çıkarı imiş gibi gösterme arzusu koşullandırmıştır kamusal alan ve bu içinde zorunlu olarak farklılığı ve aykırılığı, rasyonelize edilmeye direneni bastırmayı içerir. Liberal yönetim biçiminin genel oy ilkesi aracılığıyla kamuoyundan yararlanmasının temelinde nasıl ki mülkiyet ve üretim ilişkilerinin sorgulanmasına yönelik hoşnutsuzlukları kanallandırmak başka bir deyişle rasyonelleştirerek ortadan kaldırma eğilimi baskın çıkmaktaysa, burjuva kamusal alanının da sözde herkesin katılımına açık bir tartışma

ve müzakere ortamını hayata geçirme düşüncesinde hegemonyayı derinleştirme isteği ağır basmaktadır.

Diğer taraftan burjuva kamusunun bu baskıcı doğasına rağmen, kendisiyle aynı zamanda ortaya çıkarak onunla yarışan öteki kamusal oluşumlarının varlığı da inkar edilemez. Nancy Frazer' ın anlatısıyla "burjuva kamusal alanıyla fiilen aynı anda ortaya çıkan, ulusçu kamular, popüler köylü kamuları, elit kadın kamuları ve işçi sınıfı kamuları gibi rakip bir 'karşıt-kamu takımı'

bulunuyordu. Diğer bir deyişle, burjuva kamusal alanının birlik ve teklik iddiasına karşı duruş, Habermas'ın öne sürdüğü gibi 19. yy'ın ikinci yarısında başlamadı" (Frazer, 1990: 61). Habermas burjuva kamusal alanından kurtuluş ve özgürleşim yolunda bir "imkan olarak" yararlanmanın peşine düşerken "ortak söz söyleyebilmenin" koşulları üzerinde fazlaca durmuş gibi görünüyor. Bu ancak ortak bir tecrübe bağlamı içinde mümkün olabilecek bir şeydir. Alt sınıfların, bağımlı grupların ve mağdurların tecrübeleri ile bu tecrübelerin baskı ve zor yoluyla tarihsel olarak özgül bir görünüme bürünmesine yol açan ve böylece onların ontolojik statüsünü tayin eden egemen ve yönetici sınıfın tecrübelerinin ortak bir söz söyleme ve düşünme forumunda buluşması mümkün müdür? Böylece politikanın farklı toplum kesimlerinin müzakereleri sonucu ortak bir söze ulaşma etkinliği olarak kavranması gerçektende hâkim konumdakilerin otoritesini ve iktidarını dönüştürmeye ve katılımcı bir demokrasinin önünü açmaya hizmet eder mi?

İşte burjuva kamusal alanının en büyük zaafı, Negt ve Kluge'nin dediği gibi sözde toplumun bütünü temsil etmesine rağmen, tözünü herhangi bir yaşam bağlamını özgül olarak ifade etmeyen bir "ara" alandan almış olmasıdır (Negt ve Kluge, 136: 136). Habermas'ın kamusal alan anlatısının sınırları da bu "ara alanı" imtiyazlandırmayı sürdürmesi ve bu "ara alana" katılımın ve varlığının devam etmesinin hakim güç ve iktidar ilişkilerini meşrulaştırma yönünde bir etkide bulunacağını görmeye yanaşmamasıdır. Burada üzerinde durulması gereken, kitlelerin ya da mağdur ve mağlup konumunda yar alanların böyle bir ara alanda verecekleri mücadelenin niteliği ve sonuçlarıdır. "Eğer kitleler, kamusal alanın desteğiyle gücüne güç katmış bir egemen sınıfla savaşıyorlarsa, bu ümitsiz bir mücadele olur; çünkü kamusal alanı oluşturanlar aslında kendileri olduğu için, bu durumda her zaman aynı anda kendilerine karşıda savaşmış olurlar" (Negt ve Kluge, 2004: 136). Bir başka deyişle, tüm yaşam alanlarını kapsadığı ilan edilen kamusal alanın içinde kitleler, hakim olana karşı mücadeleye kalkarlarsa hegemonyanın en önemli vasfı olan "öteki"nin, "başka"nın da

İçerildiği, kapsandığı kanısının uyanmasına yol açarlar; böylece hakim temsil ve örgütlenme biçimlerinden ayrı bir örgütlenme tarzının oluşması yönünde çaba sarfedilmesi gereksiz hale gelir ve muhalif söylem, tahakküm biçimlerinin sınırları içinde hareket eden rutin bir işleme dönüşür.

#### 4. SONUÇ VE DEĞERLENDİRME

Benjamin'in tecrübe kuramı alternatif bir tarih ve siyaset analizi geliştirmeye çalışması bakımından önemlidir. Ancak bunu idealist ve soyut bir evrenselcilik anlayışı içine düşmeden yapar; bu nedenle liberal ve hatta Marksist tarihselciliği ve siyaset görüşünü soyut ve idealistik

bulduğu için eleştiriye tabi tutar. Onun tecrübe kuramı, siyasetin temeline tecrübeyi koymuş olması ve böylece siyasetin olanaklılık koşulları üzerinde odaklanmasıdır. İnsanların doğru düşünme ve doğru yargıda bulunma imkanlarına sahip olup olmamaları, demokrasinin iletişimin formel ve informel yapılarının herkese açık olmasından kalkarak tanımlanabileceği indirgemeci bir kavrayış tarzını eleştirmek için elverişlidir.

Mağdur ve bağımlı olanların perspektifinden bakıldığında tarihin bugünü sürekli bir kriz halidir; kuraldışılığın kural haline gelmesidir. Burjuva liberal kamusal alan nosyonu Habermasçı müdahale içinde dahi bu “kuraldışılığın” onaylanmasından ve süreklilik kazanmasından başka bir anlamda düşünülebilir mi? Egemen sınıflarla bağımlı sınıfların aynı forumun herkese açık eşit üyeleri olmaları ve birlikte toplumsal gelişme ve siyasal ilerleme yönünde bireysel çıkarları ve ilgileri aşan bir düzeyde müzakere içinde olmaları olanaklı mıdır? Başka bir deyişle burjuva liberal kamusal alanı herkesin çıkarlarını ve tecrübelerini dile getirme kabiliyetine ve bu yönde gelişim gösterme eğilimine sahip midir? Tecrübe anlayışının esasını oluşturduğu bir kamusal alan nosyonu, kamunun farklı görünüm aldığı parlamento, siyasi partiler, sendikalar, sivil toplum kuruluşları ve televizyon gibi her düzeyde hangi toplum kesimlerinin tarihsel ve kolektif tecrübelerinin dile getirildiği, temsil edildiği ve örgütlendiği sorularının sorulmasına yardımcı olur. Bu sorunun yanıtı, temsil mekanizmalarından ve kamusal görünürlük biçimlerinden dışlanan toplum kesimlerini, yaşam tarzlarını gündeme getirebilir ve bu çerçevede meşruiyet sorununa yeni bir boyut kazandırabilir. Meşruiyet kavramı Benjaminci “ilişkilendirme” ilkesinin ışığı altında gerçek yaşam ve politika, geçmiş ve şimdi arasında bağlantı kurularak anlam kazanır. Temsil ve ifade biçimleri ile toplumun geniş ve dezavantajlı kılınmış kesimlerinin gerçek yaşantısı arasındaki kopukluk meşruiyet kavramının temellendirilmesi gereken zemine işaret eder. Benjamin modernizmin sonuçlarını sadece tam algı ve yaşam hakimiyeti gibi tecrübenin unsurlarının

kayıbı bağlamında analiz etmekle kalmaz, aynı zamanda geç kapitalizm, üretim ve mülkiyet ilişkilerinin baskıcı koşulları altında endüstriyel-ticari çıkarların kamusal meseleleri kendi parantezine alarak koşullandırdığı bir ortamda, tecrübenin geri kazanılarak politikanın merkezine yerleştirilmesinin önemini vurgular. Negt ve Kluge'nin alternatif-kamusal alan yorumu bu düşüncüyü geliştirmeye çalışır. Bu nedenle Benjamin'in modernizm analizi üzerine temellenmiş tecrübe kuramını Negt ve Kluge'nin karşıt-kamusal alan analiziyle birlikte okumak bize, hegemonyacı kamusal alan anlatısının ve Habermasçı siyaset vizyonunun ötesinde güç ve iktidar ilişkilerini vurgulayan, maddi ve somut çıkarların bilgisi üzerinde yapılmış, tarihte ve bugün egemen kamusal alan biçimiyle ilişkisinde farklı nedenlerle damgalanarak kamusal tartışmadan dışlanmış olanların katılımına açık bir kamusal-alan anlayışı geliştirme imkânı sağlayacaktır.

**AKTİF VE PASİF EŞİTLİK: ÇAĞDAŞ SİYASET FELSEFESİNDE BİR ADALET  
TARTIŞMASI**

**Doç. DR. Salih AKKANAT (Orcid ID: 0000-0002-8766-9238)**  
Gümüşhane Üniversitesi, İİBF, Siyaset Bilimi ve Kamu Yönetimi, Gümüşhane

**ÖZET**

Çağdaş siyaset felsefesinde adalet, genellikle verili sosyal-politik koşullarda mevcut bulunan bir haksızlığın telafisi anlamına gelir. Haksızlık, kaynakların ya da imkânların eşit ve adil olmayan dağılımı kadar kimliklerin tanınmamasının sonucudur. İlk yaklaşım, dağıtım sorununa odaklanan maddi bir çözüm sunmaya çalışırken; ikincisi, etik-politik bir amaç doğrultusunda, ötekinin tanınması ve içerilmesi anlamına gelen evrenselci ve eşitlikçi toplumsal bir düzenin kurulmasını hedefler. Bu bildiri, Amartya Sen, Robert Nozick ve John Rawls'un liberal ve liberteryen dağıtıcı adalet yaklaşımları ile düşünsel zeminini Hegel'in oluşturduğu, Axel Honneth'in tanınmacı adalet yaklaşımının, ortak öncüllere sahip olduğunu vurguluyor ve adalete ilişkin üçüncü bir yol önermeyi amaçlıyor. Dağıtıcı ve tanınmacı adalet; toplumun hiyerarşik tarzda yapılanmasından çok doğurduğu sonuçları düzenlemeyi amaçladığı için benzerlik göstermektedirler. Dağıtıcı adalet, kimlerin nelere ve ne kadar sahip olduğu soruları ile meşgul olduğu ölçüde, yurttaşın ortak yaşam olanaklarının belirlenmesine katılımını önemsizleştirmekte ve böylece, toplumsal yapı ve kurumsal

bağlamın eleştirisinden kaçınmaktadır. Tanınma etiği ise adaleti, öncelikle bir kimlik sorunu olarak gördüğü; kimliği de öznelarası bir perspektif bağlamında tanımladığı için, toplumsal düzenin asli eleştirisine kuramsal zemin sunmaktan uzak bir tür “sosyolojizme” dönüşmektedir. Bu nedenle, her iki adalet yaklaşımını da pasif eşitlik başlığı altında toplamak mümkündür. Öte yandan, toplumsal düzenin kuruluş mantığının yapı-sökümünü hedefleyen, “aktif eşitlik” bahsinde değerlendirebileceğimiz, farklı bir “adalet” düşüncesinden daha bahsedebiliriz. Jacques Ranciere’in temsil ettiği bu düşünce biçimi; toplumsal düzenin kuruluş mantığını oluşturan hiyerarşiyi, doğal yeterliliklerine uygun düşen bir düzen çerçevesinde tarafların konumlandırılmasına dayandırır. Bu nedenle, toplumsalın kurucu mantığının sekteye uğratılması; tarafların, toplumsal partnerler olarak kendilerini görünür kılacakları ve seslerini duyurabilecekleri siyasal bir uzamın doğması anlamına gelecektir. Böylece, taraflar radikal bir eşitlik fikrine dayanarak, toplumun hiyerarşik örgütlenmesini sorguladıklarında ancak toplumsal bir fail haline gelecek ve bu sayede “adalet” fikrine geçerlilik kazandırabileceklerdir.

**Anahtar sözcükler:** Adalet, pasif eşitlik, aktif eşitlik, siyasal

### ACTIVE AND PASSIVE EQUALITY: A DISCUSSION FOR JUSTICE IN CONTEMPORARY POLITICAL PHILOSOPHY

#### ABSTRACT

In contemporary political philosophy, justice usually means reparation for an injustice existing in given socio-political conditions. Injustice is the result of ignorance of identities as well as the unequal and unjust distribution of resources or opportunities. The first approach tries to offer a material solution that focuses on the distribution problem; second, it aims at the establishment of a universalist and egalitarian social order, which means the recognition and inclusion of the other, in line with an ethical-political purpose. This paper emphasizes that Amartya Sen, Robert Nozick and John Rawls' liberal and libertarian distributive justice approaches and Axel Honneth's recognitionist justice approach, whose intellectual ground is formed by Hegel, have common premises and aims to suggest a third way of justice. Distributive and recognition justice are similar in that they aim to regulate the results they produce rather than the hierarchical structure of society. To the extent that distributive justice is preoccupied with the questions of who owns what and how much, it trivializes the citizen's participation in determining the possibilities of common life, thus avoiding criticism of the social structure and institutional context. Recognition ethics, on the other hand, sees justice primarily as a problem of identity; since it defines identity in the context of an intersubjective perspective, it turns into a kind of "sociology" that is far from providing a theoretical ground for the fundamental critique of the social order. Therefore, it is possible to gather both justice approaches under the heading of passive equality. On the other hand, we can talk about a different idea of "justice", which we can evaluate in the talk of "active equality", which aims at the deconstruction of the foundational logic of the social order. This way of thinking represented by Jacques Ranciere bases the hierarchy that constitutes the foundation logic of the social order on the positioning of the parties within the framework of an order appropriate

to their natural competencies. Therefore, disrupting the constitutive logic of the social, it will mean the emergence of a political space in which parties can make themselves visible as social partners and have their voices heard. Thus, when the parties question the hierarchical organization of the society, based on a radical idea of equality, they will become a social agent and thus will be able to give validity to the idea of "justice".

**Keywords:** Justice, passive equality, active equality, political

## 1. GİRİŞ

Çağımız politik pasiflik çağıdır. Tamamen pasif değiliz. Sonuçta, çoğumuz (hepimiz olmasa da) oy veriyoruz. Siyasi görüşlere sahibiz. Hükümetimizden beklentilerimiz var. Ama siyasi eylemde bulunmuyoruz. Biz örgütlenmiyoruz; siyasi kolektiviteler yaratmıyoruz veya bu tür faaliyetlerle meşgul değiliz. Siyasete de spora olduğu gibi katılıyoruz, yani katılımcı olarak değil de taraftar olarak ve çoğu zaman da daha az istekle katılıyoruz. Nedir bunun nedeni? Daha çok teorik bir neden üzerinde duracağım.

Pek çok düşünür (akla yeni bir örnek olarak Michel Foucault geliyor) kendimiz hakkında nasıl düşündüğümüz ve nasıl davrandığımız arasındaki karmaşık etkileşimlere işaret etmişlerdir. Kim olduğumuz, çoğunlukla benimsediğimiz teorilerin bir ürünüdür. Bu nedenle, toplumların ve kültürlerin entelektüellerin ne düşündüklerinden nasıl etkilendiklerini veya üniversitede sosyal bilimler derslerinde öğretilenlerden nasıl etkilendiğimiz ne fazla abartmak gerekir ne de hafife almak. Toplumun ve bireyin teorik olarak nasıl tanımlandığı ile siyasal edilgenlik açık bir bağ vardır.

O halde ana akım siyaset felsefesinin bir siyasi edilgenlik felsefesi olduğunu göstermek istiyorum. Daha spesifik olarak, bunun bir pasif eşitlik felsefesi olduğunu iddia ediyorum. Pasif eşitlikten çok aktif eşitliğe dayanan bir siyasi düşünce çerçevesi oluşturmak için de Fransız tarihçi ve düşünür Jacques Rancière'in çalışmalarına başvurulabileceğini öne sürüyorum.

Öncelikle, pasif eşitliğin ne anlama geldiğini anlamamız gerekiyor. Pasif eşitliği, eşitliğin devlet kurumları tarafından yaratılması, himaye edilmesi veya korunması şeklinde kısaca tanımlamak mümkündür. Pasif eşitliğin arkasındaki temel fikir, bir tür eşitliğin, eşitliği

tehlikede olanlar adına bir kurum tarafından sağlanması gerektiğidir. Eşitlik, eşitliğin öznelere tarafından alınmak veya yasalaştırılmak yerine onlara verilmeli veya en azından onlar adına korunmalıdır.

Bu, yöneten kurumun fiili eşitliği kendisinin vermesi gerektiği anlamına gelmez. İki farklı yorumu daha mümkündür bu anlayışın. İlk olarak, insanların sahip oldukları veya müdahale edilmediği takdirde doğal olarak sahip olacakları bir eşitlik biçimi zaten söz konusudur ve siyasal kurumun rolü sadece bu eşitliği korumak veya himaye etmektir. Robert Nozick'in liberteryenizminde olduğu gibi, tehlike altında olan aslında eşitlik değil özgürlüktür ve özgürlük, insanların zaten uygulayabilecekleri bir şeydir; bu nedenle devlet tarafından verilmesine gerek yoktur. Devletin görevi, onun bozulmadan devamını sağlamaktır. İkinci yorum da, bir tür eşitliği sağlamak için insanlara eşitlikten başka bir şey verilmesi gerektiğidir. Bu bakımdan John Rawls'un düşüncesi, eşitliği doğrudan sunmak yerine eşitliği sağlayan

şeyleri teşvik etmek olarak okunabilir. Ancak, bu farklı eşitlik yaklaşımları, eşitliğin öznesini aktör/fail olarak görmek yerine edilgen/alıcı konumuna yerleştirdikleri için her iki yaklaşım biçimi de pasif eşitlik fikrinin değişik yüzlerini temsil ederler.

## **2. JOHN RAWLS: CEHALET PERDESİ**

Adil bir dağıtım için ilkelerden yola çıkmak gerekiyorsa, o zaman ilkelerin kendisiyle başlayamayız. Bunun yerine, proje, adil bir dizi ilke üretmek için bir yöntemle başlamalıdır. O halde yöntem yeterliyse, ondan kaynaklanan ilkeler de yeterli olacaktır. Normatif adalet alanına bu şekilde yaklaşmak belirli bir açıdan bilime benzer. Bilimde, kişi bilimsel yöntemi kabul ederse, bu yöntemin sonuçları ile de kendini bağlamış demektir.

Rawls'un kullandığı yöntem, ünlü cehalet peçesidir. Kişi, içinde yaşadığı toplum için tercih ettiği dağıtım ilkelerini seçer, ancak kendisinin o toplumdaki yeri ve nitelikleri hakkında hiçbir bilgisi yoktur. Irk, dini inanç (varsa), fiziksel avantajlar veya dezavantajlar, maddi durum, kişilik özellikleri, cinsiyet: bunların tümü, işgal ettiği toplum için dağıtım ilkelerini seçme konumunda (Rawls'ın terminolojisindeki orijinal konum) olan kişi tarafından bilinmiyordur. Cehalet perdesi, seçiciyi kendisine atfedilebilecek tüm olası konumları hesaba katmasını gerektirdiği için, seçimi yapanlar üzerinde bir tarafsızlığa zorlar. Kişi, bu çıkarların ne olacağını bilmiyorsa, dağıtım ilkelerini seçerken kendi çıkarlarına ayrıcalık tanınması da imkânsızdır. Bu anlamda cehalet perdesi, Kant'ın salt rasyonel varlıklar fikrine tekabül eder.

Tamamen rasyonel bir varlık, belirli çıkarlar veya eğilimler temelinde değil, yalnızca rasyonelliğin emirleri temelinde seçimler yapar.

### 3. ROBERT NOZICK: HAK EŞİTLİĞİ

Yakın zamandaki ana akım çağdaş felsefede, belki de Rawls'un adalet görüşünün en büyük rakibi Robert Nozick'in ve özellikle onun *Anarşi, Devlet ve Ütopya*'sıdır. Batı dünyasındaki egemen sınıflar arasında Nozick'in görüşü belli bir çekiciliğe sahiptir. Özellikle küreselleşmenin gelişile (veya en azından hızlanmasıyla) piyasaların işleyişi lehine hükümetlerin müdahalelerini eleştiren siyasi görüşler yükseliştir. Hükümetler, Ronald Reagan'ın dediği gibi, çözümden çok sorundur. Piyasaların hükümetler üzerindeki önceliğine ilişkin bu görüş en az iki şekilde savunulabilir. Çağdaş düşüncede daha yaygın olan ilki, kapitalist piyasaların dizginsiz bir şekilde işlemesine izin verilmesinin en fazla sayıda insana en büyük iyiliği getireceğidir. Bireysel inisiyatifi teşvik etmek, bir nüfusun her bir üyesinin yaratıcı kaynaklarını serbest bırakır, arz ve talebin verimli çalışmasına izin verir ve ticaret gibi

ekonomik etkileşim yoluyla barışı teşvik eder. Bu görüş, resmi ideoloji olarak başarılı olmaya devam ederken -Washington Konsensüsü'nün merkezi bir ilkesi olmaya devam ediyor- ampirik olarak pek de başarılı olmadı. Serbest-zincirinden boşanmış kapitalist pazarların kapitalistler için iyi olabileceği ortaya çıktı. Başkaları için iyi oldukları daha az açıktır.

Kapitalist piyasaları devlet müdahalesine karşı savunmaya yönelik ikinci yaklaşım, bu piyasaların genel faydasına değil, piyasalardaki katılımcıların haklarına dayanır. Bu yaklaşım, faydacı olmaktan ziyade genel olarak Kantçıdır. Nozick'in benimsediği yaklaşım budur. “Hakları ulaşılabilecek nihai duruma dahil etmenin aksine, bunları yapılacak eylemlere yan kısıtlamalar olarak yerleştirebiliriz: Kısıtlama C'yi ihlal etmeyin.” Bu görüş Rawls'tan farklıdır ve sonuç olarak Kantçı gereksinimlerin farklı bir yorumunu içerir. Rawls'tan farkı, belirli bir dağılımın sonuçlarıyla değil, bu dağılımın meydana geldiği süreçle ilgilenmesinde yatmaktadır. Nozick'e göre adaletin özü, kimin neye sahip olduğu meselesi değil, insanların bir toplumda nasıl etkileşime gireceği meselesidir. Bu nedenle, Nozick'in yaklaşımı ilk bakışta adalete ve nihayetinde eşitliğe daha aktif bir yaklaşım gibi görünebilir.

Nozick, Rawls gibi, adalete yaklaşımını Kantçı olarak görür. Bunu yaparken, vurguyu Kant'ın düşüncesinde Rawls'tan farklı bir noktaya yerleştirir. Rawls'a göre, adalete Kantçı yaklaşımın özünü oluşturan karar verirken herkesi eşit biçimde göz önüne almaktır. Cemaat için adaletle karar verilecekse, kişiler kendi özel ilgi ve eğilimlerinden uzaklaşmalı, herkesin çıkar ve eğilimlerine göre karar vermelidir. Bu, tamamen rasyonel bir varlığın Kantçı idealini yansıtır.

Nozick'in Kantı, saf rasyonaliteden çok, insanlara araç olarak değil, nihai olarak muamele etmekle ilgilenir. "Eylem üzerindeki yan kısıtlamalar, insanların yalnızca araçlar değil, amaçlar olduğu yönündeki Kantçı ilkeyi yansıtır; rızaları olmadan başka amaçlara ulaşmak için feda edilemez veya kullanılamazlar. Kişiler dokunulmazdır."

#### 4. AMARTYA SEN: BECERİLERİ GELİŞTİRMEK

Rawls gibi, devlet gibi kurumların insanların yaşamlarına aktif müdahalesini gerektiren, ancak Nozick'inki gibi, müdahaleyi insanların yaşam koşullarından ziyade kendi kendilerini yaratmalarını teşvik etmeyi amaçlayan bir dağıtımcı adalet teorisi geliştirmiştir. Sen'e göre, bir adalet teorisinin asıl odak noktası, yetenekler dediği şeydir ve o, bu yetenekleri, işlevler dediği şey temelinde tanımlar.

Eylemler ve varlıklar, sahip olunanlarla karşılaştırılmalıdır. Sen için, siyasette adalet neyin bize ait olduğu ya da bize ne verildiği meselesi değildir; daha doğrusu, mesele sadece bununla ilgili değildir. Daha da önemlisi, ne yapabileceğimiz meselesidir. Eylemi bağımsız olarak değerli

olarak kabul eden bir yaşam anlayışı, kısmen filozof Bernard Williams'ın yazılarından alınan, hayatın mülklerden ziyade tasarılar meselesi olduğu fikrini yansıtır. İnsan yaşamını yalnızca bir dizi ilişkisiz eylem olarak değil, zamansal olarak ortaya çıkan bir dizi tasarı olarak düşünmeliyiz. Olabileceğim kişi olmak, benim belirli şeylere sahip olmamı gerektirse de, öncelikle bu sahip olma meselesi değildir. Bu daha çok bir "yapmalar ve varlıklar" meselesidir. Bir yaşama değerini veren şey, kişinin dostlukları ve aşk ilişkilerini sürdürme, anlamlı bir kariyer inşa etme, kişinin atletik veya sanatsal yeteneklerini geliştirmesiyle ve yalnızca bağımsız anların bir toplamı olarak değil, birbirine örülmüş iplikler gibi zamanı tutarlı ve anlamlı bir kalıba dönüştüren başka tasarılarla bağlantılıdır.

Sen için bu anlayışlar, insanların erişmesi gereken malları nasıl kavramamız gerektiğini yapılandırır. Hem faillik ile esenlik arasındaki farkı hem de başarı ile özgürlük arasındaki farkı yansıtan dört parçalı bir ayrım önerir. İkinci ayrım, bir kişinin projelerinde gerçekte elde ettiği şey ile farklı hedefler için çabalamak zorunda olduğu özgürlük arasında bir fark olduğu fikrini yansıtır. Kişinin yapmak istediği şeyi başarabilmesi iyidir; ama aynı zamanda, nihayetinde bu yolları seçmese bile, farklı yollara çıkma özgürlüğüne sahip olmak da iyidir. Bu, insanların yapabileceği seçimlerin çeşitliliğini yakalar.

Siyaset felsefesine bu şekilde yaklaşmanın erdemlerinden biri, eşitlik ve özgürlük arasındaki eski tartışmayı yararlı bir şekilde yeniden çerçevelemesidir. İnsanların, bir toplumun üyeleri

arasında eşitsizliği teşvik edecek şekilde, istediklerini yapma özgürlüğü olmalı mı? Yoksa eşitlik özgürlük pahasına elde edilmesi gereken bir şey mi olmalıdır? Sen'in düşüncesinde bu soru yeni bir kılığa bürünür. İnsanları eşit olarak kabul etmek ve yöneten kurumları bu eşitliği korumakla yükümlü kabul etmek durumunda, insan yaşamının gelişmesi için önemli sayılabilecek diğer eşitlik türlerinin aksine, eşit özgürlük bunda nasıl bir rol oynar? Soruyu bu şekilde sormak sorunu çözmez, ama bizim ona yeni bir şekilde, belki de yeni düşünce yolları açan bir şekilde yaklaşmamıza izin verir.

Ancak üç eşitlik yaklaşımı da pasif eşitlik hattında bulunmaktadır. Nozick ve Rawls için olduğu gibi Sen için de eşitlik, insanların politik olarak ne yaptıklarından ziyade kurumların insanlara vermek zorunda oldukları şeylerle ilgili bir değer olarak görülmektedir. Bu üç düşünür de, insanların nasıl eylemde bulunabilecekleri ile değil, ne elde edeceklerine ile ilgilenmektedir. Bu düşünce tarzı, çağdaş adalet teorilerinin merkezinde bulunur ve onları tanımlamak için kullanılan bir terim etrafında kavramlaştırılır: dağıtımcı adalet teorileri.

Dağıtımcı adalet teorileri, bir toplumun avantajlarının ve sorumluklarının nasıl dağıtılması gerektiği sorusuna odaklanır. Bir toplumun sahip olduğu mallar - serveti, sağlık hizmetleri,

işleri, eğitimi, kaynakları, hakları - nasıl dağıtılmalıdır? Ve bir toplumun gerektirdiği yükümlülükler - toplumun korunması, çeşitli mallarının finansmanı, külfetli işleri- nasıl dağıtılmalıdır? Bu gibi sorular sorarak, dağıtımcı adalet teorilerinin temelde pasif eşitlik anlayışına sahip oldukları hemen görülebilir. Açık bir şekilde ifade etmek gerekirse, dağıtımcı adalet teorileri, tanınması gereken bir tür eşitlik ararlar ve buna dayanarak, bu eşitliği yaratacak, koruyacak veya himaye edecek bir mal dağılımını tartışmaya açarlar.

## **5. SONUÇ**

Dağıtımcı adalet teorileri, farklı açılardan eleştirilmiştir. Iris Marion Young, *Justice and the Politics of Difference* adlı kitabında, dağıtımcı adalet teorilerinin maddi mallara aşırı derecede odaklandığına ve bu malları statik ve değişmez olarak gördüğüne işaret etmektedir. Maddi malların tahsisine odaklanarak, dağıtımcı adaleti teorileri “dağıtım modellerini belirlemeye yardımcı olan sosyal yapıyı ve kurumsal bağlamı görmezden” gelmektedir. Dağıtımcı adalet teorilerinde temel mesele, insanların ortak yaşamlarının yaratılmasına nasıl katıldıkları sorusu yerine kimin neye sahip olduğudur. Bu ise, insanların kolektif ve özerk eylem kapasitesini göz önünde bulundurmaya ihmal eder ve siyasi katılımın demokratik karakterini köreltir.

Young, tüm tahsislerin maddi olması gerekmediğinin altını çizer. Hak veya fırsat tahsislerinden de söz edilebilir. “Fakat,” diye belirtiyor, “dağıtım kavramının bu genişlemesi

ikinci bir soruna yol açmaktadır. Dağıtım paradigması metaforik olarak maddi olmayan sosyal mallara doğru genişletildiğinde, dağıtım kavramı bu maddi olmayan malları sosyal ilişkilerin ve süreçlerin bir işlevi olarak görmek yerine statik şeylermiş gibi temsil eder.” Her şeyden önce dağıtımlarla ilgilenildiğinde, siyasi iktidar alanına ve bunun insanlar üzerindeki etkilerine karşı körleşir. Özellikle, dağıtımcı adalet teorileri, baskı ve tahakküm olgusunu ve bunlardan kaynaklanan sorunları tartışmayı ihmal eder. Baskı, “bazı insanların sosyal olarak genel kabul görmüş ortamlarda tatmin edici ve yaygın becerileri öğrenmesini ve kullanmasını engelleyen sistematik kurumsal süreçlerden veya insanların oyun oynama ve başkalarıyla iletişim kurma veya duygularını ve sosyal hayata bakış açısını ifade etme yeteneklerini engelleyen kurumsallaşmış sosyal süreçlerden oluşur.” Tahakküm ise “insanların eylemlerini veya eylemlerinin koşullarını belirlemeye katılmalarını baskılayan ya da engelleyen kurumsal koşullardan oluşur.” Baskı, insanların kapasitelerini sergilemelerini engeller ve tahakküm, onların kamusal yaşama yeterli ölçüde katılmalarını kısıtlar.

**ARDAHAN'DA “HAYRAT” HALI ve DÜZ DOKUMA YAYGI GELENEĞİ**

**Dr. Öğr. Üye. Ebru SUBAŞI (Orcid ID: 000-0002-2254-0871)**

Ardahan Üniversitesi İnsani Bilimler ve Edebiyat Fakültesi, Sanat Tarihi Bölümü, Ardahan-Türkiye

**ÖZET**

Anadolu'nun farklı kullanım amaçlarına yönelik üretilen halı veya düz dokuma yaygıları arasında “hayrat”, “ölümlük-dirimlik” veya “sargı” adı ile bilinen dokuma örnekleri de mevcuttur. Bu dokumalar, cenaze merasimi sırasında, tabut veya sal üzerine örtülür, mezarlık dönüşünde ise ölen kişinin hayrına, camiye bağışlanır. Yakın zamanlara kadar, Ardahan ve köylerinde devam eden bu uygulamaya göre, “hayrat” adı verilen halı veya düz dokuma yaygılar, her genç kızın, diğer çeyizlik dokumalarına eklenir. Yoksa bile evlendikten sonra dokunarak, günü geldiğinde kullanılmak üzere bir kenarda hazır bekletilir ya da ölen kişinin ardından dokunabilir. 2022 yılında Ardahan merkez ve köylerinde sürdürdüğümüz araştırmalarda, camilerde üst üste serili vaziyette çok sayıda hayrat halı ve düz dokuma yaygısı tespit edilmiştir. Fotoğrafları çekilerek belgelenen eserler, yörenin ölüm ve defin gelenekleri de dikkate alınarak tanıtılmaya gayret edilmiştir.

**Anahtar Kelimeler:** Ardahan, Halı, Düz Dokuma Yaygı, Hayrat.

**“HAYRAT” (CHARITIES) CARPET AND FLAT WEAVE RUG TRADITION IN ARDAHAN**

### **ABSTRACT**

Among the carpets or flat weave rugs produced for different usage purposes in Anatolia, there are also examples of weave known as "hayrat" (charities), "ölümlük-dirimlik" (death- life/ funeral ceremony) or "sargı" (wrapping). These weaves are covered on a coffin or raft during the funeral, and donated to the mosque for the sake of the deceased upon returning from the cemetery. In accordance with this practice, which was preserved in Ardahan and its villages, until recently, carpets or flat weaves called "Hayrat" were added to other weaves of the dowry of each young girl. If not, then it is woven after the wedding or after the deceased and set aside for use when necessary. In the course of research that we conducted in the center and villages of Ardahan in 2022, a large number of hayrat carpets and flat weave rugs lying were found in mosques. Artifacts that have been photographed and documented have been attempted to represent the mortal and burial traditions of the region.

**Key Words:** Ardahan, Carpet (rug), Flat Weave Rug, Hayrat (Charities).

Türkiye'nin kuzeydoğusunda bulunun Ardahan, Kars'a bağlı bir ilçe iken, 1992 tarihinde, Bakanlar Kurulu Kararı ile il statüsüne getirilmiştir. Yaklaşık 2000-2200 m. yüksekliğe sahip ilin yüzölçümü 5.035,51 km<sup>2</sup> dir. Kuzey ve kuzeydoğudan Gürcistan, güney ve güneydoğudan Kars, güneybatıdan Erzurum, doğudan Ermenistan ve batıdan Artvin ile çevrili Ardahan'ın Posof, Damal, Göle, Hanak, Çıldır olmak üzere beş ilçesi bulunmaktadır (Kılıç, 2019: 108-109).

Ardahan'a adını veren kavmin M.Ö. VI. yüzyılda yöreye yerleşen, Kıpçaklar'ın kolu Arda Boyunun olduğu tahmin edilmekle birlikte (Kaplanoğlu, 2012: 27), yörede tarih öncesi kültürlerin ilk aşaması sayılan Paleolitik, Mezolitik ve Neolitik çağlara ait birçok yerleşim yerinin varlığı tespit edilmiştir. Kars-Ardahan çevresinde sırasıyla Kimmerler, İskitler, Persler, İskender İmparatorluğu, Arsaklar, Araplar, Selçuklular, Bagratlılar, Gürcüler, Harzemşahlar, İlhanlılar, Karakoyunlular, Akkoyunlular ve Osmanlılar hakimiyet kurmuştur (Sevindi, 2015: 571-572).

Asırlar boyunca çok sayıda medeniyete ev sahipliği yapması, Ardahan'ın kültürel birikimini zenginleştirmiş, bu sayede sanatsal ve estetik değerinin yanı sıra işlevsel yönü de ağır basan eserler üretilmiştir. Başta Türkmenler olmak üzere, yörede yerleşik her aile, soy ve topluluğun dokuduğu halı ve düz dokuma yaygılar bu açıdan dikkat çekicidir. Özellikle, yer sergisi, yastık, minder, heybe, çuval, namazlık, saf seccade gibi dokuma türleri arasında, "hayrat" adı verilen halı ve düz dokuma yaygılar, malzeme, renk, teknik ve desen özellikleriyle, diğer dokumalardan farklı olmasa bile kullanım amacıyla diğerlerinden ayrılır. Bir kişinin ölümünden önce veya sonra dokunarak hazır edilen ve günü geldiğinde tek seferlik kullanımının ardından, ölen kişinin hayrına camiye bağışlanan bu dokumalar, Türk kültürünün zenginliğini ortaya koyan önemli maddi ürünlerdir.

### **TÜRKLER'DE ÖLÜM VE DEFİN GELENEKLERİ İÇİNDE HALI VE DÜZ DOKUMA YAYGILARIN YERİ**

Ölüm; doğum ve yaşamın ardından insanın karşılaştığı en büyük kişisel tecrübe olmasına rağmen, ölü ve ölüm olgusunun çevresinde gelişen inanç ve uygulamalar, bu durumu toplumsallaştırmıştır.

Türk toplulukları yaşadıkları bölgenin siyasi ve idari yapısının sahip olduğu dinin etkisinde kalarak, ölülerini "yakma, ağaca asma ve toprağa gömme" gibi farklı uygulamaları gerçekleştirmiş olsalar da (Radloff, 1994: 130-133) hepsinin yaşanma biçimini Tengricilik inancı şekillendirmiştir (Ersoy, 2002: 87). Her zaman ikinci bir hayatın var olduğuna duyulan

inanç ise ölümlerin birtakım eşyalarla defnedilmesi geleneğini doğurmuştur. Örneğin İskitler, öbür dünyadaki sosyal düzenin bu dünyadakinden farklı olmadığını düşündükleri için, bu dünyadaki gibi kral, savaşçı veya hizmetkâr olarak kalmasını istedikleri kişilerin yanına ona göre öteberi koymuşlardır. Çin kaynaklarından elde edilen bilgilere göre, Hunlar ölümlerini iç ve dış olacak şekilde yapılmış iki kat tabut içine koyarak bu tabutları altın ve gümüş işlemeli kumaş ve kürklerle örtmüşlerdir (Onay, 2013: 239). Kaşgarlı Mahmud'un "ölu beylerin ve hanların üzerine örtülen bir kumaştan bahsetmesi ve buna "esük" denildiğini" söylemesinden yola çıkarak, cenaze üzerine kumaş vb. bir örtü serildiği anlaşılmaktadır. Bunun bir kumaş, halı-kilim veya keçe olması mümkündür (Deniz, 2012: 476). Hunların özellikle hanedan üyeleri için yaptıkları kurganlara koydukları (Onay, 2013: 239), ağaç tabutlar, ölu hediyeleri, ölen kişinin ölümler dünyasında bu hayattakine benzer bir yaşantı süreceğine inanıldığı için yapılmış minyatür boyutunda farklı nesnelere, küçük masalar, yiyecek kapları, yere serilen ve duvara asılan keçe, halı ve düz dokuma yaygılar, ölümler başının altına konulan yastıklar, yanına konulan silahlar, ölümler mezar giysisi, at kadvraları, at koşum takımları vb. birçok eser, cenaze törenlerine ait maddi kültür unsurlarının örnekleridir (Çoruhlu, 2004: 247).

Göktürklerin ölümler merasimleri Hunlardan pek farklı değildir. Bunlar ölümler ceket giydirip, beline kuşağını sardıktan sonra, yanına yayı ve önüne tahta kabını koymaktadır (Küçük, 2010: 287). Türklerin ölümlerini kıyafetleriyle gömmeler geleneklerinin yanı sıra İslamiyet'e girmeden önce "kiben" adını verdikleri bir tür kefen kullandıkları da bilinmektedir (Deniz, 2012: 476).

Geleneksel Türk dinindeki, ölümler ve defin çevresinde gelişen inanç ve uygulamalar İslam dininin kabulünden sonra da farklı biçimlere bürünerek varlığını korumuştur.

Bu bağlamda Orta Asya'da, özellikle Türkmenlerin ve Azerilerin defin törenlerine bakıldığında, dokuma geleneğinin devamlılığını koruduğu görülmektedir. Değişik fonksiyonlara sahip dokuma yaygılar arasında, özellikle cenaze törenlerinde, ölen kişi "ayatlık" veya "eyatlık" adı verilen halı ya da düz dokuma yaygıya sarılmaktadır (Türkmen, 2018: 662).

Kazakistan'da cenazenin keçeye veya bir beze sarılması geleneği, çok eski zamanlardan bu tarafa aynı şekilde devam etmektedir. Ölen kişi kefenlendikten sonra keçeye (kiyiz) sarılarak, üzerine halı veya kilim (gilem) örtülmektedir. Evde kılınan cenaze namazının ardından, sal benzeri bir aletle kabristana götürülür. Üzerindeki kumaşlar alınıp bir kenara konur. Kilim bir yere serilir ve definden sonra imam ve cenazeyi getirenler (süyekçiler) bunun üzerine oturarak dua eder. Cenaze keçe içinde mezara kadar getirilir ve keçeden çıkartılıp kefeniyle defnedilir (Deniz, 2012: 469).

Kırgızistan’da bir kişi öldüğünde tabutu üzerine halı, kilim veya keçe örtme geleneği vardır. Ölünün mezara götürülmesi sırasında ölen kişinin birinci dereceden akrabası, özellikle kızı veya oğlu tarafından bir örtü örtülür. Halk arasında da “oğlu halı örttü” şeklinde konuşulur (Deniz, 2012: 470).

Özbekistan’da ise ölen kişi yıkanıp, kefenlendikten sonra, halı, kilim ya da şalca (çözgü yüzlü dokuma) adı verilen dokumaya sarılır veya tabutu üzerine örtülür. Bu dokumalar, kimi zaman ölenin anısına, yakınları tarafından sonradan da dokunup, camiye veya türbeye serilebilir. Buna hatıra halı-kilem (estelik gilem) denir (Deniz, 2012: 470).

Özbeklerde, dört kollu tabutun üzerine “bahmal” denilen halı, kilim ya da şalca namazlağ (caynamaz) örtülür. Aynı gelenek Türkmenistan ve Anadolu’da da görülür. Türkmenlerde cenaze kilime sarılmaz ama tabut üzerine yeşil bir örtü serilir. (Deniz, 2012: 470-474).

Uygurlarda ise cenaze yıkandıktan sonra kefenlenerek, siyah veya beyaz bir keçeye sarılır. Defin sırasında keçe çıkarılıp, kefeniyle birlikte gömülür. Ölen kişinin tabutu üzerine halı, battaniye veya güzel ipten dokunmuş bir örtü örtülür (Deniz, 2012: 474).

Orta Asya’dan başlayarak dünyanın birçok yerindeki Türk topluluklarında varlığını devam ettiren ölüm ve sonrasına ait inanış ve uygulamalar, Anadolu’ya benzer şekilde taşınmıştır. Ancak değişen coğrafya, iklim ve karşılaşılan farklı kültürlerin yanı sıra, bu topraklarda yaşanan İslam ve ahiret inancı, ölümle ilgili emir ve yasakları da belirlemiştir. Dolayısıyla, yeniden şekillenen ölüm ve defin gelenekleri içinde, halı ve düz dokuma yaygıların kullanımı da Anadolu’ya özgü bir hal almıştır.

Anadolu insanı yaşı kemale erdikçe veya ciddi bir hastalığa yakalanınca, zihinsel ve fiziksel olarak ölüme hazırlanır. Bu sebeple, ölümden sonra kullanılması için sabun, gülsuyu, havlu takımı, beyaz tülbent, kefen vb. eşyaları bohçalayarak sandığında saklar. Kimi yörelerde, bir halı veya düz dokuma yaygı da cenaze töreni sırasında, tabut veya sal üzerine örtülmesi için, genç kızlar ya da evli kadınlar tarafından dokunarak hazır edilir. Evde dokuma yapmayı bilen yoksa, satın alınır veya sipariş üzerine dokutulur. Günü geldiğinde kullanılan bu dokuma yaygılar, mezarlık dönüşünde diğer aile bireyleri tarafından camiye bağışlanır. Böylece, camiye serilen bu dokumalar üzerinde cemaatin yapacağı her ibadetin sevabından, ölünün de istifade edeceği umulur.

Sayın, Prof. Dr. Bekir Deniz’in ifadesine göre bu gelenek Anadolu’da yeni ortaya çıkmış değildir. Muhtemelen Selçuklular ve Osmanlılar devrinde cami, zaviye, medrese, şifahane gibi dini ve sosyal yapıların halı, kilim vb. sergi ihtiyacı, vakıf gelirleriyle satın almanın yanı sıra bu şekilde bağış yoluyla da karşılanmıştır (Deniz, 1994: 284-287).

Camilere bağış yoluyla gelen halı ve düz dokuma yaygılar, aslında yazılı olmayan birtakım kurallar sayesinde de koruma altına alınmıştır. Öyle ki bu dokumalar, serildiği günden itibaren caminin malı sayıldığı için asla geri istenemez ve diğer dokumalar gibi alınıp, satılamaz. Uzun yıllar içinde camilerde üst üste serilmiş keçe, halı ve düz dokuma yaygı katmanları oluşmasının sebebi budur.

Aynı amaç için kullanılsa bile Anadolu'nun her yöresinde farklı isimler verilen bu halı ve düz dokuma yaygılar, Çanakkale'de "ölümlük kilim", Konya, Aksaray, Kayseri, Kırşehir çevresinde "ahretlik kilim", Manisa, Denizli, Aydın çevresinde "sargı kilimi" (Kayışoğlu Şahin, 2013: 57), Ereğli, Halkapınar (Konya), Aksaray çevresinde "sal halısı-kilimi" veya "salaca halısı-kilimi", Emirdağ (Afyon) civarında "ölümlük", Isparta çevresinde "ölümlük-dirimlik" veya "ahretlik halı-kilim" (Deniz, 2012: 467), yine Isparta civarında "sargı kilimi" (Kılıçarslan ve Etikan, 2015: 79), Çameli (Denizli) yöresinde "ölümlük kilim" (Sökmen, 2021: 108), Burdur civarında "ölümlük-dirimlik" (Güven, 2022: 172) gibi isimlerle anılır.

#### **ARDAHAN VE ÇEVRESİNDE "HAYRAT" DOKUMALARI**

Ardahan'da, ölüm çevresinde gelişmiş, bir dizi dini ve sosyal uygulama mevcuttur. Ölüm olayı vuku bulduğunda öncelikle kişinin çenesi beyaz bir tülbent ile bağlanır. Kolları yanına konur. Bacakları da düzeltilerek ayakları başparmaklarının ucundan bağlanır. Ölen kişinin, üzerindeki mevcut kıyafetleri çıkarılmadan, bir beze, battaniyeye veya bir kilime sarılarak, yönü kibleye gelecek şekilde hazırlanan yer yatağına yatırılır. Mevta çok vakit geçirilmeden yıkanarak, kefenlenir. Namazının kılınmasının ardından cenaze, tabut veya yörede "dört kollu" denilen, iki kalın ahşap sopanın arasına, özel olarak dokunmuş bir kilimin dikilmesiyle yapılmış, sal benzeri aracın üzerine sırt üstü yatırılır. Üzerine ise "hayrat" adı verilen halı veya düz dokuma yaygı örtülür. Mezarlığa taşınan cenaze erkek ise, defin sırasında dokuma toparlanarak bir kenara alındıktan sonra defin işlemi gerçekleştirilir. Ancak ölen kişi kadın ise üzerindeki dokuma yaygı, karşılıklı kenarlarından tutularak, yukarı doğru kaldırılır. Paravan gibi kullanılan bu halı-kilim sayesinde, cenazenin, nikah düşen erkekler tarafından görülmesi engellenir. Defin işlemi bittikten sonra, mezarlık dönüşünde bu halı veya düz dokuma yaygı camiye bağışlanır (19.09.2022 tarihinde Arif Hocaoğlu'ndan şifahen alınan bilgilere göre). Geçmiş yıllarda kadın mevta kabre konurken, kimi zaman paravan niyetine çarşaf veya kumaş da kullanılmış. Bu kumaş, defin işleminin ardından caminin imamına ya da kadın gassala verilmiş. Ancak son yıllarda bu gelenek terkedilmiştir (11.07.2022 tarihinde Turan Şimşek'ten şifahen alınan bilgilere göre).

Köklü bir dokumacılık geçmişine sahip Ardahan'da, hayrat dokumaları kız çeyizlerinin bir parçası olabileceği gibi, kadın evlendikten sonra da kendisi ve kocası adına bir halı veya düz dokuma yaygıyı, kendi elleriyle dokuyarak, kullanılacağı güne kadar bir kenarda bekletir. Hazırda böyle bir dokuması olmayanlar, birinci dereceden bir akrabasının ölümünün ardından da dokuyabilir. Sonradan dokunan hayrat halı-kilimlerinin üzerinde, çoğu zaman ölen kişinin isim, soy isim, ölüm tarihi vb. bilgiler yer alır. Bu kitabi bilgiler halı veya düz dokuma yaygıya diğer nakışlar gibi dokunur (11.07.2022 tarihinde Turan Şimşek'ten şifahen alınan bilgilere göre).

Yörede hayrat dokumaları, ailenin ekonomik durumu iyi ise halı, orta halli ise kilim, bunların ikisini de karşılayacak gücü yoksa keçeden yapılır. Ancak ne olursa olsun hayrat halı-kilim-keçesi başka işlerde kullanılmaz. Bir yere serilmez. Çok darda kalırsa bile satılmaz (19.09.2022 tarihinde Melek Hocoğlu'ndan şifahen alınan bilgilere göre).

Yöre halkı, hayrat halı veya düz dokuma yaygınının, tüm masraflarının %100 helal paradan karşılandığından emin olmak ister. Çünkü bu dokumayı yapmaktaki amacı zaten Allah'ın rızasını kazanmak ve sevap işlemektir. Bundan dolayı dokumayı yapacak kadın kendi eliyle beslediği koyunun yününden dokumasını yapar veya tavuğu, koyunu, ineğinden elde ettiği yumurta, süt, yoğurt, peynir vb. yan ürünleri satarak kazandığı parayı bu işe harcar (19.09.2022 tarihinde Arif Hocoğlu'ndan şifahen alınan bilgilere göre).

Ardahan'ın merkez ve köylerinde yaptığımız araştırmalarda, hemen her camide karşılaştığımız, hayrat halı ve düz dokuma yaygıları, malzeme, renk, teknik ve üslup bakımından, özel bir kurguya sahip değildir. Bütünüyle yörenin gelenekli dokuma karakterini bu dokumalarda da görmek mümkündür. Genellikle taban halısı-kilimi, saf seccade veya namazlık boyutlarında dokunmuştur.

### **DEĞERLENDİRME ve SONUÇ**

Türk topluluklarında ölümden sonraki hayatla ilgili inanç ve uygulamalar, Anadolu'ya taşınırken İslam'daki Ahiret anlayışıyla yeniden şekillenmiştir. Orta Asya'da ölüm ve defin gelenekleri içinde önemli bir yer tutan halı ve düz dokuma yaygılar, bugün farklı şekillerde de olsa hâlâ kullanılmaktadır. Anadolu'nun birçok yöresinde tabut üzerine örtülerek, cenazenin son yolculuğunda ona eşlik eden ve mezarlık dönüşünde camiye bağışlanan bu dokumalar, Ardahan çevresinde köklü bir geçmişe sahiptir.

Ardahan nüfusunun çoğunluğunu oluşturan Oğuzların Karapapak Boyundan gelen Terekemelerin (Konukçu, 1999: 47) yanı sıra kendilerini Türkmen ve yerli olarak tanımlayan

diğer Türkmen gruplarının geçmişten günümüze büyük bir bağlılıkla devam ettirdikleri dokumacılık faaliyetleri sayesinde, camilere bağışlanan halı ve düz dokuma yaygı sayısı da oldukça fazladır.

Geçmiş yıllarda camilere bağışlanan halı ve düz dokuma yaygıların bakımını yöre halkı üstlenmiştir. Bu amaçla her hafta veya iki haftada bir, mahalle ve köy halkından genç kızlar, kadınlar, imece usulüyle camilerin halılarını silkeler, süpürür, her yerin tozunu alırlardı. Ayrıca her sene yaz ayında da camilerin imamları ile cemaatin ortak kararıyla belirlenen bir günde, bütün keçe, halı ve düz dokuma yaygılar toplanarak, dere kenarlarına veya pınar başlarına götürülerek yıkanır (06.07.2022 tarihinde Arife Özcan'ndan şifahi alınan bilgilere göre).

Ancak son yıllarda camiler, duvardan duvara fabrika halıları ile kaplandıkça, bağışlanan dokumalar ya yeni döşemelerin altında kalmış ya da bir köşeye üst üste istif edilmiştir. Camilerin olumsuz ısı ve nem koşullarından dolayı, birçok dokuma çürüme tehlikesiyle karşı karşıyadır.

Yörede çok sık karşılaşılacakla birlikte, bazı camilerde hırsızlık olayları da yaşanmıştır. Bu durumun önüne geçebilmek için, değerli görülen kimi dokumalar ya imamların evlerinde koruma altına alınmış veya camilerin kapıları vakit namazları dışında kilitlenerek önlem alma yoluna gidilmiştir.

Son yıllarda yörede dokumacılık faaliyetleri gerilemeye başladığı için camilere bağışlanan halı ve düz dokuma yaygı sayısı da yok denecek kadar azalmıştır. Bu durumla bağlantılı olarak yöredeki “hayrat” geleneği de unutulmaya başlamıştır. Günümüzde sal veya tabut üzerine örtmek için, camiden tedarik edilen, üzerinde Kur'an-ı Kerim'den ayetlerin yazılı olduğu yeşil renkli örtüler kullanılmaktadır. Ayrıca tabutun üstüne, ölen kadın ise başörtüsü, yazma, erkek ise şapka, bere, kız çocuğu ise gelinlik, duvak, asker ise üniformasının konulduğu da görülmektedir.

Günümüz koşullarında geleneği yeniden canlandırmak pek mümkün görünmese de mevcut halı ve düz dokuma yaygıların koruma altına alınarak gelecek kuşaklara aktarılması, ayrıca bu örnekler doğrultusunda yöredeki dokumacılık faaliyetlerinin yeniden canlandırılması önem taşımaktadır.

**ABSTRACT**

In the Turkish Education System, English course is taught within the framework of the English Language Curriculum prepared by the Ministry of National Education Board of Education. The "target skills" in the English Language Curriculum constitute the main purpose of the English course. It is of great importance that English teachers make students acquire these "target skills" in the education and teaching process. The role of the pre-service English Language Teaching Undergraduate Program is fundamentally and primarily effective in helping teachers acquire target skills to students. The Ministry of National Education carries out continuous studies in the field of education programs, as a requirement of the situation of Turkey, which is in the process of membership to the European Union, in the context of English language teaching and the expectations of the epoch from individuals in terms of language. As a result of these studies, the ministry prepared English Language Curricula at primary, secondary and high school levels in 2018 and gave practice instruction. This situation brought up the development of the English Language Teaching Undergraduate Program of Education Faculties, which train English teachers, in line with the expectations. The Council of Higher Education, especially taking into account the changes made in primary education programs, has started studies in order to make the necessary updates in the English Language Teaching Undergraduate Program. The Council of Higher Education aimed to meet the expectations of the Ministry of National Education for English lessons and teachers with the English language teaching undergraduate program prepared in 2018. The "target skills" included in the English Language Curricula prepared by the Ministry of National Education for the 2nd, 3rd, 4th, 5th, 6th, 7th and 8th Grades in Primary and Secondary Schools in 2018 and The English Language Teaching Undergraduate Program prepared by the Higher Education Council and started to be implemented in 2018 are the subjects of this study. It is of importance that English teachers who graduated from the English Language Teaching Undergraduate Program are competent in making students acquire the target skills in the

English Language Teaching Program. In this framework, Examining the English Language Teaching Undergraduate Program in terms of Target Skills in the English Language Curriculum reveals the significance of this study. The aim of this study is to examine

the English Language Teaching Undergraduate Program in terms of the target skills in the Primary and Secondary School English Language Curriculum and to make the necessary evaluations. Within the framework of this main purpose, answers to the following questions were sought:

1. What are the compulsory Field Education courses in the English Language Teaching Undergraduate Program and how is their distribution according to the semesters?
2. What are the target skills in the English Language Curriculum?
3. What are the English Language Teaching Undergraduate Program courses that these target skills are related to and what are the statements in the contents of these courses?
4. How is the distribution of the statements related to the English Language Curriculum Target Skills in the courses in the English Language Teaching Undergraduate Program according to the semesters? In this study, qualitative research method was used. The data of the research were collected through document analysis. This study is limited to the English Language Curriculum prepared by the Ministry of National Education for Primary and Secondary Schools' 2-8. grades and the English Language Teaching Undergraduate Program prepared by the Council of Higher Education for Education Faculties. Elective courses were not included in the study. The data sources of the study, Primary and Secondary School 2-8 Grade English Curriculum, were obtained from the Ministry of National Education Website; The English Language Teaching Undergraduate Program was obtained from the website of the Council of Higher Education. First, the English Language Curriculum was examined and target skills were presented. Then, the English Language Teaching Undergraduate Program was examined; courses related to the target skills in the English Language Curriculum and their contents were tried to be determined. The data were shown in tables; interpretations of the findings were made. Based on the findings, the conclusions and necessary recommendations were given.

**Keywords:** English Language Teaching, Undergraduate Program, Primary And Secondary School English Language Curriculum, Target Skills.

## **1.INTRODUCTION**

Language and language learning is an indispensable element for human beings. Language is important for the individual's self-expression, as well as for communicating with other individuals. This is a significant issue that should be considered in the socialization process of the individual.

In today's world, where the interaction between societies and ancient cultures continues continuously and intensively, it is an important competence for individuals to use different languages effectively as well as having a command of their mother tongue. People with this competence, while giving importance to global and national elements, also contribute to the construction of societies that are sensitive to different cultures and values (Council of Europe, 2001). In today's world, where the need and opportunities for interpersonal communication have increased, the demand for language learning has increased. Undoubtedly, one of the most important tools that can be used to "keep people of different languages, cultures and nationalities together with a common consciousness" in the European Union countries is a language teaching that includes qualified and rich learning opportunities that can serve the idea of multilingualism (Aytan, Göksel Günaydın, 2021).

Arousing interest and developing an attitude towards learning English at primary and secondary school level is an important issue in the Turkish Education System. In this process, the acquisition of basic language skills depends on the quality of the teacher and the content of the curriculum prepared. The quality of the teacher depends on the pre-service undergraduate programs prepared by the Council of Higher Education, and the quality of the teaching program depends on the quality of the English Language Curriculum prepared by the Ministry of National Education. In both cases, curricula are of great importance.

The curriculum is a program that generally consists of certain categories of knowledge and focuses on skill and practice in some schools, and aims to gain knowledge and skills in a planned manner in line with the aims of the education program (Varış, 1996). The curriculum is a guide that shows the subjects to be taught in various classes and courses at a certain teaching level, their purposes, how many hours each lesson will be taught in a week according to the classes, and teaching methods and techniques (Büyükkaragöz, 1997). In other words, a curriculum is a mechanism of experiences that includes all activities related to the teaching of

a lesson that is planned to be taught to the individual at school or outside of school (Demirel, 2005). Curriculum is a program designed to help students acquire the knowledge and experience of humanity as of its historical development, depending on the goals of the schools, the needs of the individual

and in order to improve his/her abilities, in a way that can affect his/her thoughts, feelings and behaviors (Kocaçınar, 1966; Hesapçioğlu, 1988). Curriculum is a planned effort to influence students in a certain way and to develop their personalities (Alicıgüzel, 1979; Hesapçioğlu, 1988). The curriculum covers all activities related to teaching-learning processes. In another aspect, the curriculum is the whole of the syllabuses (Küçükahmet, 1999). Curriculum is a guide or a project of this nature that shows what, why and how to take place in the teaching-learning process of a course (Özçelik, 1987; Aykaç et al., 2006). However, this covers all activities for the realization of practical objectives rather than a printed guide (Aykaç et al., 2006). The common point in these definitions is that the curriculum is a subcategory of the education program, and it is a process that includes all the activities related to the teaching of the lessons, related to the behaviors related to the knowledge, emotions and skills that are planned to be acquired by the individual at school or out of school.

In the Turkish Education System, the English course is taught within the framework of the English Language Curriculum prepared by the Ministry of National Education Board of Education and Discipline. English language curriculum has been revised in accordance with the general objectives of Turkish National Education as defined in the Basic Law of the National Education No. 1739, along with the Main Principles of Turkish National Education. In designing the new English language curriculum, the principles and descriptors of the Common European Framework of Reference for Languages: Learning, Teaching, Assessment (CEFR) were closely followed. The CEFR particularly stresses the need for students to put their learning into real-life practice in order to support fluency, proficiency and language retention (CoE, 2001); accordingly, the new curricular model emphasizes language use in an authentic communicative environment. As no single language teaching methodology was seen as flexible enough to meet the needs of learners at various stages and to address a wide range of learning styles, an eclectic mix of instructional techniques has been adopted, drawing on an action oriented approach in order to allow learners to experience English as a means of communication, rather than focusing on the language as a topic of study. Therefore, use of English is emphasized in classroom interactions of all types, supporting learners in becoming language users, rather than students of the language, as they work toward communicative

competence (CoE, 2001). As the CEFR considers language learning to be a lifelong undertaking, developing a positive attitude toward English from the earliest stages is essential; therefore, the new curriculum strives to foster an enjoyable and motivating learning environment where young learners/users of English feel comfortable and supported throughout

the learning process. Authentic materials, drama and role play, and hands-on activities are implemented to stress the communicative nature of English. At the 2nd and 3rd grade levels, speaking and listening are emphasized; while reading and writing are incorporated in higher grades as students become more advanced. Throughout each stage, developmentally appropriate learning tasks provide a continued focus on building the learner autonomy and problem-solving skills that are the basis for communicative competence. In framing the new curricular model for English, no single teaching methodology has been designated. Instead, an action-oriented approach grounded in current educational research and international teaching standards has been adopted, taking into account the three descriptors of the CEFR comprising learner autonomy, self-assessment, and appreciation for cultural diversity (CoE, 2001). In doing so, it is expected that learners will become confident and proficient users of English, developing appreciation for their own unique culture while learning to understand and value a broad spectrum of international languages and cultures in accordance with CEFR's (MEB, 2018).

The curricular model is divided into 3 learning stages with respect to the language uses, functions and learning materials that are introduced. At the earliest levels, comprising grades 2 through 4, the main emphasis is on listening and speaking. Reading, writing, and grammatical structures are not a focus at this stage, in line with research indicating that younger children learn languages best through songs, games, and hands-on activities (Cameron, 2001). Thus, reading and writing tasks at the lower grade levels are limited. At the earliest stages, learners are introduced to English through cognates; these are believed to provide a bridge between languages, helping learners to transition from the known to the unknown using terms that are easily recognizable (Rodriguez, 2001). This concept is supported by Krashen's (1988) argument that language input must be interesting, relevant and comprehensible to stimulate comprehension. In the 5th and 6th grades, as students continue to develop their language skills, exposure to short texts is introduced. At the same time, these learners may participate in controlled writing activities such as filling out a club membership registration card with their name, date of birth, address, and other concrete, factual

information. In the 7th and 8th grades, older students who have formed the necessary foundation for an understanding of literacy issues will then be exposed to reading and writing as an integral aspect of language learning, such as reading simple texts or writing short, simple stories about their friends (Bayyurt & Alptekin, 2000). This approach follows Cummins' (1984) model, which advocates a progression from cognitively undemanding, context-embedded activities to cognitively demanding, context-

embedded tasks, moving from familiar to unfamiliar concepts in building language and literacy skills (MEB, 2018).

The "target skills" in the English Curriculum constitute the main purpose of the English course. It is of great importance that English teachers acquire these "target skills" in the education process. The role of the pre-service English Language Teaching Undergraduate Program is fundamentally and primarily effective in helping teachers gain target skills to students.

The Ministry of National Education carries out continuous studies in the field of education programs, as a requirement of the situation of Turkey, which is in the process of membership to the European Union, in the context of English language teaching and the expectations of the age from individuals in terms of language. As a result of these studies, in 2018, the Ministry of National Education prepared English Lesson Curriculums at primary, secondary and high school levels and gave practice instructions. This situation brought up the development of the English Language Teaching Undergraduate Program of Education Faculties, which train English teachers, in line with the expectations. The Council of Higher Education has started studies to make necessary updates in the English Language Teaching Undergraduate Program, especially taking into account the changes made in primary education programs. The Council of Higher Education aimed to meet the expectations of the Ministry of National Education for English lessons and teachers with the English Language Teaching Undergraduate Program prepared in 2018.

The "target skills" included in the English Language Curricula prepared by the Ministry of National Education for the 2nd, 3rd, 4th, 5th, 6th, 7th and 8th Grades in Primary and Secondary Schools in 2018 and The English Language Teaching Undergraduate Program prepared by the Higher Education Council and started to be implemented in 2018 are the subjects of this study.

It is of importance that English teachers who graduated from the English Language Teaching Undergraduate Program are competent in making students acquire the target skills in the English Language Teaching Program. In this framework, Examining the English Language Teaching Undergraduate Program in terms of Target Skills in the English Language Curriculum reveals the significance of this study.

The aim of this study is to examine the English Language Teaching Undergraduate Program in terms of the target skills in the Primary and Secondary School English Language Curriculum and to make the necessary evaluations. Within the framework of this main purpose, answers to the following questions were sought:

- 1.What are the compulsory Field Education courses in the English Language Teaching Undergraduate Program and how is their distribution according to the semesters?
- 2.What are the target skills in the English Language Curriculum?
- 3.What are the English Language Teaching Undergraduate Program courses that these target skills are related to and what are the statements in the contents of these courses?
- 4.How is the distribution of the statements related to the English Language Curriculum Target Skills in the courses in the English Language Teaching Undergraduate Program according to the semesters?

In this study, qualitative research method was used. The data of the research were collected through document analysis. This study is limited to the English Language Curriculum prepared by the Ministry of National Education for Primary and Secondary Schools' 2-8.grades and the English Language Teaching Undergraduate Program prepared by the Council of Higher Education for Education Faculties. Elective courses were not included in the study.The data sources of the study, Primary and Secondary School 2-8 Grade English Curriculum, were obtained from the Ministry of National Education Website; The English Language Teaching Undergraduate Program was obtained from the website of the Council of Higher Education. First, the English Language Curriculum was examined and target skills were presented. Then, the English Language Teaching Undergraduate Program was examined; courses related to the target skills in the English Language Curriculum and their contents were tried to be determined. The data were shown in tables; interpretations of the findings were made. Based on the findings, the conclusions and necessary recommendations were given.

This section, in line with the purpose of the research, contains the compulsory Field Education courses in the English Language Teaching Undergraduate Program and their distribution according to the semesters; the target skills in the Primary and Secondary School English Language Curriculum; information and comments on the English Language Teaching Undergraduate Program courses that these target skills are related to and the statements in the contents of these courses.

### 2.1. Compulsory Field Education Courses in the English Language Teaching Undergraduate Program and their Distribution by Semester

Information on the compulsory Field Education courses in the English Language Teaching Undergraduate Program and their distribution according to the semesters is given in Table 1.

**Table 1.** Compulsory Field Education Courses and Distribution by Semester

Undergraduate Courses (14+12=26)	Semesters								Total	
	1	2	3	4	5	6	7	8	F	%

\* Courses whose names and contents are not related to target skills.

As seen in Table 1, the number of "Field Education" courses in the English Language Teaching Undergraduate Program is 26. While these courses (F=5) are in the 2nd semester with a rate of

19.23%, in the 1st (F=4), 3rd (F=4) and 4th (F=4) semesters with 15.38%; 11.54% in the 5th (F=3) and 6th (F=4) semesters; It is in the 7th (F=7) semester with a rate of 7.69% and in the 8th (F=2) semester with a rate of 3.85%.

## 2.2.Target Skills in the English Language Curriculum

Information on the target skills in the English Language Curriculum prepared for the 2nd, 3rd, 4th, 5th, 6th, 7th and 8th grades of Primary and Secondary Schools is given in Table 2.

**Table 2.**Target Skills in the English Curriculum (MEB, 2018: 93)

Levels [CEFR*] (Hour/Week)	Grade	Target Skills	Main Activities/Strategies
<b>1</b> [A1] (2)**	2	Listening and Speaking	Total Physical Response (TPR) / Crafts / Drama
	3	Listening and Speaking Very Limited Reading and Writing***	
	4	Listening and Speaking Very Limited Reading and Writing***	
<b>2</b> [A1] (3)**	5	Listening and Speaking Limited Reading *** Very Limited Writing***	Drama/ Animation
	6	Listening and Speaking Limited Reading *** Limited Writing***	
<b>3</b> [A2] (4)**	7	<b>Primary:</b> Listening and Speaking <b>Secondary:</b> Reading and Writing	Theme*****
	8	<b>Primary:</b> Listening and Speaking <b>Secondary:</b> Reading and Writing	

\*CEFR: Common European Framework of Reference for Languages.

\*\*Number of Lesson Hours per Week.

\*\*\*\*The very limited skills in the boxes with this sign refer to simple and short spoken/written texts and materials. For example, in the 2<sup>nd</sup> and 4<sup>th</sup> grades, the main goal is the development of listening and speaking. As Cameron (2001) said, spoken language for children is the language that the child first encounters, understands, practices and learns (p. 18). Therefore, activities aimed at improving reading and writing skills should not exceed the vocabulary level (Example: Children can write “cat” under the cat picture). In addition, reading and writing activities of up to 25 words can be done in limited skills. For example, in the 5<sup>th</sup> and 6<sup>th</sup> grades, reading activities can reach the sentence level, and older students in the 7<sup>th</sup> and 8<sup>th</sup> grades can use reading and writing as an important part of language learning as they acquire the basic knowledge of literacy activities.

\*\*\*\*The main features of theme-based teaching are: Highly contextualized learning environment, vocabulary and grammar structures handled within the framework of a topic, skills and activities that integrate with the theme chosen according to the subject of the lesson (eg, scientists, geography, responsibilities at home, etc.) that enable meaningful situation-based learning.

As seen in Table 2, three language levels have been determined in the Turkish Education System according to the Primary and Secondary School English Language Curriculum, introduced language uses, functions and learning materials. The first level covers grades 2, 3 and 4, the second level covers grades 5 and 6, and the third level covers grades 7 and 8.

On the other hand, there are two language levels in the Primary and Secondary School English Language Curriculum, A1 and A2, according to the Common European Framework of Reference for Languages [CEFR]. A1 language level covers 2nd, 3rd, 4th, 5th and 6th grades, while A2 language level covers 7th and 8th grades. While "listening and speaking" skills, which are among the target skills in the English Language Curriculum, are included in all grades (2-8), "reading and writing" skills are in all grades (3-8), except for the 2nd grade; "very limited reading and writing" skills in 3rd and 4th grades; "limited reading" skill in 5th and 6th grades; "very limited writing" skill in 5th grade; "limited writing" skill in 6th grade; "reading and writing" skills are included in 7th and 8th grades. However, in 7th and 8th grades, "listening and speaking" skills are given as "primary", while "reading and writing" skills are given as "secondary".

### **2.3.English Language Teaching Undergraduate Program Courses Related to Target Skills in the English Language Curriculum and Statements in the Contents of These Courses**

#### **2.3.1.English Language Teaching Undergraduate Program Courses Related to the Target Skills in the English Language Curriculum**

Information on the English Language Teaching Undergraduate Program Courses Related to the Target Skills in the English Language Curriculum is given in Table 3.

**Table 3.** English Language Teaching Undergraduate Program Courses related to the Target Skills in the English Language Curriculum

	Semesters	Undergraduate Courses	Target Skills			
			Listening	Speaking	Reading	Writing
Courses Whose Names and Contents Are Related to Target Skills	1	Reading Skills 1			✓	
		Writing Skills1				✓
		Listening and Pronunciation 1	✓	✓		✓
		Verbal Communication Skills 1		✓		
	2	Reading Skills 2		✓	✓	✓
		Writing Skills 2			✓	✓
		Listening and Pronunciation 2	✓			✓
		Verbal Communication Skills 2		✓		
	3	Critical Reading And Writing		✓		✓
	Total		2	5	3	6
Courses Whose Contents Are Related to Target Skills	3	Linguistics 1	✓	✓		
	4	Linguistics 2		✓		
	5	Teaching English Language Skills 1	✓	✓		
	6	Teaching English Language Skills 2			✓	✓
	8	English Exam Preparation and Evaluation	✓	✓	✓	✓
	Total		3	4	2	2
<b>The overall total</b>			5	9	5	8

As seen in Table 3, the number of compulsory "Field Education" courses in the English Language Teaching Undergraduate Program is 14, which are related to the target skills in the English Language Curriculum. The number of these courses, whose names and contents are related to the target skills in the English Language Curriculum, is 9. These courses are included in the first three semesters of the undergraduate program. The number of courses whose only contents are related to the target skills in the English Language Curriculum is 5. These courses take place in the 3rd, 4th, 5th, 6th and 8th semesters of the undergraduate program.

Among the English Language Teaching Undergraduate Program Courses, 9 courses whose names and contents are related to the target skills in the English Language Curriculum; 6 of them are related to "writing", 5 of them are "speaking", 3 of them are "reading" and 2 of them are "listening" target skills. Of the English Language Teaching Undergraduate Program Courses, 5 courses whose only contents are related to the target skills in the English Language Curriculum; 4 of them are related to "speaking", 3 of them are "listening" and 2 of them are related to "reading" and "writing" target skills.

In general, of the 14 English Language Teaching Undergraduate Program courses that are related to the target skills in the English Language Curriculum, 9 are speaking, 8 are writing, and 5 are "listening" and "reading skills".

While "English Exam Preparation and Evaluation" is the only course related to all target skills out of 14 English Language Teaching Undergraduate Program courses related to the target skills in the English Language Curriculum; It is seen that the "Listening and Pronunciation 1" course "Listening-Speaking-Writing"; "Reading Skills 2" course "Speaking-Reading-Writing"; "Listening and Pronunciation 2" course "Listening-Writing"; "Writing Skills 2" and "Teaching English Language Skills 2" course "Reading-Writing"; "Critical Reading and Writing" course "Speaking-Writing"; "Linguistics 1" and "Teaching English Language Skills 1", "Listening-Speaking"; "Verbal Communication Skills 1", "Verbal Communication Skills 2" and "Linguistics 2" course only "Speaking"; "Reading Skills 1" course only "Reading"; "Writing Skills 1" course is only related to the "Writing" target skills.

### **2.3.2. Statements in the Contents of English Language Teaching Undergraduate Program Courses Related to the Target Skills in the English Language Curriculum**

Table 4 provides information on the statements related to the Target Skills in the English Language Teaching Undergraduate Program courses and their contents, whose both names and contents are related to the Target Skills in the English Language Curriculum.

**Table 4.** English Language Teaching Undergraduate Program Courses and their contents, whose names and contents are related to the Target Skills in the English Language Curriculum

Courses	Statements
Reading Skills 1 (1 <sup>st</sup> Semester)	<ul style="list-style-type: none"> <li>* To grasp different perspectives by using authentic <b>reading</b> pieces such as newspapers, magazines, reviews and academic articles,</li> <li>* Gaining high-level <b>reading</b> skills such as predicting the connections between sentences and the main idea of the article, reaching the main idea and using semantic clues between sentences,</li> <li>* Gaining the habit of <b>reading</b> inside and outside the classroom.</li> </ul>
Writing Skills1 (1 <sup>st</sup> Semester)	<ul style="list-style-type: none"> <li>*Description, comparison, discussion, text production with the types of narration, summary <b>writing</b>, interpretation,</li> <li>*<b>Writing</b> short stories, reviews (on books and/or movies) and formal/informal letters.</li> </ul>
Listening and Pronunciation 1 (1 <sup>st</sup> Semester)	<ul style="list-style-type: none"> <li>*Analysis of authentic <b>listening</b> materials and <b>speech</b> phrases taken from different contexts;</li> <li>*Sound differences and phonological <b>transcription</b> of problematic sounds are covered,</li> <li>*High-level <b>listening</b> skills; basic <b>listening</b> and <b>speaking</b> skills such as vowels, consonants, word stress and intonation, and phonological <b>transcription</b> studies are done.</li> </ul>
Verbal Communication Skills 1 (1 <sup>st</sup> Semester)	<ul style="list-style-type: none"> <li>*Developing <b>verbal communication</b> skills by using appropriate expressions and strategies for various verbal communication situations,</li> <li>* Developing the ability to <b>express</b> feelings and thoughts effectively through mutual <b>speaking</b>, presentation and discussion activities,</li> <li>*Development of <b>speaking</b> and hearing comprehension skills by using up-to-date, authentic, audio-visual materials.</li> </ul>
Reading Skills 2 (2 <sup>nd</sup> Semester)	<ul style="list-style-type: none"> <li>* To be able to comprehend direct and indirect, plain and figurative meanings by examining the information in <b>reading</b> texts,</li> <li>* To be able to convey personal opinions to the texts <b>read</b> in short <b>verbal</b> and <b>written</b> forms.</li> </ul>
Writing Skills 2 (2 <sup>nd</sup> Semester)	<ul style="list-style-type: none"> <li>*<b>Read to write, write to be read,</b></li> <li>* Raising awareness about the applications to be made in the pre-, during and post-<b>writing</b> stages,</li> <li>* <b>Rewriting</b> with explanation,</li> <li>* Composition and homework report <b>writing</b>.</li> </ul>
Listening and Pronunciation 2 (2 <sup>nd</sup> Semester)	<ul style="list-style-type: none"> <li>*<b>Listening</b> sub-skills such as <b>taking notes</b>, making predictions, reaching certain and detailed information, making sense of the context, understanding the essence of the content,</li> <li>*The focus is on authentic <b>listening</b> materials with different English accents drawn from a variety of fields, such as interviews, films, songs, lectures, television programs and news broadcasts.</li> </ul>
Verbal Communication Skills 2 (2 <sup>nd</sup> Semester)	<ul style="list-style-type: none"> <li>*Developing advanced <b>verbal communication</b> skills,</li> <li>*Developing the ability to <b>express</b> feelings and thoughts appropriately through <b>verbal</b> activities such as interviews, presentations and discussions,</li> <li>*Developing advanced <b>speaking</b> and hearing comprehension skills through the introduction and application of hearing comprehension techniques and strategies.</li> </ul>
Critical Reading And Writing (3 <sup>rd</sup> Semester)	<ul style="list-style-type: none"> <li>*To be able to <b>summarize</b> and/or <b>report</b> current studies selected from the field of English Language Education.</li> </ul>

As seen in Table 4, the number of statements included in the contents of the English Language Teaching Undergraduate Program courses, whose names and contents are related to the Target Skills in the English Language Curriculum, is 36. While 13 of these statements are related to "Speaking" target skill, 12 of them are related to "Writing"; 6 of them are related to "Reading"; 5 of them are related to "Listening" target skills.

Table 5 provides information on the English Language Teaching Undergraduate Program courses whose only contents are related to the Target Skills in the English Language Curriculum and the statements about the Target Skills in their contents.

**Table 5.** English Language Teaching Undergraduate Program courses and their contents whose only contents are related to the Target Skills in the English Language Curriculum

Courses	Statements
Linguistics 1 (3 <sup>rd</sup> Semester)	Research on brain and language, lateralization and handedness, evolution of language, human language functioning patterns, language use and language disorders (e.g. simultaneous <b>listening</b> test, split brain, WADA test) Phonology, acoustic, affective and <b>pronunciation</b> phonology, <b>speech</b> organs, phonemes, vowels and consonants, international phonology alphabet, double vowel, triple vowel, <b>utterance</b> ,
Linguistics 2 (4 <sup>th</sup> Semester)	Pragmatics: notation, intuition, principles of <b>speech</b> , speech-act and tact.
Teaching English Language Skills 1 (5 <sup>th</sup> Semester)	Different phases and techniques of <b>listening</b> , <b>speaking</b> , <b>pronunciation</b> and vocabulary teaching.
Teaching English Language Skills 2 (6 <sup>th</sup> Semester)	Detailed examination of different phases and techniques of <b>reading</b> , <b>writing</b> and grammar teaching.
English Exam Preparation and Evaluation (8 <sup>th</sup> Semester)	Types of questions used to measure <b>reading</b> , <b>writing</b> , <b>listening</b> , <b>speaking</b> , vocabulary and grammar levels.

As seen in Table 5, the number of statements included in the contents of the English Language Teaching Undergraduate Program courses, whose only contents are related to the Target Skills in the English Language Curriculum, is 14. While 7 of these statements are related to "Speaking" target skill; 3 of them are related to "Listening", 2 of them are related to "Writing" and "Reading" target skills.

#### **2.4. Statements Regarding the English Language Curriculum Target Skills in the Courses in the English Language Teaching Undergraduate Program**

Table 6 provides information about the English Language Curriculum Target Skills in the courses in the English Language Teaching Undergraduate Program.

**Table 6.** Statements Regarding the Target Skills in the Courses in the English Language Teaching Undergraduate Program and their Distribution by Semester

Target Skills	Courses Whose Names and Contents Are Related to Target Skills			Courses Whose Contents Are Related to Target Skills						Total
	Semesters			Semesters						
	1	2	3	3	4	5	6	7	8	
	f	f	f	f	f	f	f	f	f	F
Listening	3	2		1		1			1	8
Speaking	7	5	1	3	1	2			1	20
Reading	3	3					1		1	8
Writing	4	7	1				1		1	14
<b>Total</b>	17	17	2	4	1	3	2		4	50

As seen in Table 6, the number of statements regarding the English Language Curriculum Target Skills in the courses in the English Language Teaching Undergraduate Program is 50. While "Speaking" is in the first place (F=20) in terms of target skills, "Writing" (F=14) is in the second place; "Listening" (F=8) and "Reading" (F=8) target skills are in the third place.

In the distribution of the statements related to the Target Skills by semesters, the first semester (f=17) and the second semester (f=17) are in the first place, while the third semester (f=6) is the second; 8th semester (f=4) is in third place; 5th semester (f=3) is fourth; The 4th semester (f=1) is in the fifth place. In the 7th semester, there is no statement about the English Language Curriculum Target Skills.

### 3.CONCLUSION AND RECOMMENDATIONS

In this section, the compulsory Field Education courses in the English Language Teaching Undergraduate Program and their distribution according to the semesters; The target skills in the Primary and Secondary School English Curriculum; The results and suggestions about the English Language Teaching Undergraduate Program courses that these target skills are related to and the statements in the contents of these courses are included.

Most of the Compulsory Field Education courses (f=17/F=26) in the English Language Teaching Undergraduate Program are in the first four semesters. Others (f=9) are in the last four semesters. It is noteworthy that only one Compulsory Field Education course took place in the last semester. This situation can be considered as a challenging process for the students in the 1st and 2nd grades. It is useful to pay attention to ensure a balance as much as possible in the distribution of Compulsory Field Education courses over the semesters throughout the undergraduate education process. On the other hand, it has been determined that neither the names nor the contents of a significant part (f=12) of the Compulsory Field Education courses

(F=26) are related to the target skills in the Primary and Secondary School English Language Curriculum. It is thought that this situation will negatively affect teachers' competencies regarding their knowledge and skills on field education. This possible negative effect can be eliminated by associating all Compulsory Field Education course contents with the target skills in the Primary and Secondary School English Curriculum.

The Primary and Secondary School English Language Curriculum in the Turkish Education System is for three language levels. These three levels correspond to the two language levels in the Common European Framework of Reference for Languages. "Listening" and "Speaking" skills, which are among the target skills in the Primary and Secondary School English Language Curriculum, are given more place. "Reading" and "Writing" skills take the second place. While developing the Primary and Secondary School English Language Curriculum, it is important to restructure the existing language levels in terms of the language levels included in the Common European Framework of Reference for Languages. On the other hand, it is very important to include the four basic skills sufficiently and in a balanced way while the program is being restructured.

The number of compulsory "Field Education" courses in the English Language Teaching Undergraduate Program, whose names and contents are related to the target skills in the English Language Curriculum (f=9), is higher than the number of the courses whose only contents are related to the target skills in the English Language Curriculum (f=5). It is important that the names of the courses, along with their contents, are related to the target skills in the English Language Curriculum. Paying attention to this will positively affect the inclusiveness of the undergraduate program regarding the target skills in the primary and secondary school program.

Among the target skills while "Listening" is given more place in the Primary and Secondary School English Curriculum, there are mostly statements related to the "Speaking" target skill in the course contents of the English Language Teaching Undergraduate Program. For this reason, it is important to restructure the course contents of the English Language Teaching Undergraduate Program by taking into account the target skills and their ratios in the Primary and Secondary School English Language Curriculum.

It has been determined that the course contents of the English Language Teaching Undergraduate Program differ in terms of their relationship with the target skills in the English Language Curriculum. These differences can be eliminated by restructuring the

course contents of the English Language Teaching Undergraduate Program to cover all target skills.

It has been concluded that the number of statements in the contents of the English Language Teaching Undergraduate Program courses, whose both the names and the contents are related to the Target Skills in the English Language Curriculum, is higher than the number of the statements in the contents of the courses whose only contents are related to the Target Skills in the English Language Curriculum. This shows that course titles are important in terms of covering target skills. Therefore, as much as possible, target skills should be taken into account when determining course names along with the contents.

It has been determined that most of the statements in the contents of the courses in the English Language Teaching Undergraduate Program are related to the target skill of "Speaking", followed by the target skill of "Writing", and the statements related to the target skills of "Listening" and "Reading" in the last place. Elimination of these differences is possible by taking into account all target skills while restructuring the course contents.

It has been determined that the expressions related to target skills belong to the 1st and 2nd semesters at the same rates among the 8 semesters during the undergraduate education. The balanced distribution of the expressions related to the target skills according to the semesters can be possible with the balanced distribution of the courses related to the target skills.

All the results and suggestions given above require that the target skills in the Primary and Secondary School English Language Curriculum be carefully considered with many dimensions while the English Language Teaching Undergraduate Program is being developed.

## LİNUS TORVALDS'IN AÇIK KAYNAKLI MİMARİSİ VE UYGULANABİLİRLİĞİNİN ARAŞTIRILMASI

**Dr.Öğr. Üyesi Prof.Dr. İclal ALUÇLU(Orcid No: 0000-0002-8151-2811)**  
Dicle Üniversitesi Mimarlık Bölüm

**Yüksek Lisans Öğrencisi, Cihat İRVEN(Orcid No: 0000-0002-0685-7385)**  
Dicle Üniversitesi Fen Bilimleri Enstitüsü Mimarlık Anabilim Dalı

### ÖZET

Gelişen teknoloji ve kümülatif bir şekilde ilerleyen bilim ile modern yapı ve yapım yöntem-teknikleri, insanın var olduğu dönemden itibaren sürekli ilerlemiştir. Her çağın popüler yapım teknikleri toplumların öncelikle kültürel arayışlarının sonucu olarak buldukları iklim ve coğrafyadan esinlenerek oluşmuştur. Her ulus kendi coğrafyasından ve geçmişinden esinlenerek, yapım teknolojileri geliştirmiş ve bunun sonucunda çeşitli kültürel öğeler içeren yapılar ortaya koymuştur. Bu kültürel yapıların bir kısmı günümüze ulaşmıştır. Bazıları ise çağlar boyunca aşınımlara ve tahriplere uğrayarak yok olmuştur. Geçmişte olduğu gibi günümüzün dünyasında da, artan yapı ihtiyaçlarına yeni ve pratik yaklaşımlar ortaya çıkmıştır. Bunlardan biri olarak çalışmaya konu olan Linux işletim sisteminin mucidi Linus TORVALDS tarafında öne sürülen ekolojik “Açık Kaynaklı Ev” adlı yapı üretim ve planlama modelidir. Emek, yoğun konut tasarımı yaklaşımı, basmakalıp McMansionlar, daha yaygın ve düşük maliyetliken bu yeni modele göre konut tasarımı, fabrikasyon ve teknoloji bir arada kullanılarak, yüksek performanslı, düşük enerjili, masrafsız, esnek ve birden fazla yerde uygulanabilecek konutlar inşa edilebilecektir. Modele göre bu esnek DIY(kendin yap tasarım modeli) tasarım fikri konut endüstrisinin yeniden şekillendirilmesi için bir anahtar olabilecek ve malzemeler bu evlerin yapımında daha fazla kullanılacak. Bu çalışma, yazılımcı Linus TORVALDS'ın “Açık Kaynaklı Evler” olarak tanımladığı konut uygulama modeli çözümlenmesini, Anadolu’da uygulanabilirliği ve uygulandığı takdirde mimarideki ortaya çıkacak faydaların araştırılmasını kapsamaktadır. Çalışmaya konu olan problem, açık kaynaklı ev modelinin Anadolu’daki konut anlayışına pratik ve ekonomik yönden bir çözüm olup olmadığıdır. Söz konusu çalışmanın amacı ise; bu problemin çözümüne katkı sağlayıp, Türkiye’de ortaya çıkan konut ihtiyacını ekonomik ve pratik bir çözüme kavuşturulmasına teknolojik bir mimari model üzerinden ışık tutmaktır. Bu bağlamda çalışmada,

---

TORVALDS'in modeline uygun olarak uygulanmış yapı modelleri üzerinden "Açık Kaynaklı Evler" ve "Açık Kaynak Kodlu Mimari" temel prensibi ortaya konulacaktır. Modelin Anadolu'daki konut ihtiyacına ekonomik ve pratiklik yönünden katkısı incelenecektir.

**Anahtar Kelimeler:** Açık Kaynaklı Evler, Açık Kaynak Kodlu Mimari, Linus TORVALDS Mimarisi

**LINUS TORVALDS' OPEN SOURCE ARCHITECTURE AND RESEARCHING ITS  
APPLICABILITY**

**ABSTRACT**

Developing technology and cumulatively advancing science and modern construction and construction methods-techniques have continuously progressed since the time of human existence. The popular production techniques of every age have been inspired by the climate and geography of the societies, primarily as a result of their cultural pursuits. Each nation, inspired by its own geography and past, has developed construction technologies and as a result, has created structures containing various cultural elements. Some of these cultural structures have survived to the present day. Others have been destroyed by erosion and destruction over the ages. In today's world, as in the past, new and practical approaches to increasing building needs have emerged. One of these is the ecological building production and planning model called "Open Source House", put forward by Linus TORVALDS, the inventor of the Linux operating system, which is the subject of the study. While labor-intensive housing design approach, stereotypical McMansions are more common and low-cost, according to this new model, high-performance, low-energy, inexpensive, flexible and multi-site residences can be built by using a combination of housing design, fabrication and technology. According to the model, this flexible DIY design idea could be a key to reshaping the housing industry and materials will be used more in the construction of these homes. This study covers the analysis of the housing application model, which is defined as "Open Source Houses" by software developer Linus TORVALDS, its applicability in Anatolia and the investigation of the benefits that will arise in architecture if implemented. The problem that is the subject of the study is whether the open source house model is a practical and economical solution to the housing concept in Anatolia. The aim of this study is; To contribute to the solution of this problem and to shed light on a technological architectural model for an economical and practical solution to the housing need in Turkey. In this context, in this study, the basic principles of "Open Source Houses" and "Open Source Code Architecture" will be revealed through the building models applied in accordance with the model of TORVALDS. The contribution of the model to the housing need in Anatolia in terms of economy and practicality will be examined.

**Keywords:** Open Source Homes, Open Source Architecture, Linus TORVALDS Architecture

## 2.GİRİŞ

Gelişen teknoloji ve kümülatif bir şekilde ilerleyen bilim ile modern (çağdaş ve her çağın kendisine münhasır olan) yapı ve yapım yöntem-teknikleri, insanın var olduğu dönemden itibaren sürekli ilerlemiştir. Her çağın popüler yapım teknikleri toplumların öncelikle kültürel arayışlarının sonucu olarak buldukları iklim ve coğrafyadan esinlenerek oluşmuştur. Her ulus kendi coğrafyasından ve geçmişinden esinlenerek, yapım teknolojileri geliştirmiş ve bunun sonucunda çeşitli kültürel öğeler içeren yapılar ortaya koymuştur. Bu kültürel yapıların bir kısmı günümüze ulaşmıştır. Bazıları ise çağlar boyunca aşımılara ve tahriplere uğrayarak yok olmuştur.

Bilimin ilerlemesi ile insanoğlu, öncekilerine nazaran daha fonksiyonlu yapım teknolojilerine ulaşmış ve artan ihtiyaçlar ile kültürel yapım teknolojilerinden zaman içerisinde vazgeçmiştir. Kültürel öğeler yerine teknolojinin ilerlemesiyle zaman içerisinde belirli ülkelerde ortaya çıkan yapım teknikleri ve teknolojileri küresel ölçekte her yerde kullanılmaya başlanmıştır.

Geçmişte olduğu gibi günümüzün dünyasında da, artan yapı ihtiyaçlarına yeni ve pratik yaklaşımlar ortaya çıkmıştır. Bunlardan biri olarak çalışmaya konu olan Linux işletim sisteminin mucidi Linus TORVALDS tarafında öne sürülen ekolojik ‘‘Açık Kaynaklı Ev-Yapı’’ adlı yapı üretim ve planlama modelidir. Emek, yoğun konut tasarımı yaklaşımı, basmakalıp McMansionlar, daha yaygın ve düşük maliyetliken bu yeni modele göre konut tasarımı, fabrikasyon ve teknoloji bir arada kullanılarak, yüksek performanslı, düşük enerjili, masrafsız, esnek ve aynı anda birden fazla yerde uygulanabilecek konutlar inşa edilebilecektir. Modele göre bu esnek DIY(kendin yap tasarım modeli) tasarım fikri konut endüstrisinin yeniden şekillendirilmesi için bir anahtar olabilecek ve gerçek malzemeler bu evlerin yapımında çok daha fazla kullanılacak. Model özellikle kırsal ve kentlere uzak yöreler için kısa sürede inşa modülü ve planı oluşturmak amacıyla ortaya çıkmıştır. Michelle Kavurman Designs'ın başkanı Paul Wagner'a göre, yaşam alanlarımızı inşa etmek için kullandığımız malzemelerde köklü ve yeni değişiklikler görmeye devam edeceğiz. Warner'a göre, "Evlerin ve binaların geliştirilebilirliği geleceğin tasarımlarında, tüm konut sistemi içinde yenisi ile kolaylıkla değiştirilebilir parçalar halinde, bir çeşit becerikli iskelet ya da kabuk yaratmak çok büyük rol oynayacak."

Söz konusu bu çalışmada bu tekno-mimari modelin Anadolu'da ki uygulanabilirliği ortaya koymayı amaçlamaktadır. Çalışmaya konu olan problem; açık kaynaklı ev modelinin Anadolu'daki konut anlayışına pratik ve ekonomik yönden bir çözüm olup olmadığıdır. Bu

bağlamda bu modelin uzak köy ve yaşam alanlarında ile şehirlere yakın alanlarda konut ve diğer

yapıların inşa edilmesine yönelik pratik ve ekonomik yönden katkısı incelenecek ve Anadolu için uygunluğu ortaya konulacaktır.

### 3.ARAŞTIRMANIN PROBLEMİ ve HİPOTEZLERİ

Bu araştırmada temel olarak ele alınan problem; açık kaynaklı ev modelinin konut mimarisi başta olmak üzere, mimari uygulamalara ekonomik ve pratik yönünden katkı sağlayıp sağlamadığıdır. Bu doğrultuda oluşturulan hipotezler şunlardır:

**H0:** "Açık Kaynaklı Ev" modeli, kente uzak alanlar ile kentlere yakın alanlarda konut ve yapı ihtiyacına ekonomik ve pratik bir çözüm sunmaktadır.

**H1-a:** "Açık Kaynaklı Ev" modeli, kente uzak alanlar ile kentlere yakın alanlarda konut ve yapı ihtiyacına pratik ancak maliyeti yüksek bir çözüm sunmaktadır.

**H1-b:** "Açık Kaynaklı Ev" modeli, kente uzak alanlar ile kentlere yakın alanlarda konut ve yapı ihtiyacına pratik olmayan maliyeti düşük bir çözüm sunmaktadır.

**H1-c:** "Açık Kaynaklı Ev" modeli, kente uzak alanlar ile kentlere yakın alanlarda konut ve yapı ihtiyacına pratik olmayan ve maliyeti yüksek bir çözüm sunmaktadır.

### 4.ARAŞTIRMANIN AMACI ve ÖNEMİ

Günümüzde teknolojik ve bilimsel alanda her geçen gün yeni gelişmeler olmakta ve bu gelişmelere paralel olarak insanoğlunun yaşam standartları artarken, konfor anlayışları da sürekli değişim göstermektedir. Bütün teknolojik yeniliklerin temelinde olduğu gibi ev-konut teknolojisindeki gelişmelerin temelinde de; ihtiyaçların karşılanması için ekonomik(ucuza mal edilen) ve hızlı(pratik) bir yol olarak yorucu işleri hafifleterek insan verimliliğini arttırmak arzusu vardır (Gönen, 1988: 37). Böylece teknolojinin insanlara sunduğu imkânlar sayesinde daha önce elle yapılan birçok işlem, artık insan müdahalesi olmadan oluşturulan otomasyon sistemleri ile otomatik olarak yapılabilmektedir. (Yumurtacı ve Keçebaş, 2009)

Bu çalışmanın amacı; günümüzde özellikle kırsal alanlarda uygulanmaya başlanılan "Açık Kaynaklı Ev" üretim modelinin ülkemizde uygulanabilir bir yöntem olması üzerinde gerçekleri ortaya çıkarmaktır. Bu sayede kırsal alanlar başta olmak üzere çeşitli deprem, turizm ve sanayi alanları gibi alanlarda hızlı ve değiştirilebilir(kompakt) çeşitli plansal paylaşım ekolü ile her yerde uygulanabilir yapı üretim anlayışı oluşturulabilir. Bu çalışmanın esas önemi ise bu noktada ortaya çıkmaktadır. Çünkü ekonomik yapı üretim modülü olarak da

tanımlanan “Açık Kaynak Kodlu Yapı Üretim” anlayışı yüksek işçilik ve yüksek işçilik ücreti başta olmak üzere yapıların üretim sürecine yönelik çeşitli kolaylıklar sağlamaktadır.

Bilindiği üzere kırsal kesimde, büyük ölçüde yeni konut yapımı ihtiyacı olmakla birlikte, mevcut konutların ihtiyaca cevap verebilecek düzeye çıkartılabilmesi en önemli sorunu teşkil etmektedir. Bu çalışma ile birlikte kırsalda kentleşme kavramının, özellikle üretim bazlı çiftlikler gibi yapıların kurulumundaki hız ve ekonomik model olarak kullanışlılığı test edilmesi bakımından son derece önemlidir.

### 5. LİNUS TORVALDS VE AÇIK KAYNAK KODLU MİMARİ ANLAYIŞ

Linus Benedict Torvalds ( 28 Aralık 1969, Helsinki, Finlandiya) Finlandiya asıllı Amerikalı bir yazılım mühendisi olarak bilinir. Linux işletim sistemi çekirdeğinin geliştiricisi ve proje 1. Kademe yöneticisi olup, ABD'de yaşamaktadır. Transmeta(*Transmeta Corporation*, merkezi Santa Clara, California'da bulunan bir Amerikan fabrikasyon yarı iletken şirketi)di. Bir VLIW çekirdeğine ve Code Morphing Software adlı bir yazılım katmanına dayalı düşük güçlü x86 uyumlu mikroişlemciler geliştirdi. )'daki görevinden ayrıldığından beri OSDL'de (Açık Kaynak Geliştirme Laboratuvarları) tam zamanlı olarak Linux çekirdeği üzerinde çalışmaktadır. Linus, Andrew S. Tanenbaum tarafından geliştirilen Minix işletim sisteminin ihtiyacını karşılayamamasına mukabil, bu sisteme orjinal eklemeler yapmak için geliştirmeye başlamış ancak yazmaya başladığı programı zamanla Unix tarzında kişisel bilgisayarlarda çalışabilecek farklı ve dinamik bir işletim sistemi çekirdeğine dönüştürmüştür. **Linux** adı verilen bu çekirdek ve sistemi günümüzde pek çok farklı bilgisayar mimarisinde ve tüm GNU/Linux dağıtımlarında kullanılmaktadır. Ayrıca bütün bu çalışmaları sonrası Linus Torvalds, 2012 Milenyum Teknoloji Ödülü'ne layık görülmüştür

Söz konusu bu araştırmayı ilgilendiren kısım ise; Linus 'ün ileri sürdüğü yeni yapı üretim modellerinden biri olarak tanımlanan “Açık Kaynaklı Evler” veya “ Açık Kaynak Kodlu Üretim Modeli”nin i uygulanabilirliği üzerinedir. Geçtiğimiz senelerde insanların tek sabit bir fikri vardı. Ancak günümüzde ilerleyen teknoloji ile ilgili yeni kazanımlar elde edilmiştir. Bunlardan biride Linus'un da üzerinde durduğu üç boyutlu yazıcılarıdır. İşte bu noktada Linus'un bir fikri vardı. Ona göre; 3B yazıcı gibi yeni icatlar “bir şeyin üretimi” için gerekli zamanı ve dolayısıyla maliyeti azaltıyor. Artık kullandığımız cep telefonları California'da tasarlanıp Çin'deki fabrikalarda üretilmeyecekti. Herkes tarafından tasarlanıp evinizdeki fabrikadan yani 3B yazıcıdan bastırılacaktı. Nitekim ki günümüzde bu durumun evrildiğini görüyoruz. Emek yoğunlu konut ve yapı tasarımı yaklaşımı, basmakalıp McMansionlar, daha

yaygın ve düşük maliyetliken, bu yeni modelde, konut tasarımı, fabrikasyon ve teknoloji bir arada kullanılarak,

yüksek performanslı, düşük enerjili, masrafsız, esnek ve aynı anda birden fazla yerde uygulanabilecek konutlar inşa edilecektir.

Linus'un Açık kaynaklı mimarisi, evrensel bir altyapı içinde sanal ve gerçek alanların hayal gücü ve oluşumunda yeni prosedürleri savunan, gelişmekte olan bir paradigmadır. Açık kaynak kültürü, modüler tasarım, avant-garde mimari, bilim kurgu, dil teorisi ve nöro-cerrahi gibi çok çeşitli referanslardan yararlanarak, tasarım ve tasarım araçlarının profesyoneller tarafından ortaklaşa kullanımına yönelik mekânsal tasarım açısından kapsayıcı bir yaklaşım benimser ve sıradan vatandaşları kullanıcıları ve üreticileri olarak görür. Yani bir müteahhitte ihtiyaç duymaz. Vatandaş merkezli tasarım şemsiye teriminde daha çok açık kaynaklı mimari kavramını kullanır.

Vatandaş merkezli tasarıma/üretim, Teksas Üniversitesi gibi önde gelen üniversitelerin akademik araştırma birimleri tarafından 1999 yılında çok ciddi bir şekilde öncülük edilmiştir. Earthnomad Vakfı olarak mesleki aplikasyon örgütleri ve ARK tektoniği gibi kuruluşlar, mekâna/yere göre tasarım ve kamu politikasının kesiştiği noktada vatandaş merkezli tasarım hareketi vurgulayan diğer önemli kuruluşlardandır. Daha sonraki yıllarda, hareket, organizasyonlardan ve işbirliklerinden akademik kurumlar tarafından desteklenen topluluk tasarım merkezlerine kadar küresel çapta çeşitli emekleri kapsayacak şekilde büyüdü. Vatandaş(insan) merkezli tasarım hareketinin ve buna bağlı olarak açık kaynak mimarisinin ilkeleri, 1960'lardan beri vatandaş katılımı araştırma ve uygulamaları üzerine biriken bilgi birikimi üzerine inşa edildi.

Yüzyılın başlarında, vatandaş katılımı araştırmaları ve uygulamaları, sosyal ve uygulamalı bilimlerde daha etkili yaklaşımlar ve paradigmlar merceğiyle, Dr. Schaban-Maurer müzakereci tasarım ve fonetik bağlantı kaynağı "Vatandaş Uygulayıcısının Yükselişi", 'Yaşam Deneyimi Anlatı Değişimi' metodolojisinin ilkelerini ve uygulamalarını, içinde kurduğu Mindful Policy Engagement(Akıllı Poliçe Yaklaşımı) alanında ortaya koydu. 2013, 'Mimarlık, Kentsel Tasarım ve Kentsel Planlama Politikası için Vatandaş Katılımında Vatandaş Uygulayıcısının Rollerini: Phronesis Tabanlı Bir Yaklaşım " Çalışma, vatandaş merkezli mimari, kentsel tasarım ve kentsel planlamanın yanı sıra kentsel ve kamu politikasına ilişkin en iyi örnek olay incelemeleri ve en iyi uygulamalardan oluşan bir yapı için titiz bir teorik temel sağlar. Dr. Schaban-Maurer'e göre (LENE) metodolojisi, süreçlerini

Phronetic Engagement ve Mindful Policy ilkeleriyle yeni bir araştırma alanına entegre ederek anlamlı ve etkili tasarım uygulamalarına yol açar.( Mindful Policy Engagement,Schaban-Maurer, 2013: 11)

Şekil 1- Linus'un Açık Kaynak Sistemi Uygulama Aşamaları Ve 3d Yazıcı Ile Yazılmış Yapı Maketi

O zamandan beri, açık kaynak mimarlık pratisyenleri ve akademisyenler, disiplinler arası işbirlikleri, yayınlar, konferanslar ve uluslararası sergiler yoluyla vatandaş merkezli tasarım hareketinin diğer alanlara erişimini ve etkisini artırdı. Son on yılda, açık kaynaklı mimari, bilinçli politika katılım alanı ve vatandaş merkezli tasarım hareketi, en belirginleri 'sosyal etki tasarımı', 'kamu yararına tasarım' ve taraftarları tasarım pratiğini sosyal hizmetle birleştiren 'açık mimari ağı'. Bu erken dönem çabaları, onlarca yıl önce, mimarların, şehir tasarımcılarının, planlamacıların devam eden bağlılıkları yoluyla yeni oluşumlar tarafından ilerletiliyor. Açık kaynak mimarisi, deneyimli profesyoneller kadar amatörlere de dayanır, bireysel "kitlenin dehası" üretici ve izleyici(üretici dışı ) arasındaki ikili ayrımı aşındırır. Sosyal yazılımlar gibi, projenin her aşamasında birden çok kullanıcının temel rolünü kabul eder – ister. Müşteriler ister topluluklar, tasarımcılar veya bina sakinleri olarak; en iyi ihtimalle, sistemleri etkili bir şekilde ölçeklendirmek için güçlü ağ efektlerinden yararlanır. Siyasi farklılıklar gizli otoriterlikten komüniter uzlaşmacılığa kadar çeşitlilik gösterse de, tipik olarak demokratiktir, açık erişim ve katılım ilkelerini kapsar.

Geleneksel gelişmeler, gelen gelişmelerle ilgili olarak 'topluluğa' danışılan katılım programlarını gerektirir, genellikle odak grupları gibi kör araçlarla, bu genellikle temsil ve girdi eksikliğiyle sonuçlanır veya en kötüsü NIMBYizm ile sonuçlanabilir . Kalabalık tarafından finanse edilen modellerle, sürece dahil edilen katılım biçimleri, alan kullanımının

kullanıcıları tarafından belirlenen şartlara göre optimize edildiği bir tür ortaya çıkan şehirleşmeyi mümkün kılar. İnsanların gücünün bu ıslahı, Hacktivizmin yumuşak, mekansal bir versiyonu olarak görülebilir . Açık kaynaklı mimarinin, açık kaynaklı yazılımın bazı organizasyonel dezavantajlarından mustarip olması muhtemeldir. Projelerin çatallanması(ayrışması), terk

edilmiş projeler, ikiliklerin ortaya çıkması ve binaların kurulu temeliyle uyumsuzluk gibi Organize edilmiş korku, belirsizlik ve şüpheli kampanyaları olasıdır.

Açık kaynak mimarisinin önemli bir yönü, açık işbirliği standartlarının ortaya çıkmasıdır. Ortak, açık, modüler standartların oluşturulması ,OpenStructures projesi tarafından önerilen ızgara gibi, donanım uyumluluğu sorununu ve bileşenler arasındaki arabirimi ele alarak, herkesin herkes için tasarladığı ağlar arasında işbirliğine dayalı çabalara izin verir. Standartlar aynı zamanda parasal olmayan değişim (bilgi, parçalar, bileşenler, fikirler) ve uzaktan işbirliği ağlarının büyümesini teşvik eder.

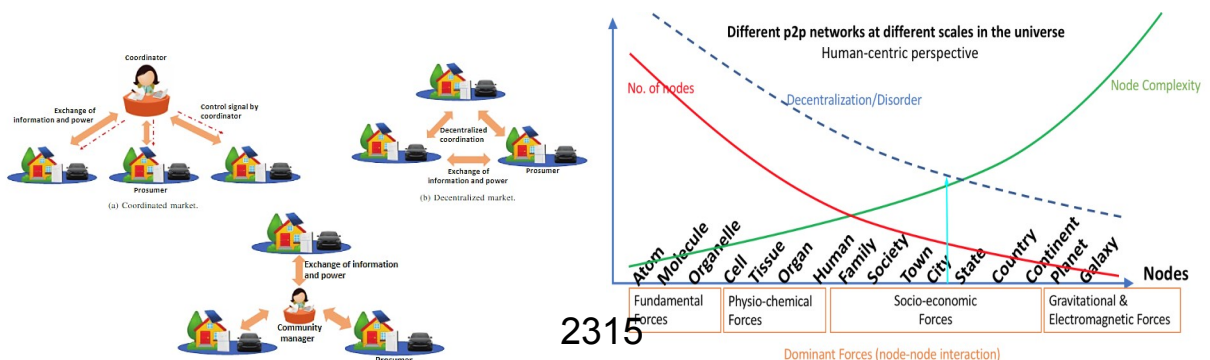

Algoritmalar, ilgili ancak farklılaştırılmış tasarım nesnelere türlerinin oluşturulmasını sağladığından, toplu özelleştirme standardizasyonun yerini alır. Grasshopper 3D, Generative Components, Revit ve Digital Project gibi parametrik tasarım araçları, yeni kullanıcı gruplarının sanal tasarımlarla etkileşime girmesine, gezinmesine ve değiştirmesine ve benzeri görülmemiş düşük maliyetle seçenek dizilerini test etmesine ve deneyimlemesine olanak tanıyor; sadece tüketiciler. Açık kaynak kodlar ve komut dosyaları, tasarım topluluklarının bilgileri paylaşmasına ve karşılaştırmasına ve modüler bileşenler aracılığıyla üretimi toplu olarak optimize etmesine olanak tanıyarak paylaşılan bilginin tarihsel birikimini hızlandırır. BIM(Bina Bilgi Modellemesi) ve ilgili işbirliği araçları ve uygulamaları, tasarım bilgilerinin disiplinler arası bir arada bulunmasını ve bir dizi platform ve zaman ölçeğinin entegrasyonunu sağlar. Hızlı prototipleme ve diğer 3B baskı teknolojileri, mimari ölçekte bile hem temsili hem de işlevsel fiziksel eserlerin daha geniş bir kitleye anında üretilmesini sağlar.

