

# III INTERNATIONAL SIIRT CONFERENCE ON SCIENTIFIC RESEARCHES

'18-19 November 2022'

## CONFERENCE PROCEEDING BOOK

### EDITORS:

Prof. Dr. Cahit PESEN  
Assoc. Prof. Dr. Seyithan SEYDOSOGLU  
Assist. Prof. Dr. Enser YILMAZ  
Assoc. Prof. Dr. Seyfettin KAYA

**III. INTERNATIONAL SIIRT CONFERENCE  
ON SCIENTIFIC RESEARCH**

**Siirt University  
November 18-19, 2022**

**CONFERENCE PROCEEDINGS BOOK**

**EDITOR**

**Prof. Dr. Cahit PESEN**

**Assoc. Prof. Dr. Seyithan SEYDOŞOĞLU**

**Assoc. Prof. Dr. SEYFETTİN KAYA**

**Assist. Prof. Dr. Enser YILMAZ**

**All rights of this book belongs to ISPEC Publishing House.**

**Without permission can't be duplicate or copied.**

**Authors of chapters are responsible both  
ethically and juridically.**

**ISSUED: 25/12/2022**

**ISBN: 978-625-6380-99-8**

## **CONFERENCE ID**

### **CONFERENCE TITLE**

**III. INTERNATIONAL SIIRT CONFERENCE ON SCIENTIFIC RESEARCH**

### **ORGANIZATION**

**Siirt University**

### **HONORARY PRESIDENT OF CONFERENCE**

**Prof. Dr. Nihat ŞINDAK**  
**Rector of Siirt University**

### **HONOR BOARD**

**Prof. Dr. Cemalettin ERDEMCI**

**Prof. Dr. Tekin ŞAHİN**

**Prof. Dr. Cahit EPCACAN**

**Prof. Dr. Cafer ŞAKA**

**Prof. Dr. Cetin KARADEMİR**

**Prof. Dr. Ekrem ORBAY**

**Prof. Dr. Hasan Basri MEMDUHOGLU**

**Prof. Dr. Mürsel ÇELİK**

### **PRESIDENT OF CONGRESS**

**Prof. Dr. Cahit PEŞEN**

### **GENERAL COORDINATOR**

**Assoc. Prof. Dr. Seyithan SEYDOSOGLU**

### **PARTICIPATING COUNTRIES**

**Türkiye, Albania, Algeria, Azerbaijan, Bangladesh, Bulgaria, Burkina Faso, Canada, Cyprus, Ethiopia, Georgia, Germany, India, Indonesia, Iran (Persia), Jordan, Kazakhstan, Libya, Macedonia, Malaysia, Morocco, Niger, Nigeria, Pakistan, Philippines, Rumania, Saudi Arabia, Slovenia, South Korea, Sri Lanka, Uganda, Ukraine, Vietnam**

### **TOTAL ACCEPTED ARTICLE**

**Turkey: 230**

**Other Countries: 238**

## **SCIENCE BOARD**

**Prof. Dr. Hüseyin Yaşar (Siirt University)**

**Prof. Dr. Rezzan Karakaş (Siirt University)**

**Prof. Dr. Ömer Yavuz (Dicle University)**

**Prof. Dr. Ali Akgül (Siirt University)**

**Prof. Dr. Atilla Batur (Dumlupınar University)**

**Prof. Dr. Cafer Saka (Siirt University)**

**Prof. Dr. Ömer Şahin (İstanbul Teknik University)**

**Prof. Dr. Arzdar Kiracı (Siirt University)**

**Prof. Dr. Sedat Benek (Harran University)**

**Prof. Dr. Mustafa Argunşah (Erciyes University)**

**Prof. Dr. Bayram Durbilmez (Nevşehir Hacı Bektaş Veli Ü University)**

**Prof. Dr. Ahmet Selim Dalkılıç (Yıldız Teknik University)**

**Assoc. Prof. Murat Serdar (Tokat Gaziosmanpaşa University)**

**Assoc. Prof. Melih Kuncan (Siirt University)**

**Assoc. Prof. Naci Ömer Alayunt (Siirt University)**

**Assoc. Prof. Ulaş BİNGÖL (Emir Abdelkader University)**

**Dr. Ahmet Uğur (Université d'Algeria)**

**Dr. Nihayet KOCYIGIT (Batman University)**

**Dr. Öğretim Üyesi Mahmut Kaya (Siirt University)**

**Dr. Muhammet Ücretini (Emir Abdelkader University)**

**Dr. Adnan Akhter (University of Punjab)**

**Dr. Akbar HOSSAIN (Bangladesh Wheat and Maize Research Institute)  
(BWMRI)**

**Dr. Alfonso CUESTA MARCOS (Bayer Crop Science)**

**Dr. Allah WASAYA (College of Agriculture, BZU, Bahadur Sub-Campus  
Layyah)**

**Dr. Ayman ELSABAGH (Kafrelsheikh University)**

**Dr. Elham MOTALLEBI (Islamic Azad University)**

**Dr. Muhammad Aamir IQBA (University of the Poonch Rawalakot (AJK))**

**Dr. Muhammad Ali RAZA (Sichuan Agricultural University)**

**Dr. Muhammad MUBEEN COMSATS (University Islamabad, Vehari  
Campus)**

**Dr. Serkan ATEŞ (Oregon State University)**

**Dr. Shah FAHAD (The University of Swabi)**

**III-INTERNATIONAL  
SIIRT CONFERENCE  
ON SCIENTIFIC RESEARCH  
Siirt University, November 18-19, 2022**

---

**CONFERENCE PROGRAM**

---

**Zoom Meeting ID: 864 8881 6529  
Zoom Passcode: 003300**

## IMPORTANT

- To be able to make a meeting online, login via <https://zoom.us/join> site, enter ID instead of “Meeting ID or Personal link Name” and solidify the session.
- The presentation will have **15 minutes** (including questions and answers).
- The Zoom application is free and no need to create an account.
- The Zoom application can be used without registration.
- The application works on tablets, phones and PCs.
- Speakers must be connected to the session **15 minutes before the** presentation time.
- All congress participants can connect live and listen to all sessions.
- During the session, your camera should be turned on at least %70 of session period
- Moderator is responsible for the presentation and scientific discussion (question-answer) section of the session.

## TECHNICAL INFORMATION

- Make sure your computer has a microphone and is working.
- You should be able to use screen sharing feature in Zoom.
- Attendance certificates will be sent to you as pdf at the end of the congress.
- Moderator is responsible for the presentation and scientific discussion (question-answer) section of the session.

**Before you login to Zoom indicate hall number and your surname  
(Hall-1, Sevda KOC-AKRAN)**

---

---

## ÖNEMLİ

- Kongremizde Yazım Kurallarına uygun gönderilmiş ve bilim kurulundan geçen bildirimler için online (video konferans sistemi üzerinden) sunum imkanı sağlanmıştır.
- Online sunum yapabilmek için <https://zoom.us/join> sitesi üzerinden giriş yaparak “Meeting ID or Personal Link Name” yerine ID numarasını girerek oturuma katılabilirsiniz.
- Sunumlar için **15 dakika** (soru ve cevaplar dahil) süre ayrılmıştır.
- Zoom uygulaması ücretsizdir ve hesap oluşturmaya gerek yoktur.
- Zoom uygulaması kaydolmadan kullanılabilir.
- Uygulama tablet, telefon ve PC’lerde çalışmaktadır.
- Sunum yapacakların sunum saatinden **15 dk önce** oturuma bağlanmış olmaları gerekmektedir.
- Tüm katılımcılar oturumlara online katılıp dinleyebilir.
- Oturumdaki sunumlardan ve bilimsel tartışmalardan (soru-cevap) oturum başkanları sorumludur.
- Sunumlar için **15 dakika** (soru ve cevaplar dahil) süre ayrılmıştır.

## TEKNİK BİLGİLER

- Bilgisayarınızda çalışır durumda mikrofon bulunmalıdır.
- Zoom’da ekran paylaşma özelliği kullanılabilir.
- Katılım belgeleri kongre sonunda tarafınıza pdf olarak gönderilecektir.
- Kongre programında yer ve saat değişikliği gibi talepler dikkate alınmayacaktır.