Bununla birlikte, gelecekteki sakinlerin ve kullanıcıların bunlara erişmesinin imkansızlığı nedeniyle, şu anda popüler olan tasarım yazılımının kullanımına yönelik ciddi eleştiriler var. P2P Şehircilik, geleneksel olarak türetilmiş tasarım bilgilerini toplayan ve bunu açık kaynaklı bir web platformunda kullanıma sunan düşük teknoloji tasarımlarını destekler. Bu

odak, bunun yerine geleneksel yerel malzemeleri ve yerel mimaride inşa tekniklerini teşvik eder ve son derece pahalı parametrik tasarıma odaklanan sanal tasarım gruplarından tamamen farklıdır. P2P Şehircilik savunucuları, sürdürülemez ürünlerle bağlantı, güçlü ticari çıkarlar ve yalnızca birkaç katılımcının toplam kontrolü nedeniyle "moda" olarak gördükleri tasarım yaklaşımlarına felsefi olarak karşı çıkıyorlar - ki bu, tasarımı tüm nüfusa açmanın tam tersidir. Onların görüşüne göre, açık kaynak tasarımının amacı, kullanıcıların kendi konutlarını tasarlamasını ve inşa etmesini kolaylaştırmak olmalı, mevcut yıldız mimarları içeren bir tasarım elitini teşvik etmeye devam etmek değil. (Tushar/Yuen/Saha ,2020)

Gelişen açık kaynaklı donanım hareketi, yazılım, donanım ve mekanizmaları sıkı bir şekilde bütünleştiren kinetik veya akıllı ortamların tasarlanmasında yer alan donanımın paylaşılmasına ve bu donanım üzerinde işbirliğine olanak tanır. Sensör verileriyle bilgilendirilen bu çeşitli araçlar sayesinde tasarım, geleneksel tasarımın tek seferlik, ayrık ateşle ve unut yönteminin aksine devam eden, evrimsel bir süreç haline gelir. Bu, tasarımın her zaman bitmeyen bir süreç olduğu ve aynı zamanda kullanıcılar ve tasarımcılar arasında bir işbirliği olduğu gerçeğinin bir kabulüdür. Tasarım, inşaat ve kullanım aşamaları için işletim sistemleri, zengin bir 'uygulamalar' ekosistemini harekete geçiren açık platformlar olarak yaratılır. Linux olmak için çeşitli uygulamalar itişip kakıyor mimari yazılımlar, planların ve kesitlerin tesliminden ziyade farklı ölçeklerde 'platform oyunları' yapmak. Yerleşik algılamaya ve bilgi işlem, Bruce Sterling 'in bir Spimes dünyası vizyonuna daha da yaklaşarak, daha büyük " Nesnelerin İnterneti " içindeki tüm materyalleri giderek daha fazla birbirine bağlamaktadır. Malzemeler, imalat ve yapım sırasında konumlarını ve durumlarını iletir, konumlandırmaya, sabitlemeye ve doğrulamaya yardımcı olur ve kullanım ömrü boyunca dağıtılmış veri tabanlarıyla iletişim kurmaya devam eder.

**Şekil 3-** P2P/Peer to Peer (Eşler arası) Bağlantı Sisteminin Karmaşık Düğüm Çözme Grafiği ve Prosumer Bağlamı(hem tüketici hem üretici)(Tushar/Yuen/Saha ,2020)

P2P/Peer to Peer (Eşler arası) bağlantı sistemi esasında söz konusu makalenin yoğunlaştığı noktadır. Bu sistemin mantıklı bir şekilde anlaşılması Linus'un aklındaki sistemi anlamamızı sağlayacaktır. Çünkü temel olarak Açık Kaynak Mimarisinin temelinde yatan odak noktasıdır. Daha çok yazılım dilinde kullanılan bir terimdir. Eşler arası paylaşım demek aslında bir veriyi/bilgiyi/üretimi birden fazla eşle paylaştırarak çözmektir.

### **6.AÇIK KAYNAK KODLU TASARIM VE UYGULAMA/WIKIHOUSE UYGULAMASI**

WikiHouse, evleri tasarlamak ve inşa etmek için açık kaynaklı bir projedir. Tıpkı Linus'un öne sürdüğü gibi işleyen sistem herkese açık bir haldedir. Telif haklarını içermez ve özgürce kullanılabilir. Sürdürülebilir bir sistem olan Wikihouse, sunduğu kaynaklar ışığında konutların inşasını demokratikleştirmeye ve basitleştirmeye çalışır. Proje, 2011 yazında Alastair Parvin ve Londra merkezli bir strateji ve tasarım uygulaması olan Nick Ierodionou tarafından Tav of Espians, James ile işbirliği içinde başlatıldı. Arthur şimdi 0(zero/sıfır) ve Momentum Engineering'den Steve Fisher ile beraber yürütmektedir. Wikihouse projesine Gwangju Tasarım Bienali içinde Gwangju , Güney Kore gibi ülke ve birimler çeşitli katkılar oluşturdu .Projeye o zamandan beri dünya çapında bir katkıda bulunanlar topluluğu haline geldi.

WikiHouse yapılarının inşası özel bir parça gerektirmez çünkü kesilen ahşap parçalar, klasik Kore mimarisinden esinlenerek kama ve dübel bağlantıları ile birbirine geçer. WikiHouse' un çerçevesi, inşaat konusunda resmi eğitim almamış kişiler tarafından bir günden kısa bir sürede kurulabilir. Çerçeve daha sonra kaplamayla bitirilmelidir, Yalıtım, kablo ve tesisat bu yaşadığı önce. WikiHouse projesi Open Systems Lab.(Açık Sistem Laboratuvarı) tarafından sürdürülmektedir. WikiHouse'a medyanın tepkisi, büyük ölçüde projenin deneysel doğasına, IKEA mobilyaları ile karşılaştırmalara ve CNC yönlendiricilerini bulmanın ve kullanmanın olası maliyetlerine odaklanmıştır. Amerikalı bilim kurgu yazarı Bruce Sterling de WikiHouse tasarımının bir incelemesini yaptı ve bunu olumlu bir şekilde "şahsen büyük olasılıkla inşa edip oturabilirim" olarak tanımlamıştır.

1 Digital design

2 Local fabrication

3 Rapid assembly

## 7. AÇIK KAYNAK KODLU MİMARİNİN UYGULANABİLİRLİĞİ

Uygulanabilirlik arařtırmaları; ekonomik, teknik, finansal, yasal ve örgütsel arařtırmalar olarak beře ayrılabilir. (Batuk,2018)Söz konusu çalışmada, teknik yönden ‘‘Linus Torvalds‘ın Açık Kaynaklı Evlerinin Anadolu‘daki Uygulanabilirliđi’’ deđerlendirilecektir. Teknik arařtırmalar; üretim süreci ařamalarının tanımlanması, üretimde kullanılacak teknolojinin belirlenmesi, fabrika(üretim modeli) tasarımı ve iç yerleşimi, bakım-onarım olanakları gibi konuları kapsar. Bu dođrultuda çalışmada kullanılacak yöntemde, işletme ve yapı kuruluşlarında teknik arařtırma deđerleme ařamalarıyla deđerlendirilecektir.

### AÇIK KAYNAK KODLU MİMARİNİN UYGULANABİLİRLİĞİ DEĐERLENDİRME METODOLOJİSİ

Şekil 5- Çalışma Metodolojisi /Yapıların(ve İşletmelerin) Kuruluşunda Teknik Arařtırma Deđerleme Ařamaları(Batuk,2018)

### 7.1. Açık Kaynak Evlerinde Kuruluş Yerinin İnşaatı Uygunluđunun Deđerlendirilmesi

Açık kaynak evleri kuruluş ařamasında özel bir alan veya bölge içermez.(A. Parvin 2011) Yapılar kurulmak istenildiđi ortama uygun iklimsel(kimyasal) ve fiziksel şartlara dirençli olarak tasarlanıp üretilir. Bu alan sulak bir alanda olabilir veya karlı bir bölgede olabilir. Sistem tüm bu dirençleri içeren 3.parti bulut sistemlerine uygun olarak dizayn edilmiştir. Açık kaynak mimarisinde temel işleyiş mantıđı P2P sistem üzerinden kurulduđundan, aslında sistem bütün kullanıcılar üretici konumuna da getirmektedir. Bu sistem sayesinde istenilen yapı elemanı siparişi verilip sistem üzerindeki bir kullanıcıya üretilebilir. Özelleştirilebilir üretim sistemi sayesinde, çeşitli şartlara ve sıcaklıklara dayanıklı materyaller yardımıyla

yeryüzünde bir çok yerde uygulanabilir. Dolayısıyla uygulanmak istenildiği ortam şartlarına uygun materyalin kullanımı ile Anadolu'da ,coğrafi ve iklimsel durumu ne olursa olsun uygulanabilir olduğu ortadadır. Bu sistemin kurulumu için tek şart CNC(Computer Numerical Control) Makineleri ve materyalleri , veya 3d yazıcıya yakınlık olarak belirlenebilir. Söz konusu bu şartın durumu, değişken olarak "zaman" ibaresini etkiler.

**Şekil 6-** Farklı Bölgelerde Uygulanmış Açık Kaynak Evleri,(Arcdaily,2019)

Açık kaynak sistemi ile kuruluş yeri fark etmeksizin istenilen üretim elde edilebilir. Halihazırda gelişmekte olan "Açık Kaynak Tasarım" artan nüfusa bağlı olarak hızlı talep karşılanması açısından da günümüzde de yaygınlaşmasını hızlandırmaktadır. İzlenebilir yapı kavramı ile beraber daha kompakt bir yaşam sunan ve Le Corbusier'in dediği "yaşam makineleri" ana fikri ile örtüşen sistemde her arazi şartlarına elverişlidir. Dilenirse taşınabilen kompakt modüler yapı sistemleri halinde üretimi esas alır. Bu doğrultuda modüler parçalardan, parçadan bütüne gidilmek suretiyle, bir araya gelir. Arazi şartlarının değişmesi durumunda araziden kaldırılabilir şekilde de tasarlanabilir.

Açık kaynak mimarisi mobilite esas alır. Özellikle küçük yapılarda bu kompaktlık çok önemli bir boyuta ulaşır. Ayrıca kompaktlıkla beraber teknolojiyi de destekleyen modülerliğe de sahiptir. Bu sistemle herhangi bir yerde akıllı çiftlikler, evler, sanayi veya ticari birimler

uygulama ağı doğrultusunda oluşturula bilinir. Arazi şartları ne olursa olsun bu sistemle yapılan yapılar çevresel şartlara uygun tasarlanabilir.

Şekil 7- Açık Kaynak Sistemleri İle İnşa Edilebilen, Yüksek Verimliğe Sahip Önemli Fonksiyona Sahip Bazı Yapılar

## 7.2. Açık Kaynak Evlerinde Ürün Niteliklerinin Analizi

Açık kaynak mimari uygulamasında çeşitli materyaller kullanılabilir. Genellikle bu üretim modelinde CNC makineleri tarafından kesilebilen materyaller (MDF, Alüminyum, Metal, Akrilik, Alçıpan vb.) ile 3D yazıcıları tarafından üretilen materyaller benimsenir. Ayrıca CNC kesim yöntemiyle üretilmiş ara ve detay yapı malzemeleri de üretilmektedir. (A. Parvin 2011) Bu materyallerin tümü Anadolu'da temin edilebilir. Bu sistemde uygulanan yapı malzemelerin tamamı geri dönüştürülebilir.

Açık kaynak mimari uygulamasında kulağa karmaşık gelse de, temel fikir çok basit: Ya diğer birçok ürünü yapmak için kullandığımız aynı türden fabrika üretim yöntemlerini kullanarak binalar yapacak olsaydık? Bariz bir örnek vermek gerekirse, araba yapma şeklimize bakabiliriz. Ürünün bu şekilde modüler bileşenlere bölünmesi, işin aşamalı olarak yapılmasına, daha karmaşık, standartlaştırılmış, hassas işlerin, ürünün kalite açısından kontrol edilebildiği fabrika koşullarında önceden makine ve montaj ekipleri tarafından yapılmasına olanak tanır. Parçalar daha sonra hızla birleştirilebilir. Diğer, daha basit bir örnek IKEA düz paket mobilya olacaktır. Bu, olağanüstü beceri gerektiren geleneksel mobilya yapımının aksine, son montaj o kadar basit ki, belirli bir beceri veya bilgi olmadan bile hemen hemen herkes tarafından yapılabilir.

	Technical Part	Aesthetic Part	Applications	Engraving
Aluminum	Yes	No	Lightweight gears and technical parts	No
Stainless Steel	Yes	No	Long-lasting technical parts (i.e.: high strain, outdoor use)	No
Steel	Yes	No	Structural parts	No
POM	Yes	No	Lightweight gears and technical parts	No
Acrylic	No	Yes	Decorative objects (i.e.: company logos...)	Yes
MDF	Yes	Yes	Structure for furniture and decorative objects	Yes
Plywood	No	Yes	Decorative objects (i.e.: engraved supports)	Yes
Cardboard	No	Yes	Unexpensive decorative objects (i.e.: cards, signs...)	Yes

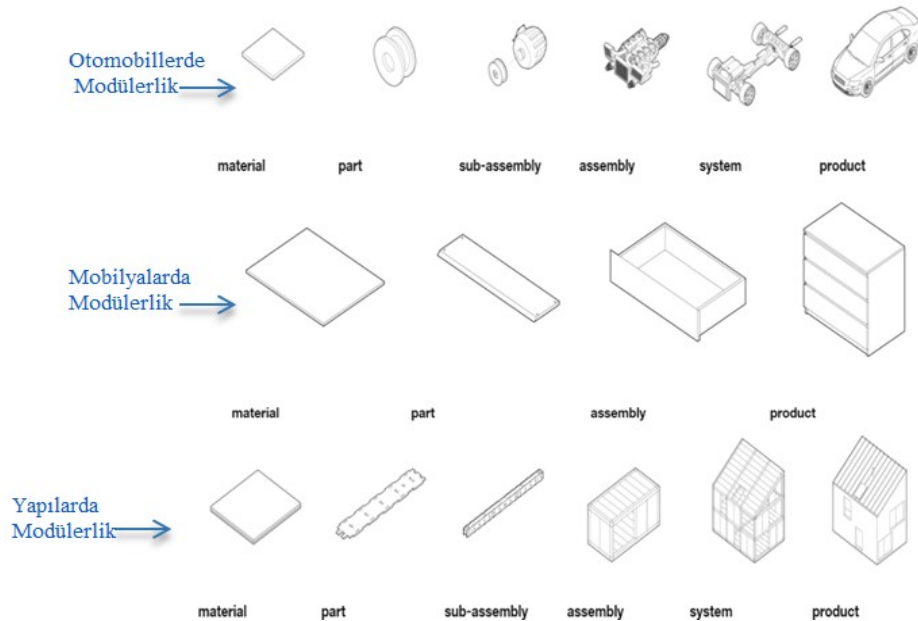

Designed for the following materials:

Şekil 8- CNC ve 3D Yazıcılar Tarafından İşlenebilen Bazı Yapı Materyalleri

Ürünün bu şekilde modüler bileşenlere bölünmesi, işin aşamalı olarak yapılmasına, daha karmaşık, standartlaştırılmış, hassas işlerin, ürünün kalite açısından kontrol edilebildiği fabrika koşullarında önceden makine ve montaj ekipleri tarafından yapılmasına olanak tanır. Parçalar daha sonra hızla birleştirilebilir. Diğer, daha basit bir örnek IKEA düz paket mobilya olacaktır. Bu, olağanüstü beceri gerektiren geleneksel mobilya yapımının aksine, son montaj o kadar basit ki, belirli bir beceri veya bilgi olmadan bile hemen hemen herkes tarafından yapılabilir. Elbette, arabalardan veya bir dizi çekmecedan farklı olarak, binalar "herkese uyan tek beden" ürünler değildir. Farklı evlerin farklı sitelere ve farklı kişilere yanıt vermesi gerekir. Bununla birlikte, standartlaştırılmış, LEGO benzeri sistemler geliştirerek, bir binanın tüm bileşenlerini "ürünleştirmek" ve genelleştirmek mümkün hale gelirken, yine de her bir binanın bu bileşenlerin benzersiz bir montajı olmasına izin verilir.

Genel olarak değerlendirilirse, bu bileşenler ve sistemler birbirinden ne kadar bağımsız olursa, o kadar kolaylaşır. Bu sadece evi yaparken değil, yıllar sonra, binayı ömrü boyunca korumaya gelince de geçerlidir. Binalar, çoğu üründen daha uzun ömürlü olma eğilimindedir ve içlerindeki farklı sistemler, farklı hızlarda değişme veya değiştirilmeye ihtiyaç duyma eğilimindedir. Frank Duffy ve Stewart Brand, binaları farklı sistemlere veya katmanlara böldüler. Linus durumu yapılar için farklılaştırmıştır. Yeni kurduğu sistemin önemli bir yönü, bu katmanları, birbirinden mümkün olduğunca bağımsız bir ev içinde ayrı, birlikte çalışabilir sistemler olarak ele almaktır. Geleneksel olarak, mimarlar binalarını akılda tutarak tasarlama eğilimindedirler, ancak tasarımlarını nasıl inşa edeceklerini başkalarına bırakırlar. Linus'un bu fikri, özellikle üretim süreci olmak üzere ürünün yaşamının tüm aşamalarını optimize etmek için yenilik ve tasarım düşüncesini uygulamaktır.

**Şekil 9- Farklı Alanlarda Modülerlik**

Bununla birlikte, açık kaynak mimarisinin en önemli yönü "Tasarım " bölümüdür. Geleneksel olarak, mimarlar binalarını akılda tutarak tasarlama eğilimindedirler, ancak tasarımlarını nasıl inşa edeceklerini başkalarına bırakırlar. Açık kaynak mimarisinin fikri, özellikle üretim süreci olmak üzere ürünün yaşamının tüm aşamalarını optimize etmek için yenilik ve tasarım düşüncesini uygulamaktır. Yani üretim için tasarım regülasyonu ana dayanak noktasında yer alır. Tasarım üretim sırasında maliyeti, zamanı ve malzeme tüketimini en aza indirecektir. Bu aynı zamanda fabrika kurulum maliyetini, verimlilik ve hassasiyete göre optimize etmeyi ve fabrika zemin süreçlerini veya nakliyeyi basitleştirmeyi de içermektedir. Sistem montaj sırasında zaman, maliyet, beceri ve karmaşıklık eşiklerini düşürmek için tasarlanmıştır. Bu, bileşenlerin mümkün olduğu kadar "tak ve çalıştır" yapmasının yanı sıra, tam zamanında teslimat, saha ekipmanının maliyeti ve farklı ekiplerin birbirinden bağımsız olarak çalışmasına izin verme gibi diğer faktörleri de içerir. Ayrıca, sağlık ve güvenlik tehlikelerini olabildiğince tasarlama çalışmaya da içerir.

Açık kaynak uygulamasında binanın ömrü boyunca bileşenlerin bakımı, onarımı ve değiştirilmesinin maliyetini ve zorluğunu azaltacak tasarım eksenine uygulama, hizmetlere kolay erişim sağlar. Binayı mümkün olduğunca basit ve güvenli bir şekilde sökülüp takıla bilinir, böylece mümkün olduğunca çok sayıda bileşen yeniden kullanılabilir .Elbette, "optimizasyon" hedefinin arkasında "ne için optimize etme" sorusu yatıyor. Tasarımlar, malzeme maliyeti, işçilik maliyeti, hız, enerji performansı, ağırlık, yerleşik karbon, beceri eşikleri, uyum engelleri, sağlık, refah, yerel işler, kültürel benimseme vb. Gibi sonsuz sayıda olası faktör için optimize edilebilir. Mükemmel veya "doğru" bir çözüm yoktur, her zaman bir sonucu diğeriyle değiş tokuş etmeniz gerekir. Farklı durumlar ve farklı öncelikler, farklı çözümler gerektirmektedir. Günümüzde kullanımda olan bir dizi yaygın yöntemi vardır ve daha pek çoğu geliştirilmekte veya henüz keşfedilmemiştir. Geniş bir spektrumla eşleştirilebilirler:

Şekil 10- Yapı Tasarım Ve Uygulama Yönteminde Alan Ve Fabrikasyon Kullanımı Analizi(Wikihouse,2019)

### 7.3.Açık Kaynak Evlerinde Üretim Planı, Gerekli Makine ve Teçhizat Türü

Geçen yüzyılda ev inşa etme şeklimizin çok az değiştiği bir sır değildir. Sadece fiziksel yapı yöntemleri (tuğla, beton, marangozluk vb.) açısından değil, aynı zamanda arkasındaki tasarım ve tedarik zincirleri ve dolayısıyla bu tedarik zincirlerinin arkasındaki iş modelleri açısından da bu durum geçerlidir. Ayrıca 21. yüzyılın sistemik zorlukları karşısında - iklim değişikliği, kaynakların tükenmesi, değişen işgücü piyasaları, artan nüfus, yaşlanan toplumlar, artan sağlık maliyetleri ve arazi piyasası başarısızlığı gibi - bu inşa yöntemlerinin artık amaca uygun olmadığı kabul edilmektedir.

Açık kaynak mimari uygulamasında CNC makineleri tarafından kesilebilen materyaller(MDF, Alüminyum, Metal, Akriik, Alçıpan vb.) ile 3D yazıcıları tarafından üretilen materyaller benimsenir. (A. Parvin 2011) Bu materyallerin tümü Anadolu'da temin edilebilir. Ayrıca CNC kesim yöntemiyle üretilmiş ara ve detay yapı malzemeleri de üretilmektedir.2021 yılıyla beraber ülkemizde CNC kesim makineleri neredeyse her şehirde mevcuttur. Açık kaynak mimari uygulamasında kullanılan uygun modeller mevcuttur. Kullanılan materyaller de temin edilebilinirdir.

Açık kaynak mimari tasarımda P2P sistemi benimsenir. Her kullanıcı herhangi bir yapının herhangi bir bileşenini üretebilir. Prosumer Bağlamı(hem tüketici hem üretici) olarak adlandırılan bu sistemdeki bileşen tasarımları sadece konunun uzmanına açıktır. Aynı zamanda yerel ekonomileri destekleyen bu sistemde dileyen kurumsallaşabilir. Ancak

projelendirme sistemindeki projeler ,ulusal yönetimler tarafın yetki verilmiş kişiler(mimar,mühendis) tarafından üretilmektedir. Sistem yeni projelendirme ve siparişleri alınarak veya mevcutta açık paylaşım bulutuna dahil edilmiş projeler kullanılır. Sistem tarafından kullanılan ulus yönetimler Yapıya ait proje dilenirse sistemdeki diğer kullanıcılar ile paylaşıla bilinir.

Açık kaynak evlerinde üretim planlanmasında dijital tasarım faydaları sonuna kadar kullanılabilir. Aslında bu alan Parametrik Dijital tasarım için önemli bir platform olacaktır, ancak bunlar resmin yalnızca bir parçasıdır. Gelecekte tasarım, aşağıdakiler dahil olmak üzere tüm geliştirme ve yaşam döngüsü boyunca binayı destekleyecek bir dizi dijital teknolojiye ve hizmete sorunsuz bir şekilde bağlanmalıdır:

- **Dijital ikizler**

Her binanın ayrıntılı 3B dijital modelleri ve veri kümeleri olarak tanımlanır. Bunlar gelecekteki işletim, bakım ve modifikasyon için referans noktaları olarak kullanılır. Bunların bina sahibine ait olması gerekecektir. Özellikle 3D çalışmalar bulutlarda saklanmalıdır ki gelecekte ekleme çıkarma veya dönüşümde kesin bir şekilde kullanılabilsin. Günümüzde geleneksel metotlar ile yapılan yapılar bu mümkün değildir. Çünkü yapılar yerinde bire bir tatbik edilmeye biliniyor. Ayrıca bir yeri değiştirmek için yıkım işlemi gerekmektedir.

- **Sensörler**

Kullanımdaki verileri toplayan ve sahibini (veya bu tür verilerin mahremiyetlerini tehlikeye atabileceği durumlarda kullanıma) performans verilerini tasarımcılara ve ürün şirketlerine geri paylaşmaya davet eden herşey olarak tanımlanabilir.

- **"Akıllı ev" işletim sistemleri**

Bu, evin sakinlerinin evi izlemesine ve kontrol etmesine izin verir.

- **Akıllı sözleşmeler**

Yeni finans, arazi kullanım hakkı ve performansa dayalı (veya "önleyici") yatırım türleri.

1.Proje seçimi veya yeni proje üretimi

3.Kurulum/Montaj

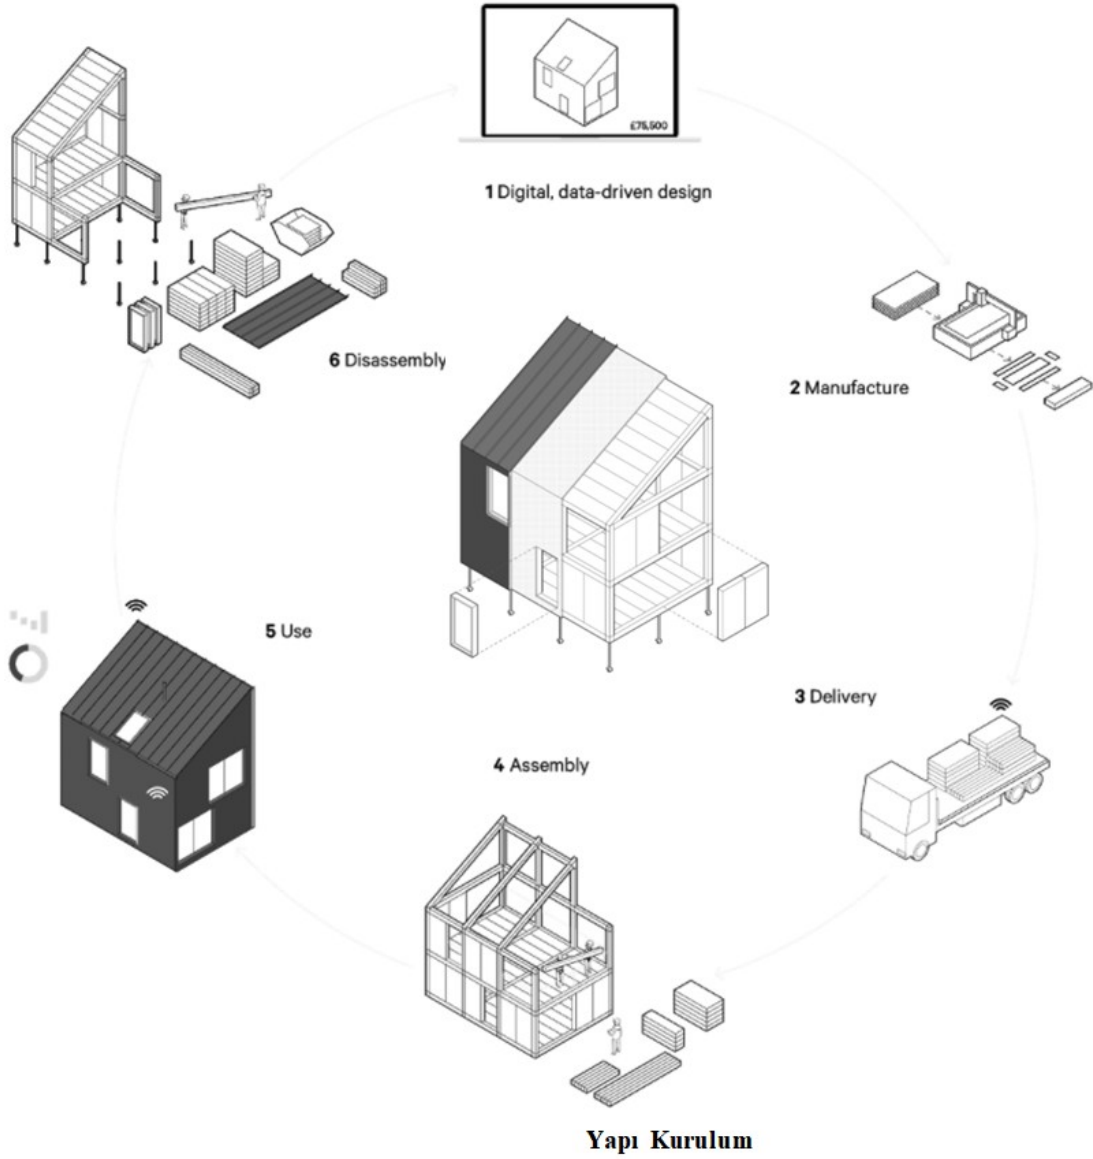

Açık Kaynak Mimarisi Model Alternatifleri Tasarımı

**CNC Kesim Ve Yapı Bileşeni Üretimi/Montajı**

**Şekil 12- Açık Kaynak Mimarisi Yapı Üretim Şeması (WikiHouse,2019)**

#### **7.4. Açık Kaynak Evlerinde Üretimde Çalışan Sayısı ve Niteliği**

Bu modelde, çeşitli yapılarda çıkan kurulum maliyetleri ve yüksek günlük işletme maliyetleri olan büyük, merkezi fabrikalar yerine, küçük ölçekli, yerel' mikro fabrikalar ', uçan fabrikalar 've ondan oluşan dağıtılmış ağlarda üretimi lisanslamak mümkün hale gelmektedir. Bunlar genellikle esnek fabrikalardır (birden fazla türde ürün üretebilmeleri açısından). Bu kadar küçük, esnek fabrikalar büyük olanlara göre kesinlikle daha az verimli olsalar da, daha esnek olmaları, küçük işletmeler için daha ticari olarak erişilebilir olmaları bakımından daha etkili olabilirler, nakliye masraflarından tasarruf edebilirler ve hatta müşterilerin maliyetleri düşürmelerine izin verebilirler. Kendi bünyesinde imal etmek için kendi mikro fabrikalarını

kurarak. Ayrıca, evlerin yakınında imalat işleri yaratmaları bakımından 'yerel ekonomik çarpan' etkisine sahip olabilirler, böylece her pound / euro / dolar/ tl vb.gibi yerel ekonomi içinde geri dönüştürülür.

Görüldüğü üzere sistemde iş gücü olarak 4 alan mevcuttur. Birincisi tasarım ve projelendirme aşamasıdır. İkincisini, alanda fabrikasyon süresince gerekli ekipmanların üretiminde çalışan iş gücü olarak tanımlayabiliriz. Üçüncü olarak üretilen parçaların nakliyesi işlemi sırasında iş gücü ve son olarak üretilen ve inşaat alanına getirilen yapı elemanların montaj/kurumu sırasında ki iş gücüdür. Klasik inşaat yöntemlerine göre çok daha az iş gücü gerektirdiği ortadadır. Mevcut birçok inşaat firması, eski inşaat yöntemlerinin mirası olan zihniyetini, alışkanlıklarını ve kültürünü sarsmakta zorlanacaktır. Tedarikleri, sağlık + güvenlik konusunda yetkin, ancak hızlı bir montaj ve / veya açık işbirliği zihniyetiyle gelen ve aynı sonuçlarla motive olan diğer sektörlerden firmalarla (teçhizat veya etkinlik kurucuları gibi) planlayan sistem ismi gibi açık uçlu geliştirilebilir bir sistemdir.

Şekil 13- Klasik ve Paylaştırılmış P2P Fabrikasyon(Wikihouse,2019)

IKEA ve Skanska, Hacimsel Yöntem,(BoKlok İsveç)

L&G Homes Çapraz Lamine Ahşap + Volumetric, İngiltere

Urban Splash / SIG Tarafından Ev Volumetric, İngiltere

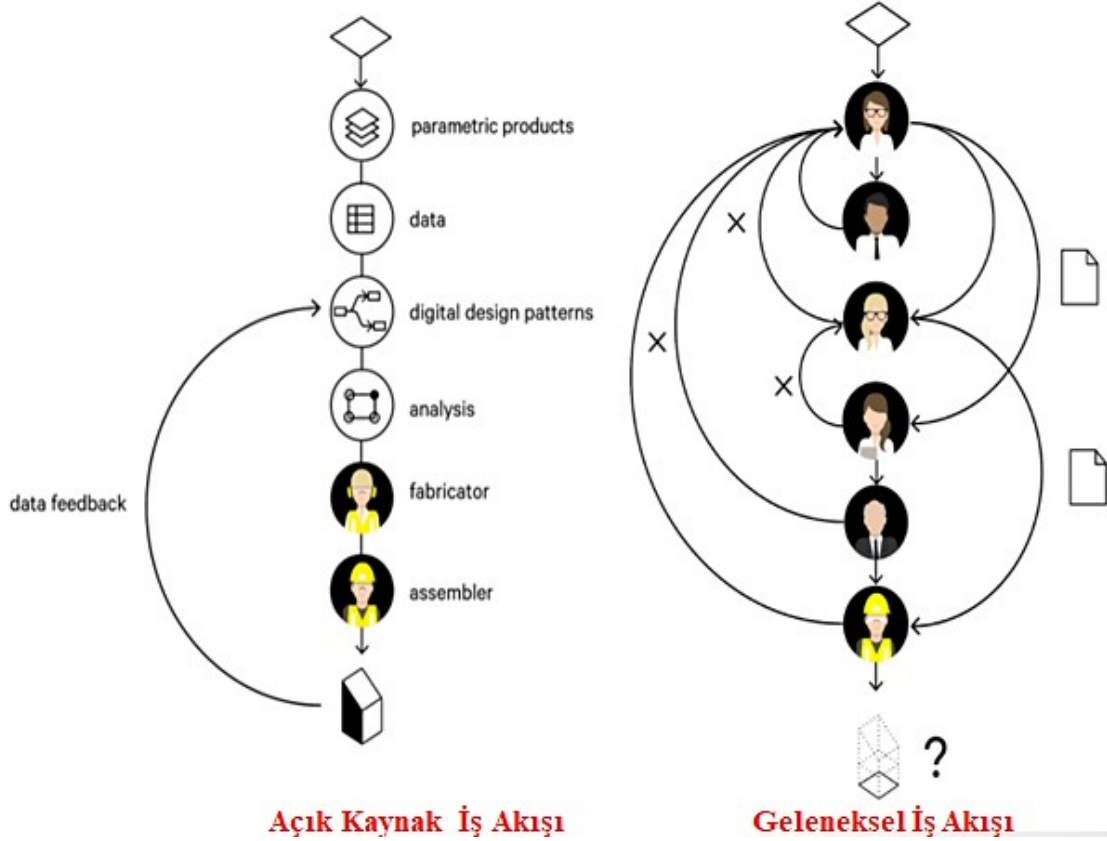

Çapraz Lamine Ahşap (Birden Fazla Üretici)

**Şekil 14-** Paylaştırılmış Fabrikasyon(Wikihouse,2019)

Açık kaynak mimari uygulamasında ,fiziksel olarak yüksek performanslı evler inşa etmeyi önemli ölçüde kolaylaştırır ve hızlandırır. Ancak bu, hikayenin sadece bir kısmı olarak görülmez. Genel giderlerin, gecikmelerin ve belirsizliğin çoğu, daha geniş tasarım sürecinden ve proje yönetimi işinden kaynaklanmaktadır. Bu, her projenin, her projeyi sıfırdan tasarlaması ve teslim etmesi, çizimler yapması, maliyetleri tahmin etmesi ve düzenlemelere uygunluğunu kontrol etmesi gereken bir dizi danışmana bağlı olduğu anlamına gelir. Aslında bundan daha kötüsü, çünkü müşterinin tasarımda her değişiklik yapması gerektiğinde, danışmanların projeyi yeniden çizmesi, yeniden kontrol etmesi ve yeniden maliyetlendirmesi gerekiyor. Böylece her proje, duruma göre sıfırdan tasarlanır. Aslında, her proje e-postalarda, toplantılarda ve telefon görüşmelerinde birkaç kez tasarlanır. Mühendislik veya maliyet bilgisi olmadan bir tasarım üretmek yerine, her proje özelleştirilebilir bir ürün haline getirilmiş Ar-Ge bilgisiyle başlar. Bu, bir tasarımın bu parametreler dahilinde üretilmesine ve tüm değişkenlerin aynı anda hesaplanmasına olanak tanır ve tasarımcı

kararlarının maliyet ve performans üzerindeki etkisini anında görebilir. Amaç, şeffaflığı ve üretkenliği önemli ölçüde artırmak ve ev üretmenin marjinal maliyetini düşürmektir.

Şekil 15- İş Akış Şeması(Wikihouse,2018)

Açık kaynak mimari uygulamasında, fiziksel olarak yüksek performanslı yapılar inşa etmeyi önemli ölçüde kolaylaştırır ve hızlandırır. Ancak bu, hikâyenin sadece çok küçük bir kısmı olarak görülmez. Genel maliyetin, gecikmelerin, stresin ve belirsizliğin çoğu, daha geniş tasarım sürecinden ve proje yönetimi işinden kaynaklanmaktadır. Bu, her projenin, her projeyi sıfırdan tasarlaması ve teslim etmesi, çizimler yapması, maliyetleri tahmin etmesi ve düzenlemelere uygunluğunu kontrol etmesi gereken bir dizi danışmana bağlı olduğu anlamına gelir. Aslında bundan daha kötüsü, çünkü müşterinin tasarımda her değişiklik yapması gerektiğinde, danışmanların projeyi yeniden çizmesi, yeniden kontrol etmesi ve yeniden maliyetlendirmesi gerekiyor. Böylece her proje, duruma göre sıfırdan tasarlanır. Aslında, her proje e-postalarda, toplantılarda ve telefon görüşmelerinde birkaç kez tasarlanır. Mühendislik veya maliyet bilgisi olmadan bir tasarım üretmek yerine, her proje özelleştirilebilir bir ürün haline getirilmiş Ar-Ge bilgisiyle başlar. Bu, bir tasarımın bu parametreler dâhilinde

kararlarının maliyet ve performans üzerindeki etkisini anında görebilir. Amaç, şeffaflığı ve üretkenliği önemli ölçüde artırmak ve ev üretiminin marjinal maliyetini düşürmektir.

Şekil 16- Açık Kaynak Evlerinde Yerinde Montaj Uygulamaları

### 7.5. Açık Kaynak Evlerinde Çevre ve Güvenlik Araştırmaları

Geleneksel metotlarla yapılar çok yavaş inşa edilirler ve bu süreç en az 1-2 aylık bir tasarım/onay dönemi ile beraber toplamda en az yaklaşık 6-9 ay sürer. Düşük enerji performansına sahipler. AB'de binalar enerji tüketiminin% 40'ını ve CO2 emisyonlarının% 36'sını oluşturmaktadır.(Wikihouse,2019) Evler bu tüketimin çoğunluğunu (yaklaşık% 30) oluşturmaktadır. Yüksek somutlaşmış karbona sahiptirler. Üretimlerinde yer alan ekstraksiyon süreçleri nedeniyle, bu özellikle tuğla ve beton için geçerlidir. Genellikle 600kgCO<sub>2</sub> / m<sup>2</sup>'nin üzerindedir. Doğrusaldırlar yani, dünyadan çıkarılan malzemeleri kullanırlar, sonra "yıkılırlar" ve ömürlerinin sonunda çöplüklere gönderilirler. Binalar, en büyük hammadde tüketicisi (yaklaşık% 60) ve çöplük atığına en büyük katkıda bulunan (yaklaşık% 32). Doğrusaldırlar yani, dünyadan çıkarılan malzemeleri kullanırlar, sonra "yıkılırlar" ve ömürlerinin sonunda çöplüklere gönderilirler. Binalar, en büyük hammadde tüketicisi (yaklaşık% 60) ve çöplük atığına en büyük katkıda bulunan (yaklaşık% 32). Yerinde malzeme israf oranları yüksektir, tipik olarak% 10-20 arasındadır. Kesin değildirler. Kesin olmayan bina, hatalara, kusurlara neden olabilir veya projenin ilerleyen bölümlerinde ikincil etkilere neden olabilir. Örneğin, pencerelerin sıralanmasını pencere açıklıkları inşa edilene kadar geciktirmek alışılmadık bir durum değildir. Beceri ve yoğun emek gerektirirler. Karmaşıklıkları, yüksek bir maliyetle gelen deneyim ve beceri gerektirir. Örneğin, İngiltere'de tuğla örmenin maliyeti her yıl yaklaşık% 6 artıyor. (The DfMA Housing Manual, Wikihouse,2019) Çok sayıda malzeme,

yöntem ve ticaret bilgisi ve bu faktörleri birbirine karşı tartmak için deneyim gerektirdiklerinden karmaşıktırlar. Genellikle kusurludurlar .Hata yapmak çok kolay olduğu için kusur oranı yüksektir. Örneğin; Birleşik Krallık 'ta yeni ev sakinlerinin% 98'i bir tür kusur bildiriyor ve genellikle onarılması

zor. (Wikihouse,2019) Tasarım ve inşaat sırasındaki hataların, yapım maliyetlerinin% 7'sine kadar katkıda bulunduğu tahmin edilmektedir. Güvensiz İnşaat halen en yüksek ölüm oranlarından birine sahiptir ve tüm ölümcül işyeri kazalarının%32'sinden sorumludur. Hava kalitesi, yalıtım, gün ışığı, havalandırma ve yeşil alanla görsel temas açısından sağlıksızdırlar. Birleşik Krallık'ta kalitesiz konutların NHS'ye yılda 760 milyon sterlin ve genel olarak toplum için 1,9 milyar sterline mal olduğu tahmin edilmektedir. (The DfMA Housing Manual, Wikihouse,2019)

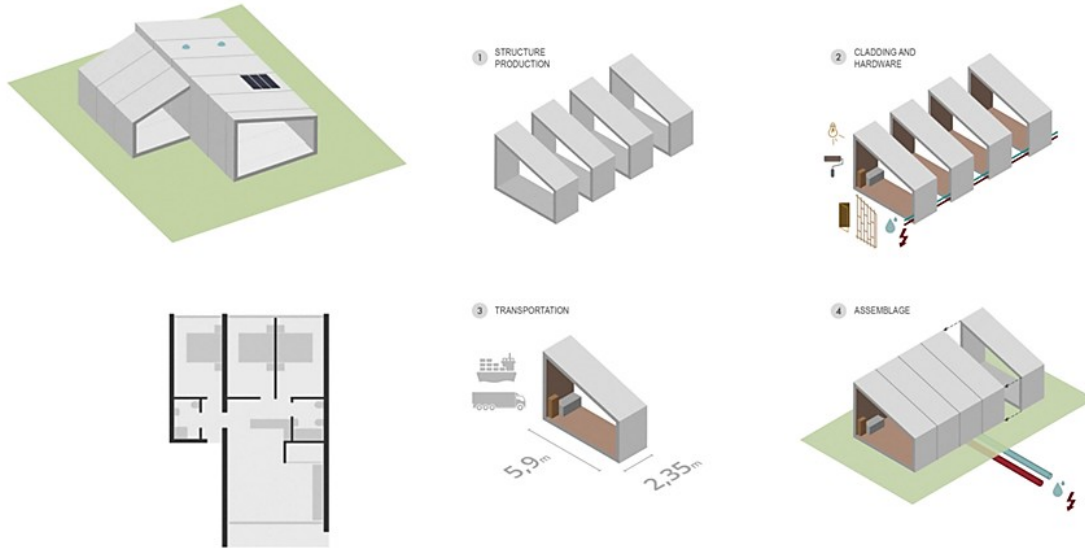

Şekil 17- 1960-2020 Yılları Arası Konutlarda Yıllara Göre Co2 Salınımı  
(Manu Los Gözlem İstasyonu,Datawrapper)

Geleneksel yöntemlerle inşa edilen yapılar risklidirler, çünkü maliyetleri önceden tahmin etmek zordur, bu nedenle diğer ürünlerden farklı olarak, bir binayı satın almadan önce ne kadar mal olacağını bilmenin kesin bir yolu yoktur. Bir binanın üretilmesinde birden fazla ticaret ve kritik yol bulunduğundan, küçük sorunlar bile büyük sorunlara dönüşme eğilimindedir. Sonuç olarak, inşaat projelerinin çoğu bütçeyi aşıyor. Tipik olarak, parçaları veya hizmetleri (iskele gibi) beklerken gecikmeler yaşar. Bu risk, birçok küçük ve kendi kendini inşa edenleri tamamen yasaklar ve aynı zamanda "kötü" tedarik modellerini zorunlu kılar. Dayanıklılık, kullanım, sağlık ve enerji performansı ile ilgili kullanım sırasında herhangi bir performans verisi kaydetmedikleri için 'aptaldırlar'. Herkese uyan tek beden ısmarlama, üst düzey konut piyasasının dışında, farklı sitelere ve kişilere özelleştirme için genellikle çok az yer vardır veya hiç yer yoktur. Bu, birçok grubu dışlar ve kalitesiz yerlere katkıda bulunur.

Manueldirler. Her proje, çok az otomasyon veya tekrarlanabilirlik ve çok sayıda müzakere / tartışma ile her seferinde sıfırdan tasarlanmalı ve yapılmalıdır. Bu, her ürünün "marjinal maliyetini" çok yüksek kılar. Bu yüksek tasarım genel giderlerinin her bir binanın maliyetine %20–30 arasında katkı yaptığı tahmin edilmektedir. Demokratik değillerdir. Bütün bunlar, ev inşa etme eyleminin büyük ölçüde zenginler tarafından kontrol edildiği ve az sayıda büyük şirket tarafından

yürütüldüğü anlamına gelir. Özellikle, bunu doğrudan ikinci el pazar için evler inşa eden spekülatif geliştiricilere bırakma eğilimindeyiz ve bu nedenle kaliteli, sürdürülebilir evler inşa etmek için çok az teşvikimiz var. Günümüzde inşaat, son kullanıcıların istekleri veya ihtiyaçları değil, arz yönlü kâr tarafından yönlendirilen yukarıdan aşağıya bir faaliyettir. Barınmanın insanlar tarafından değil, insanlara yapılan bir şey olduğu fikrine alıştık. Bu bir problem olarak görülmektedir. Çünkü nihayetinde, yapabilecekleri en iyi, en sağlıklı, en sürdürülebilir evleri inşa etmek için doğrudan teşviki olan insanlar, içinde yaşayacak, çocuklarını burada büyütecek ve ısınma faturasını ödeyecek kişilerdir. (The DfMA Housing Manual, **Wikihouse,2019**)

Şekil 18- Modüller Halinde Tasarlanan Açık Kaynak Evi

### 7.6. Açık Kaynak Evlerinde Lisans İşlemleri

Açık kaynak mimarisinde tüm yapılar; amaca yönelik yapısal uygunluk, yangın güvenliği, enerji performansı, erişilebilirlik vb. konularını kapsayan mevcut yerel bina kurallarını her zaman karşılamalı veya aşmalıdır. Bazı yerlerde bir tipe göre onay kullanmak da mümkün olabilir. Her binanın denetlenmesini ve imzalanmasını zorunlu kılmak yerine, kalite kontrol

standartları ve prosedürleri eşliğinde tip 'mekanizmasına göre onay almak projenin esas gayesidir. Klasik sistemde olduğu yine burada da yapılar açık pazarda satılacaksa, alıcıların muhtemelen ipotek finansmanı ile finanse edilmesi gerekecektir.

Bazı ülkelerde (İngiltere gibi) bu, açık kaynak mimari sistemlerinin ürün sertifikalı olmasını ve farklı projeler için bir garanti verilmesini gerektirecektir. (Birleşik Krallık 'ta bir "garanti", genellikle yeni bir evde 10 yıllık kusur sorumluluk sigortasıdır). Garanti sigortacıları, herkesin bildiği gibi muhafazakârdır ve bina yöntemlerinde yeniliklere yanıt vermekte yavaş

davranabilirler, ancak bu sorunu çözmek için bir dizi yeni sigorta ürünü piyasaya sürülüyor. Bu, müşterilerin, tasarımcıların ve yenilikçilerin farkında olması gereken bir şeydir: Yeni açık kaynak mimarisindeki sistemlerinin, birçok projenin devam edebilmesi için muhtemelen yerinde bir garanti sigortasına sahip olması gerekecektir. (Wikihouse,2021)

Açık kaynak mimarisinde yapılar klasik lisanslama veya ruhsatlandırmadan ayrı düşünülmemelidir. Sistem esnek tasarım fikriyle yola çıktığı için güncel bütün yasal düzenlemelerine uydurulabilir. İmar kanunları doğrultusundaki düzenlemelere uygundur. Hâlihazırda asıl araçlarından biri olan bulut sertifikasyon sistemiyle tasarımları oluşturulduğundan diğer sertifikasyon işlemlerinde de (yangın,enerji v.b. gibi) geleneksel yöntemlerle inşa edilen yapılara göre avantajlıdır. Dolayısıyla ülkemizde lisans işlemleri için kullanılabilir durumdadır. Ayrıca Avrupa birliği, ISO gibi uluslararası sertifikasyon sistemini desteklemektedir. Ayrıca açık kaynak yapıları herhangi bir ahşap çerçeve yapısı gibi davranacaktır. İlerleyen süreçte teknolojinin gelişimi ile çelik veya daha güçlü materyaller kullanılarak daha ileri uçlu yapılar yapmakta mümkündür. Bununla birlikte, tasarımı imzalamak için bir yapısal mühendise ihtiyaç duyulması her zaman geçerlidir. Düzenlemelerin esasında ülkeden ülkeye değiştiğini unutmamak gerek. (Wikihouse,2021)

## 8. TARTIŞMA

Uluslararası düzlemde zaman zaman yaşanan konut krizleri akademiden, endüstriden ve politika yapıcılardan her zaman ilgi çekmektedir. Bugün ile 2050 arasında, bir toplum olarak, büyük bir inşaat zorluğuyla karşı karşıyayız: yalnızca milyonlarca ev, okul ve diğer binalar inşa etmemiz gerekmiyor, aynı zamanda bu binaların düşük enerjili, düşük karbonlu olması ve bizim esenlik olduğu ortadadır. Mevcut yapım yöntemlerimiz bu amaca uygun değildir. Yavaş, öngörülemez, savurgan, enerji ve karbon yoğun ve çok büyük miktarlarda kalifiye işgücü gerektiriyorlar. Bu yöntemlerin alternatiflerini düşündüğümüzde, büyük, pahalı,

merkezi üretim tesisleri gerektiren ve her duruma uyan tek boyutlu modüler evler üreten çözümler düşünme eğilimindeyiz. 'Endüstri 3.0' olarak anılan şey. Bunlar, büyük şirketlerin büyük projeleri için harikadır, ancak küçük, özel projeler için o kadar iyi değildir.

Peki ya maliyetin bir veya büyük kısmına dijital mikro fabrikalar kurabilseydik: web'i kullanarak ortak çözümleri paylaşan yerel üreticilerden oluşan bir ağ? Dağıtılmış, esnek bir tedarik zinciri. 'Endüstri 4.0' Söz konusu krize ilişkin çeşitli çözümler ortaya konulmuştur. Açık kaynak inşaat sistemleri, uzun vadeli sosyal, ekonomik ve çevresel sürdürülebilirliği sağlamak için umut verici bir çözüm olarak ortaya çıkartmıştır. Araştırma çerçevesi, iki ana kavramın

birleşik bir görünümüne dayanmaktadır: "şenlik" ve "açıklık". Amaç, bu iki yön arasındaki ilişkinin derinlemesine anlaşılmasını sağlamak ve "Yerel Tasarım Global Üretim Yerel" ile ilgili literatür sağlamaktır. Analiz, şenlik ve açıklığın karmaşık ve bağlama özgü faktörler olduğunu gösterdi. Açık kaynak mimarisi genel olarak şeffaflığı hedefler. Sistem P2P (Peer To Peer) mobilitesi ile taşınmaktadır. 'Tilki gibi tembel olun' - Linus Torvalds. Başkalarının özgürce adapte olması ve iyileştirmesi için ortak çözümleri paylaşmayı önermektedir. Bu şekilde, hiçbir sorunun iki kez çözülmesinin gerekmediği büyük bir Ar-Ge topluluğundan hepimiz faydalanılır.

Tipik performans karşılaştırması	
<b>Beton, tuğla ve blok</b>	<b>WikiHouse</b>
yapım maliyeti £ 1100-1600 / m <sup>2</sup>	yapım maliyeti £ 1100-1600 / m <sup>2</sup>
proje maliyeti kesinliği düşük	proje maliyeti kesinliği orta-yüksek
inşaat süresi 6-9 ay	inşaat süresi 8-12 hafta
inşaat beceri seviyesi yüksek	inşaat beceri seviyesi düşük
U değeri 0,3 W / m <sup>2</sup> K	U değeri 0,15 W / m <sup>2</sup> K
Kaçak hava 8-10 m <sup>3</sup> / ha <sup>2</sup>	Hava sızdırmazlık 1-3 m <sup>3</sup> / ha <sup>2</sup>

Yeniden kullanılabilir bileşenler % 0-10	Yeniden kullanılabilir bileşenler % 80-90

Şekil 19- Geleneksel Yöntemler ile Açık Kaynak Ev Tipik Performans Karşılaştırması (İngiltere, Wikihouse, 2021)

Türkiye’de, kentlerdeki sosyo-ekonomik değişimlerle birlikte hızlı bir nüfus artışı ve kentleşme olgusu yaşanmaktadır ve kentleşme sorunu giderek büyüyen boyutuyla çözüm beklemektedir. 1950’li yıllardan beri kırsal alandan kentsel alanlara çok yoğun bir göç başlamıştır. Bunun sonucunda zaman içinde kentleşme sorunu ve konut açığı ortaya çıkmıştır. Ancak, konut sektörüne yapılan yatırımların üretken yatırımlar olarak kabul edilmemesi nedeniyle gereken önlemlerin alınmaması, kamu kaynaklarının dağınık ve yetersiz oluşu, konut yapımında, konut sahibi olmada, yeterli ve etkin bir sistemin oluşmasını engellemiştir.

Boylece günümüzde konut sorunu önemli boyutlara ulaşmıştır. Türkiye’de konut sektörünün, ekonomik gelişme bakımından taşıdığı önemin anlaşılması sonucu, kamu otoriteleri soruna çözüm bulmak için bir takım arayışlara başlamış ve çeşitli dönemlerde farklı politikalar izleyerek sorunu çözmek istemişlerdir. Ancak sorunları tespit etmekteki başarılarını çözmekte gösteremeyip yetersiz kalmışlardır.

Alastair Parvin: Konut kriziyle ilgilenmemin nedenlerinden biri Amerika veya İngiltere gibi ülkelerde de meydana gelmesidir. Onlar dünyadaki en zengin ülkelerden bazılarıdır ve yine de Britanya'da Avrupa'nın en küçük evlerinden bazılarını ya da ikinci en küçük evlerini inşa

ediyoruz. Zengin olmamız gerekirken neden konut krizi yaşıyoruz? Sanayi Devrimi'nden bu yana, temelde, kaliteli malları etkili bir şekilde üretebilecek tek insanların, ister piyasa ister devlet olsun, büyük organizasyonlar ve şirketler olduğu varsayılmıştır. Birleşik Krallık 'ta öncelikle büyük bir enflasyona yol açan bir arazi ve altyapı krizi olduğunu bildiğimiz konut krizinden bahsettiğimizde, hükümetler hala "Ah, ev inşa şirketleri için daha fazla arazi alalım, geliştiriciler. " Ve kullanmayacaklar çünkü iş modellerini temelden yanlış anladılar. Bir geliştirici, yalnızca bunu yapmak karlı olduğunda inşa eder, bu yüzden onlara bir sürü arazi vermiş olsak bile, yine de evleri sadece fiyatları yüksek tutacak hızda piyasaya sürerler. Özel inşaatçılar yalnızca karlı olduğunda inşa etmezler. Her zaman bir ev istedikleri zaman inşa ederler. Öyleyse, tüm bu işin özü şu soru: Evlerimizi kim inşa ediyor? Varsayım, bu büyük veya kuruluşlar olması gerektiğidir ve tartıştığımız şey, bu yeni teknolojilerin artık geçerli olmadığıdır.

**Şekil 20-** Açık Mimaride Konut Uygulaması Yapı Mobilirite Analizi(Janelle Zara/Archizer,2021)

## **9 .SONUÇ ve ÖNERİLER**

Açık kaynak mimarisinde tüm yapılar; amaca yönelik yapısal uygunluk, yangın güvenliği, enerji performansı, erişilebilirlik vb. konularını kapsayan mevcut yerel bina kurallarını her zaman karşılamalı veya aşmalıdır. Açık kaynak mimarisi aslında mimariyi kitleler için demokratikleştirme misyonu gibi görünmektedir. Ancak mimarları genel denklemden

çıkardığımızda, insanlar sadece *binalarla* kalmıyor mu? Sistem esasında insanları mimariden, dışavurumundan mahrum mu bırakıyor? Esasında bu soruların cevabı zaten apaçık ortadadır. Açık bir şekilde görülmektedir ki açık kaynak sistemleri tatbik edildiği ülkelerde daha çok mimar ve mühendis müdahalelerine ihtiyaç duymaktadır. Bunun sebebi sıradan yapı bilgisine sahip bir bireyin sistemde geleceğe dönük kompaktlık, mobilirite, modülerlik vs. gibi çözümlerden uzak olmasıdır. Bu sistemde yapı üzerinden çeşitli formasyonlar kullanılarak yapı hızlı üretilecek hale getirilir. Bunun içinde ileriye yönelik projeksiyonlarda yapıya uzman tasarımcının yol haritası çıkarması gerekmektedir. Dolayısıyla uzman bir bireyin kendi yükümlülüklerini yerine getirmesi sistemin işleyişi açısından elzem bir haldedir. Şuan için sistem “Açık” ibaresini üretimde efektif bir şekilde sergilemektedir. İleride gelişen teknolojik enformasyon ve mobilizasyon ile bu durumun değişeceği de ortadadır. Ülkemizde konut ihtiyacı ve performans verilerine bakıldığında sektörel daralma ve arz-talep dengesizliği(balonlaşması) gün yüzündedir. Artan nüfus ile beraber konut ihtiyacı da paralel olarak artmaktadır. Konut ihtiyacı buna mukabil hızlı bir şekilde karşılanmak durumundadır. Bunun için geleneksel konut inşaat uygulamalarından farklı bir çözüm arayışına gidilmelidir. Açık kaynak mimarisi, bulut tabanlı sistem ile hem üretici hem tüketici modülü ile yeni olan sistem kaçırılmamalıdır. Yerel ekonomiye de katkı verecek Linus Torvalds’ın modeli modern yapılaşma tanımlarına da uymaktadır. Ülkemizde ekonomik durumu güçlü olanın sadece yapı yapabildiği de gözden kaçırılmamalıdır. Dolayısıyla konut veya yapı üretim modelinde demokratikleşme olarak tanımlanan açık kaynaklı mimari kavramı hızlı bir şekilde benimsenerek ,alternatif sistemler denenmelidir. Sonuç olarak ‘LİNUS TORVALDS’IN AÇIK KAYNAKLI MİMARİSİ VE UYGULANABİLİRLİĞİNİN ARAŞTIRILMASI’ ’adlı söz konusu bu çalışma da açık kaynak sisteminin Anadolu başta olmak üzere konut çözümüne iyi bir alternatif yaklaşım olduğu ortadadır. İlgili kurumsal teşvikler ile kısa projeksiyonda kırsal alanlarda uzun projeksiyonda kentsel alanda ve ölçekte büyük getirisi var olduğu çalışma boyunca ifade edilmiştir. Bu doğrultuda söz konusu sistem ile özellikle kırsal, iş gücünden yoksun, ekonomik olarak şartların elverişsiz olduğu ve yapım maliyet ve şartlarının zor olduğu bölgelerde açık kaynak mimarisi ile yapı inşaatının ülkemizce de uygun olduğu ortaya konulmuştur. Kısa vadede yerelleşme sağlayarak modern yapı yapım çözümü sunmakla beraber açık kaynaklı mimari geleceğin mimari uygulama alanı olacağı yabancı uzman çevrelerce de kabul edilmiştir.

**ÖZET**

Kentsel dönüşüm, şehrin bir bölümünün veya ciddi anlamda büyük bir kısmının proje kapsamında, sistematik bir şekilde mevcut yapı stoklarının olası depremlere karşı toprak zeminin ve üzerindeki yapının risk değerleri belirlenerek, yapılan kamusal çalışmalardan biridir. Sağlıksız kent dokularının iyileştirilmesinde ve kentsel sorunların çözümünde ekonomik, mekânsal, toplumsal koşulları dikkate alan kapsamlı bir projelendirme ve uygulama süreci olarak da tanımlanabilir.

Son yıllarda dünyanın birçok ülkesinde olduğu kadar, Türkiye'deki planlama/mimarlık ortamında da kentsel dönüşüm kavramı üzerinde çeşitli tartışmalar yapılmaktadır. Bu konuda uluslararası manada söz sahibi uzmanlar kentsel dönüşümü, kentsel sorunlara çözüm üretmek amacıyla, değişime uğrayan bir bölgenin ekonomik, fiziksel, sosyal ve çevresel koşullarına kalıcı bir çözüm sağlamaya çalışan kapsamlı bir vizyon ve eylem olarak tanımlamaktadır. Günümüzde kentsel dönüşüm sonucunda, kentlerin kimliklerini yitirerek gittikçe birbirini andıran dokuların ortaya çıkması kültürel anlamda bir sorun olmakla kalmayıp, ekonomik, sosyal ve psikolojik sonuçlar doğurmaktadır. Kentlerin kimliklerini koruyabilmesi ve kimliklerine uygun gelişebilmesi, gelişimin ekolojik, sosyal ve kültürel boyutlarının ihmal edilmemesine bağlıdır. Gelişme yolundaki kentlerin büyümesi kent kimliği gözetilerek gerçekleştirilmelidir. Bu da kent kimliğinin, önemli bir planlama parametresi olarak ele alınmasını gerektirmektedir. Ayrıca, bir kentin kimliğinin oluşumunda son derece etkin olan kent sakinleri ile kentin doğal değerleri, kentin planlama stratejilerine de yön verebilmelidir. Kentin kimliğine sahip çıkmak başta o kentte yaşayanlara düşen görevlerdendir. Bu doğrultuda söz konusu çalışmada ele alınan konu; Depremler sonrasında yapılan kentsel dönüşüm ve onun mimari ortaya çıkardığı mimari kimlik sorunsallarıdır.

**Anahtar Kelimeler:** Mimari ve Kimlik, Kentsel Dönüşüm, Kent Kimliği

## IN URBAN TRANSFORMATION STRUCTURES ASSESSMENT ON ARCHITECTURAL IDENTITY

### ABSTRACT

Urban transformation is one of the public works carried out by systematically determining the risk values of the existing building stocks against possible earthquakes, the soil ground and the structure on it, within the scope of the project of a part of the city or a significant part of the city. It can also be defined as a comprehensive project design and implementation process that takes into account economic, spatial and social conditions in the improvement of unhealthy urban textures and the solution of urban problems. In recent years, there have been various discussions on the concept of urban transformation in the planning/architecture environment in Turkey as well as in many countries of the world. Experts who have a voice on this subject in the international sense define urban transformation as a comprehensive vision and action that tries to provide a permanent solution to the economic, physical, social and environmental conditions of a region that has undergone changes in order to find solutions to urban problems. Today, as a result of urban transformation, the emergence of cities that resemble each other by losing their identities is not only a cultural problem, but also has economic, social and psychological consequences. The ability of cities to protect their identities and develop in accordance with their identities depends on not neglecting the ecological, social and cultural dimensions of development. The growth of cities on the way of development should be realized by considering the identity of the city. This requires the urban identity to be considered as an important planning parameter. In addition, the inhabitants of the city, which are extremely active in the formation of a city's identity, and the natural values of the city should be able to direct the planning strategies of the city. Protecting the identity of the city is one of the duties of the people living in that city. In this direction, the subject discussed in this study; Urban transformation after earthquakes and its architectural identity are the problems of architectural identity.

**Keywords:** Architecture and Identity, Urban Transformation, Urban Identity

## 2.GİRİŞ

Kentsel dönüşüm, şehrin çok küçük bir bölümünün veya ciddi anlamda büyük bir kısmının proje kapsamında, sistematik bir şekilde mevcut yapı stoklarının olası depremlere karşı toprak zeminin ve üzerindeki yapının risk değerleri belirlenerek, yapılan kamusal çalışmalardan biridir. Sağlıksız kent dokularının iyileştirilmesinde ve kentsel sorunların çözümünde ekonomik, mekânsal, toplumsal koşulları dikkate alan kapsamlı bir projelendirme ve uygulama süreci olarak da tanımlanabilir. Son dönemlerde dünyanın birçok ülkesinde olduğu kadar, Türkiye’deki planlama/mimarlık ortamında da kentsel dönüşüm kavramı üzerinde çeşitli tartışmalar yapılmaktadır. Bu konuda uluslararası manada söz sahibi uzmanlar kentsel dönüşümü, kentsel sorunlara çözüm üretmek amacıyla, değişime uğrayan bir bölgenin ekonomik, fiziksel, sosyal ve çevresel koşullarına kalıcı bir çözüm sağlamaya çalışan kapsamlı bir vizyon ve eylem olarak tanımlamaktadır.(Thomas, 2003). Günümüzde kentsel dönüşüm sonucunda, kentlerin kimliklerini kaybederek gittikçe birbirini andıran dokuların ortaya çıkması kültürel anlamda bir sorun olmakla kalmayıp, ekonomik, sosyal ve psikolojik sonuçlar doğurmaktadır. Kentlerin esas kimliklerini koruyabilmesi ve kimliklerine uygun gelişebilmesi, gelişimin ekolojik, sosyal ve kültürel boyutlarının ihmal edilmemesine bağlıdır. Gelişme yolundaki kentlerin büyümesi kent kimliği gözetilerek gerçekleştirilmelidir. Bu da kent kimliğinin, önemli bir planlama göstergesi olarak ele alınmasını gerektirmektedir. Ayrıca, bir kentin kimliğinin oluşumunda son derece etkin olan kent sakinleri ile kentin doğal değerleri, kentin planlama stratejilerine de yön verebilmelidir. Kentin kimliğine sahip çıkmak başta o kentte yaşayanlara düşen görevlerdendir. Çalışmanın özel olarak yoğunlaştığı konu kentsel dönüşümün getirdiği kimlik sorunlarıdır. Bu durumun iyi bir şekilde değerlendirilebilmek için en yakın tarihte sonuçların gözlemlenebileceği 2011 yılındaki Van Deprem’i referans alınmıştır. Ayrıca çalışmanın konusuna uygun bir değerlendirme yapmak içinde seçilen yerde deprem sonrası kentsel dönüşüm yapılarının olması gerekmektedir. Bu bağlamda çalışmaya en iyi referans yeri Erciş olarak seçilmiştir. Bu depremin en çok tahribata yol açtığı yerlerden biri Erciş’tir. Ayrıca kente devlet eliyle yeni bir yapılaşma-kentsel dönüşüm yapıları yapılmıştır. Çalışmada cevap aranan temel problem; 2011 Van Depremi sonrasında kentsel dönüşüm kapsamında yapılan yapıların, kentin tarihi geçmişi ve planlaması açısından, Erciş kent kimliğine zararının

ne olduğudur. Çalışmanın amacı ise; bu problemin çözümüne katkı sağlayıp, Erciş’te yapılan kentsel dönüşümü irdeleyerek söz konusu kente ait mimari kimlik sorunlarını gün yüzüne çıkarmaktır. Çalışmada, Erciş kentini geçmiş planlama ve mimari kimliğini ifade eden görsel

kayıtlardan yararlanılacaktır. Yapılan kentsel dönüşümün mimari kimliği ortaya konulup Erciş kentine uygunluğu ifade edilecektir.

### 3.ÇALIŞMANIN PROBLEMİ ve HİPOTEZLERİ

Bu araştırmada temel olarak ele alınan problem; *2011 Van Depremi sonrasında kentsel dönüşüm kapsamında yapılan yapıların, kentin tarihi geçmişi ve planlaması açısından, Erciş kent kimliğine zararının ne olduğudur.* Çalışma, Erciş kent merkezinde yapılan kentsel dönüşümün ilk etabı olarak planlanan ve uygulanan proje ve yapıları kapsamaktadır.

**H0:** 2011 Van Depremi sonrasında kentsel dönüşüm kapsamında yapılan yapılar, tarihsel mimari bütünlük gözetildiğinde, Erciş kent kimliğine aykırıdır.

**H1-a:** 2011 Van Depremi sonrasında kentsel dönüşüm kapsamında yapılan yapılar, tarihsel mimari bütünlük gözetildiğinde, Erciş kent kimliğiyle örtüşmektedir.

**H1-b:** Erciş'te kentsel dönüşüm çerçevesinde yeni yapılara ihtiyaç yoktur.

**H1-c:**2011 Van Depremi sonrasında kentsel dönüşüm kapsamında yapılan yapılar, Erciş kent kimliğine yeni bir vizyon katmaktadır.

### 4. ÇALIŞMANIN AMACI ve ÖNEMİ

Söz konusu bu çalışmanın amacı; *2011 Van Depremi sonrasında kentsel dönüşüm kapsamında yapılan yapıların, kentin tarihi geçmişi ve planlaması açısından, Erciş kent kimliğine zararının ne olduğudur* çalışmanın problemi olarak ifade edilen, Erciş'teki kentsel dönüşüm sonucu değişen kentsel kimlik probleminin çözümüne katkı sağlayarak, kentin mimari kimlik sorunlarını gün yüzüne çıkarmaktır. Çalışma, Erciş kentindeki yapılan söz konusu yapılaşmanın, kentin gelecek projeksiyonuna etkisinin ortaya koyacak olması suretiyle önem arz etmektedir.

### 5. ÇALIŞMANIN MATERYAL ve YÖNTEMİ

Çalışmada, Erciş kentine ait geçmiş planlama ve mimari kimliği ifade eden, görsel kayıtları alınmış yapıların mimari kimliğinden yararlanılacaktır. Yapılan kentsel

dönüşümün mimari kimliği irdelenip Erciş kentine uygunluğu çalışma doğrultusunda ortaya konulacaktır.

Bu bağlamda öncelikle; Erciş için modern kimlik yapıları olarak kabul edilen erken cumhuriyet dönemi yapılarından günümüzde ayakta duranları işlenecektir. Çeşitli dönemlerde

tahrip olan, kent için son derece önemli kimlik değerleri olarak kabul edilen bu yapıların mimari özellikleri belirtilerek kimliksel yönleri değerlendirilecektir. Daha sonra aynı değerlendirme kentsel dönüşüm ile yapılan yapılar üzerinde olacaktır. Çalışmanın sonuç kısmında ise iki kimliksel değer karşılaştırılıp çalışma sonuçlandırılacaktır.

## 6. ERCİŞ KISA TARİHÇESİ

Erciş'in de içinde bulunduğu Van Gölü havzasının geçmişi tarih öncesi dönemlere kadar gitmektedir. Bölgede Neolitik(eski çağ) yerleşmeler hakkında bilgi olmamasına rağmen Tilkitepe Höyüğü, Kalecik, Dilkaya ve Ernis mezarlarındaki buluntularda Kalkolitik yerleşim izlerine rastlanılmaktadır. Dilkaya Höyüğü buluntularında Erken Hurri kültürünün (M.Ö 3000) bölgede etkili olduğu bilinmektedir.

Erciş'in genel olarak bilinen ilk resmi tarihi Urartularla (MÖ 900-600) başlar. Ortadoğu kaynaklarında geçen "Arciş" adının Urartu Kralı Arğişti'den geldiği ve dolayısı ile Erciş'in Urartular döneminde yaşayan halkı ile kurulduğu belirtilmektedir. Urartu Krallığı'nın batı tarafı yolu olan ve Erciş'ten başlayıp Muş-Bingöl üzerinden Malatya'ya uzanan yol Erciş'in Urartu geçmişinde önemini artırmıştır. Hatta yolu elinde tutmak, güvenliğini sağlamak için yol boyunca birçok güvenlik ve konaklama istasyonları yapılmıştır. Erciş'in çeşitli yerlerinde bulunan çivi yazılı kitabelerden anlaşıldığı kadarıyla Urartu Kralları Arğişti ve Menua döneminde Erciş'in imar edildiği, Tetuma adında bir şehir kurulduğu ve imar edilen bu şehirde tarıma büyük önem verilerek tarımsal sulama kanallarının yapıldığı bilinmektedir. (Bingöl,Çetin,2019)

**Şekil 1-** Urartu Döneminden Kalma Tarihi Erciş Kalesi Kalıntıları

Urartu devletinden sonra sırasıyla Medler, Pers, Roma ve Bizans hakimiyetine giren bölge 640 yılında Hz. Ömer'in komutanlarından İyaz Bin Gonem tarafından İslam'a katılır. Daha sonra tekrar Bizans İmparatorluğunun eline geçen Erciş, bir müddet Emevi ve Abbasilerin hâkimiyetinde kalır. IX. yüzyıldan itibaren Vasburakan ve Bağretlı gibi mahalli krallıkların hâkimiyetine girer. Yöreye ilk Türk akınları 1054 yılında bizzat Tuğrul Bey 'in kumanda ettiği büyük ordu ile başlar ve Muradiye ( Bargiri ) ile Erciş feth edilir. Daha sonra Erciş, 1071 Malazgirt Zaferi ile Selçuklu topraklarına katılır. (Wikipedia). Erciş asıl önemine XIV. Yüzyılda Karakoyunlularla (1365-1469) kavuşur. Erciş merkez olmak üzere kurulan devletin kurucusu Bayram Hoca'dır.

Karakoyunlu Devleti (1351–1469); İlhanlılar Devleti'nin (İran Moğolları) yıkılmasından sonra Türk boy ve aşiretler bir araya gelerek oluşturduğu siyasî birliğin ve bunların XIV. yüzyılın ikinci yarısında Doğu Anadolu ve Azerbaycan'da kurdukları devletin adıdır, Karakoyunlular'ın Moğol istilâsı ve İlhanlılar devrinden önceki durumları hakkında hiçbir bilgi mevcut değildir. Kaynakların rivayetinden, Koyunlular devletini teşkil eden boy ve oymakların Moğol istilâsı (1220–1221 ve takip eden yıllar) neticesinde Türkistan'dan İran'a ve sonra Doğu Anadolu'ya geldikleri,

Musul-Van Gölü çevresi ile Erzurum bölgelerinde geleneksel yaylak-kışlak hayatlarına devam ettikleri anlaşılmaktadır. (Bingöl, Çetin,2019)

Şekil 2- Karakoyunlu Döneminden Kalma Tarihi Erciş Kadempaşa Hatun Kümbeti(Miladi 1458)

Karakoyunlu Türkmenleri Reisi Bayram Hoca, İlhanlı Devleti'nin yıkılmasından (1336) sonra Azerbaycan ve Doğu Anadolu'daki siyasî otorite boşluğundan faydalanarak faaliyetlerini artırır.(778/1376). Musul'dan başka, Sürmeli-Çukuru (bugünkü Iğdır vilâyeti arazisi) ve Nahçıvan havalisini ele geçirir. Erzurum, Avnik, Hasan-Kalesi de, Sutaylılar'ın ortadan kalkması ve Erzurum'a kadar hâkim bulunan Orta Anadolu Beyliği Eratnalılar'ın zayıf düşmesi üzerine, buraları da hâkimiyeti altına alır. Bütün bu gelişmeler yaşanırken Karakoyunluların merkezi Erciş'tir. Karakoyunlular daha sonra yıkılır ve bölge Osmanlı Devleti'nin egemenliğine girer.

**Şekil 3-** Karakoyunlu Döneminden Kalma Erciş Karakoyunlu Mezarlıkları

1632’de Van, Erciş, Adilcevaz ve Muş’un Osmanlı tarafından yönetildiği bilinmektedir. Akabinde 1653 de Van Beylerbeyliğine bağlı Erciş sancak olur. 1840 daki deprem ve 1841 de göl sularının yükselmesi ile halk kaleyi terk eder. Erciş; Örene, Çelebibağı, Kasımbağı, Gölağzı ve Yukarı Çınarlı gibi yerleşim yerlerine taşınarak burada yeni yerleşim birimi oluşturulur. 1899 tarihli Van Vilayet salnamesinde “Erciş’te 500 hane çok sayıda iş yeri, iki han, iki camii bir ortaokul ve hükümet konağı yer almaktadır” ibaresi geçmektedir. Osmanlı devletinde 1864’de Meslis-i Vala’dan çıkarılan Vilayet nizamnâmesi taşra örgütlenmesini yeni baştan düzenlemiştir. Bu gelişmeler ışığında Erciş 1910 yılında kaza ( ilçe) olmuştur.

1914 de I. Dünya savaşının başlamasından sonra, 1915 tarihinde Ermenilerin ile birlikte Erciş ve çevresi Ruslar güçleri tarafından işgal edilir. Rusların işgali sırasında Ermenilerin yerli halka karşı isyanı başlar ve bu isyan çevreye yayılır. İsyana karşısında zamanın kolluk teşkilatı etkisiz kalarak halkın güvenliğini sağlayamaz. Bu durum karşısında halk bölgeden göç etmeye başlar. Ancak buraya göç oldukça zordur. Fakir ve hasta olan halkın bir kısmı yolda ölür. Bir kısmı da yollarda Ermeni çeteleri tarafından öldürülür. Göç edemeyen halk (bu göç edemeyenlerin büyük bir kısmı hasta

ve yaşlılardır) da yıllardır birlikte yaşadıkları ekmeklerini paylaştıkları Ermeniler tarafından katliama maruz kalır. Halkın evleri iş yerleri yağmalanır, insanlar bir araya toplanıp yakılır, bazen köprüden atılır, hamile bayanların karnı delinir ve vahşi bir şekilde katledilir.

Şekil 3- Geç Osmanlı Dönemi Erciş Yapıları ve Erciş Halkı(1918,erciş.gov)

1917 'de Rusya'nın I. Dünya Savaşından çekilmesiyle birlikte silahlarının bir kısmını Ermenilere bırakır. Ermeniler de katliamlarına devam ederler. Katliamların zirveye çıktığı noktada silahlı kuvvetlerimiz doğu illerini düşman işgalinden kurtarmak için harekete geçer. Ali İhsan Paşa yönetiminde 4. Kolordu birlikleri 1 Nisan 1918'de Erciş, Ermeni işgalinden kurtarılır. İlçede sayıca az kalan perişan haldeki Ercişlilerin yaraları sarılır ve göç edenler de yavaş yavaş memleketlerine dönerler. 29 Ekim 1923'te Cumhuriyetin ilan edilmesiyle rahat bir nefes alan Erciş'te imar ve iskan faaliyetlerine başlanır. 1923 de Erciş'te Belediye kurulur. Eğitim-Öğretim sorunlarını çözmek için 1925 de bu günkü Atatürk İlköğretim Okulunun Tarihi binası Atatürk İlkokulu olarak açılır.

## 7. ERCİŞ'TE KENT KİMLİĞİ ve ERKEN CUMHURİYET DÖNEMİ MİMARİSİ

Osmanlı tarihine baktığımızda, geleneksel mimarisinde 19. yüzyıl bitişinden itibaren Batı sanat akımlarının giderek daha fazla etkin olduğu ve Osmanlı geleneksel kimliğini yansıtan sanat unsurların sürekli azaldığı bir sanatsal anlayış başlamıştır.

İmparatorluğun geleneksel mimarisinin içinde bulunduğu bu çıkmazdan kurtararak öz kimliğine kavuşturmayı amaçlayan Birinci ve İkinci Milli Mimarlık Hareketleri ile bir mimari değişim başlamış, bu değişim bütün Avrupa, Anadolu'da olduğu gibi bir Anadolu kenti olan

Erciş'te etkilemiştir. Van Gölü Havzası'nın önemli kültürel-sanat merkezlerinden birisi olan ve yaklaşık 3000 yıllık bir tarihe sahip olan Erciş'te 20. yüzyılın başlarından sonra bu anlayış doğrultusunda başta konut ve kamu binaları olmak üzere birçok sivil mimari eser inşa edilmiştir. Deprem bölgesinde bulunduğu için geçmişte çok büyük yıkımlar yaşayan ilçede bu mimari anlayışla yapılan sadece 4 kültürel yapı günümüze ulaşabilmiştir. 23 Ekim 2011 depremi esnasında çeşitli zararlar gören bu yapılar kentin estetiğe ve kimliğe katkılarıyla beraber temel Cumhuriyet döneminin sosyo-kültürel, ekonomik faaliyetlerini günümüze taşıyan birer tarihi belge niteliğindedir.(Bingöl, Çetin,2019)

### 7. 1. Erciş Erken Cumhuriyet Dönemi Mimarisi Ve Kimliği

Günümüzde insanların esas olarak yaşadığı Yeni Erciş'te ve etrafında çok az da olsa bazı tarihi mimari eserler varlığını sürdürmektedir. Söz konusu eserler içerisinde Erciş kentinin tarihsel kesitlerinin bir parçasını oluşturan 20. yüzyıl başlarına ait 4 yapı bölge insanı için sembol ve anı değeri olan birer tarihi kült-belge niteliğindedir. Aynı zamanda bu söz konusu eserler Kurtuluş Savaşı ve Cihan harbi sonrası tamamen tahrip olan Erciş kentine yönelik esaslı yeni bir mimari kimlik olarak kabul edilmiştir.

#### 7.1.1.Erciş Atatürk İlkokulu

Şekil 4- Erken Dönem Cumhuriyet Mimarisi, Erciş Atatürk İlkokulu(E. Bingöl,2019)

Konumu: Vanyolu Mahallesi, Alkoçlar Caddesi'nde günümüzde Tenzile Ana İlk ve Ortaokulu'nun arkasında yer almaktadır. Yapım Tarihi: Okulun üstünde ve çevresinde bir kitabesi tespit edilemediğinden, tarihlendirilmesi için okulun arşiv kayıtları temel alınmıştır. Yıl olarak 1925 tarihlendirebileceğimiz bina 1996 yılına kadar Atatürk İlkokulu ismiyle

egitim öğretime devam ederken bu tarihten sonra Anadolu Lisesi'ne devredilmiştir. Kent halkı arasında halen Atatürk İlkokulu olarak bilinen bina, 2011 depreminde hasar gördüğü için eğitime bir süre ara verilmiş, 2015'te Erciş Kaymakamlığı çalışmalarıyla onarılarak Şehit Jandarma Astsubay Ahmet Çelik İmam Hatip Ortaokulu ismiyle tekrar açılmıştı. Günümüzde de, bu isimle eğitim-öğretime devam etmektedir. (Bingöl, Çetin,2019)

Mimari Üslup Özellikleri: Plansal olarak; doğu-batı boyunca uzanan yapının 34,5 m. uzunluğundaki güney cephesi doğu ve batı köşelerden 21 m. kuzeye doğru devam ederek U şeklini oluşturmaktadır. Avluyla bakan kuzey cephe ise yaklaşık 20 metre uzunluğundadır. Okulun dış cephelerinde toplamda 28 adet dış pencere açılarak çok ferah bir iç alan sağlanmıştır. Pencerelerin birçoğu mimari form olarak birbirine yakın olarak gözükmektedir. Ayrıca batı cephedeki 3. pencere diğerlerinden biraz daha küçük iken, kuzey taraftaki bahçeye bakan pencereler çok fazla basit bir şekildedir. Bu pencerelerin sonraki dönemlerde yapılan onarımlar sonrasında orijinalinden ayrı yapıldığı anlaşılmaktadır. Esas orijin pencereleri düşeyde basık dairesel formda kemerli ve kemerler cepheden dışa doğru çıkmalı bir şekilde yapılmıştır. (Bingöl, Çetin,2019)

Şekil 5- Erken Dönem Cumhuriyet Mimarisi, Erciş Atatürk İlkokulu Planı

Dış Süsleme Özellikleri: Süsleme karakterleri bakımından basit olan yapıda sadece antre kapısındaki bir taşta bitki motifli süsleme öne çıkmaktadır. Oldukça basit plastik formda işlenmiş kıvrık ağaç dalı ve rumi-palmet motiflerinden oluşan süslemeli taş büyük bir ihtimalle çevredeki Ortaçağ Dönemi Türk-İslam mezar baş taşlarından alınmış olmalıdır. Renkli kesme taş malzemeye sahip yapının iç kısımları bir restorasyon ile tamamen yenilenmiştir. Yapının çatısı dıştan beşik çatı ile örtülüdür.

7.1.2.Erciş Haydarbey Okulu

Konumu: Kentin Haydarbey Mahallesi'nde varlığına devam etmektedir. İnşa Tarihi: Binanın üzerinde yapılışına dair herhangi bir kitabesi bulunmadığı için ne zaman yaptırıldığı kesin olarak bilinmemektedir. Mevcudatta dış beden duvarları ayakta olan çatı örtü sistemi ve iç taşıyıcı duvarları büyük oranda tahrip vaziyette bulunan okulun tarihlendirilmesi ile ilgili okulun arşiv belgelerinde çok önemli bilgiler elde edilmiştir. Söz konusu kayıtlardan anlaşıldığı itibariyle, burada daha önce var olan ve eğitim medresesi olarak kullanılan bina 1947-1948 senelerinde okula tali edilerek kullanılmış ve ilk mezununun da 1952 yılında 01 numara ile 1937'lu Mehmet BAY olduğu ortaya çıkmıştır. (Bingöl, Çetin,2019)

Şekil 6- Erken Dönem Cumhuriyet Mimarisi, Erciş Haydarbey Okulu(E. Bingöl,2019)

Ayrıca söz konusu kayıtlardan yapının 1947 senesi öncesinde de var olduğu gün yüzüne çıkmaktadır. Okulun yer aldığı mahallede 107 yaşında olduğunu bilinen Sülhattin Akıncı'dan elde edilen bilgiler ve binanın yapısal-mimari özellikleri göz önüne alındığında 20. yüzyılın başlarında inşa edilmiş olma olasılığı ortaya çıkmaktadır. 1976 Depremi'nde çatı-üst örtüsü, 2011 Van Depremi'nde de doğu ve kuzey cephesinin büyük bir bölümü tahrip olmuş olan yapı çok ciddi bir şekilde harap haldedir. Ayrıca restorasyona çok muhtaç halde olduğu da ortadadır. (Bingöl, Çetin,2019)

Genel Mimari Özellikleri: 13x18 metre ebatlarında doğu-batı hattı boyunca dikdörtgen planlı olan okulun, 4'er adet güney ve kuzey dış bedenlerinde, 3'er adet de doğu ve batı cephelerinde toplamda 14 tane dış penceresi bulunmaktadır. Söz konusu pencereler biçim itibariyle birbirleriyle çok benzer yapısal özellikler göstermektedir. 80x200 cm. ebatlarında dış pencereler yuvarlak formlu kemerli olup beden duvarlarından dışa doğru taşırılmıştır. Üzengi(denge) taşları ile kilit taşları bütün pencerelere çok sıradışı bir form katarken kilit taşlarında birer adet altı kollu yıldız süslemesine de yer verilmiştir. Yapının esas girişi kuzey taraftan sağlanmaktadır. Dairesel kemerli, kemerinde altı kollu yıldız tarzında madalyonu bulunan ve dış bedenden dışa doğru taşırılmış olan bu kapı, ne yazık ki 2011 Van Depremi'nde tahrip olarak varlığını yitirmiştir. Ayrıca kapının şekli hakkında çok fazla bilgi bulunmamaktadır.(Bingöl,Çetin,2019)

Şekil 7- Erken Dönem Cumhuriyet Mimarisi, Erciş Haydarbey Okulu Planı

Aşırı yoğun tonda kırmızı ve sis-gri renkli düzgün kesme taş yapı malzemelerinin görüldüğü yapı, esas olarak tip renk taş işçiliğinin uygulandığı Erciş kenti ve etrafındaki mimari yapılardan bu özelliğiyle bir tarafa ayrılmaktadır. 1976 yılı zelzelesinden sonra çöken çatı örtüsünün dökümleri henüz kaldırılmamış olup, yapı günümüzde perişan bir haldedir. (Bingöl, Çetin,2019) Motif-Süs Özellikleri: Yapı ana girişin ve pencerelerin dışa çıkmalı, dairesele kemerleri üstünde yer alan altı kollu yıldız madalyonları haricinde başka motif ve süslemesi bulunmamaktadır.

7.1.3.Erciş Şevket Bey Köşkü

Konumu: Erciş kentinin Vanyolu Mahallesi, Vanyolu Caddesi içinde varlığını sürdüren köşk, Erciş Belediyesi'ne ait Emrah ile Selvi Parkı bünyesinde yer almaktadır. Genel Tarihi: Etrafında ve duvarlarında inşa kitabesine rastlanılmadığı için hangi tarihte yapıldığı kesin olarak bilinmeyen 2 katlı köşkün, giriş zemin bölümü Ercişli Âşık Emrah'ı Koruma ve Yaşatma Derneği tarafından kullanılmaktadır. 2. katı ise; 23 Ekim 2011 Van Depremi'nde tahribat gördüğü için onarım görmek için günümüzde kapatılmıştır. Erciş kentinde sivil mimari anlamında en önemli binalardan biri olan köşk, 20. yüzyıl girişinde ilçenin önde gelen kişilerinden Vanlı Şevket Bey'e ait olduğu bilinmektedir. Mimari özellikleri esas alınarak, yine çevresinde bulunan

Nezir Ergöl Köşkü'ne yapısal olarak benzerliği de göz önünde bulundurularak binanın 1930'lu senelerinde inşa edildiği bilinmektedir. (Bingöl, Çetin,2019)

Genel Mimari Özellikleri: 16x16 metre boyutlarında karesel planlı ve 2 katlı yapılan köşkün zemin katın güney cephesinde ve zemin katın kuzeydoğu köşesinden merdivenlerle ikinci kata çıkışı sağlamak amacıyla iki adet ana girişi vardır. Binada 8 tanesi zemin katta 12 tanesi 2.normal katta olmak üzere ebatları farklı 20 adet dış pencere yer almaktadır.Ayrıca büyük kısmı düz atkı taşlı kapı ve pencereler mimari biçim ve motif açısından çok basit bir düzende olup, herhangi bir motif veya kabartma biçimi yoktur. Ancak dikkat çeken bir özellik olarak kapı ve pencere kenarlıkları ile köşkün 4 bir köşesinde dışa doğru çıkartılmış olan kesme taşlar vardır. Köşkün önemli bir bölümünde moloz taş kullanılmış ve üstü değişik bir şekilde sıvanarak bitirilmiştir. Esas iç bölümünde herhangi bir motif unsuru olmayıp binanın üst örtüsü dıştan çatı ile örtülüdür. (Bingöl, Çetin,2019)

Şekil 9- Erken Dönem Cumhuriyet Mimarisi, Erciş Şevket Bey Köşkü (E. Bingöl,2019)

## 8. ERCİŞ KENTSEL DÖNÜŞÜM YAPILARINDA MİMARİ ve KİMLİK

Çok uzun bir geçmişi olan tarihi kentlerin de tarih boyunca farklı dönemlerde sahip olduğu önceki- sonraki veya eski- yeni kimliklerin üst üste birikmesiyle oluşmuş özel bir kimliği olduğu ve bu kimliğin büyük ölçüde öncekileri ve önceki dönemleri de yansıttığı/temsil ettiğini bilmekteyiz. Sorun esasında değişim değil, değişimin plansız ve kontrol dışı cereyan

etmesidir. Kentin kendisi için yapılacak her çeşit planlamanın amacına uygun, fiziki olarak yeterli ve isabetli olup olmadığından haber veren mihenk taşı ise kentin kimliğidir. Ancak kentsel kimlik birikimi deprem, afet, savaş gibi olay ve olgular geçiren kentler için geçerli olmayabiliyor. İşte Erciş'te bu duruma uyan kentlerden biridir. Özellikle geçmiş kimliğini savaş sırasında kaybetmiş ve 2011'de de kentteki geriye kalmış önemli kimliksel yapılarını kaybederek mimari kimlik açısından zayıflamıştır. 2011 Van Depremi'nden sonra Erciş'te yeniden şehirleşme gündeme gelerek hızlı kentsel dönüşüm önerilmiştir. Çeşitli proje ve etap önerileri sonucunda 2012 yılında projelendirmeye başlandı. İlk proje önerisi sunulduktan sonra önerilen projenin maliyetli olacağı gerekçesiyle proje iptal edildi. 2013 yılında

tekrardan projelendirme yapılmış olup ilgili kurumdan onay alınarak uygulama çizimlerine başlanılmıştır.

Uzun tartışmaların gölgesinde etaplara ayrılarak, Başbakanlık Toplu Konut İdaresi Başkanlığı (TOKİ) tarafından; Van'ın Erciş İlçesi'nde "Kentsel Dönüşüm ve Gelişim Projesi" kapsamında, 407 dükkân ve 48 ofis planlanarak kısa sürede inşa edilmiştir. Projelendiricileri tarafından proje; Selçuklu ve Osmanlı'dan günümüze şehirlerin kalbi konumunda olan çarşılar, alım-satım başta olmak üzere çeşitli ekonomik etkinliklerin yürütüldüğü mekânlar olmanın ötesine geçerek her kesimden kent sakinini buluşturan birer kamusal alan, çıkış noktası olarak benimsendiği belirtilmiştir.

Şekil 10- Erciş Kentsel Dönüşüm İnşaat Görünümü (Hekimyaşı,2018)

Bu bakış açısıyla geliştirilen projede, dükkân ve ofis cephelerinde tarihi Türk çarşı mimarisi örnek alınmıştır. Yeni bir yaşam merkezine dönüşen cami merkezli ticaret alanında, cephe tasarımlarının tamamında ahşap ve taş görünümlü levhalarla birlikte, cumbalar, çatılarda çıkmalar ve payandaların tamamında fibercement (doğal çimento levhalar) kullanılarak 2018 yılında inşası tamamlanmıştır. (Hekimyaşı,2018)

Şekil 11- Erciş Kentsel Dönüşüm Cephe Görünümü (Hekimyaşı,2018)

Şekil 12- Erciş Kentsel Dönüşüm Genel Görünümü (Hekimyaşı,2018)

### **8.1. Erciş Kentsel Dönüşüm Yapılarında Mimari Kimlik Değerlendirilmesi**

Şekil 10, 11 ve 12 de görüldüğü üzere planlanan ve inşa edilen kentsel dönüşüm yapıları için, cami veya külliye merkezli bir yerleşim seçilmiştir. Erciş'in geçmiş dönem kent yapısı incelendiğinde seçimin doğruluğu görülür. Geçmiş görsel kayıtlara bakıldığında Erciş, depremde ağır hasar alıp yıkılan Kara Yusuf Paşa Camii etrafında

şekillenmiş olup esasında cami-merkezli bir şehirleşmeye dayanan kentsel plan yerleşimine sahipti. Kentsel dönüşüm kapsamında seçilen plan yerleşiminin de bu şekilde olması kentsel kimliğe aykırı olarak görülmemelidir. Sonuçta kentsel planlama fonksiyonu aynıdır. Kentsel dönüşümde yapılan uygulama, yeni yapılan cami ve avlu etrafında yapılaşma, doğru bir seçimdir.

Şekil 13- Deprem Öncesi, Erciş Kara Yusuf Paşa Camii

Ancak Erciş'in kent görünümü açısından seçilen mimari tasarım Erciş kent kimliğine uygun değildir. Şekil 14 te görüldüğü üzere geleneksel Karadeniz evleri tasarımsal olarak Erciş kentsel dönüşüm yapılarına benzemektedir. Daha çok ahşap yapı malzemelerinin kullanıldığı geleneksel Karadeniz evleri tamamen kendine has bir dış cepheye sahiptir. Söz konusu Erciş'teki günümüze ulaşan tarihi yapılarına bakıldığında, yapıların dış cephesinde taşın veya taş kaplamanın kullanıldığı görünür. 2011 sonrası yapılan kentsel dönüşüm yapılarının pencere detayları da yine Geleneksel Karadeniz Evleri'ne benzemektedir. Pencere kayıt detaylarının da yine birebir taklit edilmiş olduğu görülmektedir. Dolayısıyla burada Karadeniz Bölgesi'ne ait bir kimlik getirilip Erciş'in kentsel dönüşümünde işlenmiş ve uygulanmıştır. Bölgesel kentsel kimlik göçü olarak da adlandırabileceğimiz bu durum Erciş kent kimliği açısından son derece endişe vericidir.

Şekil 14- Örnek Geleneksel Karadeniz Evleri Görünümleri

Hareketi olarak bilinen, 1938-1950 senelerini içine alan dönemde globalde ve Türkiye’de oldukça farklı sosyo-ekonomik, politik, siyasal ve etkileşimlerin etkileri ile gelişerek Cumhuriyet dönemi kent mimarisinde kendi biçimini-kimlikliliğini oluşturma adına ilk büyük adımını teşkil etmiştir. Başta Ankara, İstanbul ve büyük kentlerde daha çok Anadolu geleneksel halk mimarlığının mimari objeleri ve malzemelerinin ele alınmıştır. Söz konusu akımı, Ankara’dan ırak diğer Anadolu kentlerinde İkinci Milli Mimarlık binalarına ait bazı unsurların yerel mimarlık akımları ile devinimselleşerek bir akım-mod fikrine dönüştürülmesi ile 1970’te kadar uygulanmıştır.

Doğu Bölgesi’nde Erzurum, Kars, Van şehirleri başta olmak üzere Anadolu’nun diğer kentsel bölgelerinde çoğunluk olarak önümüze çıkan düzgün kesme taş uygulamacığı görüldüğü bu yapılarda dış kapı ve dış pencere yapısal kemerleri ile kemer kilit taşlarının dışarı çıkarıldığı, zaman zaman kemer kilit taşları üzerinde bitkisel motiflere veya madalyonların yapıldığı ortadadır. Günümüz tarihi bölge kent kimliklerini ve tarihsel yapı-dokularını tamamlamayan anıtsal yapılar, Cumhuriyet dönemi mimarlık tarihi içerisinde çok orijinal yere sahiptirler. Basit ve heykelsel biçimleri ile dikkat çeken bu binalardan Atatürk Okulu ve Haydarbey Okulu, birçok Erciş ‘linin eğitim gördüğü mektepler olması hasebiyle kent halkı içinde de hatıra değerleri bulunmaktadır. Kentte sivil mimarının ilçedeki en lokomotif örnekleri olan Şevket Bey Yapısı ve Nezir Ergöl Yapısı, mimari biçemleriyle kentin Erken Cumhuriyet dönemi mimarlık geçmişine pencere olmaktadır. Düzgün kesme taş işçiliği, dışa doğru çıkarılmış kapı ve pencere dairesel kemerleri ile kemer kilit taşları üzerinde yer alan süsleme ve dekorları ile dikkat çeken 80-90 senelik tarihi olan bu binalar, maalesef yok olma tehditiyle yüzyüze kalmıştır. Ayrıca bu yapıların kentsel-varlık olarak korunmasının yanı sıra kimliksel-varlık olarak da korunması önem arz etmektedir. Bu durumda kentte yapılan en büyük ölçekli

projede de bu husus göz önünde bulundurulması gerekirdi. Ancak işlenen durum bunun tam tersi olarak gözlemlenmiştir.

Erciş kentinde yapılan kentsel dönüşüm açık bir şekilde bir kentin geçmiş kimliğini başka bir kente dönüştürme projesi olarak görülmektedir. Yapılan tasarım ve uygulama neticesinde Geleneksel Karadeniz Evleri'nin tasarım girdileri Erciş'te

işlenmiş olup, söz konusu kente Karadeniz kenti görünümü ve kimliği kazandırmıştır. Kentsel dönüşüm kapsamında yapılan yapıların Erciş kent kimliğini yansıtmamasının yanı sıra kentin ana arterlerinin de kapatılması kenti kapalı bir havzaya dönüştürmüştür. Özellikle cami etrafında konumlanan ofislerin kent merkezine erişimi sorun teşkil etmektedir. Kentsel dönüşümün plan fonksiyonu Erciş'in eski kentsel fonksiyonuna uygun olmasına rağmen burada sirkülasyon alanlarının zayıf bırakıldığı gözlemlenmiştir.

## 10.SONUÇ VE ÖNERİLER

Günümüz kentlerinde ise çoğu zaman gözden kaçan, hâlbuki hayli önemli bir sorun; kentin kendine ait bir kimlikten yoksun olmasıdır. Kimlik konusuna duyarsız olan hemen her ülkede, kimliksiz kentler başıboş biçimde ve sorunlarıyla birlikte büyümeye devam etmektedir. Son yıllarda modern kentlerin kimliklerini hızla veya yavaş yavaş kaybederek birbirine benzer hale gelmeye başladıkları dikkat çekmektedir.

Her kentte kendine özgü nitelikler taşıyan; fiziksel, kültürel, sosyoekonomik, tarihî ve biçimsel faktörlerle şekillenen ve başlı başına bir tarihî olgu olan kent kimliğinin zamanla oluştuğu gibi yine zaman içinde bir dereceye kadar değişmesi doğaldır. Ancak, arzu edilen ve olması gereken; değişimin mevcut kimlik ekseninde ve mevcut kimliği yok etmeden gerçekleşmesidir. Çünkü hiç değişmeyip bize hep aynı kalıyormuş gibi görünen kentler bile aslında yavaş da olsa büyümekte veya değişmektedir. Bizde bu algıyı/hissi uyandıran şey; bu kentlerin öz kimliklerine uygun gelişmesidir.

Osmanlı dönemine bakıldığında, topografyanın elverdiği yönde ve organik düzlemde gelişim gösteren Osmanlı kentlerinin çevresiyle bütünleşmiş, doğa ile barışık, anıtsal yapıları ve külliyeleriyle kendine has bir kentsel görünüm ve imaja sahip oldukları görülmektedir. Bugün ise Ülkemizde geleneksel yapıdaki kentler günümüzde sürekli büyüyen sosyo-ekonomik yapılarıyla geleneksel olmaktan hızla uzaklaşan bir kimliğe bürünmektedir. Birçok örneğinde olduğu gibi, değişim süreçlerinde kentlerin kimliklerini kaybettiği veya mevcut kimliğinin farklılaştığını ve kentin başka kentlerle benzeştiğini görmekteyiz. Hatta kimliğin özellikle önemli olduğu kentlerde, düzensiz yapılaşma o yerin kimliğini tamamen alıp

götürebilmektedir. Kimlik hakkında buraya kadar sözü edilenler dikkate alınacak olursa takdirde: kentlerin kimliklerinin korunması için söylenenlerin hayata geçirilmesi nasıl olacaktır; bunun başarmanın

şartları nelerdir ve bunu kim yapacaktır soruları cevaplanabilecek ve bu konuda kime ne görev düştüğü anlaşılacaktır.

Sonuç olarak kentlerin kimlikleri kent kullanıcılarını için son derece önemlidir. Kent kimliği ve mimarisini teşkil eden ne olursa olsun kentlerin mimari kimliği özgün ve geçmişine dayalı olması özellikle Anadolu da yer alan tüm kentler için önemlidir. Çünkü Anadolu'dan sayısız medeniyetler çıkmıştır. Onların mirası korunmalı ve çağdaş yapılara ilham kaynağı olmalıdır. Söz konusu çalışmaya konu olan Erciş'te çeşitli medeniyetlere ev sahipliği yapmış olup, korunması gereken mimari kimliğe sahip kentlerden biridir. 2011 Van Depremi sonrası Erciş için yapılan kentsel dönüşüm projesinde görülen yapılara gelirse, bunların daha çok Karadeniz yöresine ait yapılara mimari kimlik benzerliği dikkat çekmektedir. Projelendirme sürecinde yapı yerleşimleri geleneksel Osmanlı çarşı mimari yönelimine benzese de Erciş'in mevcutta sahip olduğu tek mimari kimlik yapıları olan Erken Dönem Cumhuriyet yapılarına benzememektedir. Kentsel dönüşüm kapsamında yapılan yapıların açık bir şekilde "Tarihi Karadeniz-Kastamonu Evleri"nden ilham alındığı ortadadır. Erciş erken cumhuriyet dönemi yapılarına bakıldığında kentteki yapılarda dış cephelerin taş veya taş kaplamaya rastlanılmaktadır. Dolayısıyla yapılan yapıların Erciş kent kimliğine zarar verdiği ve kentin tarihsel değerlerini gözetmediği ortadadır. Bu durumda öne sürülen "H0: 2011 Van Depremi sonrasında kentsel dönüşüm kapsamında yapılan yapılar, tarihsel mimari bütünlük gözetildiğinde, Erciş kent kimliğine aykırıdır." hipotezinin doğruluğu ortaya çıkmaktadır.

### ÖZET

Akım ortamlarından veya durgun sulardan su temini için çeşitli büyüklük ve şekillerde su alma ağızları kullanılmaktadır. Tek bir su alma ağzının debisinin yeterli olmaması durumunda ikili veya üçlü su alma ağızları kullanılabilir. Yatay veya düşey olarak düzenlenebilen bu yapılardan su alınırken hava girişi olmamasına dikkat edilmesi gerekir. Ağız veya ağızlara hava girişinin deneysel olarak incelenmesi bazı projeler için maliyet ve zaman açısından uygun olamayabilmektedir. Bu çalışmada, açık kanal akımı içerisinde bulunan ve düşey aşağı su alan ikili ve üçlü dairesel su alma ağzına hava çekirdekli çevrintinin ulaştığı, su yüzeyi ve ağız arasındaki düşey mesafe olan kritik batıklık, bir hesaplamalı akışkanlar dinamiği yazılımı ile bulunmuştur. Model sonuçları literatürdeki deneysel neticelerle karşılaştırılmıştır. Modellerde, türbülans modeli olarak büyük girdapları çözen, küçük girdapları da modelleyen LES (large eddy simulation) modeli seçilmiştir. Sayısal analizler sonucunda, kritik durumda hava çekirdekli çevrintinin ağza ulaştığının simülasyonlarda tam olarak gözlemlenmesi için oldukça küçük çözüm ağı aralığı seçilmesi gerektiği görülmüştür. Bu yüzden kritik batıklığın tahmini için akım alanı içerisindeki vortisite dağılımından da yararlanılmıştır. Gerek ikili gerekse üçlü ağız durumunda, ağız merkezlerini birleştiren doğru ile ağızlara yaklaşan akım doğrultusundaki açının büyümesi halinde hata oranının düştüğü, bu açı sıfıra doğru yaklaştıkça ise hata oranının arttığı görülmüştür. Bunun sebebinin membada bulunan su alma ağzı akımlarından kaynaklanan ve mansaba doğru taşınması beklenen çevrintili akımın simülasyonlarda tam olarak yakalanamaması olduğu sonucuna varılmıştır. Sonuç olarak incelenen hesaplamalı akışkanlar dinamiği yazılımının, kanal akımı içerisinde yerleştirilmiş ve düşey aşağı su alan çoklu su alma ağızlarına ait kritik batıklığı bulma konusunda, belirli akım ve geometri şartlarında kabul edilebilir doğrulukta sonuçlar verebildiği anlaşılmıştır.

**Anahtar kelimeler:** Çevrinti, hesaplamalı akışkanlar dinamiği, kritik batıklık, su alma ağzı

**NUMERICAL SIMULATION OF CRITICAL SUBMERGENCE FOR MULTIPLE INTAKES****ABSTRACT**

Various sizes and shapes of intakes are used for taking water from flow environments or stagnant waters. If the discharge of a single intake is not sufficient, dual or triple intakes can be used. While taking water from these structures, which can be arranged horizontally or vertically, attention should be paid to avoid air-entrainment to intakes. Experimental examination of the air entrainment to intakes may not be suitable in terms of cost and time for some projects. In this study, the critical submergence which is the vertical distance between the water surface and the intakes at which the air-core vortex just reaches the intakes was investigated with a computational fluid dynamics software for the dual and triple vertically downward flowing intakes located in an open channel flow. The model results were compared with the available experimental results. In the models, the LES (large eddy simulation) turbulence model, which solves large eddies and models small eddies, was chosen. As a result of the numerical analysis, it has been seen that a very small mesh sizes should be selected in the simulations in order to fully observe the air-core vortex in the critical condition. Therefore, the vorticity distribution within the flow field was also used for the estimation of critical submergence of both dual and triple intakes. It has been observed that if the angle between the direction of the approaching flow and the line connecting the intake centers increases, the error decreases, and as this angle approaches zero error increases. The reason for this is that the separation vortices originating from the flow of the upstream intake and expected to be carried towards the downstream could not be fully captured in the simulations. It has been deduced that the examined computational fluid dynamics software can give acceptable results for the prediction of critical submergence for multiple intakes located in the channel flow under certain flow and geometrical conditions.

**Keywords:** Vortex, computational fluid dynamics, critical submergence, intake

## 1. GİRİŞ

Su alma ağızları durgun sulardan veya akım ortamlarından su temini için kullanılan yapılardır. Su alma yapıları tasarlanırken temin edilmek istenen su debisinin sağlanmasının yanında, yapıya sediment veya hava girişi olup olmayacağı da dikkate alınmalıdır. Su alma yapılarından alınan sudaki belli bir çap ve miktarın üzerindeki sediment türbinlerde ve diğer yapılarda aşınma gibi sorunlara neden olur ve çökeltim havuzlarının verimini azaltır. Bununla birlikte su alma ağızı üzerinde oluşan serbest çevrıntiler sonucu hava girişi de önemli bir sorundur. Eğer ağza hava girişi olursa istenilen debinin altında su temin edilir. Buna ek olarak pompa ve türbinlerin verimliliğinin düşmesine, gürültü, titreşim ve kavitasyona neden olur. Oluşan bu çevrıntiler sistemin çalışmasının askıya alınmasına bile sebep olabilir. Su alma ağızına hava girişini önlemek için su yüzeyi ile ağız arasında belli bir düşey mesafe farkı olması gerekir. Ağız merkezinden su yüzeyine kadar olan düşey mesafe o su alma ağızına ait “batıklık (S)” değerini gösterir. Su alma ağızı üzerinde tam bir çevrinti oluşumu sonrası hava girişinin başladığı su derinliği ise “kritik batıklık ( $S_c$ )” olarak tanımlanmaktadır. Şekil 1’de düşey bir su alma ağızına ait batıklık ve akım durumları görünmektedir.

Şekil 1. Su alma ağızına ait batıklık, kritik batıklık ve hava girişi (Arslan, 2006)

Durgun sulardan veya akım ortamlarından alınmak istenilen su için tekli su alma ağızları yetmeyebilir. Bu durumda çoklu (ikili veya üçlü gibi) su alma ağızları kullanılabilir. Bu çalışmada bir Hesaplamalı Akışkanlar Dinamiği (HAD) programı olan Flow-3D aracılığı ile tabandan belli bir seviye yüksekte olacak şekilde konumlanmış çoklu (ikili veya üçlü) su alma ağızlarına ait kritik batıklık araştırılmıştır. Çoklu su alma ağızlarına ait kritik batıklık ile ilgili mevcut sınırlı sayıdaki çalışmalardan aşağıda bahsedilmiştir.

Yıldırım ve Taştan (2009) üniform akım ortamına farklı konumlarda yerleştirilmiş çoklu su alma ağızlarına ait kritik batıklığı süperpozisyon yöntemiyle bulmuşlardır. Süperpozisyon yönteminde her bir ağza ait küresel kuyu yüzeyleri toplanarak ağızların birbirleri üzerindeki akım engel etkileri göz önüne alınmıştır. Yıldırım vd. (2009) kanal akımı içerisine yerleştirilmiş düşey aşağı su alan ikili dairesel su alma ağızlarına ait kritik batıklığı potansiyel akım yaklaşımını kullanarak bulmuştur. Yıldırım ve Taştan (2017) ikili ağız durumunda ağız akımlarının birbirleri üzerinde akım engel etkilerinin ihmal edilebileceği mesafeyi araştırmışlardır. Yıldırım vd. (2011) kanal içerisine farklı konumlarda yerleştirilmiş çoklu su alma ağızlarına ait kritik batıklığı potansiyel akım çözümüyle analitik olarak elde etmişlerdir. Yıldırım vd. (2012) kanal akımı içerisine farklı konumlarda yerleştirdikleri ikili dikdörtgen su alma ağızı için kritik batıklığı süperpozisyon yöntemiyle elde etmişlerdir. Dikdörtgen ağızlara ait kuyu yüzeylerinin toplamı yapılırken bu kuyu yüzeylerinin şekli, iki ucu yarım küresel kuyu yüzeyi ile kapalı silindirik bir kuyu yüzeyi olduğunu kabul etmişlerdir.

Su alma yapıları ve bu yapılarda oluşabilecek çevrintili akımların HAD kullanılarak çözümleriyle ilgili yapılan çalışmalar aşağıda özetlenmiştir.

Kadhim ve Thamiry (2020), ANSYS Fluent kullanarak kritik batıklık incelemesi yapmışlardır. 3 farklı ağız tipi, 5 farklı batıklık, 3 farklı boru arası mesafe ve 5 farklı emiş hızı kullanıp 225 farklı kombinasyon için kritik batıklık değerini bulmuşlardır. Jain, Ahmad ve Singh (2013), Reynolds Ortalamalı Navier Stokes denklemlerini kullanan ANSYS Fluent 14.0 programında k-ε türbülans modeliyle çoklu su alma ağızlarının bulunduğu serbest su yüzeyli bir rezervuarda oluşan çevrintilerle alakalı sayısal bir çalışma yapmıştır. Sonuç olarak çevrinti oluşumunun Froude sayısı ile doğru orantılı olduğunu, çevrintinin yok olmasının, yukarı yönlü su alan düşey su alma ağzının batıklık miktarı ile üstel olarak orantılı olduğunu ifade etmişlerdir. Guyot vd. (2014), sonlu hacimler yöntemi kullanan Flow-3D programının verdiği sonuçların kararlılık ve uygunluğunu test etmek amaçlı, hidrolik olarak kompleks bir olay olan, serbest yüzeyli akımlarda çevrinti oluşumu üzerine çalışma yapmışlardır. Tataroğlu (2014), hazne ve yatay su alma ağzından oluşan bir sistemdeki çevrinti oluşumunu Flow-3D yazılımı ile sayısal olarak incelemiştir. Sayısal modellemeler öncesi debi, ağız çapı, hazneye ait yan duvarların birbirine olan uzaklığı gibi değerleri değiştirmiş ve her düzenek için kritik batıklık değerini bulmuştur. Lucino vd. (2010), bir hazneden pompa ile düşey yukarı yönlü bir ağız aracılığı ile su

çekilmesi sonucu oluşan çevrintilerin deneysel sonuçlarını, Flow-3D programının verdiği nümerik sonuçlar ile kıyaslayıp doğrulamayı amaçlayan bir çalışma yapmışlardır. Sungur

(2018), asimetrik konumlu yatay bir su alma ağzına ait kritik batıklığı Flow-3D aracılığı ile incelemiş ve elde ettiği nümerik sonuçları, Haspolat (2015)'in deneysel sonuçları ile karşılaştırmıştır. Nümerik ve deneysel sonuçlar arasında %3,21 ila %16,76 hata payı olduğunu, bu sebeple programın asimetrik konumlu ağızlar için çevrinti oluşumunu araştırmada oldukça başarılı olduğunu belirtmiştir.

Yapılan çalışmalar göz önüne alındığında, kanal akımı ortamında düşey aşağı su alan çoklu (ikili veya üçlü) su alma ağızlarına ait kritik batıklığın bir HAD programıyla bulunması ile ilgili benzer sayısal bir çalışma olmadığı görülmüştür. Bu çalışmada dikdörtgen bir kanal akımı ortamında farklı pozisyonlarda konumlandırılmış ikili veya üçlü düşey aşağı su alan dairesel su alma ağızlarına ait kritik batıklık Flow-3D yazılımıyla bulunmaya çalışılmıştır. Böylece, kullanılan yazılımın bu tip bir problemi hangi ölçüde ve hangi şartlar altında tahmin edebildiği mevcut çalışmalardaki deneysel sonuçlarla karşılaştırılarak ortaya konacaktır.

## 2. DENEYSEL ÇALIŞMA

Bu çalışmada, dikdörtgen kesitli kanal akımı içerisinde düşey aşağı yönlü su alan çoklu su alma ağızlarına ait kritik batıklık değerinin sayısal olarak bulunması amaçlanmıştır. Bulunan sonuçların doğruluğunun kıyaslanması için deneysel verilere ihtiyaç olduğundan çoklu su alma ağızlarına ait kritik batıklığın deneysel olarak incelendiği Taştan (2007)'nin çalışmasından faydalanılmıştır. Laboratuvar ortamında su alma ağızlarına ait kritik batıklık araştırılırken Taştan (2007)'nin çalışmasında yatay, dikdörtgen geometriye sahip açık bir kanal kullanılmıştır. Kanal uzunluğu 10 m, genişliği ve yüksekliği ise 50 cm'dir. Akım, kanal başlangıcındaki 22 kW gücünde bir pompayla kanala verilmiştir. Kanala verilen akımı uniform ve dönmesiz bir hale getirmek amacıyla kanal başlangıcından 2,5 m mesafede ızgara kullanılmıştır. Deney düzeneği Şekil 2'de gösterilmektedir.

Kanal ortasında iç çapı  $D=5.32$  cm, dış çapı  $D=5.92$  cm boru tipi düşey aşağıya doğru su alan su alma ağızları kullanılmıştır. Boruların cidar kalınlığı 0.3 cm'dir. Kanal ortasında konumlandırılmış su alma ağızlarının sayısı ise 2 veya 3 olmak üzere deney setine göre değişmektedir.

Deney setlerinde ağız arası mesafeler  $a$ , ağızların birbirine göre açıları ise  $\alpha$  ile gösterilmiştir. Çalışmada kritik batıklık üzerindeki yan duvar ve kanal tabanı etkilerinin ihmal edilebilmesi için ağızların belirtilen katı sınırlardan en büyük kritik batıklık değerinden daha fazla olacak şekilde konumlandırıldığı ifade edilmiştir. Çalışmadaki temel amacın ağızların birbirlerine ait

akım etkilerini araştırmak olduğu belirtilmiştir. Bu sebeple su alma ağızlarının merkezleri ile kanal tabanı arasındaki düşey mesafe 4D olarak (21.28 cm) seçilmiştir.

Şekil 2. Deneysel düzeneği (ölçeksiz) (Taştan, 2007)

Ağızlardan alınan debiler kanal dışında 7.5 kW gücünde pompalar aracılığıyla çekilmiştir. Kanala su verilirken de 22 kW gücünde bir pompanın kullanılmıştır.

Pompa çıkışındaki vanalar sayesinde ağızlardan çekilen debiler ve kanala verilen debi ayarlanabilmiştir. Bununla birlikte debi ölçümü için ağızlardan çıkan akımın geçtiği pompalardan sonra üçgen savak, kanal sonunda su alma ağızlarından artan suyun geçtiği dikdörtgen savak kullanılmıştır. Kanal sonundaki bulunan ayarlanabilir kapak yardımıyla da kanaldaki seviye ayarlanabilmiştir. Deneysel yapılar yapılırken pompalar aracılığıyla kanala su

verilmiş ve ağızlardan su alınmıştır. Tam bir çevrinti (hava girişli çevrinti) oluşuncaya kadar beklenilmiş eğer oluşum yoksa kanal sonundaki kapak aracılığıyla seviye belli bir miktar düşürülmüştür. Çevrinti oluşunca ise debi ve kanaldaki su seviyesi ölçümleri yapılmıştır.

### 3. SAYISAL ÇÖZÜMLEME YÖNTEMİ

Mevcut çalışmada da çoklu su alma ağızları için kritik batıklık değeri sayısal olarak araştırılırken Flow-3D programı kullanılmıştır. Flow-3D özellikle serbest yüzeyli akımlarla alakalı çözümler üretme ve inceleme yapmak için kullanılan bir HAD (Hesaplamalı Akışkanlar Dinamiği) programıdır (Yıldırım, 2021).

Flow-3D, dikdörtgen çözüm ağı için VOF (Volume of Fluid) metodu kullanan ticari bir hesaplamalı akışkanlar dinamiği kodlamasıdır (Guyot vd., 2014). Bu program Hesaplamalı Akışkanlar Dinamiği (HAD) – (Computational Fluid Dynamics, CFD) alanında kullanılan etkili bir modeldir. Flow-3D türbülans, viskozite, sıg sular, kavitasyon, gözenekli ortamlar gibi farklı fiziki durumları modelleyebilmektedir Bu program, akış alanının üç boyutlu analizini yapabilir ve akışkanlarla ilgili konuları içeren geniş bir pratik aralığa sahiptir. Bu yazılım döküm, hidrolik, havacılık, deniz bilimleri, petrol, gaz vb. konularla ilgili problemlerin çözümünde kullanılmaktadır.

Programda çözümlenmesi istenen model oluşturulduktan veya hazır bir model, program ortamına aktarıldıktan sonra akım alanının hesaplanması için ağ sisteminin belirlenmesi ve daha sonra ağ bloklarının oluşturulması gerekmektedir. Bir model için tek bir ağ bloğu kullanılabildiği gibi daha detaylı inceleme için iç içe geçmiş (yuvalanmış - nested) ağ blokları da kullanılabilmektedir. Ağ sistemini ve ağ bloklarını modele uygun seçtikten sonra ağ aralıklarının belirlenmesi gerekmektedir.

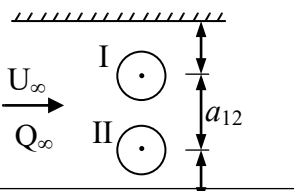

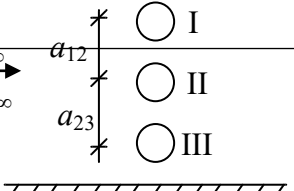

Modele ait ağ aralıkları belirlenir veya istenilen sayıda hücre sayısı bir ağ bloğu için tanımlanır. Bu kontrol hücrelerinin merkezlerinde (kontrol hacmi olarak da tanımlanmaktadır) o hücreye ait skaler büyüklükler yer almaktadır (Yıldırım, 2021). Programda analiz yapılırken hücrelerin yüzeylerinde ise hız gibi vektörel büyüklükler

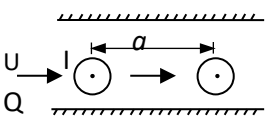

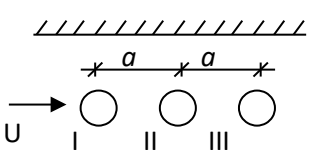

bulunur. Bu aşamadan sonra ise başlangıç koşulları, ağ bloklarına ait sınır koşulları ve türbülans modeli belirlenmelidir. Programda FAVOR (Fractional Area / Volume Obstacle Representation) isminde, incelenecek hücrelere ait hacmin ne kadarının hesaplanabilir, ne kadarının da katı ile dolu olduğunu gösteren bir yöntem bulunmaktadır. Bu sayede kullanıcı, modelin simülasyonuna başlamadan önce ağ blokları içerisindeki katı alanı ve akışkan hareketinin gerçekleşebileceği alanı inceleyebilmektedir.

#### 4. SAYISAL ÇALIŞMA: DÜŞEY BORU TİPİ ÇOKLU AĞIZLARININ MODELLENMESİ

Bu bölümde anlatılan sayısal modellemelerde, 2. bölümde bahsedilen Taştan (2007)'nin deneysel çalışması esas alınmıştır. Bu çalışmada sayısal olarak modellenen deney setlerine ait tablo aşağıda verilmiştir (Bu tabloda  $Q_\infty$  ve  $U_\infty$  ağız grubuna yaklaşan akımın debisini ve ortalama hızını, c ağızların tabana mesafesini, Q ise ağızların debisini göstermektedir)

**Tablo 1.** Modellenen deney setleri

Şekil	Deney No	a/D	c/D	$Q_\infty$ (lt/sn)	$Q_1$ (lt/sn)	$Q_2$ (lt/sn)	$Q_3$ (lt/sn)
	1.1	2	4	15.83	6	6	-
	1.2			15.48	6	2	-
	1.3			15.66	4	8	
	1.4			15.1	2	8	
	1.5			15.1	3	6	
	2.1	2	4	17.58	4	2	6

	2.2			22.8	5	5	5
	3.1	2	4	20.22	6	6	-
	3.2			21	7	7	-
	3.3	4	4	22.94	10	5	-
	4.1	2	4	21.7	5	5	5
	4.2	2	4	18.16	1	7.5	0.75

Sayısal modelin kurulmasının ilk aşaması deneydeki fiziksel modelin şeklinin yazılıma tanıtılmasıdır. Bu bağlamda, 1.5 m uzunluğunda dikdörtgen kesitli, yatay tabanlı bir açık kanal düzeneği ve akışkan olarak 20° sıcaklıkta bulunan su kullanılmıştır. Deneylerde kullanılan kanalın boyu 7.5 m olmasına rağmen, 1.5 m'lik kanal uzunluğunun daha uzun kanal uzunluklarına kıyasla simülasyonlarda ciddi bir fark oluşturmadığı görüldüğünden çözüm süresinden tasarruf etmek adına bu kanal uzunluğunun seçilmesi yeterli görülmüştür (Şekil 3).

Yukarıda anlatılan fiziksel model yazılımda oluşturulduktan sonra çözüm ağlarının yazılıma tanıtılması gerekir. Modelde, tüm kanalı kapsayacak bir ana ağ bloğu ve her bir su alma ağzını ve civarındaki akımı tanımlayacak ana ağ bloğu içine tanımlanmış ağ blokları (nested mesh blocks) kullanılmıştır. Dolayısıyla örneğin ikili ağız durumunda toplam 3 adet çözüm ağı bloğu bulunmaktadır. Çözüm ağı bloklarının oluşturulmasından sonra ağ aralıklarının belirlenmesi gerekmektedir.

Bu açıklamalar ışığında, programın akışkan hareketini hesaplaması için oluşturulan ana ağ bloğu 0.02 m aralıklı, çevrıntilerin daha detaylı gözlemi ve ağızlardan su temini için kullanılan ağız boruları etrafındaki ağ blokları 0.0025 m aralıklı belirlenmiştir. Ana ağ bloğu ve su alma ağızları çevresinde kullanılan ağ blokları Şekil 4.'de görülmektedir.

Şekil 4. Modele ait ağ blokları

Ağ blokları oluşturulduktan sonra bloklara ait sınır koşulları belirlemiştir. Buna göre temel çözüm ağı bloğunun X yönünde minimum değeri için “Debi (Volume flow rate)” seçilip kanala verilecek su değeri deneylere ait verilerle aynı olarak yazılmıştır. Temel ağ bloğuna ait X maksimum değeri “Basınç (Specified pressure)” seçilip ilgili simülasyon için seçilen su yükseklik değeri girilmiştir. Temel ağ bloğunun sınırları y minimum, y maksimum, z minimum “Wall” olarak seçilmiştir. İlgili çözüm ağı bloğunun z maksimum değeri “Simetri (Symmetry)” olarak belirlenmiştir.

Su alma ağızı etrafındaki ince aralıklı çözüm ağı bloklarının sınır şartları z minimum hariç “Grid overlay” olarak belirlenmiştir. z minimum için  $-z$  yönünde su çekilmesi amacıyla “Debi (Volume flow rate)” seçilmiştir. Başlangıç koşulu olarak da, simülasyon başlangıcında kanalın seçilen su yüksekliği ile dolu olduğu kabul edilmiştir.

Ağ bloklarına ait sınır şartı seçimleri model üzerinde Şekil 5’de görülmektedir.

Şekil 5. Model ağ bloklarının sınır koşulları

Su alma yapılarında hava çekirdekli çevrinti oluşumunu inceleyen benzer çalışmaların çoğunda da LES modeli kullanıldığından (Evranoş 2019, Sungur 2018, Yıldırım 2020) bu çalışmada da türbülans modeli olarak LES seçilmiştir.

İncelenen sayısal modellerde genel çözüm ağ aralığı 2 cm, su alma ağızlarına ait çözüm ağlarına ait ağ aralığının 0.25 cm belirlendiği daha önce belirtilmişti. Bu ağ aralıkları için hava girişim olarak her modelde gözlemlenmemektedir. Su yüzeyinde bir çöküntü ve hava çekirdekli çevrintinin su alma ağzına doğru düşey aşağı yönde bir miktar uzaması görülebiliyorken hava çekirdekli çevrintinin ağza tamamıyla ulaşması simülasyonların çoğunda, seçilen çözüm ağ aralıklarında mümkün olmamıştır. Hava girişli çevrintinin tam olarak ağza girişinin gözlemlenmesi için su alma ağızlarını çevreleyen çözüm ağ bloklarının çok daha küçük ağ aralıklarına sahip olması gerekmektedir (örneğin  $< 0.1$  cm). Bu çalışmada genel çözüm ağ bloğu 2 cm aralıklı, ince çözüm ağ blokları 0.25 cm aralıklı seçilmiş ve bunun sonucu çözümlerin alındığı bilgisayar için 50 sn'lik simülasyon, yaklaşık 5 gün sürmüştür. Biraz ileride de

anlatılacağı gibi bir deney verisine ait kritik batıklığın bulunması için en az iki veya daha fazla sayıda deneme yapılması gerekmektedir. Bu durum da bir deney verisine ait çözümün seçilen çözüm aralığında bile yaklaşık 15 gün sürmesi anlamına gelmektedir. Daha ince bir çözüm ağ kullanılması bir simülasyon için harcanacak zamanı ay mertebesine getireceği için bu noktada yatay tekli bir su alma ağzında kritik batıklığın araştırıldığı Sungur (2018)'in çalışmasında izlenen yöntemden faydalanmıştır.

Sungur (2018), ölü sonlu dikdörtgen bir kanalda yatay tekli bir su alma ağzına ait kritik

batıklığın sayısal olarak incelediği çalışmada, bu çalışmadakine benzer olarak ağ aralıklarının hava çekirdekli çevrintinin ağza girişini tam olarak yakalayabilecek kadar çok küçültülmesinin uygulamadaki zorluğuna değinirken sirkülasyon ve vortisite değerlerini kritik batıklığın tahmini için kullanmıştır. Hava girişli çevrinti durumunda, su yüzeyinde başlayan vortisite, büyüklüğünde azalma olmadan ağza kadar ulaşmalıdır. Dolayısıyla simülasyonlarda, hava çekirdekli çevrintiye ait çöküntü ve bir miktar düşey uzamanın gözlemlenmesinin ardından vortisite konturları takip edilerek ağza kadar vortisitenin taşınıp taşınmadığı kontrol edilmiştir (Şekil 6).

Şekil 6. Akım alanında oluşan eş vortisite konturları

Bu çalışmada kritik batıklığın tahmini için ise deneme-yanılma yöntemi izlenmiştir. Seçilen deney verisi için deneyde gözlemlenen kritik batıklık değerine yakın bir su

seviyesinde simülasyon çalıştırılmıştır. Eğer ağza hava girişi simülasyon süresi boyunca gözlemlenmezse su yüzeyi 1 cm düşürülerek simülasyon tekrar edilmiştir. Bu işlem hava girişi elde edilene kadar devam ettirilmiştir. Eğer ilk denemede hava girişi gözlemlenirse de, bu sefer su yüzeyi 1 cm artırılarak hava girişinin devam edip etmediği kontrol edilir. Bu durumda da hava girişi olmayıncaya kadar su seviyesi arttırılmaya devam edilir. Dolayısıyla bir deney verisinin simülasyonu için en az 2 deneme yapılması gerekir ki, bu çalışmada kritik batıklığın bulunabilmesi için genelde 3-4 simülasyon yapılmıştır.

Yukarıdaki tüm açıklamalar ışığında simülasyonlar sonucunda elde edilen kritik batıklık değerleri ile deney neticelerinin karşılaştırılması aşağıdaki tabloda verilmiştir.

**Tablo 2.** Simülasyon sonuçları ile deney sonuçlarının karşılaştırılması

Deney No	a/D	c/D	$Q_{\infty}$ (lt/sn)	$Q_1$ (lt/sn)	$Q_2$ (lt/sn)	$Q_3$ (lt/sn)	$S_c$ (cm) (deney)	$S_c$ (cm) (sim.)	Hata (%)	Ort. Hata (%)
1.1	2	4	15,83	6	6	-	11,9	8,72	27	20,1
1.2			15,48	6	2	-	10,97	9,72	11,3	
1.3			15,66	4	8	-	12,72	11,72	7,9	
1.4			15,1	2	8	-	11,48	8,72	24	
1.5			15,1	3	6	-	10,85	8,72	19,6	
2.1	2	4	17,58	4	2	6	9,65	7,02	27	20,1
2.2			22,8	5	5	5	10,13	7,72	23,8	
3.1	2	4	20,22	6	6	-	13,1	8,72	33,4	38,6
3.2			21	7	7	-	18,35	10,72	41,5	
3.3	4	4	22,94	10	5	-	12,65	6,72	46,9	
4.1	2	4	21,7	5	5	5	11,88	7,72	35	
4.2	2	4	18,16	1	7,5	0,75	10,53	6,72	36	

Yapılan simülasyonlarda 1 cm lik deneme yanılma payı olduğu ve simülasyon sonuçlarının 1 cm kadar da arttırılabileceği de göz önünde bulundurulmasında fayda vardır.

## 7. SONUÇLAR VE ÖNERİLER

Su alma ağızları tasarlanırken su yüzeyinde oluşan hava çekirdekli çevrıntiler yoluyla ağza hava girişinin engellenmesi gerekmektedir. Çünkü bu durum su alma ağzının verimli çalışmamasına, istenilen debinin alınamamasına ve su iletim hattında kavitasyon ve titreşimlere neden olur. Bu durum için alınabilecek en kolay tedbir, ağız merkezleri ile su

yüzeyi arasındaki düşey mesafe olan batıklığı su alma ağzına hava girişinin başlayacağı kritik batıklık değerinden yüksek tutmaktır. Bu çalışmada dikdörtgen kesitli bir açık kanal akımı içerisine yerleştirilmiş ve düşey aşağı su alan dairesel kesitli çoklu su alma ağzlarına ait kritik batıklık hesaplamalı akışkanlar dinamiği ilkelerini kullanan bir yazılım ile sayısal olarak elde edilmeye çalışılmıştır. Bu çalışmada elde edilen sonuçlar ve öneriler aşağıda sıralanmıştır.

- Çoklu su alma ağzı akımları aralarındaki mesafeye, açığa ve debi oranlarına bağlı olarak birbirleri üzerinde akım engel etkileri uygularlar.
- Bir ağız grubu içerisindeki bir ağız üzerinde oluşan hava çekirdekli çevrintinin ağza kadar ulaşıp ulaşmadığının bilgisayar modellemelerinde tam olarak gözlemlenebilmesi için çok küçük çözüm ağı aralıkları gerekmektedir. Çünkü hava çekirdekli çevrintinin yarıçapı çevrintinin alt ucu ağza doğru yaklaştığında oldukça küçülmektedir. Dolayısıyla tam bir çözüm alınabilmesi için çok yüksek kapasiteli bilgisayar imkanlarına ihtiyaç vardır.
- Kritik batıklık veya hava çekirdekli çevrintinin oluşumu üzerinde bilgisayar modellerinde seçilen türbülans modelinin de önemi büyüktür. Bu çalışma kapsamında yapılan simülasyonlar LES (large eddy simulation) türbülans modelinin hava çekirdekli çevrinti için daha başarılı olduğunu göstermiştir.
- Hava çekirdekli çevrintinin tam olarak ağza girişinin görülemediği durumlarda kritik batıklığın tahmini için ağız yüzeyindeki çöküntü ile belirginleşen ve ağza doğru ilerledikçe şiddeti artan vortisitienin takibi yapılmıştır. Ancak belirtilen durumun oluşması halinde bile ağza hava girişinin kesin olarak gerçekleştiğini söylemenin mümkün olmadığı bilinmelidir.
- Gerek ikili gerekse üçlü ağız durumunda, kanal akımı doğrultusu ile ağız merkezlerini birleştiren doğru arasındaki açının  $90^\circ$ 'ye yaklaşması durumunda deneysel kritik batıklık ile sayısal arasındaki yaklaşık ortalama hata debi durumlarına bağlı olmak kaydıyla %20 civarı iken bu hata açının  $0^\circ$ 'ye yaklaşması durumunda %40'lara çıkmaktadır.
- Simülasyonlarda hata oranının en büyük olduğu durum, kanal akımı doğrultusu ile ağız merkezleri arasındaki açı  $0^\circ$  olduğu ve membada bulunan ağız debisi ile mansapta bulunan ağız debisi arasında ciddi bir farkın olmadığı durumdur. Böyle bir durumda mansaptaki ağzın debisi mabadaki ağzın debisinden küçük olsa dahi kritik batıklık mansaptaki ağzda oluşmaktadır. Mabadaki ağza ait Rankine şeklinin etrafında oluşan ayrılma çevrintileri kanal akımı ile birlikte mansaba taşınmakta ve mansaptaki ağzın üzerinde su yüzeyinde rahatsızlıklara sebebiyet vererek mansaptaki ağzın kritik duruma ulaşmasını sağlamaktadır. Fakat bilgisayar modellemelerinde mabadaki ağız üzerinde oluşan ayrılma çevrintilerinin

mansaba doğru taşınması tam olarak görüntülenmesi için çözüm ağı aralığının çok küçültülmesi gerektiğinden simülasyonlarda bu durum tam olarak yansıtılamamış ve kritik batıklık, olması gerektiğinden çok daha az bulunmuştur.

- Kanal akımı doğrultusu ile ağız merkezleri arasındaki açı  $90^\circ$  olması durumunda ağızlara ait Rankine şekillerinin etrafındaki ayrılma çevrintileri yüzeyde ağız akımları üzerinde çok etkili olmadığından bu durum içinde yazılım nispeten daha düşük hata oranları ile sonuç verebilmektedir.
- Tüm bilgisayar simülasyonlarında kritik batıklık değeri deneysel kritik batıklıktan daha küçük bulunmuştur.

### ÖZET

Şiddet, Dünya Sağlık Örgütü (WHO) tarafından, “fiziksel güç veya iktidarın kasıtlı bir tehdit veya gerçeklik biçiminde bir başkasına uygulanması sonucunda maruz kalan kişide yaralanma, ölüm ve psikolojik zarara yol açması ya da açma olasılığı bulunması” durumu olarak tanımlanmaktadır. Şiddet türlerinin en önemlisi ve belki de en az dikkat çeken ekonomik şiddettir. Kadına yönelik ekonomik şiddet sayılabilecek birçok durum vardır. Kamusal alanda çalışmasına rağmen kadının kazancına el koyarak onu ekonomik anlamda kendisine bağımlı kılmak, bazı şeylerden kadını mahrum etmek bunlardan bazılarıdır. Bu çalışmanın amacı, Türkiye İstatistik Kurumu tarafından 2014 yılında yapılan Kadına Yönelik Aile İçi Şiddet Araştırması mikro veri setini kullanarak Türkiye’deki 15 yaş ve üzeri kadınların eş/partner dışı ekonomik şiddete maruz kalmasını etkileyen faktörleri tespit etmektir. Bu çalışmada Binary lojistik regresyon analizi kullanılmıştır. Çalışmada yer alan bağımsız değişkenler literatür araştırması yapılarak tespit edilmiştir. kadının ikamet ettiği bölge (batı, güney, orta, kuzey, doğu), yaşı (15-24, 25-34, 35-44, 45-54, 55 ve üzeri), eğitim düzeyi (okuma yazma bilmiyor/diploması yok, ilkokul, ortaokul, lise, üniversite), medeni durumu (bekar, evli), sağlık durumu (mükemmel/iyi, idare eder, kötü/çok kötü) ve oda sayısı (2 ve altı, 3, 4, 5 ve üstü), çalışma durumu (hayır, evet), eş/partner dışında başka birisinin fiziksel şiddetine maruz kalma durumu (hayır, evet), eş/partnerin dışında başka birisinin duygusal şiddetine maruz kalma durumu (hayır, evet), eş/partner dışında başka birisinin cinsel şiddetine maruz kalma durumu (hayır, evet) dur. Bu çalışmada elde edilen sonuçlar, kadına yönelik şiddetin önüne geçilmesi konusunda politika ve programların oluşturulması için bilgi kaynağı olabileceği açısından önemlidir.

**Anahtar Kelimeler:** Ekonomik şiddet, Türkiye, Türkiye’de Kadına Yönelik Aile İçi Şiddet Araştırması

## **ABSTRACT**

Violence is defined by the World Health Organization (WHO) as the state "causing injury or the possibility of injury, death and psychological harm on the exposed person as a result of the application of physical power or potency to another in the form of a deliberate threat or reality". Economic violence is the most important and perhaps the least remarkable form of violence. There are many situations that can be considered as economic violence against women. Despite working in the public sphere, confiscating women's earnings, making her economically dependent on her, depriving women of certain things are some of them. The aim of this study is to determine the factors affecting the exposure of women aged 15 and over in Turkey to economic violence, by using the Microdataset of the Research on Domestic Violence against Women conducted by the Turkish Statistical Institute in 2014. Binary logistic regression analysis was used in this study. The independent variables in the study were determined by literature research. region of residence (west, south, middle, north, east), age (15-24, 25-34, 35-44, 45-54, 55 and above), education level (illiterate/no diploma, primary school), middle school, high school, university), marital status (single, married), health status (excellent/good, manageable, bad/very bad), and number of rooms (2 and below, 3, 4, 5 and above), employment status (no, yes), exposure to physical violence by someone other than the spouse/partner (no, yes), exposure to emotional violence by someone other than the spouse/partner (no, yes), sexual violence by someone other than the spouse/partner exposure status (no, yes). The results obtained in this study are important in that they can be a source of information for establishing policies and programs to prevent violence against women.

**Key words:** Economic violence against women, Turkey, National Research on Domestic Violence Against Women in Turkey

## **1.GİRİŞ**

Şiddet, insan yaşamının her alanında ortaya çıkan ve dünyada giderek artan önemli bir toplum sağlığı sorunudur (Alkan, Oktay & Ünver, 2020). Şiddet, Dünya Sağlık Örgütü (WHO) tarafından, “fiziksel güç veya iktidarın kasıtlı bir tehdit veya gerçeklik biçiminde bir başkasına uygulanması sonucunda maruz kalan kişide yaralanma, ölüm ve psikolojik zarara yol açması ya da açma olasılığı bulunması” durumu olarak tanımlanmıştır (Alkan & Ünver, 2020). Kadınlara karşı şiddet genellikle duygusal, fiziksel, psikolojik, ekonomik ve cinsel şiddet olarak sınıflandırılmaktadır (Watts & Zimmerman, 2002). Şiddet türlerinin en önemlisi ve belki de en az dikkat çeken de ekonomik şiddettir. En önemli şiddet türü olan ekonomik şiddet, kadınların hayatını ve geçimini etkileyen bir aile içi şiddet biçimi olarak kabul edilir (Lencha, Ameya, Baresa, Minda & Ganfure, 2019). Kadına yönelik ekonomik şiddet sayılabilecek birçok durum vardır. Kamusal alanda çalışmasına rağmen kadının kazancına el koyarak onu ekonomik anlamda kendisine bağımlı kılmak, bazı şeylerden kadını mahrum etmek, kadının evde ürettiği ürünlere el koyarak kadını ‘ücretsiz aile işçisi’ olarak görmek, kadını sadece çocuklara, yardıma muhtaç hasta ve sakatlara ya da diğer aile bireylerine bakmakla mükellef biri olarak görmek bunlardan bazılarıdır. Ayrıca, evlenirken ya da evlendikten sonra kadının sahip olduğu takı ve parasına el koymak, kadına çalışmak istemesine rağmen izin vermemek ya da kadını zorla çalıştırmak, mirastan yoksun bırakmak, boşandıktan sonra nafaka ödemeyerek onu mağdur etmek gibi toplumun kabul etmemesi gereken yaptırımlar da ekonomik şiddeti geniş anlamda açıklamaktadır (Grigaitė, Karalius & Jankauskaitė, 2019). Kadınların toplumsal yapı içerisinde görmüş olduğu ekonomik şiddet psikolojik ve fiziksel sağlığını önemli derecede etkilemektedir. Kişisel karakterin ötesinde oluşan şiddet, aile geçmişleri, mevcut durum veya şiddetin olduğu durumlar ve sosyo-kültürel faktörler ile bağlantılıdır (Alkan, Özar & Ünver, 2021).

Yapılan araştırmaların sonuçları, Türkiye’de ve dünyada şiddete maruz kalan kadınların prevalansının yüksek olduğunu göstermektedir (García-Moreno et al., 2005; WHO, 2014). Bu çalışmanın amacı, Türkiye’de Kadına Yönelik Aile İçi Şiddet Araştırması mikro veri setini kullanarak Türkiye’deki 15 yaş ve üzeri kadınların eş/partner dışı ekonomik şiddete maruz kalmasını etkileyen faktörleri tespit etmektir. Çalışmada kadınların sosyo-demografik ve ekonomik özelliklerinin kadınların ekonomik şiddet görmesinde ne derece etkili olduğunun belirlenmesi de

amaçlanmıştır. Türkiye’de Kadına Yönelik Aile İçi Şiddet Araştırması verilerinin kullanılmasının nedeni, ülke genelini yansıtmaları ve hem uluslararası karşılaştırmalara imkân veren hem de ulusal ihtiyaçlara ışık tutan bir çalışma olmasıdır.

## 2. MATERYAL VE METOT

### 2.1. Veri

Bu çalışmada, Türkiye İstatistik Kurumu tarafından 2014 yılında yapılan Türkiye’de Kadına Yönelik Aile İçi Şiddet Araştırması mikro veri seti kullanılmıştır. Türkiye’de Kadına Yönelik Aile İçi Şiddet Araştırması, kadınların yaşadığı aile içi şiddetin büyüklüğü, içeriği, neden ve sonuçları ile risk faktörlerinin anlaşılması amacıyla ülke çapında yürütülmüş en geniş kapsamlı araştırmalardan biridir. Araştırmanın kapsamı, Türkiye sınırları dahilinde bulunan tüm yerleşim yerlerindeki hane halklarıdır. Türkiye’de Kadına Yönelik Aile İçi Şiddet Araştırması’nın örneklem tasarımında ağırlıklı, tabakalı ve çok aşamalı küme örnekleme yaklaşımı kullanılmıştır. Araştırma, hanede bulunan 15-59 yaş arası kadınlarla gerçekleştirilmiştir (TÜİK, 2014).

Bu çalışmada Türkiye’de Kadına Yönelik Aile İçi Şiddet Araştırması anketine 2014 yılında katılan 15 yaş ve üzeri 7070 kadının verileri kullanılmıştır.

### 2.2. Değişkenler

Türkiye’de Kadına Yönelik Aile İçi Şiddet Araştırması’nda kadınlara, “15 yaşınızdan sonra ailenizden, akrabalarınızdan ya da tanıdıklarınızdan biri siz çalışmak istediğiniz halde çalışmanıza engel oldu mu ya da işten ayrılmanıza neden oldu mu? Ailenizden, akrabalarınızdan ya da tanıdıklarınızdan biri siz okumak istediğiniz halde okula devam etmenize engel oldu mu ya da okuldan ayrılmanıza neden oldu mu” soruları sorulmuştur. Bu sorularla ölçülen şiddete maruz kalma durumu bağımlı değişkenin oluşturulmasında kullanılmıştır. Araştırmaya katılan kadınlar yukarıda belirtilen durumlardan en az birini yaşadıysa eşi/partneri dışında başka birisinden ekonomik şiddete maruz kalmıştır ve hiçbirini yaşamadıysa ekonomik şiddete maruz kalmamıştır. Sonuç olarak çalışmanın bağımlı değişkeni, kadınlar ekonomik şiddet gördüyse 1 ve görmediyse 0 kodunu alan kadınların ekonomik şiddet görme durumudur.

### 2.3. Bağımsız Değişkenler

Çalışmada yer alan bağımsız değişkenler literatür araştırması yapılarak tespit edilmiştir. Kadınların sosyo demografik ve ekonomik özelliklerine ilişkin değişkenler, kadının ikamet ettiği bölge (batı, güney, orta, kuzey, doğu), yaşı (15-24, 25-34, 35-44, 45-54, 55 ve üzeri), eğitim düzeyi (okuma yazma bilmiyor/diploması yok, ilkokul, ortaokul, lise, üniversite), medeni durumu (bekar, evli), sağlık durumu (mükemmel/iyi, idare eder, kötü/çok kötü) ve oda sayısı (2 ve altı, 3, 4, 5 ve üstü), çalışma durumu (hayır, evet), eş/partner dışında başka birisinin fiziksel şiddetine maruz kalma durumu (hayır, evet), eş/partnerin dışında başka birisinin duygusal şiddetine maruz kalma durumu (hayır, evet), eş/partner dışında başka birisinin cinsel şiddetine maruz kalma durumu (hayır, evet) dur.

Ordinal ve nominal değişkenler, modele alınacak tüm değişkenlere ait kategorilerin etkilerini gözlemlemek amacıyla kukla değişken olarak tanımlanmıştır (Alkan & Ünver, 2022; Alkan & Ünver, 2022; Alkan & Ünver, 2020).

### 2.4. İstatistiksel Analiz

İstatistiksel çıkarımın temel alanlarından biri, istatistiksel hipotezlerin test edilmesidir (Alkan & Ünver, 2021). Verilerin analizinde SPSS 20 ve Stata 15 programlarından yararlanılmıştır. Öncelikle araştırmaya katılan kadınların eş/partnerleri dışında başka birisinden ekonomik şiddete maruz kalma durumuna göre frekans ve yüzdeleri elde edilmiştir. Ekonomik şiddet görme durumu ve bağımsız değişkenler arasındaki ilişkiyi incelemek için ki-kare bağımsızlık testi yapılmıştır. Daha sonra binary lojistik regresyon analizi kullanılarak kadınların eş/partner dışı ekonomik şiddete maruz kalmasında etkili olan riskli faktörler belirlenmiştir.

Binary lojistik regresyon, bağımlı değişkeninin iki durumlu seçenekli olduğu durumlarda bağımlı değişken ile bağımsız değişken(ler) arasındaki nedensel ilişkinin incelenmesinde kullanılan bir istatistik analiz yöntemidir (Alkan & Ünver, 2020).

## 3. TARTIŞMA

### 3.1. Çalışmaya Katılan Bireylerin Tanımlayıcı İstatistikleri

Türkiye’de kadınların eş/partner dışı ekonomik şiddet görme durumunda etkili olabilecek faktörlere ilişkin bulgular Tablo 1’de gösterilmiştir. Çalışmaya en fazla katılımın %32 ile batı bölgesinden olduğu görülmektedir. Kadınların %29’unun 25-34 yaş aralığında olduğu Tablo 1’de görülmektedir. Kadınların %42,4’ü ilkokul mezunu

iken, %78,6 sı evlidir. Ayrıca kadınların %70,4'ünün çalışmadığı ve %47,9'unun sağlık durumunun mükemmel/iyi olduğu görülmektedir. Çalışmaya katılanların %42,9'unun 4 odalı hanede yaşadığı tespit edilmiştir. Ayrıca tablo 1 de kadınların eş/partner dışı fiziksel şiddet görme durumunun %12,9, eş/partner dışı cinsel şiddet görme durumunun %6 ve eş/partner dışı duygusal şiddet görme durumunun %20,4 olduğu tespit edilmiştir.

Çalışmada binary lojistik regresyon modeline alınacak olan bağımsız değişkenler arasında çoklu doğrusal bağlantı olup olmadığı test edilmiştir. Varyans enflasyon faktör (VIF) değerleri 5 ve üzerinde olanların orta derecede, 10 ve üzeri olanların ise yüksek derecede çoklu doğrusal bağlantıya sebep olduğu düşünülmektedir (Alkan, Oktay, Ünver, & Gerni, 2020; Ünver & Alkan, 2020; Ünver & Alkan, 2021). Bu çalışmada, değişkenler arasında çoklu doğrusal bağlantı sorununa sebep olan herhangi bir değişken bulunmamaktadır.

### 3.2. Model Tahmini

Çalışmada yer alan kadınların eşi/partneri dışında başka birisinden ekonomik şiddet görme durumunu etkileyen faktörleri belirlemek için binary lojistik regresyon modeli kullanılmıştır. Tahmin edilen model ve marjinal etki sonuçları Tablo 3'te verilmiştir. Tablo 3 incelendiğinde; kadınların ikamet ettiği bölge, yaş, eğitim (ilkokul, ortaokul, lise, üniversite), medeni durum, sağlık durumu (mükemmel/iyi), oda sayısı (dört), eş/partner dışı fiziksel şiddet görme durumu, eş/partner dışı cinsel şiddet görme durumu ve eş/partner dışı duygusal şiddet görme durumu değişkenlerinin anlamlı olduğu görülmektedir.

**Tablo 3.** Kadınların partner dışı ekonomik şiddet görme durumunda etkili olan sosyo-demografik ve ekonomik faktörlere ilişkin tahmin edilen model ve marjinal etki sonuçları

Tablo 3'e göre, güney, orta, kuzey ve doğu bölgesinde yaşayan kadınların batı bölgesinde yaşayanlara göre ekonomik şiddete maruz kalma olasılığı sırasıyla %14,6 %17, %10,4 ve %17,5 daha fazladır. Kadınların 25-34 yaş grubunda olması referans gruba göre ekonomik şiddete maruz kalma olasılığını %31,4 arttırmaktadır. Benzer şekilde kadınların 55+ yaş grubunda olması referans gruba göre ekonomik şiddete maruz kalma olasılığını %30,7 arttırmaktadır İlkokul, ortaokul, lise ve üniversite mezunu kadınların hiç okul bitirmemiş (okuma yazma bilmeyen) kadınlara göre ekonomik şiddete maruz kalma olasılıkları sırasıyla %29,6, %32, %100 ve %197 daha azdır. Medeni durumu evli olan kadınların, medeni durumu bekar olan kadınlara göre ekonomik şiddete maruz kalma olasılığı %14,3 daha fazladır. Sağlık durumu mükemmel/iyi olan kadınların referans gruba göre ekonomik şiddete maruz kalma

olasılığı %25 daha azdır. Hanesinde oda sayısı 4 olan kadınların, referans gruba göre ekonomik şiddete maruz kalma olasılığı %14,8 daha fazladır. Eş/partner dışında fiziksel şiddet gören bir kadının referans gruba göre ekonomik şiddete maruz kalma olasılığı %26,8 daha fazladır. Eş/partner dışında cinsel şiddet gören bir kadının referans gruba göre ekonomik şiddete maruz kalma olasılığı %27,2 daha fazladır. Eş/partner dışında duygusal şiddet gören bir kadının referans gruba göre ekonomik şiddete maruz kalma olasılığı %30 daha fazladır.

#### 4. SONUÇ

Bu çalışmada Türkiye'deki 15 yaş ve üzeri kadınların eş/partnerleri dışında başka birisi tarafından ekonomik şiddete maruz kalmasını etkileyen faktörler tespit edilmiştir. Çalışmada kadınların eğitim durumunun ekonomik şiddet görmeye etkili olduğu belirlenmiştir. Çalışmada eğitim seviyesi arttıkça ekonomik şiddet görme olasılığının azaldığı sonucuna ulaşılmıştır. Kadına yönelik şiddet için en önemli risk faktörlerinden biri, kadınların düşük eğitim düzeyidir (Hossain & Khan, 2015). Kadınların eğitim düzeyi düştükçe, şiddete maruz kalma oranları da artmaktadır (Sen & Bolsoy, 2017). Yüksek öğrenim gören her beş kadından biri şiddete maruz kalırken, daha düşük eğitim seviyesine sahip her iki kadından biri şiddete maruz kalmaktadır. Eğitimli kadınların kötü niyetli bir ilişkiyi tanımak ve bitirmek için daha fazla kaynağı olduğu görülmektedir (Flake, 2005). Kadınların genel olarak eğitim düzeylerini artırmak, kişisel becerilerini, istihdam edilebilirliklerini ve dolayısıyla sosyo-ekonomik düzeylerini geliştirecektir. Böylece şiddete maruz kalma risklerini azaltacaktır (Boyle, Georgiades, Cullen, & Racine, 2009; Lee et al., 2015).

Çalışmada kadınların ikamet ettiği bölgenin ekonomik şiddet görmeye etkili olduğu belirlenmiştir. Türkiye'de yapılan çalışmalarda, kadınlara yönelik şiddetin sıklığının, kadınların yaşadığı coğrafi bölgelere göre değiştiği de ortaya koyulmuştur (Abramsky et al., 2011; Kocacık & Çağlayandereli, 2009; Alkan & Ünver, 2020; Alkan, Özar & Ünver, 2021). Çalışmada, güney, orta, kuzey ve doğu bölgesinde yaşayan kadınların batı bölgesinde yaşayan kadınlara göre ekonomik şiddet görme olasılığının daha fazla olduğu tespit edilmiştir. Kadınların ekonomik şiddet görmesinde etkili olan değişkenlerden birisi de sağlık durumudur. Kadınların sağlık durumu iyileştikçe ekonomik şiddet görme olasılıklarının azaldığı sonucuna ulaşılmıştır. Yapılan çalışmalarda da benzer sonuçlar elde edilmiştir (Mathur et al., 2018; Nduna, Jewkes, Dunkle, Shai, & Colman, 2010; Okafor et al., 2018). Çalışmanın dikkat çekici sonuçlarından birisi de medeni durum değişkeninin kadınların ekonomik şiddet görmesinde etkili olmasıdır (Alkan, Özar & Ünver, 2021; Alkan & Ünver, 2020). Ayrıca çalışmada yaş arttıkça ekonomik şiddet görme olasılığının arttığı sonucuna ulaşılmıştır.

Çalışmada eş/partner dışındaki birisi tarafından fiziksel şiddete maruz kalan kadınların, eş/partner dışındaki birisi tarafından fiziksel şiddete maruz kalmayan kadınlara göre daha fazla ekonomik şiddete maruz kaldıkları tespit edilmiştir.

Çalışmada eş/partner dışındaki birisi tarafından cinsel şiddete maruz kalan kadınların, eş/partner dışındaki birisi tarafından cinsel şiddete maruz kalmayan kadınlara göre daha fazla

ekonomik şiddete maruz kaldıkları tespit edilmiştir. Çalışmada eş/partner dışındaki birisi tarafından duygusal şiddete maruz kalan kadınların, eş/partner dışındaki birisi tarafından fiziksel şiddete maruz kalmayan kadınlara göre daha fazla ekonomik şiddete maruz kaldıkları tespit edilmiştir.

Çok boyutlu ve karmaşık bir olgu olarak kabul edilen kadına karşı eş/partner dışı ekonomik şiddetin önlenmesinde bu konuda faaliyet gösteren kurum ve kuruluşların ortak hareket etmeleri büyük önem taşımaktadır. Kadına yönelik eş/partner dışı ekonomik şiddetin çözümlenmesinde faaliyet gösteren politika belirleyiciler, mahkemeler, sağlık kuruluşları, polis ve sivil toplum örgütleri uyum içinde çalıştığında hem sorunun tespit edilmesine hem de soruna ilişkin daha organize ve bilinçli yaklaşımlar geliştirilmesine imkân sağlanacaktır. Bu çalışmada elde edilen sonuçlar kadına yönelik şiddetin önlenmesinde politika ve programların oluşturulması için bilgi kaynağı olabilmesi açısından önemlidir. Aynı zamanda bu çalışma planlanan girişimlerde öncelikli grupların belirlenmesinde önemli bir yol gösterici olabilir. Kadına yönelik şiddet kavramının insan onuruna yapılan bir saldırı ve temel insan hakları ihlali olarak kabul edildiği gerçeği göz önüne alındığında, kadınların maruz kaldıkları şiddet türleri ve şiddete maruz kaldıkları zaman yapmaları gerekenler ve yasal düzenlemeler konusunda bilinçlendirilmeleri büyük önem taşımaktadır.

Bu çalışma birkaç sınırlamaya sahiptir. Birincisi, çalışmadaki veriler ikincil verilerdir. İstatistik analiz için gerekli olan değişkenler veri setinde var olan değişkenlerden oluşmaktadır. İkincisi, veriler kesitsel olduğundan, kadınlara yönelik ekonomik şiddet ile ilgili kesin nedensel ilişki çıkarılamamaktadır. Üçüncüsü, çalışmada elde edilen veriler kadınların kendi cevaplarıdır. Bundan dolayı bu veri toplama yönteminde elde edilen veriler yanlış olabilir.

## ÖZET

Mevcut bu araştırmada, mühürleme işleminin pişmiş etin myofibriler protein profili üzerine etkisinin belirlenmesi amaçlanmıştır. Bu amaçla et örnekleri, yüzey sıcaklığı önceden 250 °C'ye getirilen ızgara tavaında 20, 30 ve 40 °C iç sıcaklıklarda mühürlenmiştir. Mühürleme işleminden sonra numuneler, sıcaklığı önceden 180 °C'ye ayarlanmış bir fırında iç sıcaklıkları 71 °C'ye ulaşmaya kadar pişirilmiştir. Mühürleme işlemi uygulanmayan örnekler doğrudan fırında (71 °C iç sıcaklık) pişirme işlemine tabi tutulmuş ve kontrol grubu olarak değerlendirilmiştir. Örneklerin myofibriler protein profilinde meydana gelen değişiklikler Sodyum Dodesil Sülfat Poliakrilamid Jel Elektroforezi (SDS-PAGE) tekniği ile incelenmiştir. Mühürleme işlemi yapılmadan fırında pişirilen örneklerde, hammaddede tespit edilen 200 kDa ağırlığındaki myosin ağır zincirinin bant yoğunluğu azalmıştır (negatif kontrol, F); farklı iç sıcaklıklarda (20 °C, 30 °C ve 40 °C) mühürlenmiş ve fırında pişirilmiş (M20+F, M30+F, M40+F) örneklerde ise bu protein bandı kaybolmuştur. Ayrıca hammaddede tespit edilen 153 ve 104 kDa ağırlığındaki protein bantlarının pişirme işlemi sonucunda tüm muamele grubu örneklerinde kaybolduğu gözlemlenmiştir. Aktin proteininin bant yoğunluğu, muamele grupları arasında farklılık göstermiştir. Muamele grupları arasında en yüksek aktin bant yoğunluğu, mühürlenmemiş F grubu örneklerinde tespit edilirken, mühürleme derecesinin artması nedeniyle aktin molekülünün bant yoğunluğu azalmıştır. Ayrıca 30 °C ve 40 °C iç sıcaklığa kadar mühürlenmiş M30+F ve M40+F grubu örneklerinde 33 kDa ağırlığında yeni bir protein bandı gözlemlenmiştir.

**Anahtar kelimeler:** Et, Myofibriler Protein, Mühürleme, SDS-PAGE

## THE EFFECT OF SEALING PROCESS ON MYOFIBRILLAR PROTEIN PROFILE OF MEAT

## ABSTRACT

In the present research, it was aimed to determine the effect of sealing process on myofibrillar protein profile of cooked meat. For this aim, the meat samples were sealed at internal temperatures of 20, 30, and 40 °C in the griddle pan, the surface temperature of which was brought to 250 °C in advance. After the sealing process, the samples were baked in an oven whose temperature was pre-set to 180 °C until their internal temperature reached 71 °C. Samples that did not apply the sealing process were directly subjected to baking in the oven (internal temperature of 71 °C), and evaluated as control group samples. The changes in the myofibrillar protein profile of the samples were examined by Sodium Dodecyl Sulphate Polyacrylamide Gel Electrophoresis (SDS-PAGE) technique. The band density of myosin heavy chain of 200 kDa detected in the raw material decreased in the meat samples cooked in the oven without the sealing process (negative control, F); and this protein band was lost in the samples sealed at different internal temperatures (20 °C, 30 °C, and 40 °C) and baked (M20+F, M30+F, M40+F). In addition, it was observed that protein bands weighing 153 and 104 kDa detected in the raw material disappeared in all treatment group samples as a result of the cooking process. The band intensity of actin protein differed between the treatment groups. While the highest actin band density among the treatment groups was detected in group F samples that sealing was not applied, the band density of the actin molecule decreased due to the increase in the degree of sealing. Moreover, a new protein band with a weight of 33 kDa was observed in M30+F and M40+F group samples sealed up to 30 °C and 40 °C internal temperature.

**Keywords:** Meat, Myofibrillar Protein, Sealing, SDS-PAGE.

## 1. INTRODUCTION

Meat has an important place in nutrition due to its high amount and quality of protein, minerals such as zinc and iron as well as the main source of B group vitamins (Gökalp et al. 2010). Except for meat products that are consumed as especially raw, meat and meat products are generally consumed after the cooking process. By cooking, both pathogenic

microorganisms are inactivated and the sensory properties of the product are improved (Sante-Lhoutellier et al. 2008). Many structural changes are seen in the meat, including protein denaturation and shrinkage, with heat application, the water holding capacity of meat is reduced so that the quality of meat changes with cooking (Tornberg 2005; Barbera and Tassone 2006).

Myofibrillar proteins are salt-soluble proteins that include contractile, regulatory, and cytoskeletal proteins (Toldra 2010; Marino et al. 2014). These proteins constitute approximately 50-55% of total muscle proteins (Tornberg 2005). Myofibrillar proteins are responsible for the formation of sticky structure and hard texture in meat as a result of applied heat processes (Han et al. 2014). Changes in these major components, which have a significant effect on the formation of meat texture, also play an important role in the sensory characteristics of meat products (Larrea et al. 2006).

Sealing can be defined as the formation of crust on the surface of meat by high-temperature application. Sealing is based on the principle that the proteins on the meat's surface form a denatured layer as a result of the rapid application of high heat to the meat (Erdogan 2005). This process is usually performed on surfaces heated up to 160-250 °C (Babür and Gürbüz 2015). Visually more attractive and delicious meat products are obtained due to the Maillard reaction that occurs during the sealing process (Barber and Broz 2011). It is not yet known how the sealing process and degree of sealing, which have started to be widely applied in the fast-food industry in recent years, affect the myofibrillar protein profile of the meat. Therefore, in the present study, the effects of the sealing process and the degree of sealing on the myofibrillar protein profile of cooked meats were investigated.

## **2. MATERIAL AND METHOD**

### **2.1. Material**

In the present study, beef (*M. Longissimus thoracis et lumborum*) removed from three different beef carcasses obtained from Erzurum Meat Combine was used as material.

#### **Cooking conditions**

The sealing process was carried out using a griddle pan (Karaca, Turkey). For this process, the meat samples were sealed at internal temperatures of 20, 30, and 40 °C in the griddle pan, the surface temperature of which was brought to 250 °C in advance. After the sealing process, the samples were baked in an oven (Arçelik, Turkey) whose temperature was pre-set to 180 °C until their internal temperature reached 71 °C to ensure food safety. Samples that did not apply the sealing process were directly subjected to baking in the oven (internal temperature of 71 °C), and evaluated as control group. Cooking surface and internal temperatures were determined using a laboratory-type thermometer (Testo, Lenzkirch, Germany).-

#### **Determination of SDS-PAGE profile of myofibrillar proteins**

The method reported by Oz and Kaya (2019) was used to determine the effect of sealing and cooking processes on myofibrillar proteins. In this context, the changes occurring in myofibrillar proteins were examined by Sodium Dodecyl Sulphate Polyacrylamide Gel Electrophoresis (SDS-PAGE) technique. Briefly, the samples were homogenized in a 30 mM phosphate buffer (pH 7.4). The homogenate was centrifuged at 10,000×g for 20 min at 4°C. The supernatant was collected by filtration through glass wool. This procedure was repeated twice for the pellets. Afterward, the pellet was homogenized with 100 mM phosphate buffer (pH 7.4). The homogenate was then centrifuged at 10,000×g for 20 min at 4°C. The supernatant was collected as the myofibrillar protein fraction. The concentration of the extracts was determined by the Bradford method and the samples mixed with 50 mM Tris buffer (pH 6.8), in a ratio of 1:1 (v/v). The mixture was kept at 100 °C for 5 minutes and then stored at -20 °C until use. For the separation of myofibrillar proteins, 5% loading gel were used. 10 µL of the sample was loaded into each gel well and the samples were run at 100 V until the paint trail reached the end of the gel. The gel was then stained with a staining solution containing Coomassie Brilliant Blue R-250 After staining, the dye was removed with a wash solution until the gel background became clear. The molecular

weights of the protein bands were determined using the protein standard mixture (Bio-Rad, Broad Range, USA) in the Image Lab 6.0 (Bio-Rad) program.

### **3. RESULTS AND DISCUSSION**

The SDS-PAGE electrophoretogram of myofibrillar proteins of meat samples sealed until they reach different internal temperatures and baked is presented in Figure 1. Myosin protein constitutes an important part of myofibrillar proteins, known as proteins that dissolve in

solutions with high ionic strength (Marino et al. 2014). In the present study, it was determined that the band density of myosin heavy chain of 200 kDa detected in the raw material decreased in the meat samples cooked in the oven without the sealing process (negative control, F); and this protein band was lost in the samples sealed at different internal temperatures (20 °C, 30 °C, and 40 °C) and baked (M20+F, M30+F, M40+F). Similarly, it was observed that protein bands weighing 153 and 104 kDa ( $\alpha$ -actinin) detected in the raw material disappeared in all treatment group samples as a result of the cooking process. Similarly, it has been reported that the thermal stability of myosin heavy chain and  $\alpha$ -actin is low and that serious decreases in band densities are observed as a result of temperature application of 60 °C (Kajak-Siemaszko et al. 2011; Wen et al. 2015; Taşkıran et al. 2020).

**Figure 1.** The SDS-PAGE electrophoretogram belonged to myofibrillar proteins of the samples

**Notes:** STD: Protein standard, H: Raw material, F: Samples cooked in the oven without the sealing process, M20+F: Samples cooked in the oven after sealing up to 20 °C internal temperature, M 30+F: Samples cooked in the oven after sealing up to 30 °C internal temperature, M40+F: Samples cooked in the oven after sealing up to 40 °C internal temperature

Another important myofibrillar protein, actin which constitutes approximately 25% of myofibrillar proteins, was detected in all treatment group samples. However, the band intensity of this protein differed between the treatment groups. While the highest actin band density among the treatment groups was detected in group F samples that sealing was not applied, the band density of the actin molecule decreased due to the increase in the degree of sealing. In the current study, it is thought that the low band density observed, especially in the M30+F and M40+F groups, is associated with the high sealing internal temperature in these groups, in other words, the longer the time required to reach the relevant internal temperatures

in these samples. As a matter of fact, it is known that cooking temperature and duration affect protein denaturation. In the present study, a new protein band with a weight of 33 kDa was observed in M30+F and M40+F group samples sealed up to 30 °C and 40 °C internal temperature. A new protein band with a molecular weight of 18 kDa was detected in M20+F, M30+F, and M40+F group samples sealed at different internal temperatures (20, 30, and 40 °C). It has been reported that new low molecular weight protein bands may emerge as a result of the degradation of high molecular weight proteins by cooking (Dai et al. 2013).

#### **4. CONCLUSION**

It was determined that the sealing process affects the myofibrillar protein profile, especially depending on the degree of sealing. It was observed that the SDS-PAGE profile of the samples baked in the oven after sealing up to 20 °C internal temperature was generally similar with the control group samples that were not sealed. In the light of the data obtained, it can be said that the M30+F and M40+F group samples differed from the F and M20+F group samples and the rate of protein denaturation in M30+F and M40+F group samples was slightly higher.

TELEVİZYON DİZİLERİNİN ALIMLANMASINDA SİYASAL ORTAM VE  
İZLEYİCİ ARASINDAKİ İLİŞKİ

**Dr. Öğr. Üyesi Mehmet Ozan AŞIK (Orcid ID: 0000-0002-5588-2376)**  
Bursa Uludağ Üniversitesi, Fen-Edebiyat Fakültesi, Bursa, Türkiye

### ÖZET

İzleyici araştırmalarında televizyondaki medya içeriğini alımlamanın üç temel biçimi vardır: 1) Hakim okuma, 2) müzakereli okuma ve 3) muhalif okuma ve bir toplumdaki siyaset kurumu bu üç alımlama tarzına etkilemektedir. Bu çalışma, Türkiye gibi siyasi ve kültürel kutuplaşmanın yoğun olduğu bağlamlarda, bu üç okuma tarzının televizyon metnine mi içkin yoksa izleyicilerin sosyo-kültürel arkaplanları tarafından mı daha çok belirlendiğine dair literatürdeki klasik tartışmayı yeniden ele alacaktır. Böylece, izleyici araştırmaları literatürüne sosyolojik perspektiften farklı bir teorik yaklaşım getirmek hedeflenmektedir. Bu çalışma, benim de yürütücüsü olduğum Diriliş: Ertuğrul dizisi üzerine yapılan bir izleyici araştırmasına dayanmaktadır. Bu çalışma kapsamında 38 düzenli dizi izleyicisi ile derinlemesine mülakatlar gerçekleştirilmiş ve araştırmanın sonuçları, dizinin metinsel incelemesi ile birlikte analize tabi tutulmuştur. Bu verilerden hareketle ampirik analiz iki aşamadan oluşacaktır. İlk aşamada siyasi ideolojilerin, söylem ve politikaların oluşturduğu siyasal çevrenin izleyicinin dizileri alımlama sürecine olası etkilerine bakılacaktır. Kutuplaşmanın tarafı olan siyasal iktidar, televizyon programının üretimi sürecine doğrudan müdahale edebildiği gibi programın izleyicilerinin etkisi altında olduğu siyasal çevreyi de manipüle edebilmektedir. İkinci aşamada ise bir metin olarak dizilerdeki senaryonun, karakterlerin, diyaloglar ve mesajların farklı sosyo-kültürel arkaplana sahip izleyiciler tarafından nasıl alımlandığına bakılacaktır. Bu aşamada ilk bakılacak şey, metinsel çok anlamlılıktır. Önceki çalışmalar kanıtlamıştır ki, bir toplumdaki egemen bir siyasi ideolojinin, düşünce ya da söylemin bir televizyon dizisi metnini tamamen şekillendirmesi mümkün değildir. Çünkü hem toplumsal bağlamin hem de üretim aşamasının çok katmanlı ve aktörlü komplike yapısından dolayı bir televizyon metnine birden fazla siyasi söylem ve ideoloji etki edebilir. Ayrıca, popüler televizyon dizilerinin toplumdaki herkesi cezbedebilmesi için farklı ve hatta birbiriyle çatışan siyasi ve kültürel öğeleri metinde barındırması gerekir. Benim bu çalışmada yapmak istediğim metinlerdeki çok anlamlılığa bakmak; ardından bu çok anlamlılığın özellikle üç okuma tarzından müzakereli okumaya nasıl yol açtığını incelemektir. Analizin sonucunda bu çalışmanın temel iddiası şudur: Sosyolinguistik açıdan bir metin olarak televizyon dizisi içeriği, siyasetin izleyici alımlaması üzerine etkisini iki seviyeli bir süreç ile dolaylılamaktadır. İlk seviye, siyasi ortam ile metin arasındaki ilişkiye bakarken ikinci seviye, metin ile izleyici arasındaki ilişkiye odaklanmaktadır.

**THE RELATIONSHIP BETWEEN POLITICAL ENVIRONMENT AND AUDIENCES  
IN THE RECEPTION OF TELEVISION SERIES**

## ABSTRACT

There are three main modes of reception of televisual media content in audiences studies: 1) dominant reading, 2) negotiated reading, 3) oppositional reading, and the political institution in a society impacts these three modes of reception. The present study brings a new perspective to the classical debate in the relevant academic literature about whether the socio-cultural backgrounds of viewers determine the three modes of reading or these modes are immanent to the televisual text within Turkey's highly polarized political and cultural climate. Therefore, the study aims to bring a fresh theoretical approach to the literature on audience studies from a sociological perspective. The paper is based on audience research, in which I was involved as a co-investigator, on the television series Resurrection: Ertuğrul. For the research, we conducted in-depth interviews with 38 regular viewers of the television drama, and the results were analyzed in combination with the textual examination of the drama. Based on the data, the empirical analysis consists of two levels. At the first level, I look into the potential effects of the political environment that consists of political ideologies, discourse and policies on the process of the reception of the series. Political power that takes a side in the bifurcation of society manipulates the political environment that influences the viewers of television programs, as well as it can directly intervene into the production process of the television program. At the second level, I examine how the plot, characters, dialogues and messages are received and interpreted by the viewers of different socio-cultural backgrounds. At this level, the first phenomenon to analyze is textual polysemy. Previous studies have proven that it is not possible for a dominant political ideology, thought or discourse in a society to completely shape the text of a television series. This is because, due to the multi-layered and complex structure of both social context and a production stage, more than one political discourse and ideology can affect the televisual text. Also, in order for popular television series to appeal to everyone in the society, they must contain different and even conflicting political and cultural elements in the text. What I want to do in this study is to look at the textual polysemy; and then examine how the textual polysemy opens up the way for the negotiated among the three modes of reading. As a result of the analysis, the main claim of this study is as follows: in terms of sociolinguistics, the content of television series as a text mediates the effect of politics on audience reception through a two-level process. The first level focuses on the relationship between the political environment and the text, while the second level focuses on the relationship between the text and the audience.

## 1. GİRİŞ

Bu çalışma, medya ve iletişim çalışmalarının iki alt disiplini olan siyasal iletişim ve izleyici araştırmalarının kesişimini sosyolojik bir perspektiften incelemektedir. Bu amaçla, çalışmada bir yandan siyaset kurumu ile televizyon dizisi izleyicileri arasındaki ilişkiye bakılacak ve

siyasi ideolojilerin, söylem ve politikaların oluşturduğu siyasal çevrenin izleyicinin dizileri alımlama sürecine olası etkileri incelenecektir. Diğer yandan, metin ile izleyici arasındaki ilişkiye bakılacak ve bir metin olarak dizilerdeki senaryonun, karakterlerin, diyaloglar ve mesajların farklı sosyo-kültürel arkaplana sahip izleyiciler tarafından nasıl alımlandığı incelenecektir. Siyaset kurumu ile dizi izleyicileri arasındaki sosyolojik ilişkiyi devlet-birey ilişkisi açısından açıklamak mümkündür. Toplumsal kutuplaşmanın olduğu bir sosyal bağlamda siyasal iktidar, siyasal-kültürel bir kampın parçası olarak televizyon programının üretimi sürecine doğrudan müdahale edebildiği gibi programın izleyicilerinin etkisi altında olduğu siyasal çevreyi de manipüle edebilmektedir. Toplumsal bir aktör olarak bireyin sosyolinguistik bir metin olan televizyon dizisi ile olan sosyolojik ilişkisi de, hem metnin farklı ve hatta birbiriyle çatışan siyasi ve kültürel öğeleri metinde barındırmasından hem de bireyin içine doğdu ve sosyalleştiği sosyo-kültürel ortamın okuduğu metni algılamasına ve yorumlamasına, yani alımlamasına, etki etmesinden kaynaklanmaktadır.

İzleyici araştırmalarında Hall'un çalışmasına (Hall, 2005) dayanarak, bir televizyon metnine yönelik üç ana izleyici tepkisi olduğunu varsayıyoruz. Bunlardan ilki, tercih edilen okumayı sorgulamadan kabul eden “baskın okuma”dır. Tercih edilen okuma “metnin bir özelliğidir” (Morley, 1991) ve metnin üretim sürecinde metne yazılır, ancak mesajları ve temsilleri yorumlamanın sadece belirli bir yolunu ifade eder – metnin üreticileri tarafından amaçlanan ve istenen yolu (Kim, 2004). Siyasi söylemler ve ideolojiler de medya süreç ve uygulamalarının dışından tercih edilen okumayı şekillendirebilir. İkincisi, izleyicilerin egemen ideolojik çerçeveyi reddetmeden metindeki bazı mesajları ve temsilleri sorguladığı “müzakereli okuma”dır. Üçüncüsü ise, izleyicilerin metni aktif ve bilinçli olarak karşı çıktıkları bir ideolojinin ya da sosyo-politik düzenin ürünü olarak algıladıkları için temelde tüm içeriğin eleştirmeni haline geldikleri “muhalif okuma”dır.

Bu üç okuma ya da alımlama tarzından hareketle bu çalışmanın temel araştırma sorusu şudur: Türkiye gibi siyasi ve kültürel kutuplaşmanın yoğun olduğu bağlamlarda

müzakereli okuma televizyon metni ile ortak bir kültürel ve siyasal bir arkaplana paylaşan izleyicilerin bulunduğu noktada nasıl ortaya çıkmaktadır? Bu soruya yanıt aramak için bu çalışma, benim de yürütücüsü olduğum Diriliş: Ertuğrul dizisi üzerine yapılan bir izleyici araştırmasına dayanmaktadır. Tekden Şirketler Grubu'nun üstlendiği Diriliş Ertuğrul dizisi, 10 Aralık 2014 tarihinden 29 Mayıs 2019 tarihine kadar kamu kuruluşu olan TRT'de çarşamba akşamları yayınlanmıştır. Diriliş Ertuğrul dizisi yayınlandığı dönemde hem AB reyting sıralamasında hem de toplamda genellikle birinci sırada yer almıştır. Türkiye'nin

siyasal konjonktüründen etkilendiğini saha çalışmamız boyunca deneyimlediğimiz dizi, 71 ülkeye ihraç edilmiş ve dijital mecrada da kendisine yer bulmuştur. Dizinin bölümleri tekrar Beyaz TV ve 360 TV’de yayınlanmaktadır.

Popüler bir kültür anlatısı olarak Diriliş Ertuğrul dizisinde Kayı Boyu’nun mücadeleleri ve devletleşme girişimlerinin başladığı dönem sergilenmektedir. Bunun da ötesinde Diriliş, AKP tarafından eğlence kisvesi altında sürekli siyasileştirilen bir dramadır (Carney, 2018). Drama, Türk-İslam Sentezi ve yeni-Osmanlı canlanmacılığının bir bileşimi olan bir ideolojiden beslenen erken dönem Osmanlı-Türk toplumunun tarihinin kurgusal ve teleolojik bir okumasını sunmaktadır. Dizi, 13. yüzyılda Osmanlı İmparatorluğu'nun ilk temellerini atan şanlı Türk komutanı Ertuğrul Gazi'nin önderliğinde, yeni ortaya çıktığı varsayılan Türk ulusunun düşmanlarına karşı savaşçılarıyla birlikte mücadele eden bir destana dayanan tarihi bir kurgudur. Bu çalışma kapsamında Diriliş dizisini düzenli izleyen 38 izleyicisi ile derinlemesine mülakatlar gerçekleştirilmiş ve araştırmanın sonuçları, dizinin metinsel incelemesi ile birlikte analize tabi tutulmuştur.

Bu araştırmada kullanılan alımlama analizi, televizyon programlarının ürettiği anlam ile izleyicilerin ürettiği anlam arasındaki ilişkiyi ortaya koymayı amaçlayan bir yöntemdir (Şeker, 2009). Alımlama analizinin amacı ise alımlamayla ilgili süreçleri inceleyip, medya içeriğinin kullanım ve etkileriyle ilgili bir tavır geliştirebilmektir (Jensen ve Rosengren, 2005). Hall’a göre toplumsal ve kültürel inşa olarak anlam, metnin sadece üretim anında değil aynı zamanda metnin tüketicisi/okuyucusuyla bulunduğu anda kurulmaktadır (Oğuz, 2014). Medya mesajlarının çoğunlukla polisemik olması sebebiyle bu mesajları anlamlandırma girişimi, izleyici/okuyucunun sosyal, kültürel ve politik tavrıyla da yakından ilişkilidir. Yani, bir toplumdaki egemen bir siyasi ideolojinin, düşünce ya da söylemin bir televizyon dizisi metnini tamamen

şekillendirmesi mümkün değildir. Çünkü hem toplumsal bağlamın hem de üretim aşamasının çok katmanlı ve aktörlü komplike yapısından dolayı bir televizyon metnine birden fazla siyasi söylem ve ideoloji etki edebilir. Ayrıca, popüler televizyon dizilerinin toplumdaki herkesi cezbedebilmesi için farklı ve hatta birbiriyle çatışan siyasi ve kültürel öğeleri metinde barındırması gerekir. Diriliş dizisi de çokanlamlı bir metinsel yapıya sahiptir ve bu araştırmanın da analizi, dizideki meta-anlatı olarak Türk-İslam sentezinin mesajlarını egemen okumaya tabii tutan, siyasi olarak görece homojen bir izlerkitlenin çok anlamlılığı nasıl yorumladığı üzerine odaklanmaktadır.

## 2. ARAŞTIRMA VE BULGULAR

Bu çalışmada, televizyon metninin siyasetin izleyici alımlaması üzerindeki etkisine nasıl aracılık ettiğini anlamak için iki seviyeli bir açıklama sunuyorum.

Seviye 1: Metin-seyirci ilişkisi vazgeçilmez bir şekilde daha geniş kültürle bağlantılıdır (Bird, 2003) ve televizyon programları “hatırı sayılır bir ideolojik güç kaynağı” (Lewis, 1991) olduğu için diziler, siyasi iktidarın tercih edilen okumayı yaptığı (Wren-Lewis, 1983) bir dizi paylaşılan kültürel varsayımı dile getirir ve manipüle eder. Siyasi iktidarın bu kaynağı iki şekilde kullanması muhtemeldir. Birincisi, iktidar metnin doğrudan ideolojik manipülasyonu yoluyla egemen okumayı güvence altına almaya çalışır. İkinci olarak iktidar, kamuoyunu metnin tercih edilen anlayışına ve daha büyük siyasi önemine doğru toplamak için televizyon metni etrafında dönen siyasi söylemler ve uygulamalardan oluşan siyasi bir ortamı da manipüle edebilir.

Seviye 2: İkinci seviyede, metnin izleyici alımlaması üzerindeki siyasi etkilere iki şekilde aracılık etmesi muhtemeldir. Her şeyden önce, bir televizyon dizisinin metnindeki yazılı siyasi mesajlar, izleyicileri siyaset hakkında bilgi edinmeye, siyaset üzerine düşünmeye ve yargılamaya ve ideal siyasi durumları ve uygulamaları tahayyül etmeye sevk edebilir (van Zoonen ve Wring, 2012). İkinci olarak, metnin kendisi de kamusal alandaki siyasi tartışmaları tetikleyerek siyasi ortamı etkileyebilir; bu da izleyicileri kamusal meseleleri anlama, siyasi pozisyonlarını ifade etme ve siyasi süreçleri açıklama konusunda bilgilendirir (Tenenboim-Weinblatt, 2009).

Televizyon dizilerinde siyaset, metin ve izleyiciler arasındaki karmaşık ilişki, AKP'li siyasetçilerin konuşmalarının, kendi siyasi fikir ve meselelerinin *Diriliş*'i etkilemesinde kendini gösterir. Dizinin yapımcıları (bunlardan biri bir dönem AKP

Milletvekili olan Kemal Tekden'dir) AKP politikalarının ideolojik ve siyasi temalarını olumlu bir şekilde olay örgüsüne dahil etmişlerdir (Carney, 2018). *Diriliş*, devlete ait yayın kuruluşu Türkiye Radyo Televizyon Kurumu'nda (TRT) yayınlanmış ve prodüksiyonu AKP'nin kontrolü altındaki kamu fonları tarafından cömertçe desteklenmiştir. Cumhurbaşkanı Recep Tayyip Erdoğan, diziyi çok sevdiğini ve düzenli olarak izlediğini açıkça ifade etmiştir. Azerbaycan Cumhurbaşkanı İlham Aliyev, Erdoğan'ı Ankara'daki Cumhurbaşkanlığı Sarayı'nda ziyaret ettiğinde, Cumhurbaşkanı'nın bandosu *Diriliş*'in tema şarkısını çalmış ve bu şarkı “*Diriliş Marşı*” olarak adlandırılmıştır (Carney, 2018). Erdoğan, dramının yapım setini bile ziyaret etmiş, ana savaşçı karakterlerle selfie çektirmiş ve yönetmen koltuğuna oturmuş. Halka hitaben yaptığı konuşmalarda, *Diriliş* gibi televizyon programlarının “milliyetçi bir

gençlik” yetiştirmek ve “milli ve kültürel değerlerimizi yeniden keşfetmek” için hayati önem taşıdığını vurgulayarak dizinin tanıtımını yapmıştır.

Televizyon dizilerinin üretimine yapılan siyasi ve ideolojik müdahalelere rağmen, televizyon metninin tek bir anlamı yoktur (Morley, 1991), dolayısıyla egemen ideolojilerle ilişkisi muğlaktır (Lewis, 1991). Yapım süreci, yazar ile yapımcı, yapımcı ile televizyon ağı, ağ ile siyasi güç ve potansiyel izleyici arasındaki dinamik ilişki diyalojik bir etkileşim yaratmaktadır (Newcomb, 1984). İşbirliğine dayalı üretim sürecindeki bu etkileşimler, kaçınılmaz olarak metni çoklu müzakere perspektiflerini yoğun bir şekilde bir araya getirir ve metni bu perspektiflerle doldurur (Newcomb, 1984). Metnin kendisi, çeşitli alternatif sosyal gerçeklikleri ve pratikleri bünyesinde barındırır (Newcomb, 1984); bu da televizyonu yapılandırılmış bir çokanlamlılık haline getirir (Morley, 1999). Siyaset ve ideoloji açısından, metinsel çok anlamlılık, çeşitli siyasi partiler ve örgütler tarafından üretilen ve metne sızan ideolojilerin çokluğu ile pekiştirilir (Morley, 1999). İzleyici söz konusu olduğunda, bir televizyon programının popüler olabilmesi için geniş bir izleyici kitlesine ulaşması gerekir (Fiske, 1986). Dolayısıyla metin, politik ve sosyo-kültürel açıdan farklı izleyici grupları tarafından metnin alımlanması ve çözümlenmesinde kullanılacak farklı söylemsel pratiklere ve ideolojik çerçevelere izin verecek şekilde açık olmalıdır (Fiske, 1986).

İngiliz kültürel çalışmalar yaklaşımı, temelde medya metinlerinin hegemonik ve muhalif okumaları arasındaki güç ilişkilerini çözmekle ilgilendiğinden, egemen medyaya direniş olasılıklarını göstermek için izleyicilerin farklı geçmişleri ve tek bir metinsel malzemeyi çözenin farklı yolları arasındaki ilişkinin araştırılmasıyla çok

meşgul olmuştur (Hall, 2005; Morley, 1999). Ancak bu çalışma, egemen ideolojik çerçeveyi paylaşan bir grup izleyiciye odaklanmaktadır. Bu vaka çalışmasında, dizinin sadık izleyicilerinin çoğu AKP destekçileridir. Diriliş dizisi onlara Türk siyaseti ve Osmanlı tarihi hakkında sahip oldukları fikirlerden oluşan bir repertuar sunmaktadır ve izleyiciler de bu medya içeriğini keyifle tüketmektedir. Hepsi baskın Türk-İslam ideolojik çerçevesini tanımakta ve bunu medya içeriğini sahiplenmek ve yorumlamak için kullanmaktadır. Ancak bu araştırmanın metin analizinin göstereceği gibi, Diriliş dizisi çokanlamlı bir metinsel yapıya sahiptir. Bu çalışmada da, izleyicinin bu çok anlamlılığın açtığı “metinsel çatlağı” izleyicilerin nasıl anlamlandırdığına bakmaktadır. Çalışmanın katılımcıları, siyasi görüşleri ve toplumsal konumları üreticilerin ve yönetici elitlerinkinden farklı olduğu için değil, metindeki çok anlamlılıktan dolayı eninde sonunda kendilerini dizideki belirli temsil mekanizmalarını müzakere ederken bulmaktadırlar.

Metindeki çok anlamlılığın kaynağı, Türk-İslam ideolojik mesajları ile kadın cinsiyetinin alternatif temsili arasındaki çelişkidir. Türkiye bağlamında, televizyon dizilerindeki kadınlar genellikle erkeklere tabi olan ve kadınların korunmaya ihtiyaç duyduğu zayıf karakterler olarak temsil edilmiştir (Saktanber, 1995). Türk medyasında kadınlar geleneksel olarak üç rolde stereotipleştirilmektedir: 1) iyi/sadık/fedakar anne ve eş, 2) cinsel obje ve 3) dayak yiyen, tecavüze uğrayan ve ihanete uğrayan kurban (Gencel Bek ve Binark, 2000; Saktanber, 1995). Diriliş'in metinsel çerçevesini şekillendiren Türk-İslam ideolojisi kadın cinsiyetini ağırlıklı olarak annelikle ve anneliğin aile hanesi sınırları içindeki performansı ile ilişkilendirilmektedir (Göle, 2019). Kadınlar özel alana indirgenmiştir ve doğum yapmaları, yemek yapmaları, beslemeleri, çocuk yetiştirmeleri, evde temizlik yapmaları beklenmektedir. Bununla birlikte, iki kadın kahramanın temsili, metinde radikal bir çok anlamlılık yaratarak egemen ideolojik görüşle doğrudan ve açık bir şekilde çelişir. Ertuğrul'un annesi Hayme Ana ve eşi Halime Sultan dramada “anne” stereotipinin özelliklerini taşır. Ancak, Hayme Ana ve Halime Sultan, anne rollerine rağmen güçlü, cesur ve savaşçıdırlar. Bunlar, Türk tarihi dramalarında genellikle erkek kahramanlara atfedilen özelliklerdir. Hem Hayme Ana hem de Halime Sultan kılıç taşır ve bir kadın olarak birkaç erkek savaşçıya karşı savaşarak kendilerini tehlikeye atmaktan çekinmezler. Her iki kadın da, Osmanlı İmparatorluğu'nun temellerini atacak olan Türk boyunun

kadın ve erkek üyelerine emirler vererek, kamusal alanda yönetici bir otoriteye sahip siyasi bir konum işgal etmektedir.

Toplumsal cinsiyet temsilleri akışkan ve değişkendir, yerleşik toplumsal pratiklere ve algılara itiraz eder, dolayısıyla farklı medya biçimlerinde veya farklı siyasi, ekonomik ve kültürel bağlamlarda farklı anlamlar kazanır (Lemish, 2012). Hiyerarşik kadınsı ve erkeksi stereotiplere meydan okuyan, giderek çeşitlenen kadınsı imge ve rol biçimleri artık birçok dizide mevcuttur. Fakat, günümüz televizyon filmlerinde yer alan fiziksel olarak güçlü ve hükmedici, şiddet unsuru araç ve gereçleri kullanabilen kadın imgeleri, güçlü ve seksi olmak gibi geleneksel kadınlık kavramlarına uydıkları için ataerkilliğe bir tehdit oluşturmamaktadır (Inness, 2004). Diriliş'te de, karakterlerin tercih edilen okuması, her iki kadını da bir dereceye kadar bağımsız, iddialı ve güçlü kadın kahramanlar olarak kodlar, ancak bu özelliklerini olumlu kadınlıklarının bir parçası olarak ataerkil kültüre uygun “tercih edilen” aşk ve evlilik tanımlarına dahil ederler. Bununla birlikte, yapımcıların çabalarına rağmen, bu izleyici araştırması Hayme ve Halime imgelerinin tercih edilen okumayı ikircikli ve çelişkili hale

getirdiğini, Türk televizyon dizilerindeki cinsiyetçi kalıpları yıktığını ve izleyicileri kadınların yalnızca geleneksel kadın rollerine uygun olmadığına inanmaya teşvik ettiğini ortaya koymaktadır.

Buraya kadar, Türk-İslam dramasının, Türk-İslam siyasi söylem ve pratiklerinin hakim olduğu siyasi ortam tarafından reddedilen alternatif toplumsal cinsiyet temsiline “ontolojik açıklığı” inceledik. Çalışmanın kalan kısmında, aşağıdaki soruyu ele alarak katılımcıların bu ontolojik açıklığı nasıl yorumladıklarına bakılacak: izleyiciler bu alternatif toplumsal cinsiyet temsili, dizinin siyasi iktidar tarafından onaylanan baskın Türk-İslam ideolojik çerçevesine nasıl uydurmaktadır?

İzleyici araştırmasının katılımcılarıyla yapılan derinlemesine görüşmelerde, toplumsal cinsiyet eşitliği konusundaki görüşlerin Türk-İslam kültürel bakış açısını onayladığını görülmüştür. 38 katılımcının 26’sı “kadın her alanda olmalı” demiştir, fakat bu katılımcıların büyük bir kısmı da kadının yerini bilerek ve ailedeki görevlerini aksatmayarak bunu yapması gerektiğini vurgulamıştır.

K1: Bence [kadınlar] her yerde yer almalıdır. Kadın eli her şeye değmelidir. Ama herkes yerini de bilmelidir. Çünkü kadınsın; yani derler ya hani burnunu sokma herşeye; siyasete gir, şunu da bunu da yap ama yerini bil (Erkek, 45 yaş, Memur).

K2: Şu anki döneme baktığımızda kadın artık bayağı ön plana çıkmaya başladı. Kendine özgüveni arttı. Bu kesinlikle iyi bir şey. Ama kadının rolü arttıkça aile yapıları bozulmaya başladı. Çünkü kadın sürekli dışarda, anne olma iç güdülerini çoğunda kaybolmaya başladı (Kadın, yaş 38, Ağız-Diş Sağlığı Teknikeri).

Her ne kadar kadının toplumdaki etkin konumundan veya milleti, ailesi için önemli oluşundan bahsedilse de mülakatlarda kadınla erkeğin görevlerinin ayrı olduğu fikri birçok katılımcıda görülmektedir.

K3: Kadınların yapacağı iş vardır, erkeklerin yapacağı iş vardır. Ben buraya kadar gidebilirim, ondan sonrasını sen yapabilirsin diyerek eşim söyler mesela... Herkesin bir çizgisi olması lazım yani aile hayatında. Bu çizgiyi aşınca sorunlar çıkıyor. Eskiden o çizgiyi aşmıyorlarmı (Erkek, yaş 47, İşletmeci).

K4: [Dizide] Herkes yerini biliyor orda. Hani olması gerektiği gibi. Bey olarak ona saygı duyup emirlerine uyuyor. Konmuş kurallar var (Kadın, yaş 57, Kuaför).

Ancak, katılımcılara, dizideki kadın karakterler hakkında görüşleri sorulduğunda “ev işi yapan, obanın işini yapan, aile düzenini sağlayan” olarak nitelendiren katılımcılar 19 kişi olup

sayıca en fazladır. “Savaşçı kadınlar” ifadesi 17, “yönetimde etkili, beylik yapan kadınlar” ifadesi ise 14 katılımcı tarafından dile getirilmiştir. Hayme Ana ve Halime Sultan’ın Türk kadınına yansıtma konusundaki görüşleri sorulduğunda bir yandan “güçlü kadın”, “savaşçı”, “yönetimde etkili olan kadın” gibi kodlar, öte yandan da “eşine saygılı, bağlı ve sadık”, “geleneklerine bağlı”, “hamarat”, “çok iyi anne”, “fedakâr”, “cefakâr” gibi ifadeler öne çıkmıştır. Katılımcıların tanımladığı Türk kadınına doğasına uygun olan “savaşçı kadınlar” ve “beylik yapan kadınlar” kodları toplumsal cinsiyet rolleri düşünüldüğünde aslında erkeğe atfedilen roller arasında yer almaktadır. Buradaki çelişkili çok anlamlılığın alımlanmasında özellikle erkek katılımcıların ifadelerinde bir muğlaklık yorumu göze çarpmaktadır.

K5: Kadının yeri obada yemek yapmak, çocuk bakmak. Ama kadınlar orda erkeklerle savaşıyor. Bakıyorsun bir iki kişiyi öldürüyor aynı anda. Düşünüyorsun, Allah Allah bu nasıl kadın mesela?... Hayme Ana vardı. Tam bir Osmanlı kadınıymış o zaman. Dört dörtlük kadınımış. Ertuğrul Gazi’nin onun sayesinde bir yerlere geldiği belli... (Erkek, yaş 52, Tekstilci).

K6: [Kadınların] Kadınlık rolünün dışında erkeklerin de rolünü üstlendiği, sadece dişi kuş değil savaşçı da olduğu bir dönem. Erkek de oluyorlar yani. Acizlik yok kadınlarda. Kadın olarak her şeyin üstesinden geliyorlar (Erkek, 25, Polis).

### 3. SONUÇ

Diriliş'teki güçlü ve sert kadınlar ataerkil hegemonyanın bir eleştirisini sunmazlar, ancak kadınlık ve erkeklik arasındaki hiyerarşik cinsiyet ayrımlarını daraltarak kadınlar için güçlendirilmiş bir cinsiyet kimliği sunarlar. Bu tür bir güçlendirme, Diriliş'in kapsayıcı ideolojik çerçevesini ve metinsel bağlamının dışındaki izleyici yansımaları şekillendiren siyasi ortamla da çatışır. Dizideki ideoloji ile toplumsal cinsiyet temsili arasındaki çelişki, bizi siyasi iktidar ile metin arasındaki karmaşık ilişkiye dair klasik tartışma üzerine düşünmeye sevk etmektedir. Diriliş'teki güçlü, kudretli, otoriter, savaşçı kadın temsili, muhalif ya da çelişkili olan; ideolojik egemen okuma yapıldıktan sonra iktidarın kontrolünden kaçan semiyotik bir anlam fazlasıdır. Diriliş'teki semiyotik anlam fazlalığı çatışmayı değil, dramının mümkün olduğunca çok sayıda izleyiciyi memnun edebilmesi ve sonuç olarak maksimum gelir elde edebilmesi için çoklu yorumlara izin veren bir tür çelişkili müphemliği ortaya çıkarmaktadır. Bu müphemlik, katılımcılar tarafından baskın ataerkil kültür içinde eritilmektedir, ancak katılımcılar bunu yaparken dizideki temsil edilen kadın imajını cinsiyetsizleştirmekte ve ne eril ne de dişil olan bir toplumsal cinsiyet yorumu ortaya koymaktadırlar.

**ÖZET**

Bu çalışmada Karaman ili büyükbaş hayvancılık işletmelerinin stratejik analizleri yapılarak literatüre katkı sağlamak amaçlanmıştır. Bu amaç doğrultusunda Karaman ilinde 25 büyükbaş hayvancılık işletmesi üzerinde yarı yapılandırılmış sözlü mülakat tekniği kullanılarak araştırma yapılmıştır. Yapılan araştırma ile hayvancılık işletmelerinin güçlü ve zayıf yönleri ile işletmelere yönelik fırsat ve tehditlerin belirlenmesi amaçlanmıştır. Bu doğrultuda SWOT analizi tekniği kullanılmıştır. Yapılan SWOT analizi bulgularına göre elde edilen veriler SWOT matrisi üzerinde tablo haline getirilmiştir. Karaman ilinin büyükbaş hayvancılık işletmelerinin güçlü ve zayıf yönleri ile fırsat ve tehditleri maddeler haline getirilerek yazılmıştır ve tekrarlanma sayıları tablo üzerinde derecelenmiştir. Sonuç kısmında SWOT matrisi üzerinde tekrarlanma sayılarına göre büyükbaş hayvan yetiştiriciliğinde güçlü yönler ağırlıklı olarak işletmelerin kendi kaba yemlerini kendisi üretmesi şeklindedir. En yaygın zayıf yönler ise yetersiz teknoloji oluşudur. Fırsatların çoğunu ise bakanlıkların sağladığı teşvik ve destekler olarak sıralanmıştır. En büyük tehdit yüksek girdi maliyetleri ve enflasyon-fiyat istikrarsızlığının olduğu görülmüştür. Sonuç olarak bu çalışma, bölgesel bir araştırma niteliği taşıyor olsa da ülke çapında ki büyükbaş hayvan yetiştiriciliği içinde önem taşımaktadır.

**Anahtar Kelimeler:** Stratejik analiz, SWOT analizi, Büyükbaş hayvancılık işletmeleri

**STRETEGIC ANALYSIS IN CATTLE FARMING BUSINESSES: EXAMPLE OF  
KARAMAN PROVINCE**

### **ABSTRACT**

In this research, it is aimed to contribute to the litterateur by making strategic analyzes of cattle farming business administration in Karaman province. For this purpose, this research is conducted on 25 cattle farmin business administration in Karaman by using semi-structured oral interview technique. The aim of the research is both to determine the strengths and weaknesses of the livestock sector, and the opportunities and threats to the enterprises. In this direction, the SWOT analysis technique was used. The data which was obtained according to the SWOT analysis ascertainments were tabulated on the SWOT matrix. The strengths, weaknesses, opportunities and threats of the cattle farming business administration in the Karaman province were specified on items and the number of their repetitions was graded on the table. In the conclusion part, according to the number of repetitions on the SWOT matrix, the strengths in cattle breeding are mainly that the enterprises produce their own roughage, and the most common weakness is poor technology. Most of the opportunities are listed as incentives and supports provided by the ministries. The biggest threat was found to be high input costs and inflation-price instability. As a result, although this study is a regional research, it is important in cattle breeding throughout the country.

**Keywords:** Strategic Analysis, SWOT analysis, Cattle breeding enterprises

## **GİRİŞ**

İnsanoğlunun en eski beşeri faaliyetlerinden biri olan hayvancılık; en genel anlamıyla evcil hayvan yetiştirmek ve bunlardan belli faydaları elde etme faaliyetidir (Doğanay, 2021). Türkiye'de hayvancılık genel ekonomi ve tarım sektörü içinde büyük ölçüde önem taşıyan bir yere ve potansiyele sahiptir. Hayvansal üretim faaliyetlerinin kimi bitkisel ve bitkisel yan ürünlerin değerlendirilmesi, işgücü başına düşen verimliliğin artırılması, işletme kar payının arttırılması, iklimsel ve ekonomik nedenlerden kaynaklanacak olan risk faktörünün azaltılması gibi bazı faktörler işletmelere olumlu şekilde etkiler sağlamaktadır. Ayrıca dengeli ve bilinçli beslenme açısından toplum sağlığı için büyük önem taşımaktadır.

Türkiye doğal kaynakları ve çevreyle ilgili koşulları bakımından hayvancılık için oldukça elverişli bir bölgede bulunmaktadır. Ancak, izlenen yanlış politikalar hayvancılığın gelişimini büyük ölçüde baskılamış, sektörde bazı gerilemeler meydana getirmiştir(Vural ve Fidan,2007;2). Bunun sonucu hayvan sayısı düşüş gösterirken, ürünlerin fiyatları giderek yükselmiş, insanlar daha az miktarda hayvansal ürün tüketmek zorunda kalmışlardır.

Geçmişten günümüze süregelen, sahip olduğu coğrafi ve doğal özelliklerinden dolayı Anadolu'daki en önemli tarım ve hayvancılık bölgelerinden biri olarak bilinen Karaman ilinde ekonomi adı geçen doğal kaynaklarından dolayı büyük ölçüde tarım ve hayvancılığa dayanmaktadır.

İç Anadolu bölgesinin tahıl ambarı olarak bilinen Konya ovasıyla olan coğrafi ilişkisinden dolayı Karaman ili hayvancılığı özellikle kaba yem üretiminde büyük ölçüde fırsat sağlamaktadır. Özellikle büyükbaş sığır yetiştiriciliği ve bu anlamda süt sığır yetiştiriciliğinde ilerleme kaydetmiş olan Karaman ilinde 64.419 adet sığır bulunmaktadır(www.tarimorman.gov.tr/2022). Bölgede geleneksel anlamda süt sığırcılığı ne kadar devam ettirilse de bölgesel, ulusal ve küresel rekabetin sürekli arttığı ve değiştiği 21.yüzyılda söz konusu işletmelerin varlığını sürdürebilmeleri stratejik yönetim ile mümkün olabilmektedir(Aktan, 2008).

İşletmelerin giderek değişen şartlar ve rekabet ortamında ayakta durabilmeleri için stratejiler geliştirmeleri gereklidir buda stratejik analizler yapabilmelerine bağlıdır. Stratejik analiz, işletmelerin hedef ve bu hedeflere bağlı amaçlarının belirlenerek bunlara en uygun stratejilerin geliştirilmesi, söz konusu işletmenin iç ve dış çerçevesinin birlikte incelenmesini kapsayan bir süreçtir(Bozkıran, 2018).

Hayvancılık işletmelerinin bulunduğu durumu ve dışarıdan bakınca görülecekleri konumu belirlemek için stratejik analizlere tabi tutulmaları gerekir. Bu analizler sürecinde birçok yöntem kullanılmaktadır, bu kullanılan yöntemlerin başında ise SWOT analizi yöntemi gelmektedir. SWOT analizi, bir proje veya iş faaliyetlerinde yer alan güçlü ve zayıf yönler ile fırsat ve tehditleri anlamaya yardımcı olabilecek kolay fakat çok sıklıkla kullanılan bir araçtır(Downey,2007). Hayvancılık sektöründe farklı alanlar için yapılan stratejik alanlarda SWOT analizinin kullanıldığı birçok farklı çalışmanın olduğu görülmektedir.

Hayvancılık işletmelerinin bulunduğu durumu ve dışarıdan bakınca görülecekleri konumu belirlemek için stratejik analizlere tabi tutulmaları gerekir. Bu analizler sürecinde birçok yöntem kullanılmaktadır, bu yöntemlerin başında ise SWOT analizi gelmektedir. SWOT analizi, bir proje veya iş faaliyetlerinde yer alan güçlü ve zayıf yanlar ile fırsat ve tehditleri anlamaya yardımcı olan basit fakat çok yaygın kullanılan bir araçtır(Downey,2007).

Hayvancılık sektöründe farklı alanlar için yapılan stratejik alanlarda SWOT analizinin kullanıldığı birçok farklı çalışmanın olduğu görülmektedir.

Bu çalışmada Karaman ili hayvancılık işletmelerinin stratejik analizleri yapılarak literatüre katkı sağlamak amaçlanmıştır. Bu doğrultuda Karaman ilinde bulunan 25 hayvancılık işletmesi üzerinde gerekli araştırmalar yapılmıştır. Hayvancılık işletmelerinin güçlü ve zayıf yönleri ile fırsat ve tehditleri belirlemek için SWOT analizi tekniği kullanılmıştır.

## 1.LİTERATÜR

Stratejik analiz; işletmenin amaçlarının yeniden tanımlanması, bu amaçlara yönelik stratejilerin belirlenmesi ve hem işletmenin hem de işletme dış çevresinin araştırılmasına yönelik çabaları; yani örgüt-çevre ilişkisinin değerlendirilmesini kapsamaktadır(Dinçer, 2004).

### 1.1.Strateji

Strateji genele tabirle plandır, çünkü stratejide esas olarak alınan istediğimiz ve arzuladığımız sonuçlara ulaşabilmektir. Strateji aynı planda olduğu gibi belirli bir bilgi birikimine sahip olarak veya yetersiz denecek kadar az bilgilerin olduğu ileri derecede belirsizlik altında yapılır.

Stratejide; işletme ve işletmenin içinde mevcut olarak bulunduğu çevre dikkate alınarak yapılır. Strateji dinamiktir, işletmenin erişmek istediği sonuçları etkileyecek rakiplerin olası faaliyetlerinin de önceden hesaplamak gerekir. Aslında stratejiyi kısaca; rakiplerin

faaliyetlerini analiz ederek amaçlara ulaşmak için belirlenen, sonuç odaklı, uzun dönemler içeren, dinamik kararlar topluluğu olarak açıklanabilir.

Strateji kelimesi işletme alanına ve diğer mevcut bilim dallarının literatürlerine askeri literatürden dâhil olmuştur. Askeri strateji kavramı bir savaşta ordunun girişeceği hareketlerin ve faaliyetlerin tasarlanıp yönetilmesi sanatı şeklinde açıklanabilir. Kelime anlamı olarak da bir amaca ulaşabilmek için izlenen yollar ve uygulanan yöntemlerin tamamı şeklinde de tanımlanabilir. Stratejiyi satranç oyununa da benzetebiliriz. Tek bir hamle ile yetinilmez, birkaç adım sonrasını da hesaplamamız gerekmektedir.

Strateji kavramı bir işletmenin hedeflerine ulaşmasında yardımcı olan, mevcut kaynak kullanımını gibi faaliyetlerin uygulanmasında kullanılan aksiyon planıdır.

Değişik aktiviteler uygulanması ya da mevcut aktivitelerin rakiplerden farklı bir biçimde uygulamaktan ibarettir. Mevcut her işletme strateji terimiyle yakından ilgili olmak durumundadır. Rakiplerine zamanında karşılık verebilmek, ortam değişiklikleriyle zamanında mücadele edebilmek, değişken müşteri beklentilerini karşılayabilmek ve hazırda bulunan mevcut kaynaklarını verimli bir şekilde kullanabilmek için işletmeler sürekli yeni yöntemler geliştirmelidir.

Stratejiler belirlenirken bireysel değil, işletmenin geneliyle toplu bir şekilde gerçekleştirilmelidir. Geniş araştırmalar ve bilgilerin ışığı altında oluşturulmalıdır. Strateji uzun süreli rekabeti temin etmenin yanında işletmenin yeterince esnek kalmasını sağlamalıdır. Stratejik planlama ise bir işletmenin mevcut içinde bulunduğu durumunu tespit etme, gelecekteki olması beklenen hedeflerini belirleme ve bu belirlenen hedeflere ulaşmak amacıyla strateji geliştirme ile ölçümlene sürecini ihtiva eden iş disiplini. Geniş alanlarda yapılan araştırmalar ve bilgilerle geliştirilmelidir. Günümüzde çok yoğun olan rekabet ortamları rekabet etmek için işletmeler sürekli olarak pazar, rekabet ve diğer faktörler ile ilgili çok fazla bilgi toplama ve bilgileri topladıktan sonra analiz etmeleri gerekir.

### 1.1.1.Stratejinin Özellikleri

- Analiz etme aracıdır.
- Amaçlarla ilgilidir.
- Kurum ve çevresiyle karşılıklı ilişkileri düzenler.
- Gelecek için yol haritası sunar.
- Karmaşık ve dinamik çevrede faaliyet alanını belirler.
- Monoton kararların dışına çıkar.

- Örgütlerin var oluş amaçlarının belirlenmesine olanak sağlar.
- Analiz sürecini kapsar.
- Amaçlara bağlı bir unsurdur.

### 1.1.2. Stratejik Analiz

İşletmenin amaçlarının yeniden tanımlanması, bu amaçlara uygun stratejilerin belirlenmesi yani örgüt ve çevre ilişkisinin değerlendirilmesini kapsar. Örgütler ya da işletmeler, stratejik analizlerle elde ettikleri bilgilerden harekete geçerek, rekabet edebilecek güçte bir avantaja sahip olmak ya da mevcut olan avantajlarını korumak için uzun vadede ki planlarını, stratejilerini geliştirebilecek, geliştirdikleri bu stratejileri program, bütçe ve prosedürler sayesinde faaliyete geçirerek değerlendirip kontrol edebilecekleri sonuçlara dönüşüreceklerdir( Efil, 2004).

Diğer bir deyişle stratejik sürecinde, var olma sebeplerini ortaya koyan görevlerini ve ilerledikleri noktayı netleştirebilen vizyonları ile beraber esas değerlerini birleştiren işletmeler, uygulayıp izleyecekleri stratejiler doğrultusunda harekete geçecektir( Kaplan ve Norton, 2006). Bu nedenlerden dolayı işletmelerdeki stratejik analiz sürecinin oldukça önemli bir yeri vardır.

Stratejik analiz sürecinde ilk önce işletmeye ait dış çevre daha sonra işletmenin kendisi incelebilmektedir. Dış çevrenin analizi örgütün eylemleri çevresindeki tehdit ve fırsatları, iç çevre analiziyse örgüt içindeki zayıf ve güçlü yönleri açıklamayı amaçlar(Bernroider, 2002).

Stratejik analiz yöntemi olarak farklı yöntemler bulunmaktadır. İç çevre analizleri için; temel yetkinlikler analizi, değer zinciri analizi için ise, PEST-PESTE-PESTLE( Political, Economic, Social, Teknological, Legal, Environmental) ve senaryo planlamaları gibi analiz yöntemleri kullanılabilir( Prahalad ve Hamel, 1990).

### 1.2. SWOT ANALİZİ

Swot, güçlü (strenghts), zayıf (weaknesses), fırsat (opportinuties) ve tehdit (threats) kelimelerinin İngilizce kelime olan karşılıklarının ilk harflerinden oluşmaktadır. SWOT dış çevre analizi sayesinde meydana gelen, tespit edilen fırsatlar ve tehditlerin içinde buldukları çevre analizinde örgütün güçlü ve iyileştirilmeye açık yönleri ile karşılaştırmasının yapılmasıdır(Yıldırım,2008; Küçüksüleymanoğlu:2008).

SWOT analizi stratejinin ve örgütün yol haritasının oluşturulmasında yardımcı olmak amacıyla meydana getirilen bir yöntem şekli olarak da değerlendirilebilir. Bu yöntem örgütlerin güçlü ve zayıf yönleriyle örgütün mevcut dış çevresinde oluşan fırsat ve tehditleri

belirlemek doğrultusunda uygulanır. Bu temel unsurların tanımlanmasıyla örgütlerin güçlü taraflarını temele alan, zayıf yönlerini minimal düzeye indirerek örgütün çevresindeki fırsatlardan faydalanırken ya da tehditlere karşı da önlem olarak stratejiler geliştirilmeye olanak sağlar. (Arıöz ve Yıldırım,2012)

Lumpkin ve Dess'in deyişlerine göre örgütler devamlılığını sağlayabilmek ve geliştirebilmek için içinde buldukları çevrelerin beklentilerini ve emellerini karşılamak durumundadırlar. Örgütlerin iç ve dış çevrelerinde ortaya çıkan değişimler kimi zaman örgütleri bir fırsatla, kimi zamanda ise bir tehdit unsuruyla karşılaştırabilmektedirler. SWOT analizi ise tam da bu durumda örgüte ait iç ve dış çevre analizlerini yaparak mevcut durumun saptanması, güçlü-zayıf yönleri, fırsat ve tehditleri ortaya çıkararak örgütü içinde bulunduğu çevre koşullarına daha yatkın hale getirir (Ağaoğlu, Şimşek ve Altınkurt,2006).

Eğitim yöneticileri bu analiz yöntemi ile kendi toplumlarının ihtiyaçlarına odaklanarak daha iyi bir hizmet için sınırlarını oluştururlar( Balamuralikrishna Dugger,1995). Yani güç çözümlenmesiyle strateji geliştirenler için iç; yani güçlü-zayıf ve dış; fırsat ve tehdit faktörlerini sınıflandırarak daha da derin ve detaylı olarak stratejiler belirlenmesine olanak sağlar( Peng Wang ve Gao,2014).

SWOT analizi sayesinde örgütlerin güçlü yanlarının etkinliği artırılarak, zayıf yönleri azaltılabilirken; oluşturulan bu fırsatlardan yararlanılarak ve ortaya çıkan tehdit unsurlarını en az seviyeye indirerek başarılı ve etkin bir strateji yöntemi oluşturulmasına sağlam bir zemin hazırlayabilir(Çelik ve Murat,2010).

SWOT analizi yardımıyla örgütün içinde bulunduğu durum, güçlü-zayıf yönler, fırsat ve tehditler belirlenip örgütün ihtiyaçları ortaya konur(Şahin ve Arslan,2000).

Bunların yanı sıra güç çözümlenmesi zayıf yönleri güçlüye dönüştürmek ve tehditleri fırsata çevirebilmek için de yararlı olan bir analiz tekniğidir ( Birel,2008).

### **1.2.1 SWOT Analizinin Amacı**

SWOT analizi; Örgütlerin güçlü ve zayıf yanlarını belirlemek, fırsat ve tehditlerin ne olduğunu algılamak amacıyla kullanılan temel unsurlardan biridir. Aynı zamanda örgütün mevcut durumunu görmeye olanak sağlar. Mevcut örgütler SWOT analizi yöntemiyle buldukları konumu görüp gelecekteki hedeflerini belirleyebilir. Bu analiz örgütün güçlü yönlerine odaklanarak, tehditleri en aza indirmek ve uygun fırsatları değerlendirebilmek açısından fayda sağlar.

SWOT analizi, stratejik planlama sürecinde hem yaklaşım tarzı, hem de bir analiz tekniği olarak, örgüt yöneticilerine düşünme modeli oluşturur. Oluşturulan bu model hem bilgi toplama, hem bu bilgileri yorumlama, gündemi sınırlandırma ve kararların dayanacağı temelleri oluşturur. SWOT analizi metodu alınacak stratejik kararlar için, oldukça önemli bir temel özelliği taşımaktadır( Dinçer,2002).

Değişen çevre koşulları sebebiyle örgütleri tehdit veya fırsatlarla karşı karşıya getirebilmektedir. Oluşan bu sorunların yanı sıra örgütlerin mevcutta buldukları kaynak ve becerilere bağlı olarak ortaya çıkan güçlü ve zayıf yönleri mevcuttur.

Stratejik analizlerin temel odak noktası ögeler arasındaki ilişkileri inceleyerek bu ilişkilerden örgüt için maksimum seviyede fayda sağlamaktır. Stratejik kararların verilmesinde, bilgi toplama ve tasnif etmede aracı olan SWOT analizi ile toparlanılan bilgilerin doğruluğu, ileriye yönelik bilgilerin netliği, bu bilgilerin doğru bir şekilde kullanımı, karar veren kişilerin zihin modelleri ve niyetleri çıkan sonuçlar üzerinde etkili olur( Dinçer,2002).