**Zoom'a girişte sırayla salon numarasını ve soyadınızı yazınız  
(Salon-1, Enser YILMAZ)**

# -Opening Speech-

**Date: 18.11.2022**

**Ankara Time: 10.30 - 11.00**

\*\*\*

**Prof. Dr. Cahit PESEN**

Chairman of the Organizing Committee

\*\*\*

**Dr. Mustafa Latif EMEK**

Chairman of the IKSAD

\*\*\*

**Prof. Dr. Nihat ŞINDAK**

Rector of Siirt University

**Zoom Meeting ID: 864 8881 6529**

**Zoom Passcode: 003300**

## **PARTICIPATING COUNTRIES:**

Türkiye, Albania, Algeria, Azerbaijan, Bangladesh, Bulgaria, Burkina Faso, Canada, Cyprus, Ethiopia, Georgia, Germany, India, Indonesia, Iran (Persia), Jordan, Kazakhstan, Libya, Macedonia, Malaysia, Morocco, Niger, Nigeria, Pakistan, Philippines, Rumania, Saudi Arabia, Slovenia, South Korea, Sri Lanka, Uganda, Ukraine, Vietnam

**18.11.2022 / Session-1 / Hall-1**

Ankara Local Time: 13<sup>30</sup>-15<sup>30</sup>

Siirt University, Faculty of Arts and Sciences

**HEAD OF SESSION: Prof. Dr. Murat GULMEZ**

Authors	Affiliation	Presentation title
Muhammed Ahmed Selçuk Figen Çelik Harun Kaya Kesik Şeyma Günyakti Kiliç Sami Şimşek	Siirt University	In-silico Determination of Phylogenetic Analysis and Haplotype Diversity of Human Echinococcus granulosus sensu stricto (G1 genotype) Using Mitochondrial CO1 and ND1 Gene Markers
Murat Gülmez Kübranur Yıldız Bayhan Sefa Üner	Siirt University	Development of a process suitable for cow's milk kumiss production
Murat Gülmez Kübranur Yıldız Bayhan Sefa Üner	Siirt University	Technical, Physical, Chemical and Microbiological Analyses of Siirt Herby Cheese
Ebru Bilen Serpil Kahya Demirbilek Öznur Yılmaz Muhammet Ali Karadağ Havva Kurnaz	Siirt University	Kedi Ve Köpeklerde Farklı Hatlardan Yapılan Ovariohisterektomi Sonrası Operasyon Bölgesinden İzole Edilen Bakteriler Ve Antimikrobiyal Duyarlılıkları
Muhammed Ahmed Selçuk Figen Çelik Burçak Aslan Çelik	Siirt University	Investigation of Endoparasites in Sheeps of Siirt Province

## Picture Fuzzy Set

Including more possible types of uncertainty, Cuong [5] defined picture fuzzy set (PFS) in 2014 generalizing the concepts of fuzzy set and intuitionistic fuzzy set.

**Definition**

Let  $X$  be the universe. Then a PFS  $A$  is defined on  $X$  as  $A = \{r, (\mu_A(r), \eta_A(r), \nu_A(r)) : r \in X\}$ , where  $\mu_A(r), \eta_A(r), \nu_A(r) \in [0, 1]$  denote the degree of truth membership (DTMS), degree of abstention membership (DAMS), degree of false membership (DFMS) of  $r \in A$ , respectively with  $0 \leq \mu_A(r) + \eta_A(r) + \nu_A(r) \leq 1 \forall r \in X$ . Also  $\forall r \in X, D_A(r) = 1 - (\mu_A(r) + \eta_A(r) + \nu_A(r))$  represent denial degree of  $r \in A$ . Here,  $\mu_A(r), \eta_A(r), \nu_A(r)$  all are independent.

4. TARTIŞMA VE SONUÇ

- ✓ Bu çalışmada, ülkemizdeki yükseköğretimdeki tohumculuk eğitiminin mevcut durumu ortaya konulmaya çalışılmıştır.
- ✓ Yapılan araştırmalar sonucunda, lisans düzeyinde eğitim verilen **Ziraat Fakültelerinin (36 adet)** tamamında tohumculukla ilgili dersler verildiği saptanmıştır. Günümüze kadar **toplam 84 adet meslek yüksek okulunda** tohumculukla ilgili derslerin verildiği program olduğu saptanmıştır.
- ✓ Ancak meslek yüksekokullarında farklı adlarla açılmış olan tohumculuk derslerinin (**organik tohumculuk ve fibbi aromatik bitkiler tohumculuğu programları hariç**) birçoğunun, ders içeriklerini incelendiğinde lisans düzeyinde verilen tek bir tohumculuk derslerine karşılık geldiği görülmüştür.
- ✓ Bu durumun tohumculuk sektörüne bir kazanım sağlamayacağı, gerek meslek yüksek okullarında gerekse Ziraat Fakültelerinde teorik derslerin yanı sıra, uygulamalı derslere de ağırlık verilmesi gerektiği bilinmektedir.

**Giriş (Introduction)**

Bitki - toprak sistemine Yağış (P) ile giren su miktarı kazanç olarak ifade edilmektedir. Yüzeysel akış (R), sızma (D<sub>s</sub>) ve evapotranspirasyon (ET) ile sistemden çıkan su miktarları ise kayıp olarak ifade edilmektedir. Sisteme giren (kazanc) ve çıkan (kayıp) su miktarlarını eşitlediğimizden yararlanılarak ET en doğru şekilde belirlenebilmektedir (Eşitlik 1). P ve D<sub>s</sub> parametreleri sırasıyla pluviyometre (Şekil 2) ve lysimetre (Şekil 3) kullanılarak ölçülebilmektedir. R ise yüzeysel akış katsayılarına dayalı bazı empirik yöntemler kullanılarak tahmin edilebilmektedir. Fakat bu ölçme ve tahmin işlemleri çok zor ve zaman alıcı olmaktadır.

Bu nedenle daha kolay ölçülebilir veya tahmin edilebilir parametreler olan hava sıcaklığı (T), nispetel nem (RH), solar radyasyon (R<sub>s</sub>) ve rüzgar hızına (U<sub>s</sub>) dayalı empirik yöntemler kullanılarak ET miktarının tahmin edilmesi yolu pratikte daha çok tercih edilmektedir.

$$P = R + D_s + ET \qquad ET = P - (R + D_s) \quad (1)$$

The amount of water entering the plant - soil system with precipitation (P) is expressed as gain. The amount of water leaving the system with surface runoff (R), infiltration (D<sub>s</sub>) and evapotranspiration (ET) are expressed as loss. ET can be determined most accurately by utilizing the equality of the amount of water entering (gain) and leaving (loss) water in the system (Equation 1). The P and D<sub>s</sub> parameters can be measured using the pluviometer (Figure 2) and lysimeter (Figure 3), respectively. R can be estimated using some empirical methods based on surface runoff coefficients. However, these measurement and estimation processes are very difficult and time consuming.

Therefore, in practice, it is more preferred to estimate the amount of ET using empirical methods based on air temperature (T), relative humidity (RH), solar radiation (R<sub>s</sub>) and wind speed (U<sub>s</sub>), which are more easily measurable or available parameters.

**ÖZET**

*Echinococcus granulosus* ve genetik varyantlarının neden olduğu kistik ekinokokkozis (CE), insanlarda önemli morbiditeye yol açan, ihmal edilmiş bir zoonotik hastalıktır. Bu çalışma ile farklı ülkelerden NCBI veri tabanına kayıt edilen insan *E. granulosus sensu stricto* (G1 genotipi) mitokondriyal CO1 ve ND1 gen sekanslarının filogenetik analizlerinin yapılarak genetik ve haplotip çeşitliliklerinin in-silico analiz yöntemi ile ortaya konulması amaçlanmıştır. Analizler için 401 bp uzunluğunda mt-CO1 (n=133) ve 407 bp uzunluğunda mt-ND1 (n=140) gen dizilerini içeren toplam 273 gen sekansı kullanıldı. Diziler hizalandıktan sonra filogenetik ve haplotip analizlerine tabi tutuldu. mt-CO1 gen dizilerinde 31 farklı noktada ve mt-ND1 gen dizilerinde 100 farklı noktada mutasyonlar gözlemlendi. Haplotip analizi

sonucunda mt-CO1 gen dizilerinde 34 haplotip, mt-ND1 gen dizilerinde ise 37 haplotip belirlendi. Tajima D ve Fu'nun Fs, Fu'nun LD değerleri hem mt-CO1 hem de mt-ND1 bölgelerinde yüksek negatiflik gösterdiği belirlendi. mt-CO1 veri seti incelendiğinde, en yüksek Fiksasyon indeksi (Fst) İspanya ve Finlandiya arasında (0,33333) bulunurken, en düşük Hindistan ve Çin arasında (-0,05120) bulundu. Ayrıca mt-ND1 veri seti incelendiğinde en yüksek Fst, İspanya ile Finlandiya arasında (0,33333), İspanya ile Peru arasında (0,33333), İspanya ile Polonya arasında (0,33333), İspanya ile Moğolistan arasında (0,33333), en düşük ise Irak ve İran (-0,00873) arasında bulundu. Bu çalışma ile *E. granulosus* s.s. G1 genotipinin dünya çapındaki epidemiyolojisi, dağılım modeli, bulaşma dinamikleri, popülasyon dağılımı ve haplotipleri hakkında gelecekte yapılacak çalışmalar için bir model olacak veriler elde edilmiştir.

**IN-SILICO DETERMINATION OF PHYLOGENETIC ANALYSIS AND  
HAPLOTYPE DIVERSITY OF HUMAN ECHINOCOCCUS GRANULOSUS SENSU  
STRICTO (G1 GENOTYPE) USING MITOCHONDRIAL CO1 AND ND1 GENE  
MARKERS**

**ABSTRACT**

Cystic echinococcosis (CE), caused by *Echinococcus granulosus* and its genetic variants, is a neglected zoonotic disease that causes significant morbidity in humans. In this study, it was aimed to perform phylogenetic analyzes of human *E. granulosus sensu stricto* (G1 genotype) mitochondrial CO1 and ND1 gene sequences registered in the NCBI database from different countries and to reveal genetic and haplotype diversity by in-silico analysis method. A total of 273 gene sequences including 401 bp long mt-CO1 (n=133) and 407 bp long mt-ND1 (n=140) gene sequences were used for analyses. After the sequences were aligned, they were subjected to phylogenetic and haplotype analyzes. Mutations were observed at 31 different points in the mt-CO1 gene sequences and at 100 different points in the mt-ND1 gene sequences. As a result of haplotype analysis, 34 haplotypes were determined in mt-CO1 gene sequences and 37 haplotypes in mt-ND1 gene sequences. It was determined that Tajima D and Fu's Fs and Fu's LD values showed high negativity in both mt-CO1 and mt-ND1 regions. When the mt-CO1 dataset was analyzed, the highest Fixation index (Fst) was found between Spain and Finland (0.33333), while the lowest was found between India and China (-0.05120). In addition, when the mt-ND1 dataset is examined, the highest Fst is between Spain and Finland (0.33333), between Spain and Peru (0.33333), between Spain and Poland (0.33333), between Spain and Mongolia (0.33333), the lowest was found between Iraq and Iran (-0.00873). With this study, *E. granulosus s.s.* Data on the worldwide epidemiology, distribution pattern, transmission dynamics, population distribution and haplotypes of the G1 genotype have been obtained, which will serve as a model for future studies.

**ÖZET**

Paraziter hastalıklar, dünya üzerinde insan ve evcil hayvanlarda önemli bir problem olarak verim düşüklüğüne ve bazen de ölümlere sebep olmaktadır. Hayvanlarda verim düşüklüğüne neden olan helmint ve protozoon hastalıkları çoğu kez subklinik olarak seyrettiklerinden dolayı genç hayvanlarda gelişme geriliğine, yaşlı hayvanlarda ise et, süt, döl ve kalite bozukluklarına yol açmaktadır. Bu çalışmanın amacı, koyun yetiştiriciliğinde önemli bir potansiyele sahip olan Siirt ili koyunlarda endoparazitlerin yaygınlığının tespit edilmesidir. Bu amaçla, Siirt ili merkez ve Kurtalan, Baykan, Aydınlar, Pervari, Eruh, Şirvan ilçeleri olmak üzere 7 farklı lokasyonda otlatılan 1 yaşından büyük ve meraya çıkmış koyunlardan 250 adet dışkı örneği toplanmıştır. Bu örnekler Siirt Üniversitesi, Veteriner Fakültesi Parazitoloji Laboratuvarına soğuk zincir altında getirilerek muayene edilmiştir. Laboratuvara getirilen her bir koyun dışkı örneği, trematod, cestod ve nematod yumurtaları ile *Eimeria* ookistlerinin teşhisi amacıyla Fülleborn'un doymuş tuzlu su metodu ve Modifiye Benedek sedimantasyon yöntemleri kullanılarak muayene edilmiştir. Dışkı muayenesi yapılan 250 koyunun 62'sinde (% 24,8) *Eimeria* sp., 147'sinde (%58,8) ise helmint türleri tespit edilirken, 24'ünde (%9,6) de miks enfeksiyonlar (*Eimeria* sp. + Helmint türleri) görülmüştür. Yapılan dışkı muayenesinde helmint türleri olarak, *Fasciola* sp. (%1,2), *Dicrocoelium dentriticum* (%0,4), *Moniezia* sp. (%1,2), Trichostrongylidae sp. (%55,6), *Trichuris* sp. (%6,4) yumurtaları tespit edilmiştir. Ayrıca helmint türleri arasında da miks enfeksiyonlar görülmüştür. Sonuç olarak Siirt ve yöresinde yapılan bu çalışmada koyunlardan alınan dışkı örneklerinde endoparazitlerin yaygın olarak görüldüğü ve önemli bir problem teşkil ettiği saptanmıştır. Bu sebeple hem yetiştiricilerin paraziter hastalıklar konusunda bilinçlendirilmesi hem de bu hastalıklara karşı korunma ve kontrol programlarının geliştirilmesi önem arz etmektedir.

**Anahtar Kelimeler:** Siirt, koyun, dışkı, endoparazit

---

**INVESTIGATION OF ENDOPARASITES IN SHEEPS OF SIIRT PROVINCE**

**ABSTRACT**

Parasitic diseases cause low productivity and sometimes death as an important problem in humans and domestic animals around the world. Since helminth and protozoan diseases, which cause low productivity in animals, often progress subclinically, they cause growth retardation in young animals and meat, milk, progeny and quality disorders in old animals. The aim of this study is to determine the prevalence of endoparasites in sheep in Siirt province, which has an important potential in sheep breeding. For this purpose, 250 stool samples were collected from sheep over 1 year old and grazed in 7 different locations, namely in the center of Siirt and in Kurtalan, Baykan, Aydınlar, Pervari, Eruh, Şirvan. These samples were brought to Siirt University, Faculty of Veterinary Medicine Parasitology Laboratory under cold chain and then examined. Each sheep fecal sample brought to the laboratory was examined using Fülleborn's saturated brine method and Modified Benedek sedimentation methods for the identification of trematode, cestode and nematode eggs and *Eimeria* oocysts. As a result of stool examination of 250 specimens; *Eimeria* sp. in 62 (24.8%) sheep, helminth species in 147 (58.8%) sheep, mix infection (*Eimeria* sp. + Helminth species) in 24 (9.6%) sheep were detected. As helminth species in the stool examination, *Fasciola* sp. (1.2%), *Dicrocoelium dentriticum* (0.4%), *Moniezia* sp. (1.2%), Trichostrongylidae sp. (55.6%), *Trichuris* sp. (6.4%) eggs were detected. Mixed infections were also observed among helminth species. As a result, in this study conducted in Siirt and its region, it was determined that endoparasites were widely seen in stool samples taken from sheep and constituted a significant problem. For this reason, it is important to raise awareness of breeders about parasitic diseases and to develop protection and control programs against these diseases.

**ÖZET**

Dünya çapında gittikçe artan, hayvan ve insan sağlığını etkileyen antimikrobiyal dirençli mikroorganizmalar çok önemli bir sorun teşkil etmektedir. Mikrobiyal direncin üstesinden gelmek için yeni antimikrobiyal ajanlara ihtiyaç duyulmaktadır. Arı kovanlarından elde edilen propolis ve arı sütü antibakteriyel, antioksidan, antienflamatuar gibi birçok fonksiyonel özelliklere sahip kompleks bileşiklerdir. Bu çalışmanın temel amacı Siirt'in Pervari yöresine ait propolis ve arı sütünün *Br. abortus* S19 suşu üzerindeki antibakteriyel etkisini araştırmaktır. Bu amaçla propolisin çeşitli oranlardaki etanolik ekstrasyonları ile arı sütünün çeşitli oranlardaki dilüentleri tüp dilüsyon ve disk difüzyon yöntemleri ile *Br. abortus* S19 suşu için antimikrobiyal duyarlılık testleri yapıldı. Disk difüzyon için boş antibiyotik disklerine (5mm çaplı) %96'luk etanolün 50 mikrolitresinde sırasıyla 5 mg, 2,5 mg, 1,25 mg, 0,6 mg, 0,3 mg, 0,15 mg ve 0 mg (kontrol) propolis olacak şekilde 50 µL emdirildikten sonra diskler kurutuldu. Saf arı sütü distile su ile %100, %50, ... %3,12 şeklinde dilue edildi, diluentlerden 50 µL alınarak boş antibiyotik disklerine emdirilerek kurutuldu. Hazırlanan diskler 0.5 McFarland yoğunluğunda hazırlanmış *Br. abortus* S19 suşu inoküle edilmiş %5 fetal buzağı serumu içeren tryptic soy agar (TSA) besiyerlerine belli aralıklarla yerleştirildikten sonra 3 gün boyunca 37 °C'de mikroaerofilik ortamda inkübe edildi. Tüp dilüsyon için 2 mL %5 fetal buzağı serumu içeren tryptic soy brotha (TSB) 50 mg propolis içeren ekstrat ilave edilerek seri dilüsyonları yapıldı, arı sütü dilüsyonu için 1,5 mL TSB'a 0,5 mL saf arı sütü eklenip homojenize edilerek seri dilüsyonları yapıldı. Tüm tüplere 100 µL 0.5 McFarland yoğunluğunda hazırlanmış *Br. abortus* S19 suşu inoküle edilerek 3 gün boyunca 37 °C'de mikroaerofilik ortamda inkübe edildi. Tüp dilüsyonda propolisin minimal letal konsantrasyonu (MLK) 1,56 mg/mL bulunurken, arı sütünün MLK 125 µL/ mL olarak belirlendi. Propolis emdirilmiş disklerin zon çapları sırasıyla 5 mg-18 mm, 2,5 mg-16 mm, 1,25 mg-15 mm, 0,6 mg-13 mm, 0,3 mg-11 mm, 0,15 mg-9 mm ve sadece çözücü emdirilmiş disk çevresinde zon görülmedi. 50, 25 ve 12,5 µL arı sütü emdirilmiş diskler sırasıyla 16mm, 14mm ve 13mm çapında zonlar oluştururken devam eden konsantrasyonlarda zon görülmedi. Sonuç olarak propolis ekstraktı ve arı sütünün *Br. abortus* S19 suşu üzerine antibakteriyel etkili olduğu belirlendi.