### **1.3. HAYVANCILIK**

İnsanoğlunun en eski beşeri faaliyetlerinden biri olarak bilinen hayvancılık; genel bir tabirle evcil hayvan yetiştirmek ve bunlardan fayda elde etmektir. Toplumların refah düzeylerini artırma yolunda ki ekonomik olarak büyüme ve kalkınmasının sağlanması, toplumlar tarafından hedeflenen temel olgulardan biridir. Bu ekonomi olgusu da hayvancılık sektöründe stratejik olarak önemli bir yere sahiptir. Küresel ısınma, iklim değişiklikleri, talep ve arz durumlarındaki değişimler bu sektöre olan ilgi ve alakayı arttırmaktadır. Yaşanan ve hala yaşanmakta olan arz talep dengesizlikleri, hızla değişen fiyatlar, gıda tedariki ve üretimin sürdürülebilirliği noktasındaki yaşanan

aksaklıklar hayvancılığın ekonomi açısından kritik önemini ortaya çıkarmıştır( Türkiye Ziraat Odaları Birliği, 2019).

Hayvancılık sektörü et, süt ve ürünleri sanayi, dericilik, tekstil, veteriner ilaçları ve ekipman sanayi ve yem sanayi vb. bileşenleri ile yeni iş ve geçim alanları ortaya çıkarmaktadır. Bunun yanı sıra hayvansal ürünlerin işlenmesi ile birlikte katma değer de oluşmaktadır( TİGEM, 2017).

#### **1.3.1. Türkiye’de Hayvancılık**

Türkiye’de hayvancılık mevcut bulunduğu iklim yapısı ve çevreyle ilgili durumu sebebi ile tarımsal ürün üretiminde miktar ve ürün çeşitliliği yönünden çok büyük miktarda potansiyele sahip olan ülkemizde tarım sektörü ekonomik ve sosyal alanda önemli yer tutmaktadır. Tarım

sektörüne ait bir dal olan hayvancılıkta ülke ekonomisi açısından önemli bir yere sahiptir. Hayvancılık sektörü, sanayi hammaddesi, beslenme, işsizliği ve köyden kente göçü önlemede ve istihdam yaratmada önemli yer tutar. Aynı zamanda bu sektör ülke ekonomisine önemli ölçüde destek sağlayan, birim miktar yatırıma en yüksek katma değeri sağlayan ve en düşük seviyede maliyetle istihdam oluşturan bir sektördür( Şahin ve Ulutaş, 2010).

Ülkede hayvansal ürünler ilk önce çocuklar olmak üzere, genellikle her yaşta ki nüfusun beslenmesinde önemli yer tutmaktadır. Ülke halkının sağlıklı ve dengeli beslenmesinin sağlanması için gerekli önlemlerin alınması, refah düzeyinin artırılmasıyla birlikte hayvansal ürün miktarı ve kalitesinin artırılması gerekir.

Süt hayvancılığı üretim hareketleri bazı bitkisel ve bitkisel yan ürünlerin değerlendirilip işlenmesi, iş gücü verimliliğinin artması, işletme kar oranının artması vb. faktörler işletmeler için olumlu katkılar sağlamakta, dengeli ve düzenli beslenme açısından toplum sağlığı için büyük önem taşımaktadır( Vural ve Fidan, 2007).

Türkiye nüfusu her geçen yıl artmaktadır. Fakat hayvan sayıları bu oranda artış göstermemektedir. TÜİK'ten edinilen bilgilere göre 1981 yılında 15.981.000' de en yüksek sayıya erişen hayvan sayısı ilerleyen yıllarda ise düşüşe geçmiş ve 2003 yılında 9.788.102' ye kadar gerilemiştir. 2014 yılına kadar tekrar artma eğiliminde olan sığır sayısı 2014 yılında 14.122.847' ye kadar çıkmıştır. 2021 yılı verilerine göre ülkemizde bulunan mevcut hayvan sayısı 17.850.543 baş sığır, 185.574 baş manda olmak üzere toplamda 18.036.117 baş büyükbaş hayvan bulunmaktadır (TÜİK, 2021). Bu bağlamda halen daha dünyanın gelişmekte olan ülkeleri arasında olan ve gelişmişlik sıralamasında ilk 20 ülke arasında olan ülkemizde, dünyanın önemli hayvancılık

ülkeleri arasında olup, bu alanda yapılan yenilikler ile son yıllarda hayvancılık üretimini arttırmaktadır(Doğanay, 2011). Ülkemiz dünya ülkeleri arasında süt üretiminde 7. , sığır eti üretiminde ise 16. sırada yer almaktadır.

Ülkemizde bulunan büyükbaş ve küçükbaş hayvanlardan toplamda 23.200.306 ton süt elde edilmektedir. 2021 yılında yapılan bu ölçümlerden elde edilen sonucun 21.307.116 tonluk kısmını sığır sütleri oluşturmaktadır, ülkemizde süt ihtiyacının büyük bir kısmını sığır sütleri karşılamaktadır(TÜİK, 2021).

Türkiye hayvancılığında 2021 yılında toplam büyükbaş ve küçükbaş hayvanlardan 1.952.098 ton kırmızı et üretilmektedir. Üretilen toplam et miktarının 1.460.719 tonluk kısmını sığır eti oluştururken bunu; 385.993 tonla koyun, 94.555 tonla keçi, 10.831 tonla ise manda eti takip etmektedir. Üretilen sığır eti miktarı yıllar içerisinde değişiklik gösterse de en yüksek üretim

2021 yılında (1.460.719 ton), en düşük değerini ise 2003 yılında (290.454 ton) almıştır(TUİK, 2021).

Hayvancılık işletmelerinin yapısı; ülkemizde hayvancılık birbirinden farklı olan birçok biçimde yapılmaktadır. Bunlardan ilki köy yani aile tipi hayvancılık olup, her bir işletmede ortalama 1 ya da 2 adet hayvan bulunmaktadır. 2. tip ise arazisi olmayıp dışarda günlük hesabı çalışan ve ailenin tüketimini karşılayacak 1-2 adet hayvanı bulunan tarım işçilerine ait faaliyetlerdir. Yaygın olarak bulunan bir diğer işletme tipi ise bitkisel üretimin yan ürünleri ile yapılan hayvancılık faaliyetidir. Bunları pazar için üretimde bulunan işletmeler ile modern olarak hayvancılık yapan işletmeler takip eder( Talim ve Saner,1995).

Modern işletmelerde kaba yem üretiminin büyük bir kısmı işletmenin kendisi tarafından karşılanmakta, kesif yeminse tamamına yakın kısmı dışarıdan tedarik edilmektedir. Ülkemizde bulunan tarım işletmelerinin sadece %3' lük dilimi hayvancılık, kalan yüzdelik kısmı ise tarım ve hayvancılık üzerine kurulmuştur. Büyük ve modern işletmelerin teknik ve ekonomik etkinliği, küçük aile işletmelerine oranla daha da fazladır.

Türkiye doğal kaynakları ve iklim koşulları yönüyle hayvancılık için oldukça elverişlidir. Fakat izlenen hatalı ve yanlış politikalar hayvancılığın gelişiminin önüne geçmiş, sektörde gerilemelere neden olmuştur. Bu durumların neticesinde hayvan sayıları giderek azalmış olup, hayvansal ürünlerin fiyatları giderek artış göstermiş, insanlarımız daha az miktarda hayvansal ürün tüketir hale gelmiştir.

Türkiye' de 2000 Genel Tarım Sayımına göre 3.967.000 tarım işletmesi bulunmaktadır. Bu sayının ise yalnızca %3,6'sını hayvancılık işletmeleri oluşturmaktadır( TUİK, 2007).

### **1.3.2. Karaman İli Hayvancılığı**

Karaman ili hayvancılığı, geçmişten günümüze dek süre gelmiş, sahip olduğu konum ve doğal kaynaklarından dolayı Anadolu'da ki en önemli tarım ve hayvancılık bölgelerinden biri olarak bilinen Karaman ilinde ekonomi bahsi geçen doğal kaynak ve coğrafi bakımından dolayı önemli ölçüde tarım ve hayvancılığa dayanmaktadır. İç Anadolu bölgesinin tahıl ambarı olarak bilinen Konya ovasıyla olan coğrafi yakınlığından dolayı Karaman ili hayvancılığı özellikle kaba yem üretiminde büyük ölçüde fırsat sağlamaktadır. Özellikle büyükbaş sığır yetiştiriciliği ve bu anlamda süt sığır yetiştiriciliğinde önemli derecede ilerleme kaydetmiş olan Karaman ilinde 67.174 baş sığır bulunmaktadır. Karaman ilinin merkezi de dâhil olmak üzere toplam işletme sayısının %38,02'sini büyükbaş hayvan işletmesi oluşturmaktadır (TUİK, 2021).

Karaman ilinde bulunan toplam sığır sayısının 49.084'ünü kültür ırkları, 17.588'ini kültür melezleri, kalan 502 tanesi ise yerli ırklar oluşturmaktadır(TUİK, 2021).

Karasal iklimin hâkim olduğu Karaman ilinde hayvancılık işletmeleri incelendiğinde genellikle küçük ve orta ölçekli işletmelerin olduğu; verimliliğin, kaba yem ulaşımının yüksek fakat kişi başına düşen gelirin tatmin edici olmadığı, ancak hayvancılık işletmelerinin il ekonomisine büyük ölçüde katkı sağladığı görülmektedir.

## 5.YÖNTEM

Bu çalışmanın amacı Karaman ili büyükbaş hayvancılık işletmelerinin güçlü ve zayıf yanlarıyla fırsat ve tehditlerinin belirlenmesidir. Bu amaç doğrultusunda Karaman ilinde 25 büyükbaş hayvancılık işletmeleri üzerinde araştırma yapılmıştır. Karaman İl Gıda Tarım Hayvancılık Müdürlüğü'nün en son verilerine göre 9.493 hayvancılık işletmesi bulunmaktadır. Zaman ve maliyet kısıtları nedeniyle bütün işletmelere ulaşamadığımdan dolayı kolayda örnekleme yöntemiyle seçilen 25 büyükbaş hayvancılık işletmesi üzerinde görüşme-sözlü mülakat şeklinde veri toplanmıştır.

Veri toplama kısmında ise işletmelerin türü, gösterdikleri çalışma alanları, hayvan sayıları, güçlü ve zayıf yönler ile fırsat ve tehditlerin sorulduğu açık uçlu bir soru

formu kullanılmıştır. Bu soru formları işletmelerin sahipleri veya yöneticileri tarafından doldurulup cevaplanmıştır.

Araştırma yarı yapılandırılmış mülakatlar içeren nitel bir çalışmadır. İhtisas araştırma alan yazın taraması içeren bir çalışmadır.

<b>TOPLAM</b>	<b>3862</b>	<b>5001</b>	<b>36</b>	<b>1260</b>	<b>9493</b>
<b>YÜZDE</b>	<b>%38.02</b>	<b>%49.23</b>	<b>%0.35</b>	<b>%12.4</b>	<b>%100</b>

Bu çalışmanın amacı Karaman ili büyükbaş hayvancılık işletmelerinin güçlü ve zayıf yönleri ile fırsat ve tehditleri belirlemektir. Bu çalışmada nitel araştırma metodu kullanılmıştır. Büyükbaş hayvancılık işletmeleri sahipleri ya da yöneticileri veya uzmanlar ile yapılan yarı yapılandırılmış mülakatlar içeren nitel bir araştırmadır.

Hayvancılık işletmelerinin güçlü ve zayıf yönleri ile fırsat ve tehditlerin belirlenmesinde SWOT analizi tekniği kullanılmıştır, kullanılan sorular şu şekilde sıralanmıştır;

➤ **Fırsatlar:** Günümüz koşullarında hayvancılık sektöründe hangi fırsatlar değerlendirilmeye müsaittir?

- Karaman açısından
- Türkiye açısından
- Dünya açısından

➤ **Tehditler:** Günümüz koşullarında hayvancılık sektöründe hangi fırsatlar değerlendirilmeye müsaittir?

-Karaman açısından

- Türkiye açısından
- Dünya açısından

➤ **Güçlü Yönler:**

-Karamandaki işletmelerin güçlü yönleri nelerdir?

-İşletme olarak sizi rakiplerden ve diğer işletmelerden üstün kılan yönler nelerdir?

-Rakiplerin ve diğer işletmelerin sizde yakalayamadığı yönler nelerdir?

➤ **Zayıf Yönler:**

- İşletme olarak sizi rakiplerden ve diğer işletmelerden ayıran zayıf yönler nelerdir?
- Güçlendirmeyi düşündüğünüz zayıf yönleriniz nelerdir?
- Keşke işletmemiz sahip olsaydı dediğiniz hususlar var mı?

Toplamda 12 soru kullanılarak yarı yapılandırılmış sözlü görüşme - mülakat şeklinde sorular sorulmuştur.

## 6.BULGULAR

Bu bölümde büyükbaş hayvancılık işletmeleriyle alakalı sayısal bulgular, görüşlerine ulaştığımız işletme sahipleri veya yöneticilerinin demografik bilgileri, SWOT analizi bulgularına açıklanmıştır.

**Tablo 2.** Tarımsal işletmelerle ilgili sayısal bulgular  
**Table 2.** Numerical findings on agricultural holdings

İşletmenin türü	Süt İşletmesi	Besi İşletmesi	Süt-Besi İşletmesi
Sayı	17	1	7
Faaliyet Alanı	Yiyecek ve İçecek	Yiyecek	Yiyecek ve İçecek

Tablo 2’de araştırma yapılan 25 büyükbaş hayvancılık işletmesinin 17 tanesi sadece süt üretiminde, yiyecek ve içecek alanında faaliyet göstermektedir. Kalan işletmelerden sadece 1 tanesi besi işletmesi olup sadece yiyecek alanında faaliyet göstermektedir. Diğer 7 işletme ise hem süt hem de besi işletmesi olarak, yiyecek ve içecek alanında hizmet vermektedir.

**Tablo 3. Uzmanların Demografik Bilgileri**  
**Table 3. Demographic Information of Experts**

MESLEK	SAYI
Esnaf	2
Yönetici	2
Çiftçi	10
Veteriner Hekim	4
Ziraat Mühendisi	3
Birlik Başkanı	4

Tablo 3 incelendiğinde görüşüne başvurulmuş kişilerin meslekleri bu şekildedir, görüşüne başvurulmuş kişilerden 2 esnaf, 2 kişi yönetici, 4 kişi veteriner hekim, 3 kişi ziraat mühendisi, 4 kişi birlik başkanı ve çoğunluk olarak ise 10 kişinin çiftçi olduğu görülmektedir. Toplamda 25 kişinin verileri ele alınarak SWOT matrisi oluşturulmuştur.

## SWOT ANALİZİ BULGULARI

**Tablo 4. SWOT Matrisi**  
**Table 4. SWOT Matrix**

İÇ ÇEVRE FAKTÖRLERİ (İÇ DURUM ANALİZİ)	
GÜÇLÜ YÖNLER	ZAYIF YÖNLER
G1.Çoğu işletme kendi yemini kendisi üretiyor.(13)	Z1. Hayvan refahı yetersizdir.(3)
G2.Doğru besleme yapmayı biliyoruz.(1)	Z2. Robotik sağım sistemine ihtiyaç vardır.(3)
G3.Karamanlı ili hammaddeye yakınlık açısından elverişlidir.(4)	Z3. Teknoloji yetersizdir.(10)
G4.Likidide sorunun olmaması.(3)	Z4. İşçi yönetiminin eksik yapılması.(3)
G5.Sürekli yenilenebilir olması.(2)	Z5. İnsanlarla etik bağlantı kuramamak.(1)
G6.Bölge halkının bilinçli olması,tecrübeli olması.(1)	Z6. Bakım maliyetlerin yüksek olması.(1)
G7.Aile işletmesi olması,hayvan takibinin düzgün yapılması.(5)	Z7. Finansman-sermaye yetersizliği.(5)
G8.Yemin lojistik kısmı az maliyetlidir.(2)	Z8. Daha ucuz enerjiye ihtiyacımız var.(2)
G9.Cıvardaki bütün illere et-süt sevkiyatının kolay yapılması.(3)	Z9. Sürü takip sisteminin olmaması.(1)
G10.Aynı tarım arazisinde 1 yıl içinde 2 kez ürün elde etmek.(3)	Z10. Teknik eleman yetersizliği.(4)
G11.Et işleme tesislerinin fazla olması.(2)	Z11. Aile işletmelerinin fazla olması.(3)
G12.İş seveerek yapmak.(3)	Z12. Kesif yem maliyetlerinin fazla olması.(2)
G13.Karaman ili Kaba yem üretim merkezidir.(4)	Z13. Hayvancılığın ek iş olarak yapılması.(1)
G14.Pazara ve fabrikalara yakın olması.(4)	Z14. Hayvanlar için yetersiz barınma alanı.(2)
G15.Teknolojiyi verimli kullanmak.(3)	Z15. Makine-ekipman yetersizliği.(4)
G16.Mesleki tecrübemin olması.(4)	Z16. Eğitim seviyesinin düşük olması.(2)
G17.Ekilebilir arazinin geniş olması.(1)	Z17. Ekim için kullanılan arazilerin kiralık olması.(2)
G18.Pazarın geniş olması.(4)	Z18. Damızlık niteliğindeki hayvanların kesime yönlendirilmesi.(2)
G19.Bilgili tecrübeli ve eğitilmiş yetiştiriciler olması.(4)	Z19. Dış pzara ulaşımın istenilen şekilde olmaması.(2)
G20.İklim koşulları hayvancılık için uygundur.(2)	Z20. Toprak yapısından dolayı mera bitkilerinin verimsiz olması.(4)
G21.Doğru besleme çok önemlidir.(4)	Z21. Girdi maliyetlerinin çıktı maliyetlerinden fazla olması.(2)
G22.Bilgiye ve öğrenmeye her zaman açık haldeyiz.(2)	Z22. Sulama maliyetlerinin fazla olması.(3)
G23.Hayvan kayıt sistemi ile otokontrol sistemin olması.(1)	Z23. Kışın çok soğuk iklim şartlarına hayvanların dayanamaması.(1)
G24.İşgücü maliyetinin düşük olması.(2)	Z24. Bilgisiz hayvan yetiştiriciliği ve yerel yönetim ilgisizliği.(1)
DIŞ ÇEVRE FAKTÖRLERİ(DIŞ DURUM ANALİZİ)	
FIRSATLAR	TEHDİTLER
F1.Likidite sorunun olmaması.(2)	T1.Yanlış uygulanan tarım politikaları.(1)
F2.Bölgesel birliklerin hayvan alımında önder olması.(3)	T2.Verimli arazilerin imara açılması.(1)
F3.Geniş ve bereketli mera alanlarının olması.(3)	T3.Azalan arz talep oranı.(10)
F4.Hayvancılığa dayalı işgücünün yaratılması.(2)	T4.İşgücünün yetersiz olması.(3)
F5.Küçük aile işletmelerinin fazla olması.(2)	T5.Bölgeye uygun hayvan ırkının tercih edilmemesi.(2)
F6.Bakanlıkların sağladığı uzun vadeli kredi destekleri.(8)	T6.Yüksek girdi maliyetleri.(13)
F7.Kurban bayramı için hayvan üretiminin yapılması.(1)	T7.Siyasi belirsizlikler.(2)
F8.Et fiyatlarının artması hayvan sahiplerine katkı sağlar.(3)	T8.Giderek azalan yer altı su kaynakları.(3)
F9.Hayvansal atıkların verimli değerlendirilmesi.(2)	T9.Bilinçsiz kullanılına teşvik ve krediler.(1)
F10.Birim alandan elde edilen yem miktarının fazla olması.(2)	T10.Eflasyon-Fiyat istikrarsızlığı.(14)
F11.Ucuz yeme kolay ulaşabilmek.(3)	T11.Önüne geçilemeyen hayvan hastalıkları.
F12.Sürdürülebilir bir sektör olması.(6)	T12.Suni et üretiminin giderek yaygınlaşması(hayvansal gıdaların yapılaşması).(5)
F13.4 mevsim yaşanan bir ülke olduğundan hayvan ırklarının refahı.	T13.Yüksek sera gazının hayvancılık sektörünü olumsuz etkilemesi.(2)
F14.Ortadoğu pazarına yakınlık.(3)	T14.İthalat kısıtlamaları.(1)
F15.Temel tüketim maddesi üretimi.(11)	T15.Aşı-ilaç maliyetinin yüksek olması.(4)
F16.3.Dünya ülkelerine hayvan ihracatı yapmak.(1)	T16.Damızlık hayvan temininde yaşanan zorluklar.(1)
F17.Süt ve et pazarının geniş olması.(1)	T17.Hayvancılığa gereken önemin verilmemesi.(1)
F18.Süt ve et işleme tesislerine yakınlık.(1)	T18.İşletme çalışanlarının yeterli teknik bilgiye sahip olmamaları.(2)
F19.Protein ihtiyacının çoğunu etten karşılamak.(3)	T19.Denetimlerin yetersiz olması.(1)
F20.Devletin ekipman desteği.(1)	T20.Hayvancılıkla ilgili bilimsel çalışmaların yetersiz olması.
F21.Sektörde bilinçli üreticilerin çalışması.(1)	T21.Bilinçsizce yapılan hayvancılık uygulamaları.
F22.İklim koşullarının yem bitkisi üretiminde verimli olması.(1)	T22.Tüketiminin alım gücünün düşmesi.(3)
F23.Bölgede üretilen ürünlerin fiyatının uygun olması.(2)	T23.Büyük işletmelerin küçük aile işletmelerine tehdit içermesi.(2)
F24.İşletmelerin kaba yemini kendisi üretmesi.(8)	T24.Karbon salınımının giderek artması.(3)

Karaman ili büyükbaş hayvancılık işletmelerinde yapılan SWOT analizi bulguları tablo 4'de verilmiştir.

## 7.SONUÇ VE ÖNERİLER

Özellikle son yıllarda meydana gelen ekonomide ki küresel anlamdaki değişimler aynı oranda ülke ve bölgesel hayvancılığı da etkilemektedir. Bu etki olumlu ya da olumsuz yönlerde değişiklik göstermektedir. Oluşan bu ekonomik dalgalanmalardan minimal düzeyde etkilenmek için işletmelerin belirli stratejiler geliştirmeleri ya da mevcut bulunan stratejilerini güncellemeleri ve değişikliklerden en az düzeyde etkilenmeleri gerekmektedir. Geliştirilecek

bu stratejiler işletmelerin yararına olacağından dolayı en az maliyetle en çok kar edilmesi amaçlanmalıdır. Bu nedenle geliştirilecek stratejiler hayali ya da kurgusal değil tamamıyla işletme için en fazla avantajı sağlayacak şekilde olmalıdır.

Yapılan bu çalışmada Karaman ili büyükbaş hayvancılığı işletmeleri için SWOT analizi yapılmıştır. SWOT analizi yöntemi ile işletmelerin zayıf ve güçlü yönleri ile işletmelerin içinde buldukları fırsat ve tehditler belirlenmeye çalışılmıştır.

Analizin sonucunda ortaya çıkan güçlü yönler ağırlıklı olarak ‘ çoğu işletmenin kendi kaba yemini kendi ürettiği olması’ iken en yaygın zayıf yönleri ise ‘yetersiz teknoloji’ oluşudur. Bununla beraber ‘bakanlıkların sağladığı teşvik ve destekler ile hayvancılık için gerekli temel tüketim maddelerinin üretimi’ fırsatların çoğunluğunu oluştururken; en büyük tehditler ise ‘yüksek girdi maliyetleri ve enflasyon-fiyat iktidarsızlığıdır. Sonuç olarak bu çalışma, bölgesel bir araştırma niteliği taşıyor olsa da ülke çapında ki büyükbaş hayvan yetiştiriciliği içinde önem taşımaktadır.

- Büyükbaş hayvan yetiştiriciliğinde en büyük tehdit yüksek girdi maliyetleridir. Bu maliyetlerin önüne geçmek oldukça zor olsa da, işletmelerin kaba yem ihtiyacını kendileri karşılamaları oldukça büyük yarar sağlayacaktır.

- İş gücü maliyeti en aza indirilmesi için gereken ekipmanlar sağlanılmaya çalışılmalıdır. Maddi imkânlar boyutunda teknolojiden yararlanılmalıdır.

- Fazla çeşit, çok maliyetli rasyonlar yerine mevcut hammaddelerle birlikte gereken rasyon dengesini sağlayacak en uygun fiyatlı hammaddeler kullanılmaya çalışılmalıdır.

- Tarımsal hibe ve teşviklerden mümkün olduğu derecede en yüksek oranda faydalanılmalıdır. Bu sayede işletme için gerekli alet ve ekipmanlara daha kolay ve en uygun şekilde ulaşılabilir.

- Fiziksel anlamda işçi bulması, bulunan mevcut işçinin sürdürülebilir düzeyde çalışması için ne kadar zor olsa da gereken imkânlar sağlanılmaya özen gösterilmelidir.

- İşletmeler için veteriner maliyetleri oldukça yüksek gider kısmını oluşturmaktadır. Bunun için işletme herhangi bir hastalığın ortaya çıkmasını beklemek yerine mutlaka koruyucu hekimliğe başvurmalıdır. Bu sayede bireysel tedavi masrafı yerine sürü bazında daha az maliyet çıkarılır ve işletme genelinde çoğu hastalığın önüne geçilmiş olur.

- Genellikle çoğu süt işletmesi sütü verdiği firmadan yem almak zorunda tutulmaktadır.

Bunun önüne geçebilmek için bireysel hareket etmeyi en aza indirmeli ve mümkün olduğu kadar kooperatif düzeyinde çalışılmalıdır.

- Ürün pazarlama kısmında ülkemiz pazarının hemen hemen hepsini büyük şirketler ve aracılar oluşturmaktadırlar. Bu durum ise üretici boyutunda ciddi sorunlar yaratmaktadır. Bunun için de birlikler ya da kooperatifler kurulup toplu bir şekilde hareket edilmeli, Pazar oluşturulan bu tekelden kurtarılmaya çalışılmalıdır.

## **ON SMALL LEBESGUE SPACES**

**Dr. Öğr. Üyesi Yasin KAYA (Orcid ID: 0000-0002-7779-6903)**  
Dicle University, Department of Mathematics, Diyarbakır

### **ABSTRACT**

In the first part of this presentation we will briefly discuss the Banach function spaces and grand Lebesgue spaces which is introduced by Iwaniec and Sbordone when dealing with integrability of jacobian. In the second part we discuss small Lebesgue spaces which is introduced by Fiorenza. Then we discuss the role of small Lebesgue spaces with grand Lebesgue spaces.

**Keywords:** grand Lebesgue spaces, Banach function spaces, Hölder inequality

## 1. INTRODUCTION

Given a measurable set  $\Omega \subset \mathbb{R}^n$  we denote its Lebesgue measure by  $|\Omega|$ . Let  $M_0$  denote the set of all real, scalar-valued measurable functions, finite a.e. in  $\Omega$  and  $M_0^{+i}$  be the set of all measurable functions, whose values lie in  $[0, \infty]$  finite a.e. in  $\Omega$ .

**Definition 1.1.** [1] A mapping  $\rho: M_0^{+i} \rightarrow [0, \infty]^i$  is called a Banach function norm if, for all  $u, v, u_k \in M_0^{+i}$ , ( $k=1,2,3,\dots$ ) and for all measurable subsets  $E$  of  $\Omega$ , the following properties hold:

$$(i) \rho(u) = 0 \iff u = 0 - i.a.e.$$

$$(ii) \rho(\beta u) = \beta \rho(u), \text{ for all scalars } \beta \geq 0$$

$$(iii) \rho(u+v) \leq \rho(u) + \rho(v)$$

$$(iv) 0 \leq v \leq u \text{ a.e.} \implies \rho(v) \leq \rho(u)$$

$$(v) 0 \leq u_n \uparrow u \text{ a.e.} \implies \rho(u_n) \uparrow \rho(u)$$

$$(vi) |E| < \infty \implies \rho(\chi_E) < \infty$$

$$(vii) |E| < \infty \implies \int_E u(x) dx \leq \alpha \rho(u) \text{ for some constant } \alpha = \alpha(E, \rho) < \infty.$$

**Definition 1.2.** [1] Let  $\rho$  be a Banach function norm. Then the space

$$X(\rho) = \{u \in M_0 : \rho(|u|) < \infty\}$$

is called a Banach function space. For every  $u \in X(\rho)$  define

$$\|u\|_{X(\rho)} = \rho(|u|).$$

Under standard vector space operations  $(X(\rho), \|u\|_{X(\rho)})$  is a normed linear space.

**Definition 1.3.** [1] If  $\rho$  is a Banach function norm then its associate norm  $\rho'$  is defined on  $M_0^{+i}$  by

$$\rho'(v) = i \int v \rho$$

Given a Banach function space  $X(\rho)$ , the Banach function space  $X(\rho')$  determined by  $\rho'$  is called the associate space of Banach functions space  $X(\rho)$ .

**Definition 1.4.** [1] Let  $X(\rho)$  be a Banach function space. A given function  $u \in X(\rho)$  is said to have absolutely continuous norm if

$$\lim_{k \rightarrow \infty} \|u \chi_{E_k}\|_{X(\rho)} = 0$$

whenever any sequence subsets  $E_k \subset \Omega$  satisfy  $\chi_{E_k} \rightarrow 0$ , a.e. If all functions in  $X(\rho)$  have this property,  $X(\rho)$  is said to have absolutely continuous norm.

**Theorem 1.5.** [1] A Banach function space  $X(\rho)$  is reflexive  $\iff X(\rho)$  and its associate space  $X(\rho')$  have absolutely continuous norm.

## 2. RESEARCH AND FINDINGS

In 1992 Iwaniec and Sbordone [6], when dealing with the problem of the integrability of the Jacobian under minimal hypothesis, introduced the grand Lebesgue space. Starting from this moment we always assume the Lebesgue measure of  $\Omega$  is finite. The grand Lebesgue space  $L^{p, \lambda}(\Omega)$  is defined as the set of measurable functions  $u$  on  $\Omega$  for which

$$\|u\|_{p, \lambda} < \infty \iff 0 < \varepsilon < p - 1 \left( \frac{\varepsilon}{|\Omega|} \int_{\Omega} |u|^{p-\varepsilon} dx \right)^{\frac{1}{p-\varepsilon}} < \infty.$$

For  $p > 1$  and  $0 < \varepsilon < p - 1$  the following continuous embeddings hold

$$L^p(\Omega) \subset L^{p, \lambda}(\Omega) \subset L^{p-\varepsilon}(\Omega).$$

Also function  $u(x) = \frac{1}{x^{1/p}}$  is an example of  $u \in L^{p, \lambda}(0,1) / L^p(0,1)$ .

An important fact is that the set of  $C_0^\infty(\Omega)$  functions is not dense in grand Lebesgue space.

**Theorem 2.1.** [3,4] The closure  $\overline{C_0^\infty(\Omega)}_{L^{p, \lambda}(\Omega)}$  consists of functions  $u \in L^{p, \lambda}(\Omega)$  which satisfy

$$\lim_{\varepsilon \rightarrow 0} \varepsilon \int_{\Omega} |u|^{p-\varepsilon} dx = 0.$$

**Theorem 2.2.** [3]  $L^{p, \lambda}(\Omega)$  is not reflexive

*Proof.* Let define a function by

$$u: (0,1) \rightarrow \mathbb{R}, \quad u(x) = \frac{1}{x^{1/p}}.$$

Since  $u \in L^{p, \lambda}(0,1)$  and

$$\lim_{\delta \rightarrow 0^+} \left( \int_0^\delta \frac{1}{x^{1/p}} dx \right)^{\frac{1}{p-\varepsilon}} = \lim_{\delta \rightarrow 0^+} \left( \int_0^\delta \frac{1}{x^{1/p}} dx \right)^{\frac{1}{p}}$$

we conclude that the space  $L^{p, \lambda}(0,1)$  has not absolutely continuous norm.

Given  $1 < p < \infty$  and  $\frac{1}{p} + \frac{1}{p'} = 1$ ,  $L^{p, \lambda}$  is consist of functions  $v \in M_0$  defined on  $\Omega$  which satisfy the following norm condition

$$\|v\|_{p, \lambda}$$

**Theorem 2.3.** [5] For every  $u \in L^{p, \lambda}(\Omega)$ ,  $v \in L^{p', \lambda}$

$$\frac{1}{|\Omega|} \int_{\Omega} uv dx \leq \|u\|_{p, \lambda} \|v\|_{p', \lambda}$$

Now the small Lebesgue space defined as the set

$$L^{p, \lambda}(\Omega) = \{v \in M_0 : \|v\|_{p, \lambda} < \infty\}$$

$L^{p, \lambda}(\Omega)$  small Lebesgue space is a Banach function space [5].

**Theorem 2.4.** [5] For every  $u \in L^{p, \lambda}(\Omega)$ ,  $v \in L^{p', \lambda}(\Omega)$  the following Hölder inequality holds

$$\frac{1}{|\Omega|} \int_{\Omega} uv dx \leq \|u\|_{p, \lambda} \|v\|_{p', \lambda}$$

*Proof.* Given  $u \in L^{p, \lambda}(\Omega)$  and  $v \in M_0$  from Theorem 2.3.

$$\begin{aligned} \frac{1}{|\Omega|} \int_{\Omega} |u||v| dx &= \int_{\Omega} |u||v| dx \leq \int_{\Omega} |u| \psi dx \leq \int_{\Omega} |u| \psi dx \leq \int_{\Omega} |u| \psi dx \\ &\leq \int_{\Omega} |u| \psi dx \leq \int_{\Omega} |u| \psi dx \leq \int_{\Omega} |u| \psi dx \\ &\leq \int_{\Omega} |u| \psi dx \leq \int_{\Omega} |u| \psi dx \leq \int_{\Omega} |u| \psi dx \end{aligned}$$

### 3. CONCLUSION

Grand Lebesgue and small Lebesgue spaces are an active area of research and have many applications. Grand Lebesgue spaces have some generalization. There are still open questions in this spaces. As a example, it is not known whether continuous functions dense in grand Lebesgue spaces.

## **TÜRKİYE’NİN EĞİTİM SİSTEMİNDEKİ İKİLİKLER SORUNU**

**Dr. Muhterem ALTIN (Orcid ID: 0000-0002-4386-5149)**  
Milli Eğitim Müdürlüğü, Eğitim Müfettişleri Başkanlığı, Diyarbakır

### **ÖZET**

Türkiye’de milli eğitimin son derece kapsamlı amaçları vardır. Bu amaçların gerçekleştirilmesi için milli eğitim sistemi kurulmuştur. Bu sistemden öncelikli olarak, toplumu oluşturan tüm fertlere belirlenen davranışları kazandırması ve böylece hedeflenen ideal toplumu oluşturması beklenmektedir. Günümüzde ülkenin her tarafına yayılmış eğitim kurumları aracılığıyla işleyen bu sistemde zaman içinde çeşitli sorunlar ortaya çıkmakta ve eğitim kurumu kendisinden beklenenleri verememektedir. Ortaya çıkan bu sorunların çözümü için çeşitli değişiklikler yapılmaktadır. Ancak eğitim alanında süregelen bazı uygulamalar çeşitli sorunlara neden oldukları halde dikkatlerden kaçabilmekte, bu uygulamaların değiştirilmesi veya gözden geçirilmesi hususu ihmal edilmektedir. Türkiye’de eğitimle ilgili araştırmacıların ve karar vericilerin gerektiği kadar üzerinde durmadığı sorunlardan biri de eğitim alanında yaşanan ikilikler sorunudur. Günümüzde Türkiye’nin eğitim sisteminde sorunlar yaratan, eğitim sisteminin birçok amacının gerçekleşmesini engelleyen ve gelecekte olumsuz toplumsal sonuçlar doğurabilecek çok sayıda ikilik bulunmaktadır. Bu ikiliklerin en önemlileri ise resmi ve özel okul ikiliği, taşınmaz ve taşınmaz eğitim ikiliği ile müfredat ve sınav ikiliğidir. Yıllardan beri eğitim sisteminde devam eden bu ikiliklerin bütün boyutlarıyla tartışılması, bunlardan kaynaklı sorunların ortaya konulması ve buradan hareketle çözümlerin üretilmesi önemli ve gereklidir. Buradan hareketle bu çalışmanın amacı mevcut uygulamalardan hareketle bu ikiliklerin nasıl oluştuğunu ve hangi sorunlara yol açtığını ortaya koymaktır. Çalışma büyük ölçüde eğitim sistemi mevzuatı ile eğitim sistemindeki uygulamalar dikkate alınarak yapılmıştır. Bu ikiliklerin hem şu anda neden oldukları hem de gelecekte neden olabilecekleri sorunlar ortaya konulmaya çalışılmıştır.

**Anahtar kelimeler:** Eğitim, sistem, ikilik, toplum.

## **THE PROBLEM OF DUALITIES IN TURKEY'S EDUCATION SYSTEM**

### **ABSTRACT**

National education in Turkey has very comprehensive objectives. The national education system was established for the realization of these aims. From this system, it is expected that all members of the society will gain the determined behaviors and thus create the ideal society. Today, in this system, which operates through educational institutions spread all over the country, various problems arise over time and the educational institution cannot deliver what is expected from it. Various changes are made to solve these emerging problems. However, some ongoing practices in the field of education can be overlooked even though they cause various problems, and the issue of changing or reviewing these practices is neglected. One of the problems that education researchers and decision makers in Turkey do not pay enough attention to is the problem of dualities in the field of education. Today, there are many dualities that create problems in Turkey's education system, prevent the realization of many aims of the education system, and may have negative social consequences in the future. The most important of these dualities are the duality of public and private schools, duality of non-transported and transported education, and the duality of curriculum and examination. It is important and necessary to discuss these dualities, which have been going on in the education system for years, with all their dimensions, to reveal the problems arising from them and to produce solutions based on this. From this point of view, the aim of this study is to reveal how these dualities occur and what problems they cause, based on existing practices. The study has been carried out by taking into account the education system legislation and the practices in the education system. The problems that these dualities cause both now and may cause in the future have been tried to be revealed.

**Keywords:** Education, system, duality, society.

## GİRİŞ

Türkiye’ de hem devletin hem de toplumun eğitim sisteminden beklentileri oldukça çok ve yüksektir. Devlet beklentilerini Milli Eğitim Temel Kanunu başta olmak üzere, eğitimle ilgili diğer kanunlarda, yönetmeliklerde ve öğretim programlarında ortaya koyarken, vatandaşlar da çocuklarının eğitimi için büyük bir çaba göstererek beklentilerini ortaya koymaktadır. Hem devletin hem de vatandaşların eğitim sisteminden beklentilerini karşılamak için Türkiye’ de Millî Eğitim Bakanlığı adı altında devasa bir eğitim örgütü kurulmuştur. Millî Eğitim Bakanlığının verilerine göre, 2021/2022 öğretim yılında Millî Eğitim Bakanlığına bağlı olarak faaliyet gösteren resmi ve özel toplam okul sayısı 70380 olup bu okullarda 17589316 öğrenci eğitim almıştır (Millî Eğitim İstatistikleri, Örgün Eğitim 2021/'22, s.45). Bu rakamlar eğitim sisteminden yararlanan kişi sayısının ne kadar çok olduğunu ve aynı zamanda eğitim sisteminin ülke açısından önemini ortaya koymaktadır. Ancak Cumhuriyet tarihi boyunca kısa süreli başarılı bazı uygulamalar dışında, eğitim sistemi hiçbir zaman hedeflerine tam olarak ulaşamamış, dolayısıyla devletin ve toplumun beklentilerini karşılayamamıştır. Eğitim sisteminde ortaya çıkan sorunları çözmek için hemen hemen tüm siyasi iktidarlar döneminde çeşitli değişiklikler yapılmış, ancak günümüze kadar geçen sürede belirlenmiş olan amaçlarını tam olarak gerçekleştirebilen bir eğitim sistemi oluşturulamamıştır.

Eğitim sisteminde ortaya çıkan sorunları çözmek için yapılan değişikliklerin ve getirilen yeni uygulamaların bir kısmı da zaman içinde yeni sorunların oluşmasına neden olmuştur. Çünkü Türkiye’de eğitim alanında alınan kararlar ve yeni uygulamalar sadece gündemde olduğu ilk yıllarda araştırmacıların ilgisini çekmekte, çeşitli bilimsel çalışmalara konu edilmektedir. Ancak sonraki süreçte olağan hale gelen uygulamaların, meydana gelen toplumsal, ekonomik, teknolojik vb. durumlar karşısında nasıl sonuçlar doğurduğu hususu kimsenin ilgisini fazla çekmemektedir. Buradan hareketle bu çalışmada başlangıçta eğitim alanındaki bazı sorunların çözümü için getirilen, ancak zaman içinde eğitim sistemi içinde ikilik yaratan ve bu yönüyle yeni sorunların ortaya çıkmasına neden olan bazı uygulamalar ele alınacaktır.

Çalışmada Türkiye’nin eğitim sisteminde çeşitli sorunlar yaratan resmi-özel okul ikiliği, taşınmalı ve taşınmaz eğitim ikiliği, müfredat-sınav ikiliği tartışılacaktır. Bu ikilikler

tartışılırken, okul öncesi, ilköğretim ve ortaöğretim kademesi dikkate alınacak, bu kademedeki eğitimle ilgili yasal düzenlemeler ve mevcut uygulamalardan hareket

edilecektir. Bu ikiliklerin eğitim sisteminde ortaya çıkardığı sorunlar ortaya konulacak ve gelecekte yaratabilecekleri toplumsal sonuçların neler olabileceği hususları üzerinde durulacaktır.

### **1.Resmi-Özel Okul İkiliği**

Türkiye’de okul öncesi, ilköğretim ve ortaöğretim seviyesinde eğitim veren okulları resmi ve özel okul olmak üzere ikiye ayırmak mümkündür. Resmi okul kavramı ile binaları devlete ait olan, çalışanlarının devlet tarafından atandığı, ihtiyaçlarının devlet tarafından karşılandığı ve doğrudan Millî Eğitim Bakanlığı tarafından yönetilen okullar kastedilmektedir. Türkiye’deki okulların büyük bir kısmı resmi okullardır. Çalışmada bahsedilen özel okullar ise, “5580 sayılı Özel Öğretim Kurumları Kanunu hükümlerine göre açılan okul/kurumlardır”. (Millî Eğitim İstatistikleri, Örgün Eğitim 2021/22, s. XXII). Özel okulların sahibi devlet değil, kendilerine kurum açma izni verilen gerçek veya tüzel kişilerdir. Millî Eğitim Bakanlığının istatistiklerine göre 2021/22 öğretim yılında Türkiye’de 14179 özel okulda 1578233 öğrenci öğrenim görmüş ve 163975 öğretmen görev yapmıştır. Bu rakamlara göre özel okulların Türkiye’nin toplam okul sayısı içindeki payı yüzde 20,1, bu okullarda öğrenim gören öğrencilerin payı ise yüzde 9’ dur (Millî Eğitim İstatistikleri, Örgün Eğitim 2021/22, s.45). Bu okullardaki eğitim öğretim faaliyetlerinin, resmi okullarda olduğu gibi 1739 sayılı Milli Eğitim Temel Kanununa uygun olarak yürütülmesi gerekir. Resmi okullardan farklı bir öğretim programı uygulamak isteyen özel okulların ise Millî Eğitim Bakanlığından izin alması gerekir. Aynı zamanda özel okullar Millî Eğitim Bakanlığı tarafından denetlenen, gerektiği durumlarda çeşitli cezalar verilen ve yine kanunda yazılı hallerin gerçekleşmesi durumunda kapatılabilen okullardır (Özel Öğretim Kurumları Kanunu). Dolayısıyla yasal olarak hem resmi okullar hem özel okullar aslında aynı amaçları gerçekleştirmek üzere kurulan okullardır. Ancak halihazırda bu iki okulun çalışma prensiplerinin, önceliklerinin, olanaklarının, öğrenci ile veliye karşı olan tutumlarının, meydana gelen gelişme ve değişmelere ayak uydurma kapasitelerinin farklı olması eğitim sisteminde bir ikiliğin oluşmasına neden olmaktadır. Türkiye’de resmi ve özel

okulların aynı anda var olmasının eğitim sisteminde oluşturduğu ikiliği ve bu ikiliğin neden olduğu sorunları şu şekilde özetlemek mümkündür.

Birincisi, özel okullar paralı okullardır ve bu okullarda okuyabilmek için belli bir ekonomik güce sahip olmak gerekir. Dolayısıyla özel okullar büyük oranda ekonomik açıdan toplumun orta ve üst sınıflarına hitap eden okullardır. Bu okulların pahalı olması ve öğrencilerinin büyük bir kısmının zengin çocuklarından oluşması, buna karşılık toplumun yoksul kesimlerinin çocuklarının resmi okullarda okumak zorunda kalması bir ayrışmaya neden olmaktadır. Bu durum toplumu oluşturan farklı sınıflara mensup çocukların uzun süren okul hayatı boyunca birbirinden izole olmasına, birbirinden uzaklaşmasına neden olmakta ve nihayetinde okul yaşamından sonra başlayan toplumsal yaşamda birbirlerini anlamamasına neden olabilmektedir. Böylece toplumsal yaşamın belirli kurallar ve bir düzen içinde devam edebilmesi için gerekli olan sosyalizasyon süreci (Fichter, 2016: s.26-27) eksik kalmaktadır.

İkincisi, resmi okullar ile özel okullar arasında öğrenciye yönelik tutum arasında bazı farklar vardır. Sonuç olarak özel okula giden her öğrenci aynı zamanda, okulun para kazanmasını sağlayan bir müşteridir. Bu nedenle hem öğrencinin hem de okulun ücretini ödeyen velisinin okuldan memnun olması gerekir. Bu nedenle özel okullarda görevli öğretmen, yönetici ve diğer personel resmi okullara göre öğrenciye karşı daha dikkatli, daha nazik ve daha ilgili davranmaktadır. Bu durum özel okula devam eden öğrencilerin kendilerini daha iyi hissetmesine ve özgüvenlerinin yükselmesine neden olmaktadır.

Üçüncüsü, bazı resmi okullarda personel ve imkân yokluğu veya yetersizliği, bazılarında ise yönetim zafiyeti nedeniyle temizlik, bakım ve onarım konularında sorunlar yaşanırken, özel okullar bu konularda herhangi bir sorun yaşanmaması için daha dikkatli davranmaktadır. Bu nedenle özel okullara giden öğrenciler daha temiz ve bakımlı binalarda eğitim görürken, bazı resmi okullara devam eden öğrenciler bu imkanlardan mahrum kalmaktadır.

Dördüncüsü, resmi okullar her öğrenciyi kabul etmek ve her öğrenciye hizmet vermek zorunda iken, özel okullar öğrencisini seçme imkanına sahiptir. Birçok özel okul kabul sınavı veya bursluluk sınavı adı altında çeşitli sınavlar yaparak alacağı öğrencileri belirlemektedir. Bu durum özel okulların hem ekonomik imkânları hem de başarı

düzevi iyi olan öğrencileri resmi okullardan çekmesine neden olmakta, böylece özel okulların resmi okullara göre daha avantajlı hale gelmesini sağlamaktadır.

Beşincisi, özel okulların öğrenci bulabilmesi ve açık kalabilmesi için başarılı olmaları gerekir. Özellikle velilerin de dikkat ettiği ortaöğretime geçiş ve üniversiteye giriş sınavlarında mümkün olduğunca öğrencilerini iyi okullara veya bölümlere yerleştirmek zorundadırlar. Bu nedenle özel okullar yetenekli ve sınavlarda başarılı olabilecek bir öğrenci keşfettiklerinde, bu öğrencilerle daha fazla ilgilenmektedir. Bu duruma karşılık çoğu resmi okul, standart bir eğitim vermekle yetinmekte, bazen öğrenci sayısının fazlalığından, bazen imkân azlığından, bazen de ilgisizlikten dolayı resmi okullarda okuyan yetenekli öğrenciler hakkettikleri yerlere gelememektedir.

Altıncısı, özel okulların özellikle son yıllarda, resmi okullara nazaran yabancı dil eğitimine daha fazla önem verdikleri ve öğrencilerini yurt dışındaki eğitim olanakları konusunda daha fazla bilgilendirdikleri gözlenmektedir. Özel okullara devam eden öğrencilerin ekonomik durumları da dikkate alındığında, bu okullarda okuyan öğrencilerin yabancı dil öğrenme ve yurtdışındaki eğitim olanaklarından yararlanma konusunda resmi okullara devam eden öğrencilerden daha avantajlı oldukları söylenebilir.

Türkiye’de eğitim sistemi içinde resmi okullar ile özel okulların aynı anda var olmasının neden olduğu sorunlar listesini daha da uzatmak mümkündür. Genel olarak özel okulların daha iyi bir eğitim verdiği şeklinde oluşan manzaradan, resmi okulların başarısız olduğu veya resmi okullarda görev yapan yönetici, öğretmen ve diğer çalışanların özel okullarda çalışanlardan daha az başarılı oldukları şeklinde bir sonuca ulaşmak yanlış olacaktır. Çünkü resmi okullar ile özel okulların hizmet verdiği öğrenci sayısı, öğrenci profili, okulların bulunduğu yerleşim yerleri, sahip olunan olanaklar vb. birçok konuda aralarında önemli farklılıklar vardır. Resmi okullarda görevli yönetici ve öğretmenlerin karşılaştıkları birçok sorun, zorluk ve imkânsızlık özel okullarda hiç yaşanmamaktadır.

## **2. Taşınmaz ve Taşınmaz Eğitim İkiliği**

Millî Eğitim Bakanlığı tarafından “**Taşınmaz Eğitim**: Çeşitli nedenlerle birlikte okula erişimde sorunlar yaşayan ilkökul, ortaokul ve ortaöğretim öğrencilerinin belirlenen okullara günü birlik taşınarak eğitim ve öğretim görmelerini sağlamak amacıyla yapılan uygulama” (Millî Eğitim İstatistikleri, Örgün Eğitim 2021/’22, s.XXI) olarak

tanımlanmaktadır. Bu uygulamanın hayata geçebilmesi için, ‘‘İl ve ilçelerde, her eğitim ve öğretim yılında; taşıma yoluyla eğitimden faydalanacakları, taşıma kapsamına alınacak yerleşim birimlerini ve taşıma merkezi okul/kurumları belirlemek üzere ‘Planlama Komisyonu’ kurulur.’’ (Millî Eğitim Bakanlığı Taşıma Yoluyla Eğitime

Erişim Yönetmeliği, madde, 5/1). Bu komisyonun yaptığı planlama ve Millî Eğitim Bakanlığı Taşıma Yoluyla Eğitime Erişim Yönetmeliğinde belirlenen usul ve esaslar dahilinde taşınmalı eğitim yapılır (Millî Eğitim Bakanlığı Taşıma Yoluyla Eğitime Erişim Yönetmeliği). Dolayısıyla Türkiye’de ilköğretim ve ortaöğretim kurumlarında eğitim görmesi gereken öğrencilerin bir kısmı devletin sağlamış olduğu araçlarla sabah evlerinden alınarak eğitim ve öğretim görmeleri gereken okullara götürülmekte ve günün sonunda yine aynı araçlarla evlerine bırakılmaktadır. Buna karşılık bazı öğrenciler ise evlerine çok yakın okullara yürüyerek veya kendi imkanları ile eğitim ve öğretim gördükleri okullara gitmektedir. Böylece bazı okullarda taşınmalı eğitim yapılırken, bazılarında ise böyle bir durum yaşanmamaktadır. Bazı okullarda ise hem taşıma kapsamında olan hem de taşıma kapsamında olmayıp kendi imkanları ile okula gelen öğrencilere birlikte eğitim verilmektedir. Böylece uygulamada taşınmasız ve taşınmalı eğitim ikiliği ortaya çıkmaktadır.

Türkiye’de ilköğretim ve ortaöğretim zorunludur. İlköğretim kurumları ilkokul ve ortaokullardan, ortaöğretim kurumları ise liseler ve mesleki eğitim merkezlerinden oluşmaktadır (Millî Eğitim Temel Kanunu). Ancak Türkiye’nin coğrafi yapısı ve yerleşim durumu nedeniyle, her yerleşim biriminde bir ilkokul, ortaokul ve lise yapma olanağı bulunmamaktadır. Bu nedenle aslında taşınmalı eğitim bir ihtiyaçtan ortaya çıkmıştır. Ancak yıllar içinde taşınmalı eğitimden yararlanmak zorunda kalan öğrenci sayısı giderek sayısı artmış, buna paralel olarak taşınmalı öğrencilere hizmet veren okul, yönetici, öğretmen, servis ve yemek firması sayısı da artmıştır. Bu durum taşınmalı eğitimi, maliyeti yüksek, yönetilmesi zor ve eğitim sistemi açısından çeşitli sorunlar da üreten bir uygulamaya dönüştürmüştür.

Halihazırda bir yanda taşınmalı eğitimin yapıldığı, diğer yandan taşınmalı eğitimin yapılmadığı okulların aynı anda eğitim sistemi içinde yer alması bazı sorunların ortaya çıkmasına neden olmaktadır. Bu sorunları şu şekilde özetlemek mümkündür.

Birincisi, taşıma merkezi olan okullarda görev yapan yönetici ve öğretmenlerin iş yükü taşıma merkezi olmayan okullarda çalışanlara göre çok fazladır. Taşıma merkezi olan okullarda görev yapan yönetici ve öğretmenler standart görevlerine ek olarak, öğrencileri taşıyan servis araçlarını ve sürücülerini kontrol etmek, bunların günlük gidiş gelişlerini kayıt altına almak, taşıma kapsamındaki öğrencilere verilen yemeğin, teknik şartnameye

ve günlük menü listesine uygun olup olmadığını her gün kontrol etmek, bu alanlarda yaşanan sorunları çözmek ve ilgili yerlere bildirmek gibi görevleri de yapmaktadırlar. Aynı zamanda taşıma merkezi olan okulların büyük bir kısmı kırsal kesimde yer almakta, bu okullarda görev yapan yönetici ve öğretmenlerin okulun bulunduğu yerde ikamet etme imkânı bulunmamaktadır. Bu nedenle taşıma merkezi okullarda görev yapan öğretmen ve yöneticiler de kendi imkanlarıyla her gün kilometrelerce uzakta bulunan okullarına gidip gelmek zorunda kalmaktadır. Bu durum yönetici ve öğretmenler açısından bir eşitsizlik yaratmaktadır.

İkincisi, taşıma merkezi okullara devam eden öğrenciler her gün servis araçlarıyla kilometrelerce yol katetmektedir. Buna karşılık bazı öğrenciler ise evlerine çok yakın okullarda eğitim almaktadır. Bu durum taşıma kapsamındaki öğrenciler için bir dezavantaja dönüşmektedir. Çünkü bu öğrencilerin zamanının büyük bir kısmı okula gidiş ve dönüş esnasında geçmekte, evlerine vardıklarında ödevlerini yapmaya ve ders çalışmaya zamanları kalmamaktadır. Özellikle ilkökul çağındaki öğrencilerin servis araçlarına yetişebilmesi için her gün sabah çok erken saatlerde kalkması ve okula gitmesi kendileri açısından oldukça zordur.

Taşınmalı eğitim uygulamasının sorun yarattığı konulardan biri de bu okullarda öğrencilere verilen yemek konusudur. Taşıma kapsamındaki öğrencilere bedeli devlet tarafından karşılanmak üzere öğle yemeği verilmektedir. Ancak bazı okullarda taşıma kapsamında olan ve taşıma kapsamında olmayan öğrenciler birlikte eğitim görmektedir. Dolayısıyla bu okullarda taşıma kapsamındaki öğrencilere öğle yemeği verilirken, diğer öğrencilere yemek verilmemekte, bu öğrencilerin öğle arasında kendi imkanlarıyla yemek ihtiyacını gidermeleri beklenmektedir. Oysa özellikle kırsal kesimde birçok öğrenci bu imkana sahip değildir. Bu durumda aynı okulda okuyan bazı öğrenciler öğle yemeğini yerken, bazı öğrenciler bu imkândan yararlanamamaktadır. Bu durum hem

öğrencileri olumsuz etkilemekte hem de bu okullarda görev yapmakta olan yönetici ve öğretmenleri öğrencilerine karşı zor durumda bırakmaktadır.

Türkiye’deki ihtiyaçtan ortaya çıkan taşınmalı eğitim uygulamasının mevcut haliyle ürettiği sorunlar yukarıda sayılanlardan daha fazladır. Bu nedenle bu uygulamanın ürettiği sorunları tam olarak ortaya koyabilmek ve aynı zamanda bu uygulamayı daha iyi

hale getirebilmek için detaylı ve kapsamlı çalışmaların yapılmasına ihtiyaç bulunmaktadır.

### **3.Müfredat Sınav İkiliği**

Türkiye’de okul öncesi, ilköğretim ve ortaöğretim kademelerinde uygulanacak müfredat Millî Eğitim Bakanlığının bir birimi olan Talim ve Terbiye Kurulu Başkanlığı tarafından öğretim programı adı altında hazırlanmaktadır. Dolayısıyla tüm okullarda derslerin Talim Terbiye Kurulu tarafından o ders için hazırlanmış olan öğretim programına göre işlenmesi, programlarda belirlenen kazanımların elde edilmesi ve böylece milli eğitimin genel ve özel amaçlarına ulaşılması hedeflenmektedir (Öğretim Programları).

Yürürlükte bulunan mevzuata göre ‘‘Öğrenme-öğretme sürecinde resmî ve özel okul öncesi eğitim kurumlarında aylık plan ve günlük eğitim akışı, ilköğretim ve ortaöğretim kurumlarında yıllık plan ve ders planı yapılması zorunludur.’’ (Millî Eğitim Bakanlığı Eğitim ve Öğretim Çalışmalarının Planlı Yürütülmesine İlişkin Yönerge, Madde:5). Buna göre okul öncesi eğitim kurumlarında görev yapan öğretmenlerin aylık planlarını ve günlük eğitim akışlarını, Talim ve Terbiye Kurulu tarafından hazırlanmış olan okul öncesi eğitim programına uygun olarak hazırlamaları ve hazırladıkları bu plan doğrultusunda çalışmalarını yapmaları gerekmektedir. İlköğretim ve ortaöğretim kurumlarında görev yapan öğretmenlerin ise yine Talim ve Terbiye kurulu tarafından hazırlanmış olan öğretim programlarına uygun olarak eğitim öğretim yılının başında bir yıllık plan hazırlamaları, sonrasında ise ders planı yapmak suretiyle derslerini işlemeleri beklenmektedir (Millî Eğitim Bakanlığı Eğitim ve Öğretim Çalışmalarının Planlı Yürütülmesine İlişkin Yönerge). Normal şartlarda bir okulda dersler Millî Eğitim Bakanlığı tarafından hazırlanmış olan programa uygun olarak işlenmiş ve belirlenmiş

olan kazanımlar elde edilmiş ise, bu okulun öğrencilerinin girecekleri sınavlarda başarılı olmak için ilave bir eğitime ihtiyaç duymamaları gerekir. Ancak Türkiye’de gelinen noktada sadece okulda verilen eğitimle sınavlarda başarılı olmak neredeyse imkânsız hale gelmiştir. Öğrencilerin eğitim hayatları boyunca girmeleri gereken sınav sayısının çok olması, her yıl çok sayıda sınav yapılması, yapılacak sınavlar için yeni soruların üretilmesi vb. nedenlerle sınava hazırlık adı altında yeni bir eğitim alanı ve sektörü oluşmuştur. Günümüzde okulların yanında kurslar aracılığıyla verilen sınavlara hazırlık eğitimi, eğitim sisteminde müfredat ve sınav ikiliğinin oluşmasına neden olmuş, oluşan

bu ikilik de bazı sorunların yaşanmasına yol açmaktadır. Bu ikilik nedeniyle ortaya çıkan sorunları şu şekilde özetlemek mümkündür.

Birincisi, sınava hazırlık için harcanan çaba, okullarda verilen ve birden fazla alanda öğrencilere davranış ve beceri kazandırmayı amaçlayan normal eğitimi olumsuz etkilemektedir. Çünkü zamanla sınavda başarılı olmak, okuldaki derslerden başarılı olmaktan daha önemli hale gelmektedir. Bu durum özellikle girilecek sınavlarda soru sorulmayacak olan görsel sanatlar, beden eğitimi, müzik vb. derslere olan ilginin azalmasına neden olmaktadır. Aynı zamanda öğretmenlerin derslerin yanında öğrencilere kazandırmaya çalıştıkları diğer davranışlara karşı öğrencilerin duyarsızlaşmasına ve sınava yönelik olmayan çalışmalarını gereksiz görmelerine neden olmaktadır.

İkincisi, öğrencilerin girmeleri gereken sınavların çokluğu, eğitime dair beklentinin değişmesine ve farklılaşmasına neden olmaktadır. Devlet eğitimden, belirlediği genel ve özel amaçların gerçekleşmesini beklerken, öğrenci ve veliler için sınavda başarılı olmak daha önemli bir amaç haline gelmektedir. Özellikle öğretmenler bu iki beklenti arasında sıkışmakta, normal öğretim programını uyguladıkları ve devletin hazırlamış olduğu kitaplara göre dersleri işlediklerinde, öğrenci ve velilerin sınava hazırlık beklentisi nedeniyle zorluk yaşamaktadırlar. Derslerini sınav hazırlık kitaplarına göre işlediklerinde ise bu kez müfredattan uzaklaşmak suretiyle Millî Eğitim Bakanlığının denetim sistemiyle karşı karşıya gelmektedirler.

Üçüncüsü, Türkiye’de sınavların çok olması ve öğrencilerin okuldaki eğitime ek olarak bir de sınava hazırlık eğitimi alması, eğitimin maliyetini artırmaktadır. Veliler bir yandan çocuklarının okul ihtiyaçlarını karşılarlarken, diğer yandan çocuklarını özel

kurslara göndermek zorunda kalmakta, onlara ayrıca sınav hazırlık kitaplarını almaktadır. Bu durum aynı zamanda ekonomik imkanları iyi olmayan öğrencilerin aleyhine bir durum oluşturmaktadır. Çünkü okulun yanında özel bir kursa devam etmenin ve sınava hazırlık için ek kaynaklar almanın maliyeti oldukça yüksektir ve her öğrenci velisinin bunu karşılaması mümkün değildir.

Elbette sınava hazırlık amacıyla kurslarda verilen eğitimler Millî Eğitim Bakanlığının belirlemiş olduğu müfredattan tümüyle kopuk değildir. Örneğin bir ortaokulda matematik dersinde işlenen konular ile bir özel öğretim kursunda ortaokul seviyesindeki öğrencilere anlatılan matematik konuları büyük ölçüde aynıdır. Ancak arada yaklaşım ve amaç

farklılığı bulunmaktadır. Okulda matematik dersini anlatan bir öğretmen sadece öğrencinin gireceği sınavda başarılı olmasını değil, aynı zamanda öğrencinin anlatılan konuyu tam olarak kavramasını, ileride karşılaşacağı konular için temel bilgiler edinmesini, matematiksel formülleri ve bu formüllerin oluşmasını sağlayan mantığı da anlamasını hedeflemek zorundadır. Bu nedenle kestirme ve kısa yollar yerine uzun yollarla ve örneklerle dersini anlatması gerekir. Oysa sınava hazırlık amacıyla ders anlatan öğretmenler sadece öğrencinin sınavda başarılı olmasına odaklandıkları için, bir konuyu mümkün olan en kısa sürede anlatmaya ve kısa yollar öğretmeye çalışmaktadırlar. Bu nedenle sınava hazırlık amacıyla gerçekleşen öğrenmelerin büyük bir kısmı kalıcı olamamakta, sınavdan sonra unutulmaktadır.

## **SONUÇ**

Türkiye'nin eğitim sisteminin yukarıda sayılanlardan daha fazla sorunu ve sistem içinde daha fazla ikiliği vardır. Bu nedenle eğitim sistemin bir bütün olarak ele alınması, bireylerin ve toplumun ihtiyaçları ile çağın gerekleri dikkate alınmak suretiyle yeniden düzenlenmesi bir ihtiyaçtır. Bu çalışmaya konu edilen üç ikilikle ilgili ise şu sonuçlara ulaşmak mümkündür.

Türkiye'de özel okulların eğitim sistemi içinde edindikleri yer ve bu okullara yönelik talebin boyutu, eğitim sisteminde özel ve resmi okulların aynı anda var olmaya devam edeceklerini göstermektedir. Bu noktadan sonra yapılması gereken ilk iş eğitim alanında çalışan bilim insanlarının ve karar vericilerin, özel ve resmi okul ikiliğinin varlığı

nedeniyle oluşan sorunları daha detaylı bir şekilde ele alması ve bu sorunlara çözüm aramasıdır. Bu sorunlara çözüm aranırken özel okullar ve resmi okullar arasındaki uçurumun nereden kaynaklandığı sorusuna yanıt aranmalı, bu iki okul türünün varlığının öğrenciler arasında fırsat ve imkân eşitliğini bozucu taraflarının düzeltilmesi hedeflenmelidir.

Türkiye’de taşınmalı eğitim bir ihtiyaçtan doğmuştur. Bu nedenle bu uygulamadan tümüyle vazgeçilmesi mümkün görünmemektedir. Bu nedenle yapılması gereken bu uygulamanın belli aralıklarla gözden geçirilmesi ve bu uygulama nedeniyle ortaya çıkan sorunların ve eşitsizliklerin en aza indirilmesine çalışılmalıdır. Bu çerçevede özellikle köylerde bulunan ilkokulların tekrar açılması veya yeni ilkokulların yapılması sorunların

bir kısmını azaltabilir. Covid 19 pandemisi döneminde, kapatılan ve taşıma kapsamına alınan küçük köy okullarının yeniden açılmasının gündeme gelmesi ve son zamanlarda Milli Eğitim Bakanlığında köy okullarının yeniden açılması yönünde bir eğilimin oluşmuş olması önemlidir. Bu tavır sürdürülmelidir.

Türkiye’nin eğitim sisteminde müfredat sınav ikiliğinin yarattığı sorunlar yukarıda sayılanlardan çok daha fazladır. Bu nedenle Türkiye’nin eğitim ve sınav sistemini gözden geçirmesi, sınav sayısını azaltması, öğrencilerin okula ek olarak bir de sınava hazırlık eğitimi alma ihtiyacını ortadan kaldırması acil bir ihtiyaç olarak ortada durmaktadır.

## SİNEMADA TEMSİL VE ÖTEKİ: “WONDER” FİLMİ ÖRNEĞİ

**Yüksek Lisans Öğrencisi Mühibe ASLAN (Orcid ID: 0000-0002-2840-7668)**  
Gaziantep Üniversitesi, Sosyal Bilimler Enstitüsü, Film Tasarım Anabilim Dalı

**Doç.Dr. Gönül CENGİZ (Orcid ID: 0000-0001-6685-5376)**

Bölümü

### ÖZET

Sinemanın tarihsel süreci içerisinde kurulan hikâyelerde, temsil ve öteki kavramı önemli bir role sahip olmuştur. Sinemada öteki, karşıtlık/zıtlık oluşturduğundan filmlerin anlam ve ritmini yüksek tutmaktadır. Temsil ve öteki kavramı, “Wonder” filmi bağlamında değerlendirilmekte ve toplumun yarattığı öteki algısı analiz edilmektedir. Filmde öteki olarak temsil edilen karakterin yaşam biçimi, toplumun ötekiye olan bakışı, ötekinde oluşan sosyolojik etkiler ve ötekileştirmenin çocuk karakterde yarattığı travma anlatılmaktadır. Çocuk karakterlerin, toplumsal yapının oluşturduğu öteki konumunda nasıl davrandığı ve neler yaşadığı “Wonder” filmi üzerinden, fiziksel görüntünün ötekileştirilmesi bağlamında değerlendirilmektedir. Aynı zamanda diğer çocuk karakterlerin de bulunduğu sınıf farkı, ırk, kıyafet, karakter, sosyal statü ve yaşayış biçimlerinde var olan öteki normları aktarılmaktadır. Toplumun öteki gerçeği, filmin hikâyesinde de aynı gerçeklik ile yansıtılmaktadır. Toplu olarak yapılan davranışlar ile haklı ve doğru kabul edildiği düşüncesi oluşsa da, film bu haklılığı yıkarak farklılığın bir sorun ya da problem oluşturmadığını izleyicisine göstermektedir. Hikâyede kurulan öteki kodlamaları ile çocukların gözünden bu kodlamalara verilen tepkiler ve toplumun ötekine olan davranışı metinsel analiz yöntemi ile incelenmektedir. Filmde, toplumun oluşturduğu ‘ötekileştirme’ kavramı içerisinde karakterlerin kötü davranış biçimi, argo kelimeler, toplumdaki soyutlanma, sosyal aktiviteleri tek başına yapmak, şiddet, insanların bakışlarından kaçma, çoğunluğa karşı tek başına mücadele etme ve bunun sonucunda yaşam şeklinin nasıl bozulduğu temsiller üzerinden çözümlenmektedir. Yapılan metinsel analiz sonucunda toplumun çoğunluğu temsil etmesi ile dayatılan ötekileştirmenin, çocuk karakterin yaşamında sosyolojik ve psikolojik etki bıraktığı görülmektedir.

**Anahtar Kelimeler:** Temsil, Öteki, Çocuk, Toplumsal Yapı, Wonder Filmi

**REPRESENTATION AND THE OTHER IN CINEMA: THE CASE OF THE  
“WONDER” MOVIE**

**ABSTARCT**

The concept of representation and the other has played an important role in the stories established in the historical process of cinema. In cinema, the other keeps the meaning and rhythm of the films high, as they create opposition/contrast. The concept of representation and the other is evaluated in the context of the movie “Wonder” and the perception of the other created by the society is analyzed. In the movie, the life style of the character represented as the other, the society's view of the other, the sociological effects of the other and the trauma caused by the othering in the child character are told. How the child characters behave and what they experience in the other position formed by the social structure is evaluated in the context of the othering of the physical image through the movie “Wonder”. At the same time, the other norms that exist in the different class, race, dress, character, social status and lifestyles of the other child characters are conveyed. The other reality of society is reflected with the same reality in the story of the film. Although the thought that it is accepted as right and right with the collective behaviors, the film destroys this right and shows the audience that difference does not create a problem or a problem. The other codings established in the story, the reactions given to these codings from the eyes of the children and the behavior of the society towards the other are examined with the textual analysis method. In the movie, the bad behavior of the characters, slang words, isolation from society, doing social activities alone, violence, avoiding people's eyes, fighting alone against the majority, and how the way of life deteriorates as a result, are analyzed through representations within the concept of "othering" created by the society. As a result of the textual analysis, it is seen that the othering imposed by the representation of the majority of the society has a sociological and psychological effect on the life of the child character.

**Keywords:** Representation, Other, Child, Social Structure, Wonder Movie

## **1.GİRİŞ**

Sinemanın tarihsel gelişim sürecinde farklı bir mecra olduğu ve insanların ilgisini çekmesi üzerine bir sanat dalı haline gelmesi hem teknik hem hikâye olarak gelişmesine olanak sağlamıştır. Sinemanın temsil görenekleri ile bulunulan coğrafyanın yaşayış şeklinin, kültürünün, insanların vs. gibi birçok etmen ve bunların nasıl temsil edildiği, edinilen temsilin ne kadar gerçeklikle yansıtıldığı oldukça önemlidir. Karakterlerin, kameranın, kurgunun, sesin dahi artık bir temsil olarak bir ifade şekli vardır. Sinemada temsili kurmak filmin temel içeriğine şekil verdiği gibi kendine özgü bir dil oluşturmuştur. İzleyici üzerinde etki bırakmak veya bağlantı kurmak temsil ile olmaktadır. İzleyici kendisinden ve hayatından bir şeyler görmek ister ve bunu gördüğü zaman öykü ile bağlantısını oluşturur.

Toplumda öteki, kendisi gibi olmayan, dışta kalan, benzer olmayan, farklı ve değersiz olarak tanımlanır. Sinemada öteki ise, tıpkı toplumun ötekisine benzemektedir. İnsanlar gerçek hayatta öteki olarak kabul ettiklerini filmlerdeki karakterde de görmek istemektedirler. Bu tarihsel süreç içerisinde toplumun gördüğü savaşlar, ekonomik yapısı, siyasi hayatı, kültürü gibi birçok etken ötekinin algılanma biçimini etkiler ve şekillendirir. Ötekilerin popüler kültürde yer alma biçimleri, sıklıkları ve değişim çizgileri dikkatle incelendiğinde yaşanan dönemlerdeki egemen algının nasıl şekillendiği üzerine bir ipucu elde etmek olasıdır (Kırel, 2018, s. 398).

Gerçek hayatta var olan zıtlıklar sinemada da var olmalı, eğer bir karşıtlık yok ise hikâye içerisinde kendi ötekisini oluşturmalıdır. Karşıtlık yaratılarak öykünün gerçekliği temsil etmesi gerekmektedir. Karşıtlık olmazsa, hikâyenin akışının olamayacağı gibi anlamını da kaybedecektir. Ötekileştirmek, kişinin kendisi gibi olmayana nefreti olduğu ve bunun nedeni öteki gibi olamadığının sosyolojik ve psikolojik bir etkisi vardır. Bu etkinin en önemli temsilcileri ise toplumdur. Çoğunluk her zaman üstünlük kurar ve çoğunluğa ait olmayana ise görmek istemediği için dışlar. Kimlikler insanları tanımlar nereye ait olduklarını gösterir. İnsanlar bulunduğu toplumun veya grubun üyesi olmak ister fakat gurubun dışında kalmayı tercih edenler öteki konumuna itilebilirler.

Bireye ya da bir topluluğu kimliklendirme, sınıflandırma, toplumsal belleğin oluşmasına sebep olurken; ortaya çıkan toplumsal bellek, bireyler arası bağlılık ve dayanışma gibi duyguların yeşermesini sağlar (Aslan, 2018, s. 67). Topluluk ise kendisi gibi olanı

yanında ister kendisine düşünce, fiziksel vb. gibi durumlarda benzerliği yok ise ötekileştirir. Kendini bir gruba yâda topluluğa ait hissetmediğinde yâda kabul edilmeyen birey olduğunda bu durum karşısında travmalar oluşur. Sinemanın tarihsel süreci boyunca temsil ve öteki filmlerin yapı taşları olmuş ve etkin bir dil oluşturmuştur. Öteki, hikâyenin vazgeçilmez karakteri ve popüler kültür içerisinde yer alan, toplumun içinde ama dışta kalan, kendisine bir kimlik arayan, insanların görmesi gereken bir türdür.

## **2.YÖNTEM**

Çalışmanın amacı, (Wonder, 2017) filminin metinsel çözümlene yöntemiyle analizi ve öteki çocuk olarak tanımlanan karakterin yüzündeki deformasyondan dolayı farklı yaşam şeklini, farklılığa yaklaşmamızı, ötekinin getirdiği kötü davranış biçimini, ötekileştirmenin getirdiği sosyolojik ve psikolojik etkileri ve toplumsal yapısını incelemektir.

Dram ve çocuk türünde olan film, toplumun dayattığı ötekileştirmenin getirdiği psikolojik ve sosyolojik travmanın yansıması, karakterlerin temsile ve ötekiye bakışı ve ötekileştirilmiş karakterin yaşadığı hayat biçimi bağlamında analiz edilmektedir. Filmde temsilin önemi ve öteki olarak tasvir edilen karakterin yaşam biçiminin zorluluğunun aktarılması, ötekileştirmenin çocukta bıraktığı travma, toplumun öteki olana farklı bir bakış açısıyla bakması, ötekinin sosyolojik etkileri olarak anlatılması kapsamında sınırlandırılmıştır.

Ötekilik kavramının psikoanalitik yönden önemi, ötekinin yalnızca kültürün ve kişinin tümüyle dışında kalan şeyleri değil kişinin içinde bastırılan ve yadsınıp dışlanarak kişinin dışında bir şeymiş gibi nefret edilen şeyleri temsil etmesidir (Demir, 2008, s. 14). Kişi kendisinde görmek istemediğini öteki olana yakıştırır. Öteki olan ise bu baskılar yüzünden nefretini ve psikolojik durumunu başka şekillerle veya durumlarla anlatmaya çalışır. Ötekileştirmenin getirdiği bu dram hikâyesi ve bunun çocuk karakter üzerinde anlatımı, “Wonder” filmi ile çözümlenecektir. Sinemada öteki, filmlerin

vazgeçilmezi olmuştur, çünkü zıtlığa yani karşıtığa ihtiyaç vardır ki bu hikâyenin anlamını ve ritmini yüksek tutmaktadır.

Filmin hikâyesinde ötekileştirilen başkarakterimiz olup, ötekinin yaşadığı durumları özellikle çocuk üzerinden zorluğunu ve toplumun öteki olana bakışının değişmesi

gerektiğini, çocuk karakterin fiziksel görüntüsü üzerinden ötekileştirilmesinde yaşanan gerçekçiliğin incelenmesi amaçlanmıştır.

### **3.SİNEMADA TEMSİL**

Temsil kavramı, taklit etme ile eş değerdir. Temsil, var olanın yeniden üretilmesi ile sunulmaktadır. Taklit etme veya yansıtma durumu, öyküyü, karakterleri, olayları oluşturduğu gibi kendini yenileyerek gelişim göstermektedir. Tarihsel süreç içerisinde temsil kurmanın en önemli unsuru, fotoğraf ve sinema birlikteliğinin etkisi olmaktadır. Sinema, teknoloji ve fotoğraf birleşimi ile birlikte gelişerek, görsel, işitsel, içerik olarak anlatı kazanmaktadır. Bununla birlikte gerçeğin görüntüsünü vermek yeterli olmayıp, gerçeği yeniden üretip yeni bir anlatı dili yansıtılmaktadır. Teknik anlamda da verilen görüntü bize sunulan temsilleri göstermektedir. Sinemadaki haliyle temsil ise sinemasal araçlar kullanılarak referans alınan her ne ise onun yerini tutacak başka ifadeler oluşturmak şeklinde tanımlanabilir. Kurulan bu ifadeler aracılığıyla ortaya çıkan nihai söz ya da yargı ise söylem kavramı ile karşılık bulmaktadır (Cerrahoğlu, 2019, s. 522).

Filmlerde neyin temsil edildiği, konusu ve temasına bağlı olarak izleyiciye mesaj vermekle birlikte, biçim ve içeriğin nasıl kurulduğu, sinemasal anlatım araçlarının nasıl kullanıldığı, öykünün nasıl oluşturulduğu, filmin amacına uygun şekilde kullanıldığının önemi vardır. Tüm bunlar ile birlikte var olan bir diğer önemli unsur ise, izleyicinin varlığı olup, temsil edilen ile bağlantı kurmasıdır. Temsiller için kullanılan kodlamalar, izleyicinin kodlamaları ile ilişkili olması önemlidir. Yani temsiller öylesine kurulmamış, belli bir amacı ve anlamı bulunmaktadır. Temsil kavramının öncül bir biçimi gibi kullanılan ve temeli Platon ve Aristoteles'e dayanan mimesis, doğa ve insan eylemlerinin doğrudan taklidi olarak karşımıza çıkmaktadır (Cerrahoğlu, 2019, s. 521). Mimesis kavramının oluşturduğu temsil ve gerçeklik ilişkisinin konu bakımından bir anlamı vardır. Sinemasal gerçeklik ve kullanılan araçların temsili öyküde nasıl tasvir

edildiği ile ilgilidir. Gerçeklik bağı ancak izleyici ile ortak temsil kodları kullanıldığı sürece hikâye yâda öykü gerçekçi kabul edilmemektedir.

Gerçeklikten kopuşun olduğu ve bağlantı kuramadığı temsil kodları, izleyiciyi gerçeklik algısından koparmaktadır. Sinema, toplumsal gerçekliği oluşturan kültürel temsilleri sinemasal araçların aktardığı söylem ile oluşturulmaktadır. Kültürel temsiller, toplumsal

yaşamın şekillenmesi, toplumsal gerçeğin nasıl oluşması gerektiğini, neyin ön planda baskın olması gibi güçlü bir rolü vardır. Bundan dolayıdır ki, toplumsal iktidarın muhafazası için kültürel temsillerin üretimi üzerinde söz sahibi olmak önem taşıdığı gibi, “toplumsal dönüşümleri amaçlayan ilerici hareketler için de vazgeçilmez bir kaynak” oluşturmaktadır (Namaz, 2011, s. 43).

#### **4.SİNEMADA ÖTEKİ**

Sinema sanatında hikâye anlatımı karşıtlıklar üzerinden kurulmaktadır. Karşıtlıklardan oluşan çatışmayı kurabilmek için öteki olana ihtiyaç duyulur. Öteki kavramı ise, çoğunluğa göre benzer özellik göstermeyen, çoğunluğun dışında kalan, farklı olarak tanımlanan, dışta kalan olarak tanımlanabilir. Toplumda veya insanlar arasında öteki, kendisi gibi olmayan, fiziksel veya düşünce farklılığına sahip, toplumla aynı özelliği taşımayan, karşıtlık oluşturan ve değersiz olarak nitelendirilir. Sinema tarihinin başlangıcından, yani Lumiere Kardeşlerden günümüze kadar karşıtlıklar yani öteki hep var olmaktadır. Gerçek hayatta kopyalanan veya yeniden tasarlanan hikâyelerde var olan karşıtlık sinemanın da vazgeçilmezi olmaktadır. Eğer gerçek hayatta öteki yoksa hikâye kendi ötekisini oluşturmaktadır. Karşıtlıklar tıpkı gerçek hayatta olduğu gibi zıt olarak nitelendirilen, iyi ile kötü, zengin ile yoksul, özgürlük ile tutsak gibi birçok örnek ile verilmektedir. Bundan dolayı bir kimse kendini tanıtırken zıt olandan yani ne olmadığını söyleyerek açıklamaktadır.

Sinemada öteki inşa edilirken; sinema anlatısına etki eden iki temel unsurun iyi planlanması gerekmektedir. Bu iki temel unsurdan birisi, anlatı dili, diğeri de sinemasal estetikdir (Aslan, 2018, s. 69). Hikâyede kullanılan dil, karakterler arası ilişki ve yüklenilen anlam iken estetiksel olarak ise ışık, renk, kameranın nerede durduğu, müzik gibi birçok teknik araç öteki olanı inşa etmektedir. Mesajın doğru iletilmesi için doğru araçların kullanılması gerekmektedir. Bu mesajın nasıl veya ne kadar doğru iletildiği ise

yönetmene ve hikâyeye bağlıdır. Temsil ile kurulan kodlamalar ile hikâyeye tasarlanır ve öteki karakter izleyiciye aktarılır. İzleyici ise öteki olarak kodladığı karakteri tanır ve bağ kurarak hikâyeyi bütünleştirir. Hikâyenin öteki olana etkisi gibi izleyicinin de öteki karaktere etkisi büyüktür.

Bazen hikâyeye öteki karakterin zorlu yaşamını ve ötekinin gözünden bakılan dünyanın zorluğunu izleyiciye aktarmaktadır. İzleyicinin öteki karaktere her zaman değersiz olarak bakmaması ve farklılığa karşı anlayışlı veya duyarlı olması gerektiğinin mesajı iletilir. Ötekinin bir diğer önemli unsuru ise ön yargıdan türemesidir. Ön yargı, kişinin stereotipleşmiş görüşlerine göre tasarlanan, ötekinin olumsuz yönlerinin algılanması göre şekillenen kalıplaşmış yargılardır. Stereotip ise, bireyin özellikleri içerisinde birkaçını ele alarak basitleştirerek akılda kalıcı olarak kalmasını sağlayan düşüncedir. Ön yargılar ile kişiye bir kimlik verilmiş olur ve toplum tarafından sadece o kimliğe aittir. Bizim sahip olduğumuz özelliklere sahip olamayan varlığa karşılık gelen “öteki”, “var’ların” (ben-biz) ve “yok’ların” (sen-öteki) mekânına indirgenmektedir (Namaz, 2011, s. 35). Ön yargılar, ötekileştirme süreci içerisinde önemli bir role sahip olmaktadır.

Hollywood sinemasının ideolojik yapıya sahip olması, kitleleri yönlendirme gücüyle birlikte, dönemin popüler toplumsal sorunlarına yönelik film üretimi yapmaktadır. İstenilen düşünceyi filmler yoluyla kitleleri empoze etme ve neyin nasıl olması gerektiğinin mesajını verecek güce sahiptir. Bu gücün etkisiyle ortak kültür egemenliği oluşturarak ötekinin de rolünü ve verilecek değeri ortaya koymaktadır. Çoğunluğun savunduğu düşünce her zaman haklı ve güçlü durumunda olmaktadır. Tek yani bireyin yalnızlığını, farklılığını toplum kabul etmez çünkü kendisi bunu yapacak güce sahip değildir ve ötekiyi bastırmaya çalışmaktadır.

Öteki, “ben”in kendini gerçekleştirdiği, dolayımıldığı nesnedir. Kendini gerçekleyebilmesi için “öteki”nin varlığı zorunluluktur. Öteki ile uzamsal alana giren “ben”, kendi uzamsal alanını yaratır, kendini dış dünyanın nesnelere farklı olarak kurgular (Nurdoğan Rigel, 2005, s. 287). Bundan dolayı “ben”in var olabilmesi için öteki olana ihtiyaç vardır. Öteki toplum tarafından ne kadar dışlansa da farklı olarak görülse de, aslında o toplumun önemli bir rolüne sahip olduğu gibi toplumun da kendini

tanıtması ve var etmesinde güçlü bir etkisi vardır. Öteki olanı konuşur, onu anlatır ve ön planda tutar, kendini öteki ile tatmin ederek aslında öteki karakteri yaşamın gerçekliğinde başrol yapar. Tıpkı gerçek yaşamda olduğu gibi filmlerde de öteki en önemli role sahip bir karakter olur.

### **5.SİNEMADA ÇOCUK, TOPLUMSAL YAPI VE ÖTEKİ**

Sinemanın tarihsel süreci içerisinde çocuk karakterler sık sık filmlerde yer almaktadır. İlk başlarda önemsiz ve ilgi alanı olarak görülmeyen çocuk zaman içerisinde öykünün de önemli bir parçası haline gelmektedir. Çocuğun toplumsal yapının içinde ne kadar ve nasıl var olduğu önemli bir konu haline gelmiş ve çocuk sinema sektörü oluşmaya başlamıştır. Dünya sinemasındaki çocukluk imgesinin serüvenine bakıldığında, çocukluk kategorisinin tarihsel varlığına ilişkin tartışmaların, özellikle modernleşmeyle birlikte çocukluğun icadının bu görünümü doğrudan etkilediği görülmektedir (Düzcan, 2017, s. 415). Çocuk karakterin rolü, daha ciddi toplumsal problemlere yönelik veya şiddet, cinsel istismar, baskı, aşağılama, suçlama, tehdit gibi önemli konuların temsilcileri olmuşlardır. Çocukluk temsili, kendi alanında yaşayan görünmeyen veya topluma çok etkisi olmayan birey iken zamanla toplumun sorunlarının önemli bir parçası haline gelmiştir. Bu yüzden toplumun yarattığı sorunlara çocuğun gözüyle bakmak veya bu sorunların çocukta yarattığı etki çocuğun dili ile anlatılmaktadır.

Sinema ve toplum ilişkisi genellikle birlikte ilerlemiş olup, toplumsal yapı filmlerde çokça kullanılmaktadır. Çünkü toplumsal yapı kavramı baskıdan oluşmaktadır. Kendi otoritesini bireye kabul ettirmeye muktedir olan toplum, bu baskısıyla bireyi aşar. Bu halde kişinin kendisine egemen olma potansiyeline sahip bu güç karşısında boyun eğmesi, gücün meydana gelmesi için ana koşul olarak kabul edilebilir (Uçan, 2019, s. 9). Filmlerde oluşturulan karakterler arası güç ilişkisi, sosyal yaşam, değerler arası zıtlıklar, yaşanan zaman, ahlak ve görgü kuralları gibi birçok toplumsal yapılar sinema ile bağımlı koparmamış ve bir bütün olarak öykülerle bunu sürdürmüştür. Çok yönlü anlatıya sahip olan sinema sanatı, kültürel, psikolojik, sosyolojik, toplumsal konuları, sanatıyla bütünleştirerek kitlesel bir dil oluşturmaktadır. Bu dilin kullanımında film içerisinde toplumu ne kadar objektif bir gözle yansıttığı, konuya karşı olan tavrı, bakış açısı ile sanatçı kendi normlarını yansıtır. Bu yüzden film içerisinde toplumsal yapının ne kadar doğru veya yanlış anlatımı kullanıldığı dil ile belirtilmektedir.

Ayrıca, film sadece bölgesel değil, geniş bir açıyla evrensel bir dil oluşturarak mesajını bu yapıya göre belirtir. Filmler, izleyici ile yoğun bir iletişim halinde olup mesajını buna göre vermektedir. Toplumsal yapının önemli parçası olan çocuklar ise bu

iletişimin doğrudan temsilcileri olmaktadır. Çocuk, toplumda kendine dayatılan sorumlulukları

veya baskıyı, söylem ve hareket yolu ile izleyiciye aktarmaktadır. Toplumsal yapının oluşturduğu ötekileştirme ile çocuk, psikolojik ve sosyolojik olarak etkilenmekte ve bunun sonucunda büyük bir sarsıntı geçirmektedir. Kurulan baskının, sinemada anlatım biçimi ile nasıl temsil edildiği seyircinin de nasıl davranması gerektiği üzerinden mesaj vermektedir. Zamanla kişinin zihnini doğal düzende insanın ve toplumda bireyin yeri, dünyaya ilişkin soyut sorular meşgul etmeye başlamakta ve bu anlam sorununun çözümlenmesi için kişinin daha geniş bir toplumla ilişki kurması gerekmektedir (Uçan, 2019, s. 40). Ancak ötekileştirilen çocuk karakter, yaşadığı baskı ile toplumdan uzaklaşmaktadır.

Çocuğun fiziksel görüntüsü üzerinden ötekileştirilmesi ve bunun sonucunda yaşadığı sarsıntı ile çocuk toplumdan uzaklaştığı gibi insan ilişkilerinde de sorun yaşamaya başlamaktadır. Hem aile ile hem arkadaş çevresi veya toplumun geri kalan bireyleri ile iletişim problemi yaşamakta olup bu sorunun fiziksel ötekileştirmeden kaynaklandığını düşünmektedir. Bunun sonucunda kendi benliğini kaybettiği gibi öz güven problemi ve içe kapanıklık olarak tanımlanan psikolojik etkiler yaratmaktadır. Yaşadığı bu psikolojik etki ile kimlik sorgulaması yaptığı ve var olan kimliğini de kaybetmeye başladığı gözlenmektedir. Çünkü toplum içinde var olan kimlik, bireysel bir davranış veya toplumsal yapıya göre farklılık oluştuğu zaman, toplum tarafından cezalandırılarak, öteki kimliğine bürünmektedir.

Fiziki imgelerle oluşturulan damgalar, kişiyi toplumdan soyutlayarak geri dönülemez bir bedensel kusur yaratır. Antik Yunan'da uygulama bulan durum damgalanan bireyi sosyal alanda çöküntüye uğrattırırken, psikolojik tahribatın kapısını aralamaktaydı (Aslan, 2018, s. 67). Fiziki imgeler en dikkat çeken temsiller olduğu için kişi sürekli psikolojik olarak sözel şiddet görmektedir. Bununla birlikte sosyal alanda da bir birey olarak kabul edilmediği gibi neden istenmediğine dair kabaca tabirler de kullanılmaktadır. Toplum tarafından her alanda uygulanan baskıya kişi dayanamadığı gibi psikolojik problemler de yaşamaktadır. Kendini toplumdan soyutladığı için yalnız kalmakta veya çevresi ile yapması gerekenleri tek başına yapmaya başlamaktadır. Kişi, bu şekilde davranış göstererek toplumun dayattığı öteki kodlarını kabul eder ve mücadele etmeyi bırakır.

Fiziksel deformasyon aslında sadece bir hastalık olup, kişinin toplumdan soyutlanmasına sebebiyet vermemesi gerekmektedir.

Öteki, toplumun hâkim olduğu kültür temsilleri dışında kalan kimliği ile var olmaktadır. Bunun sonucu ise bu kimliğin getirdiği artık zorlu bir yaşam olması ve çocuğun kendini hiçbir yere ait olmama hissini sürekli hatırlatılmasına maruz kalmasıdır. Ötekileştirmenin alanı geniş olup sadece fiziksel değil, çocuk karakterlerin yaşadığı coğrafyanın, kültürünün, cinsiyet ayrımının, ırk farklılığının getirdiği ayrışma yüzünden yaşam biçimleri zorlaşmaktadır. Kimlik, kişilerin bir parçası, toplumsal yapı içerisinde var olan grupların temsili, kültürü yansıtan bir ayna ve öznel olarak yapılan şeyleri nesnellikle konumlandırır. Yani birey tekliği değil çoğunluğu kimliği ile temsil eder. Örneğin bir bireyi, dâhil olduğu varsayılan kategoriden farklı bir kategoride yeniden sınıflamamıza ve söz konusu kişiye ilişkin nitelermelerimizi değiştirmemize sebebiyet verebilecek türden uyuşmazlıkların söz konusu olabileceği hatırlanmalıdır (Goffman, 2014, s. 31).

Goffman'ın dediği gibi fiziksel deformasyon uyuşmazlığına sahip olan çocuk ise toplumun var ettiği kimlik içerisinde yer almayarak ötekileştirilmektedir. Ötekileştirilen çocuk ise, toplumun normal olarak kabul ettiği tipsele özelliklere uymamasından kaynaklanan sorun yaratır. Bu sorun çocuğa baskı uygulanarak gösterilmekte olup çocuğun toplumun kimliğine ve özelliklerine uymadığı yansıtılmaktadır. Ötekileştirilen çocuk kendi benliği ile bir mücadeleye girer ve toplumun kimliğine neden sahip olmadığını sorgulamasını yapar. Bunun dâhilinde ise kendi var olan öteki kimliği ile toplumun onu kabul etmesini sağlamaktadır.

Kimlikler, kültür, cinsiyet, ırk, dil, coğrafya gibi birçok etmene bağlı olarak değişmektedir. Her coğrafyanın veya her ırkın kendine göre oluşturduğu kimlikler bulunmaktadır. Bunun nedeni farklılığın, toplumun yapısına ve tarihsel gelişim sürecinde var olan yaşam tarzına bağlıdır. Bunun sonucu olarak, artık kimlik kategorisi, kendi içerisinde tutarlı, istikrarlı bir sabit olarak değil, “kendilik” ile “toplum” arasındaki karşılıklı “etkileşim” sonucu “kurulan” bir yapı olarak kavranır (Özdoyran, 2020, s. 476). Yani öteki kavramını oluşturan etmenler, toplumun kişiye olan bakış açısını, toplum içerisinde konumunu belirten kimliğe sahip olurlar. Toplum kendi

içerisinde de sınıf farkını ortaya koyduğu için, öteki olana bakış toplumun kendi içinde de değişiklik göstermektedir.

Öteki nitelmesi ya da terimi, belli bir konunun, durumun, varlığın tam karşısında yer alanı, karşıt ikiliğin hep değersiz görülen kanadını anlatır (Demir, 2008, s. 4). Ötekinin var olması demek toplumun var olması demektir aslında, çünkü farklılık ile toplum bir anlam kazanmaktadır. Bu yüzden kültür olarak simgelenen şeyler farklılık/karşıtlık ile oluşmaktadır. Zıtlıklardan bir güç ilişkisi yaratılır ve bu zıtlıklardan doğan farklılık ise simgelenen şeye anlam kazandırmaktadır. Hayatımızın, kültürümüzün, yaşanılan coğrafyanın, insanların, tenlerin, ırkların, dillerin veya daha birçok şeyin karşıtı muhakkak var olup kendini tanımlamak için ise karşıtlık kullanılmaktadır. Bu yüzden farklılık anlam kazanmaktadır.

Çocuk anlatıları aynı zamanda toplumların aile yaşamları, ekonomik ve sosyal konumları hakkında sosyolojik analizlere imkân veren bir potansiyel barındırmaktadır (Düzcan, 2017). Çocuk, toplumun normlarının temsili olmaktadır. Bu yüzden çocuk, toplumun yapısı içinde var olan öteki kodların yansıması niteliğindedir.

## **6. ÇOCUK KARAKTERİN FİZİKSEL GÖRÜNTÜSÜ ÜZERİNDEN ÖTEKİLEŞTİRİLMESİ BAĞLAMINDA WONDER FİLMİNİN ANALİZİ**

Wonder filminin, dram, çocuk teması üzerinde kurulan hikâyesi, toplumsal yapı ve öteki ile bağlantı kurulmaktadır. Film, 10 yaşındaki Auggie Pullman'ın, yüzündeki deformasyon ile uyum sağlamaya çalıştığı yaşamını konu almaktadır. Auggie'nin, bu yaşına kadar eğitimini evde annesi vermiş, artık okula başlaması gerektiği söylenmektedir. Evde eğitim almasının sebebi ise öteki kimliğinden kaçmasıdır. Filmin önemli tarafı öteki algısı üzerinden çocuğun belirli kodlarla öteki olmanın zorlu yaşamını göstermektir. Film, tüm bu zorlu yaşam içerisinde çocuğun öteki konumunu yıkıp kendini topluma kabul ettirmesini izleyiciye aktarmaktadır. Sadece filmin başkahramanı değil, hikâye içinde yer alan diğer çocuk karakterler de, sosyal sınıf farkından oluşan ötekileştirmeye maruz kalmaktadır. Her çocuğun yaşadığı farklılığın getirdiği yaşam biçimi aktarılmıştır.

Filmin giriş sahnesinde yıldızların var olduğu gökyüzü ve astronot kıyafetli biri görülmekte olup sesle desteklenerek uzayda yaşanan bir an simgelenmektedir. Aslında bu sahnenin Auggie'nin odası olduğu ve bir kask ile yatağın üzerinden zıpladığı görülmektedir. Uzay simgelerinin var olduğu oda aslında çocuğun hayal dünyası tasviri

olduğu anlatılmaktadır. Uzayın temsili, insan vücudunun görünmediği kıyafeti, sınırların dışına çıkan farklı bir evren ve uzakta kimsenin var olmadığı farklı bir dünya yaratmaktadır. Auggie burada sıradan yaptığı aktivitelerden bahseder, dondurma yemek, bisiklet sürmek, bilim sevmek, aile ile yapılan aktiviteler, uzaya çıkma hayali gibi sosyal aktiviteler sıradan ama görünümünün sıradan olmadığını söylemektedir. Auggie yaptığı veya sevdiği hobilerden bahsederken ve bunları yaparken kafasında hep kask görülmektedir. Cümlelerin sonunda onlarca ameliyat geçirdiği ama hiç birinin normal bir insan görünümüne sahip olmadığını söyler.

Auggie hayatını ve eğitimini evden devam ettirse de artık okula gitmesi gerektiğini bilmekte ama bunu normal bir insan gibi görünmediğinden yapmak istememektedir. Çünkü toplumla yüzleşmeye cesaret edememekte ve bunu anlatırken insanların ona dik baktığını ve yüzündeki deformasyondan dolayı çocukların ondan kaçtığını söylemektedir. Normal bir çocuktan kim kaçarsa ki mesajını da vermektedir. Bu ise öteki olmanın çocuk açısından en zor tarafı olup toplumun kendisini kabul etmediğinin farkında olmasıdır. Auggie'nin ailesi, yüzündeki deformasyondan kaynaklanan farklılığı ona yansıtmayan, hep destekçi olan aile olarak temsil edilmektedir. Bununla birlikte toplumla yüzleşmek için artık ilk adımı atar ve okula gitmeye karar verir. Bu cesaret adımının amacı ise bilim yani hayal dünyasında var olan uzay olduğu aktarılmaktadır.

Okulu tanıma sahnesinde üç arkadaşı ile tanışır ve onları ayakkabılarına göre sınıflandırır. Yani kıyafet veya giysinin karşısındaki kişi hakkında bilgi verdiğini ve kişinin kimliğinin ne olduğunu ve sosyal sınıfların temsilini simgelemektedir. Okulun ilk günü bahçedeki çocuklar Auggie gördüğü zaman ondan uzaklaşmaları ve kötü tabirleri, öteki olana bakışı simgelemektedir. Annesinin söylediğini düşünerek "bulunduğun yeri sevmiyorsan, olmak istediğin yeri hayal et" imgesinin içinde kendisini bulur. Auggie çocuklar arasında ötekileştirildiğinde ve yalnız hissettiğinde kendisini olmak istediği hayali dünyada düşünmektedir. Bu hayali dünya sevdiği film olan Star Wars kahramanlarını görmesi ve onların da sıradan olarak görülmemesi

kendisiyle bir bağ veya ortak duygu paylaşımı yaşamaktadır. Çocukların aileden veya toplumdan aldıkları kodlamalar ile Auggie'nin vebalı olduğunu düşünürler. Tıpkı toplumdaki bireyler gibi, çocuklar arasında da ötekiye bakışın kabaca bir tavrı veya daha anlaşılır davranışları da vardır. Bunun temeli aileden geldiği gibi toplumun içinde de şekillenmeye başlamaktadır.

İlk derste kendini tanıtmada konusunda, Auggie çekinerek ve özgüven eksikliği ile bunu yapmak istemese de yapmak zorunda kalır ve kendisini tanımlayan şeylerden bahseder. Burada tanımladığı şeyler kendisinin görünümü ile ilgili bir kimlik sunmaktadır. Çekinmesinin sebebi ise herkesin ona bakmasında ve farklılığının görünmesinden alay edileceğini düşünmesinden olmaktadır. Filmin içerisinde okulda verilen derslerde de farkındalığa ve ötekiye bakış mesajları iletilmektedir. Farklı olana nasıl davranılması gerektiği, farklılığın hissettiği duygu durumu veya kimliğinizin ne olduğu gibi birçok mesaj izleyiciye aktarılır. Auggie, öteki kimliğiyle sürekli yüzleşmeye maruz kalarak, yemeğini tek başına yemesi, sınıfta tek başına oturması ve arkadaşı olmaması gibi ötekileştirilen durumlarla karşılaşmaktadır.

Auggie'nin bahçede yürürken, yemek yerken, diğer çocukların ona bakıp kabaca sözler söylemesi ve gülmesi farklılığının gerçek yüzünü göstermektedir. Toplumda aktarılan kodlar ile bu hastalığa sahip olan bireylerin hastalığı bulaştırdığı, uzak durulması gerektiği gibi algı yaratılmıştır. Auggie'nin, kabaca davranışlar ile yüzleşmesi onun acı çekmesine ve farklılığının sorun olduğu düşüncesine neden olmuştur. O, kendisini normal bir birey olarak değil, öteki kimliğinde görmektedir. Sadece Auggie değil ailenin diğer bireyleri de bu farklılıktan oluşan problemler yaşamaktadır. Auggie'nin kız kardeşi Olivia ailesinin kardeşi ile çok ilgilenmesi ve kendisinin görünmemesi sonucunda kendini içine kapatır. En yakın arkadaşının, kardeşinden dolayı arkadaşlığının sonlandırıldığını düşünmesi üzerine yeni tanıştığı arkadaşına tek çocuk olduğunu, yani yalan söyler. Toplumdan soyutlanmak istemediği ve terk edilmek istemediği için yalan söylemektedir. Olivia, toplumun öteki olana karşı düşüncesinden dolayı böyle söylese de daha sonra empati kurarak yani kardeşinin yalnız kaldığını düşündüğü için kardeşinin de destekçisi olmaya çalışmaktadır. Çünkü tıpkı kardeşi gibi kendisi de toplum ile bağ kuramadığı gibi yalnız kalmaktadır.

Toplumda kadına biçilen rol ve erkeğe biçilen rol gibi filmde de rollerin farklılığı işlenmiştir. Kız çocuğunun ihmal edilmesi, erkek çocuğa daha fazla ilgi gösterilmesi yine toplumun gerçeklerini yansıtmaktadır. Oysaki erkek çocuğa hastalığı olduğu için daha fazla ilgi gösterilirken, kız çocuğun görülmemesi yine bir ötekileştirme durumu yaratmaktadır. Bu davranış ile çocuğun farklı olduğu ve sıradan olmadığı düşüncesi yansıtılmaktadır. Auggie artık bulunduğu ortama alışmaya ve arkadaşlık kurmaya başlar

ve her normal çocuk gibi toplumun dayattığı öteki algısını kırmaya başlar. Auggie'nin, Jack ile kurduğu arkadaşlık, sosyalleşmesine ve topluma ayak uydurmasına olanak sağlamıştır. Görsel örnekleme, çocukların davranışlarının farkında olmadan öğrenmelerine yardımcı olabilmektedir. Çocukların arkadaşlarıyla birlikte bu aktivitelerde bulunuyor olmaları model olma davranışı üzerinde etkili olabileceğini düşündürmektedir (Üstündağ, 2021, s. 627). Çünkü herkes gibi hareket etme, aynı davranışı gösterme, benzer aktiviteler ve mekânlarda bulunma, ortak bir paylaşım alanı sergilemek, toplumdan ve arkadaşlarından hiçbir farkının olmadığını göstermiştir. Çoğunluğun yaptıklarını taklit etmek, kişiyi öteki kimliğinden uzaklaştırdığı gibi toplumun içinde var etmiştir. Auggie, kendini toplumun içinden olduğunu ispatlamaya ve öteki kimliğini değiştirmenin çözümünü ancak bu şekilde elde etmeye çalışmıştır.

Jack'in, Auggie hakkında olumsuz düşüncelerini arkadaşlarına aktarması aslında ona burslu kimliğinin verilmesi, arkadaşları tarafından sürekli hatırlatılması, bursluluğunun zarar görmesi ve sınıfsal farkının oluşmaması korkusu ile söylendiği aktarılmaktadır. Toplumun öteki kodları çok fazla olduğu gibi, okuldaki diğer çocukların sınıfsal veya ırksal farklılığından kaynaklanan dışlanma da yaşanmaktadır. Çocuk karakterler ise toplumun dışlamasından korktukları için kendini savunma durumuna geçmektedirler. Jack, sözel şiddete maruz kalan Auggie'yi korumak için diğer çocuğa fiziksel şiddet uygular ve bu şiddetin haklılığını savunur. Jack bursluluğunu kaybetmemek için kibar bir dille okula özrünü iletir. Sosyal davranış veya aileden alınan ahlak kuralları gereği aslında bunun doğru olmadığını düşünerek yani empati kurarak Auggie ile arkadaşlıklarına devam ederler. Bu davranışı sergilemeleri, aileden geldiğinin gösterilmesi gibi toplumun baskısına da bir başkaldırı niteliğindedir. Filmi içerisinde, toplumun öteki olana farklı bakış açısından gelen dışlanma, ötekinin toplum ile sosyalleşmesine imkân tanınmadığı, öteki her zaman dikkat çeken ve farklı bir kimliğe

sahip olarak görüldüğü için, çocuklar Auggie'den uzak durmaktadırlar. Auggie, yeni arkadaşı ile sosyal aktiviteler yapmakta ve bununla mutlu olduğu gibi sıradan bir çocuk gibi kabul görmektedir. Auggie ve Jack bilim projelerinde birinci olmuş ve Auggie kendini diğer insanlara ispatlamış artık çevresi genişleyerek ön yargıları yıkmıştır. Filmde okul sorumlusunun verdiği önemli bir mesaj, Auggie'nin görüntüsünü değiştirmek yerine insanların onu görme şeklini değiştirmesi gerektiğini söylemesidir. Yani ötekileştirme

eleştirilmiş ve insanın artık bakış açılarını değiştirmesi gerektiği mesajı verilmiştir. Bir diğer karakter ise gerçek dünyada bunun olmayacağını ve kabul edilmeyeceğini vurgulamaktadır.

Auggie toplumun var ettiği normlara göre hareket ederek, kendisine öğretilen gibi davranış göstererek arkadaşlarına şiddet uygulamış ve bunun sonucunda şiddet uygulamak, çevre edinmek ve bununla mutlu bir yüze sahip olmak artık ön yargıların ve ön yargılarla oluşan ötekileştirmenin verdiği durumdan uzaklaşmış, toplumsal yapının içinde var olmuştur. Auggie, filmin başında yüzündeki deformasyon yüzünden çekindiği her şeyi yapmaya başlamış ve toplumun bir bireyi olarak kendini kabul ettirmiştir. Karşısında olan, alay eden ve farklılığını yüzüne söyleyen herkes artık onun yanında olmuştur. Auggie kendi öz benliğini kazanmış ve örnek öğrenci olarak ödül kazanmıştır. O, bu ödül ile tüm farklılıklarına rağmen toplumla mücadele ederek ön yargıları yıkmış, kendisini öteki konumundan çıkararak başarılı olması ile ispatlamıştır. Auggie, toplum tarafından verilen bütün tabuları yıkarak, toplumun önemli bir parçası olmuş ve farklılığın sadece fiziksel olduğunu izleyiciye göstermiştir.

## **7.SONUÇ**

Sinemanın başlangıcından günümüze kadar, kurulan hikâyenin temsilleri ve bu temsillerin neyi ifade ettiği önemli olmuştur. Temsiller, öteki olanı oluşturmakta çünkü zıtlığa ihtiyaç duymaktadır. Gerçek yaşamda olan zıtlıklar/karşıtlıklar, sinemaya da aktarılmakta, çünkü izleyici gerçek yaşamdan kopmak istememektedir. Öteki olanı oluşturan en önemli etmen ise toplumdur. Toplum, çoğunluğu temsil ettiği için kendisi gibi olmayanı, farklı olanı kabul etmeyerek içine almamaktadır. Yani öteki olan her zaman dışlanmakta ve çoğunluğun içinde bulunmamaktadır. Sinema, öteki olana karşı

oluşturulan kodlamaları kendi öykülerinde kullanır. Toplumun öteki olana bakışını, hikâyesinde temsil eder. Bazen eleştirel bir yaklaşım, bazen destekleyici bir yaklaşım sergilenmektedir.