**Anahtar kelimeler:** Antibakteriyel, propolis, arı sütü, *Brusella*

**ANTIBACTERIAL EFFECT OF PROPOLIS EXTRACT AND ROYAL JELLY  
FROM THE PERVARI REGION OF SIIRT AGAINST *Brucella abortus* S19 STRAIN**

---

**ABSTRACT**

Antimicrobial resistant microorganisms, which are increasing worldwide and affecting animal and human health, constitute a very important problem. New antimicrobial agents are needed to overcome microbial resistance. Propolis and royal jelly obtained from beehives are complex compounds with many functional properties such as antibacterial, antioxidant, anti-inflammatory. The main purpose of this study was to investigate the antibacterial effect of propolis and royal jelly from the Pervari region of Siirt on *Br. abortus* S19 strain. For this purpose, antimicrobial susceptibility tests were performed for *Br. abortus* S19 strain using ethanolic extractions of propolis at various rates and diluents of royal jelly at various rates by tube dilution and disc diffusion methods. After impregnating 50 µL of 5 mg, 2.5 mg, 1.25 mg, 0.6 mg, 0.3 mg, 0.15 mg and 0 mg (control) propolis in 50 microliters of 96% ethanol on empty antibiotic discs (5 mm diameter) for disk diffusion, respectively, the discs were dried. Pure royal jelly was diluted with distilled water as 100%, 50%, ... 3.12%, 50 µL of diluents was taken and dried by absorbing into empty antibiotic discs. The prepared discs were placed in tryptic soy agar (TSA) medium containing 5% fetal calf serum, prepared at 0.5 McFarland density, inoculated with *Br. abortus* S19 strain, and then incubated in a microaerophilic environment at 37 °C for 3 days. Serial dilutions were made by adding 50 mg of propolis extract to tryptic soy broth (TSB) containing 2 mL of 5% fetal calf serum for tube dilution. For royal jelly dilution, 0.5 mL of pure royal jelly was added to 1.5 mL of TSB and homogenized. dilutions were made. 100 µL of 0.5 McFarland concentration prepared *Br. abortus* S19 strain was inoculated into all tubes and incubated in a microaerophilic environment at 37 °C for 3 days. While the minimal lethal concentration (MLC) of propolis was found to be 1.56 mg/mL in tube dilution, the MLC of royal jelly was determined as 125 µL/mL. Zone diameters of propolis-impregnated discs are 5 mg-18 mm, 2.5 mg-16 mm, 1.25 mg-15 mm, 0.6 mg-13 mm, 0.3 mg-11 mm, 0.15 mg-9, respectively. mm and no zones were seen around the solvent impregnated disc only. While discs impregnated with 50, 25 and 12.5 µL royal jelly formed zones of 16mm, 14mm and 13mm in diameter, respectively, no zones were observed in continued concentrations. As a result, it was determined that propolis extract and royal jelly had antibacterial effect on *Br. abortus* S19 strain.

**Keywords:** Antibacterial, propolis, royal jelly, *Brucella*

**ÖZET**

Ankiloglossi (tongue-tie), ağız boşluğunun ventral kısmına yapışık olan, çoğunlukla kısa ve kalın bir frenulum lingua ile karakterize, köpeklerde nadiren karşılaşılan dilin konjenital bir anomalisidir. Bu sunumda; Siirt Üniversitesi Hayvan Sağlığı Uygulama ve Araştırma Merkezine kısırlaştırma isteği ile getirilen 2 yaşlı, 38kg ağırlığında, erkek, melez bir köpekte karşılaşılan kongenital ankiloglossi olgusuna yer verilmiştir. Kısırlaştırma isteğiyle getirilen hastada yapılan klinik muayeneler esnasında dilin frenulum lingua kısmının oral kavitenin ventraline tamamen yapışmış olduğu görüldü. Hastanın dilinin ağız boşluğundan dışarıya uç kısmı haricinde özellikle yan kısımlarının çok az bir miktarda sarkar vaziyette çıkabildiği ayrıca su ve gıda maddelerini ağzına alırken zorlandığı saptandı. Operatif tedaviye karar verilen hasta uygun şekilde genel anesteziye alındı. Yan vaziyette yatırılan hastanın ağzına uygulanan bir padan yardımıyla ağzın açık tutulmasına yardımcı olundu. Yapışık olan frenulum lingua, dilin apeks kısmından kaudale doğru horizontal ve vertikal düzlemlerden frenuloplasti tekniği ile makas yardımıyla kesilerek fazla parça çıkarıldı ve dil serbest hale getirildi. Oluşan az miktardaki kanama gazlı bez ile tampon yapılarak durduruldu. Ensizyon açıklığı polidiodoksanon (USP: 2/0, Alcadinone, Katsan®) sutur materyali ile basit sürekli dikişlerle kapatıldı. İşlem sonrası anestezi altındayken ve uyandıktan sonraki süreçte hastanın dilini normal şekilde hareket ettirebildiği görüldü. Post operatif dönemde hastaya antibiyotik, non-steroid antiinflamatuvar ve ağız antiseptikleri ile medikal tedavi başlandı. Yaş mama ile beslenmesi önerilen hastada 15 gün sonra kontrole çağırıldığında dikişlerin kendi kendine attığı ancak buna rağmen yara hattının tamamen yapıştığı gözlemlendi. Bu sunumda bir köpekte ankiloglossinin tedavisinde uygulanan frenuloplastinin hızlı ve başarılı sonuçlar veren kolay uygulanabilen bir operatif tedavi yöntemi olduğu gösterilmiştir.

**Anahtar kelimeler:** Köpek, Frenulum lingua, Frenuloplasti

**A CASE AND TREATMENT OF CONGENITAL ANKYLOGLOSSIA IN A DOG**

**ABSTRACT**

Ankyloglossia (tongue-tie) is a congenital anomaly of the tongue rarely encountered in dogs, which is characterized by a mostly short and thick frenulum lingua attached to the ventral part of the oral cavity. In this presentation; a case of congenital ankyloglossia encountered in a 2-year-old, weighted 38kg, male, mixed breed dog brought to Siirt University Animal Health Application and Research Center with a request for castrating was presented. During the clinical examinations performed in the patient who was brought for sterilization, it was observed that the lingua part of the frenulum of the tongue was completely adhered to the ventral part of the oral cavity. It was determined that the patient's tongue could protrude from the oral cavity in part, especially the lateral parts, except for the tip, and it had difficulty in taking water and food into its mouth. The patient, for whom surgical treatment was decided, was appropriately gone under general anaesthesia. In order to keep patient's mouth open, a pad applied to its mouth who was lying on his side. The adhered frenulum lingua was cut from the horizontal and vertical planes from the apex part of the tongue towards the caudal by means of frenuloplasty technique with the help of scissors, the excess parts were removed and the tongue was released. Small amount of bleeding that occurred was stopped by cushioning with gauze. The incision opening was closed with polydioxanone (USP: 2/0, Alcadinone, Katsan<sup>®</sup>) suture material by means of simple continuous sutures. After the procedure, it was observed that the patient was able to move its tongue normally while under anaesthesia and after it came from anaesthesia. In the post-operative period, medical treatment with antibiotics, non-steroidal anti-inflammatory and oral antiseptics were started for the patient. It was observed in the patient, who was recommended to be fed with wet food, that the stitches were removed themselves in the control after 15 days, however the wound line was completely adhered. In this presentation, it was demonstrated that frenuloplasty applied in the treatment of ankyloglossia in a dog is an easily applicable surgical treatment method having fast and successful results.

***Aspergillus flavus*'UN SAFRANIN BOYAR MADDESİNİN BİYOSORPSİYONUNUN  
ARAŞTIRILMASI**

**METİN KERTMEN**

*Siirt Üniversitesi, Sağlık Bilimleri Fakültesi, Siirt*

**ÖZET**

Atıksuların içerdikleri boyarmaddelerin birincil olarak alıcı ortamdaki ışık geçirgenliği azaltmaları nedeniyle bu ortamda bulunan bitkilerin fotosentez yapma hızının azalmasıyla doğal şekilde üretilen oksijen üretim miktarının düşmesine neden olur. İkinci olarak atıksuyla deşarj edilen kimyasal boyarmaddelerin belli bir derişim oranının üzerinde olması halinde suda yaşam süren canlıların zehirlenmeye sebep olabilmesi şeklinde iki tür etkisinin olması söz konusudur. Bu maksatla birçok yöntemler geliştirilmiştir. Biyosorpsiyon gerek ekonomik gerekse ekolojik açıdan oldukça önem arz etmektedir. Aktif kömür, perlit gibi kimyasal adsorbentler kullanılabildiği gibi, bir çok farklı biyolojik adsorbentler olan bakteri, mantar, alg ve bitkiler tekstil boyarmaddelerin gideriminde alternatif adsorbent olarak kullanımı araştırılmış ve bu yönde birçok çalışmalar yapılmıştır. Biyosorpsiyon deneyinde temas süresi, başlangıç boyar madde konsantrasyonu, sıcaklık ve pH'nın etkileri incelendi. Bulguların analizinin yapılırken fizikokimyasal parametreler olan; İzoterm, Termodinamik, Kinetik ve FT-IR spektrumları kullanılmıştır. Biyodegradasyon deneyinde biyosorbentten deney öncesi ve sonrası tam kuru ağırlıkların farkı dikkate alınarak hesaplanmıştır. Sonuç olarak *Aspergillus flavus* biyosorbenti üzerine Safranin boyarmaddesinin oldukça yüksek oranda adsorplandığı görülmüştür. Deneylerin sonunda başlangıç boyar madde konsantrasyonunun pH ve sıcaklığından etkilendiği görüldü. Düşük pH koşulunun en etkili parametre olduğu tespit edildi. Analiz değerlerinde Freundlich izotermine uyum olduğu, Kinetik modellemelere uyum sağladığı,  $\Delta G^\circ$ ,  $\Delta H^\circ$  ve  $\Delta S^\circ$  termodinamik parametrelerine göre sonuçlar pozitif olarak bulunmuş olup biyosorbent ile boyar madde arasında oldukça güçlü bir etkileşim olduğunu göstermektedir. FT-IR spektrumları irdelendiğinde çeşitli kimyasal grupların biyosorpsiyonun gerçekleşmesinde etkin rol oynadığı görülmüştür. Biyodegradasyon deneyinde boyarmadde ile temas eden örneklerde bozunma daha az bozunma gerçekleştiği tespit edilmiştir. Tüm veriler ışığında, üretimi kolay ve ekonomik olan, *Aspergillus flavus*'un yapılacak boyar madde biyosorpsiyonu çalışmalarında kullanılabilecek uygun biyosorbent olduğu sonucuna varıldı. Bu şekildeki çalışmaların yaygınlaşması çevre kirliliği üzerine hassasiyeti artırarak atıksuların daha etkili şekilde arıtılabilirliği üzerine daha etkili sonuçlar elde edilmesini sağlayacaktır.

**INVESTIGATION OF THE BIOSORPTION OF SAFRANIN DYEING SUBSTANCE**  
**OF *Aspergillus flavus*****ABSTRACT**

Due to the fact that the dyestuffs contained in wastewater primarily reduce the light transmittance in the receiving environment, the rate of photosynthesis of the plants in this environment decreases, resulting in a decrease in the amount of naturally produced oxygen production. Secondly, if the chemical dyestuffs discharged with wastewater are above a certain concentration, there are two types of effects that can cause poisoning to the living creatures in the water. Many methods have been developed for this purpose. Biosorption is very important both economically and ecologically. Chemical adsorbents such as activated charcoal and perlite can be used, as well as their use as alternative adsorbents in the removal of many different biological adsorbents such as bacteria, fungi, algae and plants textile dyestuffs, and many studies have been carried out in this direction. The effects of contact time, initial dyestuff concentration, temperature and pH were investigated in the biosorption experiment. While analyzing the findings, the physicochemical parameters; Isotherm, Thermodynamic, Kinetic and FT-IR spectra were used. In the biodegradation experiment, the total dry weights of the biosorbent before and after the experiment were calculated considering the difference. As a result, it was observed that Safranin dyestuff was highly adsorbed on *Aspergillus flavus* biosorbent. At the end of the experiments, it was observed that the initial dyestuff concentration was affected by pH and temperature. It was determined that the low pH condition was the most effective parameter. The analysis values were found to be positive according to the Freundlich isotherm, kinetic modeling,  $\Delta G_0$ ,  $\Delta H_0$  and  $\Delta S_0$  thermodynamic parameters, indicating that there is a very strong interaction between the biosorbent and the dyestuff. When the FT-IR spectra were examined, it was seen that various chemical groups played an active role in the realization of biosorption. In the biodegradation experiment, it was determined that less degradation occurred in the samples that came into contact with the dyestuff. In the light of all the data, it was concluded that *Aspergillus flavus*, which is easy and economical to produce, is a suitable biosorbent to be used in dyestuff biosorption studies. The spread of such studies will increase the sensitivity on environmental pollution and provide more effective results on the treatment of wastewater more effectively.

**ABSTRACT**

Ellis type 3 coronary perforation is one of the most feared complication in interventional percutaneous coronary procedures. Although it is rare, every cardiologist who performs coronary intervention should know the management of this complication well, as it can be fatal if not intervened early and may require urgent cardiovascular surgery. The most important risk factors for coronary perforation includes interventions for complex coronary artery stenosis and lesions with high calcification density in patients with hypertension and diabetes mellitus, use of atheroablative devices, aggressive oversized balloon dilatations, use of hydrophilic guidewire, advanced age and female gender. Despite the increasing number of coronary angiography units and centers capable of percutaneous coronary intervention, the lack of cardiovascular surgical support in some centers complicates the management of such rare but potentially fatal complication. With this point of view, we aimed to discuss the difficulties we experienced in the management of a Type 3 Ellis coronary perforation case that developed during emergency percutaneous coronary intervention performed at a hospital without an on-site cardiac surgery unit

**Keywords:** Coronary perforation, percutaneous coronary intervention, cardiovascular surgery, complex coronary artery stenosis

**ÖZET**

Dünya nüfusunun hızla arttığı bu dönemde insanların ucuz gıdaya ulaşılabilmesi için hayvansal ürünlerin ekonomik bir şekilde elde edilmesi gerekmektedir. Günümüzde dünyanın birçok bölgesinde insanlar açlık tehlikesiyle karşı karşıyadırlar. İnsanların hayvansal gıdaya kolay ve uygun bir bedelle ulaşabilmesi için üretilen ürünlerin birim maliyetlerinin düşük olması gerekmektedir. Kırmızı et fiyatlarının yüksek olmasından dolayı tüketiciler tavuk etine yönelmektedirler. Tavuk etinin ucuza mal edilmesi yem maliyetine bağlıdır. Hayvansal ürünlerin veriminin artırılmasında yem katkı maddeleri üzerinde çeşitli çalışmalar yapılmaktadır. Etlik piliç beslemede abdominal bölge ve karkastaki yağlanma üretim maliyetini artırmakta ve tüketici tercihleri üzerinde negatif bir etki oluşturmaktadır. Yem katkı maddelerinden biri olan L-Karnitin, etlik piliçlerde yukarıda bahsedilen problemleri ortadan kaldırmak için kanatlı rasyonlarına katkı maddesi olarak kullanılmaktadır. İnsan ve hayvanlarda katkı maddesi olarak kullanılan L-Karnitin, lizin ve metiyoninden sentezlenmektedir. L-Karnitin, sitoplazmadan mitokondriye nakil edilen uzun bir zincir yapısına sahip yağ asitlerinin iç mitokondriyal zardan geçişinde görev almaktadır. Bu sebepten dolayı enerji ihtiyaçlarını yağ asitlerini kullanarak elde eden dokularda L-Karnitin esansiyel bir madde olarak görev alır. L-Karnitin insan ve hayvanlarda yağları enerjiye dönüştürmede önemli fonksiyonlar yüklenmektedir. Etlik piliç diyetlerine yem katkı maddesi olarak L-Karnitin ilave edilmesi hayvanlarda yemden yararlanmada artma meydana getirmekte buna bağlı olarak ta canlı ağırlıkta artış meydana gelmekte, abdominal yağda azalma, but ve göğüs eti miktarında artış aynı zamanda bağışıklık sistemini güçlendirmektedir. Bu bildiride L-Karnitin etlik piliç diyetlerine eklenmesiyle besi performansı üzerine olan etkileri sunulmaktadır.