Wonder filmi ile izleyiciye çocuk karakterin, fiziksel görüntüsü üzerinden öteki konumunda olması, ötekileştirmenin sonucunda yaşadığı sosyolojik ve psikolojik etkileri aktarılmıştır. Çocuk karakterler sinemanın başlangıcından beri var olsa da, ön planda yer almayıp daha sonra hikâyenin başkahramanı ve bununla birlikte öteki kodlamaların

temsilcileri olmuşlardır. Çocuk karakterlerin bazıları, toplumun ayrıştırmasını kabul etmemiş, bazıları ise çevresini ve ebeveynlerini taklit etmesi ile öteki konumunda nasıl bir davranış gösterdiği veya neler yaşadığı filmle aktarılmıştır. Toplumun ötekisi, kadın veya erkek, cinsiyet, ırk, kültür, çocuk gibi hangi alanda veya hangi anlamda olduğu fark etmediği gibi tepkisi de değişmemektedir.

Wonder filminin ana teması, başkahramanın fiziksel görüntü üzerinden bir ötekileştirme olsa da aslında filmde her karakterin bulunduğu sınıf farkı, kıyafeti, karakteri, yaşayış biçimi gibi birçok yönden ötekileştirme bulunmaktadır. Başkahramanımız Auggie'nin, yüzündeki deformasyondan dolayı ötekileştirilen hayat hikâyesi, farklılığın sebep verdiği zorluklar, bu zorluklarla nasıl mücadele edildiği ve diğer çocukların belirli farklılıklarla ötekileştirildiği yaşam şekilleri ve buna bağlı davranışları aktarılmıştır.

Buradan anlaşılan her toplumun veya her belirli sınıfın kendisine göre öteki temsileri bulunmakta ve öteki olana farklı bir davranış gösterilmektedir. Filmde toplum ile öteki arasında gerçeklik ve biçim, sosyal sorumluluk bilincinin hangi bireylerde var olduğu, olmayanların ise nedeni detaylı şekilde gösterilmiş ve açıklanmıştır. Ötekileştirmenin yarattığı problemler, çocukların öteki olana sert bakış açısı, kullanılan argo kelimelerin öteki olanda yarattığı psikolojik durum izleyicinin de empati kurması açısından doğrudan aktarılmıştır. İnsan ancak empati kurabildiği takdirde karşısındaki anlayabilir ve hissedebilir, bu yüzden insanların farklılığı daha saygılı ve özenli davranması gerektiği mesajı verilmiştir. Ötekileştirilen çocuk, yaşanan dışlanmadan dolayı travma yaşar ve kendi içine kapanır. Bunun sebebi toplumun bireyleri, sosyalleşmesine izin vermediği gibi baskı yöntemini de kullanması filmde gösterilmiştir.

Wonder filmi isminden anlaşılacağı gibi öteki olan Auggie, toplumun ona dayattığı kabuğunu kırıp, ön yargıları yıkıp, zor olanı başararak mucizeyi gerçekleştirmiş ve toplumun bireylerine kendini ispatlamıştır. Film, ötekileştirmenin getirdiği kötü davranış, şiddet, argo kelime kullanımı, toplumdaki soyutlanma, sosyal aktiviteleri tek başına yapma, yalnızlık, insanların bakışlarından kaçma, çoğunluğa karşı tek başına mücadele etme gibi birçok nedenin zorluğu ve yaşam şeklinin düzenini nasıl bozduğunu aktarmıştır. Kullanılan temsil kodlamaları ile çocukların bu kodlamalara göre tepki verdiği ve çocukların gözünden, toplumun farklılığa olan davranışı aktarılmıştır.

Filmde, cinsiyet, ırk, kültür, giyim tarzı, sosyal statü, ötekileştirmenin alanında var olmuş ve aktarılmıştır. Erkek ve kadının rolleri toplumda nasıl ise filmde de aynı şekilde yansıtılmıştır. Giyim tarzı kişinin kimliği hakkında bilgi verdiği, cinsiyetlerin eşitsizliğinde adaletli bir dengenin olmaması, zenginlerin üstünlüğü ve yoksulların her şeyi mecbur kabullenmesi, sosyal mekânların statüye göre belirlenmesi gibi birçok öteki kodlamalar filmde tüm gerçekçiliği ile verilmiştir. Film, temsilleri ve temsillerin oluşturduğu ötekileştirmeyi çocuk karakterler üzerinden aktardığı gibi, ötekileştiren, baskı uygulayan topluma ise eleştiri yapmıştır. Gerçek hayatta olduğu gibi, ötekileştiren ve ötekiyi savunan karakterler vardır. Bunun sonucunda öteki olana ne olduğu ve neler hissettiği aktarıldığı gibi toplumsal yapının buna göre görüşünü değiştirmesi gerektiği mesajı iletilmiştir.

#### **ÖZET**

Bir kentin yapılı çevresini oluşturan konutlar, yapıldıkları dönemin kültürel, sosyal ve ekonomik özelliklerini yansıtmaktadırlar. Konutlar, barınma ihtiyacını karşılayan, insan yaşamının büyük bir bölümünü kapsayan yapılardır. Konutların plan, cephe ve malzeme özellikleri toplumun sahip olduğu değerleri yansıtmaktadır. Bu değerlerin yansıtıldığı en önemli yapı elemanlarından biri cephelerdir. Bir mimari yapıda cephe, yapıyı dışardan tanıtan ve çevre ile iletişim kuran en dikkat çekici bileşenlerden biridir. Değişen toplumsal yapı, kültürel özellikler, ekonomik ve teknolojik gelişmelerin etkilediği konutlar, bu faktörlerin etkisiyle değişmiş ve gelişerek günümüze kadar ulaşmışlardır. Tarihsel süreçte, geleneksel yapılar ve dönemin gerekliliklerine uygun olarak tasarlanan yeni yapılar kent ölçeğinde bir arada ve yan yana bulunmaktadır. Farklı dönemlerde farklı mimari anlayışlar ile oluşturulan bu yapıların cepheleri arasındaki uyum ve farklılığı tespit etmek için Malatya İli Sinema Caddesi alanına bulunan Geleneksel Malatya konutlarının ve çağdaş konutlar tespit edilmiştir. Tespit

edilen sivil mimari örneklerin cepheleri görsel analiz kapsamında değerlendirilmiş ve farklılıkları ortaya konulmuştur.

**EVALUATION OF BUILDING FACADES IN THE SCOPE OF VISUAL  
ANALYSIS: CASE STUDY MALATYA-CINEMA STREET**

**ABSTRACT**

The dwellings that make up the current building environment of a city reflect the cultural, social, and economic characteristics of the period in which they were built. Dwellings are structures that meet the need for shelter and cover a large part of human life. The plan, facade, and material features of the dwellings reflect the values of the society. Facades are one of the most important building elements in which these values are reflected. In an architectural building, the facade is one of the most striking components that introduces the building from the outside and communicates with the environment. The dwellings, which are affected by the changing social structure, cultural characteristics, and economic and technological developments, have changed and developed with the effect of these factors and have reached the present day. In the historical process, traditional buildings and new buildings designed in accordance with the requirements of the period exist together and side by side at the urban scale. . In order to determine the harmony and difference between the facades of these buildings, which were created with different architectural understandings in different periods, the traditional residences and contemporary residences on Malatya Province Cinema Street were identified and examined. In this way, it is aimed to set an example of how the facades of the historical buildings and the structures built later in the city should be shaped together.

**Keywords:** Visual Analysis, Malatya Traditional Houses/ Dwellings, Facade

## GİRİŞ

Yapılar inşa edilirken dönemine ait belirli kaygılar ve estetik anlayış ile oluşmuşlardır. Günümüze kadar her dönemde farklı anlayış ile inşa edilen yapılar kentlerde bir arada var olmaktadır. Kentlerde dini yapılar, kamusal yapılar ve konut yapıları olmak üzere farklı tiplerde yapılar bulunmaktadır. Fakat konutlar, insanların barınma ihtiyaçlarını karşıladıkları, yaşamlarının büyük bir bölümünü kapsayan mekânlardır. Bu nedenle toplumun inanışları, sosyal, kültürel, ekonomik özellikleri konutların yapım özelliklerini doğrudan etkilemiştir. Konutların plan, cephe, malzeme özellikleri toplumun sahip olduğu değerleri yansıtmaktadırlar. Bu değerlerin yansıdığı en önemli yapım elemanlarından biri cephelerdir. Bir mimari yapıda cephe, yapıyı dışardan tanıtan ve çevreyle iletişim kuran en dikkat çekici bileşenlerden biridir. Cepheler formel yapılar değil, fenomenler ve şehrin kullanıcıları tarafından yorumlanan anlamları şehrin dilini şekillendiriyor. (Şenyiğit ve Altan,2011)

Günümüzde cepheler kentsel mekanlarda aktif rol almaktadır. Cephe, insanları ve binaları veya binaları ve şehri birbirine bağlayan dev bir bölme değil, bir binayı çevreleyen bir kabuktur. Bina teknolojisinin gelişmesiyle birlikte cephelerin rolü de çeşitlenmekte ve genişlemektedir. Günümüzde dış dünya ile bağlantı kuran yapısal bir unsur olan cephe, içerisi ve dışarı arasında etkin bir şekilde çevre imajı oluşturan ve yapıyı bir kentsel peyzaj olarak kazandıran bir arayüzdür. (Üstündağ,2009).Bir yapının ve kent mekânının önemli parçası olarak cephenin görsel olarak incelenmesinde ve analiz edilmesinde, algı kavramı önemli bir yer tutmaktadır. Algı, duyum verilerini yorumlayarak çevremizdeki nesne ve olaylara anlam verme süreci ve bir nesnenin farkına varma ve onu değerlendirme sürecidir. İnsanın çevresi ile ilişkilerinin incelenmesinde, yapısal çevrenin algılanması, önemli bir araç olarak kabul edilebilir.

### 1.1. Çalışmanın Amacı, Kapsamı ve Önemi

Farklı dönemlerde farklı mimari anlayışlar ile inşa edilen yapıların bir arada bulunduğu kent Bundan yola çıkarak farklı zaman dilimlerinde mimari anlayışta yaşanan değişimi anlamak için konut cepheleri incelenmiştir. Bu noktadan hareketle çalışma kapsamında Geleneksel Malatya konutlarının ve çağdaş konutların bulunduğu Sinema Caddesi çalışma alanı olarak belirlenmiş ve incelenecek konutlar tespit edilmiştir. Tespit edilen sivil mimari örneklerin cepheleri görsel analiz kapsamında değerlendirilmiş ve farklılıkları ortaya konulmuştur.

Bu çalışma ile geleneksel konutlar ile çağdaş konut cephelerinin cephe düzenleri analiz edilmiş, ritim, oran, tekrar gibi özellikleri belirlenmiştir. Böylece kentte bir arada bulunan tarihi yapılar

ile sonradan inşa edilen yapıların cephe düzenlerinin bir arada nasıl biçimlenmesi gerektiği hakkında örnek teşkil etmesi amaçlanmıştır.

### 1.2. Algılama Kavramı ve Görsel Algı

İnsan, duyu organları ve duyum mekanizmaları aracılığı ile çevresinden sürekli uyarılar almaktadır. Uyarıların alındığı nesne ya da durumların değerlendirilip yorumlanması, yani algılanması; alınmakta olan duyumların dışında başka bilgilendirme kaynaklarının da etkin olduğu dinamik ve karmaşık bir olgu olarak görülmektedir. (Akdeniz,1982)

İnsan çevredeki nesnelere beş duyu organıyla algılar. İnsan, duyuları aracılığıyla aldığı bu uyarılara bir anlam yükler. Algı, duyumların ve anlamlarının yorumlanması sonucunda ortaya çıkar. Duyu organlarımızın yapısı ve işlevi, algılarımızın şekillenmesinde rol oynar. Ama daha fazla duyuya anlam verdiğinizde algı oluşur.(Üstündağ,2009)

İnsanlar algılama, biliş ve eylem mekanizmalarıdır. Algı, duyular aracılığıyla çevreden bilgi edinme eylemidir. Biliş, algılananın kavranması ve anlaşılmasıdır. (Göler, 2009).

- Algılamanın ana özellikleri şunlardır:
- Algı kişiden kişiye değişen bir olgudur.
- Hareket, algısal olaylarda önemli bir rol oynar.
- Algılamada kişi, amacına uygun bilgiyi çevreden alır.(Aydınlı,1992).

Görüş alanında dokusal bir etki, benzer nesnelere yan yana gelmesinin, birden çok kritik özelliğe dayalı olarak, bakış açısı, görüş mesafesi ve algısal koşullara bağlı olarak, bakan kişi dışında görsel olarak algılandığı etkidir. (Kalyoncu,2000)

Dış dünya üzerinde bilgilenmelerin, tüm algıların önemli bir bölümünün, %80-90 kadarının görme duyusu yolu ile alınıp beyne ilettiği kabul edilmektedir.( Aksoy, 1975)

Görmede, nesnelere ilettiği ve gözden beyne iletilen bilgilerin yanı sıra başka bilgi kaynakları da etkindir. Bu genellikle nesnenin önceki bilgilerine dayanan bilgileri içerir. Görsel bağlamda, nesnelere sadece retinal uyarılardan daha fazlasıdır. Objelerin geçmişini ve geleceğini algılamak önemlidir..

Bütünün düzeni ve niteliği, onu oluşturan etkili unsurlar ve onların hareketleri ile ifade edilir. Seçilen ve yeniden oluşturulan çizgiler, renkler, şekiller ve tonlar her zaman birbiriyle

bağlantılıdır. Noktalar, çizgiler, renkler, şekiller, dokular, lekeler ve boyutlar gibi tasarımların oluşturulmasında etkili olan görsel tasarım öğeleri vardır. En önemli tasarım öğesi noktadır. Noktalar birbirine bitişikse, bir çizgi oluşturulur. Çizgiler tasarımın önemli bir unsurudur.

Kompozisyonunuzu dengeleyebilir veya başka bir zaman dengeye alt üst edebilir. (Ketenci ve Bilgili, 2006)

### **1.3. Mimaride Görsel Tasarım Elemanları**

#### **1.3.1.Sayı**

Elementler bir arada veya birbirinden ayrı bulunabilir. Bireysel öğeler, çevrelerine küçük referanslar sağlar. Ancak öğelerin sayısı arttıkça ve tekrarlandıkça bu tekrarlanan öğeler arasında görsel ilişkiler ve etkileşimler oluşmaya başlar. Sayı ne kadar yüksek olursa, doku veya tasarım o kadar karmaşık olur (Turgut,1999).

#### **1.3.2. Yön**

Yönler, şekiller ve çizgiler, gözlemcinin bakış açısına göre durumlarını gösterir. Nesnelere ve çizgiler konumlarında bir miktar yön gösterir. Genel olarak yatay, dikey ve eğri olarak tanımlanan bu yönler, bakan kişi üzerinde farklı etkilere sahiptir. (Ustaömeroğlu, 1998)

Üç tür konum vardır: yatay, dikey ve çapraz. Yatay konum yere paraleldir. Dikey bir konum, zeminle 90 derecelik bir açı oluşturur. Skew ise yatay ve dikey konumlar arasındaki açı olarak ifade edilebilir. (Turgut,1999)

#### **1.3.3.Biçim**

Format önemli değişkenlerden biridir. Şekillerin uyumu, tasarımın önemli bir unsurudur. Karmaşıklık, şekiller farklı ölçeklerde veya farklı görüş mesafelerinde tekrarlandığında ortaya çıkar. Tasarımdaki uyumsuz şekiller gerilimi ve görsel tutarsızlığı artırır. (Turgut,1999)

#### **1.3.4.Büyüklik ve Mesafe**

Farklı boyutlarda kullanılan şekilleri yerleşiminizde kullanarak farklı efektler elde edebilirsiniz. Boyutsal unsurlar bu nedenle tasarımda önemli bir rol oynar. (Gümüş, 2019) Daha geniş, daha büyük bir şekil daha görünür ve ön plana çıkıyor. Küçük formlar çok etkileyici değildir. Mimari tasarımda elemanlar arasındaki mesafe önemlidir. Şekiller arasındaki boşluk aynı veya farklı olabilir. Farklı aralıklarla farklı oranlarda kullanarak karmaşık dokular oluşturulabilir.

Dokular, binaların tasarımında kullanılır ve sadece kullanılan malzemeler veya binanın tamamı olabilir. Görsel etki açısından şekil, renk ve boyutlar kadar önemli bir tasarım öğesidir. Bu unsurun öneminin farkında olan tasarımcılar, mimari, iç mimari, resim, heykel ve endüstri alanlarında farklı dokulardaki malzemeleri kullanarak estetik değerin faydalarını tasarımlarına aktarırlar. Cam, plastik, metal ve tuğla gibi farklı malzemelerin kullanılması tasarımı daha geniş

ve zengin kılmaktadır. Bu yapısal etkiler, tarih boyunca çeşitli mimari akımların şekillenmesinde etkin rol oynamıştır. (Ustaömeroğlu, 1998)

## 2. ARAŞTIRMA BULGULARI

### 2.1.Çalışma Alanı

Geleneksel bir Malatya konağı mimari özelliklerini taşıyan Beş Konaklar, Saray Mahallesi'nde Sinema Caddesi üzerinde yer alıyor. 1900'lü yıllarda inşa edilen bu konaklar, Malatya'daki sivil mimarinin en güzel örneklerini temsil etmektedir. Caddeye bakan bu villalar, yan yana inşa edilmiş iki katlı beş villadan oluşmaktadır. Villanın dış cephesinde ana yapı malzemesi olarak kerpiç kullanılmıştır. Duvarları, zemini ve iç mekanı birbirine bağlayan kirişlerin, dolapların, kapı ve pencerelerin, tavanın ve bankların tamamen ahşap olduğunu görebilirsiniz. Villanın ana giriş kapısı çift kanatlı olup, üzerinde tente, ışıklık gibi isimlerin yer aldığı, çoğunlukla oval olan bir pencere yer almaktadır. Her villada konumlandırılmış, pencere seviyesinden sokağa uzanan çıkıntılı cumbalar kafesli yapılardır (malatyakultur.com).

Sinema Caddesinde tarihi Beş Konakların yan cephelerine ve karşı cephesine günümüze ulaşana kadar yapılar eklenmeye devam etmiştir. Bu yapılar da konut işlevli yapılardır. Farklı dönemlerde yapılan bu konutlar ile Beş Konaklar arasında mimari özellikler arasında farklılıklar bulunmaktadır. Kentin önemli bir caddesi olan Sinema Caddesi, geleneksel konutlar ile çağdaş konutların bir arada bulunduğu kompleks bir düzene sahiptir. Çalışma alanı olarak tarihi Beş Konaklar ve her iki yanındaki çağdaş konutlar incelenmiştir.

Yakın Geçmişe Ait Betonarme Yapılar  
Beşkonaklar Caddesi Yol Aksı

**Şekil:1** Beş Konaklar (2. Yapı) Cephesi

**Şekil:2** 3. Yapı Cephesi

**Şekil:3** 1. Yapı Cephesi

## 2.2. Çizgisel Değerlendirme

Uzayda iki noktayı birleştirerek veya noktaları belirli bir yönde zincirleyerek bir çizgi oluşturulur. Bir çizgi, uzunluğu ve genişliği olan bir şekil olarak da tanımlanabilir. Mimaride, odayı çevreleyen yüzeyler (zemin, duvarlar, tavan), odanın dış kabuğu, dış kabuğun açıklıkları (pencereler, kapılar) ve bina şeklinin silueti, hepsi doğrusal temsillerdir. (Gürer, 1992).

Sinema Caddesindeki belirlenen binaların cephelerini incelenmiş ve cephelerdeki mimari elemanlar belirlenmiştir. Pencere ve kapı boşluklarının, cumbaların, kat izlerinin, kolonların, kütsel hareketlerin çizgisel bir eleman olarak görev aldığı görülmektedir. Bu çizgisel elemanlar yatay, düşey ve eğrisel olarak sınıflandırılmış ve cephe üzerinde yapılan çizimler ile cephe üzerindeki etkileri incelenmiştir.

Cepheler üzerindeki yatay çizgiler kırmızı, düşey çizgiler mavi, eğrisel çizgiler ise yeşil renk ile tanımlanmışlardır.

Şekil:4 Sinema Caddesi Cephesi

Şekil:5 Yatay Cephe Çizgileri

Şekil:6 Düşey Cephe Çizgileri

Şekil:7 Eğrisel Cephe Çizgileri

Renklendirme tamamlandıktan sonra bir çizim programı ile yapılan sayım sonucunda seçilen cephede 527 dikey çizgi, 581 yatay çizgi ve 77 eğrisel çizgi olduğu görülmüştür.

Yatay çizgiler, güven veren, durağan, dinginliği çağrıştıran, rahatlatıcı ve sakinleştirici çizgilerdir. Mimar yapıların geniş, ferah ve dengeli algılanmasını sağlamaktadır. Düşey çizgiler, yüksekliği, gücü, dinamizmi, resmiyeti çağrıştıran çizgilerdir. Mimari yapıların hareketli, ulaşılmaz algılanmasını sağlamaktadır. Eğrisel çizgiler ise pasifliği, yumuşaklığı, organikliği, esnekliği yansıtan çizgilerdir.

Cephedeki çizgiler incelendiğinde düşey ve yatay çizgi sayılarının birbirine yakın olduğu görülmüştür. Tarihi Beş Konakların cephesine bakıldığında yatay çizgilerin düşey çizgilerden fazla olduğu görülmüştür. Bu da konutların daha ferah, dingin ve ulaşılabilir olduğunu yansıtmaktadır. 1. ve 3. Konutlarda ise düşey çizgiler yatay çizgilerden fazla olup düşeyde hareketlilik göstermektedirler. Böylece yapıların daha aktif, dinamik ve ulaşılmaz olduğunu çağrıştırmaktadır. Eğrisel çizgiler ise yalnızca geleneksel konutların cephelerinde bulunmaktadır. Bu da bu yapıların esnek, durağan olduğunu göstermektedir.

### 2.3. Düzlemsel Değerlendirme

Bir çizginin belirli bir yönde hareket ettirilmesiyle bir düzlem oluşturulur ve bir genişliğe ve bir uzunluğa sahiptir. Ancak genişliği yoktur. Düzlemler, hacimlerin boyutunu tanımladıkları için 3B mimari tasarımda önemli bir unsurdur.(Üstündağ,2009 ).

Bu bölümde kapı ve pencere boşlukları, duvarlar, kütleli hareketler düzlemsel olarak incelenmiştir. Pencere ve kapı boşlukları genel olarak dikdörtgen ve kare forma sahip olmakla beraber geleneksel konut cephelerinde elips düzlemler de bulunmaktadır.

Duvar düzlemleri kapı ve pencerelerin çıkarılması sonucu oluşan düzlemlerdir. Kütleli hareketler ise mimari formların önde veya arkada olması sonucu oluşan düzlemlerdir. Katı ve geçirgen düzlemlere bakıldığında, vitrin, pencere ve kapı geçirgen olup geriye kalan duvarlar ve masif yüzeyler ise katı düzlemler olarak görülmektedir.

Şekil:8 Kapı ve Pencere Düzlemleri

Kapı ve pencere düzlemleri incelendiğinde yapıların kendi aralarında pencere düzlemlerinin tekrar ettiği görülmektedir. Fakat bir bütün olarak bakıldığında bina cephelerinin yanlarındaki yapıların cepheleri ile uyum içerisinde olmadığı farklı oran ve sayıda boşluk düzenlendiği görülmektedir. 1. Ve 3. Konutlarda zemin katlarda büyük pencere açıklıkları düzenlenmiş olup diğer katlar ile uyumsuzluk bulunmaktadır.

Şekil:9 Duvar Düzlemleri

Şekil:10 Katı ve Geçirgen Düzlemler

Katı ve geçirgen düzlemlere bakıldığında 2. Yapının cephesinde geçirgen yüzeylerin katı yüzeylere göre daha az oranda bulunduğundan dolayı daha kapalı bir yapıya sahiptir. 1. Ve 3. yapıların cepheleri ise katı yüzeylere oranla saydam düzlemlerin daha fazla olduğu bu nedenle bu yapıların daha geçirgen olduğu görülmektedir. Aynı zamanda bu yapıların zemin katları diğer katlara göre daha geçirgen hatta tamamen saydam bir yapıdadır. Zemin katlarda dükkânların bulunması sebebiyle bu mekânların insanlar için kolay ulaşılabilir olmasını sağlamak için daha geçirgen düzenlenmiştir.

Şekil:11 Kütlesel Hareketlerin Oluşturduğu Düzlemler

Cephenin ileri geri kütle hareketleri sonucu oluşan düzlemler ise her yapıda görülmektedir. Apartman bloklarında tüm cephe boyunca olan kütle hareketleri, Beş Konaklarda üst katlardaki cumbalarda görülmektedir.

#### 2.4. Hacimsel Değerlendirme

Cadde'deki binaların hacimlerini incelediğimizde 1. ve 3. yapının düşeyde dikdörtgen formlarına, 2. yapının ise yatayda dikdörtgen formlara sahip olduğu görülmektedir. Diğer

konutların Beş Konaklara göre daha yüksek yapıda olduğu görülmektedir. 1. ve 3. yapının daha

yüksek, heybetli olması ise iki yapı arasında kalan 2. Yapı üzerinde ezici bir etki oluşturmaktadır. Kütleler aynı hizada sıralanmış şekilde daha çok dolu hacimler olduğu görülmektedir.

Şekil:12 Doluluk- Boşluk Yüzeylerinin Oluşturduğu Düzlemler

## 2.5. Ritim Değerlendirmesi

Mimaride ritim duygusu, dönüşümlü tekrarların, mükemmel tekrarların ve gelişen öğelerin sıralı kullanımından gelir. (Aydınlı,1992). Düzenli aralıklarla tekrar eden şekiller, ritim oluşumunda önemli değişkenlerdir. Basit bir ritim veya karmaşık bir ritim olabilir. Ritim de önemli bir bileşen olarak kullanılır. (Üstündağ,2009).

Mimaride ritim, orantılı olarak değişebilen tekrar eden modüller veya ilişkiler dizisidir. Her birim bir bütün olarak ayrı olsa da, bir bütünü oluşturacak şekilde belirli bir düzende kümelenmiş olarak algılanabilir. mimari ritim; duvar parçalanmasındaki büyük çöküntüler, dolgular, boşluklar, bazen bina yapıları, modüler sistemler, bazen kullanılan mekansal elemanlar olarak adlandırdığımız ve seçilen malzemelerin biçimsel veya yapısal özelliklerinin yakalanabildiği mimari ritimdir (Gezer, 2014).

Çalışma alanındaki yapılara bakıldığında 1. ve 3. yapının yüksekliklerinin ortalarında bulunan 2.yapıdan daha yüksek olduğu görülmektedir. Bu nedenle kütleli düzlemde bir ritme sahip değillerdir. Cephelerdeki pencereler incelendiğinde, Pencerelerin genellikle kare veya dikdörtgen olduğu görülmektedir. 1. Yapıda pencereler sık ve dar olup her katta tekrarlanmıştır. Zemin katta bu pencerelerin yerine büyük ve geniş pencere ve kapı boşlukları oluşturulduğundan bu kat diğer katlar ile uyumsuzdur. 2. Yapıda ise pencereler geniş ve daha seyrek düzenlenmiştir. Farklı konutlarda aynı pencere düzeni devam etmekte ve bir ritim

oluşturmaktadır. 3.yapıda ise pencereler geniş ve sık olarak düzenlenmiştir. Cephe simetrik bir düzende olup katlarda tekrar devam etmektedir. Fakat zemin katta dükkânın olduğu bölümde

pencere tekrarı bozulmuştur. Yapıların cepheleri birlikte incelendiğinde 2. Yapının yan cephelerine sonradan eklenen 1. ve 3. Yapının aynı cephe düzenini devam ettirmediği görülmektedir. Yapıların kendi içinde bir tekrar bulunurken yapılar arasındaki ilişkide birbiriyle uyumlu bir tekrar görülmemektedir.

## **SONUÇ**

Malatya ilini önemli bir caddesi olan Sinema Caddesi üzerinde yapılan alan çalışması ile kentin simge yapılarından olan Tarihi Beş Konaklar ve yanında bulunan güncel apartmanlar belirlenerek araştırmalar yapılmıştır. Mimari yapıların önemli bir parçası olan cepheleri görsel analiz kapsamında incelenmiştir.

Bu çalışma ile tarihi ve günümüz konutlarının cepheleri değerlendirilerek aralarında denge ve uyum olup olmadığı tespit edilmiştir. Öncelikle yapılan literatür çalışması sonucu algı kavramı ve görsel algı incelenmiş, mimaride görsel tasarım elemanları belirtilmiş ve alan çalışmasında değerlendirmeler yapılmıştır.

Sinema caddesi üzerinde bulunan yapıların cepheleri çizgisel, düzlemsel ve hacimsel olarak değerlendirilmiş ayrıca ritim değerlendirmesi yapılmıştır. Yapıların kendi içerisinde çizgisel ve düzlemsel olarak tutarlı olduğu fakat bir arada denge ve uyumun sağlanmadığı görülmüştür. Sonradan eklenen yapıların tarihi yapının çizgisel ve kütsel özelliklerini dikkate almadan yapıldığı ve tarihi yapının arada hacim olarak kaybolduğu görülmektedir.

Çizgisel değerlendirmede, yapıların genellikle yatay ve düşey çizgilerin olduğu aynı zamanda tarihi konakta eğrisel çizgilerin de bulunduğu görülmektedir. Bu da cepheye esneklik ve öznellik kazandırmıştır. Düzlemsel olarak değerlendirmede doluluk- boşluk oranlarına bakıldığında 2. yapının boşluk oranların daha az olduğu böylece kapalı bir yapıda olduğu, 1. ve 3. Yapının ise boşluk oranlarının daha fazla olduğu görülmektedir. Cephelerin bütününde ise yapıların arasında oranlar arasında farklılıklar olması cephede bütünlüğü bozmaktadır. Hacimsel değerlendirmede ise 1. ve 3. yapının düşey düzlemde yükseldiği ve 2. yapının yatayda uzadığı görülmektedir. Bu da 2. yapı üzerinde ezici bir etki oluşturmaktadır. Cephe bütününde birbirini takip eden çizgiler ve düzlemler bulunmadığından bir ritim ve uyum görülmemektedir.

1. ve 3. Yapı tarihi konağın yanında yer alırken bu yapı ile birliktelik kurmadan, cephe özellikleri dikkate alınmadan inşa edilmişlerdir. Hacim olarak daha yüksek yapıldıkları için tarihi yapı sokakta ilk bakışta algılanmamaktadır. Cadde üzerinde farklı düzenlerde inşa edilen yapılar görsel olarak karmaşaya sebep olmaktadır.

Çalışma ile kent imajını etkileyen yapı cephelerinin tarihi ve modern yapılar üzerinde analizleri yapılmış ve bir arada bulunan bu yapıların uyum ve uyumsuzlukları incelenmiştir. Bu çalışma ile tarihi mirasımız olan geleneksel konutların cephelerinin çizgisel, ritim, doluluk-boşluk analizleri yapılarak tasarı elemanlarının kullanımının örnek oluşturması amaçlanmıştır. Aynı zamanda kent düzleminde bir arada bulunan geleneksel konutlar ve bu konutlara bitişik konumlanan modern konutların yapılan analizler ile karşılaştırması yapılarak daha çok uyumsuzluk olduğu tespit edilmiştir. Bu çalışma ile geleneksel konutların bulunduğu alanlara yeni yapılacak tasarımlar için örnek teşkil etmesi ve bu analizler doğrultusunda tarihi mirasımız olan bu konutları ezici ve uyumsuz olan tasarımlardan kaçınılması gerektiği anlaşılmaktadır.

### ÖZET

Çinko eksikliği, tarla bitkilerinde ürün veriminin ve besin kalitesinin düşmesine neden olan önemli bir problemdir. Dünya’da çinko eksikliği olan topraklarda hayatını sürdüren insanların bünyesinde çinko değerleri düşüktür. Dünyada yaklaşık 2 milyon insanın çinko değerlerinden muzdarip olduğu görülmektedir. Tarla bitkileri içerisinde tahıllar, özellikle gelişmekte olan ülkelerde günlük kalori alımını karşılamada önemli bir rol oynamaktadır. Ancak özellikle çinko eksikliği olan topraklarda yetiştirildiklerinde, tahıl tanelerinin çinko konsantrasyonlarının oldukça düşük seviyelerde olduğu görülmektedir. Sürekli tahıl bazlı diyetlerle beslenen insanlarda fiziksel gelişim, bağışıklık sistemi ve beyin fonksiyonlarındaki bozukluklara sebep olan çinko noksanlığına bağlı sağlık sorunları meydana gelmektedir. İnsanlardaki çinko eksikliğine başlıca çözüm olarak gösterilen stratejiler arasında bitki ıslah stratejisi tahıldaki konsantrasyonları iyileştirmede yararlı olan en sürdürülebilir ve uygun maliyetli bir yaklaşım olarak görülmektedir. Bununla birlikte bu strateji önemli bir çaba ve kaynak gerektiren uzun vadeli bir süreç gerektirmektedir. Bitki ıslah programlarının başarısı mevcut gen havuzlarının boyutuna bağlı kalmaktadır. Bu derlemede çinko bakımından biyolojik olarak zenginleştirilmiş buğday, pirinç ve mısır gibi tarla bitkilerinin biyofortifikasyonun çinko eksikliğine bağlı sağlık sorunlarının çözümünde üstleneceği etkin stratejiler konu ile ilgili literatürün taranması ile ele alınmıştır.

**Anahtar Kelimeler:** Zn, Biyofortifikasyon, Buğday, Fasulye, Mısır

## **ZINC (ZN) BIOFORTIFICATION IN FIELD CROPS**

### **ABSTRACT**

Zinc deficiency is a significant problem that causes a decrease in crop yield and nutritional quality in field crops. Zinc values are low in the body of people who live in zinc-deficient soils worldwide. It is seen that about 2 million people in the world suffer from zinc values. Among the field crops, cereals are essential in meeting the daily calorie intake, especially in developing countries. However, cereal grains' zinc concentrations are at deficient levels, especially when grown in zinc-deficient soils. In people constantly fed grain-based diets, health problems occur due to zinc deficiency, which causes disorders in physical development, immune system, and brain functions. Among the strategies cited as the primary solution to zinc deficiency in humans, the plant breeding strategy appears to be the most sustainable and cost-effective approach useful in improving concentrations in grain. However, this strategy requires a long-term process that requires significant effort and resources. The success of plant breeding programs depends on the size of existing gene pools. In this review, the effective strategies that biofortification of field crops such as wheat, rice, and corn that are biologically enriched in zinc will undertake in solving the health problems related to zinc deficiency are evaluated by reviewing the literature on the subject.

**Keywords:** Zn, Biofortification, Wheat, Common Bean, Maize

## 1. GİRİŞ

Günümüzde 800 milyondan fazla insan gıdaya ulaşamamakta ve yetersiz beslenmektedir (Ikerd, 2022). Dünya nüfusunun 2050 yılına kadar yaklaşık 9,5 milyara ulaşacağı ve iklim değişiklikleri nedeniyle nüfusun büyük bir kısmının açlık tehlikesi altında olacağı tahmin edilmektedir (Kush vd., 2012; Nadeem vd., 2021). 1960 yılında açlık sorununun yaygınlaşması tarımda “yeşil devrimin” gerçekleşmesini hızlandırmıştır (Şahinöz, 1990). Yeşil devrim ürünlerinden buğday ve pirinç çeşitlerinin tanıtılmasıyla, çiftçiler tarlalarında yaygın olarak yüksek verimli tahıl ürünlerinin yetiştiriciliğine başlamıştır. Daha karlı olan bu ürün grubu, protein ve mikro besin açısından zengin olan baklagil ekim alanlarında azalmaya yol açmıştır (Cakmak vd., 2010). Çiftçilerin giderek daha az üründe uzmanlaşmaya başlaması “monokültür” yetiştiriciliğin yaygınlaşmasına, tahıl fiyatlarının oransal olarak düşmesine ve bakliyat fiyatlarında artışa neden olmuştur (Pfeiffer vd., 2005; Cakmak vd., 2010). Bu durum ayrıca genetik çeşitliliğin ve mikro besinler açısından zengin olan yabani çeşitlerin tarımının azalmasına yol açmıştır (Cakmak, 2008). Yapılan araştırmalara göre 7000 bitki türünden yalnızca 30 bitki türünün dünyanın gıda kaynağının %95’ini oluşturduğu tespit edilmiştir (Cakmak vd., 2002). Gıda kaynaklarına erişimin azalması, uygun fiyatlı ve bulunabilir bir ürün olan tahıl ürünleriyle sürekli beslenmeye ve Gizli Açlığa (Hidden Hunger) yani vitamin ve mineral bakımında yetersiz beslenmeye yol açmıştır (Cakmak vd., 2010). Gizli açlık, karbonhidrat bakımından zengin ancak besin değeri bakımından zayıf bir diyet sonucunda ortaya çıkan çoklu mikro besin (demir, çinko gibi) eksiklikleridir (Burchi vd., 2011).

Çinko (Zn) hayvan, bitki ve insanların hayatta kalması için gerekli olan bir mikro elementtir (Hafeez vd., 2013). Ağırılık olarak, yer kabuğunun %0,02’sini oluşturmaktadır (Yan vd., 1999). Düşük hareketliliği nedeniyle bu element toprakta genellikle nokсандır (Nazir vd., 2016). Topraktaki Zn konsantrasyonları 10 ila 300 mg kg<sup>-1</sup> arasında değişmekte olup ortalama 50 mg kg<sup>-1</sup>’dir (Alloway, 2012). Önemli bir mikro besin elementi olan çinko, karbonhidratların, lipidlerin, proteinlerin ve nükleik asitlerin sentezinde, parçalanmasında ve ayrıca diğer mikro besinlerin metabolizmasına katılan çok sayıda (>300) enzimin temel bir bileşenini oluşturmaktadır (Alloway, 2008; McClung, 2019). Çinko eksikliğinin semptomları yaşa göre değişmekte, bebeklerde ve çocuklarda ishal, iştah kaybı, büyüme geriliği ve sık enfeksiyonlara yakalanma gibi sorunlara yol açmaktadır (Ryu ve Aydemir, 2020; King vd., 2014; Jamal vd., 2021; Krebs, 2013). Ayrıca çinko eksikliği, koku ve tat alma duyularına

müdahale edebilmekte, yetişkinlerde yara iyileşmesinde gecikmelere, bilişsel ve psikolojik işlevlerde de değişikliklere

neden olabilmektedir (Nagraj vd., 2017; Gupta vd., 2020). Hindistan, Pakistan, Mısır, Çin, İran ve Türkiye gibi ülkelerin hem topraklarında hem de yaşayan insanların Zn noksanlığı yaygın olarak görülmektedir (Cakmak, 2008; Alloway, 2008). Yaklaşık 2 milyar insanın çinko eksikliği yaşadığı bildirilmiştir (Maxfield vd., 2021). Çinko eksikliğine neden olan ana faktörün fitat içeren yüksek tahıl proteinin alımı olduğu tespit edilmiştir (Prasad, 2013). Çinko eksikliği riski taşıyan okul öncesi çocuklar arasında 116.000 ölümün sebebinin zayıflamış bağışıklık sistemi olduğu düşünülmektedir (Goyena vd., 2021) Günlük alınması gereken çinko miktarı yaş ve cinsiyete göre değişmektedir. Amerikan hastalık önleme ofisinin (ODS) verdiği bilgilere göre günlük alınması gereken çinko miktarları Tablo 1’de verilmiştir.

**Tablo 1:** Günlük Alınması Gereken Çinko Miktarı (ODS)

Yaşam Döngüsü	Günlük Çinko Miktarı
0-6 Ay Bebek	2 mg
7-12 Ay Bebek	3 mg
1-3 Yaş	3 mg
4-8 Yaş	5 mg
9-13 Yaş	8 mg
14-18 Yaş Erkek	11 mg
14-18 Yaş Kız	9 mg
Yetişkin Erkek	11 mg
Yetişkin Kadın	8 mg
Hamile	12 mg
Emziren	13 mg

Son yıllarda ortaya çıkan biyofortifikasyon kavramı yani biyolojik zenginleştirme bitki ıslahından faydalanılarak, bitkilerin besin kalitesinin yükseltilmesi ve besin içeriğinde iyileştirme olarak ortaya çıkan yeni bir yaklaşımdır (Cakmak vd., 2010). Biyoteknoloji ile ıslah metotlarının birlikte kullanılmasıyla bitkilerin yenilebilir kısımlarındaki mikro besin konsantrasyonlarını artırmayı amaçlayan biyofortifikasyonun ekonomik bir yöntem olduğu düşünülmektedir (Zhao ve McGrath, 2009). Özellikle gelişmemiş ve gelişmekte olan

ülkelerdeki kırsal nüfusta mikro besin yetersiz beslenmesini hafifletmek için bazı özel kuruluşlar (HarvestPlus, vs.) tarafından çeşitli ıslah programları geliştirilmiştir (Zhao ve

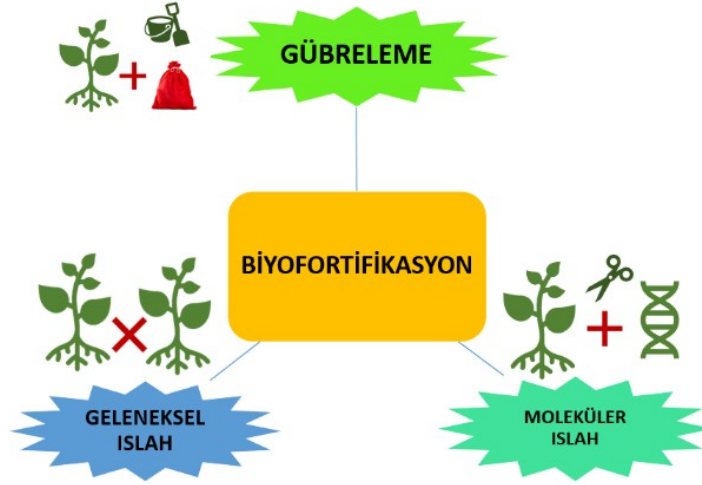

Shewry 2011). Çünkü yetersiz beslenme, gelişmekte olan ülkelerde insan gelişimini, sosyal ve ekonomik kalkınmayı engellemektedir (Khush vd., 2012). Bitkilerin biyolojik olarak zenginleştirilmesi uzun bir çaba gerektirmektedir (Şekil 1). Birçok bitki ıslah programları, verimin, biyotik ve abiyotik streslere karşı direncin ve ürünün lezzetinin iyileştirilmesine odaklanmaktadır. Son yıllarda beslenme kalitesinin iyileştirilmesi (Fe ve Zn mikro besin elementi ve Avitamini gibi) ek bir ıslah hedefi olarak eklenmiştir (Khush vd., 2012). Bitkilerin temel mikro besin içeriğinde ve vitamin seviyelerinde büyük bir genetik çeşitlilik mevcuttur. Islah stratejileri, eşeyssel olarak uyumlu olanlardan elde edilebilen germplazmda bulunan sınırlı genetik varyasyona dayanmaktadır (Hirschi 2009). Biyoteknolojik yöntemler genetik varyasyondan yararlanmayı kolaylaştırmaktadır. Demir ve çinko gibi metal iyonları, karmaşık taşıma yollarıyla topraktan tohumlara taşınmaktadır. Bu nedenle, mineral zenginleştirilmiş bitkilerin geliştirilmesinin ve mahsullerin yenilebilir dokularındaki mineral konsantrasyonlarını arttırmak için iyon taşıma mekanizmasının iyi anlaşılması gerekmektedir (Khush vd., 2012).

## 2. ÇİNKO BİYOFORTİFİKASYONU

Biyolojik zenginleştirmenin nihai hedefi yeterli ve sürdürülebilir bir şekilde besleyici ve güvenli gıdalar üretmektir (Saltzman vd., 2013). Tarla bitkileri arasında yüksek verim kapasitesine sahip olan ve yaygın olarak yetiştirilen modern buğday çeşitleri, insanların günlük gereksinimlerini karşılamak için zayıf mikro besin kaynaklarıdır. Özellikle buğday; bünyesinde insan sindirim sisteminde çinkonun emilimini azaltan fitik asit ve fenolik bileşikler gibi beslenme karşıtı bileşikler açısından zengindir (Welch ve Graham 2004). Ticari buğday çeşitlerinde tane Zn konsantrasyonları 20–35 mg/kg'dır (Rengel vd., 1999; Çakmak vd., 2004). Temel minerallerin ana kaynağı buğday olan diyetlerde bu konsantrasyonlar insan beslenmesi için yeterli değildir (Cakmak vd., 2010). Çinkonun biyoyararlanımının artması, fitat gibi anti besin maddelerinin varlığı veya destekleyici maddelerin eksikliği ile ilişkilidir (Welch ve Graham 2004; White ve Broadley 2005). Buğday bitkisi gibi önemli miktarda fitat içeren tahıllar (pirinç, mısır gibi) üzerinde yapılan çalışmalarda, Zn'nin biyoyararlanımının %25 olduğu belirlenmiştir (Cakmak vd., 2010). Tarla bitkileri arasında makarnalık buğdayın yabani ve sentetik ebeveynlerdeki Zn konsantrasyonlarının genetik çeşitliliğinden yararlanılabileceği ve beslenme kalitesinin yükseltilmesi için yetiştirmeye oldukça uygun olabileceği araştırmacılar tarafından belirtilmiştir (Cakmak vd., 2010).

Bitkide çinkonun arttırılması ile bitkinin yenilebilir kısımlarındaki kadmiyum gibi alım mekanizması çinkoya benzeyen bazı zararlı metallerin birikmesine neden olabilmektedir (Khush vd., 2012). Bu nedenle, çinko ile biyolojik olarak güçlendirilmiş bitkilerin geliştirilmesi, benzer kimyasal özellikler sergileyen herhangi bir toksik elementin birikimini en aza indirecek stratejilere ihtiyaç duymaktadır (Lee vd. 2003; Palmgren vd. 2008). Biyolojik zenginleştirme yoluyla beslenme güvenliğini sağlamaya yönelik; geleneksel ıslah, moleküler ıslah ve gübreleme gibi agronomik faaliyetleri içine alan üç ana strateji mevcuttur (Şekil 2). Tahıl ve baklagillerin zenginleştirilmesi iki farklı şekilde elde edilir. Bunlar; bitki ıslahı ile (genetik biyo-güçlendirme) çinkolu gübrelerin uygulanmasıdır (topraktan ve yapraktan) (Cakmak, 2008).

Şekil 2. Bitkileri Biyolojik Zenginleştirme Yaklaşımları

Uzun vadede genetik biyofortifikasyon, ya tohumda çinko biriktirme yeteneği yüksek olan türlerinin çaprazlanması ya da yeni çeşitler geliştirmek için genetik modifikasyon yoluyla gerçekleşmektedir. Genetik modifikasyon, çinko alımını artırmak için en sürdürülebilir ve ekonomik strateji gibi görünmektedir (Alloway, 2008). Ancak genetik olarak yüksek oranda çinko içeren çeşitlerin, marjinal çinko statüsüne sahip topraklarda yetiştirildiğinde daha fazla çinko depolama eğiliminde olabileceği bilinmelidir. Ayrıca bu çeşitlerin potansiyel olarak çinko eksikliği olan topraklardan yeterli miktarda çinko alımı yapamayacakları ve bu çeşitlerden yararlanabilmeyi azalacağı muhtemeldir. Bu nedenle, genetik biyolojik zenginleştirmenin agronomik biyo-zenginleştirmeye ilerlemesi gereken metotlar olarak değerlendirilmesi gerekmektedir (Welch, 2008; Alloway, 2008).

Çeltik bitkisi Hindistan, Endonezya ve Bangladeş gibi Asya ülkelerinde yoğun olarak yetiştiriciliği yapılmaktadır (Douthwaite, 2021). Genetik biyofortifikasyon çalışmaları incelendiğinde; HarvestPlus, Uluslararası Pirinç Araştırma Enstitüsü (IRRI) ve Uluslararası Tropikal Tarım Merkezi (CIAT) ile yapılan ortak çalışmada günlük çinko ihtiyacının yüzde 60'a kadarını karşılayabilen çinko içeriği yüksek pirinç (22-27,5 mg/kg) geliştirilmiştir (Anonim, 2022a). Ayrıca Güney Asya'da yaygın olarak yetiştirilen popüler buğday çeşitlerinin (HarvestPlus, Uluslararası Mısır ve Buğday İyileştirme Merkezi (CIMMYT) Zn bakımından üstün olanları tanımlanmıştır (Velu vd., 2015; Wani vd., 2022). Çinko içeriği arttırılmış buğday çeşitleri (29.5-54 mg/kg Zn), günlük çinko ihtiyacının %50'ye kadarını karşılayabilmekte ve

günlük buğday tüketiminin fazla olduğu bölgelerde çinko eksikliğinin azalmasına katkı sağlamaktadır. Şu anda geliştirilmiş olan bu bitkinin Afganistan, Bangladeş, Hindistan, Nepal ve Pakistan'da yetiştiriciliği yapılmaktadır (Anonim, 2022b).Yapılan başka bir çalışmada ise, 825 yabancı *T. dicoccoides* türü analiz edildiğinde, türlerin tanelerinde çinko birikiminin 14–190 mg/kg olduğu bildirilmiştir. Kültür buğdayının tanesindeki çinko içeriğinin ortalama 1 µg/tohum olduğu ve yabancı çeşitlerde ise bu içeriğin maksimum 7 µg/tohum olduğu tespit edilmiştir (Çakmak vd. 2004).

Yüksek verimli, çinko içeriği artırılmış (30-34,9 mg/kg) mısır çeşitlerinin yetiştiriciliğine başlanmıştır. Bu çeşitlerin günlük çinko ihtiyacının yüzde 70'e kadarını karşılayabilir olduğu ve günlük mısır tüketiminin yüksek olduğu bölgelerde çinko eksikliğinin azaltılmasına katkıda bulunduğu bildirilmiştir (Douthwaite, 2021). HarvestPlus, Uluslararası Mısır ve Buğday Geliştirme Merkezi (CIMMYT) ve Uluslararası Tropikal Tarım Enstitüsü (IITA) ortaklığında yürütülen çalışmalarda geliştirilen mısır çeşitleri şu anda Latin Amerika ve Afrika'da Nijerya, Kolombiya, El Salvador, Guatemala, Haiti, Honduras, Meksika, Nikaragua ve Panama gibi ülkelerde yetiştirilmektedir (Anonim, 2022c).

### 3. SONUÇ

Diğer mikro besin eksikliklerine kıyasla Zn eksikliği olan topraklar yeryüzünde daha yaygındır. İnsan popülasyonunun tahıl bazlı beslenmesi, gelişmekte olan ve az gelişmiş ülkelerdeki mikro besin eksikliğinin birincil nedenini oluşturmaktadır. Gübreleme yoluyla tarımsal biyolojik zenginleştirme, insan popülasyonundaki mikro besin eksikliğinin üstesinden gelmek için sürdürülebilir ve uygun maliyetli görünmektedir. Organik veya inorganik gübre uygulamaları, toprak özelliklerinde değişiklik yaparak mikro besinlerin biyoyararlanımını artırmaya katkıda bulursa da aşırı gübre kullanımı nedeniyle, tamamlayıcı bir yaklaşıma şiddetle ihtiyaç vardır. Biyofortifikasyon dünyada yetersiz beslenmeyi ele alan en uygun maliyetli stratejilerden biri olarak görülmektedir. Gelişmekte olan ülkelerdeki yoksullara mikro besinler sağlamaya yönelik bu strateji, geleneksel bitki ıslahı ve biyoteknoloji kullanılarak yapılan, yenilen temel gıdaları daha besleyici hale getirilmesi planlanan, etkili bir yöntemdir.

### ÖZET

Çevre kirliliği günümüz dünyasının en kritik sorunlarından biridir. Hava kirleticiler, özellikle dizel motor emisyonları sağlıklı çevre varlığı adına önemli bir endişe kaynağıdır. Egzoz borusu yoluyla salınan metal kirleticiler, atmosfere yerleştikten sonra, özellikle toprak ve bitkilerin kirlenmesi yoluyla insan ve ekosistem sağlığı açısından ciddi tehditler oluşturmaktadır. Benzin ve dizel bazlı egzoz emisyonlarına maruz kalma, tarım endüstrisinde yükselen bir sağlık riski olarak tanımlanmaktadır. Bünyesinde barındırdıkları ağır metallerle egzoz dumanları bitkiler için ciddi toksik etkiler göstermektedir. Bu dumanların içerisinde olan özellikle kurşun, nikel, civa ve kadmiyum gibi ağır metaller ekonomik değeri yüksek olan bitkilerin verim kapasitelerini düşürmekte ve sağlıksız koşullarda yetişmelerine sebebiyet vermektedir. Çevresel ve tarımsal sürdürülebilirliğe artan ilgi nedeniyle, tarım faaliyetlerinden kaynaklanan ekolojik yapının bozulmasına yönelik kaygılar dünya çapında artış gösteren bir öneme sahiptir. Bu sebeple günümüzde özellikle hava kalitesini iyileştirmek adına yürütülen faaliyetler, egzoz dumanlarından kaynaklanan kirlenme emisyonlarının azaltılmasına yöneliktir. Bu derlemede egzoz dumanlarının çevre, doğa ve tarım faaliyetleri için oluşturduğu potansiyel tehlikeler ve bazı tarla ürünlerine karşı zarar boyutları aktarılacaktır.

**Anahtar Kelimeler:** Egzoz Dumanları, Ağır Metaller, Kurşun, Nikel, Sürdürülebilir Tarım

## **EFFECTS OF EXHAUST FUMES ON FIELD PRODUCTS**

### **ABSTRACT**

Environmental pollution is one of the most critical problems of today's world. Air pollutants, especially diesel engine emissions, are an essential concern for the existence of a healthy environment. Metal pollutants released through the exhaust pipe pose severe threats to human and ecosystem health after they settle in the atmosphere, especially through the contamination of soil and plants. Exposure to gasoline and diesel-based exhaust emissions is identified as a rising health risk in the agricultural industry. The heavy metals and exhaust fumes they contain show serious toxic effects on plants. Heavy metals such as lead, nickel, mercury, and cadmium in these fumes reduce the yield capacity of plants with high economic value and cause them to grow in unhealthy conditions. Due to the increasing interest in environmental and agricultural sustainability, concerns about the deterioration of the ecological structure caused by agricultural activities have grown in importance worldwide. For this reason, activities carried out to improve air quality, especially today, aim to reduce pollutant emissions from exhaust fumes. This review will discuss the potential dangers of exhaust fumes for the environment, nature, and agricultural activities and the extent of damage to some field products.

**Keywords:** Exhaust Fumes, Heavy Metals, Lead, Nickel, Sustainable Agriculture

## 1. GİRİŞ

Farklı inorganik ve organik kirleticiler nedeniyle, çevresel bozulmalar dünya çapında hayati bir sorun haline gelmiştir. Bu sorun zamanla küresel ekosistemin bütünlüğünü ciddi oranlarda tehdit etmektedir (Zulfiqar vd., 2019). Geleneksel olarak ılıman bölgelerdeki şehirlerin hava kirliliği iklimine kükürt dioksit (SO<sub>2</sub>) ve kömür dumanı hâkim olmuştur. Yirminci yüzyılın ikinci yarısında, insan sağlığı ve sosyo-ekonomik değişimlerle ilgili endişeler, bu kirleticilerin oranında büyük azalmalara yol açmıştır. Yine de gelişmekte olan dünya ülkelerinde bazen büyüklükleri artan bir sorun olmaya devam etmektedir (Bell ve ark., 2011). Günümüzde artan kentleşme ve sanayileşme ile ilgili çevre kirliliği oldukça artış göstermiş ve çeşitli çevresel problemler ortaya çıkmıştır. Ağır metaller bu problemlerin başında gelmekte; su, toprak ve hava kaynaklarında yadsınamayacak seviyelerde kirliliğe neden olmaktadır. Bitkilerin fizyolojik yapısını olumsuz etkileyen ve bitki üretiminin azalmasına sebep olan ağır metaller, insanlarda besin zinciri yoluyla sağlık için önemli riskler oluşturmaktadır (Yerli vd., 2020). Başlıca ağır metal kaynakları; kentsel atıklar, kanalizasyon atıkları, mineral gübreler, bazı ana taşlar, biyositler, atıksular, madencilik ve motorlu araçların egzoz gazlarıdır (Seven vd., 2018). Çevre kirliliği yoğunluğu, kamyonlar, tarım traktörleri, otomotiv makineleri ve hafif ticari araçlardaki dizel motor sayısı ile doğrudan ilişkilidir (Schlosser ve ark., 2017). Çevre sorunlarına neden olan dizel motor emisyonlarının önemli bir oranı tarım traktörleri ve ormancılık makineleri gibi iş makinelerinden kaynaklanmaktadır (Gholami ve ark., 2013). Birçok atmosfer kirleticisinin yanı sıra özellikle şehirlerde trafikten kaynaklanan egzoz dumanları, insanlar, hayvanlar ve bitkiler olmak üzere tüm canlıların yaşamları için tehdit oluşturan önemli çevre kirleticileridir (Bingöl vd., 2010). Giderek artan araç sayısından dolayı enerji talebinin artmasıyla, yakıt yanmasından kaynaklanan CO<sub>2</sub> (karbon dioksit), CO (karbon monoksit), PM (parçacıklı madde), HC (hidrokarbonlar) ve NO<sub>x</sub> (nitrojen dioksit ve nitrojen monoksit) emisyonları gibi olumsuz çevresel etkiler ortaya çıkmaktadır (Schlosser ve ark., 2017).

Egzoz gazı emisyonları ile ilgili çevresel endişeler, küresel ısınma, asitleşme ve hava kirliliği ile ilgili endişelerdeki artışa paralel olarak son yıllarda artmıştır (Lovarelli ve Bacenetti, 2019).

Atmosfer kirliliğinin %60'ını oluşturan egzoz gazı kirliliğinde dizel ve benzin motorlu araçlardan çıkan gazlardaki kirletici miktarları değişiklik göstermektedir (Bingöl vd., 2010). Dizel motorlar, ağır hizmet kamyonlarında kullanıldıkları ve benzinli motorlardan daha fazla

kirlenici yaydıkları için hava kirliliğini önemli ölçüde etkilemektedir. Bununla birlikte, dizel yakıt, birim hacim başına benzinden biraz daha yüksek bir enerji içeriğine sahiptir. Arazi

araçları, kamyonlar, otobüsler ve diğer ağır hizmet araçları neredeyse tamamen dizel motorlarla çalışmaktadır (Gholami ve ark., 2013).

Egzoz gazları ile atmosfere pek çok zararlı gaz ve partikül maddesi bırakılmaktadır. Organizmalar için toksik etkiye sahip bu maddelerin çoğunda bazı ağır metaller bulunmaktadır. Bunların başında ise Nikel (Ni), Kurşun (Pb), Kadmiyum (Cd) ve Civa (Hg) gelmektedir. Kurşun ve nikel bu ağır metallerin başında gelmekte olup bitkilere son derece etkili toksik zararlar içermektedir (Bingöl vd., 2010). Ağır metallerin oluşturdukları kirliliğin toprak ekosistemi ve topraktaki faaliyetleri üzerinde de olumsuz etkileri vardır. Bu etkiler diğer ekosistemlere yayılabilmektedir. Bitkilerin aldıkları ağır metal birikimleri, su alım aşamasında, su ve toprak kaynaklarında olan ağır metallerin bitkiye geçmesiyle gerçekleşmektedir. Ayrıca, atmosferdeki ağır metallerin de toz partikülleri ile bitkiye geçişi vasıtasıyla bitkilerde ağır metallerin birikimi olabilmektedir. Bitkilerin bünyesine geçen ağır metallerin bitkinin fizyolojik aktivitesini engellediği ve değiştirdiği, ilerleyen aşamalarda da bitkilerin ölümüne neden olduğu görülmektedir. Dolayısıyla ağır metallerin bitkilerdeki birikimleri, kalite ve verim azaltan önemli bir unsurdur (Yerli vd., 2020).

Çevre kirliliğinin sebeplerinden biri olan kurşun kirliliğinin büyük bir kısmı motorlu araçlarda kullanılan benzinin yanmasından dolayı ortaya çıkan tetra etil kurşundan kaynaklanmaktadır (Seven vd., 2018). Kurşunun etkisine maruz kalan bitkilerde Pb miktarları yükselirken fotosentez hızlarının düştüğü tespit edilmiştir. Kurşunun bu etkisinin su difüzyonunun ve stomaların karbondioksit direncinin değişimiyle ilgili olduğu düşünülmektedir. Ayrıca, kurşun klorofil biyosentezini de engellemektedir. İnhibe edilen fotosentezin kısmen yapraklarda azalmakta olan klorofil miktarıyla ilgili olabileceği düşünülmektedir. Bitkilerin yeşil aksamlarındaki Pb taşınımı köklere nazaran geride kalmaktadır (Dere, 2019). Kurşun toksisitesi, çeşitlere, Pb dozlarına ve toprak tiplerine bağlı olarak tohum çimlenmesi üzerinde zararlı etkilere neden olmaktadır. Öncelikle, Pb stresi kök gelişimini etkilemekte, çünkü bitki alımı sırasında kökle doğrudan temas etmekte ve bu da kök uçlarında hücre bölünmesini engelleyebilmektedir. Bu durumu kök hacmi, uzunluğu, çapı, yanal kök oluşumu ve toplam biyokütlerdeki olumsuz fizyolojik değişiklikler takip etmektedir. (Rizwan vd., 2018). Bitkilerde aşırı nikel (Ni) konsantrasyonları, Fe alımını ve metabolizmasını bozarak kloroz ve nekroza neden olmaktadır. Yüksek Ni konsantrasyonları, toleranslı olmayan bitkilerde kök

meristemlerinde hücre bölünmesini engelleyebilmekte ve bitki büyümesini azalmaktadır (Bhalerao vd., 2015). Ağır metaller içerisinde kadmiyum (Cd), en yüksek suda çözünme

özelliği olan elementtir. Bu özelliği ile kadmiyum, doğada hızla yayılış göstermektedir. Bu element insan yaşamı için gerekli olmayan elementlerdendir (Seven vd., 2018). Bitkilerin Cd toksik seviyelerine maruz kalması çimlenmeyi baskılamakta, bitki büyümesini ve üretimini engellemektedir. Fidelerin fizyolojik süreçlerine müdahale etmekte ve tarımsal üretkenliği azaltmaktadır (Haider vd., 2021).

## 2. TARLA ÜRÜNLERİNE EGZOZ DUMANLARININ ETKİSİ

Tarım makineleri, kırsal alanlardaki hava kirletici emisyonlarının önemli bir kaynağıdır (Gholami ve ark., 2013). Bu kaynak kullanımında en kritik konulardan biri, yakıtın yanması sırasında traktörlerden çıkan egzoz gazı emisyonlarına odaklanan çiftçilik faaliyetleridir (Lovarelli ve Bacenetti, 2019). Otoyollardan 30 m uzaklıktaki mesafelere kadar ‘kurşun’ seviyeleri oldukça yüksektir. Ayrıca kurşunun yoldan 100 km uzaklığa kadar taşındığı bazı çalışmalarla tespit edilmiştir. Yüzlerce kilometre uzaklıkta bile kurşun elementi izlerine rastlanılmıştır. Hatta kutuplar üzerinde yürütülen çalışmalarda, buz tabakaları içerisinde bile otomobillerin egzozlarından kaynaklı olan yoğun ‘Pb’ birikimlerine rastlanmıştır (Lagerwerf, 1971). Kurşun içeriği için Batı Almanya'nın çeşitli bölgelerinde ana yolların yakınında ve uzağında yetişen bitkiler analiz edilmiştir. Bölgeye bağlı olarak, yol kenarından 1-2 metre uzaklıktaki yıkanmamış çimenlerdeki ortalama kurşun seviyeleri 65-120 ppm (kuru madde) aralığında tespit edilmiştir. Değerler, yolu kullanan trafik oluşum miktarına göre de değişim göstermiştir. Yol kenarından 100 metreden daha uzaktaki sahalarda ise değerler 10 ppm'den daha az miktarlarda çıkmıştır. Yolların yakınında yetişen patates ve pancarın yapraklarında da yüksek değerler tespit edilmiş, ancak yumrularının kurşun içeriği düşük çıkmıştır (Kloke ve Leh, 1969).

Çeltik bitkileri üzerinde yürütülen bir başka çalışmada Doğu Çin'de otoyol trafiği kirliliğine maruz kalan ve maruz kalmayan bitkilerin metal (Pb, Cd, Cr, Zn ve Cu) konsantrasyonları araştırılmıştır. Maruz kalan ve maruz kalmayan bitkiler arasındaki metal konsantrasyonları için yaprakta Pb, Cd ve Zn, gövdede yalnızca Zn ve tanede Pb ve Cd miktarlarında önemli farklılıklar tespit edilmiştir. Tanedeki kurşunun yaklaşık %46'sı ve kadmiyumun %41'i atmosferden yaprak alımına bağlanmış ve tahıldaki Cr, Zn ve Cu birikimlerine atmosferin belirgin bir katkısı oluşmamıştır. Çinko dışında, gövdedeki tüm ağır metaller, yaprakta

atmosferden önemli miktarda Pb ve Cd birikimi olmasına rağmen, topraktan kök alımına bağlanmıştır (Feng vd., 2011).

Türkiye’de yürütülen geniş çaplı bir araştırmada yıllar içerisinde toplanan veriler ile bitki ve toprak örneklerinde kurşun birikiminde azalma olduğu tespit edilmiştir. Çalışmada kırsal bölgelerin metropol ve sanayi şehirlerine nazaran daha düşük seviyelerde kurşuna maruz kaldığı bildirilmiştir. Daha önceki araştırmalarda Pb seviyelerinin çoğunlukla güvenlik limitlerini aştığını tespit ettikleri ve bu durumun geçmiş zamanlar içerisinde benzine katılan kurşun sebebiyle olabileceği gibi ölçüm için kullanılan analitik metotların hassasiyetlerinin düşük olmasıyla da ilişkilendirilebildikleri mesajı verilmiştir. Yıllara göre oluşan azalmanın da 2004 yılından sonra kurşunsuz benzine olan rağbetin artmasından, hava kalitesinin artması için alınan önlemlerden ve analitik yöntemlerin hassasiyetinin yükseltilmesinden kaynaklandığı sonucuna varılmıştır (Öğütücü vd., 2021). Gaziantep-Adana otoyolu kenarında oluşabilecek erozyon ihtimalinin önlenmesi adına biberiye (*Rosmarinus officinalis*), zakkum (*Nerium oleander*) ve ateş dikenini (*Pyracantha coccinea*) bitkileri ekilmiştir. Kullanımlarının yasaklanmasına rağmen insanlar hayvanları ve kendileri için bu bitkileri gıda amacıyla temin etmektedir. Çalışmada toplanan bitki örnekleri Adana-Ceyhan otoyol gişeleri ile Misis Organize Bölgesi arasında kalan otoyol üzerinden alınmıştır. Araştırmada yedi ağır metal konsantrasyonu (Ni, Zn, Pb, Cr, Fe, Mn ve Cu) incelenmiştir. Bitkilerin element içeriklerinin sırasıyla Mn, Pb, Fe, Zn, Cr, Ni ve Cu için 71.3, 7.3, 172.9, 68.9, 1.52, 62.06 ve 13.9,  $\mu\text{g g}^{-1}$  olduğu tespit edilmiştir. Çalışma sonucunda bu düzeylerin izin verilen miktarlardan yüksek olması sebebiyle gıda amaçlı kullanılmalarının engellenmesi gerektiği mesajı verilmiştir (Kirpik vd., 2017).

Yol kenarında yetiştirilen buğday ve mısır çeşitlerinde (Siettecerros, Pavon-76, *Zea mays* L. ve *Zea mays* everta L.) metallerin (Cd, Cr, Cu, Pb, Zn) fitoakümülyasyonu ve bitkilerin toksisite ve fitoremediasyon yetenekleri araştırılmıştır. Araştırmada ürünlerin metalleri biriktirme konusunda seçici bir yeteneğe sahip olduğu ve ürünlerdeki Cd, Cr, Cu ve Zn kaynağının atmosferden çok topraktan geldiği sonucuna varılmıştır. Seçilen risk değerlendirme faktörlerinin, ürünlerde bu metallerin alım derecesinin tahmin edilmesinde yararlı olduğu kanıtlanmıştır (Anongo ve Uyovbisere, 2019). Macaristan’da çayır bitkilerinin çinko, kurşun ve kadmiyum içeriklerinin otoyoldan uzaklaştıkça azaldığı tespit edilmiştir. 5 m ve 10 m mesafelerde ölçülen değerler arasında bile anlamlı bir fark olduğu sonucuna varılmıştır. (Nasrudi vd., 2004). İran’da civanperçemi (*Achillea wilhelmsii*) ve kır teresi

(*Cardaria draba*) üzerine yürütülen bir diğer çalışmada trafik hacimlerinin Cd, Cu, Pb, Ni ve Zn içerikleri üzerindeki etkileri ve bu elementlerin dinamik özellikleri değerlendirilmiştir. Bitki örnekleri,

Hamedan eyaletindeki (Batı İran) farklı trafik hacimlerine sahip üç ana otoyolun [Hamedan-Razan (HR), Hamedan-Goltapeh (HG) ve Hamedan Kermanshah (HK)] her birinin 9 km'lik bir bölümünün 700 m'si boyunca toplanmıştır. Civanperçemi'nin toprak üstü kısımlarında ortalama element içerikleri Cd için 0.16 mg kg<sup>-1</sup>, Cu için 4.52 mg kg<sup>-1</sup>, Pb için 1.91 mg kg<sup>-1</sup>, Ni için 1.70 mg kg<sup>-1</sup> ve Zn için 44.80 mg kg<sup>-1</sup> iken, kır teresinde ortalama içerikler bu elementler için sırasıyla 0.16 mg kg<sup>-1</sup>, 2.29 mg kg<sup>-1</sup>, 2.58 mg kg<sup>-1</sup>, 1.60 mg kg<sup>-1</sup> ve 31.29 mg kg<sup>-1</sup> olarak tespit edilmiştir. Bu miktarlar ile trafik hacminin civanperçemi ve kır teresi metal içeriklerini etkilediği sonucuna varılmıştır. Otsu dokulardaki metal içeriği, iki tür arasında önemli ölçüde farklılık göstermiştir. Civanperçemi metalleri köklerde biriktirme eğilimindeyken, kır teresi onları esas olarak hava kısımlarında tutmuştur. Kapsamlı analizler (trafik hacimlerinin etkisi ve bitki dokuları ile toprak numunelerindeki elementlerin içeriği arasındaki ilişkiler), her iki otsu bitkide de Cu'nun esas olarak topraktan elde edildiğini, civanperçeminin Cd'yi ve kır teresinin Zn'yi esas olarak topraktan emdiğini göstermiştir (Hosseini vd., 2020).

### 3. SONUÇ

Ağır metallerin oluşturduğu kirlilik seviyeleri son zamanlarda hızla artmakta, bu durum toprak, su ve hava ekosistemlerini önemli oranlarda etkilemekte ve bitki, hayvan ve insan sağlığı açısından ciddi problemlere sebebiyet vermektedir. Ağır metallere maruz kalan bitkilerin kaliteleri bozulmakta, bu sebeple tüketici albenisi azaltmakta, birim alandan üretim miktarının azalması ve ağır metal kalıntıları nedeniyle ihracat miktarı olumsuz etkilemektedir. Ağır metallerin yayılımında en büyük pay sahiplerinden olan egzoz dumanları ekolojik dengeye ve ekonomik getirisi yüksek olan ürünlere verdiği zararlardan dolayı günümüzde daha çok tartışılır hale gelmiştir. Egzoz dumanlarının ekosistemimizde ve tarımsal üretimde var olan bitkiler üzerindeki zararlı etkilerine karşı gerekli önlemler alınmalıdır. Gelişmekte olan ülkelerde henüz yeterli düzeyde önlemlerin alınmadığı ve çevresel kirliliğe önlem amaçlı çalışmaların eksik kaldığı görülmektedir. Bu nedenle özellikle kirlilik açısından en yüksek potansiyele sahip bölgelerin incelenmesine ihtiyaç duyulmaktadır. Ekonomik uygunluk,

hidrojeolojik özellikler, kirletici özellikler ve saha yönetimi gibi pek çok faktörün dikkate alınıp gerekli fizibilite ve laboratuvar ölçekli çalışmaların yürütülmesi gerekmektedir

### **ABSTRACT**

The contemporary realities of population expansion, resource scarcity, and climate change necessitates resilient agroecosystems to sustain food production and protect the environment. Crop performance and yield are the outcomes of genotypic expression as influenced by ongoing environmental interaction. Water is one of the most significant environmental issues, which affects crop output globally. The world's water supply is slowly running out, and droughts are occurring increasingly frequently in many places. The amount of water, the quality of the forage, and the availability of food for cattle will all be negatively impacted by climate change in tropical areas. Water stress is one of the main factors affecting crop and pasture productivity in semi-arid and arid areas as well.

**Keywords:** Forage production, drought, strategies, species

## **1. INTRODUCTION**

Crop performance and yield are the outcomes of genotypic expression as influenced by ongoing environmental interaction. Water is one of the most significant environmental issues, which affects crop output globally. The world's water supply is slowly running out, and droughts are occurring increasingly frequently in many places (Staniak & Kocon, 2015). Stronger extreme events including heat waves, flooding, and severe droughts are projected to result from global warming, having a considerable impact on agriculture. The amount of water, the quality of the forage, and the availability of food for cattle will all be negatively impacted by climate change in tropical areas (Habermann et al., 2019). Tropical pastures play a significant role in the global carbon cycle and are crucial for world livestock production (Habermann et al., 2021).

The global growth of livestock systems is being driven by an increase in demand for animal products. Forage production alternatives must be enhanced and expanded for that. The semi-arid regions that are supplied by rain offer potential (Zhang et al., 2017). In semi-arid and dry areas, water stress is one of the main factors limiting crop and pasture production. In dry and semiarid areas, it is extremely difficult to reduce agricultural water use while maintaining or increasing the economic output of the agricultural sector. In many parts of the world, especially in very dry and semiarid regions, irrigated agriculture is the primary consumer of fresh water resources (Al-Karaki & Al-Hashimi, 2012).

Major ecosystem processes are projected to be impacted by an increase in intra-annual precipitation variability due to climate change, including extreme drought and high rainfall events. There is evidence that reduced climate variability will have an impact on crop and pasture output. In order to adjust or apply compensatory methods against potential negative effects, it is required to understand the impact of increased precipitation variability on forage yield and quality due to the growing human population and increasing demand for high

quality animal feed (Grant et al., 2014). Improving crop production in water-limited areas necessitates an understanding of how water-use regulation links to biomass buildup. A fundamental limitation to the ability of plants to survive and grow under water-limited conditions is the capacity of the water transport system to maintain a hydraulic connection between leaves and the soil (Holloway-Phillips & Brodribb, 2011).

## **2. STRATEGIES UNDER DROUGHT**

Dairy farmers must increase the water productivity of their fodder systems and be able to adapt to variations in water supply from year to year and within a year if the irrigated dairy sector is to remain economically sustainable. Strategies to improve water productivity are being evaluated by researchers and dairy farmers. These include (i) choosing species that are better adapted to the current and predicted climate; (ii) using species that can endure reduced irrigation and still be productive; (iii) modifying irrigation strategies to reduce water use while maintaining water productivity; and (iv) grazing management strategies that facilitate survival during and recovery from periods of moisture stress (Rogers et al., 2017).

Lack of water affects how crops are nourished with nitrogen. This has a significant effect on soil nitrogen fluxes as well as forage yield in grasslands. In order to tailor fertilization to the anticipated demands of the crop and reduce any unfavorable effects of crops on the environment, it is critical to evaluate the N balance. The ability of grassland plants, especially grasses, to use soil resources is diverse (Durand et al., 2010).

Maximizing crop growth during the rainy seasons in Mediterranean regions is the main way to improve water use efficiency (WUE). Compared to the commonly utilized annuals, perennial forage plants have a variety of benefits. While annuals must be sown or start from the soil seed bank, they can use water from autumn until spring. Perennial plants must grow from autumn to spring and survive summer aridity in order to thrive in the Mediterranean region's yearly rainfall pattern. Plant death and stand recovery following autumn rains are two ways that drought survival can affect how efficiently water is used (Lelievre et al., 2011).

**Fig. 1.** Grassland vegetation patches in may, at the beginning of the summer drought period. Lightcolored senesced patches are naturalized annual forage grasses (primarily *Avena* spp. and *Bromus* spp.). Green patches are invasive weedy grasses (*Elymus caput-medusae*, *medusahead*; and *Aegilops triuncialis*, goatgrass) (Malmstrom et al., 2017).

Hydraulic lift or redistribution is a plant mechanism that occurs when a plant's root system comes into contact with spatially heterogeneous soil moisture, typically drier surface and moister subsurface soils. The water that is thus transferred is accessible to both the plant and its neighbors. In water-scarce regions, deep-rooting plants with their branches removed serve as an irrigation tool and increase agricultural yield (Sekiya et al., 2011). As deep-rooted species have access to water and nutrients located deeper in the soil profile, root allocation and distribution patterns might affect forage output during wet or nitrogen-stressed seasons (Skinner & Comas, 2010).

In the semiarid regions, forages could be used to replace the conventional wheat (*Triticum aestivum* L.)-fallow system with reduced and no-till systems. Forages are a desirable alternative to grain and seed crops because they use water more efficiently and are less vulnerable to production decreases that could be devastating owing to extreme water stress during important growth phases (Nielsen, 2011).

Although there are many advantages of cover crops for farms and the environment, this is not currently reflected in the adoption rates of cover cropping. Farmers may be more interested in cover crops if they are planted for forage, either as a source of income or as feed. Although this change does not have a species-specific impact, cover crops have an impact on the yearly total forage output and soil water content. Winter cover crops, which enable less reliance on the main forage crop production, may reduce forage yield uncertainty in the region with repeated drought. Annual winter cover crops reduce the amount of soil water available for the next crop (Vujic et al., 2021).

### **3. FORAGE SPECIES UNDER DROUGHT**

The expected move towards more sustainable crop-livestock systems implies wider cultivation of perennial forage legumes. Tolerant of both drought and salinity, alfalfa (*Medicago sativa* subsp. *sativa*) is the main perennial legume in most temperate regions, especially where farm systems rely largely on forage conservation (Cacan & Kokten, 2014). White clover (*Trifolium repens*) and red clover (*Trifolium pratense*) are dominant in specific regions and farm systems (Annicchiarico et al., 2015).

Drought resistance is a crucial attribute of plants (Perlikowski et al., 2019). Drought-tolerant forage crops have huge development potential in drylands considering the current global challenges (climate change, natural resources overexploitation and increasing food demand) (Huang et al., 2020).

In a study of Grant et al. (2014), a field experiment was conducted in which a temperate European grassland was subjected to altered intra-annual precipitation variability (low, medium, high) in interaction with management strategies namely fertilization and alteration of harvest date (delay by 10 days). Increased intra-annual precipitation variability decreased forage yield of the grassland. Furthermore, the proportion of functional groups was altered toward less grass and more forb biomass with amplified precipitation variability. Increased crude protein content and reduced fiber content (crude fiber, NDF, ADF) with increasing precipitation variability improved the relative feed values. Crude protein content was enhanced by fertilization during drought but reduced by delayed harvest after the drought period. Fertilization reduced losses in grassland annual yield caused by extreme precipitation. Management strategies proved less effective if precipitation variability occurred later in the season than earlier in the season. A nitrogen dilution effect (decreased plant nitrogen

concentration with increasing shoot biomass) likely influenced the grassland crude protein contents under altered precipitation regimes and might have masked possible effects of precipitation variability on plant nitrogen and therefore on quality of grassland species. Nevertheless, alterations in the plant community composition and plant senescence seem to be the main drivers of forage quality change. Fertilization during drought periods and harvest delay after drought periods were only partially successful as management strategies to sustain forage production in more extreme precipitation regimes of the future. Further strategies need to be developed that acknowledge the shift in plant species compositions as the main driver of changes in forage quality in the face of changing precipitation patterns.

Tall wheatgrass (*Agropyron elongatum* Host Beauv.) and smooth brome grass (*Bromus inermis* Leyss.) are more drought-tolerant species than orchardgrass (*Dactylis glomerata* L.), June wildrye (*Elymus junceus* Fisch.), tall fescue (*Festuca arundinacea* Schreb.), perennial ryegrass (*Lolium perenne* L.), blue panicum (*Panicum antidotale* Retz.), large canarygrass (*Phalaris tuberosa* L.) and mountain wildrye (*Secale montaneum* Guss.) (Bahrani et al., 2010).

Declining groundwater supplies, the increasing cost of irrigation, and excessive summer dryness threaten the sustainability of corn production in some agriculture zones in the world. Forage sorghum and pearl millet are potential alternatives to corn silage. Forage sorghum [*Sorghum bicolor* (L.) Moench] and pearl millet [*Pennisetum glaucum* (L.) R. Br.] are known for their ability to tolerate drought and heat, which enables them to produce high forage yields with less water than corn. Pearl millet and sorghum can also be harvested as hay, greenchop, or silage like corn (Kokten et al., 2018a; 2018b). Introduction of the brown midrib (BMR) trait into pearl millet and sorghum has enhanced their nutrient composition. Brown midrib is a genetic trait associated with reduced lignin synthesis, resulting in enhanced digestion of forage fiber in the bovine (*Bos taurus*) rumen, thereby increasing weight gain and milk production per ton of forage fed over non-BMR types. Therefore, BMR forage sorghum and BMR pearl millet could be potential alternative forage crops where water is insufficient to grow corn silage. They are likely to replace much of the corn silage crop (Bhattarai et al., 2019).

To explore additional forage options in north-west China, the biomass production and nutritive value of nine spring-sown annual crops [maize (*Zea mays*), sudan grass (*Sorghum sudanense*), small millet (*Setaria italica*), millet (*Panicum milliaceum*), soybean (*Glycine*

*max*), common vetch (*Vicia sativa*), pea (*Pisum sativum*), oat (*Avena sativa*) and spring wheat (*Triticum aestivum*)] were compared by Zhang et al. (2018) under rainfed conditions over two years.

Water use efficiencies for biomass (WUEDM) and nutritional yield indices, CP yield (WUECP) and relative feed value yield (WUERFV), were calculated. Maize produced the highest biomass yields of  $>10$  t DM ha<sup>-1</sup> and had the highest WUEDM. Biomass production was next highest in the other warm-season grasses such as sudan grass and millet species (6-9 t DM ha<sup>-1</sup>) and soybean (3-7 t DM ha<sup>-1</sup>), while spring wheat produced the earliest biomass in spring ( $P < 0.05$ ). The legumes had higher crude protein concentration and produced equivalent or higher CP yields and WUECP to the grasses (1.2-1.7 kg CP ha<sup>-1</sup> mm<sup>-1</sup>). Maize and soybean had the highest WUERFV of 26.4 kg ha<sup>-1</sup> mm<sup>-1</sup> and 19.4 kg ha<sup>-1</sup> mm<sup>-1</sup>, respectively.

Alfalfa, “Queen of the Forages”, is the most productive and highest quality forage crop. Alfalfa has been cultivated in many regions around the world as an important forage crop due to its nutritive value to livestock and ability to adapt to various environments. Alfalfa quality has been determined by many factors, including protein, fiber and lignin contents, relative feed value, total digestible nutrients, and other physical and chemical factors. Alfalfa quality is directly influenced by its feeding value from animal performance. Fiber contents such as acid detergent fiber (ADF) and neutral detergent fiber (NDF) are important factors affecting the forage quality. Alfalfa forage contains 35-55% NDF, which contributes ~ 20-30% of the digestible energy value of alfalfa, the rest coming from non-fiber components (Lin et al., 2020). Alfalfa (*Medicago sativa* L.) is an important forage legume in farming and animal husbandry systems in semiarid areas. However, its forage yields in dryland farming areas are usually very low due to water shortages and low soil phosphorus (P) availability (Gu et al., 2018).

Sivas İl Tarım ve Orman Müdürlüğü, Sivas, Türkiye

### ÖZET

Bu çalışma, Sivas ili merkez ve ilçelerinin tarımsal üretim durumunun ortaya çıkarılması amacıyla yapılmıştır. Çalışmada tarımsal üretim içerisinde bulunan tarla bitkileri ve bahçe bitkilerinin ekim veya dikim alanları, üretim miktarları ve verim değerleri belirlenmiştir. Sivas ilinin bitkisel üretim yapılan toplam tarım alanı 9.557.216 da olup, %83'ünde tarımda kullanılmaktadır. Tarımsal üretim yapılan bu arazilerin %63.4'ünde tarla tarımı, %0.8'inde bahçe tarımı yapılmakta olup, geriye kalan %1.3'lük kısım çayır arazisi ve %34.5'lik kısmı ise nadasa bırakılmaktadır. Sivas ilinde tahıllardan en çok buğday; baklagillerden nohut; endüstri bitkilerinden patates ve şeker pancarı; yem bitkilerinden ise yonca ve korunga yetiştirilmektedir. Sebzelerden en çok kabak ve domates; meyvelerden ise en çok kayısı, ceviz ve elma yetiştiriciliği yapılmaktadır.

**Anahtar Kelimeler:** tarımsal üretim, tarla bitkileri, bahçe bitkileri, Sivas

**DETERMINATION OF AGRICULTURAL PRODUCTION STATUS OF SIVAS  
PROVINCE AND DISTRICTS**

**ABSTRACT**

This study was carried out to reveal the agricultural production status of Sivas city center and its districts. In the study, planting or planting areas, production amounts and yield values of field crops and horticultural crops in agricultural production were determined. The total agricultural area of Sivas province where plant production is made is 9,557,216 decares, 83% of which is used in agriculture. 63.4% of these agricultural lands are cultivated in fields, 0.8% are horticultural, while the remaining 1.3% is meadow land and 34.5% is fallow. Wheat is the most common grain in Sivas; chickpeas from legumes; industrial crops such as potato and sugar beet; Alfalfa and sainfoin are grown from forage crops. The most common vegetables are zucchini and tomatoes; Among the fruits, mostly apricot, walnut and apple are grown.

**Keywords:** agricultural production, field crops, horticultural crops, Sivas

## GİRİŞ

Türkiye'nin [İç Anadolu Bölgesinde](#) bulunan Sivas, ticaret yolları üzerinde olduğundan dolayı [Selçuklu Hanedanı](#) döneminde tüccarların çok fazla ziyaret ettiği bir merkezdir. Sivas, ülkemizde [Konya](#) ilinden sonra [Selçuklu](#) eserlerinin en çok bulunduğu ildir. Sivas ilinde bulunan ve 13. yüzyıla ait Gök Medrese, Çifte Minareli Medrese ve Mavi Medreseleri çini sanatı açısından mutlak suretle görülmesi gereken yerlerdir. Ayrıca ilde bulunan [Ulu Camii](#) ise 1100 yılında inşa edilmiştir. Türk Kurtuluş Savaşı'nın temellerinin atıldığı, [Selçuklu](#) devrinin dev eserleriyle süslü Sivas, Türkiye'nin yüzölçümü açısından Konya'dan sonra en büyük ikinci ilimizdir.

Sivas iline ait toprakların büyük bir bölümü İç Anadolu'nun yukarı Kızılırmak havzasında, diğer bölümleri ise [Karadeniz](#) ve Doğu Anadolu bölgesi içerisinde olup, 35° 50' ve 38° 14' doğu boylamları ile 38° 32' ve 40° 16' kuzey enlemleri arasında bulunmaktadır. İç Anadolu Bölgesi, [Doğu Karadeniz Bölgesi](#) ve Doğu Anadolu Bölgesi'nde ilçeleri ve kültür zenginliği, iklim farklılığı bulunan ve sahip olduğu değerleri ile önemli bir coğrafi konuma sahiptir. Kuzeyinde Ordu, kuzeybatısında [Tokat](#) doğusunda Erzincan, kuzeydoğusunda Giresun, batısında Yozgat, güneybatısında Kayseri, güneyinde [Malatya](#) ve [Kahramanmaraş](#) ile çevrilidir (Anonim, 2022a).

Sivas ilinde bulunana Kızıldağ'dan doğan Kızılırmak, Köse Dağı'ndan doğan [Yeşilirmak](#) ve yine Köse Dağı'ndan doğan Fırat'ın en önemli kollarından biri olan Karasu Nehri, il sınırları içerisinde doğmaktadır. Sivas coğrafi açıdan kıraç arazilere sahip, yeşili az ve oldukça sert bir iklime sahiptir. İkliminin elverdiği ölçüde ilde çoğunlukla yetiştirilebilen [tahıl](#) ürünleri, şeker pancarı, [patates](#) gibi ürünlerdir.

Sivas ili ve ilçelerinin sahip olduğu nüfusun büyük bir bölümü bitkisel üretim ve hayvancılık ile uğraşmakta olup, tarımsal üretim durumunun belirlenmesi bu çalışmanın esas amacını oluşturmaktadır.

## SİVAS İLİNİN GENEL ÖZELLİKLERİ

Sivas, 28.488 km<sup>2</sup>'lik yüzölçümü ile Türkiye'nin toprak açısından ikinci büyük ili konumunda olup, topraklarının büyük bir kısmı Kızılırmak, bir kısmı da Yeşilirmak ve Fırat havzaları içerisinde bulunmaktadır. Sivas ili, coğrafi olarak İç Anadolu, Doğu Anadolu ve Karadeniz bölgelerinin kesiştiği noktada yer almaktadır. Bu nedenle Karadeniz bölgesindeki Suşehri,

Akıncılar, Gölova, Koyulhisar ve kısmen Kuzey Zara ve Doğanşar ilçelerinin bitki örtüsü, havanın sertliği ve sıcaklığı ile yıllık yağış miktarı oldukça farklıdır. Söz konusu bölgelerde merkez ilçeden farklı olarak Giresun dağları üzerindeki yaylalar ve çok endemik orman alanları bulunmaktadır (Anonim, 2022b).

**Tablo 1.** Sivas ilçelerinin tarla ve bahçe bitkileri ekim/dikim alanları

İLÇE ADI	Tarla Bitkileri								Nadas (da)	Çayır Arazisi (da)	Toplam Tarla (da)	Bahçe Bitkileri			Tarım Yapılan Arazi Toplamı (da)	Tarıma Elverişli Kullanılmayan Arazi (da)	Toplam Tarım Alanı (da)

<b>TOPLAM</b>	<b>4.009.689</b>	<b>81.636</b>	<b>37.100</b>	<b>158.854</b>	<b>66.290</b>	<b>11.701</b>	<b>679.316</b>	<b>5.044.586</b>	<b>2.749.608</b>	<b>103.325</b>	<b>7.897.519</b>	<b>41.219</b>	<b>19.432</b>	<b>279</b>	<b>7.958.449</b>	<b>1.598.767</b>	<b>9.557.216</b>

Tablo 1'den de görüldüğü üzere, 9.557.216 da'lık il toplam tarım alanının %83.27'sinde tarımsal üretim yapılmakta iken geriye kalan %16.73'lük kısım ise tarıma elverişli kullanılmayan arazi durumundadır. Tarımsal üretim yapılan alanda ise en büyük pay 4.009.689 da alan ile toplam tarım alanı içerisinde yaklaşık %42'lik payı alan hububat bitkileridir. İlçeler bazında bakıldığında ise en fazla tahıllar, baklagiller, yağlı tohumlar, yumru bitkileri ve tıbbi ve aromatik bitkiler yetiştiriciliği Kangal ilçesinde yapılırken, en fazla endüstri bitkileri ve yem bitkileri Yıldızeli ilçesinde yetiştirilmektedir. Tahıllar ve yem bitkileri yetiştiriciliği Sivas'ın merkez dahil tüm ilçelerinde yapılırken, diğer tarla bitkileri Sivas'ın bazı ilçelerinde yetiştiriciliği yapılmamaktadır. En fazla nadas alanı ve çayır arazisi ise sırasıyla 839.549 da ve 18.975 da ile Merkez ilçesinde bulunmaktadır.

Bahçe bitkileri açısından bakıldığında ise 2021 yılı itibari ile en fazla meyve yetiştiriciliği 13.530 da alan ile Gürün ilçesinde, en fazla sebze yetiştiriciliği 13.107 da alan ile Gemerek ilçesinde ve en fazla örtü altı yetiştiriciliği ise 59 ve 55 da alan ile sırasıyla Merkez ve Yıldızeli ilçelerinde yapılmaktadır. Tarıma elverişli kullanılmayan arazi ise en fazla Divriği ilçesinde (426.681 da) bulunurken, bu ili Zara (331.135 da) ve İmranlı (308.531 da) ilçeleri izlemektedir.

## **TARLA BİTKİLERİ**

### **Tahıl Üretimi**

Sivas ilinde bitkisel ürünler üretimi içerisinde en önemli gelir kaynağı olarak ilk sırada yer alan tarla ürünleri tahıllar, yem bitkileri, endüstri bitkileri ve yemeklik baklagiller olmak üzere dört ana grup altında değerlendirildiğinde gerek üretim miktarı gerekse ekiliş alanı açısından ilk sırada tahıllar gelmektedir. Sivas ilinin 2021 yılında hububat yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 2’de verilmiştir.

**Tablo 2.** Sivas İline Ait Tahıl Üretiminin 2021 Yılı Verileri

<b>Ürün Cinsi</b>	<b>Ekilen Alan (da)</b>	<b>Üretim (ton)</b>	<b>Verim (kg/da)</b>
Buğday (Diğer)	2.220.740	411.729	185
Buğday (Durum)	150.105	33.927	226
Arpa	1.268.679	231.140	182
Çavdar	10.353	1.717	166
Yulaf	359.812	104.396	290
<b>Toplam</b>	<b>4.009.689</b>	<b>782.910</b>	

Tablo 2 incelendiğinde, Sivas ilinin 2021 yılındaki hububat yetiştiriciliğine ait ortalama verilere göre, Ülkemizin birçok ilinde de olduğu gibi en çok buğday yetiştiriciliğinin yapıldığı ve bunu sırasıyla arpa, yulaf ve çavdar yetiştiriciliğinin izlediği görülmektedir. 2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen tahıllardan buğdayın üretim miktarının 445.656 ton ve veriminin diğer buğday ve durum buğdayında sırasıyla 185 ve 226 kg/da, arpanın üretim miktarının 213.140 ton, veriminin 182 kg/da, yulafın üretim miktarının 104.396 ton veriminin 290 kg/da ve çavdarın üretim miktarının 1.717 ton ve veriminin ise 166 kg/da olduğu görülmektedir.

Sivas ilinin 2021 yılında baklagil yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 3’de verilmiştir.

Tablo 3’te görüldüğü üzere, Sivas ilinin 2021 yılındaki baklagil yetiştiriciliğine ait ortalama verilere göre, en çok nohut yetiştiriciliğinin yapıldığı ve bunu sırasıyla yeşil mercimek, kuru fasulye ve kırmızı mercimek yetiştiriciliğinin izlediği görülmektedir.

**Tablo 3.** Sivas İline Ait Baklagil Üretiminin 2021 Yılı Verileri

Ürün Cinsi	Ekilen Alan (da)	Üretim (ton)	Verim (kg/da)
Kuru Fasulye	4.068	399	98
Nohut	71.180	198.471	2.788
Kırmızı Mercimek	385	34	88
Yeşil Mercimek	6.003	533	89
<b>Toplam</b>	<b>81.636</b>	<b>199.437</b>	

2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen baklagillerden nohudun üretim miktarının 198.471 ton ve veriminin 2.788 kg/da, yeşil mercimeğin üretim miktarının 533 ton ve veriminin 89 kg/da, kuru fasulyenin üretim miktarının 399 ton ve veriminin 98 kg/da ve kırmızı mercimeğin üretim miktarının 34 ton ve veriminin ise 88 kg/da olduğu görülmektedir.

#### **Yağlı Tohumlar Üretimi**

Sivas ilinin 2021 yılında yağlı tohumlar yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 4’de verilmiştir.

**Tablo 4.** Sivas İline Ait Yağlı Tohumlar Üretiminin 2021 Yılı Verileri

Ürün Cinsi	Ekilen Alan (da)	Üretim (ton)	Verim (kg/da)
Ayçiçeği (Çerezlik)	23.100	3.016	131
Ayçiçeği (Yağlık)	14.000	2.794	200
<b>Toplam</b>	<b>37.100</b>	<b>5.810</b>	

Tablo 4’de görüldüğü üzere, Sivas ilinin 2021 yılındaki yağlı tohumlar yetiştiriciliğine ait ortalama verilere göre, sadece çerezlik ve yağlık ayçiçeği yetiştiriciliğinin yapıldığı görülmektedir. 2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen yağlı tohumlardan çerezlik ayçiçeğinin üretim miktarının 3.016 ton ve veriminin 131 kg/da ve yağlık ayçiçeğinin üretim miktarının 2.794 ton ve veriminin ise 200 kg/da olduğu görülmektedir.

**Endüstri Bitkileri Üretimi**

Sivas ilinin 2021 yılında endüstri bitkileri yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 5’de verilmiştir.

**Tablo 5.** Sivas İline Ait Endüstri Bitkileri Üretiminin 2021 Yılı Verileri

Ürün Cinsi	Ekilen Alan (da)	Üretim (ton)	Verim (kg/da)
Şeker Pancarı	158.854	815.783	5.135
<b>Toplam</b>	<b>158.854</b>	<b>815.783</b>	

Tablo 5’de görüldüğü üzere, Sivas ilinin 2021 yılındaki endüstri bitkileri yetiştiriciliğine ait ortalama verilere göre, sadece şeker pancarı yetiştiriciliğinin yapıldığı görülmektedir. 2021 yılı verilerine göre; Sivas ilinde yetiştirilen endüstri bitkilerinden şeker pancarının üretim miktarının 815.783 ton ve veriminin 5.135 kg/da olduğu görülmektedir.

### **Yumru Bitkiler Üretimi**

Sivas ilinin 2021 yılında yumru bitkiler yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 6’da verilmiştir.

**Tablo 6.** Sivas İline Ait Yumru Bitkiler Üretiminin 2021 Yılı Verileri

Ürün Cinsi	Ekilen Alan (da)	Üretim (ton)	Verim (kg/da)
Patates	65.873	204.085	3.098
Sarımsak	161	57	353
Kuru Soğan	256	532	2.078
<b>Toplam</b>	<b>66.290</b>	<b>204.674</b>	

Tablo 6’da görüldüğü üzere, Sivas ilinin 2021 yılındaki yumru bitkiler yetiştiriciliğine ait ortalama verilere göre, en çok patates yetiştiriciliğinin yapıldığı ve bunu sırasıyla kuru soğan ve sarımsak yetiştiriciliğinin izlediği görülmektedir. 2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen yumru bitkilerinden patatesin üretim miktarının 204.085 ton ve veriminin 3.098 kg/da, kuru soğanın üretim miktarının 532 ton ve veriminin 2.078 kg/da ve sarımsağın üretim miktarının 57 ton ve veriminin ise 353 kg/da olduğu görülmektedir.

### **Tıbbi ve Aromatik Bitkiler Üretimi**

Sivas ilinin 2021 yılında tıbbi ve aromatik bitkiler yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 7’de verilmiştir.

**Tablo 7.** Sivas İline Ait Tıbbi ve Aromatik Bitkiler Üretiminin 2021 Yılı Verileri

Ürün Cinsi	Ekilen Alan (da)	Üretim (ton)	Verim (kg/da)
Buy (Çemen Otu)	1.262	117	92
Aspir	2.249	167	74
Çörek Otu	1.066	105	99
Adaçayı	22	8	350
Kimyon	6.838	610	89
Anason	50	5	100
Lavanta	214	20	93
<b>Toplam</b>	<b>11.701</b>	<b>1.032</b>	

Tablo 7’de görüldüğü üzere, Sivas ilinin 2021 yılındaki tıbbi ve aromatik bitkiler yetiştiriciliğine ait ortalama verilere göre, en çok kimyon yetiştiriciliğinin yapıldığı ve bunu sırasıyla aspir, çemen otu, çörek otu, lavanta, anason ve adaçayı yetiştiriciliğinin izlediği görülmektedir. 2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen tıbbi ve aromatik bitkilerinden kimyon üretim miktarının 610 ton ve veriminin 89 kg/da, aspirin üretim miktarının 167 ton ve veriminin 74 kg/da, çemen otunun üretim miktarının 117 ton ve veriminin 92 kg/da, çörek otunun üretim miktarının 105 ton ve veriminin 99 kg/da, lavantanın üretim miktarının 20 ton ve veriminin 93 kg/da, anasonun üretim miktarının 5 ton ve veriminin 100 kg/da ve adaçayının üretim miktarının 8 ton ve veriminin ise 350 kg/da olduğu görülmektedir.

### Yem Bitkileri Üretimi

Sivas ilinin 2021 yılında yem bitkileri yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 8’de verilmiştir.

**Tablo 8.** Sivas İline Ait Yem Bitkileri Üretiminin 2021 Yılı Verileri

Ürün Cinsi	Ekilen Alan (da)	Üretim (ton)	Verim (kg/da)
Yonca (Yeşil Ot)	255.176	171.933	674
Korunga (Yeşil Ot)	183.405	81.255	443
Fiğ (Yeşil Ot)	47.256	21.148	448
Mısır (Silaj)	32.650	137.539	4.213
Tritikale	158.440	33.685	213
Mürdümük	1.500	525	350
Bezelye	889	222	250
<b>Toplam</b>	<b>679.316</b>	<b>446.306</b>	

Tablo 8’de görüldüğü üzere, Sivas ilinin 2021 yılındaki yem bitkileri yetiştiriciliğine ait ortalama verilere göre, en çok yonca yetiştiriciliğinin yapıldığı ve bunu sırasıyla korunga,

tritikale, fiğ, silajlık mısır, mürdümük ve bezelye yetiştiriciliğinin izlediği görülmektedir.  
2021

yılı verilerine göre; Sivas ilinde en çok yetiştirilen yem bitkilerinden yoncanın üretim miktarının 171.933 ton ve veriminin 674 kg/da, korunganın üretim miktarının 81.255 ton ve veriminin 443 kg/da, tritikalenin üretim miktarının 33.685 ton ve veriminin 213 kg/da, fiğın üretim miktarının 21.148 ton ve veriminin 448 kg/da, silajlık mısırın üretim miktarının 137.539 ton ve veriminin 4.213 kg/da, mürdümüğün üretim miktarının 525 ton ve veriminin 350 kg/da ve bezelyenin üretim miktarının 222 ton ve veriminin ise 250 kg/da olduğu görülmektedir.

## BAHÇE BİTKİLERİ

### Meyve Üretimi

#### *Yumuşak Çekirdekli*

Sivas ilinin 2021 yılında yumuşak çekirdekli yetiştiriciliğine ilişkin kapladığı alan (da), toplu meyve veren ağaç sayısı (adet), dağınk meyve veren ağaç sayısı (adet) ve üretim miktarı (ton) Tablo 9’da verilmiştir.

**Tablo 9.** Sivas İline Ait Yumuşak Çekirdekli Üretiminin 2021 Yılı Verileri

Meyve Cinsi	Kapladığı Alan (da)	Toplu Meyve Veren Ağaç Sayısı (adet)	Dağınk Meyve Veren Ağaç Sayısı (adet)	Üretim Miktarı (ton)
Armut	1.424	38.799	31.531	645
Ayva	61	1.823	3.829	53
Elma	7.113	156.145	76.315	2.397
<b>Toplam</b>	<b>8.598</b>	<b>196.767</b>	<b>111.675</b>	<b>3.096</b>

Tablo 9’da görüldüğü üzere, Sivas ilinin 2021 yılındaki yumuşak çekirdekli yetiştiriciliğine ait ortalama verilere göre, en çok elma yetiştiriciliğinin yapıldığı ve bunu sırasıyla armut ve ayva yetiştiriciliğinin izlediği görülmektedir. 2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen yumuşak çekirdekli elmanın kapladığı alan 7.113 da, toplu meyve veren ağaç sayısının 156.145 adet, dağınk meyve veren ağaç sayısının 76.315 adet ve üretim miktarının 2.397 ton, armudun kapladığı alan 1.424 da, toplu meyve veren ağaç sayısının 38.799 adet, dağınk meyve veren ağaç sayısının 31.531 adet ve üretim miktarının 645 ton ve

ayvanın kapladığı alan 61 da, toplu meyve veren ağaç sayısının 1.823 adet, dağınık meyve veren ağaç sayısının 3.829 adet ve üretim miktarının 53 ton olduğu görülmektedir.

### ***Sert Çekirdekli***

Sivas ilinin 2021 yılında sert çekirdekli yetiştiriciliğine ilişkin kapladığı alan (da), toplu meyve veren ağaç sayısı (adet), dağınık meyve veren ağaç sayısı (adet) ve üretim miktarı (ton) Tablo 10’da verilmiştir.

**Tablo 10.** Sivas İline Ait Sert Çekirdekli Üretiminin 2021 Yılı Verileri

Meyve Cinsi	Kapladığı Alan (da)	Toplu Meyve Veren Ağaç Sayısı (adet)	Dağınık Meyve Veren Ağaç Sayısı (adet)	Üretim Miktarı (ton)
Erik (Tüm Çeşitler)	1.132	26.668	19.040	421
İğde	5	164	1.174	16
Kayısı (Zerdali Hariç)	13.910	198.449	33.929	2.205
Kızılcık	5	164	657	11
Kiraz	853	12.253	13.630	254
Şeftali	57	1.576	2.731	45
Vişne	1.829	46.211	27.932	625
<b>Toplam</b>	<b>17.791</b>	<b>285.485</b>	<b>99.093</b>	<b>3.576</b>

Tablo 10’da görüldüğü üzere, Sivas ilinin 2021 yılındaki sert çekirdekli yetiştiriciliğine ait ortalama verilere göre, en çok kayısı yetiştiriciliğinin yapıldığı ve bunu sırasıyla vişne, erik, kiraz, şeftali, iğde ve kızılcık yetiştiriciliğinin izlediği görülmektedir. 2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen sert çekirdeklilerden kayısının kapladığı alan 13.910 da, toplu meyve veren ağaç sayısının 198.449 adet, dağınık meyve veren ağaç sayısının 33.929 adet ve üretim miktarının 2.205 ton, vişnenin kapladığı alan 1.829 da, toplu meyve veren ağaç sayısının 46.211 adet, dağınık meyve veren ağaç sayısının 27.932 adet ve üretim miktarının 625 ton, eriğin kapladığı alan 1.132 da, toplu meyve veren ağaç sayısının 26.668 adet, dağınık meyve veren ağaç sayısının 19.040 adet ve üretim miktarının 421 ton, kirazın kapladığı alan 853 da, toplu meyve veren ağaç sayısının 12.253 adet, dağınık meyve veren ağaç sayısının 13.630 adet ve üretim miktarının 254 ton, şeftalinin kapladığı alan 57 da, toplu meyve veren ağaç sayısının 1.576 adet, dağınık meyve veren ağaç sayısının 2.731 adet ve üretim miktarının 45 ton, iğdenin kapladığı alan 5 da, toplu meyve veren ağaç sayısının 164 adet, dağınık meyve veren ağaç sayısının 1.174 adet ve üretim miktarının 16 ton ve kızılcığın kapladığı alan 5 da,

toplu meyve veren ağaç sayısının 164 adet, dağınık meyve veren ağaç sayısının 657 adet ve üretim miktarının 11 ton olduğu görülmektedir.

### ***Sert Kabuklular***

Sivas ilinin 2021 yılında sert kabuklular yetiştiriciliğine ilişkin kapladığı alan (da), toplu meyve veren ağaç sayısı (adet), dağınık meyve veren ağaç sayısı (adet) ve üretim miktarı (ton) Tablo 11’de verilmiştir.

**Tablo 11.** Sivas İline Ait Sert Kabuklular Üretiminin 2021 Yılı Verileri

Meyve Cinsi	Kapladığı Alan (da)	Toplu Meyve Veren Ağaç Sayısı (adet)	Dağınık Meyve Veren Ağaç Sayısı (adet)	Üretim Miktarı (ton)
Ceviz	10.964	33.355	21.581	860
Fındık	29	1.157	557	2
Badem	622	3.249	973	60
Antep Fıstığı	55	165	6.714	76
<b>Toplam</b>	<b>11.670</b>	<b>37.926</b>	<b>29.825</b>	<b>997</b>

Tablo 11’de görüldüğü üzere, Sivas ilinin 2021 yılındaki sert kabuklular yetiştiriciliğine ait ortalama verilere göre, en çok ceviz yetiştiriciliğinin yapıldığı ve bunu sırasıyla badem, Antep fıstığı ve fındık yetiştiriciliğinin izlediği görülmektedir. 2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen sert kabuklulardan cevizin kapladığı alan 10.964 da, toplu meyve veren ağaç sayısının 33.355 adet, dağınık meyve veren ağaç sayısının 21.581 adet ve üretim miktarının 860 ton, bademin kapladığı alan 622 da, toplu meyve veren ağaç sayısının 3.249 adet, dağınık meyve veren ağaç sayısının 973 adet ve üretim miktarının 60 ton, Antep fıstığının kapladığı alan 55 da, toplu meyve veren ağaç sayısının 165 adet, dağınık meyve veren ağaç sayısının 6.714 adet ve üretim miktarının 76 ton ve fındığın kapladığı alan 29 da, toplu meyve veren ağaç sayısının 1.157 adet, dağınık meyve veren ağaç sayısının 557 adet ve üretim miktarının 2 ton olduğu görülmektedir.

### ***Üzümsü Meyveler***

Sivas ilinin 2021 yılında üzüksü meyveler yetiştiriciliğine ilişkin kapladığı alan (da), toplu meyve veren ağaç sayısı (adet), dağınık meyve veren ağaç sayısı (adet) ve üretim miktarı (ton) Tablo 12’de verilmiştir.

**Tablo 12. Sivas İline Ait Üzüksü Meyveler Üretiminin 2021 Yılı Verileri**

Meyve Cinsi	Kapladığı Alan (da)	Toplu Meyve Veren Ağaç Sayısı (adet)	Dağınık Meyve Veren Ağaç Sayısı (adet)	Üretim Miktarı (ton)
Dut	147	817	8.100	111
Gojiberi	151	0	0	61
Kuşburnu	807	21.600	0	43
Çilek	40	0	0	25
Bağ (Üzüm)	2.015	0	0	1.018
<b>Toplam</b>	<b>2.202</b>	<b>817</b>	<b>8.100</b>	<b>1.155</b>

Tablo 12’de görüldüğü üzere, Sivas ilinin 2021 yılındaki üzüksü meyveler yetiştiriciliğine ait ortalama verilere göre, en çok üzüm yetiştiriciliğinin yapıldığı ve bunu sırasıyla kuşburnu, gojiberi, dut ve çilek yetiştiriciliğinin izlediği görülmektedir. 2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen üzüksü meyvelerden üzümün kapladığı alan 2.2015 da ve üretim miktarının 1.018 ton, kuşburnunun kapladığı alan 807 da, toplu meyve veren ağaç sayısının 21.600 adet ve üretim miktarının 43 ton, gojiberinin kapladığı alan 151 da ve üretim miktarının 61 ton, dutun kapladığı alan 147 da, toplu meyve veren ağaç sayısının 817 adet, dağınık meyve veren ağaç sayısının 8.100 adet ve üretim miktarının 111 ton ve çileğin kapladığı alan 40 da ve üretim miktarının 25 ton olduğu görülmektedir.