**Anahtar kelimeler:** Etlik piliç, L-Karnitin, Besi performansı

**THE EFFECTS OF L-CARNITINE ADDITION TO BROILER DIETS ON THE  
FATTENING PERFORMANCE****ABSTRACT**

In this period when the world population is increasing rapidly, animal products need to be obtained economically for people to access cheap food. In many parts of the world today, people face the threat of hunger. In order for people to have easy and affordable access to animal food, the unit costs of the products produced must be low. Due to the high prices of red meat, consumers are turning to chicken meat. The cost of broiler meat depends on the cost of feed. Various studies have been carried out on feed additives to increase the yield of animal products. In broiler feeding, fat in the abdominal area and the carcass increases the cost of production and negatively affects consumer preferences. L-Carnitine, one of the feed additives, is used as an additive to poultry diets to eliminate the above-mentioned problems in broiler chickens. L-Carnitine, used as an additive in humans and animals, is synthesized from lysine and methionine. L-Carnitine is involved in the passage of fatty acids with a long chain structure across the inner mitochondrial membrane from the cytoplasm to the mitochondria. For this reason, L-Carnitine acts as an essential substance in tissues that obtain their energy needs using fatty acids. L-Carnitine has important functions in converting fats into energy in humans and animals. The addition of L-Carnitine as a feed additive to broiler diets increases feed utilization in animals, resulting in an increase in live weight, a decrease in abdominal fat, an increase in the amount of thigh and breast meat, as well as improving the immune system. In this presentation, the effects of L-Carnitine supplementation in broiler diets on fattening performance are presented.

**ABSTRACT**

Pomegranate (*Punica granatum*) has recently sparked considerable interest due to its nutritional and antioxidant properties, helping to meet the rising demand for high-quality fruits for both fresh and processed consumption. To evaluate the antioxidant capacities of ethanol and water extract of Zivzik (*Punica granatum*), 2,2'-azino-bis-3-ethylbenzthiazoline-6-sulphonic acid radical (ABTS<sup>•+</sup>) and 1,1-diphenyl-2-picrylhydrazyl free radical (DPPH<sup>•</sup>), Fe<sup>3+</sup>-2,4,6-tris(2-pyridyl)-s-triazine (TPTZ), Fe<sup>3+</sup>, and Cu<sup>2+</sup> reducing assays were studied. The antioxidant and reducing capacity of Zivzik ethanol extracts were compared with the most commonly used synthetic antioxidants; BHA, BHT,  $\alpha$ -tocopherol and Trolox reference standards. The IC<sub>50</sub> values of ethanol extract of Zivzik pomegranate for ABTS<sup>•+</sup> and DPPH<sup>•</sup> scavenging activities were found higher than standards as 5.9  $\mu$ g/mL and 16.1  $\mu$ g/mL, respectively. Also, the phenolic and flavonoid contents in ethanol extract of Zivzik pomegranate peel were 0.95 mg GAE/g and 0.88 mg QE/g. Inhibitions of  $\alpha$ -glycosidase,  $\alpha$ -amylase, acetylcholinesterase, and carbonic anhydrase (CA II) enzymes were studied to investigate the effects of ethanol extract of Zivzik pomegranate on diabetes, Alzheimer, glaucoma, and bacterial diseases. Zivzik pomegranate peel extract of ethanol demonstrated IC<sub>50</sub> values of 28.8  $\mu$ g/mL against  $\alpha$ -glycosidase, 19,7  $\mu$ g/mL against acetylcholinesterase (AChE) and 106.3  $\mu$ g/mL against CA II enzymes. The antioxidant and inhibitory capacity of Zivzik pomegranate's various parts extracts are comparable effective, and in close range with the capacity demonstrated by the standards. *E. coli* and *S. aureus* bacteria were resistant to all four antibiotics used as standards in hospitals. In some Zivzik extracts, zones with 7-10 mm intervals, that is, areas where the extract has an antimicrobial effect, which destroyed bacteria. The 50  $\mu$ g extract and positive controls were transferred to each disc. The resulting 7-10 mm discs are very good when compared to standard antibiotics. The results clearly demonstrated that polyphenolic antioxidant-rich ingredients of the various parts of Zivzik pomegranate is a natural product has potential usage in the treatment of diabetes, Alzheimer's, glaucoma, epilepsy, microbial and cancerous diseases.

**Keywords:** Zivzik pomegranate; *Punica granatum*; antioxidant;  $\alpha$ -glycosidase; acetylcholinesterase; carbonic anhydrase; antimicrobial; phenolic compounds.

**ÖZET**

Günümüzde perovskit tabanlı güneş hücreleri oldukça ilgi çekmektedir. Perovskit tabanlı güneş pilleri bir çok katmandan oluşabilmektedir. Bu katmanlardan biride elektron taşıma tabakasıdır (ETT). ETT ile kullanılan perovskit malzemenin iletim bandı seviyeleri uyumlu olmalıdır. Bu verimi etkileyen önemli bir faktördür. SnO<sub>2</sub>, ETT yapımında kullanılan önemli malzemelerden biridir. Bu çalışmada Pb iyonu kullanılarak SnO<sub>2</sub>'nin iletim bandının seviyesinin ayarlana bilirligi araştırılmış ve tartışılmıştır. Bu çalışmadan, elde edilen veriler SnO<sub>2</sub>'nin iletim bandın seviyesinin Pb katkı oranı ile belirli miktarlarda ağalanabileceğini göstermektedir. Bu teknolojik uygulamalar için önemli bir bulgudur.

**Anahtar kelimeler:** Perovskit, SnO<sub>2</sub>, elektron taşıma tabakası, DFT

**INVESTIGATION OF THE EFFECT OF THE PB DOPING RATIO ON THE  
CONDUCTION BAND LEVEL OF TIN DIOXIDE, WHICH IS USED AS AN  
ELECTRON TRANSPORT LAYER**

**ABSTRACT**

Today, perovskite-based solar cells attract a lot of attention. Perovskite-based solar cells can consist of many layers. One of these layers is the electron transport layer (ETL). The conduction band levels of the perovskite material used with the ETL should be compatible. This is an important factor affecting efficiency. SnO<sub>2</sub> is one of the important materials used in ETL construction. In this study, the tunability of the conduction band level of SnO<sub>2</sub> using Pb ion was investigated and discussed. The data obtained from this study show that the level of the conduction band of SnO<sub>2</sub> can be adjusted in certain amounts by the Pb doping ratio. This is an important finding for technological applications.

**Keywords:** Perovskite, SnO<sub>2</sub>, electron transport layer, DFT

**ÖZET**

Bu çalışma Kant'ın ahlak teorisindeki iki paralel konu ile ilgilidir: 'doğru ile yanlış' kavramlarının rölatifliği ve evrensel ahlak yasasının temeli olarak 'görev' kavramının neliği. Kant'a göre doğru ve yanlış apriori olarak mevcut olsa da yine de eylemin ahlakiliğini belirleyen, onun hangi amaçla yapıldığıdır. Bir eylemi doğru ya da yanlış yapan, onun içinde herhangi bir duygu ve çıkarın olmadığı görev anlayışıyla yapılıyor olmasıdır. Eğer bir eylem görev saikiyle yapılırsa doğru, yapılmıyorsa yanlıştır. Buna karşılık ahlaki eylem de doğru ve yanlışa denk düşen 'iyi ve kötü' eylemdir. Dolayısıyla Kant ahlaki eylemi, duygulardan soyutlanmış görev anlayışıyla yapılan 'iyi' eylem olarak tanımlamaktadır. Böylelikle Kant, görev anlayışıyla bir eylemin ahlak yasası olabileceğini ve buradan yola çıkarak onun evrensel bir ahlak yasasına dönüşebileceğinin altını çizmektedir. Ancak burada bir eylemin ahlaki olduğunu belirleyen 'görev' kavramı nedir? Ve bununla birlikte eylemlerimizin ahlakiliğinin temelinde yer alan 'doğru ve yanlış' kavramlarının bir kesinliği var mıdır? Çünkü ahlakiliğin temelinde yer alan 'doğru ve yanlış' kavramlarının çoğu kere kişiden kişiye ve hatta toplumdan topluma göreli olduğu aşikâr olmasına rağmen, bu kavramların içeriklerinin kesin olduğu varsayılarak onları ahlaki eylemin temeline yerleştirmek ne kadar geçerli olabilir? Bu soruları birlikte ele alırken ahlaki eylemin ne olduğunun bilinebilmesi için, öncelikle doğru ve yanlışın kesin olarak ne olduğunun ortaya konulmasını gerektirmektedir ve ancak doğru ve yanlış ortaya konulduktan sonra hangi anlayışla eylememiz gerektiği de bilinebilir. Daha en başından ahlak kavramıyla yakından ilişkili, en temel iki kavram olan 'doğru ve yanlış' kavramlarının içerik itibarıyla kesin olmaması nedeniyle Kant'ın ahlak anlayışının eksik olduğu söylenebilir. Bu nedenle Kant'ın görev anlayışının bizi evrensel bir ahlak yasasına götüremeyeceğinin ana hatları çıkarılmaya başlanacaktır. Bölüm 1'de Kant'ın ahlak anlayışının arka planında yer alan görev kavramı ile başlıyorum ve bölüm 2'de doğru ve yanlış kavramlarının ne olduğu ve bunların görev kavramı ile olan ilişkisine değiniyorum. Bölüm 3'te görev anlayışıyla evrensel ahlak yasasına ulaşamayacağını irdeliyorum.

**Anahtar kelimeler:** Kant, ahlak yasası, rölativizm, görev, doğru ve yanlış

**THE RELATIVITY OF TRUE AND WRONG CONCEPTS AND THE CONCEPT OF  
DUTY AS THE FOUNDATION OF MORAL LAW IN KANT****ABSTRACT**

This study is about two parallel issues in Kant's moral theory: The relativity of the concepts of 'right and wrong' and the nature of the concept of 'duty' as the basis of the universal moral law. According to Kant, although right and wrong exist a priori, what determines the morality of the action is the purpose for which it is done. What makes an action right or wrong is that it is done with a sense of duty, in which there is no emotion or interest. An action is right if it is done with a duty motive, and wrong if it is not done. On the other hand, moral action is good and bad action corresponding to right and wrong. Therefore, Kant defines moral action as a 'good' action done with a sense of duty isolated from emotions. Thus, Kant underlines that an action can be a moral law with a sense of duty, and from there it can turn into a universal moral law. But what is the concept of 'duty' here that determines that an action is moral? And yet, is there any certainty in the concepts of 'right and wrong' that underlie the morality of our actions? Because although it is obvious that the concepts of 'right and wrong', which are at the base of morality, are often relative from person to person and even from society to society, how valid is it to place them at the basis of moral action, assuming that the contents of these concepts are certain? While addressing these questions together, in order to know what moral action is, first of all, what is right and wrong needs to be revealed precisely, and only after the right and wrong are revealed, we can also know with what understanding we should act. From the very beginning, it can be said that Kant's understanding of morality is incomplete since the concepts of 'right and wrong', which are the two most fundamental concepts closely related to the concept of morality, are not precise in terms of content. For this reason, the main lines will be drawn that Kant's understanding of duty cannot lead us to a universal moral law. In Chapter 1, I begin with the concept of duty, which is in the background of Kant's understanding of morality, and in Chapter 2, I touch on what the concepts of right and wrong are and their relationship to the concept of duty. In Chapter 3, I argue that a universal moral law cannot be achieved with a sense of duty.

**Keywords:** Kant, moral law, relativism, duty, right and wrong

**OKUL MÜDÜRLERİNİN DÖNÜŞÜMCÜ LİDERLİK DAVRANIŞLARINA İLİŞKİN  
ÖĞRETMEN GÖRÜŞLERİ: NİTEL BİR ARAŞTIRMA**

**Doç. Dr. Veysel OKÇU**

*Orcid ID: 0000-0003-3807-506X*

*Siirt Üniversitesi, Eğitim Fakültesi, Siirt*

**Yüksek Lisans Öğrencisi Rümeyza Belkıs ERKOYUNCU**

*Orcid ID: 0000-0003-0948-7540*

*Siirt Üniversitesi, Eğitim Bilimleri Anabilim Dalı, Eğitim Yönetimi Bilim Dalı*

**ÖZET**

Bu araştırmanın amacı, okul müdürlerinin dönüşümcü liderlik davranışlarına ilişkin öğretmenlerin görüşlerini belirlemektir. Araştırmada nitel araştırma desenlerinden biri olan olgubilim (fenomoloji) deseni kullanılmıştır. Araştırmanın çalışma grubunu 2021-2022 eğitim-öğretim yılında Siirt ilinde görev yapan 40 öğretmen oluşturmaktadır. Araştırmada, kolaylıkla bulunabilen/ulaşılabilen örnekleme yöntemi kullanılmıştır. Araştırmanın verileri yarı yapılandırılmış görüşme formları aracılığıyla toplanmıştır. Verilerin analizi için içerik analizi yöntemi kullanılmıştır. Yapılan araştırma sonucuna göre okul müdürlerinin dönüşümcü liderliğin idealleştirilmiş etki alt boyutunda "güven oluşturma", "saygı görme", "ihtiyaç ve beklentileri karşılama", "rol model olma", "ahlaki ve etik açıdan değerlendirme yapabilme" şeklinde davranışlar sergilediği belirlenmiştir. Dönüşümcü liderliğin ilham verici motivasyon alt boyutunda "sorun çözmede cesaretlendirme", "vizyona ulaşmada ilham kaynağı olma", "moral ve motivasyon kaynağı olma" gibi davranışların belirginleştiği ortaya çıkmıştır. Dönüşümcü liderliğin entelektüel uyarım alt boyutunda "değişim ve yeniliklere açık olma", "yenilikçi yaklaşımlarla problem çözme", "yenilikçi ve üretken olabilmek için çaba gösterme" gibi davranışlar sergiledikleri tespit edilmiştir. Dönüşümcü liderliğin bireysel ilgi alt boyutunda ise "bireysel farklılıklara bağlı ihtiyaçları karşılama", "farklılıkları zenginlik kaynağına dönüştürme", "mesleki gelişime yardımcı olma" ve "etkili iletişim kurma" gibi davranışları sergiledikleri ortaya çıkmıştır. Araştırmada, bu sonuçlara bağlı olarak bazı önerilerde bulunulmuştur.

**Anahtar kelimeler:** Liderlik, dönüşümcü liderlik, okul müdürü, öğretmen görüşleri

**TEACHERS' VIEWS ON THE TRANSFORMATIONAL LEADERSHIP  
BEHAVIORS OF SCHOOL PRINCIPALS: A QUALITATIVE RESEARCH**

**ABSTRACT**

The purpose of this research is to determine the opinions of teachers about the transformational leadership behaviors of school principals. The phenomenology design, which is one of the qualitative research designs, was used in the research. The study group of the research consists of 40 teachers working in Siirt in the 2021-2022 academic year. In the research, easily available/accessible sampling method was used. The data of the research were collected through semi-structured interview forms. Content analysis method was used for the analysis of the data. According to the results of the research, it was determined that school principals exhibit behaviors such as "building trust", "respecting", "meeting needs and expectations", "being a role model", "being able to evaluate morally and ethically" in the idealized influence sub-dimension of transformational leadership. In the inspirational motivation sub-dimension of transformational leadership, behaviors such as "encouragement in solving problems", "inspiring in reaching the vision", "being a source of morale and motivation" became evident. It has been determined that in the intellectual stimulation sub-dimension of transformational leadership, they exhibit behaviors such as "being open to change and innovation", "problem solving with innovative approaches", "striving to be innovative and productive". In the individual attention sub-dimension of transformational leadership, it was revealed that they exhibit behaviors such as "meeting the needs based on individual differences", "turning differences into sources of wealth", "assisting professional development" and "communicating effectively". In the research, suggestions are available in relation to these findings.

**Keywords:** Leadership, transformational leadership, school principal, teachers' views.

**SÜRDÜRÜLEBİLİR KALKINMA VE ÇEVRESEL GÜVENLİK SİYASASI  
BAĞLAMINDA MERKEZ-ÇEVRE OLGUSU VE EKOLOJİK ÖRSELENME**

**Doktora Öğrencisi Mehdi PEKEDİS**

*Orcid ID: 0000-0003-3824-2606*

*Sosyal Bilimler Enstitüsü, Siyaset Bilimi ve Kamu Yönetimi Bölümü,  
Kentleşme ve Çevre Sorunları Bilim Dalı, Malatya.*