#### **Açık Alan Sebze Üretimi**

Sivas ilinin 2021 yılında sebze yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 13’de verilmiştir.

Tablo 13’de görüldüğü üzere, Sivas ilinin 2021 yılındaki sebze yetiştiriciliğine ait ortalama verilere göre, en çok çerezlik kabak yetiştiriciliğinin yapıldığı ve bunu sırasıyla domates, taze fasulye, kavun, hıyar, karpuz, sivri biber, beyaz lahanaya, dolmalık biber, taze soğan, bal kabağı, sakız kabağı, şalgam, bayır turpu, havuç, patlıcan, taze sarımsak, karayaprak lahanaya, nane, pırasa, ıspanak, kıvırcık marul, maydanoz ve kırmızı turp yetiştiriciliğinin izlediği görülmektedir.

2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen sebzelerden çerezlik kabağın üretim miktarının 1.444 ton ve veriminin 104 kg/da, domatesin üretim miktarının 6.378 ton ve veriminin 2.852 kg/da, taze fasulyenin üretim miktarının 1.476 ton ve veriminin 1.370 kg/da, kavunun üretim miktarının 3.425 ton ve veriminin 4.001 kg/da, sofralık hıyarın üretim miktarının 1.093 ton ve veriminin 3.079 kg/da, karpuzun üretim miktarının 987 ton ve veriminin 3.771 kg/da, sivri biberin üretim miktarının 362 ton ve veriminin 1.541 kg/da, beyaz lahananın üretim miktarının 508 ton ve veriminin 3.848 kg/da, dolmalık biberin üretim miktarının 102 ton

ve veriminin 1.538 kg/da, taze soğanın üretim miktarının 100 ton ve veriminin 1.566 kg/da, bal kabağının üretim miktarının 205 ton ve veriminin 3.727 kg/da, sakız kabağının üretim miktarının 131 ton ve veriminin 2.918 kg/da, şalgamın üretim miktarının 56 ton ve veriminin 2.452 kg/da, bayır turpunun üretim miktarının 49 ton ve veriminin 2.218 kg/da, havucun üretim miktarının 45 ton ve veriminin 2.230 kg/da, patlıcanın üretim miktarının 35 ton ve veriminin 2.175 kg/da, taze sarımsağın üretim miktarının 10 ton ve veriminin 800 kg/da, karayaprak lahananın üretim miktarının 30 ton ve veriminin 3.000 kg/da, nanenin üretim miktarının 5 ton ve veriminin 450 kg/da, pırasanın üretim miktarının 7 ton ve veriminin 1.440 kg/da, ıspanağın üretim miktarının 6 ton ve veriminin 1.525 kg/da, kıvırcık marulun üretim miktarının 4 ton ve veriminin 1.050 kg/da, maydanozun üretim miktarının 2 ton ve veriminin 400 kg/da ve kırmızı turpun üretim miktarının 5 ton ve veriminin ise 2.400 kg/da olduğu görülmektedir.

**Tablo 13.** Sivas İline Ait Sebze Üretiminin 2021 Yılı Verileri

Ürün Cinsi	Ekilen Alan (da)	Üretim (ton)	Verim (kg/da)
Kabak (Bal)	55	205	3.727
Kabak (Çerezlik)	13.940	1.444	104
Kabak (Sakız)	45	131	2.918
Biber (Dolmalık)	66	102	1.538
Biber (Sivri)	235	362	1.541
Domates (Sofralık)	2.236	6.378	2.852
Fasulye (Taze)	1.078	1.476	1.370
Havuç	20	45	2.230
Hıyar (Sofralık)	355	1.093	3.079
Ispanak	4	6	1.525
Karpuz	238	897	3.771
Kavun	856	3.425	4.001
Lahana (Beyaz)	132	508	3.848
Lahana (Karayaprak)	10	30	3.000
Marul (Kıvırcık)	4	4	1.050
Maydanoz	4	2	400
Nane	10	5	450
Patlıcan	16	35	2.175
Pırasa	5	7	1.440
Sarımsak (Taze)	12	10	800
Soğan (Taze)	64	100	1.566
Şalgam	23	56	2.452
Turp (Bayır)	22	49	2.218
Turp (Kırmızı)	2	5	2.400
<b>Toplam</b>	<b>19.432</b>	<b>16.374</b>	

### Örtü Altı Sebze Üretimi

Sivas ilinin 2021 yılında örtü altı sebze yetiştiriciliğine ilişkin ekim alanı (da), üretim miktarı (ton) ve verimleri (kg/da) Tablo 14’de verilmiştir.

Tablo 14’de görüldüğü üzere, Sivas ilinin 2021 yılındaki örtü altı sebze yetiştiriciliğine ait ortalama verilere göre, en çok domates yetiştiriciliğinin yapıldığı ve bunu sırasıyla hıyar, sivri biber, dolmalık biber, göbek marul, dereotu ve maydanoz yetiştiriciliğinin izlediği görülmektedir.

2021 yılı verilerine göre; Sivas ilinde en çok yetiştirilen örtü altı sebzelerden domatesin üretim miktarının 723 ton ve veriminin 5.432 kg/da, sofralık hıyarın üretim miktarının 442 ton ve veriminin 5.394 kg/da, sivri biberin üretim miktarının 148 ton ve veriminin 3.016 kg/da, dolmalık biberin üretim miktarının 12 ton ve veriminin 1.967 kg/da, göbek marulun üretim miktarının 20 ton ve veriminin 4.060 kg/da, dereotu ve maydanozun üretim miktarlarının her biri için 2 ton olduğu görülmektedir.

**Tablo 14.** Sivas İline Ait Örtü Altı Sebze Üretiminin 2021 Yılı Verileri

Ürün Cinsi	Ekilen Alan (da)	Üretim (ton)	Verim (kg/da)
Biber (Dolmalık)	6	12	1.967
Biber (Sivri)	49	148	3.016
Domates (Sofralık)	133	723	5.432
Dereotu	2	2	0
Hıyar (Sofralık)	82	442	5.394
Marul (Göbekli)	5	20	4.060
Maydanoz	2	2	0
<b>Toplam</b>	<b>279</b>	<b>1.349</b>	

### SONUÇ VE ÖNERİLER

Sivas merkez ve ilçelerinde tahıl grubunda en çok buğday, arpa ve yulaf; baklagil grubunda nohut, yeşil mercimek ve kuru fasulye; yağlı tohumlar grubunda çerezlik ve yağlık ayçiçeği; endüstri bitkileri grubunda şeker pancarı; yumrulu bitkiler grubunda patates ve kuru soğan; tıbbi ve aromatik bitkiler grubunda kimyon ve aspir; yem bitkileri grubunda yonca ve korunga; yumuşak çekirdekli grubunda elma ve armut; sert çekirdekli grubunda kayısı, vişne ve erik; sert kabuklular grubunda ceviz ve badem; üzümü meyveler grubunda üzüm ve kuşburnu; açık alan sebzeler grubunda çerezlik kabak ve domates; örtü altı sebzeler grubunda ise domates ve sofralık hıyar yetiştiriciliği yapıldığı görülmektedir.

Sivas ilindeki tarımsal üretime bakıldığında Türkiye'deki diğer birçok ilde olduğu gibi en fazla buğday yetiştiriciliğinin yapıldığı, buğdaydan sonra ise en fazla arpa ve yulaf yetiştiriciliğinin yapıldığı görülmektedir. Sivas'ın tarımsal üretiminin belirlenmesi amacıyla yapılan bu çalışmanın sonucunda bölge koşullarına uygun buğday, arpa ve yulaf çeşitlerinin ortaya çıkarılmasına yönelik çalışmaların yapılması gerektiği kanaati oluşmuştur. Verimli ve kaliteli bir üretim amacıyla, çeşit, tür, yöntem ve teknolojiler yaygınlaştırılmalı, tarım-sanayi entegrasyonu sağlanmalıdır.

### ÖZET

Yapay zekâ ve derin öğrenme tekniklerine dayalı uygulamalar, son yıllarda farklı araştırma alanlarında olduğu gibi medikal alanda tıbbi görüntülemenin yorumlamasında da önemli gelişmelere yol açmıştır. Anormallikleri tespit eden, insan hatasını minimize eden, doğru sonuçlar sağlayan ve harcanan süreyi azaltan derin öğrenme modellerinden belirli bir düzeyde yararlanılmaktadır. Özellikle radyoloji ve nöroradyoloji, üretilen büyük miktarda veri nedeniyle derin öğrenme modellerinin uygulanması için uygun alanlardır. Görüntü işleme kurallarının anlamlı bir şekilde uygulanmasıyla tıbbi tanı güvenilirliğinin sağlandığı en önemli alanlardan biri tıbbi görüntülemedir. İnme, nörogörüntülemenin klinik yönetiminde önemli rol oynayan hastalıklardan biridir. Tüm dünyada önemli bir sağlık sorunu olan inme, yetişkinlerde fiziksel, sosyal, psikolojik ve ekonomik yıkıma neden olan en önemli sakatlık ve ölüm nedenlerinden biridir. Beyin, inmenin erken evrelerinde sağlıklı beyin fonksiyonları gibi davrandığı için erken teşhis imkânı zorlaşmaktadır. Uzman radyologlar bile inmenin başlangıç aşamasında bulguları gözden kaçırabilmektedir. İnme de zaman faktörü çok değerli olduğundan kullanılan tedavilerin etkili olabilmesi için semptomların başlamasıyla birlikte bu tedavilerin en kısa sürede uygulanması gerekmektedir. Erken uygulanan tedavi hayat kurtarır. Bu nedenle inmenin sebebinin (iskemik, hemorajik) ne olduğunu anlamak, kanamanın ekarte edilmesi, infarkt alanının belirlenmesi, etiyoloji hakkında bilgi edinilmesi ve tedavi planlamasının yapılabilmesi için inme vakalarında görüntülemeye ihtiyaç duyulmaktadır. Kontrastsız BT, inme şüphesi olan hastaların ilk değerlendirmesinde kullanılan birincil görüntüleme protokolüdür. Hızlı inme protokollerinin ilk adımı olan kontrast madde verilmeden elde edilen Beyin BT görüntülerinde inmenin patolojik tipini belirlemeye yönelik derin öğrenme çalışmaları oldukça sınırlıdır. Bu çalışmada, kontrastsız beyin BT görüntülerinden inme lezyonlarının tespiti ve teşhisi için otomatik segmente edilmesine yönelik derin öğrenme tabanlı yeni bir yaklaşım önerilmiştir.

**Anahtar Kelimeler:** Bilgisayarlı Tomografi, Evrişimsel Sinir Ağları, Beyin İnme, Derin Öğrenme, Anlamsal Bölütleme, U-Net.

## **SEGMENTATION OF NON-CONTRAST BRAIN CT IMAGES FOR BRAIN STROKE DETECTION**

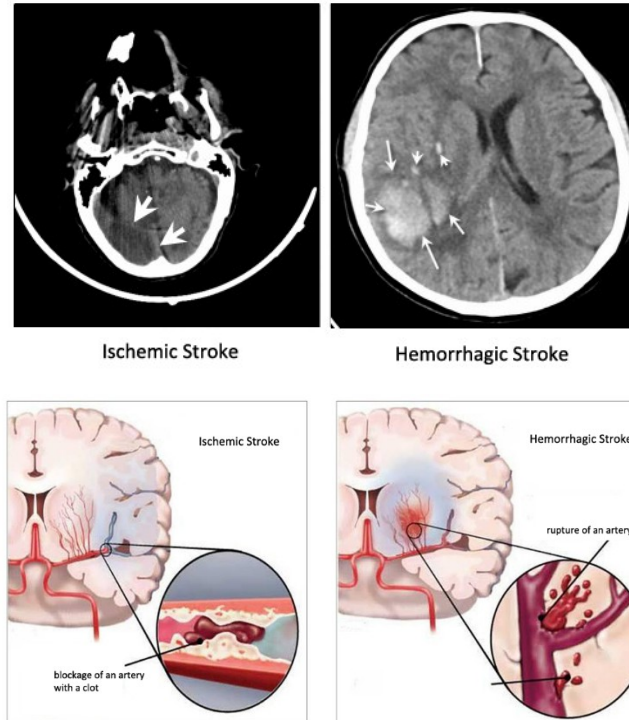

### **ABSTRACT**

Applications based on AI and deep learning techniques have come a long way in the interpretation of medical imaging in the medical field, as well as in different research areas in recent years. Deep learning models, which detect anomalies, minimize human error, provide accurate results and reduce time spent, are utilized to a certain extent. Especially radiology and neuroradiology are suitable fields for the application of deep learning models due to the large amount of data generated. One of the most important areas in which medical diagnosis reliability is achieved by applying image processing rules in a meaningful way is medical imaging. Stroke is one of the diseases in the clinical management of neuroimaging plays an important role. Stroke, which is a major health problem all over the world, is one of the most important causes of disability and mortality in adults, causing physical, social, psychological, and economic destruction. Early diagnosis becomes difficult as the brain behaves like healthy brain functions in the early stages of stroke. Even specialist radiologists may overlook the findings at the initial stage of stroke. The time factor is very valuable in stroke. Therefore, in order for the treatments to be effective, these treatments should be applied as soon as possible with the onset of symptoms. Early treatment saves lives. Therefore, imaging is needed in stroke cases in order to understand what the cause of stroke (ischemic, hemorrhagic) is, to rule out bleeding, determine the infarct area, obtain information about the etiology, and plan treatment. Non-contrast CT is the primary imaging protocol used in the initial evaluation of patients with suspected stroke. Deep learning studies on determining the pathological type of stroke on Brain CT images obtained without contrast agent administration, which is the first step of rapid stroke protocols, are very limited. In this study, a deep learning-based new approach to automatically segmentation and classification for the detection and diagnosis of stroke lesions from non-contrast brain CT images is proposed.

**Keywords:** Computer Tomography, Convolutional Neural Network, Brain Stroke, Deep Learning, Semantic Segmentation, U-Net.

## 1. GİRİŞ

İnme, tüm dünyada önemli bir sağlık sorunu olmakla birlikte yetişkinlerde fiziksel, sosyal, psikolojik ve ekonomik yıkıma neden olan en önemli sakatlık ve ölüm nedenlerinden birisidir (Nazlıel ve ark.,2020). İnme, beyne giden kan akışının durması veya beyne yeterli miktarda kan gelmemesi durumudur [1]. Bu nedenle inme etiyojisine göre tıkaçıcı (iskemik) veya kanamalı (hemorajik) olarak sınıflandırılmaktadır. **İskemik İnme**, beyin damarında pıhtı oluşması, damar sertleşmesi, beyin damarına pıhtı atması, küçük damar tıkanıklığına bağlı oluşabilmektedir. Tüm inme vakalarının %87'sini İskemik İnme oluşturmaktadır [2]. **Hemorajik inme** ise, damarın kendiliğinden yırtılması, anevrizma, travma, damar bozukluğu, yüksek tansiyon ve kanama bozuklukları gibi bir çok neden bağlı olarak ortaya çıkabilmektedir. Bu tip inme aynı zamanda yüksek tansiyondan da kaynaklanmaktadır [3]. İnme acil bir durum olduğundan inme sürecinde zaman çok değerlidir. Bu yüzden erken teşhis ve tedavi hayat kurtarır. İskemik inmede, hasta denge kaybı, bulanık görme, kollarda güçsüzlük, konuşma bozukluğu gibi belirtiler gösterebilir. Hemorajik inmede ise, semptomlar nedene bağlı olarak değişmektedir. Ancak şiddetli baş ağrısından bilinç kaybına kadar çeşitli belirtiler ortaya çıkabilmektedir (Şekil-1'de gösterilen ilk görüntü, beyin BT görüntülerini, ikinci görüntü ise beynin örnek şeklini göstermektedir).

Şekil-1: İskemik ve Hemorajik İnme [4]

İnme, serebrovasküler (*beyin damar*) bir hastalıktır. Serebrovasküler hastalıklar, beynin bir bölümünün iskemi veya kanama nedeniyle geçici veya kalıcı olarak etkilendiği ve/veya beyni besleyen damarların patolojik bir süreçten doğrudan etkilendiği tüm hastalıkları kapsamaktadır. İnme şüphesi olan bir hasta ile karşılaşıldığında cevaplanması gereken ilk soru, belirtilerin vasküler kaynaklı olup olmadığıdır. İkincisi ise inmenin patolojik tipidir (iskemik, hemorajik). Özetle, hastanın anamnez ve nörolojik muayene aşamasından sonra en önemli adım; klinik ön tanıyı doğrulamak ve inmenin patolojik tipi (iskemik mi, hemorajik mi) arasında ayırıcı tanıyı yapmaktır. Bu ayrımı doğru yapmanın günümüzdeki yolu erken dönemde beyin BT çekiminin yapılmasıdır. Bilgisayarlı Tomografi (BT), hızlı, kolay erişilebilir ve kafa içi lezyonları doğru bir şekilde saptayabilmesi nedeniyle nöroradyolojik görüntüleme önemi ve kullanımı giderek artmaktadır [4-5]. İskemik inmenin başlamasından sonra geçen süre ne kadar uzun olursa, beyin BT'sinde lezyon yanıtını görme şansı o kadar artar. Beyin, inmenin erken evrelerinde sağlıklı beyin fonksiyonları gibi davrandığı için erken teşhis oldukça güçtür. Bu durumda klinik bulgular inme ile uyumlu ise iskemik inme tanısı konur. Kontrastsız BT, özellikle acil nöroradyolojik görüntüleme gerektiren travma, kafa içi kanama ve iskemik inme hastalarında kullanılan birincil görüntüleme protokolüdür [6]. İnme tanısı konan bir hastada amaç penumbral dokuyu kurtarmaktır. Bu nedenle, iskemik inmenin başlamasından sonraki birkaç saat içinde beyne giden kan akışı yeniden sağlanmazsa, penumbral doku kurtarılamaz. İskemik inme sonucunda hücre ölümüne bağlı olarak **infarkt alanı** oluşur. Doku enfarktüsü olduğunda, süreç geri döndürülemeyerek penumbral doku kurtarılamaz duruma gelir [7]. İnfarkt alanı ise henüz ölmemiş ancak beyin kan akışının belirgin azaldığı penumbra alanı ile çevrilidir. Nöroradyolojik görüntüleme özellikle inme gibi acil durumlarda hızlı inme protokolleri ile birlikte ileri BT görüntüleme protokolleri uygulanmaktadır. Bu nedenle, inme şüphesi olan hastaların ilk değerlendirilmesinde kullanılan birincil görüntüleme protokolü **Kontrastsız BT**'dir. Prognoz düşünüldüğünde Manyetik Rezonans (MR) her hasta için maliyet etkinlik analizinde pozitif sonuçlar vermemektedir. Hızlı inme protokollerinin ilk adımı olan kontrast madde verilmeden elde edilen beyin BT görüntülerinde inmenin patolojik tipini belirlemeye yönelik derin öğrenme çalışmaları oldukça sınırlıdır. Ayrıca, inmenin ilk saatlerinde beyin normal beyin fonksiyonları gibi davrandığından iskemi tipi inme bulgusunun saptanması hemorajik inmeye göre daha zordur. Bu çalışmada kontrastsız BT kullanılmasının başlıca nedenleri şunlardır:

- 1- Kontrastsız BT görüntüleme, hızlı inme protokollerinin ilk adımıdır.
  - 2- Tetkik süresi ortalama 1 dakikadır.
  - 3- Kontrastsız BT, özellikle kafa içi kanama tespitinde yüksek duyarlılık oranlarına sahiptir  
[8].
  - 4- Kontrastsız BT ile inme benzeri semptomlara neden olan ve “inme taklitçileri” olarak adlandırılan neoplazmi ve arteriyovenöz malformasyonlar (*damar yumağı*) gibi patolojiler saptanabilir ve ayırımı yapılabilmektedir.
  - 5- Acil durumlarda inme bulgularını taklit edebilecek diğer beyin dokusu içinde gerçekleşen kanamalı patolojileri (tumör vb.) dışlamak için kullanılır.
  - 6- Kontrastsız BT infarkt alanını saptamada difüzyon ağırlıklı manyetik rezonans (Difüzyon MR) görüntülemeye göre daha az duyarlıdır [9]. Ancak BT, hızlı ve kolay erişilebilir olması nedeniyle bir çok sağlık tesisinde kullanılan ilk görüntüleme yöntemidir.
  - 7- Erken dönemde enfarktüs dokusu ile normal beyin dokusu arasındaki kontrastın düşük olması nedeniyle uzmanların çıplak gözle ince farkları tespit edememesi, kontrastsız BT’nin akut iskemik inmeli hastalarda karar vermede yardımcı olma yeteneğini kısıtladığından Derin Öğrenme tabanlı bir evrimsel sinir ağının yardımıyla bu sınırlamanın üstesinden gelinebilmesi hedeflenmektedir.
- Çalışmanın ana amaçlarından biri, kontrastsız beyin BT görüntülerinden elde edilen sonuçlarla inme teşhisine yönelik segmentasyon problemlerini çözmek için ilgili teknolojinin geliştirilmesidir. Bu tür otomatik yazılımlar (Bilgisayar Destekli Tanı Sistemleri), hekimlere karar destek sağlamak için yardımcı olarak kullanılabilir. Hekimlerin tıbbi görüntüleri yorumlamalarına destek olmak, tanı ve tedavi için bir karar destek sistemi sağlamak için uygulama düzeyinde inme yönetimini standart hale getirmek amacıyla yapılan çalışmamız, tasarlanan sistemin hedeflediği işlemler ve sunacağı öneriler aşağıdaki gibidir:
- 1- Hekimlere yardımcı bir sistem tasarlamak.
  - 2- Beyin damar hastalıkları ve inmenin topluma getirdiği ekonomik ve sağlık kaybı yükünün azaltılması için teşhis ve tahminlemeyi maksimum orana çıkarmak.
  - 3- Klinik işleyişi geliştirmek.
  - 4- Acil ve öncelikli hastaları sınıflandırmak.
  - 5- İşgücünü azaltmak.
  - 6- Maliyet ve zaman kaybını en aza indirmek.

7- Derin öğrenme modelleri ile akademik yönün gelişmesine katkıda bulunmak.

8- Sakatlık ve ölümleri azaltmak.

Yukarıda açıklanan problemin çözümü için hastanın öyküsü ve nörolojik muayenesi sonrasında klinik ön tanının doğrulanması ve inmenin patolojik tipi arasında ayırıcı tanıyı yapacak bir karar destek sisteminin tasarlanması amaçlanmaktadır.

Bilgisayar Destekli Tanı Sistemleri, tıbbi görüntüler ile radyolog hekimler arasında bir ara katman görevi görmektedir. Burada dikkat edilmesi gereken nokta, Bilgisayar Destekli Tanı Sistemleri tarafından üretilen çıktılarının **kesin sonuç** olarak kabul edilmeyeceğidir. Ancak ortaya çıkan sonuç çıktısı hekimlere bir karar destek sistemi sağlayacaktır.

Bu hususta birçok modern yöntem kullanılabilir. Burada çözülmesi gereken problemimiz Segmentasyon (Bölütleme) problemidir. Derin Öğrenme Tabanlı Evrışimsel Sinir Ağları bu problemleri çözmek için yaygın olarak kullanılmaktadır.

**Segmentasyon (Bölütleme)** : Beyin BT görüntüsünde inme varsa, inmenin patolojik tipinin (iskemik, hemorajik) bulunduğu bölgelerin tespit edilmesidir. Bu tür bir problemde, problem çözümü için genellikle bir **backbone** ve bir **decoder** kullanılmaktadır. **Backbone**; beyin BT görüntülerinden bilgi toplama, **Decoder**; Backbone tarafından toplanan bilgileri bölütlere (*segmentlere*) ayırarak ve inmenin meydana geldiği bölgeleri işaretleyerek görsel bir harita sunar. Bu anlamda Decoder modeli için **U-Net** kullanılmıştır.

Çalışmada, Etik Kurul kararı ile Elazığ Fethi Sekin Şehir Hastanesi'nden hasta mahremiyet kuralları dikkate alınarak idari izinle alınan 4.000 BT görüntüsü (*görüntü kesitleri*) kullanılmıştır. Bu görüntülerden 2.000 görüntü İnme bulguları içeren görüntü iken diğer 2.000 görüntü ise normal beyin görüntülerinden oluşmaktadır. Performans değerlendirme metrikleri ile elde edilen sonuçlar ve segmentasyon sonucunda elde edilen IoU ve Dice katsayı değeri, hekimler için erken evrede tahminlemede inme yönetimine yardımcı olma potansiyeline sahip olduğunu söyleyebiliriz.

## 2. LİTERATÜR ARAŞTIRMASI

Bu bölüm, 2015-2020 yılları arasında yayınlanan derin öğrenme tabanlı evrışimli sinir ağları anahtar kelimeleri kullanılarak beyin BT görüntülerinden inme tespiti ve inmenin patolojik tipinin segmentasyonu üzerine yapılan araştırma makelelerine ayrıntılı bir genel bakış sağlamaktadır.

Literatürde kontrast madde verilmeden elde edilen beyin BT görüntülerinden inme belirtisinin olup olmadığını ayırt eden, inmenin patolojik tipini tespit eden ve ilgili bölgenin BT görüntüsü üzerinde işaretlemesini yapan çok sınırlı sayıda çalışma bulunmaktadır. Ancak bu çalışmalar ayrı ayrı çalışmalar olup, birlikte kullanımlarını araştıran bir makale çalışması bulunmamaktadır. Ayrıca, literatürdeki çalışmalarda kullanılan veri setleri kamuya açık veri setlerinden oluşan küçük veri setleri ile sınırlandırılmıştır. Bu çalışmanın en özgün yanı ise hastaların mahremiyet kuralları gözetilerek etik kurul kararı ile Elazığ Fethi Sekin Şehir Hastanesinden alınan gerçek hasta veri setlerinden oluşan gerçek sonuçların literatüre kazandırılmasıdır. Literatür taraması

için, hemorajik inme ve akut iskemik inmede kontrastsız BT'yi değerlendirmek için bir hesaplama yöntemini tanımlayan veya test eden çalışmaları dahil ettik. Aşağıdaki kriterler literatür çalışmamıza dahil edilmemiştir.

- 1- Akut iskemik inme veya hemorajik inme lezyonlarına odaklanmayan makaleler veya çalışmalar.
- 2- Kontrastsız BT görüntülerinden derin öğrenme tabanlı evrimsel sinir ağlarını test etmeyen makaleler ve çalışmalar.
- 3- Türkçe veya İngilizce olarak sunulmayan bildiri ve çalışmalar.

Başlıca literatür araştırmaları aşağıda listelenmiştir:

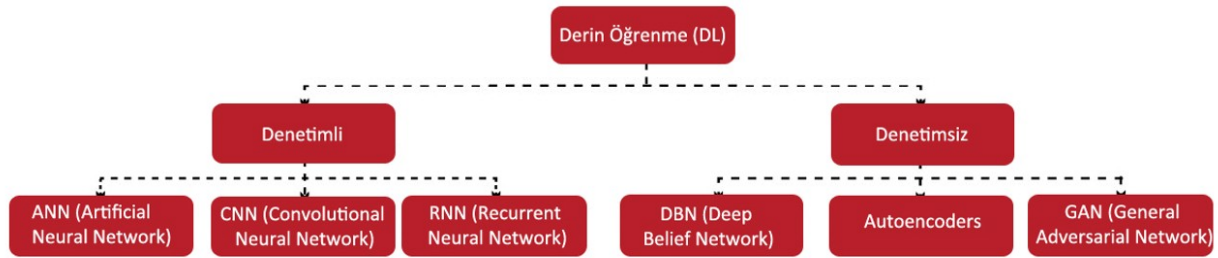

Chin ve ark., BT modalitesine dayalı olarak iskemik lezyonları segmentlere ayırmak için beş katmandan oluşan geleneksel bir CNN kullanmıştır [10]. Barmen ve ark., 11 katmandan oluşan Derin simetriye duyarlı Deep SymNet adlı bir modeli açıklamışlardır[11]. Model başlangıç modüllerinden, L-1 farkıyla birleştirme katmanlarından, maksimum havuzlama katmanlarından ve tam bağlantılı katmanlardan oluşmaktadır. Öman ve ark.'nın çalışmasından farklı olarak, bu araştırma manuel olarak segmentlere ayrılmış lezyonlara dayanmaktadır. Daha iyi performans gösterdiği için lezyon tespiti için tam otomatik bir yöntem olarak tanımlanmıştır. Akasaka ve ark., 14 radyolog arasında kontrastsız BT görüntülerinde inme teşhisinde ortalama duyarlılığın %26.5 olduğunu saptamıştır [12]. İnme ile ilgili olarak birkaç çalışma, derin öğrenme tabanlı bir evrimsel sinir ağının, BT görüntülerinde intrakraniyal kanamayı ve hemorajik inmeyi tespit etmek için başarılı bir şekilde kullanılabileceğini ortaya koymuştur [13,14,15]. Bununla birlikte, kontrastsız BT kullanılarak akut iskemik inme tespitini içeren çalışmaların nadir olduğu bilinmektedir.

### 3. TEORİK ARKA PLAN

Bu bölümde, çalışmalarını gerçekleştirmek için kullanılan derin öğrenme, derin öğrenme tabanlı evrişimsel sinir ağları ve mimarisinin tanımı ve metodolojisine teorik olarak kısa bir giriş yapılmıştır.

#### 3.1. Evrişimsel Sinir Ağları ve Derin Öğrenme

Derin öğrenme (*Deep Learning*), özellik çıkarma (*feature extraction*) için birçok doğrusal olmayan (non-linear) işlem birimi katmanını kullanmaktadır. Her ardışık katman, önceki katmandaki çıktıyı girdi olarak kullanır. Derin öğrenmeyi, ham veri kümesinden özellikleri otomatik çıkarabilen bir makine öğrenmesi sınıfı/tekniki olarak tanımlayabiliriz. Kısaca; Deep Learning (*Derin Öğrenme*), klasik makine öğreniminin daha gelişmiş bir versiyonudur. Şekil-2’de belirtildiği gibi Derin Öğrenmenin iki türü bulunmaktadır [16].

Şekil-2: Derin Öğrenme'nin Türleri

Derin öğrenme mimarileri oluşturulurken kullanılacak algoritma büyük önem taşımaktadır. Bu algoritmalar verinin tipine, boyutuna, hacmine, yapısına ve kullanılacak parametrelere göre farklılık gösterebilir.

- 1- Evrişimli Sinir Ağları (CNN),
- 2- Tekrarlayan Sinir Ağları (RNN),
- 3- Kısıtlı Boltzmann Makineleri (RBM) ve
- 4- Derin İnanç Ağları (DBN)

başlıcalarıdır. Problemimizin çözümü için en uygun algoritma Evrişimli Sinir Ağları'dır.

Evrişimli Sinir Ağları, bilinen en iyi derin öğrenme algoritmalarıdır. Genellikle görüntü sınıflandırma problemlerinde kullanılır. CNN veya ConvNet olarak da bilinir. Evrişimsel Sinir Ağları, bir girdi görüntüsü alabilen ve görüntüdeki çeşitli nesnelere ayırabilen derin öğrenme modelidir. CNN'nin birden fazla katmanı vardır (*bir giriş ve çıkış katmanının yanı sıra birden çok gizli katmandan oluşur*). Çünkü Evrişimsel Sinir Ağları, görsel nitelikler

hijerarşik yapının tamamını bulmak için birden fazla katmana ihtiyaç duyar. Tipik bir sinir ağından daha az nöron bağlantısı gerektirir. Bu, evrişimsel sinir ağı modelini eğitmeyi kolaylaştırır. Temel bir CNN mimarisinin ilk birkaç aşaması Evrişim (*convolution*) ve Havuzlama (*pooling*) katmanlarından oluşur. Son aşama, Tam Bağlantılı Katman (*Fully-Connected Layer*) ve ardından sınıflandırma (*classification*) katmanından oluşur (Şekil 3, *CNN Mimarisi tabanlı LeNet'in genel görünümü*).

Şekil-3: Genel CNN Mimarisi

Evrişimsel bir sinir ağını diğer derin öğrenme algoritmalarından ayıran en önemli özellik, görüntünün kendisini girdi olarak almasıdır. Geleneksel sinir ağlarında girdi (*input*) vektör biçimindedir.

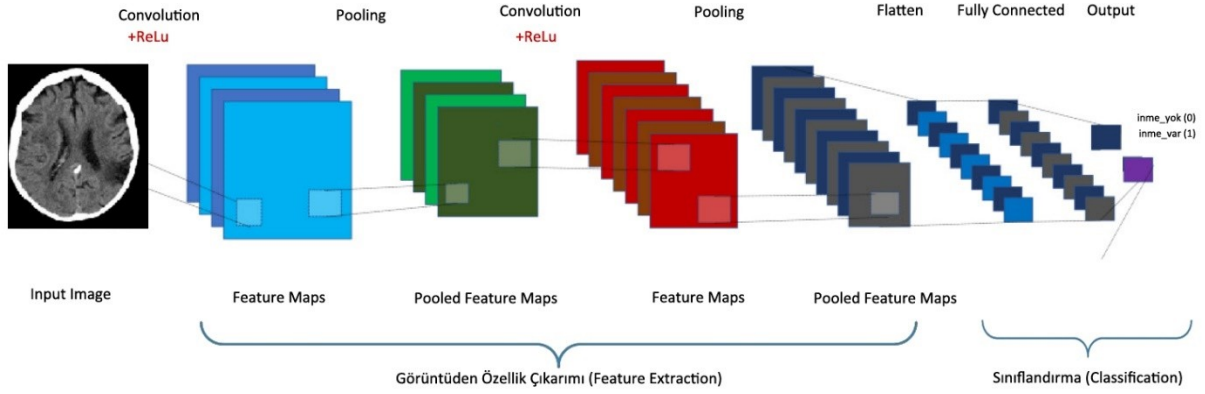

Evrişimsel sinir ağlarının en önemli avantajları aşağıda gösterildiği gibidir:

- 1- Evrişimsel filtre ve havuzlama katmanlarını kullanarak görüntüden daha fazla bilgi alınarak eğitilecek ağ parametresini büyük bir ölçüde azaltılabilir.
- 2- Önemli özelliklerden biri de *weight sharing* denilen ağırlık paylaşımıdır.
- 3- Evrişimsel Sinir Ağları'nın *local connectivity* özelliğinden de bahsedilebilir (Şekil-4 . *Evrişimsel Sinir Ağları'nın işleyişi, local connectivity, weight sharing, size reduction*)

Şekil-4: Evrişimsel Sinir Ağlarının İşleyişi (*local connectivity, weight sharing, size reduction*)

Şekil 5’de görüldüğü gibi, önerilen modelin CNN Mimarisinde iki ana bölüm bulunmaktadır. Birincisi; görüntüden özellik çıkarma adı verilen süreçte analiz için görüntünün çeşitli özelliklerini ayıran ve tanımlayan bir evrişim aracı. İkincisi ise; evrişim sürecinin çıktısını kullanan ve önceki aşamalarda çıkarılan özelliklere dayalı olarak görüntünün sınıfını tahmin eden tam bağlantılı bir katman. Burada önerilen modelin CNN mimarisi, beyin BT görüntülerinden inme olup olmadığını (*inme var, inme yok*) göstermektedir. Sınıflandırma modeli ile etiketlenen veriler, uzman hekim tarafından daha önceden etiketlenmiş doğru sınıf ile karşılaştırılarak beyin BT’inde inme olup olmadığı ayırt edilecektir.

Şekil-5 : Genel CNN Mimarisi Üzerine Kurulu, Önerilen Modelin CNN Mimarisi

### 3.2. U-NET

CNN tabanlı bir sinir ağı olan U-Net, Evrişimli bir sinir ağının kavram ve katmanlarını kullanır. Bu nedenle U-Net, piksel tabanlı görüntü bölütlemeye klasik modellere göre daha başarılı sonuçlar vermektedir. U-Net, en basit tanımıyla tıbbi bir segmentasyon aracı olarak nitelendirilse de, çok sınıflı bir segmentasyon ağı olarak karşımıza çıkmaktadır. Geleneksel evrişimsel sinir ağı modelleri, eğitim için çok büyük veri setleri gerektirir. Bu veri setlerindeki görüntüler etiketlenir ve ağa verilir. Ağ, bu etiket bilgileri aracılığıyla görüntüleri tanır. Tıbbi görüntülerde etiketleme sürecinin, uzman hekim ve zaman sağlama açısından oldukça maliyetli bir süreç olduğunu belirtebiliriz. U-Net mimarisinin bir avatanjı olarak, genellikle veri setlerinin yetersiz olduğu durumlarda tıbbi görüntülemeye doğru sonuçlar elde etmek için piksel tabanlı görüntü segmentasyonu sunmaktadır. Şekil-6'da U-Net Mimarisi verilmiştir. U-net mimarisindeki katmanlar bir araya geldiğinde U harfini çağrıştırdığı için adını bu çağrışımdan almaktadır.

Şekil-6 : Genel U-Net Mimarisi

U-Net mimarisindeki her mavi kutucuk, çok kanallı bir özellik haritasına (*feature map*) karşılık gelmektedir. Kanal sayısı kutucukların üzerinde gösterilir ve X-y boyutu kutucuğun sol alt köşesindedir. Beyaz kutucuklar ise, kopyalanan özellik haritalarını temsil etmektedir. Oklar farklı süreçleri gösterir. U-Net mimarisi daralan bir yol (*encoder path*) ve genişleyen bir yol'dan (*decoder path*) oluşmaktadır.

U-net mimarisindeki encoder, geleneksel bir evrişimsel ağın tipik mimarisini takip etmektedir. 3x3 evrişim işleminin iki kez tekrarlanmasından oluşmaktadır. Bunu daha sonra aktivasyon ve alt örnekleme olarak bilinen bir ReLu için iki adımlı 2x2 maksimum havuzlama izlemektedir. Her bir alt örnekleme işlemi ile özellik kanallarının sayısı iki katına çıkar. Mimarideki decoder her üst örnekleme işleminden sonra özellik kanallarının sayısını yarıya indiren 2x2 evrişim işleminden oluşur. U-net kullanmamızın avantajları aşağıdaki gibi sıralanabilir:

- 1- U-Net, sınırlı sayıda etiketlenmiş eğitim görüntüsünü kullanarak görüntülerin verimli bir şekilde bölütlemesini yapabilir.
- 2- U-Net mimarisi, makul düzeyde bir segmentasyon haritasını tahminlemek için encoder'dan alınan konum bilgisini ve decoder'dan alınan bağlamsal bilgiyi birleştirir.

#### 4. METODOLOJİ

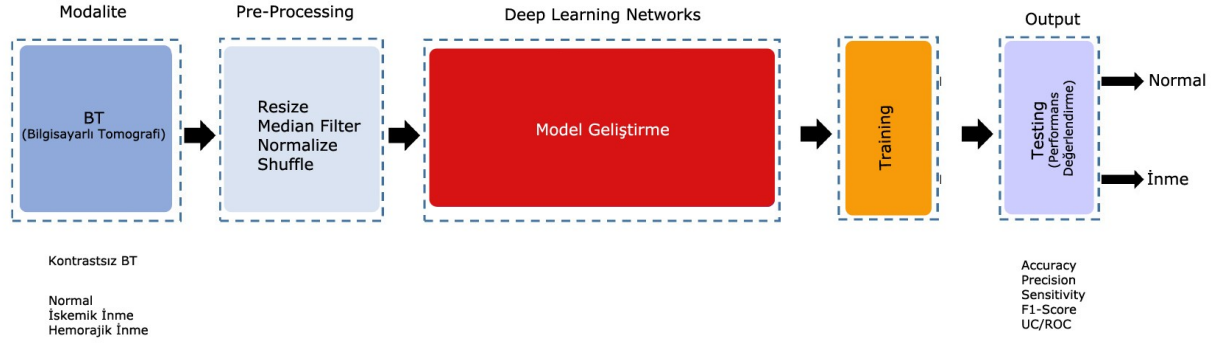

Bu retrospektif çalışma hasta mahremiyet kuralları göz önünde bulundurularak Elazığ Fethi Sekin Şehir Hastanesi Başhekimliği ve Fırat Üniversitesi Etik Kurul Başkanlığı tarafından onaylanan bir çalışma olup, önerilen modelin mimarisi ve çalışmada kullanılan veriseti bu bölümde açıklanmıştır.

##### 4.1 Bilgisayarlı Tomografi'de Derin Öğrenme Yöntemi

Bilgisayarlı Tomografi'den inme infarkt alanını analiz edebilen bilgisayar destekli bir teşhis sistemi genellikle bazı adımlardan oluşmaktadır. Bu adımlar;

- 1- Enfarktüs tespiti
- 2- Enfarktüs segmentasyonu
- 3- Enfarktüs sınıflandırması

Ancak, kontrastsız BT'de bu adımları tespit etmenin bazı zorlukları bulunmaktadır. Karşılaşılan bu zorluklar; rekonstrüksiyon, gürültü azaltma ve artefakt azaltma gibi süreçlerdir. Bu zorlukların üstesinden gelmek adına, çözünürlük iyileştirme için ön işleme aşamasında *medyan filtreleme (median filtering)*, *yeniden boyutlandırma (resizing)*,

Şekil-7 : Blok Diyagram

## 4.2 Veri Seti

Elde edilen görüntüler, hemorajik inme, iskemik inme ve normal beyin görüntülerini içeren görüntülerden oluşmaktadır. Modeli eğitmek için verisetinin %80'i eğitim için, %20'si test verileri olarak tanımlanmıştır. Çalışmada, etkilenen görüntüler **inme**, sağlıklı görüntüler ise **normal** olarak adlandırılan iki sınıftan oluşmaktadır. Etkilenen vakalar, hemorajik ve iskemik vakaların toplamıdır.

Orijinal görüntü kesitlerinin boyutu 512x512 piksel olup DICOM formatındadır. Bu çalışmada DICOM formatı yerine PACS DICOM Viewer uygulamasının sunduğu dönüştürme özellikleri kullanılarak "PNG" formatına dönüştürme işlemi yapılmıştır. DICOM formatındaki veriler "png" ye dönüştürüldükten sonra 512x512 piksellik 8 bitlik gri seviyeli görüntüler elde edilmiştir. Ancak, görüntü sayısının fazla olmasından dolayı orijinal boyutu 512x512 piksel olan görüntüler, 150x150 piksel olarak yeniden boyutlandırılarak eğitilmiştir. Verisinde bulunan 4.000 görüntüden 3.200 görüntü eğitim, 800 görüntü ise test görüntüsüdür. Görüntülerden inme (iskemik, hemorajik) bulguları içeren 2.000 görüntü manuel olarak segmentlere ayrılmıştır (bkz: Tablo-1).

	İnme	Normal	Toplam
Eğitim	1.600	1.600	3.200
Test	400	400	800
Toplam	2.000	2.000	4.000

	İkili (Binary) Sınıflandırma	Bölütleme (Segmentasyon)
İnme/Normal	2.000 / 2.000	2.000 / 2.000
Maske	-	2.000 / -

	İskemik	Hemorajik
Eğitim	800	800
Test	200	200
Toplam	1.000	1.000

**Tablo -1 :** Çalışmada kullanılan BT görüntüleri veri setleri

Ayrıca, inme bulguları içeren her bir görüntü için bir maske görüntüsü de bulunmaktadır. Çalışmadaki verisetinin manuel olarak segmentlere ayrılmış maske görüntüleri, uzman hekim tarafından sağlanan maske görüntülerinden oluşmaktadır. Bu görüntülerin önerilen modelimiz ile en doğru ve en güvenilir şekilde tahmin edilmesi beklenmektedir.

Şekil 8’de rastgele seçilen bir görüntünün manuel segmente edilmiş ve uygulama tarafından tahmin edilen maske görüntüsü görülmektedir. Manuel olarak bölütlenen görüntülerde, inme vakası içeren her bir görüntüdeki hemorajik ve iskemik alanlar, uzman hekim tarafından ITK-SNAP adı verilen bir medikal görüntü bölütleme (segmentasyon) yazılımı kullanılarak bölütlenmiştir. ITK-SNAP, tıbbi görüntülerde manuel işaretlemeyi sağlamaktadır. Ayrıca, aktif kontur yöntemleri kullanılarak tıbbi görüntülerin yarı veya otomatik olarak bölütlenmesine olanak tanır. ITK-SNAP tıbbi görüntü analiz yazılımında diğer görüntü analiz araçlarına göre özellikle görüntü bölütleme sorunu üzerinde durulmuş, bunun dışındaki özellikler minimumda tutulmuş ve fazla ön plana çıkarılmamıştır.

#### 4.3 Segmentasyon Çerçevesi

Görüntü bölütleme, bir giriş görüntüsünün verilen görüntüdeki ilgi alanı (RoI) ile farklı bölümlere ayırmayı içermektedir. Tıbbi görüntünün segmentlere ayırmanın amacı, vücudun ilgili bölümünün anatomisini incelemek, ilgilenilen bölgeyi belirlemek, enfarktüsün boyutunu (anormal olan alan) ölçmek ve karar vermeye yardımcı olmak için verilen bir girdi görüntüsünü anlamlı bir biçimde göstermektir. Görüntü bölütleme yöntemleri genel olarak semantik bölütleme (*semantic segmentation*) ve örnek bölütleme (*instance segmentation*) olarak sınıflandırılmaktadır.

**Semantik bölütleme**, bir görüntüdeki pikselleri sınıflandırma problemidir. Semantik bölütleme yöntemi, görüntüdeki her pikselin belirli bir sınıfla etiketlenmesidir.

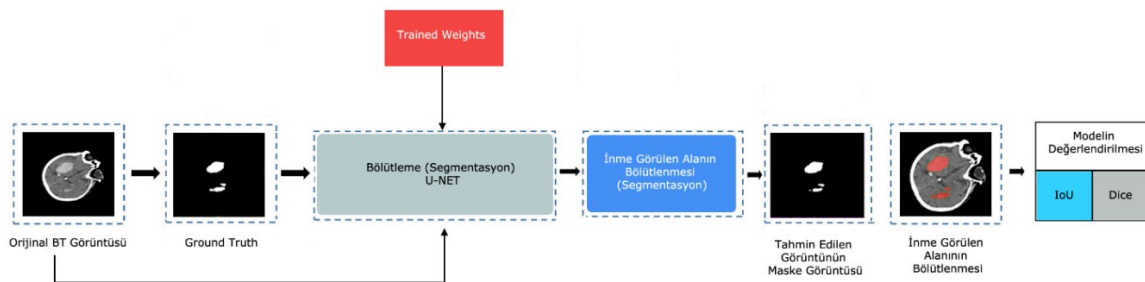

**Örnek (instance) bölütleme**, giriş görüntüsünde bulunan her bir ilgili nesneyi algılar ve tanımlar. Örnek (instance) bölütleme yöntemi, görüntüdeki ilgilenilen pikselleri sınıflandırmak ve her nesnenin konumunu kutuyla seçmektir.

Bu çalışmada, bölütleme türlerinden biri olan semantik bölütlemeyi kullanarak inme için bir teknik sunmaktayız. Önerilen segmentasyon ağ modeli çerçevemizi temsil eden bir akış diyagramı şekil 10'da verilmiştir. Segmentasyon, sınıflandırılmış kontrastsız beyin BT görüntüsündeki anormal bölgeleri tespit etmek için kullanılır. Modelimizin segmentasyon işlemini otomatik olarak yapabilmesi için test aşamasında test için ayrılan görüntülerin maskelenmiş kontrastsız beyin BT görüntülerini kullandık.

**Şekil 8** - a) Orijinal BT Görüntüsü, b) Maskelenmiş BT Görüntüsü (*Manuel Bölütlenmiş Orijinal BT Görüntüsü*), c) Ground Truth Orijinal Maske Görüntüsü, d) İnme'nin Görüntüde tespit edilmesi (*Tahmin edilen maske görüntüsü*)

Şekil 8a orijinal BT görüntüsünü gösterir, 8b manuel bölütlenmiş inme infarkt alanını (maskelenmiş BT görüntüsü) gösterir, 8c Ground Truth orijinal maskelenmiş görüntüyü gösterir ve Şekil 8d beyin BT görüntüsündeki inme infarkt alanının tahminini gösterir (tahmin edilen maske görüntüsü).

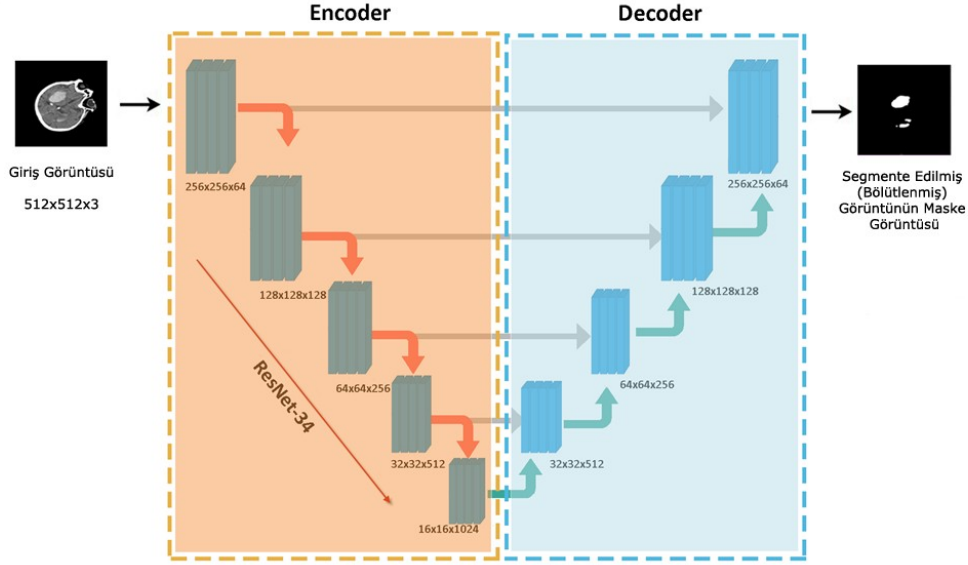

**Şekil 9** – Modelin Segmentasyon Çerçevesi

#### 4.4 Segmentasyon Mimarisi

Çalışmamızda, tıbbi görüntü segmentasyonu için derin öğrenme modelimizi eğitmek üzere Transfer Learning kullanıldı. Makalenin ana amacı sınıflandırma olmadığından sınıflandırma aşaması için performans değerlendirme sonuçlarına yer verilmemekle birlikte çalışmanın bu aşamasındaki sınıflandırma çalışmasının da segmentasyona dayalı olduğunu söyleyebiliriz. Önce görüntü üzerinde bulunan inme bulgularının olduğu alanlar segmente edilmiş ardından inme'nin tipi (*iskemik, hemorajik ve etiketlenmemiş*) olarak sınıflandırılmıştır. *Backbone* olarak ResNet34 gibi modern teknoloji mimarisi kullanılmıştır. Ayrıca, 34 katmanlı bir ResNet mimarisi olan ResNet34 kullanmamızın nedeni, ResNet50, ResNet101 ve ResNet152'den daha hızlı eğitilmiş olması ve daha az bellek kullanmasıdır.

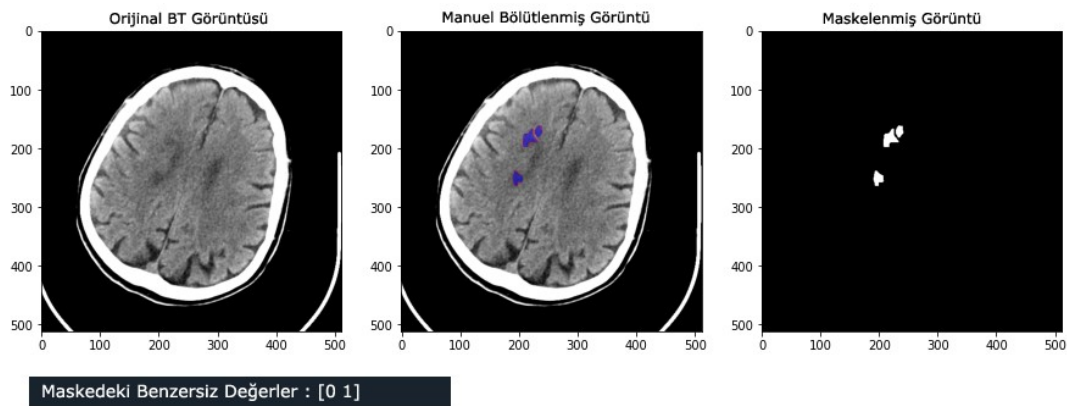

U-Net'in *encoder* ve *decoder* evrişimli sinir ağı katmanlarından oluşan bir mimari olduğunu daha önce açıklamıştık. Evrişimsel katmanlar yinlemeli olarak eğitilirken, düşük ve yüksek boyutlu özellikleri öğrenmek için bu katmanlardaki filtreler kullanılarak özellik çıkarımı gerçekleştirilir. U-Net mimarisinin arkasındaki çalışma prensibi; *encoder*, evrişimsel sinir ağı'ndan geçen görüntüyü kodlaması ve ardından *decoder* bu kodu çözerek segmentasyon maskesini elde etmesidir (*bkz: Şekil 10*). Segmentasyon maskelerinin özellikleri, öğrenilen ağırlık filtrelerine *encoder* ve *decoder* ağlarına ve atlama, birleştirme bağlantılarına bağlıdır. *Backbone*, bu katmanların *encoder* ağında nasıl düzenlendiğini tanımlayan ve *decoder* ağına nasıl kurulması gerektiğini belirleyen mimari unsurdur. Segmentasyon için, literatürde sunulan en iyi genel sonuçları göz önünde bulundurarak inme içeren kontrastsız beyin BT görüntülerini segmentlere ayırmak için ResNet34 kodlayıcılı U-Net tabanlı bir model kullanmaya karar verdik. ImageNet üzerinde önceden eğitilmiş ResNet34, derin semantik özellikleri elde etmek için *encoder* olarak kullanılmaktadır.

U-net mimarimiz şekil-10 görüldüğü gibi *encoder* ve *decoder* olarak iki aşamadan oluşmaktadır.

Şekil -10 : Backbone olarak ResNet34 ile U-Net yapısının gösterimi

Backbone, U-Net'in encoder kısmı için kullanılacak modeldir. Bu önceden eğitilmiş ağırlıklar (*pre-trained weights*, ör: imagenet) kullanarak transfer learning'den yararlanmamızı sağlar. Önerilen U-Net mimarimiz, önceden işlenmiş görüntüler ve bunlarla ilgili Ground Truth'lar üzerinde eğitilmiştir. Eğitilmiş ağırlıklar (*trained weights*) daha sonra Şekil-9'da gösterildiği gibi inme'nin patolojik tipinin (hemorajik veya iskemik) tespiti ve segmentasyonu için modelimizde kullanılmıştır. Modelimiz ilk olarak segmentasyon ağı aracılığıyla hastanın hemorajik ve iskemik inme segmentlerini çıkararak, bu segmente edilen inme bölgelerini tahmin için sınıflandırma ağına göndermektedir. Şekil-11'de orijinal bir kontrastsız beyin BT görüntüsü üzerinde inme bulgularının olduğu alan uzman hekim tarafından manuel olarak segmente edilerek , bu segmente edilen görüntünün de maskelenmiş görüntüsü oluşturularak etiketlenmiştir.

Şekil-11: Rastgele görüntü ve buna karşılık gelen Manuel segmentasyon görüntüsü ve maske görüntüsü.

## 5. SONUÇ VE DEĞERLENDİRME

Segmentasyon modellerinin kalitesini ölçmek için yaygın olarak kullanılan başlıca değerlendirme metrikleri modelimizin değerlendirilmesinde kullanılmıştır. Seçilen metrik, IoU'dur (*Kesiştirilmiş Bölgeler Ölçütleri*). Ground Truth ile model tahmini arasındaki benzerlik, Jaccard İndeksi ile ölçülmüştür. Bu nedenle IoU hesaplaması, iki dikdörtgenin kesiştiği alanın bu iki dikdörtgenin birleşim alanına bölünmesiyle hesaplanmıştır. Hesaplama formülümüz Şekil-12'de verilmiştir.

$$IoU = \frac{\text{Area of Overlap}}{\text{Area of Union}}$$

Şekil-12: IoU Hesaplama Formülü

Model doğrulama verilerine uygulandığında elde edilen sonuçlar cesaret vericidir. Modelde bir eşik değeri (threshold) oluşturulmuş ve bu değer 0,5 olarak belirlenmiştir. Bu değer altında kalan pikseller mor arka plan rengiyle maskelenmiştir ve bu eşik değerini aşan pikseller sarı olarak maskelenmiştir. Modelin her döneminde (epoch) eğitim (train) ve doğrulama (val) IoU ve loss için bir fonksiyon tanımlanmıştır. Her biri 10 saniye süren 300 epochs sonucunda, çalışmamızın segmentasyon moeli %0,8332'lik bir doğrulama Mean IoU puanına ulaşmış olup elde edilen sonuçlar şekil-13'de verilmiştir.

```
In [34]: n_classes = 3
...: IOU_keras = MeanIoU(num_classes=n_classes)
...: IOU_keras.update_state(test_pred_batch_argmax, test_mask_batch_argmax)
...: print("Mean IoU =", IOU_keras.result().numpy())
Mean IoU = 0.83327055
```

Şekil-13: Mean IoU Puanının Hesaplanması

Her sınıf için IoU puanını hesapladığımızda, elde edilen sonuçlar ise Şekil -14'de gösterildiği gibidir. Sınıf 1 etiketlenmemiş (arka plan) , Sınıf 2 iskemik ve Sınıf 3 hemorajik inme'dir. Etiket değerleri, class1=0, class2=1, class3=2'dir. Buna göre, sınıf 3, kanama tipi inme (%86,71), sınıf 2 iskemik inmeden (%63,92) daha iyi segmente edilmektedir.

Sınıf 1 , inme olmayan bölgeleri (etiketlenmemiş veya arka plan) temsil ettiğinden, IoU puanı (%99,34) beklendiği gibi yüksek çıkmıştır.

```
In [42]: class1_IoU = values[0,0]/(values[0,0] + values[0,1] + values[0,2] + values[1,0]+ values[2,0])
In [43]: class2_IoU = values[1,1]/(values[1,1] + values[1,0] + values[1,2] + values[0,1]+ values[2,1])
In [44]: class3_IoU = values[2,2]/(values[2,2] + values[2,0] + values[2,1] + values[0,2]+ values[1,2])
In [45]: print("IoU for class1 is: ", class1_IoU)
...: print("IoU for class2 is: ", class2_IoU)
...: print("IoU for class3 is: ", class3_IoU)
IoU for class1 is: 0.9934552
IoU for class2 is: 0.6392343
IoU for class3 is: 0.86712205
```

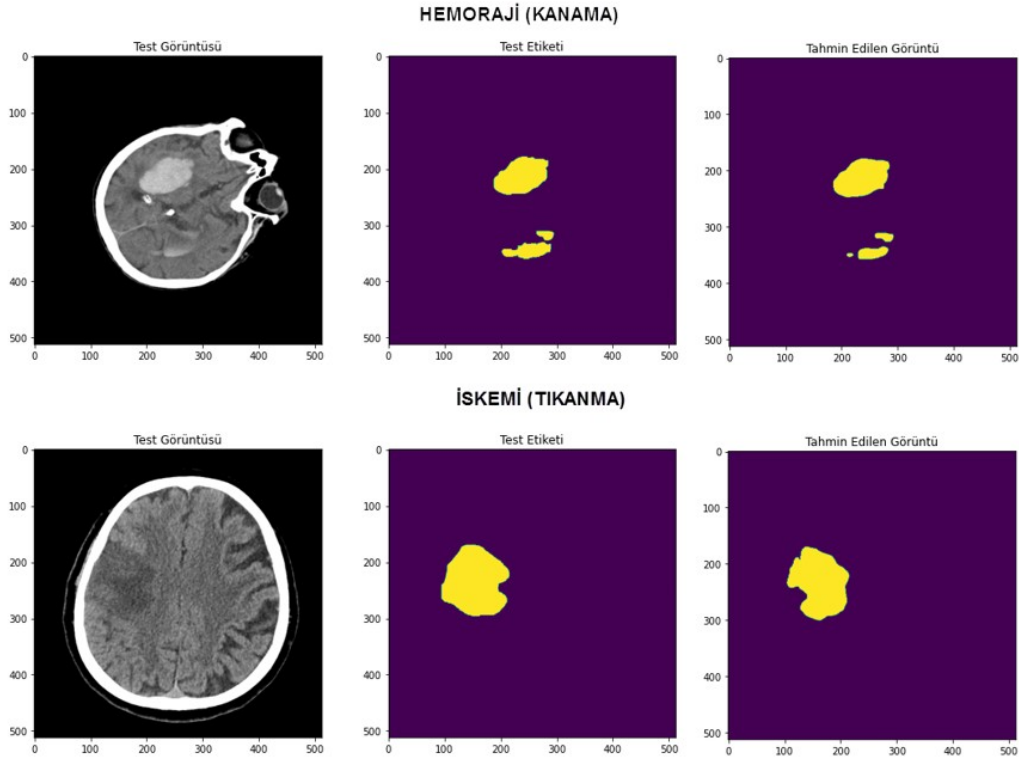

Şekil-14: Her sınıf için IoU puanının hesaplanması

Eğitim aşamasının IoU puanı ve loss değerlerinin grafik gösterimi Şekil-15’de gösterilmiştir. Şekil 16 ve Şekil 17’de her iki inme tipinin beyin BT görüntülerini ve bu görüntüler için uzman hekim tarafından manuel olarak işaretlenen maske görüntüleri ve U-Net+ResNet34+Backbone segmentasyon modeli ile tahmin edilen maske görüntülerini içermektedir. Şekil 16 ve 17’de uygulama tarafından rastgele seçilen gerçek maskeler ile tahmin edilen maskelerin birbirine çok benzediği ve kullanılan modelin performansını ortaya koyduğu gösterilmektedir. Şekil 16 ve Şekil 17’de verilen hemoraji ve iskemik görüntülerinin IoU skoru hesaplandığında sırasıyla 0,92015 değeri ile %92,01 ve 0,82229 değeri ile %82,22 başarı sağlanmıştır.

Şekil-15: Önerilen segmentasyon modelinin

Train ve Validation IoU puanı ve Loss değerleri grafiği

Şekil-16 : Test Görüntüleri ve Tahmin Edilen Görüntüleri

Şekil-17: Hemorajik ve İskemik inme görüntülerine ait IoU görüntüleri

**ÖZET**

Bu çalışmada, eğitim kurumlarında oluşması muhtemel güvenlik zafiyetlerinin derin öğrenme çözümlerini kullanarak en aza indirgenmesi hedeflenmektedir. Oluşturulan sistem eğitim kurumlarının iç ve dış mekânlarında bulunan insan davranışlarını tehlikeli, şüpheli ve normal olarak ayırt etmek için kesici ve delici alet tespiti yapmaktadır. Tespit edilen davranışlar sayesinde kurum içerisindeki öğrencilerin daha güvenli bir eğitim modeline ulaşması sağlanmaktadır. Öğrencilerin güvenli eğitim ortamına ulaşmasının sağlandığı bu projede Derin Öğrenme Sınır Ağ Modeli eğitilerek, kamera yardımıyla elde edilen görüntüler yoluyla insan davranışları kategorize edilmektedir. %90 üzerinde başarılı tahminler ile ateşli silahlar ve kesici aletler tespit edilebilmektedir.

**A SYSTEM FOR DETECTING DANGEROUS AND SUSPICIOUS HUMAN  
BEHAVIOR FOR EDUCATIONAL INSTITUTIONS**

**ABSTRACT**

This study aims to minimize the security vulnerabilities that may occur in educational institutions by using deep learning solutions. The designed system detects cutting and piercing tools to distinguish between dangerous, suspicious, and normal human behaviors in indoor and outdoor spaces of educational institutions. Thanks to the detected behaviors, it is ensured that the students in the institution reach a safer education model. In this project, where students are provided with safety education, Deep Learning Neural Network Model is trained and human behaviors are categorized with the images obtained with the help of the camera. Pistols and knives can be detected with over 90% of successful predictions.

**GİRİŞ**

Eğitim kurumları için güvenlik kavramı çok boyutlu ve hassas bir konudur. Okul güvenliği araştırmaları okullarda, öğrenci ve okul çalışanlarının fiziksel, sözel ve psikolojik güvenliği gibi temel konularda problem yaratabilecek, suç ve şiddet olaylarının (psikolojik şiddet, hırsızlık, örgütlenme, okula silah, bıçak vb. gibi kesici aletler getirilmesi...) yaşanabileceğini bize göstermektedir. Ayrıca okulda ve çevresinde yaşanan bu suç olaylarının okulun bulunduğu konuma, okul binasının bulunduğu yerde yaşayan insanlara, okul güvenilirliğine, öğrencilerin ve okul personelinin bireysel özelliklerine hasar verdiği ve etkilediği gözlemlenmektedir [1]. Bu sorunlara yönelik olarak güvenlik sistemleri geliştirilmektedir.

Güvenlik sistemleri iç ve dış mekânlar için geniş uygulama alanlarına sahiptir. Özellikle güvenlik kameraları temel korumanın ayrılmaz bir parçasıdır. Bu kameralar insanları güvenlik amacıyla kayıt altına almaktadır. Kayıt altına alınan veriler incelenerek problem tespit edilmektedir. Güvenlik kamerasına yansıyan bütün olayların insanlar tarafından manuel olarak incelenmesi mümkün değildir. Bu problem sistemin verimini büyük ölçüde azaltmaktadır. Çünkü uzun süreli video verileri incelemek müdahaleyi geciktirmekte ve zaman kaybına yol açmaktadır. Günümüzde yapay zekâ, makine öğrenmesi ve derin öğrenme sistemlerine sahip teknolojiler insan gücünün ulaşamayacağı hızda çözümler üretmektedir. Video gözetim sistemleri ile bu teknolojilerin kombinasyonu öngörülemez güvenlik açıklarını yüksek hızlarda tespit edebilmektedir. Derin öğrenme yaklaşımı kullanılarak insan davranışları incelenebilmekte ve bu davranışların şüpheli ya da normal olup olmadığı tahmin edilebilmektedir [2]. Derin öğrenme yaklaşımının avantajları, etkili izleme, daha az insan kaynağına ihtiyaç duyulması, uygun maliyet, hızlı şüpheli aktivite tespiti, yeni güvenlik eğilimlerini benimsenmesi, öngörülemez suç oranının azaltılması şeklinde sıralanabilir.

Literatürde nesne tanıma ile ilgili yapılan çalışmalar incelendiğinde; [3]'te SSD MobileNet V2 algoritması kullanılarak, istenmeyen tehdit unsuru nesnelere eğitildiği ve bu nesnelere tespitinin sağlandığı görülmektedir. Bu çalışmada nesnelere tespiti hususunda %91 oranında başarı sağlanmıştır. [4]'te ise tarım ürünleri, nesne tanıma yöntemleri kullanılarak tespit edilmiş ve bu ürünlerin toplanması için robot kol tasarlanmıştır. Nesne tanıma yöntemleri kullanılarak farklı alanlarda iş faaliyetlerinin de gerçekleştirilebileceği bu bildiride görülebilmektedir.

Bu çalışma ile eğitim kurumlarında oluşan güvenlik zafiyetlerinin YoloV5 yapay zekâ modeli üzerinde, eğitilen silah ve bıçak verilerinin tespiti ile en aza indirgenmesi sağlanmaktadır. Oluşturulan sistem eğitim kurumlarının iç ve dış mekânlarında bulunan insan davranışlarını

tehlikeli, şüpheli ve normal olarak ayırt edip etiketlemektedir. Etiketleme sistemi kesici aletlerin varlığının olup olmaması ile çalışmaktadır. Etiketlenen davranışlar sayesinde kurum içerisindeki öğrencilerin daha güvenli bir eğitim modeline ulaşması sağlanmaktadır.

Bölüm 2’de sistem modeli aktarılmakta ve çalışmadaki hazırlık ve süreç aşamalarından bahsedilmektedir. Nesne tespiti için gerekli eğitim, test ve doğrulama verileri sunulmaktadır. Eğitim yapılacak olan algoritmanın tercihi ve çalışma mekanizması verilmektedir. Eğitim sonuçları ve bu sonuçlardan elde edilen çıkarımlar yine aynı bölümde aktarılmaktadır. Bölüm 3’te genel olarak çalışmanın sonuçları ve literatüre olan katkısından bahsedilmektedir.

## SİSTEM MODELİ

Bu çalışmanın temelini eğitilmiş derin öğrenme modeli oluşturmaktadır. Etiketlenen veriler sayesinde, ateşli silahları ve kesici aletleri yüksek doğrulukla tespit eden model eğitilmiştir.

### Veri Seti

Bu çalışmada veri seti olarak iki farklı sınıf etiketlenmiştir. Bunlardan ilki bıçak diğeri ise silah sınıfıdır. Veriler etiketlenirken bu sınıflar görseller üzerinde fark edildikten sonra sınırlayıcı kutucuklarla işaretlenmiştir. Etiketleme yapılırken *Roboflow* web uygulaması ve *LabelImg* programları kullanılmıştır [5]. Şekil 1’ de *Roboflow* uygulaması üzerinden etiketlenmiş veriler görülmektedir.

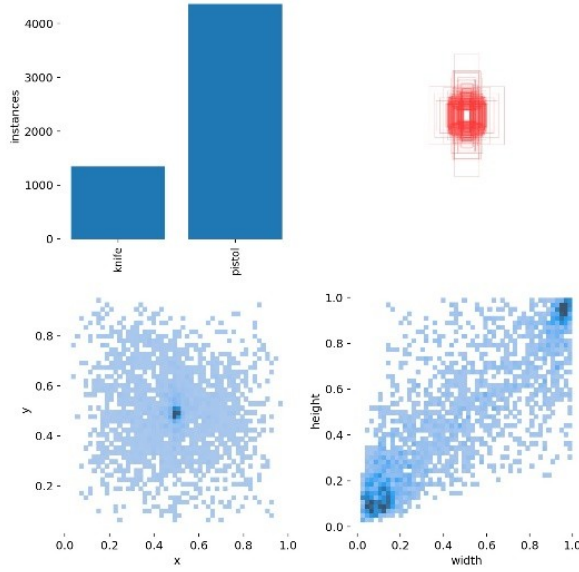

Şekil 1: Roboflow üzerinden etiketlenmiş veriler

Veri seti olarak açık kaynaklı etiketli veriler ve internet ortamında bulunan fotoğraflar etiketlenerek kullanılmıştır. Toplamda 4093 adet veri etiketlenmiştir. Bunlardan 1041 tanesi bıçak, 3052 tanesi silah görüntüsünü içermektedir. Bu veriler modele aktarılmadan önce veri ön işleme yapılmıştır. Veri ön işlemede görüntüler 416x416 piksel oranlarına getirilerek standart bir format elde edilmiştir. Ardından veri artırma yöntemlerinden parlaklık ayarı uygulanmıştır. Bu ayar ile veriler %25 oranında parlatılmış ve parlaklığı kısılmıştır. Son olarak verilere %5 piksele kadar gürültü eklenerek yeni sentetik veriler üretilmiştir. Şekil 2’de gürültü eklenmiş veri görülmektedir. Üretilen bu ilave veriler veri setine eklenmiştir.

Şekil 2: Gürültü eklenmiş sentetik veri

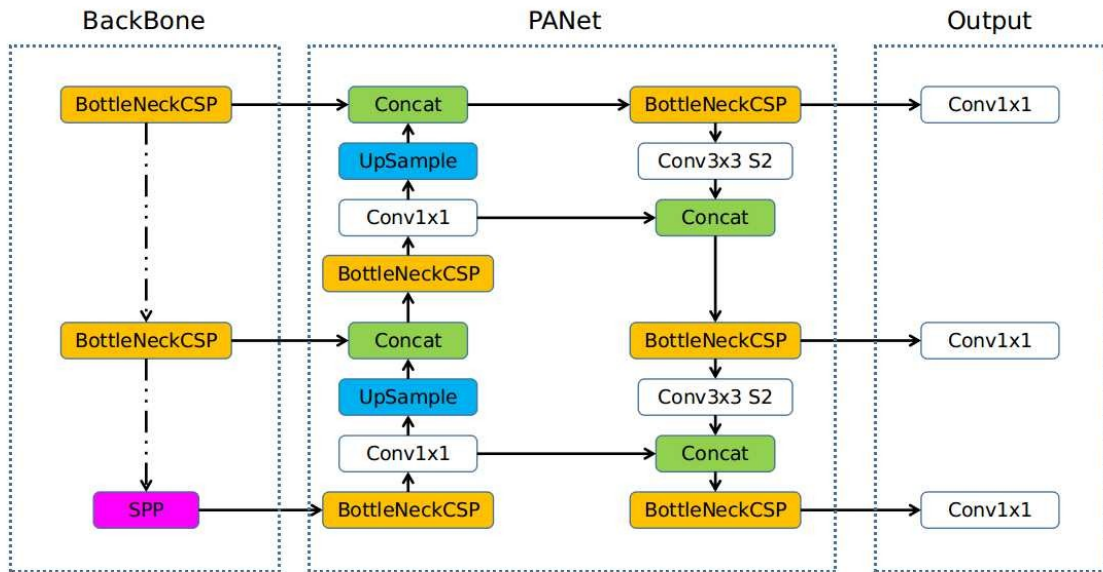

Eklenen veriler ile yeni veri seti 6295 adet imge sayısına ulaşmıştır. Bu verilerden 5339 adeti silah, 1637 adeti ise bıçak verisini temsil etmektedir. 6295 veride 6976 adet etiketleme yapılmıştır ve görüntüler ortalama 0.17mp çözünürlüğü sahiptir. Veri ve etiket dağılımı Şekil 3’te görülmektedir. Veriler istenen formata getirildikten ve artırıldıktan sonra %70 eğitim, %20 doğrulama ve %10 test olmak üzere üçe ayrılmıştır. Eğitim setiyle model eğitilmiş, test ve doğrulama setiyle tahminlerin başarısı kontrol edilmiştir. Veriler modele aktarılmadan önce model YoloV5 modeli olacağı için etiket formatı için uygun format olan *txt* formatına çevrilmiştir.

Şekil 3: Veri ve etiket dağılım tabloları

### YOLOv5 Algoritması

YOLO (You only look once) bir obje tespit algoritmasıdır. Bu ismin verilmesindeki temel neden YOLO'nun görüntüleri ızgara sistemi ile bölmesinden gelir. Izgaradaki her bölüm, o hücrede bulunan nesnelere tespit etmekten sorumludur. YOLO hızı ve doğru tespit etmesiyle en popüler nesne tespit algoritmalarından biridir. YOLO mimarisi, Şekil 4'te görüldüğü gibi, uçtan uca türevlenebilir bir ağ yapısına ve sınırlayıcı kutucuk etiket sınıflarını tahminleme yeteneğine sahiptir [6].

Şekil 4: YOLOv5 mimarisi [6]

Bu nedenle bu çalışmada YOLO'nun Pytorch çerçevesini kullanan 18 Mayıs 2020'de paylaşılan YOLOv5 versiyonu tercih edilmiştir. YOLOv5 için 4 farklı model bulunmaktadır. Bunların karşılaştırılması incelendiğinde YOLOv5x modelinin daha fazla GPU desteğine ihtiyaç duyduğu ama çok daha yüksek doğruluk verdiği gözlemlenmiştir. Şekil 5'te YOLOv5 modellerinin karşılaştırılması görülmektedir [7].

Şekil 5: YOLOv5 modelleri performans karşılaştırması [7]

## Deney

Bu çalışmada hazırlanan özel veri setinin YOLOv5x modeli ile eğitilmesi için COCO veri setinin ağırlıklarından öğrenim aktarımı kullanılmıştır. Bu sayede sıfırdan ağırlık üretmek yerine daha önce hazırlanmış ağırlıklar bu çalışmanın modeline uyarlanmıştır. Eğitim yapılırken eğitim tur sayısı (epoch) 160 olarak belirlenmiştir. Eğitim tur sayısı kadar model eğitiminde veri kümesi parçalar halinde modele aktarılmış olur. Eğitim tur sayısının ilk adımlarında öğrenme kabiliyeti düşük seviyede olmaktadır. Veri seti modelden geçtikçe ağırlıklar belirlenir ve modelin öğrenme kabiliyeti artar. Bu değer belirlendikten sonra batch değeri 16 olarak belirlenmiştir. Batch değeri ile verinin parçalar halinde modele girmesi sağlanır. Buradaki amaç, modelin tek parça ile yavaş ilerlemesi yerine, belirlenen batch değeri ile orantılı veri bloğunun tek seferde işlenmesinin sağlanmasıdır. Batch sayısı arttıkça model eğitim tur süresi de doğru orantılı şekilde artmaktadır. Bunun yanı sıra batch boyutu arttıkça tahminleme süresinin düştüğü Şekil 6'da görülmektedir [8].

Batch boyutu modele uygun olarak belirlendikten sonra eğitim başlatılmış ve 3 saatin sonunda eğitim başarı ile tamamlanmıştır. Tablo 1’de eğitimin sonunda elde edilen doğruluk değerleri verilmiştir.

Şekil 6: YOLOv5 modelleri batch size ile tahminleme süresinin karşılaştırması [8]

Sınıflar	Doğruluk (mAP@.5)
Silah	%85,3
Bıçak	%90,9
Toplam	%88,1

Tablo 1: Eğitim doğruluk değerleri

Tabloda görüldüğü gibi model yüksek doğruluk değerleri vermektedir. Bunun yanı sıra doğruluk (mAP) değeri kullanılarak hata matrisi oluşturulmaktadır. Hata matrisinde 4 adet değer bulunmaktadır [9]. Bu değerler; Doğruya doğru denmesi (True Positive – TP) doğru, yanlışla yanlış denmesi (True Negative – TN) doğru, doğruya yanlış denmesi (False Positive – FP) yanlış, yanlışla doğru denmesi (False Negative – FN) yanlış şeklinde değerlendirilmektedir. Model eğitim sırasında oluşan hata matrisi Şekil 7’de görülmektedir.

Şekil 7:Eğitimin hata matrisi

Bu hata matrisi ile birlikte 3 farklı model ölçüm metriği elde edilmektedir. Bunlardan ilki, hassasiyet (precision) olarak adlandırılmaktadır. Hassasiyet, elde edilen başarılı tahminlerin tüm tahminlere oranlanması ile bulunmaktadır. Hassasiyet (1) ile ifade edilmektedir. Duyarlılık (Recall) ise modelin doğru olarak tahmin etmesi gereken adımların kaç tanesini doğru olarak tahmin ettiğini gösteren bir ölçümdür. Duyarlılık denklem 2’de verilmektedir. Son olarak F1 skor metriği, hassasiyet ve duyarlılık değerlerinin harmonik ortalamasıyla bulunmakta ve (3) ile ifade edilmektedir. Tablo 2’de bu metriklerin eğitim sonucunda oluşan karşılıkları görülmektedir.

$$\text{Hassasiyet} = \frac{TP}{TP + FP} \quad (1)$$

$$\text{Duyarlılık} = \frac{TP}{TP + FN} \quad (2)$$

$$F1 = \frac{2 * \text{Hassasiyet} * \text{Duyarlılık}}{\text{Hassasiyet} + \text{Duyarlılık}} \quad (3)$$

Sınıflar	Hassasiyet (Precision)	Duyarlılık (Recall)
Silah	%90.2	%77,4
Bıçak	%96.3	%85,4
Toplam	%93.3	%81,4

Tablo 2: Eğitim hassasiyet ve duyarlılık değerleri

Bu değerlerin eğitim boyunca alınan harmonik ortalaması ile oluşturulan F1 eğrisi Şekil 8’de görülmektedir.

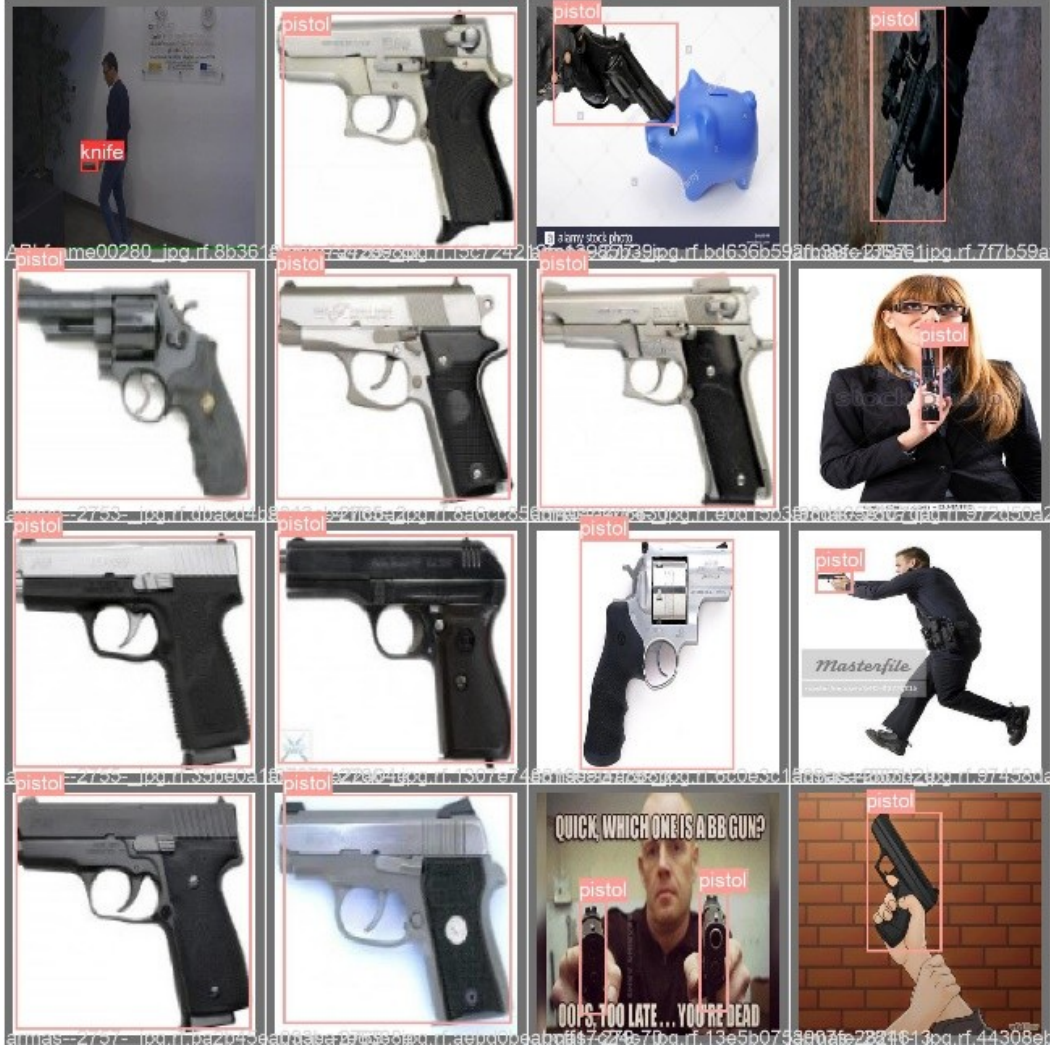

Şekil 8:Eğitimin F1 eğrisi

Model başarısının ölçülmesi için doğrulama kümesi eğitilmiş modelden geçirilmiştir. Oluşan sonuçlar, Şekil 9’da aktarılmaktadır.

## SONUÇLAR

Bu çalışmada tasarlanan yapay zekâ modeli ile eğitim kurumlarının güvenliği tek bir sistem ile kontrol edilebilecek, şüpheli kişilerin kesici ve delici alet kullandığı saniyeler içinde %90 doğrulukla tespit edilebilecek ve tehlikeli olayların kötü sonuçlarından maksimum seviyede korunmuş olunacaktır. Bu sayede az maliyet ve düşük insan gücüyle eğitim kurumları güvenli bir ortam haline getirilecektir. Çalışmanın UNESCO’nun 2030 sürdürülebilir kalkınma hedeflerinden herkes için eğitim projesine [10] hizmet etmesi amaçlanmaktadır. Bu sayede *kapsayıcı ve eşit kalitede eğitim almayı ve herkes için hayat boyu öğrenme fırsatlarını teşvik etmek* maddesine katkı sağlanması öngörülmektedir. Öte yandan eğitilen modelden alınan sonuçlar ile sınıflandırıcı model uç uça eklenerek erken tespit ve alarm sistemi çalışmanın bir sonraki fazının içeriğini oluşturulacaktır.

Şekil 9: Modelin doğrulama kümesi sonuçları

## TEŞEKKÜR

Bu çalışma 1919b012101749 başvurusu numarası ile tübitak 2209-a üniversite öğrencileri araştırma projeleri destekleme programı kapsamında desteklenmiştir.

**ERGENLERDE AİLE BÜTÜNLÜK DUYGUSU VE ÖZNEL ZİNDELİĞİN POZİTİF  
RUH SAĞLIĞI ÜZERİNDEKİ ROLÜ**

**Sabiha Beste VANGÖL (Orcid ID: 0000-0002-9491-1619)**

İstanbul Sabahattin Zaim Üniversitesi, Eğitim Fakültesi, Psikolojik Danışmanlık ve Rehberlik

**ÖZET**

Aile, içine büyüdüğümüz toplumun en küçük birimidir. Ailede birçok şeyi öğrenmekteyiz bunlar için konuşmadan tutun da karakterimizi, kültürümüzü toplumun bütünlüğüne kadar her şeyi hemen hemen aileden öğrenmekte olduğumuzu söyleyebiliriz. Aile, toplumda nüfusun kaynağını oluşturmakla birlikte toplumun temeli olarak bilinmektedir. Aile annelik babalık ve çocuk rollerinde kişilerin sosyal ve toplumsal olarak kabul ettiği bir çatı veya birlik olarak yaşamakta olduğu kabul edilmektedir bu durumda da kendi içinde kültürel ve yapı olarak incelendiğinde sosyal bir yapıdır. Böylelikle yapı içerisinde ailenin dengelerini koruyabilmek için her birey kendi rolüne uygun davranış göstermesi gerekmektedir. Ailede kişilerin sayıları ve rolleri toplumlar arası değişiklik göstermekle birlikte kırsal bölgelerde kentsel bölgelere göre üye sayısı daha fazla olan geniş aileler bulunmaktadır. Burada hem birey hem toplum için aile bütünlüğünün bireyde sağlam olması çok önemlidir. (Nazlı, 2018:32). Bireyleri dinamik, güvenli, sağlıklı, uyarıcı ve mutlu olması, empati kurabilme, kimliklerini kabul etme, yeteneklerini- ilgilerini araştırma ve kendini geliştirmeyi pozitif yönde etkilemektedir. Aile ile bireyin bir bütün olması araştırmalara da bakıldığında bireyin gelişimi, topluma karışması için önem arz eder. Bu durumda birey bütünlüğünün önemli olacağı gibi aile bütünlük duygusu da bireyler için özellikle de kişiliğimizin oturmaya başladığı dönemler için çok kritiktir. Aile bireylerinin stresli durumların üstesinden gelmesi ve aile bütünlüğü duygusunu gelişmesi için, bütünlük duygusunu bireyselden aileye doğru aktarılması ve aile bütünlük duygusu ile ailenin pozitif ruh hali uyumunu ilişkili hale getirmesi gerekmektedir (Antonovsky1988:21-25). Toplum hayatında pozitif, dinamik, mutlu olmanın temel gerekçilerden bir tanesi pozitif bakış açısına yönelik olarak öznel olarak iyi hissetmesi kişinin psikolojik olarak da iyi hissetmesinden geçer (Peterson, 2000: 108-125). Kişilerin psikolojik olarak daha iyi hissetmesi öznel zindeliklerinin güçlenmesi ile doğru orantılı olarak kabul edilmektedir. Buna göre bu çalışmada aile bütünlük duygusu ve öznel zindeliğin pozitif ruh sağlığı üzerindeki rolü incelenmiş olup nicel yöntemler; spss analizleri ile yapılan ilişki tarama, betimsel analiz, korelasyon ve regresyon analizlerini içermektedir.

**Anahtar Kelimeler:** Öznel Zindelik, Pozitif Ruh Sağlığı, Aile, Aile Bütünlüğü

**THE ROLE OF FAMILY INTEGRITY AND SUBJECTIVE VITALITY ON  
POSITIVE MENTAL HEALTH IN ADOLESCENTS**

**ABSTRACT**

The family is the smallest unit of the society we grew up in. We learn many things in the family, so we can say that we learn almost everything from the family, from speaking to our character, our culture, and the integrity of the society. The family is known as the basis of the society as well as forming the source of the population in the society. It is accepted that the family lives as a roof or unity that people accept socially and socially in the roles of mother, father and child, and in this case, it is a social structure when it is examined in terms of culture and structure. Thus, in order to maintain the balance of the family within this structure, each individual must behave in accordance with his/her own role. Although the number and roles of people in the family vary between societies, there are extended families with more members in rural areas than in urban areas. Here, it is very important for both the individual and the society that the integrity of the family is strong in the individual (Nazlı, 2018:32). Being dynamic, safe, healthy, stimulating and happy affects individuals positively, being able to empathize, accepting their identities, researching their abilities-interests and self-development. The integration of the family and the individual is important for the development of the individual and his involvement in the society. In this case, as the integrity of the individual will be important, the sense of family integrity is also very critical for individuals, especially during the periods when our personality begins to settle. In order for family members to overcome stressful situations and develop a sense of family unity, it is necessary to transfer the sense of unity from the individual to the family and to associate the sense of family unity with the positive mood of the family (Antonovsky1988:21-25). One of the main reasons for being positive, dynamic and happy in social life is to feel good subjectively for a positive perspective, and to feel good psychologically (Peterson, 2000: 108-125). It is accepted that people feel better psychologically in direct proportion to the strengthening of their subjective vitality. Accordingly, in this study, the role of family cohesion and subjective vitality on positive mental health was examined. It includes relational screening, descriptive analysis, correlation and regression analyzes with spss analysis.

**Keywords:** Subjective Vitality, Positive Mental Health, Family, Family Integrity

## **1.GİRİŞ**

Antonovsky (1987) aile bütünlük duygusu kavramını, aile bireylerinin ortak olarak dünyayı daha anlaşılabilir, çözümlenebilir ve anlamlandırılabilir olarak kabul etmesine ilişkin bir duygu olarak tanımlamaktadır. Bütünlük duygusuna sahip ailenin karşılarına çıkan problemler ve stresli durumların üstesinden diğer aile yapılarına göre daha rahat gelmektedir (Antonovsky, 1979, 1987; akt: Çeçen 2008:1202). Aile bütünlüğü olmayan yapılarda olumsuz duygu durumlarına ve bunların bireyler ya da kişiler arası ilişkiler üzerindeki etkisine odaklanan geleneksel psikoloji yaklaşımını kabul eden araştırmaların odaklandığı durumların tersine (Greenglass, 2006:137), pozitif psikolojiyi konu alan araştırmalar hayatın pozitif, olumlu ve iyi olan özelliklerine odaklanmaktadır (Seligman, 2002; Uysal, Sarıçam ve Akın, 2014:137). Pozitif psikolojinin bir kavramı olan öznel zindelik, bireylerin canlı ve enerji dolu olmasına yönelik göndermeleri bulunmaktadır (Ryan ve Frederick, 1997:184). Öznel zindelik, bireylerin hayatlarını nasıl pozitif durumlarla değerlendirdikleri ile ilgili temel olarak kabul edilebilir. İçsel olan kaynaklarla ilgili olan neşeli, pozitif, enerjik ve mutlu olma ile ilgili olan (Fini, Kavousian, Beigny ve Emami, 2010:137), hem zihinsel hem de fiziksel boyutu bulunmaktadır (Ryan ve Frederick, 1997:1223). Öznel zindelik ergenlerin birey olma yolundaki yaşam doyumları ve duygulanımlarını, motivasyon ve öz saygıları ile pozitif ilişkiliyi açıklayabilmektedir. Ergenlerin kontrol mekanizmalarında düzenleyici bir işleve sahip olan bu kavram iyi oluşun da yordayıcısı arasında (Ryan ve Fredrick, 1997:1223). Bu noktada pozitif psikoloji kavramlarından biri olan öznel zindelik grupların, bireylerin ve toplumların iyi oluşlarının ideal fonksiyonelliğine ulaşmalarına katkı sağlamaktadır (Gable ve Haidt, 2005:184). Bunun için ergen bireyin içsel mutluluk, affedicilik, iyimserlik, empati gibi pozitif özelliklerini ön planda tutarak patoloji odaklı olmaktan uzak durması gerektiği savunulmuştur (Seligman, 2002:184). Geleneksel psikoloji anlayışının aksine pozitif psikolojinin araştırmaları bireylerin yaşamlarının pozitif yönlerine odaklanmaktadır (Ryan ve Frederick, 1997:184). Öznel zindelik kişilerin enerjik, sağlıklı ve canlı karakterize edilen bir kavramdır ve Akın (2012) da öznel zindeliğin içsel mutlulukla doğrudan ilişkili olduğunu belirtmiştir. Bu araştırmada incelenen bir diğer kavram olan pozitif ruh sağlığı bireylerin davranışlarını bilimsel yolla inceleyen bir disiplin olarak tanımlanmaktadır (Doğan,2016). Modernleşmenin etkisindeki sorunlara odaklı olan psikolojinin insanı olumsuz duygu durumuna ve insanların zayıf yönlerine yaptığı öneme karşı, koruyucu/önleyici olan pozitif

ruh sağlığı kişinin güçlü ve olumlu yönlerine odaklanmıştır. Bireylerin gelişimlerinin sağlıklı olmasına bağlı olarak da

bireylerin güçlü yönlerini ön plana çıkarmayı amaçlayan pozitif psikoloji akımlarından biri olan pozitif ruh sağlığı bireylerin kaliteli ve iyi bir hayat sürmelerini sağlamak için ortam oluşturmak ve bireyin baskın olan pozitif yönlerini ortaya çıkarmak için önemli bir etken olarak görülmektedir ( Kararımak ve Siviş, 2008:30).

Yapılan literatür taramasında, günlük yaşamamızda birileri tarafından gücendirilmek ya da birilerini gücendirme gibi olumsuz duygular barındıran yaşam olaylarına karşı karşıya kalma ihtimalini göz önüne almaktadır. Bu olumsuz günlük olaylarla başa çıkabilmek yaşamı daha olumlu ve sağlıklı devam ettirmek için pozitif ruh hali oldukça gereklidir (Ekşi, Erök-Özkapu ve Ümmet, 2019:189). Olumsuz yaşam olayları kişiler arası ilişkilerle birlikte öncelikle aile içinde sonrasında ise çevreye etki eder. Aile bütünlüğü ise kişilerin iyi oluş düzeylerini, yanlışlara ilişkin bakış açılarını düzenleyerek bireyin hatalı olan kişiye, hataya ve yapılan hatanın oluşturduğu sonuçlara yönelik geliştirdiği tepkilerinin olumsuzdan olumluya doğru bir yol çizmesi anlamını bireylere aşılacaktır. Olumlu olmayan her duyguya sebep olan hatalı duygu veya davranışın kaynağı kişinin kendisinin de olabileceği gibi dışarıdan kontrol edilemeyen bir etken veya başka bir birey olabilmektedir. Bireylerin karşı karşıya kaldıkları durumlara hangi açıdan baktıkları, savunma mekanizmalarını nasıl kullandıkları, iletişim şekilleri aile bütünlüğü ile beraber öznel zindeliklerini ve ruh sağlıklarını nasıl etkilediği de değerlendirmektedir. Olaylara olumlu bir bakış açısıyla yaklaşan bireyler sorun yaratan durumlarla daha özgüvenli ve rahat bir şekilde mücadele edebilmektedir. Bu olumlu bakış açısında rol alan ve bireyin davranışlarını yönlendiren şey iyimserliktir. Bireyler karşılaştıkları sorunlara karşın yaşanan durumlara pozitif bakabilirlerse hayatı daha yaşayabilir bulup hayattan daha fazla doyum elde edeceklerdir. Bireyin dıştan gelen motivasyona bağlı kalmaksızın enerjik, pozitif ve canlı olmasından bahseden öznel zindelik, pozitif ruh sağlığının da iyi oluşuyla ilişkili olmasını (Ryan ve Frederick, 1997:1223) aile bütünlüğünün sağlam olması ile ilişkilendirmektedir. Buna bakılarak aile bütünlüğü, pozitif ruh sağlığı ve öznel zindelik kavramları araştırmacılar tarafından ilgi gören kavramlar arasında yer almaya başlamış olsa da üçünün bir arada ele alındığı ve üç değişken arasındaki ilişkiye birlikte bakılmış herhangi bir çalışmaya rastlanmamış olması konunun önemini yansıtmaktadır. Bununla birlikte, pozitif ruh sağlığı ve öznel zindelik kavramları arasındaki

ilişkiden oluşan demografik değişkenlerin farklılık durumlarına bakılarak elde edilen bulguların ergenlerle çalışan uzmanlara yol gösterebileceği düşünülmektedir.

Açıklamalardan anlaşılacağı üzere aile bütünlük duygusu öznel iyi olma ve pozitif ruh sağlığı ile ilişkili olduğu kavramları belirlemeye yönelik araştırmalar yapılmıştır.

## **2. AİLE BÜTÜNLÜK DUYGUSU ÖLÇEĞİ**

Ölçeğin orijinali Antonovsky ve Sourani tarafından 26 madde olarak geliştirilmiş, daha sonra Sagy tarafından 12 maddelik kısa formu oluşturulmuştur. Ölçek 1 ile 7 arasında değişen likert tipinde bir kişinin aile bütünlük duygusunu değerlendirme ölçeğidir. Ölçek sonucunda yüksek puan alan kişiler aile ilişkilerine yönelik olan bütünlük duygusunun yüksek olduğunu ifade eder. Öncesinde yapılan güvenilirlik ve geçerlik çalışmalarında ölçeğin toplam puan korelasyonlarının .45 ile .65 arasında değişiklik gösterdiği ve ölçeğin aile işlevlerini değerlendirmelerinde pozitif işlevlerle olumlu ve orta düzeyde yüksek, olumsuz işlevlerde ise negatif korelasyonlara sahip olduğu Sagy tarafından belirtilmektedir. Ölçeğin iç tutarlılık katsayıları ise .88 (Sagy, 1998:1205) ve .77 (Sagy & Dotan, 2001:1205) olarak belirtilmektedir.

## **3. ÖZNEL ZİNDELİK ÖLÇEĞİ**

Bireylerin kendileri ile ilgili bilgileri vermelerine yoğunlaşmış ölçme aracı olan ÖZÖ yine kendilerini iyi hissetmelerine yönelik yaşadıkları kişisel deneyimleri ve zinde oluş düzeylerini belirlemeye yönelik olan ölçme aracıdır. ÖZÖ 7 maddeden oluşmaktadır ve 7'li Likert (1kesinlikle katılmıyorum-7 kesinlikle katılıyorum) türü olan ölçme aracıdır. Ölçekte bulunan bütün maddelerden elde edilen puanlar toplanarak bireyin öznel zindelik puanı hesaplanmaktadır. Ölçeğin 2. maddesi ters kodlanmaktadır. Ölçekte bulunan puanların ranjı 7 ile 49 arasında değişmekte olup ölçeğin yüksek puanları bireylerin öznel zindelik düzeylerinin yüksek olduğunu göstermektedir. Ölçekte maddeler tek faktörde toplanmakta ve tek faktör modelin toplam varyansı %62 sini açıkladığı gözlemlenmiştir (ÖZÖ; Ryan ve Frederick, 1997:139).

## **4. POZİTİF RUH SAĞLIĞI ÖLÇEĞİ**

Lluch tarafından tanımlanan pozitif ruh sağlığının kavramsal modeli, pozitif ruh sağlığını ölçmek amacıyla geliştirilmiştir. 4'lü Likert ölçek biçiminde olmakla birlikte ölçekte ters ve düz maddeler bulunmaktadır. Ölçekten alınacak puan 39-156 aralığındadır. Bireylerin yüksek puan almaları pozitif ruh sağlığının olumlu etkilendiğini göstermektedir. Ölçeğin iç tutarlılık

katsayısı 0.89, test-tekrar test güvenilirlik katsayısı 0.92 olarak belirlenmiştir (Lluch-Canut, 1999).

### **3. YÖNTEM**

Araştırmanın evreni, yöntemi ve örnekleme, veri toplama araçlarının yapısı ve psikometrik özellikleri, veri toplama süreci ve verilerin analizi ile alakalı bilgilere yer verilmiştir. Araştırma süreci likert ölçekler aracılığıyla tamamlanacak olup, ergenlerde aile bütünlüğü, öznel zindelik ve pozitif ruh sağlığı düzeyleri ile yaş ve aile bütünlük durumları arasındaki farklılaşmaya bakılacaktır. Ayrıca aile bütünlüğü, öznel zindelik ve pozitif ruh sağlığı arasındaki ilişki incelenmiştir. Bu araştırmanın çalışma grubunu örnekleme yöntemi ile seçilmiş yaşları 13 yaş ve üzeri bireyler oluşturmaktadır. Örneklem seçiminde İstanbul, Küçükçekmece ilçesinde öğrenim gören öğrenciler katılım sağlamıştır. Ölçeklere yanıt veren herkes aynı zamanda araştırmanın örnekleimidir. Katılımcılar araştırmada kullanılan form ve ölçekleri yüzyüze ve online şekilde doldurmuşlardır. Tük, verilerinden elde edilen bilgiye göre evreni oluşturan, Küçükçekmece ilçesinde 13 yaş üstü 789.633 birey arasından en az 400 öğrenci örneklem büyüklüğüne ulaşılması hedeflenmektedir.

Aile bütünlük duygusunun, öznel zindeliğe ve pozitif ruh sağlığına etki eden puanlarının olumsuz yaşantı yaşayıp yaşamamaya göre farklılaşp farklılaşmadığına bakmak için kullanılmıştır.

### **4. AİLE BÜTÜNLÜK DUYGUSU, ÖZNEL ZİNDELİK, POZİTİF RUH SAĞLIĞI KONULARINDAKİ ÇALIŞMALAR**

Aile Bütünlük Duygusu çalışmalarına bakacak olursak; Çamaş'ın yaptığı araştırma ile başlayacak olursa üniversite öğrencileri ile birlikte yaptığı bu araştırma damgalama düzeyleri ile ilgilidir. Araştırma da aile bütünlük duygusu yer almakla birlikte sosyal destek ve öz yeterlilik ile ilişkisinden de bahsetmektedir (Güler,2019:41). Turan'ın araştırması evli çiftler ile yapılmış olup, evlilikte bireylerin birbirini desteklemesi ve problem durumlarına karşı

nasıl bir çözüm yöntemi uyguladıklarını incelemiştir. Turan'ın araştırmasında bireylerin problemlerini çözme becerileri ve aile bütünlük duygusu arasında anlamlı bir ilişki bulunmuştur. Çeçen'in araştırmasına bakacak olursak yetişkin ve ergen grupları ile çalışmış olup bireysel ve aile bütünlük duygusuna bununla birlikte yaşam doyumu ve benlik saygısını araştırmıştır. Bu araştırma da ise bütünlük duyguları ile yaşam doyumu ve benlik saygısı

arasında anlamlı bir ilişki bulunmuştur (Güler,2019:41). Yurt dışında ki araştırmalara göz atacak olursak 1995 yılında Myers ve Diener'in araştırması için bireyler arasında yakın ilişki kurmanın cinsiyet,yaş,ırk ve ekonomik düzeyden daha pozitif bir bakış açısı elde ettikleri araştırılmıştır. Buna göre bireyler aile içinde hayata bakış açılarını anlamlı bir şekilde yorumladıkları zaman yaşam istekleri anlamlı bir şekilde artış göstermektedir (Çeçen, 2008:26). Öğrenciler üzerinde çalışılan bir diğer çalışma ise Liesl ve Abraham'ın yine öğrenciler üstünde çalışmışlık bir bütünlük duygusu çalışmasıdır. İçsel kaynakları kullanma, bireyin potansiyelleri, ikili ilişkiye yönelik bir çalışma olup sonucunda içsel motivasyon kaynaklarının aile ve bireysel bütünlük duygusu arasında tamamen anlamlı bir ilişki bulmuşlardır (Güler,2019:41).

Öznel zindelik kavramı için ilk olarak Akin'ın çalışmasıyla başlayacak olursak, üniversite lisans öğrencileri hedef kitlesi ile internet bağımlılığı ile öznel mutluluk arasında ki ilişkiyi ele almıştır. Çalışmanın sonucuna göre öznel mutluluk ve internet bağımlılığı arasında ilişki olmadığı sonucuna varılırken öznel mutluluk ve zindelik arasında anlamlı bir ilişki bulunmuştur (Sivri,2019: 49). (2015) üniversite öğrencileri ile birlikte yaptığı çalışma da öznel zindelik, kendini affetme, mutluluk, yaşam enerjisi, öznel iyi oluş kavramlarının ara değişken olma yönünü test etmiştir. Yapılan bu araştırma sonucunda öznel iyi oluş, öznel zindelik ve kendini affetme değişkenleri arasında anlamlılık ortaya çıkmıştır (Sivri,2019: 49). Çelik ve Topçuoğlu'nun yaptığı çalışmada üniversite öğrencilerinin katılımıyla proaktif kişilik, öznel zindelik ve merak değişkenlerinin arasında ki ilişki incelenmiş ve bu değişkenlerin aracılık etkileri de araştırmaya konu olmuştur. Öznel zindeliğin, proaktif kişiliğin ve merak duygusunun anlamlı bir ilişkisi olduğu sonucuna ulaşılmıştır. Sarıçam, lise öğrencileri ile öznel zindelik ve okul tükenmişliği değişkenleri üstünde çalışmış ve araştırmanın sonucunda iki değişken arasında anlamlı bir ilişki bulunmuştur (Sivri,2019: 50). Yurt dışı araştırmalarına da göz atacak olursak Fini ve arkadaşları üniversite öğrencilerinin katılımıyla psikolojik iyi oluş, üniversite uyumu, öz yeterlilik, yaşam doyumu, yaşam becerileri ve öznel zindelik arasında bir ilişki olup olmadığını incelemiş buna yönelik olarak

da psikolojik iyi oluşun, yaşam becerilerinin ve yaşam doyumunun öznel zindelik ile anlamlı bir ilişkisi olduğu sonucuna varılmıştır (Sivri,2019: 51). Ryan ve Frederick birlikte yaptıkları çalışmada birçok değişkeni ele almış ve bu değişkenler ile öznel zindelik arasındaki ilişkiyi incelemiştir.

Literatür taramasında pozitif ruh sağlığına yönelik çok araştırma bulunmamakla birlikte Pozitif ruh sağlığı alanında araştırmacıları inceleyecek olursak; Araştırmacılar mental sağlık ile pozitif ruh sağlığı arasındaki tezatlıktan yana her iki kavramında mental sağlığa katkıda bulunabileceği iki kavram olarak belirtmişlerdir ( Keyes, 2005; Suldo ve Shaffer, 2008).

## **5.SONUÇ VE DEĞERLENDİRMELER**

Aile bütünlük duygusu ve öznel zindelik birlikte yaşa göre incelendiğinde anlamlı bir farklılık bulunamamış olup bu durumda aile bütünlük duygusu ve öznel zindeliğin yaş grubuna göre etkilenmediğini söyleyebilmekteyiz. Fakat aile bütünlük durumu ile birlikte incelendiğinde anlamlılık ortaya çıkmış olup ebeveynlerinin ayrı ya da birlikte olma durumlarının ergen bireyleri yakından etkilediğini belirtebilmekteyiz. Pozitif ruh sağlığı değişkenini alt boyutlarıyla yaş ve aile bütünlük durumu etkilerine göre incelediğimiz zaman anlamlı bir farklılık görülmemiştir. Bunlara ek olarak sonuç kısmında aile bütünlük duygusu ve öznel zindeliği pozitif ruh sağlığı ve alt boyutlarına göre incelediğimiz zaman regresyon analizlerinde anlamlılık elde edilmiştir. Buradan çıkardığımız sonuç aile bütünlük duygusu ve öznel zindeliğin pozitif ruh sağlığını alt boyutlarıyla birlikte olmak üzere etkilemiştir. Sonuçları değerlendirdiğimiz zaman aile bütünlük duygusu ve öznel zindelik boyutlarının ebeveynlerin ayrı ve ya birlikte olmasına göre etkilendiğini ve pozitif ruh sağlığına etki ettiğini belirtebilmekteyiz. Bu çerçevede bireylerin daha iyi, özgüvenli, hayatı seven, üretken bireyler olması için öncelikle aile bütünlük duygularının sağlam bir temele oturmuş olması yani bireyle birlikte ailelerinde ruh sağlığı konusuna önem verilmeli ve öznel zindelik duygusunun güçlenmesi için öz saygılarının, kendine güvenme, sosyal olma becerilerinin kuvvetlenmesi gerekmektedir.

**ESKİ ÇAĞ TARİHİ'NİN TAHRİBATLARI ÜZERİNE GÖZLEMLER:  
PATNOS ÖRNEĞİ (AĞRI)**

**Dr. Öğr. Üy. Gökhan KALMIŞ (Orcid ID: 0000-0002-0118-9373)**

Hatay Mustafa Kemal Üniversitesi, Fen-Edebiyat Fakültesi, Tarih Bölümü, Eskiçağ Tarihi  
ABD

**ÖZET**

Eski Çağ'dan itibaren insanlar çeşitli amaçlarla yapılar inşa etmişlerdir. Bu yapılar konumlanmış oldukları bölgenin tarihinin aydınlatılmasında önemli rol oynamaktadırlar. Özellikle Tarih Öncesi Dönem olarak isimlendirilen, yazının icadından önceki sürecin aydınlatılması, tarihi yapılardan elde edilen veriler neticesinde mümkün olmaktadır. Anadolu, Eski Çağ'dan itibaren insanlar tarafından yerleşim yeri olarak tercih edilen önemli coğrafyalardan biridir. Anadolu'nun stratejik konumu ve yaşama elverişli imkanlara sahip olması yerleşim yeri olarak tercih edilmesinde önemli bir rol oynamıştır. Ancak buradaki tarihi yapılar, geçmişten günümüze kadar yoğun bir şekilde tahribata maruz kalmıştır. Anadolu'nun Eski Çağ Tarihi'nde önemli bir yere sahip olan Ağrı ilinde bulunan Patnos'ta gerçekleştirilen bilimsel kazı çalışmaları ve yüzey araştırmaları neticesinde tespit edilen buluntular, bölgenin özellikle Geç Kalkolitik Çağ'dan itibaren yoğun bir şekilde yerleşim gördüğünü kanıtlamaktadır. Bölgede 2019 ve 2022 yıllarında gerçekleştirdiğimiz yüzey araştırmaları sonucunda tarihi yapıların yoğun bir şekilde tahribata uğradığı gözlemlenmiştir. Bu tahribatın oluşmasında kaçak kazıların etkisinin büyük olduğu ifade edilebilir. Bununla birlikte bölgedeki tarihi merkezlerin bir kısmı günümüzde yöre halkı tarafından tarla olarak kullanılmaktadır. Bazı kalelerin sur duvarlarındaki taşlar modern evlerin inşasında kullanılmak üzere götürülmüştür. Yapılan bu tahribatlar bölgenin Eski Çağ Tarihinin izlerinin silinmesine neden olmaktadır. Bu çalışma, Patnos'ta tarihin derinliklerinden günümüze kadar önemli veriler taşıyan tarihi yapıların tahribatı hakkında bilgi aktarmayı ve bu tahribatın önlenmesini hedeflemektedir.

**Anahtar Kelimeler:** Eski Çağ Tarihi, Patnos, Yüzey Araştırması, Kaçak Kazı, Tahribat

**OBSERVATIONS ON THE DAMAGES OF ANCIENT HISTORY: THE CASE OF PATNOS (AĞRI)**

**ABSTRACT**

Since ancient times, people have built structures for various purposes. These structures play an important role in illuminating the history of the region where they are located. In particular, it is possible to illuminate the period before the invention of writing, which is called the Prehistoric Period, as a result of the data obtained from historical buildings. Anatolia is one of the important geographies preferred by people as a settlement since ancient times. The strategic location of Anatolia and its favorable opportunities for life played an important role in its preference as a settlement. However, the historical buildings here have been heavily damaged.

The finds identified as a result of scientific excavations and surveys carried out in Patnos in the province of Ağrı, which has an important place in the Ancient History of Anatolia, prove that the region was intensively inhabited, especially since the Late Chalcolithic Age. As a result of the surveys we carried out in the region in 2019 and 2022, it was observed that the historical buildings were heavily damaged. It can be stated that illegal excavations have a great effect on these damages. However, some of the historical centres in the region are currently used as fields by the local people. The stones on the city walls of some castles have been taken away to be used in the construction of modern houses. These destructions cause the traces of the ancient history of the region to be erased. This study aims to provide information about the destructions and damages of historical buildings in Patnos, which carry important data from the depths of history to the present day, and to prevent this damages.

**Keywords:** Ancient History, Patnos, Survey, Illegal Excavation, Damages

## 1. GİRİŞ

Anadolu; Eski Çağ'dan itibaren çeşitli uygarlıklara ev sahipliği yapmış bir coğrafyadır. Bu coğrafyadaki uygarlıklardan miras kalan kültürel varlıklar, tahribata uğramaktadır ve bu tahribat sonucunda yok olma tehlikesi içerisinde. Tahribatın oluşmasında doğa olayları ve afetlerin yanı sıra hızlı ve kontrolsüz kentleşme, kaçak kazılar ve kültür varlıklarının tarla olarak kullanılması gibi sebepler yer almaktadır.

Araştırma sahasını oluşturan Patnos, Doğu Anadolu bölgesinin Yukarı Murat - Van bölümünde yer alan Ağrı iline bağlı bir ilçedir. Patnos'un kuzeyinde Tutak ve Hamur, batısında Malazgirt, güney ve güneydoğusunda Adilcevaz, doğusunda ise Erciş ilçeleri yer almaktadır<sup>47</sup>.

Patnos, geçmişten günümüze kadar yoğun bir şekilde kullanılan önemli ticaret yollarının geçiş güzergahı üzerinde konumlanmıştır. Batı yönünden Trabzon - Gümüşhane - Bayburt - Erzurum - Hasankale - Tahir Geçidi - Eleşkirt - Ağrı - Taşlıçay - Doğubayazıt üzerinden gelerek Kuzeybatı İran'a ulaşan yol ağının Ağrı'dan ayrılan kolu Hamur-Tutak'tan geçerek Patnos'a ulaşır. Yol ağı, Patnos'tan devam ederek Erciş'ten Van'a varmaktadır. Erzurum - Van arasındaki yol ağının en önemli durak noktalarından birini ise yine Patnos oluşturmaktadır<sup>48</sup>.

Patnos'ta, çok sayıda bilimsel kazı çalışmaları ve yüzey araştırmaları gerçekleştirilmiştir. Söz konusu çalışmalar, bölgenin Eski Çağ'da önemli bir konuma sahip olduğunu göstermektedir. Bu bağlamda, bölgede 2019 yılında N. Ceylan'ın başkanlığında gerçekleştirilen yüzey araştırması<sup>49</sup> ve 2022 yılında tarafımızdan yürütülen yüzey araştırması neticesinde, bölgenin Eski Çağ Tarihi'ne ışık tutacak önemli merkezler tespit edilmiştir<sup>50</sup>. Bu merkezlerin hemen hepsinin tahribata uğramış olması, çağlar boyunca ayakta kalmayı başarmış olan bu yapıların tarihi dokusuna zarar vermiştir.

## 2. 2019 YILINDA PATNOS'TA TESPİT EDİLEN TARİHİ VE ARKEOLOJİK MERKEZLERİN TAHRİBATI

Bölgede 2019 yılında gerçekleştirilen yüzey araştırması sırasında incelenen merkezlerin büyük bir çoğunluğunda yoğun tahribat yapıldığı anlaşılmıştır. Bu merkezler arasında yer

<sup>47</sup> Yıldız, 1996: 1 vdd.

<sup>48</sup> Yıldız, 1996: 60; Ceylan-Günaşdı, 2018: 54 vd.; Ceylan, N. 2020: 361.

<sup>49</sup> N. Ceylan'ın bilimsel başkanlığındaki ekip tarafından yürütülen 2019 yılı yüzey araştırması hakkında geniş bilgi için bkz. Ceylan, N. 2020: 361-366.

<sup>50</sup> 2022 yılı yüzey araştırmaları yayın aşamasındadır.

alan, K. Balkan başkanlığında 1961-1962 yılları arasında bilimsel kazı çalışmaları yürütülen Giriktepe

Höyük'ün, sonraki süreçte kaçak kazılara maruz kaldığı gözlemlenmiştir<sup>51</sup>. Kaçak kazılar, höyüğün tarihi dokusuna büyük oranda zarar vermiştir (Foto 1).

Bölgenin önemli kalelerinden birisi olan ve Dizginkale köyünün 500 m batısında yer alan Dizginkale Kalesi II (İlk Tunç, Erken Demir, Orta Demir [Urartu], Geç Demir ve Orta Çağ) kaçak kazılar neticesinde büyük zarar görmüştür (Foto. 2). Yine bölgenin stratejik kalelerinden olan, Yalçinkaya köyünün hemen kuzeyinde yer alan Yalçinkaya Kalesi I (Geç Kalkolitik, İlk Tunç, Orta Tunç, Orta Demir [Urartu], Helenistik ve Orta Çağ) ve kalenin yaklaşık 3 km doğusunda yer alan Yalçinkaya Kalesi II (İlk Tunç, Erken Demir ve Orta Çağ) kaçak kazılar neticesinde yoğun tahribata uğrayan merkezlerdendir<sup>52</sup> (Foto. 3-4). Bunun yanı sıra Yalçinkaya Kalesi II'nin doğusunda yer alan nekropol alanı, iş makineleri ile tahrip edilmiştir.

Bölgedeki önemli obsidiyen işleme merkezlerinden biri olduğu düşünülen Bozoğlak Kalesi (İlk Tunç, Erken Demir, Orta Demir [Urartu] ve Orta Çağ) kaçak kazılar neticesinde tahrip olmuştur (Foto. 5). Kalenin hemen doğusunda yer alan Bozoğlak Nekropol Alanı (İlk Tunç, Erken Demir, Orta Demir [Urartu], Geç Demir, Helenistik ve Orta Çağ), yine kaçak kazılar sonucunda yoğun keramik verisinin gün yüzüne çıktığı merkezlerdendir (Foto. 6).

Günümüzde tarla olarak kullanılan, Çatmaoluk Köyünün 500 m doğusundaki Çatmaoluk Yerleşmesi (İlk Tunç, Erken Demir ve Orta Demir [Urartu]), Molla İbrahim köyünde yer alan Molla İbrahim Höyük (İlk Tunç ve Orta Çağ) ve höyüğün batısında bulunan Molla İbrahim Nekropolü ile Çay Mahallesi'nde tespit edilen Çay Mahallesi Yerleşmesi iş makineleri ile sürüldüğünden dolayı tamamen tarihi dokularını kaybetmişlerdir (Foto. 7-9).

Yukarı Kamışlı köyünün batısında yer alan Yukarı Kamışlı Kalesi (İlk Tunç, Erken Demir ve Orta Çağ) kaçak kazılar sonucunda tahribata uğrayan merkezlerden biridir (Foto. 10). Yukarı Kamışlı Köyü'nün su ihtiyacını karşılayan su deposunun kale ile aynı tepede bulunması, kalenin tahrip olmasına sebep olmuştur. Bunların yanı sıra, Bağdışan Mahallesi'nde bulunan ve üzerine modern evler inşa edilen Bağdışan Höyüğü (Geç Kalkolitik, İlk Tunç, Erken Demir, Orta Demir [Urartu] ve Orta Çağ), mahalle ile iç içe geçmiş durumdadır. Höyük alanı günümüzde bahçe ve tarla olarak kullanıldığından dolayı büyük oranda tahrip olmuştur.

<sup>51</sup> Giriktepe Höyüğü hakkında detaylı bilgi için bkz. Balkan, 1964: 239 vd.

<sup>52</sup> Yalçinkaya Kalesi I ve Yalçinkaya Kalesi II hakkında detaylı bilgi için bkz. Kalmış-Karageçi, 2021: 620-622.

### 3. 2022 YILINDA PATNOS'TA TESPİT EDİLEN TARİHİ VE ARKEOLOJİK MERKEZLERİN TAHRİBATI

Bölgede, 2022 yılında yüzey araştırması sırasında incelenen merkezlerin de büyük bir çoğunluğunun yoğun tahribata uğradığı görülmüştür. Bu merkezler arasında yer alan Andaçlı Kayalar Mezra Yerleşmesi I ve Andaçlı Kayalar Mezra Yerleşmesi II kaçak kazılar neticesinde tahrip olmuştur (Foto. 11-12). Ayrıca Andaçlı Kayalar Mezra Yerleşmesi II'nin üzerinden geçirilen yol, yerleşmenin büyük oranda yok olmasına neden olmuştur. Tarım ve mera arazileri açısından önemli bir noktada yer alan Andaçlı Yamaç Yerleşmesi, kaçak kazılar sonucunda büyük oranda tahrip olan merkezlerdendir (Foto. 13). Yerleşmenin eteklerinin tarla olarak sürüldüğü ve bu alanda yoğun keramik verisinin varlığı gözlemlenmiştir.

Eryılmaz köyünün hemen batısında yer alan Eryılmaz Yerleşmesi, kaçak kazılara maruz kalan merkezlerdendir (Foto. 14). Yerleşmenin zirvesinde, Eryılmaz Köyü'nün su ihtiyacını karşılamak amacıyla inşa edilen su deposu yer almaktadır. Yerleşme üzerinde bulunan kaçak kazı çukurları ve su deposu, yerleşmenin tahrip olmasına yol açmıştır.

Esenbel köyünün hemen batısında yer alan ve Patnos'ta tespit edilen önemli kalelerden biri olan Esenbel Kalesi'nin tepe kısmında büyük çaplı kaçak kazı çukuru mevcuttur (Foto. 15). Kalenin kuzey eteğinde, Esenbel Köyü'nün su ihtiyacını karşılamak amacıyla inşa edilen su deposu yer almaktadır. Su deposu, kalenin tarihi dokusuna zarar vermiştir.

Bölgenin Eski Çağ Tarihini aydınlatılması açısından önem arz eden, Gönlüaçık köyünün yaklaşık 1 km güneybatısında yer alan Gönlüaçık Kalesi ve Yerleşim Alanı'nda gerçekleştirilen kaçak kazılar neticesinde, yer altında bulunan duvar yapısı gün yüzüne çıkmış durumdadır (Foto. 16). Gönlüaçık Kalesi ve Yerleşim Alanı'nın 250 m kuzeydoğusunda yer alan Gönlüaçık Kalesi II, kaçak kazılar sebebiyle tahrip olan merkezlerdendir (Foto. 17).

2022 yılı yüzey araştırmasından anlaşıldığı kadarıyla en büyük boyutlu kaçak kazı çalışmaları, Kazanbey köyünün 3 km kuzeyindeki Kazanbey Yerleşmesi I (39 x 18 m) ve yerleşmenin 300 m kuzeybatısında bulunan Kazanbey Yerleşmesi II (16 x 11 m)'de gözlemlenmiştir (Foto. 18-19). Her iki yerleşme de iş makineleri ile tahrip edilmiş durumdadır. Yöre halkının ifadelerine göre Kazanbey Yerleşmesi II'de gerçekleştirilen kaçak kazılar sonucunda mimari bir yapı gün yüzüne çıkmıştır. Ancak bu mimari yapı, kaçak kazıların devamı neticesinde yıkılmış/yok olmuş durumdadır.

Patnos'ta tespit edilen kaleler göz önünde bulundurulduğunda, oldukça geniş bir alanı kontrol altında tutan nadir kalelerden birisi olan Kürekli Kalesi ve Nekropol Alanı, kaçak kazılar

neticesinde yoğun tahribata uğramıştır (Foto. 20). Ayrıca kalenin güney ve güneybatı eteklerinde bulunan Kürekli Yerleşmesi I'de gözlemlenen kaçak kazılar, çok sayıda mimari yapı kalıntısının gün yüzüne çıkmasına sebep olmuştur (Foto. 21). Kürekli Yerleşmesi II, yoğun tahribata uğrayan diğer bir merkezdir (Foto. 22). Yerleşmede açılan kaçak kazı çukurlarında, keramik verileri tespit edilmiştir.

Ürküt köyünün 1,5 km batısında yer alan Ürküt Yerleşmesi, iş makineleri ile kazılan merkezlerdendir (Foto. 23). Yerleşmedeki kaçak kazılar (en büyüğü 16 x 5,20 m), yerleşmenin birçok özelliğini kaybetmesine sebebiyet vermiştir. Daha önce nekropol olarak kayıt altına alınan merkezde, kaçak kazılarla tahrip edildiği için belirtilen özelliklere rastlanılmamıştır<sup>53</sup>. Patnos'taki önemli kalelerden birisi olan ve Yurtöven Köyünün yaklaşık 1 km kuzeybatısında bulunan Yurtöven (Turnatepe) Kalesi'nde de kaçak kazı çalışmaları yoğun bir tahribata sebep olmuştur (Foto. 24).

#### 4. SONUÇ VE DEĞERLENDİRME

Anadolu, coğrafi konumu, iklim şartlarının elverişliliği ve zengin su kaynakları gibi insan hayatını olumlu yönde etkileyen özellikleri nedeniyle Tarih Öncesi ve Tarihi Çağların her döneminde yerleşim yeri olarak tercih edilmiştir. Bu coğrafya, ev sahipliği yaptığı uygarlıkların izlerini taşımaktadır. Ancak günümüzde tarihi yapıların büyük bir kısmı tahribata uğramış durumdadır. Bu tahribatın meydana gelmesinde doğa olaylarının yanı sıra insan etkisi de oldukça büyüktür.

Araştırma sahasını oluşturan Patnos; zengin su kaynaklarının varlığı, önemli yol güzergâhlarının kesişim noktasında bulunması ve stratejik konumundan dolayı geçmişten günümüze kadar önemli uygarlıklara ev sahipliği yapmıştır. Eski Çağ'dan itibaren yerleşim gören Patnos'ta gerçekleştirilen yüzey araştırmaları neticesinde tespit edilen tarihi ve arkeolojik merkezlerde yoğun tahribatlara rastlanmıştır. Tahrip edilen merkezlerin hemen hepsinde, kaçak kazı çukurlarının varlığı gözlemlenmiştir.

Bölgenin Eski Çağ Tarihi'nin aydınlatılmasında büyük önem arz eden ve geçmiş yıllarda bilimsel kazı çalışmaları yürütülen Giriktepe Höyük'te sonraki yıllarda kaçak kazı çukurlarının açılmış olduğu görülmektedir. Bölgedeki bir başka önemli yerleşim yeri olan

<sup>53</sup> Daha önceki yıllarda tespit edilen yerleşme, "Duloz Mezarlığı" olarak kayıt altına alınmıştır. Detaylı bilgi için bkz. Özfirat, 2009: 352.

Kazanbey Yerleşmesi I, iş makineleri ile kazıldığından dolayı yok olmaya yüz tutmuştur. Bu alanda

gerçekleştirilen çalışmalarda, yoğun keramik verisi tespit edilmiştir. Bölgedeki bazı merkezler ise günümüzde tarla olarak kullanıldığından dolayı tamamen tahrip olmuştur. Çatmaoluk Yerleşmesi, Molla İbrahim Höyük ve Bağdışan Höyüğü, günümüzde tarla olarak kullanılan merkezlerdendir. Bölgede tespit edilen bazı tarihi yapıların üzerine, modern yerleşimlerin su ihtiyacını karşılamak amacıyla su depolarının inşa edildiği görülmektedir. Yine bu durum da tarihi yapıların tahribatına yol açmıştır. Yukarı Kamışlı Kalesi, Esenbel Kalesi ve Eryılmaz Yerleşmesi üzerinde su depolarının mevcudiyeti, söz konusu merkezlerin tahrip olmasında etkili olmuştur. Sonuç olarak Patnos'un Eski Çağ Tarihi'nin aydınlatılmasında önemli roller üstlenen tarihi ve arkeolojik merkezlerde gerçekleşen tahribat, bu merkezlerin korunması için gerekli önlemlerin alınması gerektiğini göstermektedir. Bu manada merkezi ve yerel yöneticilerin yanı sıra T.C. Kültür ve Turizm Bakanlığı'na, Milli Eğitim Bakanlığı'na ve eğitim kurumlarına önemli görevler düşmektedir.

Bilimsel kazı çalışmaları, kültürel mirasın korunması hususunda en etkili yöntem olarak değerlendirilmektedir. Patnos ve çevresinde bilimsel kazı çalışmalarının sayısının artırılması, bölgenin Eski Çağ Tarihi'nin korunması ve geleceğe aktarılması açısından önem arz etmektedir. Bölgede gerçekleştirilecek olan kazı çalışmaları sonlandığında, bu merkezlerin güvenliğinin artırılması gerekmektedir. Aksi takdirde Giriktepe Höyüğü örneğindeki, bilimsel kazı sonrasında bölgedeki merkezlerin tahribatının engellenemez olduğu görülmektedir.

Merkezi yönetim, yerel yönetimleri kültürel mirasın korunması için maddi olarak desteklemelidir. Yerel yönetimler, halka yakınlıklarından dolayı büyük bir kitleyi yönlendirebilme imkanına sahiptir. Bu sebeple, yerel yönetimler koruma kültürünün gelişip yaygınlaşmasında önemli roller üstlenmektedirler. Başta valiler, belediye başkanları ve kaymakamlar olmak üzere, kültürel mirası korumaya duyarlı yerel yöneticilerin yönetimde olması, halkın koruma bilincinin artırılmasını sağlamaktadır.

Bunun yanı sıra bölge halkına, konunun uzmanları tarafından, kültürel mirasın korunmasına yönelik seminerler tertip edilmelidir. Özellikle eğitim-öğretim çağındaki çocuklar, öğretmenler tarafından kültürel mirasın nasıl korunması gerektiği yönünde bilgilendirilmelidir. Milli Eğitim Bakanlığınca hazırlanan ders kitaplarında "kültürel mirasın korunması" konusuna ilişkin başlıklara yer verilmeli, öğretmenler bu konuya yönelik hizmet içi eğitime tabi

tutulmalıdır. Bu sayede öğrenciler, yaşamış oldukları çevrede bulunan tarihi yapıların koruyuculuğunu bilinçli bir şekilde üstlenebilmelidirler.

**ÖZET**

Bu çalışmanın amacı, 2005-2022 yılları arasında yapılan beyin temelli öğrenmenin programda öngörülen yöntemle kıyasla öğrencilerin fen akademik başarısına etkisini meta analiz yöntemi kullanılarak genel etki büyüklüğünü hesaplamaktır. Aynı zamanda akademik başarı değişkeninin, öğretim kademesi, coğrafi bölge ve çalışılan yayın türü moderatörleri de ele alınmıştır. Bu sebeple konu alanında yapılmış olan çalışmalar incelenerek belirlenen ölçütleri karşılayan akademik başarı ile ilgili 27 çalışma için meta analize dahil edilmiştir. Bu çalışmadaki meta analiz sonuçları değerlendirildiğinde beyin temelli öğrenmenin öğrencilerin akademik başarı üzerindeki etki büyüklüğü 0.922 olarak hesaplanmıştır. Ulaşılan etki büyüklüğü Cohen (1988) sınıflamalarına göre; akademik başarı etki büyüklüğü “büyük düzey” olarak açıklanmaktadır. Thalheimer ve Cook (2002) akademik başarı etki büyüklüğü “geniş düzey” olarak açıklanmaktadır. Bu sonuçlara bakılarak beyin temelli öğrenme, programda öngörülen yöntemle göre öğrencilerin akademik başarı üzerinde anlamlı bir etkiye sahiptir ve olumlu yönde etki etmiştir. Araştırmaya dahil edilen çalışmalarda ayrıca beyin temelli öğrenmenin öğretim kademesi, coğrafi bölge ve çalışılan yayın türü göre karşılaştırmalı etki büyüklükleri hesaplanmıştır.

**Anahtar kelimeler:** Beyin Temelli Öğrenme, Beyin, Fen eğitimi, Meta analiz

**THE EFFECT OF BRAIN-BASED LEARNING ON STUDENTS' ACADEMIC ACHIEVEMENT IN SCIENCE EDUCATION BETWEEN 2005-2022: A META-ANALYSIS STUDY**

**ABSTRACT**

The aim of this study is to calculate the overall effect size of the effect of brain-based learning between 2005-2022 on students' science academic achievement compared to the method envisaged in the program, using the meta-analysis method. At the same time, moderators of academic achievement variable, academic level, geographical region and type of publication studied were also discussed. For this reason, the studies conducted in the subject area were examined and 27 studies related to academic achievement that met the determined criteria were included in the meta-analysis. When the meta-analysis results in this study were evaluated, the effect size of brain-based learning on students' academic achievement was calculated as 0.922. According to the Cohen (1988) classifications, the effect size reached; academic achievement effect size is described as “large level”. Thalheimer and Cook (2002) describe the effect size of academic achievement as “broad level”. Looking at these results, brain-based learning has a significant effect on the academic achievement of the students according to the method envisaged in the program and has a positive effect. In the studies included in the research, the comparative effect sizes of brain-based learning were calculated according to the teaching level, geographical region and the type of publication studied.

**Keywords:** Brain Based Learning, Brain, Science education, Meta-analysis

## 1. GİRİŞ

İnsanoğlu var olduğundan bu yana hep öğrenmeye ilgi duymuş, öğrenmeye açık olmuş, öğrenmenin nasıl gerçekleştiğini her zaman merak etmiş ve bu konuda çeşitli araştırmalar yapmıştır. Son dönemlerde teknolojinin yardımıyla da artan araştırmalar öğrenme sürecinin daha çok beyinle ilgili olduğunu ortaya çıkarmıştır. Nöroloji, bilişsel psikoloji ve eğitim alanında yapılan çalışmalar öğrenme ve öğrenmenin beyinde nasıl gerçekleştiğinin anlaşılmasını sağlayarak anlamlı ve nitelikli öğrenmelerin daha kolay bir şekilde gerçekleştirilmesine katkı sağlamaktadır (Harman ve Çökelez, 2012; Gözüyeşil, 2012). Günümüzde gelişen görüntüleme ve ölçme tekniklerinin kullanımı ile beynin iç yapısını daha iyi görebilmekte ve beynin içinde gerçekleşen olayları daha iyi kavrayabilmekteyiz. Eğitim, oldukça önemli ve heyecan verici bir döneme adım atmaktadır: Bu dönem, beyin çağı dönemidir. İnsan beyninin yapısı, işleyişi ve öğrenme metotları hakkında bugün eskiye göre çok daha fazla şey biliyoruz. Yeni bulgular ile bilgilerimiz sürekli olarak artış göstermektedir (Erlauer L., 2003).

Beyin temelli öğrenme, beynimizde öğrenmenin nasıl gerçekleştiğine dair bulgular ortaya koyan sinirbilim araştırmalarına dayalı, geniş kapsamlı bir öğrenmedir. Gelişimin çeşitli basamaklarında insan beyninin fonksiyonu ve yapısı hakkındaki bilgilere dayalı bir eğitim, öğretme ve öğrenme için biyolojik olarak bir çerçeve oluşmasını sağlar ve ortaya çıkan öğrenme davranışlarının açıklanmasına katkı sağlar (Gözüyeşil, 2012). Bu çok sayıda teknikler içeren bir kavramdır. Bu teknikler, öğrencilerin gerçek yaşam tecrübelerini öğrenmelerinde onlarla ilişki kuracak olan öğretmenlere rehberlik eder. Bütün öğrenmelerin bir anlamda beyin temelli olmasına karşın, beyin temelli öğrenme, anlamlı öğrenme için beyin kurallarının kabul edilmesini ve öğretimin zihindeki bu kurullarla örgütlenmesini içerir. Beyin bir örüntü detektörü gibi tasarlanmıştır. Eğitimciler olarak bizim işlevimiz, öğrencilere ‘bağlantılı örüntüleri’ anlamalarına olanak sağlayacak çeşitli tecrübeler sunmaktır (Caine, R.N. and Caine G., 2002; Albayrak, 2013; Yücel,2019; Canbulat ve Küçükkaragöz, 2014).

Fen bilimleri alanında yapılan çalışmalarda kullanılan beyin temelli öğrenmenin öğrencilerin fen dersindeki akademik başarılarına etkisini belirlemek amacıyla yapılan pek çok çalışma olmasına rağmen bu konuda yapılmış bir meta-analiz çalışmasına taramalarda çok az sayıda rastlanmıştır (Gözüyeşil, 2012; Ekemen, 2017). Bu sebepten, “Fen bilgisi derslerinde kullanılan beyin temelli öğrenmenin öğrencilerin akademik başarılarına etkisi nedir”

sorusuna verilecek cevap önem arz etmektedir. Bu çalışmada, fen eğitiminde beyin temelli öğrenmenin

etkisini inceleyen çalışmalar bir araya getirilerek fen eğitimine olan etkisini incelemek ve yorumlamak amaç olarak belirlenmiştir.

Bu araştırmanın amacı, fen eğitiminde kullanılan beyin temelli öğrenme etkinliklerinin yapıldığı 2005-2022 yılları arasındaki çalışmaların meta analiz yöntemi ile inceleyerek öğrencilerin fenedeki akademik başarılarına olan etkisini belirlemektir. Mevcut çalışmada beyin temelli öğrenmenin etkililiğini akademik başarı yönünden inceleyen deneysel çalışmalar bir araya getirilmiştir. Buradan hareketle meta analiz yöntemi kullanılarak beyin temelli öğrenmenin akademik başarı etki büyüklükleri hesaplanmıştır. Çalışmada ayrıca moderatör olarak seçilen değişkenlere ait alt problemler bulunmaktadır. Bunlar;

1. Beyin temelli öğrenmenin öğretim kademesi (İlkokul-Ortaokul-Lise-Lisans) açısından incelendiğinde akademik başarı açısından etki büyüklükleri arasında fark var mıdır?
2. Beyin temelli öğrenmenin coğrafi bölgeler (İç Anadolu-Doğu Anadolu-Güneydoğu Anadolu-Ege-Akdeniz-Karadeniz-Marmara) açısından incelendiğinde akademik başarı açısından etki büyüklükleri arasında fark var mıdır?
3. Beyin temelli öğrenmenin çalışılan yayın türü (Doktora, Yüksek Lisans, Makale) açısından incelendiğinde akademik başarı açısından etki büyüklükleri arasında fark var mıdır?

## 2. YÖNTEM

### 2.1. Araştırmanın Yöntemi

Fen eğitiminde kullanılan beyin temelli öğrenme etkinliklerinin yapıldığı 2005-2022 yılları arasındaki çalışmaların öğrencilerin fenedeki akademik başarılarına olan genel etkisini belirlemektir amacı ile yapılan bu araştırmanın yöntemi meta-analiz yöntemidir. Meta-analiz, araştırma bulgularını inceleyerek bireysel çalışmalardan veri aktarma yöntemiyle elde ettiği nicel etki büyüklüklerini birleştirir ve bu bilgiyi analiz etmek için kullanır (Durlak, 2008). Meta-analiz, diğer analizlerin analizidir. Bireysel çalışmalardan elde edilmiş çok sayıda analiz sonuçlarını bütünleştirmek amacıyla kullanılan istatistiksel analizlerdir (Glass, 1976; Dinçer, 2014).

### 2.2 Örneklem

Mevcut meta analiz çalışması için yapılan literatür taraması sonucunda elde edilen ve meta analiz çalışmasına alınan, akademik başarı değişkenini inceleyen 26 adet bireysel çalışmaya ulaşılmıştır. Araştırmalar incelendikten sonra bazı çalışmalarda birden fazla çalışmaya dahil

olabilecek veri olduğu sonucuna ulaşılmış ve bu çalışmalar birden fazla çalışma olarak analize dahil edilmiştir. Bu çalışmalara ait bilgiler aşağıda verilmiştir.

➤ Akyürek (2012) yaptığı çalışmayı bir deney iki kontrol grubu ile gerçekleştirmiştir. Bu nedenle araştırmaya dahil edilecek iki ayrı veri oluşturdukları için çalışmalar ikişer çalışma olarak analize alınmıştır.

➤ Erduran Avcı (2007), yaptığı çalışmada belirlediği fen konusu hakkındaki araştırmasını iki farklı kontrol grubuyla gerçekleştirmiştir. Bu doğrultuda çalışmadan iki farklı başarı testi sonucunda veriler bulunmaktadır. Bu nedenle araştırma iki farklı çalışma olarak analize dahil edilmiştir.

➤ Inci (2014), yaptığı çalışmada bir deney iki kontrol grubu öğrencileri ile gerçekleştirmiş ve iki farklı akademik başarı verisi elde etmiştir. Bu sebeple araştırmaya iki farklı çalışma olarak dahil edilmiştir.

➤ Keles (2007), yaptığı çalışmada bir deney iki kontrol grubu kullanmıştır. Bu sebeple araştırmaya dahil edilecek iki ayrı veri oluşturdukları için çalışmalar ikişer çalışma olarak analize dahil edilmiştir.

➤ Oktay Esen (2014), yaptığı çalışmada belirlediği fen konusu hakkındaki araştırmasını iki farklı deney grubuyla yürütmüştür. Bu doğrultuda çalışmada iki farklı başarı testi sonucunda veriler yer almaktadır.

Bu nedenle araştırma iki farklı çalışma olarak analize dahil edilmiştir.

Bu durumlar sonucunda meta analize dahil edilen çalışma sayısı 31 olarak alınmıştır. Meta analiz çalışmasına dahil edilecek akademik başarı değişkenine ait 31 bireysel çalışmanın tamamındaki örneklem sayısı 863 deney grubu, 898 kontrol grubu öğrencisidir.

### **2.3. Verilerin Toplanması**

Bu araştırmada meta-analiz çalışması yapılacak konu hakkında; yayınlanmış ve yayınlanmamış tüm doktora tezleri, yüksek lisans tezleri, hakemli ve hakemsiz dergilerde yayınlanmış makaleler, YÖK'e ait tez katalogu, makale için Ulakbim, Eric, Ebsco gibi birçok veri tabanı, SSCI indeksli dergiler, Türkiye'deki üniversite kütüphanelerinin elektronik katalogları, konferans sunumları ve bildirimler gibi birçok kaynaktan yararlanılmıştır.

Veri toplamak amacıyla öncelikle internet ortamında “beyin temelli öğrenme”, “brain-based learning”, “brain compatible instruction”, “brain-based strategies”, “brain compatible classrooms” anahtar sözcükleri kullanılarak YÖK kütüphanesi, makaleler, bildiri kitapçıkları taranmıştır. Araştırmaların Türkiye’de yapılmış olan çalışmalar olmasına dikkat edilmiştir.

Çalışmaların bir kısmı deneysel araştırmalar olmadığından bu araştırmadan çıkarılmıştır. Bazı çalışmalar hem yüksek lisans/doktora tezi hem de bildiri olarak sunulduğundan bunlardan daha çok tezler dikkate alınarak analize dahil edilip kodlanmıştır. Taranan bazı deneysel çalışmaların meta analiz için gerekli sayısal verileri içermediğinden bu araştırmanın dışında bırakılmıştır.

Araştırmada yer alan çalışmaların seçiminde esas alınan kriterler aşağıda sunulmuştur:

1. Meta analize dahil edilecek çalışmaların zaman aralığı: Çalışmaların 2005-2022 yılları içerisinde yapılmış olması. Çalışmanın 2005 yılında başlamış olması, 2005 yılında Türkiye de yapılandırmacı yaklaşıma geçilmesinden kaynaklanmaktadır.
2. Yayınlanmış veya yayınlanmamış çalışma kaynakları: Yüksek lisans ve doktora tezleri, hakemli ve hakemsiz akademik dergiler, elektronik akademik dergiler, veritabanları, kongre ve sempozyumlarda sunulmuş bildiriler.
3. Çalışmalardaki araştırma yönteminin uygun olması: Meta analiz çalışmalarında standartlaştırılmış etki büyüklüğüne ulaşabilmek için, dahil edilen çalışmaların kontrol ve deney gruplarına sahip olmaları gerekmektedir. Çalışmada deney grubu ise beyin temelli öğrenmenin uygulandığı öğrenci grubunu temsil etmektedir.
4. Amaca uygun öğrenme yaklaşımının kullanılması: Deney grubunda beyin temelli öğrenme yaklaşımının kullanılması.
5. Yeterli sayısal veri içermesi: Meta analiz çalışması için gerekli olan etki büyüklüklerinin hesaplanabilmesi için, çalışmaya dahil edilen araştırmaların deney ve kontrol grupları için betimleyici sayısal verilere ihtiyaç duyulur. Bu amaçla deney ve kontrol gruplarında aşağıda sunulan değerleri verilen çalışmalar araştırmaya dahil edilmiştir:

- Örneklem büyüklüğü (N)
- Ortalama (M)
- Standart sapma (SD)

Bir çalışmanın araştırmamızdaki meta-analize dahil edilmemesi, çalışmanın araştırma sınırları içerisinde olmamasından ya da meta analiz için gerekli istatistiksel verilere sahip olmamasından kaynaklanmaktadır (Lipsey ve Wilson, 2001; Wolf, 1986). Bu yüzden dahil

edilme kriterlerine uygun olmayan çalışmalar, meta-analiz için kullanılacak araştırmalardan hariç tutulmuştur.

Meta-analiz çalışması ile ilgili araştırmalar toplandıktan sonra dahil edilme kriterlerine uyan çalışmaların, sonraki adımlarda meta-analiz çalışmaları arasındaki karşılaştırmalarda kullanılabilmesi için araştırmaların özelliklerini sürekli veya kategorik değişkenlere dönüştürecek bir kodlama yöntemi geliştirilmesi gerekmektedir. Meta-analize dahil edilen

çalışmalar ile ilgili mümkün olduğunca açık ve detaylı bir kodlama sistemi geliştirilmelidir. Araştırmada kullanılan kodlama sistemi üç bölümden oluşmaktadır. Birinci bölüm “çalışma kimliği”dir. Bu bölüm çalışmanın kimliğini tespit etmek amacıyla çalışmanın adı, araştırmayı yapan yazar veya yazarların adı, çalışmanın yapıldığı yıl gibi bilgileri içermektedir. İkinci bölüm “çalışma içeriği”dir. Bu bölümde beyin temelli öğrenmenin uygulandığı öğretim kademesi, çalışmanın uygulandığı coğrafi bölge, yapılan araştırmanın yayın türü gibi bilgiler yer verilmiştir. Çalışma verileri üçüncü bölümde yer almaktadır. Bu bölümde çalışmalarda deney ve kontrol gruplarının betimsel bilgileri belirlenmiştir.

#### **2.4. Verilerin Analizi**

Bu çalışmada verilerin analizinde, Meta-Analizi yöntemi kullanılmıştır. Bu yöntemin amacı  $d=(X_e-X_c)/SD$  formülü ile gösterilen, deneysel çalışmalarda yer alan deney ve kontrol gruplarının ortalamaları arasındaki farkların hesaplanmasıdır (Hunter ve Schmidt, 2004). Bu çalışmada etki büyüklüğü hesaplamasında Hedges “d” kullanılmıştır. Etki büyüklüğü “d”, işlemler arası farkın iki grubun birleştirilmiş standart sapması ile bölünmesidir (Cooper, 1989). Etki büyüklüğü ile incelenen bir olayın “Ne kadar etkin olduğu” sonucu bulunmaktadır (Cohen, 1988).

Araştırmanın bulgular ve yorum kısmında kullanılan hesaplamaların, tablo ve grafiklerin oluşturulmasında MS Office Excel 2007, Comprehensive Meta Analysis (CMA) istatistik programından yararlanılmıştır. Araştırmada istatistiksel analizlerin önemlilik düzeyi olarak .05 önemlilik düzeyi seçilmiştir. Bu çalışmada farklı veri türlerinin bir araya getirilmesinde kullanışlı olmasından dolayı CMA istatistik programı tercih edilmiştir.

Burada çalışma istatistiklerine göre sınıflamalar yapıldıktan sonra sabit etki modeli ve rastgele etki modeli kullanılarak meta-analiz yapılmıştır.

### **3. BULGULAR**

Gerçekleştirilen meta analiz çalışmasındaki temel amaç, beyin temelli öğrenmenin öğrencilerin akademik başarı etki büyüklüğünü hesaplamaktır. Bu doğrultuda literatür çalışmasında belirlenen dahil edilme kriterlerine uygun çalışmalar toplanmış ve analiz edilmiştir. Bunun sonucunda beyin temelli öğrenmenin programda öngörülen eğitim sistemine göre akademik başarı açısından etki büyüklüklerinin istatistiksel anlamda arasındaki fark açıklanmıştır. Ayrıca seçilen moderatörlere göre istatistiksel analizlere yer verilmiştir. Buna göre;

Yapılan meta analiz çalışmasının literatür taraması sonucu dahil edilme kriterlerine uyan çalışmaların yayın türüne göre (Tablo 1), çalışmanın yapıldığı yıllara (Tablo 2), çalışmaların uygulandığı öğretim kademesine (Tablo 3), çalışmanın gerçekleştirildiği coğrafi bölgeye göre (Tablo 4) göre frekans/yüzde istatistikleri aşağıda verilmektedir.

**Tablo 1. Çalışmanın Yayın Türüne Göre Dağılımı**

AKADEMİK BAŞARI		
Yayın Türü	Frekans	Yüzde
Doktora	8	25,80%
Yüksek Lisans	16	51,61%
Makale	7	22,58%
Toplam	31	100

Meta analiz çalışmasına dahil edilen çalışmaların yayın türüne göre dağılımı incelendiğinde; akademik başarı değişkenini inceleyen çalışmalarda tezlerin (77,41%) ağırlıklı olduğu görülmektedir. Tezler arasından ise en çok veri yüksek lisans tezlerinden elde edilmiştir. Yüksek lisans tezleri çalışmanın %51,61'ini oluşturmuştur.

**Tablo 2. Çalışmaların Yıllara Göre Dağılımı**

AKADEMİK BAŞARI		
Çalışma Yılı	Frekans	Yüzde
2005	1	3,22%
2007	4	12,90%
2008	4	12,90%
2009	1	3,22%
2010	2	6,45%
2011	1	3,22%
2012	3	9,67%
2013	4	12,90%

2014	5	16,12%
2016	1	3,22%
2017	1	3,22%
2018	2	6,45%
2019	2	6,45%
<b>Toplam</b>	<b>31</b>	<b>100</b>

Meta analiz çalışmasına dahil edilen çalışmaların yıllara göre dağılımı incelendiğinde akademik başarı değişkenini inceleyen çalışmaların 2012-2014 yılları arasında arttığı görülmektedir. Bu nedenle çalışmanın %38,70'ini bu yıllar arasında yapılan çalışmalar oluşturmaktadır.

**Tablo 3. Çalışmaların Öğretim Kademelerine Göre Dağılımı**

AKADEMİK BAŞARI		
Öğretim Kademesi	Frekans	Yüzde
İlkokul	3	9,67%
Ortaokul	21	67,74%
Lise	6	19,35%
Lisans	1	3,22%
<b>Toplam</b>	<b>31</b>	<b>100</b>

Meta analiz çalışmasına dahil edilen çalışmaların akademik başarı değişkeninde ortaokul düzeylerinde daha fazla çalışıldığı gözlenmiştir. Meta analize dahil edilen 31 çalışmanın 21 adeti ortaokul öğrencileri üzerinde yapılan çalışmalardan oluşmaktadır. Bu da çalışmanın büyük çoğunluğu olan %67,74 sına karşılık gelmektedir.

**Tablo 4. Çalışmaların Coğrafi Bölgelere Göre Dağılımı**

AKADEMİK BAŞARI		
Coğrafi Bölge	Frekans	Yüzde
İç Anadolu	9	29,03%
Doğu Anadolu	6	19,35%
G. Doğu Anadolu	0	0,0%
Ege	4	12,90%
Marmara	4	12,90%
Akdeniz	0	0,0%
Karadeniz	8	25,80%
<b>Toplam</b>	<b>31</b>	<b>100</b>

Coğrafi bölge olarak belirlenen moderatör analizi için yapılan araştırmalar incelenmiş akademik başarı değişkeni için “Güney Doğu Anadolu Bölgesi”nde ve “Akdeniz Bölgesi”nde gerçekleştirilen çalışmaya ulaşılamamıştır. Bu nedenle frekans tablosunda değeri sıfır(0)dır. Meta analiz çalışmasına dahil edilen araştırmaların akademik başarı değişkenini inceleyen 31

çalışmadan 9 tanesi “İç Anadolu Bölgesi”nde gerçekleştirilmiştir ve bu araştırmalar çalışmanın çoğunluğu olan %29,03’ünü oluşturmuştur.

### 3.1. Akademik Başarı ile İlgili Genel Etki Büyüklüğü Bulguları

Araştırmada “Fen eğitiminde kullanılan beyin temelli öğrenme öğrencilerin akademik başarısına olumlu etkisi var mıdır?” sorusuna cevap aranmıştır. 31 çalışmadan alınan grup ortalaması, standart sapma ve örneklem büyüklüğü verileri bireysel etki büyüklüğü ve genel etki büyüklüğü CMA 2.0 programı ile analiz edilmiştir. Verilerin yorumlanması için Cohen (1988) sınıflaması ve daha detaylı olan Thalheimer ve Cook (2002) sınıflandırması kullanılmıştır.

Meta analiz çalışmasına dahil edilen 31 çalışmanın bireysel etki büyüklükleri, p değerleri, alt ve üst limitleri aşağıda verilmektedir.

**Tablo 5.** Meta Analiz Çalışmasında Kullanılan Akademik Başarı Çalışmalarının Etki Büyüklükleri ve Çalışma Verileri

TUFEKCI, DEMIREL,2009	0,928	0,233	0,054	0,471	1,385	0,000
Sabit Etkiler	0,824	0,050	0,003	0,726	0,922	0,000
Rastgele Etkiler	0,922	0,106	0,011	0,714	1,131	0,000

Çalışmaların bireysel etki büyüklükleri incelendiğinde etki büyüklüğünün negatif yönde (sıfırdan küçük) ve en küçük olduğu çalışma Demirhan (2010) “-0,337” etki büyüklüğüne sahiptir. Çalışmada etki büyüklüğünün pozitif yönde (sıfırdan büyük) ve en büyük olduğu çalışma Çakıroğlu (2014) “2,532” etki büyüklüğüne sahiptir. Çalışmaların etki büyüklükleri frekansları ve sınıflamaları aşağıda verilmektedir.

**Tablo 6.** Meta Analiz Çalışmasında Kullanılan Akademik Başarı Çalışmalarının Etki Büyüklükleri Yönüne Ait Frekans Tablosu

Etki Büyüklüğü Yönü	Frekans	Yüzde
Sıfır (0)	0	0
Pozitif (+)	30	96,77%
Negatif (-)	1	3,22%

<b>Toplam</b>	31	100
---------------	----	-----

Tablo 6' ya bakıldığında çalışmaların bireysel etki büyüklüğüne bakılan 31 çalışmanın 30 tanesi pozitif yönde etki ettiği söylenebilir. Yani Çalışmaların %96,77'si pozitif yönde %3,22'lik dilimi negatif yönde bir sonuç göstermektedir. Çalışmaların büyük bir bölümü pozitif yönde sonuç gösterdiğinden beyin temelli öğrenmenin programda öngörülen eğitim yöntemiyle işlenen derslere göre akademik başarı değişkeninin daha etkili olduğu sonucuna ulaşılmıştır. Çalışmaların etki büyüklükleri Cohen (1988) ve Thalheimer ve Cook (2002) sınıflandırmalarına göre yorumlanmıştır.

**Tablo 7.** Cohen (1988) Etki Büyüklüğü Sınıflaması

Sınıflama Düzeyi	Frekans	Yüzde
Önemsiz	1	3,22%
Küçük	5	16,12%
Orta	11	35,48%
Büyük	14	45,16%
<b>Toplam</b>	<b>31</b>	<b>100</b>

Cohen (1988) sınıflandırmasına göre çalışmaların ağırlıklı olarak etki büyüklüklerinin “büyük düzey”de olduğu görülmektedir. Etki büyüklüğü “büyük düzey”deki çalışmalar 31 adet çalışmanın 14 tanesi ile meta analiz çalışmasının %45,16 ini oluşturmaktadır. 11 tanesi %35,48'i ise “orta düzey”de etki etmektedir. Daha ayrıntılı bir sınıflandırma ile Thalheimer ve Cook (2002) sınıflandırması aşağıda verilmiştir.

**Tablo 8.** Thalheimer Ve Cook (2002) Etki Büyüklüğü Sınıflaması

Sınıflama Düzeyi	Frekans	Yüzde
Önemsiz	0	0,00%
Küçük	4	13,33%
Orta	8	26,66%
Geniş	9	30,00%
Çok Geniş	4	13,33%
Muazzam	5	16,66%
<b>Toplam</b>	<b>30</b>	<b>100</b>

Thalheimer ve Cook (2002) sınıflandırmasına göre bir çalışmanın Demirhan (2010) etki büyüklüğü “-0,337” değerinde çıkmıştır. Bu değer, sınıflandırmanın dışında kalması sebebiyle

tabloya dahil edilmemiştir. Thalheimer ve Cook (2002) sınıflamasına göre çalışmanın %30,00'

unun “geniş etki” büyüklüğüne sahip olduğu görülmektedir. Çalışmanın etki büyüklükleri frekansına bakıldığında beyin temelli öğrenme lehine pozitif yönde olduğu söylenebilir. Fakat net bir görüş elde etmek için meta analizde birleştirilmiş etki büyüklüğüne bakmak gerekmektedir.

Yapılan analiz sonucu iki model için ayrı ayrı etki büyüklükleri hesaplanmıştır. Fakat önce çalışma modelini belirlemek gerekmektedir (Sutton, Abrams, Jones, Sheldon & Song, 2000). Çalışma modelini belirlemek üzere Heterojenlik Huni Grafiği aşağıda verilmiştir.

Şekil 1. Hedges's g Değerine Göre Etki Büyüklüklerinin Dağılım Huni Grafiği

Meta analiz etki büyüklüğü hesaplama programı olan CMA 2.0'da yapılan hesaplamalarla etki büyüklüklerinin dağılımının verildiği huni grafiğinde çalışmaların dağılımı ve yoğunluğun olduğu alan görülmektedir. Bireysel yapılan her çalışmanın hemen hemen hepsinin huninin içinde yer alması beklenmektedir. Çalışmaların huninin dışında da dağılım göstermesi çalışmaların frekanslarının heterojen bir şekilde dağılım gösterdiği fikrini vermektedir. Fakat bu grafik tek başına model belirlenmesi için yeterli veriyi vermemektedir. Bu sebeple çalışmaların “Q” veya “p” değerlerine bakılması gerekmektedir (Dinçer, 2014). Aşağıdaki tabloda değerler verilmektedir.

**Tablo 9.** Akademik Başarıyı İnceleyen Çalışmaların Heterojenlik Test Sonuçları

Q	Heterojenlik			Tau-squared	Tau-Squared		
	df	p	I <sup>2</sup>		Standard	Variance	Tau
					Error		
132,420	30	<,001	77,345	0,266	0,092	0,008	0,516

Çalışmanın ilk olarak heterojenlik testi yapılmıştır. Yapılan testin sonucunda Q istatistiksel değeri 132,420 ve serbestlik derecesi 30 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 43,773 değerlerine karşılık gelmektedir. Hesaplanan Q istatistiksel değeri 132,420 ( $p < 0,05$ ) ile 30 serbestlik derecesindeki ki-kare dağılımında belirlenmiş kritik değerinin üzerinde olduğu gözlenmiştir. Bu durum sonucunda çalışmanın etki büyüklüğünün dağılımı için “heterojendir” yorumu yapılabilir. Model seçiminde heterojen çalışmalar için Rastgele Etkiler Modeli kullanılmalıdır (Akgöz vd., 2004; Borenstein vd, 2009).

Çalışmadaki bireysel çalışmaların heterojen özellik göstermesinden dolayı yanılmaları ortadan kaldırılabileceği için (Gözüyeşil, 2012; Yıldız, 2002) model seçiminin bu yönde olması uygundur. Çalışmanın her iki model için etki büyüklükleri hesaplanmış ve Tablo 10’da verilmiştir. Rastgele Etkiler Modeli çalışmanın uygun modeli olduğundan yorumlar o doğrultuda yapılmıştır (Lipsey ve Wilson, 2001).

**Tablo 10.** Meta Analiz Çalışmasına Ait Akademik Başarı Birleştirilmiş Etki Büyüklükleri

Model	Çalışma Sayısı	Etki Büyüklüğü	Standart Hata	Varyans	%95 Güven Aralığı		p
					Alt Limit	Üst Limit	
					Sabit Etki	31	
Rastgele Etki	31	0,922	0,106	0,011	0,714	1,131	<,001

Yapılan meta analiz sonucunda etki büyüklüğü 0,922 olarak bulunmuştur. Cohen (1988) ve Thalheimer ve Cook (2002) sınıflandırmalarına göre etki büyüklüğü “geniş düzey” olarak açıklanmaktadır. Ayrıca çalışmanın p değeri incelendiğinde ( $p < 0,05$ ) anlamlı olduğu yorumu yapılmaktadır. Bu durumda beyin temelli öğrenmenin, programda öngörülen yönetime göre akademik başarı üzerinde etkisi daha büyük olduğu söylenebilir. Çalışmaların etki büyüklüğünü önemli derecede etkileyen çalışmaların incelenmesi için yayın yanlılığı incelenmelidir (Dinçer, 2014).

**Şekil 2.** Akademik Başarı Yayın Yanlılığı Huni Grafiği

Yayın yanlılığı grafiğinde huninin dışında kalan kısım yayın yanlılığı hakkında bilgi vermektedir. Yatay (x) eksen etki büyüklüğü hakkında bilgi verirken dikey (y) eksen örneklem büyüklüğü ya da varyans hakkında bilgi vermektedir. Huni grafiğini simetrik bölen çizgi genel etki büyüklüğünü göstermektedir. Çalışmaların huni grafiğin içinde ve simetrik olması aynı zamanda genel etki büyüklüğü çizgisinin etrafında toplanması beklenmektedir. Huni dışında kalan çalışmaların yayın yanlılığına sebep olabileceği unutulmamalıdır. Bu sebeple çalışmaların çoğunluğunun huni içinde olması çalışmanın güvenilirliği açısından önem taşımaktadır.

Oluşan bu grafikte huni dışında 6 adet çalışma görülmekte ve bu çalışmanın %19,35'ini oluşturmaktadır. Fakat çalışmaların huni grafiğinden çok uzakta kalmamış olması yayın yanlılığının çok önemsiz derecede olabileceği fikrini vermektedir. Çalışmanın yayın

yanlılığının çok önemsiz olduğunu göstermek için aşağıda Classic Fail-Safe N ve Kendall's istatistikleri değerleri verilmektedir.

**Tablo 11.** Yayın yanlılığı Classic Fail-Safe N ve Kendall's istatistikleri

Z – Değeri	17,48572
p – Değeri	<,001
Alfa Değeri	0,05000
Tails	2,000000
Alfa için Z – Değeri	1,95996
Örneklem	31,0000
p>alfa sonucu için gerekli eksik çalışma sayısı	2437,00000
<b>Yanlılık durumu</b>	
Kendall's (P-Q)	238
Kendall's Tau	0,51515
Tau için Z – değeri	4,04515
Kendall's p1	0,00006
Kendall's p2	0,00003

Yayın yanlılığı analizi sonucunda Classic Fail-Safe N analizi ve Kendall's analizi yapılmıştır. Elde edilen veriler doğrultusunda meta analiz çalışmasına dahil edilen 31 çalışmanın etki büyüklüğünün neredeyse sıfır olacak düzeye gelebilmesi için analize 2437 çalışma daha meta analize eklenmesi gerekmektedir. Diğer bir ifadeyle 31 çalışmanın dahil edildiği bu meta analiz çalışmasından elde edilen bulgularının geçersiz sayılabilmesi için literatürden bu verilerin tersi yönünde 2437 adet çalışmanın eklenmesi gerekmektedir. Literatür taraması sonucu bu sayıda çalışmaya ulaşılması mümkün olmadığından meta analizde yayın yanlılığı yoktur denebilir.

Tablo 11'e göre, meta-analiz kapsamına alınan çalışmalarda yanlılık bulunmadığı bulgusuna ulaşılmıştır.

Çalışmaların analizlerinin sonucunda genel çerçeveyi görebilmek için Hedges's g değerine göre öğrencilerin fen eğitimindeki akademik başarı durumlarını inceleyen çalışmaların bireysel etki büyüklüklerini ve genel etki büyüklüğünün genel dağılımını gösteren Orman grafiği ve çalışma ağırlıkları aşağıda verilmiştir.

Şekil 3. Akademik Başarıyı İnceleyen Çalışmalar için Hedge's g Değerine Göre Etki Büyüklükleri Dağılımı – Orman Grafiği – Çalışma Ağırlığı

Meta Analysis

Çalışmaların orman grafiğine bakıldığında etki büyüklüğünü simgeleyen elmas, sıfırdan büyük bir değer aralığında görülmektedir. Bu durum akademik başarı üzerinde programda öngörülen yöntemle göre beyin temelli öğrenmenin daha etkili olduğunu ifade etmektedir.

Çalışma ağırlıkları incelendiğinde veriler birbirine yakın değerlerden oluşmaktadır. Çalışma ağırlıkları için ise en yüksek değer Palavan (2018) “3,79” değeridir. Çalışma ağırlığı değerlerinin birbirine yakın değerlerde olması gerekmektedir. Diğer çalışmalara ait çalışma ağırlıklarından daha büyük ya da daha düşük değerler çalışmanın yayın yanlılığını etkilemektedir. Bu sebeple çalışmadaki değerlerin normale yakın dağılım göstermesi sebebiyle çalışmada yayın yanlılığı bulunmamaktadır.

### **3.2. Öğretim Kademesi Değişkenine Göre Moderatör Analizi**

Yapılan meta analiz çalışmasındaki alt problemlerden biri olan “beyin temelli öğrenmenin öğretim kademeleri (ilkokul, ortaokul, lise, lisans) açısından incelendiğinde akademik başarı açısından etki büyüklüğü arasında fark var mıdır?” sorusu araştırılmıştır.

Fen eğitiminde Beyin Temelli Öğrenmenin öğrencilerin öğretim kademelerinin akademik başarıları açısından etkililik dereceleri, karşılaştırmalı etki büyüklük değerleri ile belirlenmiştir

Çalışmalar ilkokul-ortaokul-lise-lisans aralığındaki öğretim kademeleri olmak üzere 4 farklı kategoriye ayrılmıştır. Yapılan analiz sonuçları aşağıda verilmiştir.

**Tablo 12.** Öğretim Kademesi Moderatörünün Akademik Başarı Değişkenine Göre Etki Büyüklük Değerleri

Öğretim Kademesi	Çalışma Kodu	Etki Büyüklüğü	%95 Güven Aralığı		p
			Alt Limit	Üst Limit

Rastgele Etkiler (Tümü)		0,704	0,553	0,856	<,001

Yapılan analiz sonucunda her iki modele göre etki büyüklükleri hesaplanmıştır. Öğretim kademesinin akademik başarıya olan etkisi için genel etki büyüklüğünü hesaplarken yorumlayabilmek için hangi istatistiksel modelin seçileceğini belirlemek amacıyla heterojenlik testi yapılmıştır. Testin sonuçları aşağıda verilmiştir.

**Tablo 13. Öğretim Kademesi Moderatörünün Akademik Başarıya Göre Heterojenlik Testi**

Öğretim	N	Standart Hata	Heterojenlik				Genel Etki	%95 Güven	
			Q	df	p	I <sup>2</sup>		Büyükülüğü	Alt
Kademesi								Sınır	Sınır
İlkokul	3	0,126	2,337	2	0,311	14,408	0,779	0,249	0,743
Ortaokul	21	0,248	55,053	20	0,000	63,672	1,400	0,794	1,038
Lise	6	0,125	40,041	5	0,000	87,513	0,698	0,830	1,322
Lisans	1	0,062	0,000	0	1,000	0,000	0,830	-0,823	0,148
Total Within									
(Sabit Etkiler Modeli)			97,431	27	<,001				
Total Between									
(Karışık Etkiler Modeli)			34,989	3	0,000		0,809	0,641	0,976

Çalışmaya ait heterojenlik testi sonucunda öğretim kademeleri kategorilerinin grup heterojenlik durumları incelendiğinde “p değeri” lisans düzeyi için 1,000 ve ilkökul düzeyi için 0,311 ( $p > 0,05$ ) olarak hesaplanmıştır. Aynı zamanda bu iki düzeydeki Q değerleri  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değerlerinin altında kalmaktadır. Bu sebeple bu gruplar için Sabit Etki Büyükülüğü Modeli seçilmiştir. Diğer iki sınıf düzeyi için heterojenlik testi anlamlılık düzeyleri ( $p < 0,05$ ) hesaplanmıştır. Ayrıca Q istatistiksel değerine bakıldığında dört öğretim kademeleri için  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değerinin üstünde olduğu için çalışmalar heterojen özellikte olduğu sonucuna ulaşılmıştır. Bu sebeple bu öğretim kademeleri için Rastgele Etki Büyükülüğü Modeli seçilmiştir.

Çalışmanın heterojenlik testi sonuçları incelenirken öncelikle sabit etkiler modeline bakılmıştır. Sabit etkiler modeli bölümündeki grup içi heterojenlik testi anlamlılık düzeyi ( $p < ,005$ ) olarak hesaplanmış. Ayrıca Q istatistiksel değerine bakıldığında 97,431 ve serbestlik derecesi 27 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 40,113 değerleri aralığındadır. Hesaplanan Q istatistiksel değeri 97,431 ( $p < 0,05$ ) ile 27 serbestlik derecesindeki ki-kare dağılımında belirlenmiş kritik değeri aştığı gözlenmiştir. Buna göre çalışmalar kendi

içlerinde aynı yaygın etkiye sahiptir denilmekte ya da çalışmalar kendi içlerinde beklenenden yüksek dağılıma sahiptirler.

Ulaşılan sonuca göre Karışık Etkiler Modeline geçilmiştir ve gruplar arası (between-group) heterojenlik testine göre p değeri hesaplanmıştır. Testin anlamlılık düzeyi ( $p=0,00$ )  $<$  ( $p=0,05$ ) olarak hesaplanmıştır. Ayrıca çalışmanın Q istatistiksel değerine bakıldığında 34,989 ve serbestlik derecesi 3 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 7,815'dir. Hesaplanan Q istatistiksel değeri 34,989 ( $p<0,05$ ) ile 3 serbestlik derecesindeki ki-kare dağılımında belirlenmiş kritik değerinin altında kaldığı gözlenmiştir. Bu durumda beyin Temelli Öğrenmenin öğrencilerin fen dersi akademik başarı etki büyüklüklerinin oluşturulmuş olan öğretim kademesi kategorilerine göre anlamlı bir farklılık göstermediği sonucuna ulaşılmıştır.

### **3.3. Coğrafi Bölge Değişkenine Göre Moderatör Analizi**

Yapılan meta analiz çalışmasındaki alt problemlerden “beyin temelli öğrenmenin coğrafi bölgeler (İç Anadolu, Doğu Anadolu, Güney Doğu Anadolu, Akdeniz, Karadeniz, Marmara, Ege) açısından incelendiğinde akademik başarı açısından etki büyüklüğü arasında fark var mıdır?” sorusu araştırılmıştır.

Fen eğitiminde beyin temelli öğrenmenin öğrencilerin öğrenim gördüğü coğrafi bölgeye ait akademik başarıları açısından etkililik dereceleri, karşılaştırmalı etki büyüklük değerleri ile belirlenmiştir. Çalışmalar Türkiye'deki yedi coğrafi bölge olmak üzere 7 farklı gruba ayrılmıştır. Ancak dahil edilme kriterlerine uygun çalışmalar içinde coğrafi bölge için frekans tablosunda (Tablo 14) verildiği gibi, Güney Doğu Anadolu ve Akdeniz bölgelerinde gerçekleştirilen çalışma olmadığından moderatör için 5 adet kategori oluşturulmuştur. Yapılan analiz sonuçları aşağıda verilmiştir.

**Tablo 14.** Coğrafi Bölge Moderatörünün Akademik Başarı Değişkenine Göre Etki Büyüklük Değerleri

Coğrafi Bölge	Yazar	Yıl	Etki Büyüklüğü	Alt Sınır	Üst Sınır	Alt Sınır	Üst Sınır
İç Anadolu	AKYUREK, 2012a	2012	0,320	0,000	0,640	0,000	0,004
İç Anadolu	AKYUREK, 2012b	2012	0,606	0,000	1,212	0,000	0,000
İç Anadolu	AYDIN, 2008	2008	0,073	0,000	0,146	0,000	0,028
İç Anadolu	CELEBİ, 2008	2008	-0,141	0,000	0,282	0,000	0,167

Sabit Etkiler (Marmara)			0,148	0,000	0,296	0,000	0,002
Rastgele Etkiler (Marmara)			-0,098	0,000	0,196	0,000	0,113
Sabit Etkiler (Tümü)			0,726	0,000	1,452	0,000	0,000
Rastgele Etkiler (Tümü)			0,675	0,000	1,350	0,000	0,000

Yapılan analiz sonucunda her iki modele göre etki büyüklükleri hesaplanmıştır. Coğrafi bölge farklılıklarının akademik başarıya olan etkisi için genel etki büyüklüğünü hesaplarken yorumlayabilmek için hangi istatistiksel modelin seçileceğini belirlemek amacıyla heterojenlik testi yapılmıştır. Testin sonuçları aşağıda verilmiştir.

**Tablo 15.** Coğrafi Bölge Moderatörünün Akademik Başarıya göre Heterojenlik Testi

Coğrafi Bölge	N	Standart Hata		df	F	I <sup>2</sup>	Genel Etki Büyüklüğü	%95 Güven Aralığı	
		Q	Q					Alt Sınır	Üst Sınır
Doğu Anadolu	6	0,105	48,552	5	0,000	89,702	0,725	0,732	1,143
Ege	4	0,143	1,836	3	0,000	0,000	0,854	0,471	1,032

Marmara	4	0,129	12,245	3	0,007	75,501	0,819	0,148	0,655
Total Within									
(Sabit Etkiler Modeli)			115,583	26	<,001				
Total Between									
(Rastgele Etkiler, Karışık Etkiler Modeli)			16,836	4	0,119		0,675	0,675	1,023

Çalışmaya ait heterojenlik testi sonucunda coğrafi bölge kategorilerinin grup heterojenlik durumları incelendiğinde Ege Bölgesi ( $p>0,05$ ) olarak hesaplanmıştır. Aynı zamanda bu coğrafi bölgeye ait Q değeri  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değerlerinin altında kalmaktadır. Bu sebeple bu gruplar için Sabit Etki Büyüklüğü Modeli seçilmiştir. Diğer dört coğrafi bölge için heterojenlik testi anlamlılık düzeyleri ( $p<0,05$ ) olarak hesaplanmıştır. Ayrıca Q istatistiksel değerine bakıldığında dört coğrafi bölge için  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değerinin üstünde olduğu için çalışmalar heterojen özellikte olduğu sonucuna ulaşılmıştır. Bu sebeple bu gruplar için Rastgele Etki Büyüklüğü Modeli seçilmiştir.

Çalışmanın heterojenlik testi sonuçları incelenirken öncelikle sabit etkiler modeline bakılmıştır. Sabit etkiler modeli bölümündeki grup içi heterojenlik testi anlamlılık düzeyi ( $p<,005$ ) olarak hesaplanmıştır. Ayrıca Q istatistiksel değerine bakıldığında 115,583 ve serbestlik derecesi 26 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 38,885 değerleri aralığındadır. Hesaplanan Q istatistiksel değeri 115,583 ( $p<0,05$ ) ile 26 serbestlik derecesindeki

ki-kare dağılımında belirlenmiş kritik değeri aştığı gözlenmiştir. Buna göre çalışmalar kendi içlerinde aynı yaygın etkiye sahiptir denilmekte ya da çalışmalar kendi içlerinde beklenenden yüksek dağılıma sahiptirler.

Ulaşılan sonuca göre Karışık Etkiler Modeline geçilmiştir ve gruplar arası (between-group) heterojenlik testine göre p değeri hesaplanmıştır. Testin anlamlılık düzeyi ( $p=0,119>(p=0,05)$ ) olarak hesaplanmıştır. Ayrıca çalışmanın Q istatistiksel değerine bakıldığında 16,836 ve serbestlik derecesi 4 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 9,488'dir. Hesaplanan Q istatistiksel değeri 16,836 ( $p<0,05$ ) ile 4 serbestlik derecesindeki ki-kare dağılımında belirlenmiş kritik değerin üzerinde kaldığı gözlenmiştir. Bu

durumda beyin temelli öğrenmenin öğrencilerin fen dersi akademik başarı etki büyüklüklerinin oluşturulmuş olan coğrafi bölge kategorilerine göre anlamlı bir farklılık gösterdiği sonucuna ulaşılmıştır.

### **3.4 Çalışmanın Yayın Türü Değişkenine Göre Moderatör Analizi**

Yapılan meta analiz çalışmasındaki alt problemlerden biri olan “beyin temelli öğrenmenin çalışmanın yayın türü (makale, yüksek lisans tezi, doktora tezi) açısından incelendiğinde akademik başarı açısından etki büyüklüğü arasında fark var mıdır?” sorusu araştırılmıştır.

Fen eğitiminde Beyin Temelli Öğrenmenin öğrencilerin için çalışılan yayın türlerinin akademik başarıları açısından etkililik dereceleri, karşılaştırmalı etki büyüklük değerleri ile belirlenmiştir.

Çalışmalar yayınlanan makale, yüksek lisans tezleri ve doktora tezleri olmak üzere 3 farklı kategoriye ayrılmıştır. Yapılan analiz sonuçları aşağıda verilmiştir.

**Tablo 16.** Çalışmanın Yayın Türü Moderatörünün Akademik Başarı Değişkenine Göre Etki Büyüklük Değerleri

Rastgele Etkiler (Yüksek Lisans)	1,025	0,630	1,419	0,000

Yapılan analiz sonucunda her iki modele için de etki büyüklükleri hesaplanmıştır. Çalışılan yayın türlerindeki farklılıklarının akademik başarıya olan etkisi için genel etki büyüklüğünü hesaplarken yorumlayabilmek ve hangi istatistiksel modelin seçileceğini belirlemek amacıyla heterojenlik testi yapılmıştır. Testin sonuçları aşağıda verilmiştir.

**Tablo 17.** Çalışılan Yayın Türü Moderatörünün Akademik Başarıya Göre Heterojenlik Testi

Çalışılan Yayın Türü	N	Standart Hata	Heterojenlik				Genel Etki Büyüklüğü	%95 Güven Aralığı	
			Q	df	p	I2		Alt Sınır	Üst Sınır
Doktora	8	0,093	10,592	7	0,157	33,910	0,725	0,640	1,003
Makale	7	0,095	17,514	6	0,008	65,741	0,854	0,543	0,520
Yüksek Lisans	1	0,076	102,821	15	0,000	85,411	1,133	0,734	1,003
Total Within									
(Sabit Etkiler Modeli)			130,926	28	<,001				
Total Between									
( Karışık Etkiler Modeli)			1,494	2	0,620		0,675	0,726	0,922

Yapılan meta analiz çalışmasına ait heterojenlik testi sonucunda çalışılan yayın türü kategorilerinin grup heterojenlik durumları incelendiğinde Doktora çalışmalarının 0,157 ( $p>0,05$ ) olarak hesaplanmıştır. Aynı zamanda bu çalışmaların Q değerleri  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değerlerinin altında kalmaktadır. Bu sebeple bu gruplar için Sabit Etki Büyüklüğü Modeli seçilmiştir. Diğer iki çalışma türü için heterojenlik testi anlamlılık düzeyleri ( $p<0,05$ ) olarak hesaplanmıştır. Ayrıca Q istatistiksel değerine bakıldığında iki tür çalışmanın için  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değerinin üstünde olduğu için çalışmalar heterojen özellikte olduğu sonucuna ulaşılmıştır. Bu sebeple bu gruplar için Rastgele Etki Büyüklüğü Modeli seçilmiştir.

Çalışmanın heterojenlik testi sonuçları incelenirken öncelikle sabit etkiler modeline bakılmıştır. Sabit etkiler modeli bölümündeki grup içi heterojenlik testi anlamlılık düzeyi ( $p<,005$ ) olarak hesaplanmıştır. Ayrıca Q istatistiksel değerine bakıldığında 130,926 ve serbestlik derecesi 28 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 41,337 değerleri aralığındadır. Hesaplanan Q istatistiksel değeri 130,926 ( $p<0,05$ ) ile

28 serbestlik derecesindeki ki-kare dağılımında belirlenmiş kritik değeri aştığı gözlenmiştir.

Buna göre çalışmalar kendi

içlerinde aynı yaygın etkiye sahiptir denilmekte ya da çalışmalar kendi içlerinde beklenenden yüksek dağılıma sahiptirler.

Ulaşılan sonuca göre Karışık Etkiler Modeline geçilmiştir ve gruplar arası (between-group) heterojenlik testine göre p değeri hesaplanmıştır. Testin anlamlılık düzeyi ( $p=0,620$ )>( $p=0,05$ ) olarak hesaplanmıştır. Ayrıca çalışmanın Q istatistiksel değerine bakıldığında 1,494 ve serbestlik derecesi 2 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 5,991'dir. Hesaplanan Q istatistiksel değeri 1,494 ( $p<0,05$ ) ile 2 serbestlik derecesindeki ki-kare dağılımında belirlenmiş kritik değerin altında kaldığı gözlenmiştir. Bu durumda beyin temelli öğrenmenin öğrencilerin fen dersi akademik başarı etki büyüklüklerinin oluşturulmuş olan çalışılan yayın türü kategorilerine göre anlamlı bir farklılık göstermediği sonucuna ulaşılmıştır.

#### 4. TARTIŞMA ve SONUÇ

Fen eğitiminde kullanılan “beyin temelli öğrenmenin öğrencilerin akademik başarısına olumlu etkisi var mıdır?” sorusuna cevap aranmıştır. Meta analizi yapılan 31 çalışmanın etki büyüklüğü değerleri incelenmiştir. Gerçekleştirilmiş olan etki büyüklüğü analizine bakıldığında etki büyüklüğünün negatif yönde ve en küçük olduğu çalışmanın “-0,337” değeri ile Demirhan (2010)’a, etki büyüklüğünü pozitif yönde en büyük olduğu çalışmanın ise “2,532” değeri ile Çakıroğlu (2014)’e ait olduğu görülmüştür. Çalışmaların %96,77’si pozitif yöndeyken, %3,22’lik dilimi negatif yönde bir sonuç göstermektedir. Çalışmaların büyük bir kısmı pozitif yönde sonuç verdiği için beyin temelli öğrenmenin programda öngörülen eğitim yöntemiyle işlenen derslere göre akademik başarı değişkeninin daha etkili olduğu sonucuna ulaşılmıştır. 31 çalışmanın etki büyüklükleri hesaplandığında Cohen (1988) etki büyüklüğü sınıflamasına göre çalışmaların %45,16’sinin “büyük etki” büyüklüğüne sahip olduğu ve Thalheimer ve Cook (2002) etki büyüklüğü sınıflamasına göre çalışmaların %30,00’unun “geniş etki” büyüklüğüne sahip olduğu görülmektedir.

Meta analize dahil edilen çalışmaların dağılımını incelemek için gerçekleştirilen heterojenlik testi sonucunda elde edilen Q istatistiksel değeri 132,420 ( $p<0,05$ ) ve 30 serbestlik derecesindeki ki-kare dağılımında belirlenmiş olan kritik değeri aşmış olduğu görülmüştür. Buradan yola çıkarak çalışmaların heterojen bir dağılım gösterdiği sonucu elde edilmiştir.

Beyin temelli öğrenmenin akademik başarıya olan etki büyüklüğü pozitif yönde ve 0,922 olarak bulunmuştur. Elde edilen bu değer için etki büyüklüğü Cohen(1988) ve Thalheimer ve

Cook(2002) sınıflandırmalarındaki karşılığı “geniş düzey” olarak ifade edilmiştir. İncelemeler sonucunda beyin temelli öğrenmenin akademik başarıya olan etkisi programda ön görülen öğretim yönteminin akademik başarıya olan etkisinden daha fazladır sonucuna ulaşılmıştır.

Literatür taraması sonucunda beyin temelli öğrenme ile gerçekleştirilen meta analiz sayısı yok denecek kadar azdır. Ancak beyin temelli öğrenmenin akademik başarı üzerindeki olumlu etkisini gösterecek bireysel çalışmalar mevcuttur.( Koca, 2019; Özer, 2019; Kural, 2020).

Fen alanında gerçekleştirilen çalışmaların akademik başarı üzerindeki etkisi incelenirken öğretim kademelerindeki etkilerine de bakılmıştır. Öğretim kademelerinin etki yönleri incelendiğinde çoğunlukla pozitif yönde olduğu görülmektedir. Heterojen dağılım gösterdiği görülen çalışmaların öğretim kademelerindeki en yüksek etki büyüklüğü değeri 1,201 değer ile “Lise”ye aittir. Çalışmaların genel etki büyüklükleri incelendiğinde gruplar arasında anlamlı bir fark bulunamamıştır. Buradan yola çıkarak öğretim kademelerinin akademik başarı açısından bir farklılığı bulunmamaktadır. Literatür incelendiğinde öğretim kademesi moderatörüne göre benzer sonuçlara ulaşılmıştır.(Koca, 2019; Durlak, 2013).

Fen alanında gerçekleştirilen çalışmaların akademik başarı üzerindeki etkisi incelenirken öğrenim görülen coğrafi bölgenin etkilerine de bakılmıştır. Gerçekleştirilen analize göre coğrafi bölge moderatörü heterojen dağılım göstermektedir. Coğrafi bölgelerin etki yönleri incelendiğinde çoğunlukla pozitif yönde olduğu görülmektedir. Ayrıca çalışmaların etki büyüklüğü değerleri incelendiğinde etki büyüklüğü en fazla olan 1,053 ile “İç Anadolu Bölgesi” olmuştur. Çalışmaların genel etki büyüklükleri incelendiğinde gruplar arasında anlamlı bir fark vardır. Buradan yola çıkarak öğrenim görülen coğrafi bölgenin akademik başarı açısından bir farklılığı bulunmamaktadır. Literatür incelendiğinde coğrafi bölge moderatörüne göre benzer sonuçlara ulaşılmıştır.(Koca, 2019; Özer, 2019).

Fen alanında gerçekleştirilen çalışmaların akademik başarı üzerindeki etkisi incelenirken yapılan çalışmanın yayın türü etkilerine de bakılmıştır. Gerçekleştirilen analize göre çalışılan yayın türü moderatörü heterojen dağılım göstermektedir. Çalışılan yayın türü moderatörünün etki yönleri incelendiğinde çoğunlukla pozitif yönde olduğu görülmektedir. Ayrıca çalışmaların etki büyüklüğü değerleri incelendiğinde etki büyüklüğü en fazla olan 1,025 ile “Yüksek Lisans” çalışmaları olmuştur. Çalışmaların genel etki büyüklükleri incelendiğinde gruplar arasında anlamlı bir fark bulunamamıştır. Buradan yola çıkarak çalışılan yayın türü

moderatörünün akademik başarı açısından bir farklılığı bulunmamaktadır. Literatür incelendiğinde çalışılan

yayın türü moderatörüne göre benzer sonuçlara ulaşılmıştır.(Koca, 2019; Özer, 2019, Kural, 2020).

## **5. ÖNERİLER**

Gerçekleştirilen çalışmada Beyin Temelli Öğrenmenin fen eğitimi üzerindeki etkililiği; akademik başarı değişkeni açısından incelenmiştir. Yapılacak olan diğer çalışmalarda okuma becerilerine, karar verme becerilerine, bilişsel süreç becerilerine ilişkin farklı değişkenlerde etkililiği incelenebilir.

Gerçekleştirilen çalışmada Beyin Temelli Öğrenmenin fen eğitimine etkililiği incelenmiştir, diğer disiplinlerde (Matematik, Türkçe vb.) etkililiği incelenebilir.

**FEN EĞİTİMİNDE LABORATUVAR DESTEKLİ ÖĞRETİMİN ÖĞRENCİLERİN  
AKADEMİK BAŞARISINA ETKİSİ: BİR META-ANALİZ ÇALIŞMASI**

**Doç. Dr. Murat OKUR (Orcid ID: 0000-0003-2502-2276)**

Sivas Cumhuriyet Üniversitesi Eğitim Fakültesi, Sivas

**Uzman Öğretmen Sema CANSEVER (Orcid ID: 0000-0002-4654-7031)**

Sivas Cumhuriyet Üniversitesi Bilimleri Enstitüsü, Sivas

**ÖZET**

Bu çalışmanın amacı 2010-2021 yılları arasında yapılan fen eğitiminde laboratuvar destekli öğretimin programda öngörülen öğrenme yöntemine kıyasla öğrencilerin fen dersine yönelik akademik başarı üzerine etkisini meta analiz yöntemi kullanarak genel etki büyüklüğünü hesaplamaktır. Aynı zamanda akademik başarı değişkene bağlı moderatör olarak konu alanı, sınıf düzeyi, coğrafi bölge değişkenleri ele alınmıştır. Bu sebeple konu alanında yapılmış olan araştırmalar incelenerek, belirlenen ölçütlere uygun 31 tane çalışma meta analiz çalışmasına dahil edilmiştir. Bu çalışmadaki meta-analiz sonuçları incelendiğinde laboratuvar destekli öğretimin öğrencilerin akademik başarıları yönündeki etki büyüklüğü 1,239 olarak hesaplanmıştır. Elde edilen etki büyüklüğü Cohen (1988) ve Thalheimer ve Cook (2002) sınıflamalarına göre etki büyüklüğü “geniş düzey” olarak yorumlanmaktadır. Sonuç olarak fen eğitiminde laboratuvar destekli öğretimin programda yer alan yöntemlere göre fen dersinde laboratuvar destekli öğretim akademik başarı üzerinde anlamlı bir etkiye sahiptir. Araştırmaya dahil edilen çalışmalarda ayrıca laboratuvar destekli öğretimin öğrenme alanlarına, çalışmaların yapıldığı bölgelere ve sınıf düzeylerine göre karşılaştırmalı etki büyüklükleri hesaplanmıştır.

**Anahtar kelimeler:** Laboratuvar yaklaşımları, Laboratuvar destekli öğrenme, Meta analiz

**THE EFFECT OF BRAIN-BASED LEARNING ON STUDENTS' ACADEMIC ACHIEVEMENT IN SCIENCE EDUCATION BETWEEN 2005-2022: A META-ANALYSIS STUDY**

**ABSTRACT**

The aim of this study is to calculate the overall effect size of the effect of laboratory supported teaching in science education between 2010-2021 on students' academic achievement compared to the learning method envisaged in the program by using meta-analysis method. At the same time, moderators of academic achievement variables; subject area, grade level, geographical region variables were discussed. For this reason, by examining the studies in the subject area, 31 studies suitable for the determined criteria were included in the meta-analysis study for academic achievement. When the meta-analysis result in this study were examined, the effect size of laboratory-assisted teaching on the academic achievement of students was calculated as 1,239. According to the Cohen (1998) and Thalheimer and Cook (2002) classifications, the effect size is interpreted as "broad level". As a result, according to the method included in the curriculum of laboratory-supported teaching in science education, laboratory-assisted teaching in science lessons has a significant effect on academic achievement. In the studies included in the research, comparative effect sizes were also calculated according to the learning areas of laboratory assisted learning, the regions where the studies were carried out, and the class levels.

**Keywords:** Laboratory Approaches, Laboratory supported learning, Meta-analysis

## 1.GİRİŞ

Gelişen teknoloji ve küreselleşen dünyada eğitimin önemi her geçen gün daha da artmaktadır. Buda eğitimde birçok yeniliği ve değişimi beraberinde getirmektedir. Dünyanın her yerinde eğitimin tanımı günden güne değişmektedir. Eğitim genel anlamıyla yeni nesillerin toplumda yer edinmeleri için gerekli bilgi, beceri, donanım ve eğilimleri edinmelerine, öz varlıklarını geliştirmelerine yardım etme sürecidir (TDK, 2019). Bu süreçte geleneksel eğitimin yerini hızlı bir şekilde çağdaş eğitim almıştır.

Geleneksel eğitimde ezberciliğe dayanan öğrenmeler yerini çağdaş eğitimle birlikte kalıcı ve somut öğrenmelere bırakmıştır. Geleneksel eğitimde en önemli öge öğretmendir. Oysaki öğretmen öğrenen değil öğreten konumundadır. Eğitimin üzerinde durması gereken bireyler öğrencilerdir. Öğrencilerin önemli ve değerli olduğu eğitim sistemi çağdaş eğitimle mümkündür.

Türkiye’de 2005 yılında kullanılmaya başlanan yapılandırmacılık yaklaşımı çağdaş öğrenme ile paralellik göstermektedir. Yapılandırmacılıkla birlikte birey var olan şemalarını genişleterek kendi bilgisini oluşturmaya başlamıştır. Eski bilgisinin üzerine yenilerini inşa ederek öğrenmedeki kalıcılığı arttırmıştır. Bu da yeni yöntemlere geçmeyi zorunlu kılmıştır. Çağdaş eğitimle birebir örtüşen laboratuvar uygulamalarının kullanımı artmıştır.

Laboratuvar öğrenci ve öğretmenlerin materyallere kolayca ulaşabildikleri, öğrenmeyi kalıcı kılan ortamlardır. Laboratuvar öğrencilere ve öğretmenlere teorik bilgilerin uygulanmasında kolaylık sağlamaktadır. Öğrencinin aktif olduğu laboratuvar yönteminde araştıran, sorgulayan, eleştiren, kendi bilgisini oluşturan bireyler yetiştirmek mümkündür. Bütün bunlar fen bilimlerinin temel amacıyla örtüşmektedir. Fen bilimleri doğayı tanıma ve doğa olaylarını anlama amacıyla yapılan çalışmalardan doğmuştur (Soslu, 2010).

Toplumların gelişmesinde fen bilimlerinin ve ona dayalı olarak üretilen teknolojinin etkisi oldukça büyüktür. Fen bilimlerinin temel amacı ise fen okuryazarı bireyler yetiştirmektir (MEB, 2018). Fen okuryazarı bireyler bilgiye daha çabuk ulaşır ve bilginin doğruluğunu her zaman sorgularlar, şüphecidirler. Günlük hayatta karşılaştıkları sorunlara pratik çözümler üretirler. Fen eğitiminde bireyin daha iyi ve kalıcı öğrenmeler sağlayabilmesi, bilişsel beceriler, duyuşsal beceriler ve psiko-motor beceriler kazanabilmesi açısından laboratuvarda uygulanan deneyler oldukça önemlidir.

Shulman ve Tamir (1973) laboratuvar eğitiminin amaçlarını beş başlıkta özetlemiştir. Bunlar;

- 1- Bilime karşı ilgili, pozitif tutum sergileyen, meraklı ve açık fikirli olmayı sağlamak.
- 2- Yaratıcı düşünme ve problem çözme becerisini geliştirmek.
- 3- Bilimsel düşünmeyi ve bilimsel metodu desteklemek.
- 4- Kavramsal anlayışı ve zihinsel beceriyi geliştirmek.
- 5- Pratik ve uygulanabilir beceriler geliştirmek (Köseoğlu ve Tümay, 2010).

Her dersin kendine has bir konusu ve içeriği olup bu hususta ilgili kazanımların kazandırılabilmesi uygun yöntem, özel donanımlı yer, ayrıca özel araç ve gereçlere gerek vardır. Deney yönteminin fen öğretiminde kullanılmaya başlanmasından bu yana etkili ve verimli bir şekilde dersin işlenebileceği ortam olarak ilk akla gelen yer muhakkak laboratuvarlardır.

Bütün bunlardan yola çıkarak bu çalışmada Fen eğitiminde laboratuvar destekli öğretimin öğrencilerin akademik başarısına etkisi var mıdır? Sorusuna cevap aranacaktır. Ayrıca moderatör olarak seçilen değişkenlere ait alt problemler de yer almaktadır. Bunlar,

- a) Laboratuvar destekli öğretimin fen bilimleri dersi alt başlıkları (Konu Alanı: Fen-Fizik-Kimya-Biyoloji) açısından incelendiğinde akademik başarı açısından etki büyüklükleri arasında fark var mıdır?
- b) Laboratuvar destekli öğretimin sınıf düzeyleri (İlkokul-Ortaokul-Lise ve Üniversite) açısından incelendiğinde akademik başarı açısından etki büyüklükleri arasında fark var mıdır?
- c) Laboratuvar destekli öğretimin coğrafi bölgeler (İç Anadolu-Doğu Anadolu-Güneydoğu Anadolu- Ege-Akdeniz-Karadeniz-Marmara) açısından incelendiğinde akademik başarı açısından etki büyüklükleri arasında fark var mıdır?

## 2.YÖNTEM

### 2.1. Araştırmanın Modeli

Bu araştırma Meta-Analiz yöntemiyle yapılmıştır. Bu çalışmada CMA yazılımı kullanılacaktır. Meta- Analiz yönteminin daha net anlaşılması için bu yöntem ile ilgili gerekli açıklamalar aşağıda verilmiştir:

Meta analiz, aynı konu üzerinde birbirinden bağımsız olarak gerçekleştirilen deney ve araştırmalarda ulaşılan bulguları bir bütün haline getirmek, bu bulgulardaki farklılığı açıklamak, daha güvenilir ve daha geçerli sonuçlara ulaşmak için hesaplama yöntemlerinin kullanılması sürecidir (Dinçer, 2014).

Genel olarak meta analiz birden farklı çalışmalara ait standartlaştırılmış etki büyüklükleri, korelasyon katsayıları veya p değerleri gibi sayısal verilerin özet istatistiklerinin tipik bir analizi olarak da tanımlanabilmektedir (Çarkungöz, 2009).

## 2.2. Evren ve Örneklem

Bu araştırmada meta-analiz çalışması yapılacak konu hakkında; yayınlanmış ve yayınlanmamış tüm doktora tezleri, yüksek lisans tezleri, hakemli ve hakemsiz dergilerde yayınlanmış makaleler, YÖK'e ait tez katalogu, Eric, Ebso gibi birçok uluslararası veri tabanlarından SSCI indeksli dergilerden yararlanılacaktır. Bunların sonucunda kriterlere uygun 27 adet bireysel çalışmaya ulaşılmıştır. Çalışmalar incelendikten sonra bazı çalışmalarda birden fazla çalışma olarak analize dahil edilmiştir.

➤ Ünal (2018), Kaya ve Oral (2013), Bilen Kaya (2012), Oymak(2018) ve Toprak (2011)yaptıkları çalışmalarda iki ayrı deney ve kontrol grubu ile yürütmüşlerdir bunlar 2 ayrı deney grubu verileri olarak çalışmaya dahil edilmiştir.

## 2.3. Verilerin Toplanması

Bu araştırmada meta-analiz çalışması yapılacak konu hakkında; yayınlanmış ve yayınlanmamış tüm doktora tezleri, yüksek lisans tezleri, hakemli ve hakemsiz dergilerde yayınlanmış makaleler, YÖK'e ait tez katalogu, makale için Ulakbim, Eric, Ebsco gibi birçok veri tabanı, SSCI indeksli dergiler, Türkiye'deki üniversite kütüphanelerinin elektronik katalogları, konferans sunumları ve bildirimler gibi birçok kaynaktan yararlanılmıştır.

Veri toplamak amacıyla öncelikle internet ortamında "Laboratuvar destekli öğrenme", "laboratory assisted learning", "laboratory applications", anahtar sözcükleri kullanılarak YÖK kütüphanesi, makaleler, bildiri kitapçıkları taranmıştır. Araştırmaların Türkiye'de yapılmış olan çalışmaları olmasına dikkat edilmiştir.

Çalışmaların bir kısmı deneysel araştırmalar olmadığından bu araştırmadan çıkarılmıştır. Bazı çalışmalar hem yüksek lisans/doktora tezi hem de bildiri olarak sunulduğundan bunlardan daha çok tezler dikkate alınarak analize dahil edilip kodlanmıştır. Taranan bazı deneysel çalışmaların meta analiz için gerekli sayısal verileri içermediğinden bu araştırmanın dışında bırakılmıştır.

Araştırmada yer alan çalışmaların seçiminde esas alınan kriterler aşağıda sunulmuştur:

1. Meta analize dahil edilecek çalışmaların zaman aralığı: Çalışmaların 2010-2021 yılları içerisinde yapılmış olması. Çalışmanın 2010 yılında başlamış olmasının nedeni daha önce benzer bir çalışmanın bulunmasıdır.

2. Yayınlanmış veya yayınlanmamış çalışma kaynakları: Yüksek lisans ve doktora tezleri, hakemli ve hakemsiz akademik dergiler, elektronik akademik dergiler, veritabanları, kongre ve sempozyumlarda sunulmuş bildiriler.

3. Çalışmalardaki araştırma yönteminin uygun olması: Meta analiz çalışmalarında standartlaştırılmış etki büyüklüğüne ulaşabilmek için, dahil edilen çalışmaların kontrol ve deney gruplarına sahip olmaları gerekmektedir. Çalışmada deney grubu ise laboratuvar destekli öğrenmenin uygulandığı öğrenci grubunu temsil etmektedir.

4. Amaca uygun öğrenme yaklaşımının kullanılması: Deney grubunda laboratuvar destekli öğrenme yaklaşımının kullanılması.

5. Yeterli sayısal veri içermesi: Meta analiz çalışması için gerekli olan etki büyüklüklerinin hesaplanabilmesi için, çalışmaya dahil edilen araştırmaların deney ve kontrol grupları için betimleyici sayısal verilere ihtiyaç duyulur. Bu amaçla deney ve kontrol gruplarında aşağıda sunulan değerleri verilen çalışmalar araştırmaya dahil edilmiştir:

- Örneklem büyüklüğü (N)
- Ortalama (M)
- Standart sapma (SD)

Bir çalışmanın araştırmamızdaki meta-analize dahil edilmemesi, çalışmanın araştırma sınırları içerisinde olmamasından ya da meta analiz için gerekli istatistiksel verilere sahip olmamasından kaynaklanmaktadır (Lipsey ve Wilson, 2001; Wolf, 1986). Bu yüzden dahil edilme kriterlerine uygun olmayan çalışmalar, meta-analiz için kullanılacak araştırmalardan hariç tutulmuştur.

Meta-analiz çalışması ile ilgili araştırmalar toplandıktan sonra dahil edilme kriterlerine uyan çalışmaların, sonraki adımlarda meta-analiz çalışmaları arasındaki karşılaştırmalarda kullanılabilmesi için araştırmaların özelliklerini sürekli veya kategorik değişkenlere dönüştürecek bir kodlama yöntemi geliştirilmesi gerekmektedir. Meta-analize dahil edilen çalışmalar ile ilgili mümkün olduğunca açık ve detaylı bir kodlama sistemi geliştirilmelidir. Araştırmada kullanılan kodlama sistemi üç bölümden oluşmaktadır. Birinci bölüm “çalışma kimliği”dir. Bu bölüm çalışmanın kimliğini tespit etmek amacıyla çalışmanın adı, araştırmayı

yapan yazar veya yazarların adı, çalışmanın yapıldığı yıl gibi bilgileri içermektedir. İkinci bölüm “çalışma içeriği”dir. Bu bölümde laboratuvar destekli öğrenmenin uygulandığı öğretim kademesi, çalışmanın uygulandığı coğrafi bölge, yapılan araştırmanın yayın türü gibi bilgilere yer verilmiştir. Çalışma verileri üçüncü bölümde yer almaktadır. Bu bölümde çalışmalarda deney ve kontrol gruplarının betimsel bilgileri belirlenmiştir.

#### 2.4. Verilerin Analizi

Bu çalışmada verilerin analizinde, Meta-Analizi yöntemi kullanılmıştır. Bu yöntemin amacı  $d=(X_e-X_c)/SD$  formülü ile gösterilen, deneysel çalışmalarda yer alan deney ve kontrol gruplarının ortalamaları arasındaki farkların hesaplanmasıdır (Hunter ve Schmidt, 2004). Bu çalışmada etki büyüklüğü hesaplamasında Hedges “d” kullanılmıştır. Etki büyüklüğü “d”, işlemler arası farkın iki grubun birleştirilmiş standart sapması ile bölünmesidir (Cooper, 1989). Etki büyüklüğü ile incelenen bir olayın “Ne kadar etkin olduğu” sonucu bulunmaktadır (Cohen, 1988).

Araştırmanın bulgular ve yorum kısmında kullanılan hesaplamaların, tablo ve grafiklerin oluşturulmasında MS Office Excel 2007, Comprehensive Meta Analysis (CMA) istatistik programından yararlanılmıştır. Araştırmada istatistiksel analizlerin önemlilik düzeyi olarak .05 önemlilik düzeyi seçilmiştir. Bu araştırmada farklı veri türlerinin bir araya getirilmesinde kullanışlı olmasından dolayı CMA istatistik programı tercih edilmiştir.

Burada çalışma istatistiklerine göre sınıflamalar yapıldıktan sonra sabit etki modeli ve rastgele etki modeli kullanılarak meta-analiz yapılmıştır.

### 3. BULGULAR

Yapılan meta analiz çalışmasının bu kısmında dahil edilme kriterlerine uygun çalışmaların analizleri sonucu elde edilen bulgular yer almaktadır. İlk önce meta analiz çalışmasına dair betimleyici veriler açıklanıp daha sonra CMA2.0 programıyla hesaplanan etki büyüklüğü değerleri arasındaki farka yer verilecektir.

Gerçekleştirilen meta analiz çalışmasındaki temel amaç, fen eğitiminde laboratuvar destekli öğretimin öğrencilerin akademik başarı yönünden etki büyüklüğünü hesaplamaktır. Bu doğrultuda literatür çalışmasında belirlenen dahil edilme kriterine uygun çalışmalar toplanmış ve analiz edilmiştir. Bunun sonucunda fen eğitiminde laboratuvar destekli öğretimin programda öngörülen öğretim yöntemine göre akademik başarı açısından etki büyüklüklerinin istatistiksel anlamda arasındaki fark açıklanmıştır.

Gerçekleştirilen meta-analiz çalışmasına dahil edilen çalışmaların yayın türüne göre (Tablo 1) , çalışmanın uygulandığı sınıf düzeyine göre (Tablo 2) , çalışmanın uygulandığı coğrafi bölgeye göre (Tablo 3), çalışmanın konu alanına göre (Tablo 4) frekans/ yüzde istatistikleri şu şekildedir.

**Tablo 1.** Çalışmanın Yayın Türüne Göre Dağılımı

AKADEMİK BAŞARI			AKADEMİK BAŞARI		
Yayın Türü	Frekans	Yüzde	Yayın Türü	Frekans	Yüzde
Doktora	9	29,032%	Yükseklisans	15	48,387
Makale	7	22,580%			
<b>Toplam</b>	31	100			

Meta analizi yapılan çalışmaların yayın türüne göre dağılımı incelendiğinde; akademik başarı değişkenini inceleyen çalışmalarda tezlerin (77,5%) ağırlıklı olduğu görülmektedir. Tezler arasından ise en çok veri yüksek lisans tezlerinden elde edilmiştir. Yüksek lisans tezleri çalışmanın %48,38'ini oluşturmuştur.

**Tablo 2.** Çalışmanın Sınıf Düzeyine Göre Dağılımı

AKADEMİK BAŞARI			AKADEMİK BAŞARI		
Sınıf Düzeyi	Frekans	Yüzde	Sınıf Düzeyi	Frekans	Yüzde
İlkokul	2	6,45%	Ortaokul	11	35,48%
Üniversite	13	41,93%	Lise	5	16,12%
<b>Toplam</b>	31	100			

Meta analizi yapılan çalışmaların akademik başarı sınıf düzeyi değişkeni incelendiğinde ortaokul ve üniversite düzeylerinde daha fazla çalışıldığı gözlenmiştir. Meta analize dahil edilen 31 çalışmanın 11 adet orta okul ve 13 adet üniversite olmak üzere toplam 24 çalışmasını oluşturmaktadır. Bu da çalışmanın büyük çoğunluğu olan %77,41' ine denk gelmektedir.

**Tablo 3. Çalışmaların Coğrafi Bölgelere Göre Dağılımı**

AKADEMİK BAŞARI					
Çalışılan coğrafi Bölge	Frekans	Yüzde	Coğrafi bölge	Frekans	Yüzde
İç Anadolu	3	9,67%	Ege	4	12,90%
Doğu Anadolu	9	29,03%	Marmara	4	12,90%
G. Doğu Anadolu	0	0,0%	Akdeniz	4	12,90%
Karadeniz	7	22,58%			
<b>Toplam</b>	<b>31</b>	<b>100</b>			

Meta analiz çalışmasına dahil edilen araştırmalar incelendiğinde akademik başarı değişkenine yönelik Güney Doğu Anadolu bölgesinde gerçekleştirilmiş bir çalışmaya ulaşılamamıştır. Akademik başarı değişkenini inceleyen 31 çalışmadan 9 tanesi Doğu Anadolu Bölgesinde gerçekleştirilmiştir ve bu araştırmalar çalışmanın çoğunluğu olan %29,03'ünü oluşturmuştur.

**Tablo 4. Çalışmaların Konu Alanına Göre Dağılımı**

Konu Alanı	Frekans	Yüzde	Konu Alanı	Frekans	Yüzde
Fen	13	41,93%	Kimya	9	29,03%
Fizik	3	9,67%	Biyoloji	6	19,35%
<b>Toplam</b>	<b>31</b>	<b>100</b>			

Çalışmalar Fen Bilimleri konu alanlarının alt branşları olan Fen, Fizik, Kimya ve Biyoloji alanlarına göre kategorize edilmiştir. Meta analize dahil edilecek çalışmaların akademik başarı değişkenini inceleyen çalışmalara bakıldığında normale yakın bir dağılım gözlenmektedir. Fakat en çok Fen alanındaki araştırmalar, çalışmanın çoğunluğu olan %41,93'ünü oluşturmuştur.

### 3.1. Akademik Başarı ile ilgili Genel Etki Büyüklüğü Bulguları

Araştırmanın birinci problemine ait 'Fen eğitiminde laboratuvar destekli öğretimin öğrencilerin akademik başarısına olumlu bir etkisi var mıdır?' sorusunun cevabını araştırmak için 31 tane çalışmanın grup ortalaması, standart sapma ve örneklem büyüklüğü verileri alınarak bireysel etki büyüklüğü ve genel etki büyüklüğü ile analiz edilmiştir. Analiz işlemi CMA2.0 programı ile yapılmıştır. Verilerin yorumlanması için Cohen (1988) sınıflaması ve Thalheimer ve Cook (2002) sınıflandırması kullanılmıştır.

Meta analizi yapılan 31 çalışmanın bireysel etki büyüklükleri, p değeri, alt ve üst limitleri aşağıda verilmiştir.

Tablo 5. Meta Analiz çalışmasında Kullanılan Akademik Başarı Çalışmalarının Etki Büyüklükleri ve Çalışma Verileri

Sabit Etkiler Modeli						
Rastgele Etkiler Modeli						

Çalışmaların bireysel etki büyüklükleri incelendiğinde etki büyüklüğünün en küçük olduğu çalışma Kızılay (2016) ‘0.185’ etki büyüklüğüne sahiptir. Çalışmada etki büyüklüğünün pozitif yönde en büyük olduğu çalışma Soslu (2010) ‘3,532’ etki büyüklüğüne sahiptir. Çalışmaların etki büyüklükleri ve frekansları aşağıda verilmiştir.

**Tablo 6.** Meta Analiz Çalışmasında Kullanılan Akademik Başarı Çalışmalarının Etki Büyüklükleri Yönüne Ait Frekans Tablosu

Etki Büyüklüğü Yönü	Frekans	Yüzde
Sıfır	0	0,00%
Pozitif	31	100%
Negatif	0	0,00%
Toplam	31	100

Tablo 6. incelendiğinde çalışmaların bireysel etki büyüklüğüne bakıldığında 31 çalışmanın tamamının pozitif yönde olduğu görülmektedir. Çalışmaların %100’ü pozitif yönde etki göstermiştir de denilmektedir. Fen eğitiminde laboratuvar destekli öğretimin programda öngörülen yönetime göre akademik başarı değişkeni açısından daha etkili olduğu sonucunda yorum yapılmaktadır. Çalışmaların etki büyüklükleri Cohen (1988) ve Thalheimer ve Cook (2002) sınıflandırması aşağıdaki gibidir.

**Tablo 7.** Cohen (1988) Etki Büyüklüğü Sınıflaması

Sınıflama Düzeyi	Frekans	Yüzde
Önemsiz	1	3,22%
Küçük	5	16,12%
Orta	5	16,12%
Büyük	20	64,51%
Toplam	31	100

Cohen (1988)’in yapmış olduğu sınıflandırmaya göre çalışmaların büyük bir çoğunluğunun etki büyüklüklerinin büyük düzeyde olduğu görülmektedir. Etki büyüklüğü büyük düzeyde olan çalışmalar 20 tane ile meta analiz çalışmasının %64,51’ini oluşturmaktadır. Daha detaylı bir sınıflandırma Thalheimer ve Cook (2002) sınıflandırması aşağıdaki gibidir

**Tablo 8.** Thalheimer ve Cook (2002) Etki Büyüklüğü Sınıflaması

Sınıflama Düzeyi	Frekans	Yüzde	Sınıflama Düzeyi	Frekans	Yüzde
Önemsiz	0	0,00%	Geniş	7	22,58%
Küçük	2	6,45%	Çok Geniş	3	9,67%
Orta	5	16,12%	Muazzam	14	45,16%
Toplam	31	100			

Çalışmanın %45,16'sının muazzam etki büyüklüğüne sahip olduğu görülmektedir. Çalışmanın etki büyüklükleri frekansına bakıldığında laboratuvar destekli öğretimin lehine pozitif yönde olduğu söylenebilir fakat net bir görüş elde etmek için meta analizde birleştirilmiş etki büyüklüğüne bakmak gerekmektedir.

Yapılan meta analiz sonucu iki model için ayrı ayrı etki büyüklükleri hesaplanmıştır fakat öncelikle çalışma modelini belirlemek gerekmektedir (Sutton, ve diğ., 2000). Çalışma modelini belirlemek için heterojenlik huni grafiği aşağıda verilmiştir.

**Şekil 1.** Hedges's g Değerine Göre Etki Büyüklüklerinin Dağılım Huni Grafiği

Meta analiz programı olarak kullanılan CMA 2.0'da gerçekleştirilen hesaplamalarla etki büyüklüklerinin dağılımının verildiği bu grafikte çalışmaların dağılımı ve yoğunluğun olduğu alan hakkında bilgi vermektedir. Bireysel yapılan her çalışmaların tamamına yakınının huninin içinde yer alması beklenmektedir. Çalışmaların huninin dışında da dağılım göstermesi çalışmaların frekanslarının heterojen bir şekilde dağılım gösterdiği

fikrini oluşturmaktadır. Fakat bu grafik tek başına model belirlenmesi için yeterli veriyi içermemektedir. Bu sebeple çalışmaların heterojenlik testinin yapılması “Q” veya “p” değerlerine bakılması gerekmektedir (Dinçer, 2014). Aşağıda yer alan tabloda değerler verilmektedir.

**Tablo 9.** Akademik Başarıyı İnceleyen Çalışmaların Heterojenlik test sonuçları

Heterojenlik				Tau-Squared			
Q	Df	P	I <sup>2</sup>	Tau-squared	Standard	Variance	Tau
					Error		
158,861	30	0,000	86,748	0,330	0,110	0,012	0,575

Çalışmanın ilk olarak heterojenlik testi yapılmıştır. Yapılan testin sonucunda Q istatistiksel değeri 158,861 ve serbestlik derecesi 30 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 43,773 değer aralığındadır. Hesaplanan Q istatistiksel değeri 158,861 ( $p < 0,05$ ) ile 30 serbestlik derecesindeki ki-kare dağılımında belirlenmiş kritik değeri aştığı gözlenmiştir. Bu durumdan yola çıkarak çalışmanın etki büyüklüğünün dağılımı için “heterojendir” yorumu yapılabilir. Model seçiminde heterojen çalışmalar için Rastgele Etkiler Modeli (Random Effect Size) kullanılmalıdır (Akgöz ve diğ., 2004; Borenstein ve diğ., 2013).

Çalışmada yer alan bireysel çalışmaların heterojen özellik göstermesi nedeniyle yanılmaları ortadan kaldırabileceği için (Gözüyeşil, 2012) model seçiminin bu şekilde yapılması uygundur. Çalışmanın her iki model için de ayrı ayrı etki büyüklükleri hesaplanmış ve Tablo 11’de verilmiştir. Çalışma için uygun model Rastgele Etkiler Modeli olduğundan yorumlar ona göre yapılmıştır (Lipsey ve Wilson, 2001).

**Tablo 10.** Meta Analiz Çalışmasına Ait Akademik Başarı Birleştirilmiş Etki Büyüklükleri

Model	Çalışma Sayısı	Etki Büyüklüğü	Standart Hata	Varyans	%95 Güven Aralığı		
					Alt Limit	Üst Limit	P
Sabit Etki	31	1,141	0,050	0,002	1,044	1,238	0,000
Rastgele Etki	31	1,239	0,116	0,013	1,012	1,467	0,000

Yapılmış olan meta analiz sonucunda etki büyüklüğü 1,239 olarak hesaplanmıştır. Cohen (1988) ve Thalheimer ve Cook (2002) sınıflamalarına göre etki büyüklüğü “geniş düzey” olarak açıklanmaktadır. Ayrıca çalışmanın p değerine bakıldığında ( $p < 0,05$ ) anlamlı olduğu yorumu yapılabilir. Bu durumda fen eğitiminde laboratuvar destekli öğretimin, programda öngörülen yönetime göre akademik başarı üzerinde etkisinin daha büyük olduğu söylenebilir. Çalışmaların etki büyüklüğünü önemli derecede etkileyen çalışmaların incelenmesi için yayın yanlılığına bakılmalıdır (Dinçer, 2014).

#### Funnel Plot of Standard Error by Hedges's g

Şekil 2. Akademik Başarı Yayın Yanlılığı Huni Grafiği

Yayın yanlılığı grafiğine bakıldığında huninin dışında kalan kısım yayın yanlılığı hakkında bilgi vermektedir. Yatay (x) eksen etki büyüklüğü hakkında bilgi verirken dikey (y) eksen örneklem büyüklüğü ya da varyans hakkında bilgi vermektedir. Huni grafiğini simetrik bölen çizgi genel etki büyüklüğünü göstermektedir. Çalışmaların huni grafiğin içinde ve genel etki büyüklüğü çizgisinin etrafında toplanması aynı zamanda simetrik dağılım göstermesi beklenmektedir. Huni dışında kalan çalışmaların yayın yanlılığına sebep olmaktadır. Bu nedenle çalışmaların çoğunluğunun huni içinde olması çalışmanın güvenilirliği açısından önemlidir.

Oluşan bu grafikte huni dışında 13 tane çalışma görülmekte ve bu çalışmanın %41'ini oluşturmaktadır. Fakat çalışmaların çoğunluğunun huni grafiğinden çok uzakta kalmamış

olması yayın yanlılığının çok önemsiz derecede olabileceği sonucunu çıkarmaktadır. Çalışmanın yayın yanlılığının çok önemsiz olduğunu göstermek için aşağıda Classic Fail-Safe N ve Kendall's istatistikleri değerleri verilmektedir.

**Tablo 11.** Yayın yanlılığı Classic Fail-Safe N ve Kendall's istatistikleri

### Meta Analizin Gücü

Z – Değeri	23,69563
p – Değeri	0,00000
Alfa Değeri	0,05000
Tails	2,00000
Alfa için Z – Değeri	1,95996
Örneklem	31,00000
p>alfa sonucu için gerekli eksik çalışma sayısı	4501,00000
<b>Yanlılık durumu</b>	
Kendall's (P-Q)	143,00000
Kendall's Tau	0,30753
Tau için Z – değeri	2,43049
Kendall's P1	0,00754
Kendall's P2	0,01580

Yayın yanlılığı analizi sonucunda Kendall's analizi ve Classic Fail Safe N analizi yapılmıştır. Elde edilen bulgular doğrultusunda meta analiz çalışmasına dahil edilen 31 çalışmanın etki büyüklüğünün sıfıra yakın olabilmesi için analize 4501 çalışma daha eklenmesi gerekmektedir. Başka bir deyişle 31 çalışmanın dahil edildiği bu çalışma bulgularının geçersiz sayılabilmesi için literatürden bu verilerin tersi yönde 4501 tane çalışmanın eklenmesi gerekmektedir. Literatür taraması sonucunda bu sayıda çalışmaya ulaşmak mümkün olmadığından meta analizde yayın yanlılığı yoktur denilebilir. Tablo 11'e göre meta analiz kapsamına alınan çalışmalarda yanlılık bulunmadığı bulgusuna ulaşılmıştır.

Çalışmalardan yapılan analizler sonucunda genel durumu görebilmek için Hedges's g değerine göre öğrencilerin fen eğitimindeki akademik başarılarını inceleyen çalışmaların

bireysel etki büyüklükleri ile genel etki büyüklüğünün genel durumunu gösteren orman grafiği ve çalışma ağırlıkları aşağıdaki gibidir.

### Meta Analysis

Şekil 3. Akademik Başarıyı İnceleyen Çalışmalar için Hedges's g Değerine Göre Etki Büyüklükleri Dağılımı – Orman Grafiği – Çalışma Ağırlığı

Çalışmaların orman grafiği incelendiğinde etki büyüklüğünü simgeleyen elmas sıfırdan büyük bir değer aralığında görülmektedir. Bu durum fen eğitiminde laboratuvar destekli öğretime dayalı öğrenmenin programda yer alan yöntemlere göre akademik başarı açısından daha etkili olduğunu ifade etmektedir.

Çalışma ağırlıkları incelendiğinde veriler birbirine yakın değerlerden oluşmaktadır. Çalışma ağırlığı için en yüksek değer Güler (2016) “3,64” değeridir. Çalışma ağırlığında yer alan değerlerin birbirine yakın olması beklenmektedir. Diğer çalışmalara ait çalışma ağırlıklarından daha büyük veya daha düşük olan değerler çalışma yayın yanlılığını etkilemektedir. Buradan yola çıkarak çalışmadaki değerlerin normale yakın değer göstermesi ile çalışmada yayın yanlılığı bulunmamaktadır.

### 3.2. Konu Alanı Değişkenine Göre Moderatör Analizi

Yapılan meta-analiz çalışmasındaki alt problemlerden ‘Fen eğitiminde laboratuvar destekli öğretimin fen bilimleri dersi alt başlıkları (Konu Alanı: Fen- Fizik-Kimya-Biyoloji) açısından incelendiğinde akademik başarı açısından etki büyüklükleri arasında

fark var mıdır?’ sorusuna cevap aranmıştır.Çalışmalar Fen- Fizik-Kimya-Biyoloji konu alanları olmak üzere 4 kategoriye ayrılmıştır. Yapılan analiz sonuçları aşağıda verilmiştir.

**Tablo 12.** Konu Alanı Moderatörünün Akademik Başarı Değişkenine Göre Etki Büyüklük Değerleri

<b>Rastgele Etkiler</b>	<b>(Tümü)</b>	<b>1,139</b>	<b>0,932</b>	<b>1,346</b>	<b>0,000</b>

Yapılan analiz sonucunda her iki modele göre etki büyüklükleri hesaplanmıştır. Konu alanı akademik başarıya etkisi için genel etki büyüklüğünü hesaplarken yorumlayabilmek için hangi istatistiksel modelin seçileceğini belirlemek amacıyla heterojenlik testi yapılmıştır. Testin sonuçları aşağıda verilmiştir.

**Tablo 13.** Konu Alanı Moderatörünün Akademik Başarıya göre Heterojenlik Testi

Konu Alanı	N	Standart Hata	Q	Heterojenlik		Genel Etki Büyüklüğü	%95 Güven Aralığı		
				df	P		Alt Sınır	Üst Sınır	
						I <sup>2</sup>			
Biyoloji	6	0,108	22,731	5	0,000	78,003	1,124	0,912	1,336
Fen	13	0,076	40,195	12	0,000	70,146	0,947	0,798	1,096
Fizik	3	0,186	17,574	2	0,000	88,619	2,067	1,703	2,431
Kimya	9	0,092	46,426	8	0,000	82,768	1,210	1,030	1,390
Total Within									
(Sabit Etkiler Modeli)			126,926	27	0,000				
Total Between									
(Karışık Etkiler Modeli)			5,726	3	0,000		1,139	0,932	1,346

Çalışmanın heterojenlik testi sonuçlarına bakıldığında öncelikli olarak sabit etkiler modeline bakılmıştır. Sabit etkiler modelinde yer alan grup içi heterojenlik testi anlamlılık düzeyi ( $p < 0,05$ ) olarak hesaplanmıştır. Ayrıca çalışmanın heterojenlik testi Q istatistiksel değeri incelendiğinde 126,926 ve serbestlik derecesi 27 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 40,113 değeri aralığındadır. Hesaplanan Q istatistiksel değeri 126,926 ( $p < 0,05$ ) ile 27 serbestlik derecesindeki ki-kare dağılımında belirlenmiş olan kritik değeri aştığı görülmüştür. Buradan yola çıkarak çalışmalar kendi içinde aynı yaygın etkiye sahiptir denilmekte veya çalışmalar kendi içinde beklenenden yüksek dağılıma sahiptir denilmektedir.

Elde edilen bulgular sonucuna göre karışık etkiler modeline geçilmiştir ve gruplar arası (between-group) heterojenlik testine göre p değeri hesaplanmıştır. Testin anlamlılık düzeyi ( $p=0,000$ )< ( $p=0,05$ ) olarak hesaplanmıştır. Ayrıca çalışmanın heterojenlik testi Q istatistiksel değerine bakıldığında 5,726 ve serbestlik derecesi 3 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95

anlamlılık düzeyindeki kritik değeri 7,815 değeridir. Hesaplanan Q istatistiksel değerine bakıldığında 5,726 ( $p<0,05$ ) ile 3 serbestlik derecesindeki ki-kare dağılımında belirlenmiş olan kritik değerin altında olduğu görülmüştür. Ayrıca p değeri 0.000 olarak hesaplanmış ve anlamlı bir değer olmadığı sonucuna ulaşılmıştır. Bu durumda konu alanları açısından fen eğitiminde laboratuvar destekli öğrenmenin akademik başarıdaki etki büyüklükleri arasında anlamlı bir farklılık göstermediği sonucuna ulaşılmıştır.

### 3.3 Sınıf Düzeyi Değişkenine Göre Moderatör Analizi

Yapılan meta analiz çalışmasındaki alt problemlerden “Fen Eğitiminde laboratuvar destekli öğretimin sınıf düzeyleri (ilkokul-ortaokul-lise-üniversite) açısından incelendiğinde akademik başarı açısından etki büyüklüğü arasında fark var mıdır?” sorusu araştırılmıştır. Yapılan analiz sonuçları aşağıda verilmiştir.

Çalışmalar İlkokul-Ortaokul-Lise-Üniversite olmak üzere 4 kategoriye ayrılmıştır. Yapılan analiz sonuçları aşağıda verilmiştir

**Tablo 14.**Sınıf Düzeyi Moderatörünün Akademik Başarı Değişkenine Göre Etki Büyüklük Değerleri

Sınıf Düzeyi	Çalışma Kodu	Etki Büyüklüğü	%95 Güven Aralığı		P

Total Between									
(Rastgele Etkiler, Karışık Etkiler Modeli)			6,231	3	0,000		1,308	1,101	1,514

Çalışmanın heterojenlik testi sonuçlarına bakıldığında öncelikli olarak sabit etkiler modeline bakılmıştır. Sabit etkiler modelinde yer alan grup içi heterojenlik testi anlamlılık düzeyi ( $p < 0,05$ ) olarak hesaplanmıştır. Ayrıca çalışmanın heterojenlik testi Q istatistiksel değeri incelendiğinde 134,222 ve serbestlik derecesi 27 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 40,113 değeri aralığındadır. Hesaplanan Q istatistiksel değeri 134,222 ( $p < 0,05$ ) ile 27 serbestlik derecesindeki ki-kare dağılımında belirlenmiş olan kritik değeri aştığı görülmüştür. Buradan yola çıkarak çalışmalar kendi içinde aynı yaygın etkiye sahiptir denilmekte veya çalışmalar kendi içinde beklenenden yüksek dağılıma sahiptir denilmektedir.

Elde edilen bulgular sonucuna göre karışık etkiler modeline geçilmiştir ve gruplar arası (between-group) heterojenlik testine göre p değeri hesaplanmıştır. Testin anlamlılık düzeyi ( $p = 0,000$ ) < ( $p = 0,05$ ) olarak hesaplanmıştır. Ayrıca çalışmanın heterojenlik testi

Q istatistiksel değerine bakıldığında 6,231 ve serbestlik derecesi 3 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95

anlamlılık düzeyindeki kritik değeri 7,815 değeridir. Hesaplanan Q istatistiksel değerine bakıldığında 6,231 ( $p < 0,05$ ) ile 3 serbestlik derecesindeki ki-kare dağılımında belirlenmiş olan kritik değerin altında olduğu görülmüştür. Ayrıca p değeri 0.000 olarak hesaplanmış ve anlamlı bir değer olmadığı sonucuna ulaşılmıştır. Bu durumda sınıf düzeyleri açısından fen eğitiminde laboratuvar destekli öğrenmenin akademik başarıdaki etki büyüklükleri arasında anlamlı bir farklılık göstermediği sonucuna ulaşılmıştır.

### 3.4 Coğrafi Bölge Değişkenine Göre Moderatör Analizi

Yapılan meta-analiz çalışmasındaki alt problemlerden ‘ Fen eğitiminde laboratuvar destekli öğretime coğrafi bölgeler (İç Anadolu, Doğu Anadolu, Güney Doğu Anadolu, Akdeniz, Karadeniz, Marmara, Ege) açısından incelendiğinde akademik başarı açısından etki büyüklükleri arasında fark var mıdır?’ sorusuna cevap aranmıştır.

Fen eğitiminde laboratuvar destekli öğrenmenin öğrencilerin öğrenim gördüğü coğrafi bölgeye ait akademik başarıları açısından etkililik dereceleri, karşılaştırmalı etki büyüklük değerleri ile belirlenmiştir. Çalışmalar Türkiye’deki yedi coğrafi bölge olmak üzere 7 farklı gruba ayrılmıştır. Ancak dahil edilme kriterlerine uygun çalışmalar içinde coğrafi bölge için frekans tablosunda (Tablo 16) verildiği gibi, Güney Doğu Anadolu bölgelerinde gerçekleştirilen çalışma olmadığından moderatör için 6 adet kategori oluşturulmuştur. Yapılan analiz sonuçları aşağıda verilmiştir.

**Tablo 16. Coğrafi Bölge Moderatörünün Akademik Başarı Değişkenine Göre Etki Büyüklük Değerleri**

Yapılan analiz sonucunda her iki modele göre etki büyüklükleri hesaplanmıştır. Coğrafi bölge farklılıklarının akademik başarıya olan etkisi için genel etki büyüklüğünü hesaplarken yorumlayabilmek için hangi istatistiksel modelin seçileceğini belirlemek amacıyla heterojenlik testi yapılmıştır. Testin sonuçları aşağıda verilmiştir.

**Tablo 17.** Coğrafi Bölge Moderatörünün Akademik Başarıya göre Heterojenlik Testi

Coğrafi Bölge	N	Standart Hata	Q	Heterojenlik		Genel Etki Büyüklüğü	%95 Güven Aralığı		
				df	P		Alt Sınır	Üst Sınır	
						I <sup>2</sup>			
Akdeniz	4	0,133	13,7110	3	0,003	78,118	1,221	0,960	1,481
Doğu Anadolu	9	0,099	66,326	8	0,000	87,938	1,141	0,948	1,334
Ege	4	0,156	27,107	3	0,000	88,933	1,455	1,149	1,760
İç Anadolu	3	0,153	4,594	2	0,101	56,464	1,206	0,907	1,506
Karadeniz	7	0,101	22,444	6	0,001	73,267	0,926	0,728	1,123
Marmara	4	0,126	15,471	3	0,001	80,639	1,158	0,911	1,405
Total Within									
(Sabit Etkiler Modeli)			149,652	25	0,000				
Total Between									
(Karışık Etkiler Modeli)			2,951	5	0,708		1,176	0,959	1,393

Çalışmanın heterojenlik testi sonuçlarına bakıldığında öncelikli olarak sabit etkiler modeline bakılmıştır. Sabit etkiler modelinde yer alan grup içi heterojenlik testi anlamlılık düzeyi ( $p < 0,05$ ) olarak hesaplanmıştır. Ayrıca çalışmanın heterojenlik testi Q istatistiksel değeri incelendiğinde 149,652 ve serbestlik derecesi 25 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 37,652 değeri aralığındadır. Hesaplanan Q istatistiksel değeri 149,652 ( $p < 0,05$ ) ile 25 serbestlik derecesindeki ki-kare dağılımında belirlenmiş olan kritik değeri aştığı görülmüştür. Buradan yola çıkarak çalışmalar kendi içinde aynı yaygın etkiye sahiptir denilmekte veya çalışmalar kendi içinde beklenenden yüksek dağılıma sahiptir denilmektedir.

Elde edilen bulgular sonucuna göre karışık etkiler modeline geçilmiştir ve gruplar arası (between-group) heterojenlik testine göre p değeri hesaplanmıştır. Testin anlamlılık

düzeyi ( $p=0,708$ ) > ( $p=0,05$ ) olarak hesaplanmıştır. Ayrıca çalışmanın heterojenlik testi Q istatistiksel

değerine bakıldığında 2,951 ve serbestlik derecesi 5 olarak hesaplanmıştır.  $\chi^2$  tablosunun %95 anlamlılık düzeyindeki kritik değeri 11,070 değeridir. Hesaplanan Q istatistiksel değerine bakıldığında 2,951 ( $p<0,05$ ) ile 5 serbestlik derecesindeki ki-kare dağılımında belirlenmiş olan kritik değer altında olduğu görülmüştür. Ayrıca p değeri 0.708 olarak hesaplanmış ve anlamlı bir değer olmadığı sonucuna ulaşılmıştır. Bu durumda coğrafi bölgeler açısından fen eğitiminde laboratuvar destekli öğrenmenin akademik başarıdaki etki büyüklükleri arasında anlamlı bir farklılık göstermediği sonucuna ulaşılmıştır.

#### 4. TARTIŞMA VE SONUÇ

Fen eğitiminde laboratuvar destekli öğretimin öğrencilerin akademik başarısına olumlu yönde etkisi var mıdır? Sorusuna cevap aramak amacıyla meta analizi yapılan 31 çalışmanın etki büyüklüğü değerine bakılmıştır. Yapılan meta analiz sonucunda etki büyüklüğü analizine bakıldığında etki büyüklüğü değerinin en küçük yönde olduğu çalışmanın Kızılay (2016) 'a ait olduğu ve "0,185" etki büyüklüğü değerine sahip olduğu görülmektedir. Akademik başarı için etki büyüklüğü pozitif yönde (sıfırdan büyük) en büyük olan çalışmanın ise Soslu (2010) 'a ait olduğu ve "3,532" etki büyüklüğü değerine sahip olduğu görülmektedir. Analize dahil edilen çalışmaların geneline bakıldığında çalışmaların tamamı pozitif yönde etki göstermektedir. Çalışmaların çoğunluğunun pozitif yönde etki göstermesi fen eğitiminde laboratuvar destekli öğretimin programda ön görülen öğretim yöntemine göre akademik başarı değişkeninde pozitif yönde bir etkiye sahip olduğu söylenebilir. 31 çalışmanın etki büyüklükleri hesaplanmış Cohen (1988) ve Thalheimer ve Cook (2002) sınıflaması yapılmıştır. Cohen (1988) etki büyüklüğü sınıflamasına göre çalışmaların %64,51'inin 'geniş etki' büyüklüğüne sahip olduğu ve Thalheimer ve Cook (2002) etki büyüklüğü sınıflamasına göre çalışmaların %45,16'sının 'muazzam' etki büyüklüğüne sahip olduğu görülmektedir.

Meta analizi yapılan çalışmaların dağılımını incelemek için uygulanan Heterojenlik testi sonucunda elde edilen Q istatistiksel değeri 158,861 ( $P < 0,05$ ) ve serbestlik derecesi 30 bulunmuştur. Serbestlik derecesindeki ki-kare dağılımına bakıldığında belirlenmiş olan

kritik değeri aşmış olduğu görülmüştür. Buradan yola çıkarak çalışmaların heterojen bir dağılım gösterdiği sonucu elde edilmiştir. Fen eğitiminde laboratuvar destekli öğretime dayalı öğrenmenin akademik başarıya olan etki büyüklüğü pozitif yönde ve 1,239 olarak bulunmuştur. Elde edilen bu değerlerin etki büyüklüğü cohen (1998) sınıflandırmasındaki karşılığına bakıldığında ‘geniş düzey’ olarak ifade edilmiştir.

İncelemeler sonucunda laboratuvar destekli öğretime dayalı öğrenmenin akademik başarıya olan etkisi programda ön görülen öğretim yönteminin akademik başarıya olan etkisinden daha fazladır sonucuna ulaşılmıştır.

Yapılan literatür taraması sonucunda görülmüştür ki fen eğitiminde laboratuvar destekli öğretim ile ilgili gerçekleştirilen meta analiz çalışmaları sayısı yok denecek kadar azdır. Yapılan çalışmalarda daha çok geçmiş yılları kapsamaktadır. Ancak laboratuvar destekli öğretime dayalı öğrenmenin akademik başarı üzerindeki olumlu etkisini gösterecek bireysel çalışmalar mevcuttur (Arslan, 2015; Duman ve Avcı, 2016; Soslu, 2010; Açışlı ve Alkan&Koçak, 2014; Göktürk, 2018; Batır, 2018; Karacalı ve Özkan, 2021).

Fen eğitiminde konu alanında gerçekleştirilen çalışmaların akademik başarı üzerindeki etkisi incelenirken fen, fizik, kimya ve biyoloji alanlarındaki etkilerine de bakılmıştır.

Çalışmaların etki büyüklükleri hesaplanmış ve incelemeler yapıldığında etki büyüklükleri arasında anlamlı farklılıklar görülmemiştir. Ayrıca çalışmaların etki büyüklüğü değerleri pozitif yöndedir. Etki büyüklüğü değerlerine bakıldığında etki büyüklüğü en fazla olan 2,067 ile fizik alanı olarak bulunmuştur. En az etki büyüklüğüne sahip olan alan ise 0,947 etki büyüklüğü değeri ile fen alanı olmuştur. Çalışmaların genel etki büyüklüklerine bakıldığında gruplar arasında anlamlı bir fark görülmemiştir. Buradan yola çıkarak konu alanlarının akademik başarı açısından bir farklılık bulunmamaktadır. Literatür incelendiğinde benzer sonuçların bulunduğu görülmektedir ( Koca, 2019; Kural, 2020; Özer, 2019).

Fen eğitiminde sınıf düzeyi moderatör olarak alınmıştır. Sınıf düzeyinde gerçekleştirilen çalışmaların akademik başarı üzerindeki etkisi incelenirken ilkokul, ortaokul, lise ve üniversite alanlarında ki etkilerine de bakılmıştır.

Çalışmaların etki büyüklükleri hesaplanmış ve incelemeler yapıldığında etki büyüklükleri arasında anlamlı farklılıklara rastlanmamıştır. Ayrıca çalışmaların etki büyüklüğü değerleri pozitif yöndedir. Etki büyüklüğü değerleri incelendiğinde etki

büyüklüğü en fazla olan 1,645’le lise düzeyi olarak bulunmuştur. En az etki büyüklüğüne sahip olan düzey ise 0,972 etki büyüklüğü değeri ile ortaokul düzeyi olmuştur. Çalışmaların genel etki büyüklüklerine bakıldığında gruplar arasında (ilkokul-ortaokul-lise ve üniversite) anlamlı bir fark görülmemiştir. Buradan yola çıkarak sınıf düzeylerinde akademik başarı açısından bir farklılık bulunmamaktadır. Literatür incelendiğinde benzer sonuçların bulunduğu görülmektedir ( Koca, 2019; Kural, 2020; Özer, 2019).

Fen eğitiminde gerçekleştirilen çalışmaların akademik başarı üzerindeki etkisi incelenirken yaşanan coğrafi bölgenin etkilerine de bakılmıştır. Çalışmaların etki büyüklükleri hesaplanmış ve incelemeler yapıldığında etki büyüklükleri arasında çok büyük farklılıklar görülmemiştir. Ayrıca çalışmaların etki büyüklüğü değerleri pozitif yöndedir. Etki büyüklüğü değerleri incelendiğinde etki büyüklüğü en fazla olan coğrafi bölge 1,455 ile ege bölgesi olarak bulunmuştur. En az etki büyüklüğüne sahip olan bölge ise 0,926 etki büyüklüğü değeri ile Marmara bölgesi olmuştur. Çalışmaların genel etki büyüklüklerine bakıldığında gruplar arasında anlamlı bir fark görülmemiştir. Buradan yola çıkarak coğrafi bölgelerde akademik başarı açısından bir farklılık bulunmamaktadır. Literatür incelendiğinde benzer sonuçların bulunduğu görülmektedir ( Koca, 2019; Kural, 2020; Özer, 2019).

## **5. ÖNERİLER**

- Yapılan bu çalışmada laboratuvar destekli öğretimin geleneksel yöntemlere kıyasla öğrencinin akademik başarısını arttırmada daha etkili olduğu sonucuna varılmıştır. Bu nedenle Fen eğitiminde öğretmenin rehber konumunda bulunduğu ve deneyleri öğrencilerin aktif katılım göstererek kendilerinin yaptığı laboratuvar ortamlarının oluşturulması gerekmektedir.
- Yapılan bu meta-analiz çalışmasında laboratuvar destekli öğretim yönteminin fen eğitiminde öğrencilerin akademik başarısına, tutumuna ve bilimsel süreç becerilerine etkisi araştırılmıştır. Yapılan meta analiz çalışmasında laboratuvar destekli öğretim yönteminin öğrencilerin akademik başarısı, tutumu ve bilimsel süreç becerileri üzerinde

etkili olduğu görülmüştür. Diğer araştırmacıların da bu alanlarda meta analiz çalışması yapması önerilmektedir.

## SIİRT BASIN TARİHİNDEN BİR YAPRAK: SİYASİ MİZAH GAZETECİLİĞİ

**Resul BABAOĞLU\***  
İzmir Kâtip Çelebi Üniversitesi

### ÖZET

Siirt'te yerel basının ilk örneği olan Siirt gazetesinin 1937 yılında ilk sayısının yayınlanmasının ardından giderek canlanan yerel basın, kentin siyasal ve kültürel nabzının tutulduğu bir sosyal mecra halini almıştır. Genel itibarıyla Türkiye'de basın hayatında görülen gelişmelere paralel olarak bir gelişim gösteren Siirt basın hayatında tam bir canlanma görülmesi 1950'li yıllara tekabül etmektedir. Çok partili demokratik düzene geçildiği bu dönemin liberal ve görece özgürlükçü ruhunun basın hayatına olumlu yansımaları olmuştur. Siyasetin kiteselleştiği bu dönemde taşrada siyasal hayatın önemli unsurlarından biri haline gelen gazetelerin yerel tarih çalışmalarında kaynak değeri oldukça yüksektir. 1950'li yıllarda Siirt'te yayınlanmaya başlayan Yeni Siirt, Siirt Postası, Siirt Sesi gibi gazetelere ek olarak siyasi mizah alanında yayınlanan ve elimizde ilk sayıları bulunan Sırf Dedikodu, Yılbaşı ve Kelle Koltukta adlı mizah gazeteleri bu alanın ilk örnekleri olarak karşımıza çıkmaktadır. Siirt yerel tarih çalışmalarına yeni bir bakış sunabileceği düşünülen bu gazeteler, dönemin yerel siyasetinde öne çıkan şahsiyetlerin tanıtılması, iktidar ve muhalefet grupları arasındaki ilişkinin mahiyeti gibi konularda dikkate değer bir içeriğe sahiptir. Bunun yanı sıra, 1950'li yıllarda taşra siyasetinin hangi temalar ekseninde yürütüldüğü, çevre-merkez etkileşimi ve dönemin yerel siyasal aktörlerinin siyasete yaklaşımları gibi konular mizah gazetelerinin bir fikir verebileceği konular arasındadır. Bu çalışma kapsamında, nitel araştırma yöntemlerinden betimsel analiz yaklaşımıyla incelenen sözü edilen mizah yayınlarında yer alan haber ve yorum metinleri bütünlüklü bir veri haline getirilerek döneme ilişkin tespitler yapılmıştır.

**Anahtar kelimeler:** Siirt, yerel basın, Kelle Koltukta, Yılbaşı, Sırf Dedikodu

**A LEAF FROM SIİRT PRESS HISTORY: POLITICAL HUMOR JOURNALISM**

**ABSTRACT**

After the publication of the first issue of the "Siirt" newspaper, which is the first example of the local press in Siirt, in 1937, the local press, which has been gradually revived, has become a social channel where the political and cultural pulse of the city is kept. In general, a complete revival in the press life of Siirt, which showed a development in parallel with the developments in the press life in Turkey, corresponds to the 1950s. The liberal and relatively libertarian spirit of this period, in which the multi-party democratic order was passed, had positive reflections on the press life. Newspapers, which have become one of the important elements of political life in the provinces in this period when politics became massive, have a high resource value in local history studies. In addition to newspapers such as Yeni Siirt, Siirt Postası, Siirt Sesi, which started to be published in Siirt in the 1950s, the humor newspapers called Sırf Dedikodu, Kelle Koltukta and Yılbaşı, which were published in the field of political humor and have the first issues, appear as the first examples of this field. These newspapers, which are thought to offer a new perspective in Siirt local history studies, have a remarkable content on topics such as the introduction of prominent personalities in the local politics of the period and the nature of the relationship between the ruling and opposition groups. In addition, topics such as the themes on which provincial politics were carried out in the 1950s, the interaction of the periphery-centre and the approaches of the local political actors of the period to politics are among the topics that humor newspapers can give an idea about. Within the scope of this study, the news and commentary texts in the mentioned humor publications, which were examined with the descriptive analysis approach, one of the qualitative research methods, were turned into a holistic data and determinations were made regarding the period.

**Keywords:** Siirt, local press, Kelle Koltukta, Sırf Dedikodu, Yılbaşı

## GİRİŞ

Osmanlı Devleti'nde basın faaliyetlerinin gelişim çizgisi ile matbaanın Osmanlı/Müslüman toplumundaki kullanımı arasında tam bir paralellikten söz etmek mümkündür. Yazılı basın faaliyetlerinin Batılı ülkelerdeki ilk örnekleri 16. yüzyıla kadar geri götürülebilirken Osmanlı Devleti'nde gayrimüslimlerin öncülüğü ile bu alandaki ilk örnekler 1700'lü yılların son çeyreğinde adından söz ettirmiştir. Fransa'nın Osmanlı Devleti'nde kurmak isteği kültürel nüfuz ve ticari faaliyetlerin bir çıktısı olarak 1786 yılında Türkiye'deki Fransız Elçisi Choiseul le Gauffier elçilikte Arap harfleriyle baskı yapan bir matbaa kurmuştur.<sup>54</sup> Osmanlı Devleti'nde ilk olarak Fransızların başlattığı basın faaliyetlerine kısa bir zaman sonra Ermeni, Rum, Bulgar ve Yahudi milletlerinin iştahla katılacakları bilinmektedir. 1 Kasım 1831 tarihinde ilk sayısı çıkan *Takvim-i Vekayi* ile Padişah II. Mahmud'un başlattığı reform programının bir parçası olarak resmi gazete Osmanlı basın hayatını başlatmış oldu. Ortaylı'nın değerlendirmesine göre, 19. yüzyıl reformlarının küresel bir kesişme hamlesi sayılabilecek bu adımın Rusya'daki izdüşümü ise Büyük Petro'nun *Vedemosti* adlı gazete ile basın faaliyetlerini başlatması olmuştur.<sup>55</sup> Osmanlı ve Rus modernleşmelerinin basın alanındaki zamansallık ve zihniyet açısından şaşırtıcı düzeyde aynı ritimde ilerlemesine ek olarak her iki devlette bu alanda görülen gelişmelerde devlet elitlerinin merkezi rolde yer almaları da dikkat çekmektedir. Daha somut bir ifadeyle, Osmanlı Devleti'nde basın alanındaki gelişmeler uzun bir dönem boyunca devletin çizdiği sınırlar içinde ilerleyebilmiştir. 1860'lı yıllardan itibaren yerel idare reformlarının bir uzantısı olarak taşra merkezlerinde yayımlanmaya başlayan vilayet gazeteleri yerel basının ilk örnekleri olarak kabul edilebilir.<sup>56</sup> Merkezi idarenin önemli katkılarının olduğu bu gazeteler sayesinde Anadolu'da birçok yöre ilk kez gazete ile tanışmıştır.<sup>57</sup> Bunun yanı sıra, her ne kadar vilayet gazeteleri gazeteciliğin en basit ve yalın halinin örnekleri olarak kabul edilse de Osmanlı Devleti'nde basın faaliyetlerini İstanbul'un tekelinden çıkarmış olduğu gerçeği bu gazeteleri önemli kılmaktadır.<sup>58</sup>

<sup>55</sup> İlber Ortaylı, *Batılılaşma Yolunda*, Merkez Kitaplar, İstanbul, 2007, s.37.

<sup>56</sup> O. Fırat, "Türkiye'de Yerel Basının Gelişmesi Üzerine Notlar", *Kebikeç*, S. 2 (1995), s. 161.

<sup>57</sup> Aynı yer.

<sup>58</sup> Bülent Varlık, "Yerel Basının Öncüsü: Vilayet Gazeteleri", *Tanzimat'tan Cumhuriyet'e Türkiye Ansiklopedisi*, C. 1, Yay. Yön. Fahri Aral, İletişim Yayınları, (t.y.), İstanbul, s. 102.

Tanzimat dönemi boyunca ağır aksak ilerleyen basın faaliyetlerinde II. Meşrutiyet'in 1908'de ilan edilmesiyle birlikte belirgin bir canlılık görülecektir. Her şeyden önce sansür uygulamasının son bulunduğu bu dönemde gazeteciler üzerindeki baskı da ortadan kalkmıştır. Meşrutiyet'in ilanından kısa bir süre sonra gazete çıkarmak için imtiyaz almak isteyen yüzlerce kişi ilgili yerlere başvurmuştur. Meşrutiyet dönemi boyunca yayınlanan toplam gazete sayısının 1000 civarında olduğunu öne süren Orhan Koloğlu, bu dönemde yaşanan gelişmeleri "basın patlaması" olarak tanımlamaktadır.<sup>59</sup> Basın organlarındaki niceliğin arttığı bu toplumsal vasatta Meşrutiyet yönetimin geniş kesimlerce sınırsız bir hürriyet ile eşitlenmesi beraberinde asayişsizlik ve kaos ortamını getirmiştir. İttihat ve Terakki iktidarında 1909'da çıkarılan Basın Kanunu ile gazetecilik faaliyetleri görece sınırlandırılmıştır.<sup>60</sup>

Meşrutiyet döneminde basın faaliyetlerinde görülen canlanmanın niceliksel yönü bir kenara bırakılacak olursa Milli Mücadele dönemi yerel basın açısından oldukça verimli bir ortam yaratmıştır. Milli Mücadele yıllarında Anadolu'nun özellikle işgale uğramamış olan bölgelerinde bağımsızlık yanlısı gazeteler yayın faaliyetlerine bulunurken işgalci güçlerin baskısı ya da başka bazı gerekçelerle Milli Mücadele karşıtı gazeteler de yayın hayatında yer bulmuştur.<sup>61</sup> Tek partili dönemde siyasal hayatta liberal bir ortamı hedefleyen *Serbest Cumhuriyet Fırkası* ve *Terakkiperver Cumhuriyet Fırkası* deneyimlerinin başarısızlıkla sonuçlanması basın hayatını da içine alan genel bir baskı ortamı ile sonuçlanmıştır. 1925 yılında çıkarılan *Takrir-i Sükûn Kanunu* ile basın özgürlüğü daraltılmıştır. Serbest Cumhuriyet Fırkası'nın üç ay süren siyasal hayatından sonra ülke idaresinin ulusçuluk ideolojisi doğrultusunda yeniden biçimlendirilmeye çalışıldığı bir ortamda kurulan Halkevleri bir yönüyle basın hayatının gidişatına etki edecek sonuçlar doğurmuştur. Anadolu'da kurulan Halkevleri bünyesinde yayın hayatına başlayan Halkevi dergileri yerel basın unsurlarından sayılabilir.<sup>62</sup> Tahmin edilebileceği gibi resmi çevrelerce çıkarılan ve doğal olarak içeriği de resmi sınırlara sahip olan Halkevi dergileri sivil bir basın hayatına tekabül etmemektedir.

<sup>59</sup> Orhan Koloğlu, **1908: Basın Patlaması**, Bas-Haş Gazeteciler Cemiyeti Yayınları, İstanbul 2005.

<sup>60</sup> Necla Odyakmaz, "Osmanlı'da Anayasal Düzenlemeler ve Basına Etileri", **İstanbul Üniversitesi İletişim Fakültesi Dergisi**, (2003), S. 16, ss. 211-233.

<sup>61</sup> Fırat, a.g.m., s. 162.

<sup>62</sup> Fırat, a.g.m., s. 162.

1931 yılında çıkarılan Matbuat Kanunu tek partili dönemin liberal olmayan siyaset ve yönetim anlayışının basın-yayın faaliyetleri üzerindeki tezahürünü yansıtmaktaydı. Hükümetin basın üzerindeki ağır yetki ve denetleme gücünün dışında 1940'lı yılların savaş ortamında

uygulamada olan sıkıyönetim kanununun da basın özgürlüğünü sınırlayıcı bir etkide bulunduğunu söylemek mümkündür.<sup>63</sup> İkinci Dünya Savaşı boyunca basın hayatında gözlenebilecek çok sesliliğin savaşın son yılına doğru yerini ihtiyatlı bir basın politikasına bıraktığı bir ortamda gazeteciler mihver veya müttefik devletler yanlısı bir yayım politikası geliştirmişlerdir. Savaş sonrası dönemde dünya ölçeğinde görülen gelişmelerin Türkiye’de yarattığı dönüşümün siyasi hayattan sonra en fazla etkilediği alanların başında basın gelmiştir. Batılı demokratik devletlerin savaş sonunda kurmayı planladıkları küresel düzene uyum sağlama niyetini iyiden iyiye belli eden Türkiye’nin basın politikalarında radikal bir değişim görülecektir.

### SIİRT’TE YEREL BASININ GELİŞİMİ

Osmanlı idaresi altındaki son yıllarda Bitlis Vilayeti’ne bağlı bir sancak olan Siirt’te herhangi bir basın faaliyetinden söz etmek mümkün değildir. Ancak bu dönemde Bitlis Vilayet Gazetesi’nde Siirt’i de içine alan bazı haberlere rastlayabilmek olasıdır.<sup>64</sup> Milli Mücadele döneminde Siirt’te bağımsızlık yanlısı bir kamuoyu oluşmasına rağmen bu minvalde bir basın faaliyeti ise henüz ortaya çıkmamıştır.<sup>65</sup> Ne ilginçtir ki Cumhuriyet’in ilk yıllarında özellikle yerel basın alanında hatırı sayılır bir kıpırdanmayı doğuracak olan Halkevlerinin de Siirt’te basın alanında bir gelişmeye zemin hazırlamadığı görülmektedir. 24 Şubat 1934 tarihinde Siirt’te açılan Halkevi şubesi çatısı altında yürütülen yoğun kültürel faaliyetlerin içinde gazete ya da herhangi bir süreli yayına rastlanmaz.<sup>66</sup> Cumhuriyet yönetiminin kültür devrimini hayata geçirme çabalarının bir unsuru olarak Anadolu’da teşkilatlanan Halkevlerinde çeşitli adlarla süreli yayınlar çıkarılmasına rağmen Siirt Halkevi’nde bu alanda yalnızca merkez tarafından gönderilen süreli yayınların halka ulaştırılması ile yetinilmiştir. Bu dönemde CHP Genel

<sup>64</sup> Abdurrezzak Çelik, **Tanzimat’tan Cumhuriyet’e Siirt**, Emin Ofset, Siirt, 2019, s. 22.

<sup>65</sup> Ömer Obuz, “Milli Mücadeleye ‘Şark’tan Bir Destek: Siirt Örneği”, **Pamukkale Üniversitesi Sosyal Bilimler Enstitüsü Dergisi**, S. 27, (Mayıs 2017), ss. 264-276.

<sup>66</sup> Said Olgun, “Siirt Halkevi ve Faaliyetleri”, **History Studies, International Journal of History**, Vol. 5, Issue 2, A Tribute to Prof. Dr. Halil İnalçık, (2013), s. 290.

Sekreterliği'ne gönderilen bir yazıda *Ar* isimli güzel sanatlar mecmuası ve *Her Ay* isimli bir derginin Siirt Halkevi şubesine düzenli bir şekilde gönderildiği bilgisi yer almaktadır.<sup>67</sup> Bununla birlikte Siirt'te ilk gazetenin yayınlanması 1937 yılında gerçekleşmiştir. *Siirt* adıyla yayınlanan bu gazete, Mehmet Emin Kılıççıoğlu tarafından çıkarılmış olup *Haftalık Cumhuriyet*

*Siyasal Gazete* sloganı ile yayın hayatına başlamıştır.<sup>68</sup> Gazetenin ilk sayısında *Gayemiz ve Yolumuz* başlığıyla yer alan yazıda takip edilecek olan yayın politikasından bahsedilerek şu ifadelerle başvurulmuştur: *Ulu kurtarıcı Atamızın yapmak ve yaşatmak için bize armağan ettiği Altı Oku'un birleştiği amaca doğru metanet, sadakat ve gayretle varmak, vardurmak azmımızdan doğmadır.*<sup>69</sup> Kuşkusuz bu ifadeler dönemin siyasal havasından derin izler barındırmaktadır.

Siirt'in ilk yerel gazetesi olma özelliğine sahip olan Siirt gazetesi, tek partili siyasal sistemin çizdiği sınırlar içinde yayın faaliyetlerini sürdürmüş olup genel itibarıyla siyasal iktidarın gönüllü bir propaganda aygıtı olmuştur. Gazetenin ilk sayfalarında genellikle dönemin Siirt valilerinin beyanatlarına yer verilmiş, dış basından haber seçkileri ve CHP parti müfettişlerinin Siirt'e yapmış oldukları ziyaretler haberleştirilmiştir.<sup>70</sup> 1940'lı yılların sonlarından itibaren Türkiye'de siyasette esen liberal havanın da etkisiyle Siirt gazetesinin de bu siyasal dönüşüme ayak uydurduğu görülmüştür. Cumhurbaşkanı İnönü'nün meşhur 12 Temmuz Beyannamesi'ni manşete taşıyan Siirt gazetesi İnönü'nün siyasette başlattığı uyum dalgasını *Siyasi havayı yumuşatan bir iyilik olmak üzere, dertleri bilenlerin, kendilerinden, karşı tarafı teskin edici tedbirler alacakları ümidi uyandırmıştır* şeklinde yorumlamıştır.<sup>71</sup>

Türkiye'de 1945 yılından itibaren yeni partilerin kurulması ve 1946 seçimlerinin çok partili esasa göre düzenlenmesi gibi gelişmeler ülke sathında siyaseti ılımlı bir havaya sokmuştur. Bu dönemde halk siyasal süreçlerde ilk kez eşit katılımcı statüsü elde etmiştir.<sup>72</sup> Ülke genelinde yaşanan bu siyasal canlanmaya koşut bir şekilde Siirt'te de yerel siyasette iktidar ve muhalefet grupları arasında hatırı sayılır bir rekabet ortamı

<sup>67</sup> BCA, Fon Kodu: 490.01.22.109.17; BCA, Fon Kodu: 490.01.22.109.2.1.

oluşmaya başlamıştır.<sup>73</sup> Siyasetin kitleleştiği bu dönem, kaçınılmaz olarak siyasal partilerin ve siyasal elitlerin kamuoyu oluşturma araçlarına büyük bir ehemmiyet vermeleri sonucunu doğurmuştur. Bu dönüşümün Siirt'te yerel basın üzerinde bariz yansımaları görülmektedir. 1950'li yıllarla birlikte Siirt'te yayınlanan gazetelerin sayısında hızlı bir artış gözlenmektedir. Bu dönemde yayın hayatına başlayan Yeni Siirt (1948), Demokrat Siirt (1948), Siirt Postası (1953), Siirt Sesi (1953), Demokrat Eruh (1954), Yeni Kurtalan (1954), Demokrat Şirvan (1955), Siirt Ekspres (1957), Şarkın Sesi (1963) ve Mücadele (1964) gazeteleri dönemin çok sesli basın hayatında yer alan basın organlarıdır.<sup>74</sup> Çoğulcu demokrasiye geçiş yıllarını içine alan bu dönemde Siirt'te yayınlanan Kelle Koltukta (1953) ve Sırf Dedikodu (1954) adlı mizah dergileri ile 1956'da yayınlanan Botan adlı kültür dergisi dönemin ruhunu anlamak açısından zikre değer süreli yayınlar arasındadır.<sup>75</sup>

### KISSADAN HİSSE: SİİRT'TE MİZAH DERGİCİLİĞİ

Türkiye'de mizahın gelişim evreleri içinde 1950'li yıllar ayrı bir öneme sahiptir. Cumhuriyeti kuran tek partinin kendi içinden çıkan bir partiye iktidarı bırakması ve muhalefete geçmesiyle siyasal ortam çoksesli bir renge bürünmüştür. Buna paralel bir şekilde mizah yayıncılığı da son derece renkli ve çeşit bolluğu gösterecektir. Denilebilir ki 1950'li yıllarda en ufak bir ima veya bir ifade halk üzerinde mizahın büyük etkisini sağlayabiliyordu. Ferit Öngören'e göre bu yıllar Cumhuriyet dönemi mizah basınının en etkili yıllarıdır.<sup>76</sup>

Siirt'te yayınlanan ilk mizah gazetesi olarak tespit ettiğimiz *Kelle Koltukta* adlı süreli yayın 22 Kasım 1953 tarihinde *Haftalık Mizah Ceridesi* başlığıyla yayın hayatına başlamıştır. Derginin ilk sayısında yayının sahibi olarak dönemin önemli simalarından Haydar Koyuncu ismi verilirken yazı işleri müdürlüğünden ise Şevket Özkanlı sorumlu

<sup>73</sup> Yunus Özduygün, "Çok Partili dönemde Doğu Anadolu'da Seçimlere Bir Örnek: Siirt Seçimleri ve Demokrat Parti'nin Kalkınma Faaliyetleri (1950-1960)", *Uluslararası Sosyal Araştırmalar Dergisi*, C. 9 S. 45, (Ağustos 2016), ss. 288-301.

<sup>74</sup> Resul Babaoğlu-Said Olgun, "Siirt Basın Tarihi: Bibliyografik Bir Döküm", *Turkish Studies: International Periodical for the Languages, Literature and History of Turkish or Turkic*, Vol. 10/5 (Spring 2015), ss. 57-78.

<sup>75</sup> Aynı yer.

<sup>76</sup> Ferit Öngören, *Cumhuriyet'in 75. Yılında Türk Mizahı ve Hicvi*, Türkiye İş Bankası Kültür Yayınları, 1983, (y.y.), s. 93. Ayrıca bkz. Yasin Kayış, *Demokrat Parti Döneminde Siyasi Karikatür*, Libra Kitap, İstanbul, 2009.

olmuştur. Derginin ilk sayısında yer alan bir köşe yazısında *Neden Kelleyi Koltuğa Aldık* başlıklı yazı ile mizahi bir dil kullanılarak takip edilecek olan yayın politikasından söz edilmiştir. Derginin mizanpaj dizilimine bakıldığında sayfanın tamamında kullanılan ifadelerin mizahi karakter taşıdığı görülmektedir. *Pazartesiden Önce Cumartesiden Sonra Çıkar*, fiyat kısmında da *On Kuruşun Yarı* şeklindeki yazılar dikkat çekmektedir. Diğer yandan, derginin yayınlanma nedenleri konusunda da; *Millet-vatan ve hak yolunda canımız, kanımızı: analarımızın ak sütü gibi helal ettiğimiz için, partizanları, baskıcıları, sütü bozuk ve harcanmışları birer birer tanıtacağız. Okurlara, okutacağız. Okurlara, okuyup yazmayanlara... açıklamalarına yer verilmiştir.*<sup>77</sup> Yine derginin ilk sayısında *Mühim İşaat* başlığıyla dönemin valisine bir sataşmada bulunulduğu

anlaşılmaktadır: *Vali Paşa, bir dakika sonra burnunu her işe sokan muhabirimize şu beyanatı verecektir. C.H.P.'li olduğum yolundaki D.P.'lilerin iddiasına kargalar bile güler. Yalnız şunu söyleyeyim ki seçimlere üç ay kala istifa ederek adaylığımı Millet Partisi'nden milletvekilliği için koyacağım. Şayet o güne kadar Millet Partisi açılmazsa iş tamamen değişir.*<sup>78</sup> Derginin siyasal gelişmeleri alaycı bir yaklaşımla ele aldığı örneklerden bir diğeri de Gümrük ve Tekel ve İşletmeler Bakanı Sıtkı Yırcalı'nın Siirt'e gerçekleştirdiği ziyaretin konu edildiği espridir. *Kim Geldi?* Başlıklı yazıda *işlemeyen belediyemizi işletmek için İşletmeler Bakanı Sıtkı Yırcalı dün şehrimize gelmiştir* ifadesi kullanılmıştır. Dönemin valisi Tevfik Okyavuz'a da zaman zaman sataşmalarda bulunulan derginin ilk sayfasında *Vekiller Heyeti Vali C. Tevfik Okyavuz'un başkanlığında toplandı* başlığıyla bir oksimoron yaratılmıştır. *Vali Cavit Tevfik Okyavuz'un başkanlığında açılan toplantıda Emniyet Müdür Vekili 5 km mesafeden sesi işitilen düdüklere bekçilere alınması için bütçeye ödenek konmasını istedi. Nafia Müdür Vekili tesviyeyi turabiye olarak yapılan ilçe yollarının yağıştan bozulmaması için Müftü Vekili tarafından dua edilmesi için teşebbüse geçilmesini istedi.*<sup>79</sup>

1954 yılının hemen başında yayınlanan derginin dördüncü sayısında *Yeni Yıl Herkese Mübarek Olsun* başlıklı yazıda esprili bir dille okuyucuların yeni yılı kutlanmıştır: *Geç çıktığımızdan herkesin yeni yılını geç kutluyoruz. Kabahat ne bizde ne de*

<sup>77</sup> Kelle Koltukta, Nu.1, 22 Teşrinisani 1953.

<sup>78</sup> Kelle Koltukta, Nu.1, 22 Teşrinisani 1953.

<sup>79</sup> Kelle Koltukta, Nu.1, 22 Teşrinisani 1953.

okuyucularımızda. Bir kabahat varsa yılbaşının pazara veya pazarın yılbaşına tesadüf etmemesindedir. Pazar veya yılbaşı yerine özür diler, herkesin yeni yılını kutlarız.<sup>80</sup> Derginin içeriğine bakıldığında yer yer siyasi mizaha da yer verildiği dikkat çekmektedir. D.P. den İhraç Edildi başlığıyla verilen yazıda: Her işe burnunu sokan açığız muhabirimizden aldığımız malumata göre D.P. il idare kurulu dün Ziraat Müdürünün başkanlığında toplanarak encümen azası ve D.P. kurucularından Sadi Yaşar'ın ihracına karar verildi ifadeleri kullanılmıştır.<sup>81</sup> Derginin ilk sayfalarında sayı bilgisine yer verilmesine rağmen yayın yılının belirtilmemesi zamansal bir karmaşaya yol açmaktadır. Haftalık çıkan bu derginin sayı/numara bilgisinden yola çıkılarak tarihsel bir çıkarımda bulunmak mümkündür.

<sup>80</sup> Kelle Koltukta, Nu.4, 29 Teşrinisani 1953.

<sup>81</sup> Kelle Koltukta, Nu.4, 29 Teşrinisani 1953.

Derginin 44. sayısında Demokrat Parti'nin Siirt il teşkilatını konu alan esprilere yer verilmiştir. *Kongrede şarkı söyleyen D.P. delegeleri bir haftadan beri ağlıyor* başlığı altında Demokrat Parti üyeleri alaya alınmıştır: *D.P. ilk kongresinde bütün ilçe yollarının yapıldığı iddia ederek kongrede şarkı söyleyen D.P. delegeleri bir haftadan beri yolsuzluktan ilçelerine gidememekte ve hüüngür hüüngür ağlamaktadırlar. Gazetemiz idarehanesine gelen delegelerden bir kısmı ilçelerine gitmek için İşletmeler Bakanından bir helikopter istemektedirler. Gönderilemediği takdirde kongrede yalan söylediklerini itiraf edecektir.*<sup>82</sup> Dergide yer verilen eleştiri mahiyetindeki bölümlerden bir diğeri de ilde görev yapan bir idare amirinin resmi bir araç ile özel işlerini yaptırmasına ilişkin haberdır. *İLAN* başlığı altında yer verilen haberin alt başlığı ise *Toprak Tevzi Komisyon Başkanlığından* şeklindedir. *Müdürlüğümüze ait resmi araba odun taşımaya pek elverişli olduğundan odunlarını taşımak isteyenlerin müessesemize müracaatları ilan olunur. Not: resmi arabanın taşımaya elverişli olduğu Başkanımızın evine yapılan odun nakliyatından öğrenilmiştir.*<sup>83</sup> Derginin eleştirilerinden Ziraat Bankası da nasibini almıştır.

Bankanın DP teşkilat üyelerine verdiği kredileri eleştiri konusu yaptığı anlaşılan derginin aynı sayısında *Yağma Hasan'ın Böreği* başlığı altında zehir zemberek bir yazı kaleme alınmıştır. *Ziraat Bankası DP mensuplarına yağma Hasan'ın böreği gibi papel dağıtıyor. Her Allah'ın sabahı bankanın önü bir mahşer hatta dün bir CHP'li DP'lilere verilen papellerden aklını oynatarak deyre\* gönderildi. Parayı alanlar gülüyor. Veren memurlar da ağlıyor bu zavallı memurlara da birkaç kuruş yok mu ağızları ağızdan koku diyeceğimiz geliyor. DP yok diyor bunlar nasıl olsa reylerini bizim partiye verecekler. Hülasayı kelim her şey rey için.*<sup>84</sup>

Derginin üçüncü sayısında *Vali Konağında Yapılan Toplantıyı İfşa Ediyoruz* şeklinde haberleştirilen bir espriye yer verilmiştir. *Yarı inanılır kaynaklardan aldığımız malumata göre, Cumartesi akşamı vali konağında Millet Partililer bir toplantı yaparak milletvekili mevzuunu görüşmüşlerdir. Toplantıda ne konuşulduğu hakkında vali tarafından yemin ettirilmişse de sızan malumata göre Millet Partisi pek yakında*

<sup>82</sup> Kelle Koltukta, Nu.4. 29 Teşrinisani 1953.

<sup>83</sup> Kelle Koltukta, Nu.4, 29 Teşrinisani 1953.

\* Deyr, Siirt'in Gökçebağ köyü sınırları içerisinde bağlar bölgesi olarak da bilinen bir bölgeyi ifade etmektedir.

<sup>84</sup> Kelle Koltukta, Nu.4, 29 Teşrinisani 1953.

*açılmadığı takdirde Millet Partililer tarafından Siirt'e köylü partisi kurulacak ve Cavit Tevfik Okyavuz da seçimlere üç ay kala istifa ederek köylü partisine iltihak edecektir Görüldüğü gibi dergide değinilen konular dönemin siyasi havasına ışık tuttuğu gibi, son derece köşeli eleştirilerle de dönemin mülki erkân ve siyasal parti üyelerine eleştiriler yöneltilmiştir.<sup>85</sup>*

*Kelle Koltukta* adlı dergide yer verilen mizah içeriğinin şaşkırtıcı derecede eleştirel ve dokundurucu olması ister istemez akla bazı soruları getirmektedir. Her şeyden önce dönemin basın politikalarına bakıldığında muhalif medyaya yönelik katı tutumun nasıl oldu da *Kelle Koltukta* dergisi için işletilmediği sorusunun cevabı derginin yedinci sayısında yer bulmaktadır. Derginin yöneticilerine göre, *Kelle Koltukta besleme değildir. Resmi ilan almaz. Okuyucunun 5 geçer akçesiyle geçinir... Adnan Menderes ne yaparsa yapsın Kelle Koltuğun kılına kimse dokunamaz. Çünkü Kelle Koltuğa dokunacak babayiğit bu dakikaya kadar anasından doğmamıştır. Böyle bir yiğidin doğması anasına pek büyük sancılara mal olacak. Çünkü böyle bir adam anasından beş altını sancıyla doğamaz. Hülasayı kelim bizim matbaa Adnan Menderes'in beş kuruşluk pul üzerine imza edip CHP'si Genel Sekreterliğinden aldığı 147 bin lirayla alınmamıştır.<sup>86</sup>*

İlk sayısı 4 Ocak 1954 tarihini taşıyan bir diğer mizah dergisi de *Sırf Dedikodu* adıyla yayım hayatına başlamıştır. Sahip ve neşriyatı idare eden Selim Çerkeşlioğlu olduğu belirtilen derginin basıldığı yer ise Yazgan Matbaası'dır. Derginin elimizde bulunan ilk ve tek sayısı *Makalecik* başlığıyla çıkmıştır. *Her sayıda mini mini bir Makalecik sunacağız. Tabii başmakale olduğunu anladınız! Efendim, günlerden beri bir milletvekili namzedi gibi kafanızı şişirdik. Şöyle olacak, böyle olacak çıkaracağımız Matrak. Bir apandisit iltihabı geçiren Matrak müdahale edecek bir operatör bulunmadığından Milletvekillerimizin güzel hatırı için komşu dünyayı boyladı. Allah gani gani rahmet eyliye, Sağlık Bakanlığına da sıhhat ve afiyetler dileriz. Vadimizi yerine getirmek için komşudan bir çocuk kiraladık. Ekseriyetin teklifi ve tasvibi üzerine*

<sup>85</sup> *Kelle Koltukta*, Nu. 7, 20 Kânunuevvel 1953.

<sup>86</sup> *Kelle Koltukta*, Nu.3. 22 Teşrinisani 1953.

ismini *Sırf Dedikodu* koyduk. 15 günde bir amcalarının, abelerinin, abla, hala, hısım ve taallukatının elini öperek ve yüz görümlüğü olarak 25 kuruş isteyecektir.<sup>87</sup>

Kelle Koltukta ile kıyaslanınca *Sırf Dedikodu* adlı derginin siyasi mizaha bir nebze daha fazla ağırlık verdiği söylenebilir.<sup>88</sup> Hatta ulusal çapta siyasi aktörler ve olaylar epeyce bu dergi sayfalarında yer bulmuştur. Dönemin Cumhuriyet Halk Partisi yöneticileri arasında var olduğu bilinen çekişmelere çeşitli şekillerde vurgu yapıldığı dergide İnönü, Erim ve Gülek için yakıştıırılan şarkı sözlerine yer verilmiştir.

İNÖNÜ

Dönülmez akşamın ufkundayız vakit çok geç

Bu son faslıdır ey ömrüm nasıl geçersen geç

Cihana bir daha gelmek hayal edilse bile

<sup>87</sup> *Sırf Dedikodu*, Nu. 1, 4 Ocak 1954.

<sup>88</sup> Derginin sloganı, *On Beş Günde Bir Çıkar Siyasi Mizah Gazetesi* şeklindedir.

Avunmak istemeyiz böyle bir teselli ile

GÜLEK

Ne kadar bekledi gönlüm kazanırım diyerek

Ağladım maizi andıkça içim titreyerek

Sızladım seçimle yandım kaç günler inleyerek

Ağladım seçimi andıkça içim titreyerek

ERİM

Geçti muhabbet demi ağla gönül yan gönül

Ağla gönül, mihnete katlan gönül

Dökme sakın gözyaşı kopmaya tufan gönül

Ağla gönül yan gönül mihnete katlan gönül

Görüldüğü gibi, CHP parti teşkilatında genel sekreterlik koltuğunda bulunan Kasım Gülek ile Genel Başkan İnönü ve Nihat Erim arasındaki parti içi rekabet Sırf Dedikodu dergisinde mizahi bir açıdan ele alınmıştır.<sup>89</sup> Mayıs ayında yapılacak olan 1954 seçimlerinin Siirt'te de siyasi kulisleri harekete geçirdiği kolayca tahmin edilmektedir. Dönemin yerel basın organlarında olduğu gibi mizah basınında da siyaset konusu iştahları kabartan konular arasındaydı. *Valimiz Okyavuz'un önümüzdeki seçimde Siirt'ten milletvekili seçilmesi için, bazı hareketler ve kıvılcıklar kaydedildiği bildirilmektedir. DP baş başkanı Veysi Oran'ın milletvekili seçilmediği takdirde bir valilik kovalayacağı söylenmektedir. Az vadeli Siirt'in tesadüfi milletvekili Bahri Erdem'in adam bulunmadığı takdirde Berlin vilayetine bir küçük elçi olarak yollanacağı inanılmaz kaynaklardan bildirilmiştir. CHP'nin müdafaa edecek tarafı*

*kalmadığından Allahısmarladık demeden terk etmeğe karar veren İ.H. Özcanlı'nın etrafında CHP'liler fır dönüyorlar. Kararının kati olduğunu söylemektedir.*<sup>90</sup>

1960 senesinde Siirt'te yayınlanan mizah gazetelerinden bir diğeri de *Yılbaşı Gazetesi*'dir. Basıldığı yer kısmında gazetenin yayın türüne uygun bir şekilde *Sana ne*, hangi tarihler arasında basılacağı kısmında da *Canı istediği zaman çıkar* bilgisi yer almakta, slogan olarak da *Sulu Saf Matrak Gazete* ifadesi tercih edilmiştir.<sup>91</sup> Bu derginin Demokrat Siirt gazetesinin bir eki olarak ya da sözü edilen gazetenin matbaasında

<sup>89</sup> Sırf Dedikodu, Nu. 1, 4 Ocak 1954.

<sup>90</sup> Sırf Dedikodu, Nu. 1, 4 Ocak 1954.

<sup>91</sup> Yılbaşı Gazetesi, Sayı 1, Sene 1960.

basıldığı anlaşılmaktadır. Derginin ilk sayısında *Teşekkür* başlığı altında *Askeri gazinomuzun sempatik müdavimlerinden olup Siirt'in en çok sevilen aydınlarından Demokrat Siirt Gazetesi sahibi Bay Fuat Yazgan'a Yılbaşı Gazetesi'nin çıkmasında gösterdikleri samimi alaka ve yardımlardan dolayı gazete heyetimiz teşekkürlerini sunar* ifadelerine yer verilmiştir.<sup>92</sup> Yılbaşı Gazetesi'nin çıkış amacına uygun bir şekilde yer bulan bir mizah haberi, *Türkler Topluca Katlediliyor* başlığıyla verilmiştir. *Malumalileri hindi İngilizce Turkey diye yazılır* açıklamasıyla da mizahın altı doldurulmuştur.<sup>93</sup>

## SONUÇ

Siirt'te yerel ölçekteki basın faaliyetlerinin 1930'lu yılların sonlarında tezahür ettiği gerçeği bölge kentleriyle kıyaslandığında Siirt yerel basınının nispeten erken bir tarihsel kesitte ortaya çıktığı anlaşılmaktadır. Tek partili yılların siyasal ikliminden fazlasıyla etkilenmiş olarak basın hayatına katılan ve Siirt'in ilk yerel gazetesi olma özelliğini taşıyan Siirt gazetesi CHP iktidarının yarı resmi bir parti aygıtı hüviyetini de taşımıştır. Dönemin monist siyasal karakterinin bir uzantısı olarak sür git devam eden yerel basının murakabe etme özelliğinden ziyade tek parti iktidarının sözcülüğü işleviyle hareket ettiği görülmüştür. Bu çerçevede bir değerlendirme yapmak gerekirse Türkiye'de basının kontrol, eleştiri ve haber verme işlevlerini tam anlamıyla yerine getirmeye başladığı dönem II. Dünya Savaşı'nın sona ermesiyle başlayan siyasal liberalleşme dönemidir. Faşist Nazi Almanyası'na karşı zafer ilan eden demokratik batılı devletlerin dünya ölçeğinde kuracakları yeni düzene uyumlu bir şekilde Türkiye'de başlayan demokratikleşme çabaları doğal olarak basın faaliyetlerinde de inkâr edilemez bir serbestliği getirmiştir. Çok partili siyasal düzenin kuruluş yıllarında basın alanında görülen çok

sesliliğin taşradaki en bariz yansıması gazete sayısındaki hızlı artış olmuştur. Anadolu'daki büyük kent merkezlerinde görülen bu gelişmenin bir uzantısı olarak Siirt basınında da belirgin bir canlanma gözlenmiştir. Bir anlamda, gazetelerin iktidar ve muhalefet partilerinin sözcülüğünü üstlendiği bu yeni dönem, basının kamuoyu oluşturma ve siyasal propaganda aracı olarak işlevselleştirilmesiyle anılabilir. Özellikle 1950'li yıllarda Siirt'te sayısı iyice artan gazetelerin haber içerikleri incelendiğinde,

<sup>92</sup> Yılbaşı Gazetesi, Sayı 1, Sene 1960.

<sup>93</sup> Yılbaşı Gazetesi, Sayı 1, Sene 1960.

gazetelerin neredeyse bütünüyle siyasal konulara hasredildiği anlaşılmaktadır. Böyle bir ortamda Anadolu'nun ücra bir kentinde yayın hayatına başlayan siyasi mizah gazeteleri renkli içerikleri ve cesur eleştirel yayın politikalarıyla dikkati çekmektedir. *Sırf Dedikodu*, *Kelle Koltukta* ve *Yılbaşı* gibi siyasal mizah dergilerinin gerek taşıdıkları son derece özgün adlar gerekse de ele aldıkları konuların çeşitliliği bakımından oldukça göz doldurucu basın organlarıdır. Demokrat Parti iktidarının 1954 yılında yürürlüğe soktuğu yeni basın kanununun eleştirel gazeteciliği sınırlayan hükümler içerdiği düşünüldüğünde Siirt'te yayınlanan sözü edilen mizah dergilerinin hakikaten kelleyi koltuğa aldıkları anlaşılmaktadır. Kanımızca bu durum iki nedene dayanıyor olabilir. Öncelikle bu dönemde ulusal çaptaki basın politikalarında başvurulan sert uygulamalara rağmen, taşrada cılız bir etki yarattığı bilinen yerel basının bilinçli bir şekilde bu politikaların dışında tutulması bu noktada akla gelen ilk husustur. Bunun yanı sıra, sınırlı bir okuyucu kitlesine hitap eden bu tür yayınlar sayesinde halkın dönemin iktidarının uygulamalarına ilişkin hoşnutsuzluklarının bir ölçüde izale edilmesi de bir kenarda tutulması gereken yaklaşım olarak öne çıkmaktadır. Ancak her koşulda, bu araştırmada yer verilen basın organlarının nükteli ve dokundurucu mizah anlayışıyla yerel ölçekteki siyasal gelişmeleri okuyucuya aktarması, basın faaliyetlerinin hakkıyla yapıldığını ortaya koymaktadır. Dönemin popüler deyimlerinden biri olan *besleme basın* kategorisine hiçbir şekilde dâhil edilemeyecek olan söz konusu mizah dergileri, günlük süreli yayınların takip ettikleri ölçülü ve otokontrol mekanizmasıyla dengelenen içeriğine nazaran muhatabını sert söylemlerle hırpalayan bir yayın diline sahip olmuştur. Bu dönemin siyasete meraklı valisinden resmi hizmete mahsus aracını özel işleri için kullanan kurum amirlerine ve siyasal partilerin il teşkilatlarına varıncaya kadar oldukça geniş bir yelpazedeki kişi ve grupların mizah gazetelerine konu olduğu görülmektedir. Dönemin Siirt toplumuna ayna tutan bu dergilerde yer verilen içerikler yerel tarih araştırmaları, basın çalışmaları ve basının tarihsel gelişimi gibi alanlarda ufuk açıcı veriler sunmaktadır.

**DROUGHT AT *MEDİCAGO* SPP: A REVIEW**

**Nizamettin TURAN (Orcid ID: 0000-0002-4026-6781)**

<sup>1</sup>Siirt University, Faculty of Agriculture, Department of Field Crops, Siirt

**ABSTRACT**

Among the natural hazards, droughts possess certain unique features. Periodic droughts occur because of global temperature cycles in the oceans and atmosphere. A deep and proliferative root system helps extract sufficient water and nutrients under these stress conditions. The cultivation of legumes shows promise for the development of sustainable agriculture, but yield instability remains one of the main obstacles for its adoption. Under drought, symbiotic nitrogen fixation is one of the physiological processes to first show stress responses in nodulated legumes. Despite its primary value as animal feed, alfalfa also diversifies farming production risks, provides a source of biologically fixed nitrogen for rotational crops, reduces soil erosion, cleans land and water contamination. Alfalfa is an important forage crop that is often grown in areas that frequently experience drought and water shortage.

**Keywords:** Feed, drought, legumes, *Medicago* spp.

#### **4. INTRODUCTION**

Owing to the rise in water demand and looming climate change, recent years have witnessed much focus on global drought scenarios. Drought is best described as a natural hazard by a variety of climatological and hydrological characteristics (Mishra & Singh, 2010). Droughts have been more common in recent years, and their effects have been made worse by the increase in water demand and the fluctuation of hydro-meteorological variables brought on by climate change (Mishra & Singh, 2011). Drought is a stochastic natural hazard that develops when there is a severe and ongoing lack of precipitation. Following a first meteorological event, further effects on agriculture and hydrology are observed. Among the natural disasters, droughts have certain distinctive characteristics. In addition to delayed consequences, droughts can vary in a number of dynamic dimensions, such as severity and duration, which makes it challenging to classify them. In order to manage drought, drought characterization is essential, enabling both retrospective analyses (e.g., severity versus impacts analysis) and prospective planning (e.g., risk assessment). The adaptation of a simplified method by drought indices has facilitated drought characterization for various users and entities (Zargar et al., 2011).

Drought has long been a scourge of humanity and a factor in war and conflict. The current crisis in Syria, for example, comes in the wake of one of its worst ever droughts. Cycles in the ocean and atmosphere's overall temperature produce periodic droughts. But even if we have a greater understanding of the underlying factors, the weather continues to be unpredictable. There is an additional motivation to improve when climate change caused by human activity is included. It is projected that the greenhouse effect will increase temperatures and lengthen droughts. It is predicted that many agricultural pests will prosper. Fresh water supplies are being squeezed by all of these demands. Farmers must learn how to produce more while consuming less of this priceless resource. Research is contributing. In-development crop cultivars may withstand greater temperatures and use less water. Computer models that can better predict when and where droughts will hit would help farmers plan—although running these more complicated models is straining computing resources (Grayson, 2013).

Present food production requires an estimated  $6800 \text{ km}^3 \text{ yr}^{-1}$  of consumptive green water ( $5000 \text{ km}^3 \text{ yr}^{-1}$  in rain-fed agriculture and  $1800 \text{ km}^3 \text{ yr}^{-1}$  from irrigated crops). Without considering water productivity gains, an additional  $5800 \text{ km}^3 \text{ yr}^{-1}$  of water is needed to feed a growing population in 2050 and eradicate malnutrition. It is shown that the bulk of this water will be used in rain-fed agriculture (Rockström, 2003).

Stresses from drought, salt, and heat are three main environmental conditions that have an impact on where plants grow in nature, reduce agricultural plant yield, and jeopardize food security (Zhu, 2016). Two well-studied signaling molecules that serve as priming agents and control how plants react to stressful situations are nitric oxide and hydrogen sulfide (Antoniou et al., 2020). An significant developmental and agronomic characteristic, root system architecture is crucial for plant productivity and adaptation in water-scarce situations. Under these stress-related circumstances, a deep and proliferating root system aids in extracting enough water and nutrients (Ye et al., 2018).

## **5. LEGUMES**

The cultivation of legumes shows promise for the development of sustainable agriculture, but yield instability remains one of the main obstacles for its adoption (Prudent et al., 2020). Legume crops present important agronomical and environmental advantages mainly due to their capacity to reduce atmospheric  $\text{N}_2$  to ammonium via symbiotic nitrogen fixation. This process is very sensitive to abiotic stresses such as drought, but the mechanism underlying this response is not fully understood (Gil-Quintana et al., 2015).

The root characteristics of legume crops have been regarded as the most crucial characteristics enabling the plant to efficiently mine water from deeper soil layers under dry situations. There are numerous parameters linked with drought tolerance in legume crops (Vadez et al., 2008). Sustainability in agriculture is more crucial for distributing resources as inputs than for producing goods. The key to it is that it is also more significant than other biological characteristics, including the advantageous microorganisms. Legumes form an integral part of the soil microbial nexus. In order to achieve sustainability, soil biological health and legumes have recently received attention. Particularly in farming systems that rely on legumes, soil rhizobacteria are

crucial. This is because the resource constraints such as water and nutrients often limit the productivity of such systems (Sofi et al., 2018).

Millions of tons of nitrogen are introduced into agricultural areas through symbiotic nitrogen fixation in legume root nodules, and non-legume crops receive ammonia under N-deficient environments. Environmental stresses, such as drought, salt, cold, and heat stress, are inevitable while plants are growing and developing (Li et al., 2018). One of the environmental elements that has the biggest impact on crop output is drought. One of the physiological processes that

causes nodulated legumes to first exhibit stress responses during a drought is symbiotic nitrogen fixation (Larrainzar et al., 2007).

Climate change in conjunction with population growth necessitates a systems biology approach to characterize plant drought acclimation as well as a more thorough understanding of the molecular mechanisms of stress recovery. The environment that plants are exposed to is always changing. Extreme conditions, such a prolonged drought, are followed by rain. For recovery and ongoing growth, the plant must have molecular flexibility that enables drought adaptation and necessitates deacclimation mechanisms. The metabolome and proteome are regulated by a series of molecular events, including synthesis and degradation, and molecular interaction networks are a part of this regulatory mechanism during drought stress and subsequent recovery (Lyon et al., 2016).

## **6. *MEDICAGO* SPP.**

*Medicago sativa* L., also known as alfalfa, is a significant leguminous forage crop that is planted extensively worldwide. It not only provides abundant food for animals but also enhances soil fertility (Zhang et al., 2016). Albeit its primary use as animal feed, alfalfa also prevents soil erosion, cleans up land and water contamination, breaks up pest cycles of yearly rotation crops, and encourages soil carbon sequestration. It also serves as a source of biologically fixed nitrogen for rotating crops (Zhang et al., 2015). Climate change is predicted to result in an increase in the frequency and severity of extreme environmental conditions like drought, which will significantly reduce food yield and quality. *Medicago sativa* is an important crop that is relied upon as a staple source of

forage in ruminant feed. Despite its economic importance, alfalfa production is constrained by abiotic stress, including drought (Hanly et al., 2020).

Frequently grown in regions that frequently face drought and water shortage is the vital fodder crop alfalfa (Arshad et al., 2017). Drought is likely the primary abiotic environmental factor most adversely affecting alfalfa production globally since alfalfa's growth is significantly hampered by a lack of water (Zheng et al., 2017). Alfalfa requires irrigation in many places and uses a lot of water. It is imperative to create alfalfa cultivars with enhanced drought tolerance because to the steadily decreasing irrigation water supply and an increase in droughts brought on by climate change (Singer et al., 2021).

Alfalfa is an essential fodder product which has extensive and depth roots system, this advantage enables the plant to tolerate long term drought without any damage to its regrowth process (Hamidi & Safarnejad, 2010).

Drought stress hampers plant energy and biomass production. the effect of differential optimal nitrogen nutrition and root nodule symbiosis on drought stress and rehydration responses of *Medicago truncatula* was assessed by Staudinger et al., (2016). During droughts, root nodule symbiosis helps maintain leaves for a longer period of time. Bacterial strains and leaf initial N content had little impact on the outcome. However, this process also involves fundamental dietary changes. Rhizobia may cause increased translational regulation and hormonal interaction, according to a proteomics investigation. Furthermore, nodulated plants recover more quickly than non-nodulated plants. *Tetraploid medicago sativa* L. is a perennial forage legume of significant agronomic interest. Furthering the development of its drought tolerance is necessary because to the growing demand for its application in low-input systems and water-deficient environments. On the other hand, *Medicago arborea* L. is a perennial leguminous shrub, which is known as a drought-tolerant species (Tani et al., 2019).

Seed osmopriming improves plant growth, nodulation, chlorophyll fluorescence and nutrient uptake in alfalfa-rhizobia symbiosis under drought stress. Under drought, osmopriming promoted growth and nodulation in the examined symbioses. In plants under drought, osmopriming improved PSII performance and reduced stomatal conductance. In particular during droughts, rhizobia inoculation and seed osmopriming

improved drought tolerance and nutrient uptake. Seed osmopriming increased leaf nodulation and nitrogen content (Mouradi et al., 2016).

It has been reported that plant-associated beneficial bacteria, especially strains resistant to abiotic stresses that could maintain their efficiency under environmental challenging conditions, can contribute to alleviate abiotic stresses of host plants (Noori et al., 2021). Not only symbiotic plant components but also *Sinorhizobium meliloti* and *Mesorhizobium loti* bacteria residing in the root nodules of *M. truncatula* and *L. japonicus*, respectively, adjust their gene expression in response to water shortage. Although our results demonstrated that both *M. truncatula* and *L. japonicus* root nodules were susceptible to water deprivation, they indicated significant differences in plant and bacterial response to drought between the tested species, which might be related to the various types of root nodules formed by these species (Sanko-Sawczenko et al., 2019).

One of the leguminous forage crops that thrives in arid and semiarid climates is *Medicago falcata*. *M. falcata* is a widespread legume grass that is closely related to alfalfa. *M. falcata* and alfalfa produce a *Medicago* type with excellent usage value and great resilience, making *M. falcata* a crucial gene bank for alfalfa breeding with resistance features. In particular, *M. falcata* possess high drought tolerance, thus the regulatory mechanisms underlying drought stress in *M. falcata* will be useful for the breeding of drought-resistant alfalfa (Li et al., 2022).

## AĞIR METAL STRESİNİN BİTKİLERDE SEKONDER METABOLİT PROFİLİNE ETKİSİ

**Dr. Öğr. Üyesi Abdurrahim YILMAZ\*** (Orcid No: 0000-0001-9991-1792)  
Bolu Abant İzzet Baysal Üniversitesi, Ziraat Fakültesi, Tarla Bitkileri Bölümü, Bolu

### ÖZET

Ağır metaller, toprak ve su ekosistemlerinde bulunmakla birlikte atmosferde partikül veya buhar olarak nispeten küçük oranlarda yer almaktadır. Birçok ağır metal insan ve hayvanlar için iz miktarda gerekli olan besin maddeleridir. Bitkilere yönelik ağır metal toksisitesi bitki türleri, spesifik metal, konsantrasyon, kimyasal form, toprak bileşimi ve pH'a göre değişim göstermektedir. Ağır metallerin bitkilerde sekonder metabolit profillerine önemli ölçüde etki ettiğini gösteren birçok çalışma bulunmaktadır. Sekonder metabolitler potansiyel olarak tüm bitki organlarında bulunmakta ve bitki yetiştiriciliğinden kaynaklanan atıkların değerlendirilmesi için çeşitli olasılıklar sunmaktadır. İnsan gıdalarında, hayvan yemlerinde, ekolojide ve farmasötiklerde sekonder metabolitlerin önemi ayrıntılı olarak birçok araştırmada yer almaktadır. Tarım sektöründe genellikle bitkilerin yalnızca birkaç organı hasat edilmektedir. Bu durum da tedarik zincirinin farklı seviyelerinde çok sayıda atık oluşturmaktadır. Bu bağlamda, ihmal edilen bu içeriğin biyoaktif bileşiklerinin belirlenmesine yönelik bilimsel araştırmaların ve bunların değerlendirilmesine temel oluşturmada yapılan çalışmaların önemi gün geçtikçe artmaktadır. Bitkilerde ağır metal birikiminin konsantrasyon ve maruz kalma süresinin sekonder metabolit üretimi üzerindeki etkisini etkileyen çok önemli parametreler bulunmaktadır. Şimdiye kadar bilimsel ilgi, bitki türlerine ve farklı ağır metallere maruz kalmaya bağlı olarak değişen bir eğilim göstermiş olan vitaminler, polifenoller ve karotenoidler gibi fonksiyonel moleküllerin içeriğine ayrılmıştır. Bu nedenle, gelecekteki çalışmalar için sekonder metabolit üretimini azaltabilen veya artırabilen eşik konsantrasyon değerlerini deneysel olarak belirlemeye yönelik çabalar göstermelidir. Bu derlemede bitkilerde sekonder metabolitlerin üretimini etkileyen ağır metal stresleri, yapılan birçok bilimsel deney çerçevesinde araştırılmıştır.

**Anahtar Kelimeler:** Ağır Metal, Sekonder Metabolit, Uçucu Yağlar, Aromatik Bitkiler

**EFFECT OF HEAVY METAL STRESS ON SECONDARY METABOLITE  
PROFILE IN PLANTS****ABSTRACT**

Although heavy metals are found in soil and aquatic ecosystems, they are present in the atmosphere in relatively small proportions as particles or vapors. Many heavy metals are essential nutrients for humans and animals in trace amounts. Heavy metal toxicity to plants varies with plant species, chemical form, specific metal, soil composition, concentration, and pH. Many studies show that heavy metals significantly affect secondary metabolite profiles in plants. Secondary metabolites are potentially present in all plant organs and offer several possibilities for utilizing wastes from plant cultivation. The importance of secondary metabolites in human food, animal feed, ecology, and pharmaceuticals are covered in many studies in detail. Generally, only a few parts of plants are harvested in the agricultural sector. This creates a large amount of waste at different levels of the supply chain. In this context, the importance of scientific research on the determination of the bioactive compounds of this neglected ingredient and the studies conducted to form the basis for their evaluation is increasing daily. Critical parameters affect the effect of heavy metal accumulation in plants on concentration and exposure time on secondary metabolite production. Until now, scientific attention has been devoted to the content of functional molecules such as vitamins, polyphenols, and carotenoids, which have shown a varying trend depending on plant species and exposure to different heavy metals. Therefore, efforts should be made to experimentally determine threshold concentration values that can reduce or increase secondary metabolite production for future studies. In this review, heavy metal stresses affecting the production of secondary metabolites in plants have been investigated within the framework of many scientific experiments.

**Keywords:** Heavy Metal, Secondary Metabolite, Essential Oils, Aromatic Plants

#### 4. GİRİŞ

Çinko (Zn), bakır (Cu), nikel (Ni), molibden (Mo), manganez (Mn), krom (Cr) ve demir (Fe) gibi bazı ağır metaller, büyüme ve oksidasyon dahil bitkilerde indirgeme reaksiyonları, elektron taşınması ve diğer birçok metabolik süreçler gibi birçok yapısal ve biyokimyasal fonksiyonda gerekli olan temel eser elementlerdir (Lajayer vd., 2017). Ağır metaller, toprakta bulunan, ana kayaların ayrışmasından, pedojenezden ve antropojenik faaliyetlerden kaynaklanan nadir, doğal olarak bulunan elementlerdir. Atmosferik biriktirme, yoğun tarım, ağır trafik, metal endüstrileri, madencilik ve çöp dökme gibi antropojenik faaliyetlerdeki artışlar, arsenik, cıva, kurşun ve kadmiyum gibi metallerin toprak, su ve havada bulunan seviyelerinde ciddi oranlarda artışına neden olmaktadır. Bu olayların bir sonucu olarak, bitkilerde ürün verimliliği üzerinde zararlı etkiler gözlenmektedir (Mahajan vd., 2020). Sanayi, metalurji, ağır metal içeren kimyasal gübrelerin yapılması ve kullanılması gibi çok sayıda insan faaliyeti, doğal ortamlarda ağır metal birikimine yol açmaktadır (Lajayer vd., 2017). İnsan faaliyetleri nedeniyle, artan sanayileşme, enerji üretimi, tarım faaliyetleri ve belediye atık üretimi nedeniyle topraklardaki ağır metallerin içeriği artmaya devam etmektedir (İbrahim vd., 2017).

Tarım arazilerinin ve sulama sularının inorganik kirleticiler gibi zehirli atıklarla kirlenmesi, insanlar ve hayvanlar için çevresel riskler oluşturmaktadır. Nikel, çinko, kadmiyum, krom, bakır ve kobalt gibi ağır metaller toprakta doğal olarak birikebilmekte veya endüstriyel ve madencilik süreçlerinden kaynaklı çoğalabilmektedir (Murch vd., 2003). Ağır metaller genellikle suyun özgül ağırlığının beş katı olan inorganik elementler olarak tanımlanmaktadır. Biyosfer de dahil olmak üzere hemen hemen tüm çevresel bileşenler, çeşitli kaynaklardan sürekli olarak salınan ağır metallerin aşırı kirlilik oluşturması nedeniyle sürekli olarak tehdit altındadır (Bhattacharya, 2018). Havaya, toprağa ve çevreye salınan ağır metaller, bitkiler tarafından kökler ve yapraklar yoluyla emilebilir ve ciddi bir olası insan sağlığı riskinin yanı sıra bitki metabolizmalarının bozulmasına neden olabilir (Lajayer vd., 2017). Ağır metal stresi toprakta yüksek oranlarda kontaminasyonlara sebebiyet vermekte ve bu da bitkilerin metabolik aktivitesinde istenmeyen birkaç değişikliğe neden olmaktadır. Bitkilerin ağır

metal alımı, fotosentetik pigmentleri, şekerleri, proteinleri ve protein olmayan üretimi etkileyerek bitki ölümlerine yol açabilmektedir (Mahajan vd., 2020).

Bitkiler, ilaç geliştirme adına tıbbi değeri olan yeni ürünleri keşfetmek için temel bir kaynak olup ve bitkilerin sekonder metabolitleri, farmasötikler, gıda katkı maddeleri, tatlar ve diğer endüstriyel değerler için benzersiz kaynaklardır. Bu sekonder metabolitlerin ticari önemi, son

yıllarda üretimine ve doku kültürü teknolojisi aracılığıyla üretimlerini artırma olasılıklarının araştırılmasına büyük ilgi duyulması ile sonuçlanmıştır (Tiwari ve Rana, 2015). Tıbbi ve aromatik bitkilerde farklı kimyasal bileşenler (sekonder metabolitler), ilaç ve gıda endüstrileri yoluyla insan sağlığını iyileştirebilecek biyolojik aktivitelere sahiptir. Aynı zamanda bu bileşenler parfüm, zirai ilaç ve kozmetik endüstrilerinde temel kaynakları oluşturmaktadır (Li vd., 2020). Sekonder metabolitler genellikle biyosentetik yollara göre üç ana grupta sınıflandırılmaktadır. Bu gruplar: fenolikler, terpenler ve alkaloidlerdir. Bu fitokimyasallar, muazzam kimyasal ve biyolojik çeşitlilik ile karakterize edilmekte ve türe özgü ve organa özgü olmanın yanı sıra, üretimleri birçok biyotik ve abiyotik faktöre bağlı olmaktadır. (Chiocchio vd., 2021). Sekonder metabolitler, çevre ile bitki etkileşimlerinde önemli roller oynamaktadır (Jia vd., 2016). Bitki sekonder metabolitleri, büyüme düzenlemesinde, antioksidan aktivitede, pigment gelişiminde ve diğer süreçlerde çok önemli bir roller oynamaktadır. Küresel iklim değişikçe, artan atmosferik sıcaklıklar ve toprağın ağır metaller tarafından kirlenmesi, doğal ekosistemlerde birlikte meydana gelmekte, bu da rizosfer toprağının pH'sını değiştirmekte ve metallerin biyoyararlanımını ve hareketliliğini etkilemektedir (Zhao vd., 2016). Bitkiler, sekonder metabolitleri sentezlemek için birincil metabolitlerden daha fazla enerji harcamakta ve bu da bu sekonder metabolitlerin temel doğasını yansıtmaktadır (Jia vd., 2016).

##### **5. UÇUCU YAĞ BİLEŞENLERİNE AĞIR METAL STRESLERİNİN ETKİSİ**

Bazı tıbbi ve aromatik bitkiler, hasat edilebilir bitki örtüsündeki metal kirletici maddeleri emebilir ve biriktirebilir ve bu nedenle, uçucu yağların herhangi bir şekilde kirlenmesi olmaksızın kirli alanların iyileştirilmesi için uygun bir alternatif olarak kabul edilebilir (Lajayer vd., 2017). Sekonder metabolitlerin birikmesi genellikle, yüksek atmosferik

CO<sub>2</sub>, ağır metal stresi, UV ışığı, kuraklık, sıcaklık, mantar ve viral enfeksiyon ve diğer bitkilerin allelopatik etkileri dahil olmak üzere çevresel koşullardaki değişikliklere maruz kalan bitkilerde meydana gelmektedir (Jia vd., 2016; Zhao vd., 2016). Ağır metallerin farklı konsantrasyonlarına maruz kalan bitkilerde önemi oranlarda sekonder metabolit değişimleri, yürütülen birçok çalışma ile kanıtlanmıştır.

Nikel, lantan, öropiyum, gümüş, kadmiyum ve oksalat dahil olmak üzere metal iyonları, bazı tıbbi ve aromatik bitkilerde sekonder metabolit üretimini etkilemiştir (Zhao vd., 2001). Kadmiyum ve kobalt, çemen otunda (*Trigonella foenum-graecum*) diosgenin düzeylerini artırmıştır (De ve De, 2011). Nikel stresine bağlı olarak antosiyanin seviyelerinde

önemli bir düşüş rapor edilmiştir (Hawrylak vd., 2007). Ayrıca nikelin antosiyaninlerin birikmesini engellediği tespit edilmiştir (Krupa vd., 1996). Rai ve ark. (2004), *Ocimum tenuiflorum*'u farklı krom konsantrasyonlarına (10, 20, 50 ve 100 µM Cr) maruz bırakmıştır. Çalışma sonucunda orta derecede krom stresıyla en yüksek öjenol yüzdesinin oluştuğu bildirilmiştir.

Cu<sub>2+</sub>'ın *Amaranthus caudatus*'un kallus kültürlerinde betasiyanin birikimi üzerindeki uyarıcı etkilerini görülmüştür. Zn<sub>2+</sub> (900 uM) ilavesi de *Lepidium sativum* kültürlerinde lepidin verimini arttırmıştır (Obrenovic, 1990). Nadir toprak metali (lantanum), *Taxus sp.*'nin hücre kültüründe taksol üretimi üzerinde etkili olmuştur (Pitta-Alvarez vd., 2000). Kadmiyum ve bakır ile muamele edilen yulaf ve fasulye bitkilerinde pütresin içeriği önemli ölçüde artmıştır (Weinstein vd., 1986). AgNO<sub>3</sub> ve CdCl<sub>2</sub>, *Brugmansia candida*'nın tüylü kök kültürlerinde iki tropan alkaloidinin, skopolamin ve hiyosiyamin'in aşırı üretimini ortaya çıkarmıştır (Angelova vd., 2006). Prolin ve fenilpropanoid metabolizması, olumsuz koşullarla başa çıkmak için kadmiyum stresi altındaki *Withania somnifera* bitkilerine gerekli ozmotik ve antioksidanları sağlayarak baskın bir şekilde yukarı doğru düzenlenmiştir (Mishra ve Singh Sangwan, 2019). Fesleğen (*Ocimum basilicum* L.) bitkisinde Cd toksisitesi, savunma enzimleri ve bileşiklerinin aktivitelerini, hücre zarı oksidasyonunu ve sekonder metabolitlerin üretimini artırmıştır (Gheshlaghpour vd., 2021).

Tarla çörekotunda (*Nigella arvensis* L.) alüminyum ve nikel oksit nanopartiküllerinin büyüme ve antioksidan aktivitesi üzerine etkileri araştırılmıştır. Antioksidan aktiviteler,

sekonder metabolitlerin oluşumu, toplam antioksidan kapasite, DPPH süpürme aktivitesi ve toplam saponin içeriği gibi diğer ilgili fizyolojik parametreler, NiO nanopartikülleri 100 mg/L'ye yükseltildikten sonra inhibe olmuştur. 100–2.500 mg/L Al<sub>2</sub>O<sub>3</sub> nanopartikülleri ile muamele edilen bitkilerde toplam fenoller, saponinler, iridoidler, toplam antioksidan içerik ve DPPH süpürme aktivitesi artmıştır (Chahardoli vd., 2020). *Artemisia annua* L. bitkisinde üç gün boyunca 60 ve 120 µmol/L Cd ile muamelenin artemisinik asit, arteannuin B ve artemisinin biyosentezini önemli ölçüde iyileştirdiği tespit edilmiştir (Zhou vd., 2017).

## 6. SONUÇ

Çeşitli insan faaliyetleri ile toprağın, suyun ve havanın toksik ağır metallere kirlenmesi, hem gelişmekte olan hem de gelişmiş ülkelerde önemli bir çevre sorunudur. Ağır metaller, kontamine çevre (toprak, su ve hava kaynakları) ve kötü üretim uygulamaları yoluyla tıbbi bitki ürünlerine girebilmektedir. Ağır metalle kirlenmiş ortamlarda tıbbi bitkileri yetiştirmek, sonunda sekonder metabolitlerin biyosentezini etkileyerek bu bileşiklerin nicelik ve kalitesinde önemli değişikliklere neden olabilmektedir. Bu nedenle arzu edilen bileşenlerin hangi ağır metalin tesiri altında çoğaldığının tespitine yönelik yapılacak olan çalışmalar sekonder metabolit üretimi yapan sektörler için oldukça önem taşımaktadır.

**ABSTRACT**

The Covid-19 pandemic has had a major impact on human lifestyle, one of which is the implementation of the learning process that must be carried out remotely. The implementation of distance learning during the Covid-19 pandemic experienced several problems that resulted in low motivation for learning students. Various studies have been conducted to increase the learning motivation of students during distance learning, including this research. This study aims to 1) describe the learning process of Civic Education with a problem-based learning model assisted by the flipped classroom method in students, 2) describe the increase in student learning motivation in Civic Education learning with a problem-based learning model assisted by the flipped classroom method. This research is a class action research (PTK) consisting of two cycles. Each cycle consists of two meetings. The subjects of this study were S1 Electronic Education class A students class 2021, Yogyakarta State University, totaling 52 students with material on the rights and obligations of citizens. Data collection techniques use observation techniques, questionnaires, documentation, and tests. Based on the results of the study, 55.49% were obtained with high criteria, increased to 66.97% with high criteria in the first cycle, and increased to 80.37% with very high criteria in the second cycle. Based on these findings, it can be concluded that using a problem-based learning model assisted by flipped classroom learning methods can increase student learning motivation in remote Civic Education learning in material on the rights and obligations of citizens.

**Keywords:** student learning motivation, civic education learning, problem based learning, flipped classroom method.

## **INTRODUCTION**

The global corona virus pandemic has been sweeping the world since the end of 2019 and is still ongoing. This non-natural disaster forced the world into a new social order, including the world of education. The social change caused by the global pandemic gave birth to a policy of physical distancing, which prohibits students from studying in schools and campuses. The policy is a major challenge that must be faced by all teachers, learners, and parents of student guardians. The demands for learning that must continue under any circumstances make distance learning patterns an alternative offered by the Indonesian Ministry of Education and Culture through Circular Letter No. 15 of 2020 on Guidelines for The Implementation of Learning From Home In The Emergency Period of Spread of Corona Virus Disease (COVID-19). The Basic Law of the State of Indonesia 1945. Article 31 mandates that education is the right of every citizen. Under Article 31, the state has two obligations, namely organizing education for every citizen, and financing education for citizens. Organizing education means that the state must provide places / schools, educators, facilities and infrastructure so that teaching and learning activities can run. Financing education means that the state must provide funds / budgets so that teaching and learning activities involving educators, schools, facilities and infrastructure can be realized. The seriousness of this government is followed up by the government with Regulation of the Minister of Education and Culture Number 3 of 2020 concerning National Standards of Higher Education. In Regulation of the Minister of Education and Culture explained about the criteria for the implementation of learning in higher education units to achieve graduate competence, which is the main point is the existence of interactive, holistic, integrative, scientific, contextual, thematic, effective, collaborative, and student-centered learning. However, the ideal conditions do not all go as expected because of the covid-19 pandemic that demands distance learning. There are several problems that are a factor inhibiting the success of distance lessons in this covid-19 pandemic. Research conducted by Suyahman, et al (2021:74-78) found that inhibiting factors in online learning include quotas and internet connections, the implementation of learning, supporting tools that are less supportive, and the influence of online learning on learning outcomes. In addition to inhibiting factors in the form of facilities and infrastructure, it was also found that the lack of interaction between teachers and learners so that the material delivered was less maximal, the assignment was less effective as a benchmark for student knowledge, the delivery of material by teachers on online learning was less understood by learners, online learning could affect student

learning outcomes (Suyahman, et al, 2020: 64-78). Researchers made observations during civic education learning in class A of the Department of Electronic Education, Yogyakarta State University class of 2021, as well as conducting interviews with students. The finding of the interview results is that students feel bored with the learning process because they feel less interesting and less motivating. In addition, students are also lazy to pay attention to learning because of the impact of the distance learning policy. This can be proven when the teacher teaches in the class only a small part of the students pay attention to learning, while some students do other activities, such as playing cellphones, turning off the camera, not answering questions, leaving online classes, and so on. Of course, this can show the low interest and motivation of learning students in learning Civic Education which can affect the learning outcomes of the realm of student knowledge. Where as through Citizenship Education students are expected to be able to develop their potential both as individuals, members of society, nation and country and as members of the world community. In addition, students are also equipped with basic knowledge and abilities with regard to the relationship between citizens and the state and preliminary education in defense of the country. Citizenship as a course and subject directed towards efforts to improve, understand, imagine, and practice moral values rooted in Indonesian culture that is expected to be realized in the form of daily behavior of students both as individuals, as members of society, and citizens. This is in accordance with the Decree of the Director General of Higher Education of the Ministry of Education and Culture of the Republic of Indonesia Number 48/E/KPT/2020 on Guidelines for the Implementation of Compulsory Courses on the Higher Education Curriculum that citizenship education courses are education to provide an understanding of *Pancasila*, the 1945 Constitution of the Unitary State of the Republic of Indonesia and *Bhineka Tunggal Ika* and its implementation in forming students into citizens who are Have a sense of nationality and love of the homeland. The problem conditions outlined in the paragraph above are linear with theories related to factors that affect student learning conditions, namely factors that come from students (internal factors) and factors that come from outside the student (external factors) (Slameto, 2003: 74). Internal factors consist of intelligence or intelligence, attention, talent, interest, motivation, maturity, readiness, and fatigue (boredom). While external factors (factors that come from outside humans) include: (1) The family environment which includes: parental attention, the economic situation of parents, relationships between family members, home atmosphere, understanding of parents and cultural background. (2) The school

environment includes: educator factors, tool factors (learning media), building conditions, and the use of learning methods, curriculum, educator relationships with learners, student relations with learners, school discipline, school time, lesson standards above size and homework. (3) Community environment which includes: media factors (tv, radio, internet, etc.), social environment (friends, neighboring environment, activities in the community), activities of learners in the community and, community life forms. The learning motivation of learners can be measured through several indicators, namely: (1) feelings of pleasure, (2) student interest, (3) attention and (4) involvement learners (Safari, 2003: 60). If the problem is not solved, then in the future it can cause a less good impact for students, lecturers, and universities. The impact of low student motivation can cause learning achievement to decrease, because they are tired of distance learning. For lecturers, will feel failed in improving student learning outcomes, while for universities of course this will result in low quality of learning. Based on the background exposure of the problem, there is a learning model that can decipher existing problems, one of which is the flipped classroom learning model. Reporting from the page (2020), it was written that there verse classroom learning model is an emergency learning solution during the covid-19 pandemic. Flipped classroom is a learning model in which learners before learning in the classroom learn the material first at home in accordance with the tasks given by the educator. This method is also used by educators when there are learners who are not present in the classroom for something. The flipped classroom learning model combines the types of synchronous and asynchronous learning. The flipped classroom learning model can be classified as blended learning because it combines synchronous and asynchronous, traditional and online learning formats. Synchronous learning is a collaborative teaching format that involves interaction between educators and learners delivered at the same time. Asynchronous learning is the opposite of collaborative interaction activities of educators and learners delivered at different times. The application of this flipped classroom learning model was successfully applied in the United States as shown in research conducted by Bergman and Sams (2012: 77) that learners who practice this method are very high learning motivation, creativity increases, responsibility increases, learners are more active in the learning process in the classroom, and academic value is better when compared to traditional learning. Likewise, educators also feel they have more time to interact with learners. Flipped classroom is a learning method that must be combined with learning models that support students' competence to think critically. One of the

learning models that motivate the ability to think critically is the problem based learning model. Problem based learning (pbl) is an instructional learner centered approach that empowers learners to conduct research, integrate theory and practice, and apply knowledge and skills to develop a viable solution to defined problem (Walker, et all, 2015:10). The constructionist view of the PBL model places students as active constructors of knowledge flexibly. Knowledge is learned in a meaningful context similar to where the learner applies the knowledge next. PBL also facilitates the development of cognitive learning skills and provides intrinsic learning motivation. In the PBL class, communication also occurs effectively, and students are able to collaborate with other students in conducting experiments (Cennamo, et all, 2011:21). The position of the lecturer as a facilitator in PBL, is tasked with helping to provide experience to students in designing to solve 5 problems related to the subject matter. Students are expected to be able to interact to produce solutions to problems. The combination of problem based learning with flipped classroom can be done by students by exploring problems and learning resources independently asynchronously and discussing the problems found and solving solutions in the classroom synchronously. Such conditions are expected to make classroom learning contain active discussions that give all students the opportunity to be active. Researchers are interested in conducting classroom action research in class A of Electronic Education of Yogyakarta State University class of 2021 by using problem based learning models assisted by the flipped classroom learning methods to increase student learning motivation in civic education learning. The novelty contained in this study when compared to previous research is that there has never been a study of class actions in civic education learning that use problem based learning models assisted by the flipped classroom learning methods.

## **METHOD**

The method used in this study is class action research (CAR). According to Arikunto (Afrianti, et all, 2018: 55) stated that classroom action research is conducted by educators to research or to find solutions in solving problems that occur in classes that are experienced directly in the interaction between educators and learners who are learning in more detail. CAR aims to improve and improve the quality of learning activities and student learning outcomes (Arikunto, 2017: 195). This research was conducted in class A department of Electronics Education, Yogyakarta State University Force 2021 which amounted to 52 students. This study was conducted in two cycles, each cycle was done in 2 meetings. The

stages passed in a class action research cycle are planning, implementation, observation, and reflection. The data collection techniques used in this study are observation, questionnaire, documentation and test techniques. Initial problem collection using observation and interview techniques. The observation is carried out according to the civics lesson schedule at the research site. The interview is an open-ended interview. The instruments used in this research are learning devices in the form of Semester Learning Plans (SLP) and Student Worksheets and research instruments in the form of observation sheets and questionnaires. The criteria for student learning motivation levels are measured in questionnaires as in table 1.

**Table 1.** Motivation Questionnaire Score Criteria

Answer Options	Score
Very often	4
Often	3
Infrequently	2
Very rare	1

The question item in the questionnaire consists of 25 questions that have a choice of answers as in table 1. Based on the number of questions and scores determined, the maximum score that will be achieved by students is 100 and a score of at least 25.

Student learning motivation presentation can be calculated with the formula in figure 1.

$$P_{MS} = \frac{S_k}{\Sigma m} \times 100\%$$

Information figure 1

PMS = Percentage of student motivation

Sk = Overall score obtained

Σm = Maximum number of scores

As for calculating the percentage of student motivation to learn classically by using the figure 2.

$$P_{MS} = \frac{\Sigma \text{Siswa berhasil}}{\Sigma \text{siswa dalam kelas}} \times 100\%$$

Figure 2.

The percentage criteria for student learning motivation. (Yonny, et al in Isnaeni,2013: 67) is presented in table 2.

**Table 2.** Percentage Criteria for Student Learning Motivation

Presentage	Criteria
75%-100%	Very High
50%-74,99%	High
25%-49,99%	Medium

The criteria for individual completion in this study is if the percentage of student learning motivation increases by 70% (Isnaeni, 2013: 67). This research is considered successful if 75% of the total number of students has reached the target of the indicators that have been set.

### **RESULT AND DISCUSSION**

Based on the analysis of data on the results of the implementation of learning actions using problem based learning models assisted by the flipped classroom methods in class A of Electronic Education of Yogyakarta State University Class of 2021 can be concluded to have fulfilled all aspects of the indicators of success that have been determined. Observed indicators include increased student learning motivation. Factors that affect student learning motivation, one of which is from educational institutions or educators, namely including teaching methods and learning media used by educators (Slameto,2015:66-69). Before the action is carried out by using the learning actions using problem based learning models assisted by the flipped classroom methods during learning activities carried out by lecture methods, educators or lecturers tend to only explain the material from start to finish without using learning media, and not infrequently the explanation is passed from one topic to another so that students feel bored and not interested in the learning process which results in low motivation to learn. Learning activities are more dominated by lecturers. Less interesting learning will make students feel bored and not interested in following the learning process. Many students still do not want to ask when asked to ask, when asked to respond to lecturer's questions, students are unable to respond. Based on existing problems, improvements are needed by using learning actions using problem based learning models assisted by the flipped classroom methods to increase student learning motivation. The results of observations during learning activities in the classroom before using problem based learning models assisted by the flipped classroom, researchers saw that students of class A

of Electronic Education of Yogyakarta State University class of 2021 tended to be bored and less eager in participating in the learning process. Most students of class A of Electronic Education of Yogyakarta State University class of 2021 have low motivation. This is evidenced by the results of observations and interviews on student learning motivation which shows that the average percentage of student civic education motivation is only 55.49%. Before taking action, students tend to be reluctant to respond to questions from lecturers and not ask questions. After using learning actions using problem based learning models assisted by the flipped classroom methods increased in cycle I to 66.96% and increased again in cycle II to 80.37%. This increase is evidenced by the achievement of a predetermined success indicator of 75%. Basically the concept of flipped classroom is what was traditionally done in the classroom now done at home, while what was traditionally done as homework is now done in the classroom (Bergmann & Sams, 2012: 13). This research was conducted using two cycles on the same subject matter, namely "Harmonization of Rights and Obligations of Citizens". The implementation of cycle I begins with the planning stage. At the planning stage, the lecturer make semester learning plans and learning media in the form of learning videos, student worksheets, educational books, and relevant books. Learning media, then uploaded to whats-app or learning managerial system used in supporting learning activities. The delivery of learning materials is packaged in learning media. The implementation of classroom learning is carried out by solving real problems or problems related to the material "Harmonization of Rights and Obligations of Citizens". The syntax of the problem based learning model combined with flipped classroom is as follows.

1. Orientation of students to the problem.

Students are asked to observe contextual problems on Learner Worksheets that have been shared asynchronously and ask questions of those contextual problems associated with the material to be studied

2. Organizing students to learn

Students are asked to learn teaching materials in the form of e-modules and learning videos that have been previously shared on certain platforms such as google-classroom. Students are divided into groups to discuss.

3. Guiding student investigations

Students conduct group discussions through discussion forums and are guided by teachers in working on Student Worksheets, discussion forums can use a learning managerial system or whats-app group. Discussions can be conducted asynchronously and can be

continued on synchronous activities.

4. Develop and present the work

Students present the results of the discussion in synchronous activities with online whiteboard media through video conference with teachers using google meet or zoom

5. Analyze and evaluate the problem-solving process

Students analyze and evaluate the results of work by comparing the results of the work of other groups, if there are differences teachers help clarify the correct work results together with students.

At the end of the lesson, the teacher provides an evaluation test and a learning reflection form that students do asynchronously. From the results of the reflection, students stated that they like learning with a combination of synchronous and asynchronous because students understand the material provided better than learning only through platforms without synchronous learning through video conferencing.

After a series of learning activities have been passed through reflection activities. Cycle II is carried out at the same stage as cycle I. In cycle II there is an increase in learning motivation by 13.41% from the previous cycle to 80.37%. Students begin to get used to and enjoy the learning process with the flipped classroom method when cycle II is applied. There are many indicators used in this study as follows

1. There is an interest in various problems

In pre-action in class, students tend to be silent and do not activate the camera. When the teacher asks a question, no student answers the question. This is evidenced by the percentage obtained which is only 52.81% with high criteria. Increased in cycle I to 60.31%. Increased in cycle I because lecturers have used the problem based learning model assisted by the flipped classroom method so that students have started to be interested when lecturers give assignments and hold discussions in the classroom. Learning motivation presentations increased again in cycle II to 79.68%. In cycle II students are already interested and enthusiastic in listening to the explanation given by lecturers. In accordance with learning activities, student learning motivation has increased in interest in working on problems, self-study and active discussion in the classroom. A person who has an achievement motive tends to try to complete the task completely, without procrastinating his work (Uno, 2012: 28).

2. Happy to find and solve problems.

In pre-action there are only a few students who try to do difficult tasks, which is only 51.56% of students who try to solve problems. In cycle I it increases to 60.16%, and in cycle II it

increases again to 76.95%. In cycle I and cycle II can increase because students are already interested in learning provided by lecturers. Students are trying to do a difficult task. Students do tasks by previously learning first from home and in the classroom students work on projects, solve problems together, and discuss actively, so students are more interested in doing tasks. If the learner has high motivation, he is able to overcome difficulties (solving problems) arising from every teaching and learning process faced both in the classroom and in his environment (Solikhah, 2010: 89).

3. Diligently facing the task.

The use of problem based learning model assisted by the flipped classroom method encourages students to be aware of self-study that can be done anywhere and anytime. Activities to do tasks in the classroom encourage students to be more diligent because of the time limit to finish at that time. In addition, if in doing the task, students find problems or difficulties they can directly ask the lecturer. By using such problem based learning model assisted by the flipped classroom method, make students become more diligent in doing tasks. Before using the problem based learning model assisted by the flipped classroom method on the percentage of pretindakan obtained only 53.12%. After using the problem based learning model assisted by the flipped classroom method increased to 74.68% in cycle I and increased again in cycle II to 81.56%.

4. Can express opinions and respond to the opinions of study friends.

The problem based learning model assisted by the flipped classroom method places the completion of tasks and projects in a face-to-face classroom. That way problem solving can be implemented together through active discussion. When the task or project has been done, the student will present it and other students will respond and ask questions. The percentage obtained in pre-opressant is 55.20%, increases in cycle I to 57.29%, and increases again in cycle II to 76.04%. The problem-solving process carried out with friends is effective in increasing understanding and interest in learning in students. Research conducted by Ahmad Jaenudin (2009: 40) shows that study friends can motivate students to learn, be active, and complete their tasks.

5. There are interesting activities in learning.

Interesting activities in learning are created by lecturers to increase student learning motivation. In pre-bullying only 58.85% of students overall were interested and happy with the learning provided by lecturers. In cycle I after the action, the student's learning motivation increased to 65.1%. It then increased again to 80.72%. Flipped classroom activities are a

learning method that is relatively rarely applied in Indonesia. The lack of student experience in using this method of learning previously encourages their curiosity and interest. Flipped classroom is a learning model developed by Jonathan Bergmann & Aaron Sams in 2008 based on the Theory of Mastery Learning by Bloom & Carrol which is then combined with the use of technology in education to increase the effectiveness of learning outcomes (Bergmann & Sams, 2012: 10). The use of technology to support the application of flipped classroom learning model is increasingly compatible with habit students who are generation z who tend to be familiar with technology.

Based on the above explanation, it can be concluded that using the problem based learning model assisted by the flipped classroom method can increase the motivation to learn Citizenship Education students of class A Electronic Education Of Yoyakarta State University Force 2021. The application of flipped classroom methods was also successful in Spain as was a study conducted by Jose Maria and Pedro Mirrales entitled "*Effectiveness of The Flipped Classroom Model on Students' Self- Reported Motivation and Learning During the COVID-19 Pandemic*" (2021). The results showed that most students have a positive perception of *flipped classrooms*, nothing the benefits of practical activities in the classroom, as well as increased self- autonomy in learning. The application of problem based learning model assisted by the flipped classroom method can be an alternative learning method that is suitable to be applied in the covid-19 pandemic. problem based learning model assisted by the flipped classroom method in citizenship education courses gives students independence of study. The free learning program has also become the discourse of the Ministry of Education and Culture in 2021. So that this method is very suitable to support the free-to-be program. Freedom for students to access learning resources, study materials without limited space and time, and criticize real phenomena in society can further develop student competence in civic skill, civic desposition, and civic knowledge. Students in learning every subject matter, students are encouraged to master the material well and not just graduate, although with very good grades even Pujadi (2007:76). Increasing the motivation of students in studying Citizenship Education will have an impact on their learning achievement. Rachmanita (2010: 217) in his research stated, students who excel in addition to having high motivation, also have a need for strong achievements.

## **CONCLUSION**

Based on the results and discussion, it can be concluded that by using the problem based learning model assisted by the flipped classroom method can increase student learning motivation in citizenship education courses material rights and obligations of citizens in class A Electronic Education of Yogyakarta State University Force 2021. Increased student learning motivation is obtained from questionnaires filled by students and student motivation observation sheets. Data obtained from the results of the spread of questionnaires showed that the increase in student learning motivation increased from cycle I to cycle II. Student learning motivation in pre- action was only 55.49% with high criteria increased to 66.97% I with high category and increased in cycle II to 80.37% with very high category.

### **RECOMENDATION**

Based on the results of the analysis and conclusions, the researcher gave several recommendations as follows.

1. Class action research on increasing student learning motivation in civic education learning through a problem-based learning model assisted by the flipped classroom method has a positive impact and there is an improvement in the learning process. For this reason, it is for lecturers or lecturers to develop similar research that can contribute positively and support successful learning.
2. Class action research on increasing student learning motivation in civic education learning through a problem-based learning model assisted by the flipped classroom method has positive results for improving the quality of civic education learning in higher education. For this reason, the innovation of this learning method can be applied in the learning process.
3. In connection with this study taking on limited subjects, very specific material, and simple methods, the researcher suggests to other parties to conduct further research on this topic on a broader subject, more general material, and more relevant methods so that it can be an ongoing research.