**ÖZET**

Sürdürülebilirlik, kalkınma ve çevresel güvenliğe yönelik siyasal politikalar arasındaki ilişkiyi irdeleyen bu çalışmada, merkez-çevre olarak adlandırılan ülkelerin bağımlılığı ile ekolojik örselenme arasındaki bağlam ortaya konulmuştur. Sürdürülebilir kalkınma ilk olarak Birleşmiş Milletler tarafından 1987 yılında yayımlanan Brundtland Raporu'nda çevresel ve ekolojik tahribatla ilişkilendirilmiştir. Doğanın ve ekolojik düzenin kapitalist üretim ilişkileri karşısındaki örselenmesi 1990'lı yıllara kadar süregelen kalkınma anlayışının sorgulanmasına ve sürdürülebilir kalkınma kavramının gelişmesine olanak sağlamıştır. Merkez ülkelerin çevre ülkelerine yönelik siyasetinin bir sonucu olarak ortaya çıkan kalkınma politikaları, gerek merkez gerekse çevre ülkelerde ciddi ekolojik sorunlara ve eşitsizliklere yol açmıştır. Kalkınma politikaları daha çok merkez ülkelere çevre ülkelere yönelik siyaset olması merkez-çevre arasındaki bağımlılığa süreklilik sağlamıştır ve çevre ülkelerin merkeze olan bağımlılığında da kritik etkileri olmuştur. Nitekim ilk olarak 1950'li yıllarda başlayan çevre ülkelere yönelik kalkınma siyaseti 1980'li yıllarda neo-liberal politikalar bağlamında sürdürülmüştür. Neo-liberalizmin ve neo-liberal politikaların sermayenin ulus-devlet sınırlarını aşmaya yönelik girişimleri merkez ülkelerde gelişen sermayenin çevre ülkelere yönelmesini amaçlamıştır. Buna göre çevre ülkeler uluslararası sermaye için yeni yatırımların ve üretimin mekânsal coğrafyası olmuştur. Merkez ülkelerin çevreye yönelmesi çevre ülkelerinde çevresel ve ekolojik yapının tahribatına neden olmuştur. Çevrenin örselenmesi ve ekolojik tahribat sürdürülebilir kalkınma siyasetinin merkez ülkelere çevre ülkelere yönelik uygulanması gereken çevresel, ekolojik, toplumsal, iktisadi gibi bir dizi politikayı içermektedir. Bu bağlamda merkez-çevre arasındaki olgusal gerçeklik ekolojik tahribatın derinleşmesine ve bu doğrultuda sürdürülebilir kalkınma ve çevrenin korunmasına yönelik güvenlik politikaları arasında dönüşümsel bir ilişki olduğunu söylemek mümkündür. Çalışmada eleştirel teori bağlamında merkez-çevre olgusunun sürdürülebilir kalkınma ve çevresel-ekolojik örselenme arasındaki ilişki incelenmiştir. 1980'li yıllardan günümüze kadar olan süreci kapsayan bu çalışmada nitel araştırma tekniği kullanılmış ve elde edilen verilerin derlemesi yapılmıştır.

**Anahtar kelimeler:** Çevre, Ekoloji, Merkez-Çevre, Sürdürülebilir Kalkınma.

**THE CENTER-PERIPHERY PHENOMENON AND ECOLOGICAL DESTRUCTION  
IN THE CONTEXT OF SUSTAINABLE DEVELOPMENT AND ENVIRONMENTAL  
SECURITY POLICIES****ABSTRACT**

In this study, which produce the relationship between political policies for sustainability, development and environmental security, the context between the dependency of the countries refer to center-periphery and ecological destruction is revealed. Sustainable development was first associated with environmental and ecological destruction in the Brundtland Report released by United Nations in 1987. The destruction of nature and ecological order against capitalist production relations has enabled the questioning of the development of the concept of sustainable development. The development policies that arised as a result of the policies of the central countries towards the pripheral countries have led to serious ecological problems and inequalities in both the central and peripheral countries. The fact that the development policies are mostly from the core countries to the peripheral countries has provided continuity to the dependency between the center and the periphery and has had critical effects on the dependence of the peripheral countries on the center. As a matter of fact, the development policy towards pripheral countries, which first started in the 1950s, continued in the 1980s in the context of neo-liberal policies. Attempts by neo-liberalism and neo-liberal policies to transcend the nation-state borders of capitali aimed to direct the capital developed in the central countries to the peripheral countries. Accordingly, peripheral countries have become the spatial geography of new investments and production for international capital. The direction of the central countries to the environment has caused the destruction of the environmental and ecological structure in the peripheral countries. The environmental degradation end ecological destruction included a series of policies such as environmental, ecological, social and economic, which should be implemented from the central countries to the peripheral countries of the sustainable development policy. In this context, is possible to say that there is a transformational relationship between the factual reality between the center and periphery, the deepening of ecological destruction and, in this direction, the security policies for sustainable development and environmental protection. In the study, the reationship of the center-periphery phenomenon between sustainable development and environment-ecological trauma was examined in the context of critical theory. In this study, which covers the period from the 1980s to the present, qualitative research technique was used and the data obtained were complied.

**Keywords:** Environmental, Ecology, Central-Peripheral, Sustainable Development.

**ÖZET**

Bu çalışmada, Al-Cu ötektik alaşımında katkılama elementlerinin (Co, Sb ve Bi) mikroyapı ve termal özellikler üzerindeki etkileri araştırılmıştır. Bu amaçla, Al-Cu-x üçlü alaşımları, sabit bir sıcaklık gradyanında farklı katılaştırma hızı ile doğrusal olarak katılaştırıldı. Kontrollü olarak katılaştıran alaşımların mikroyapıları, taramalı elektron mikroskobu (SEM) kullanılarak analiz edildi. Doğrusal olarak katılaştırmış alaşımların termal özellikleri ölçülmüştür. Katılaştırma hızı, mikroyapı ve termal özellikler arasındaki ilişki belirlendi. Bu sonuçlara göre, mikroyapı değerlerinin artan katılaştırma hızı oranları ile azaldığı tespit edilmiştir. Al-Cu ötektik alaşımının termal özelliklerini katkılama elementlerinin etkilediği tespit edilmiştir. Bu çalışmada elde edilen deneysel sonuçlar, literatürde daha önce benzer deneysel sonuçlarla karşılaştırılmıştır.

**Anahtar Kelimeler:** Doğrusal katılaştırma, Termal özellikler, Entalpi.

**EFFECT OF CONTENT MATTERS ON MICROSTRUCTURE AND THERMAL PROPERTIES IN THE Al-Cu EUTECTIC ALLOY****ABSTRACT**

In this study, the effects of content elements (Co, Sb and Bi) on the thermal properties in the Al-Cu eutectic alloy were investigated. For this purpose, Al-Cu-x ternary alloys were directionally solidified with growth rates at a constant temperature gradient. Microstructures of directionally solidified alloys were analyzed by using scanning electron microscopy (SEM). Thermal properties of directionally solidified alloys were measured. The relationship among the growth rate, eutectic spacings and thermal properties were determined. According to these results, it has been found that the values of eutectic spacing decrease with the increasing values of growth rates. It was found that content elements effected on thermal properties of Al-Cu eutectic alloy. The experimental results obtained in this study have been compared with the previous similar experimental results in the literature.

**Keywords:** Directionally solidification, Thermal properties, Enthalpy.

**ÖZET**

Kuruluşu 8. yüzyıla uzanan tekkeler; kurumsal tekke hareketleri ile iktisadi faaliyetleri çeşitlendirerek yeni üretim teknikleri ve üretim planlaması gibi yöntemlerle çalışmışlardır. İslâm bilim, ahlâk ve sanatının öğretilip tatbik edildiği bu yerler, Anadolu’da iktisadi açıdan toplumu yönlendiren manevi kurumlar olmuşlardır. Bu çalışma Anadolu’nun İslamlaşması sürecinde Ali Semerkandi tekkesinin iktisadi yapısını ve etkilerini araştırmak amacıyla yapılmıştır. Anadolu’nun Türkleşmesi ve İslamlaşması yolunda büyük rolü olduğuna inanılan Ali Semerkandi, İran’ın kavşak noktalarından biri olan İsfahan’da dünyaya gelmiş manevi hüviyete sahip büyük velilerden biridir. Hz. Ömer’in soyundandır ve babası Hz. Ömer’in torunudur. Dini ilimler ve tasavvufta kendini geliştirmiş, uzun süre Kabe’de imamlık yapmış, oradan da Medine’ye geçip, Ravza-ı Mutahhara’da 7 yıl türbedarlık yapmıştır. Daha sonra himayesindeki insanlarla birlikte Anadolu’ya hareket edip önce Konya’ya, sonra da Alanya’ya yerleşmiştir. Gördüğü rüya üzerine bugünkü Ankara’nın Çamlıdere havâlisine gelmiş, Anadolu’da İslâmiyeti yaymak için çalışmış, dinî-tasavvufî hayatı şekillendirmiştir. Ali Semerkandî, tamamen ıssız ve insansız bir yer olan Kuzviran’da ilk olarak bir tekke binası yapıp, buraya ailesi ile birlikte yerleşmiştir. Tekkesinin iktisadi finansmanını sağlamak üzere değirmen ve arazi satın almış, burada tekkesinin ihtiyaçlarını karşılamış, ürün fazlasını ise sermaye yapmıştır. Ali Semerkandî Hazretlerinin gelmesiyle bölge zenginleşmeye başlamış, halk ticaret yaparak geçimini temin etmiştir. Yaptığı değirmenin geliri ile kendisinden sonra, soyundan gelenlerin bu gelire tekkesinin giderlerini karşılamalarını vasiyet etmiştir.

**ALI SEMERKANDI'S SOCIO-ECONOMIC UNDERSTANDING IN THE PROCESS  
OF ISLAMIZATION OF ANATOLIA****ABSTRACT**

Tekkes dating back to the 8th century; They diversified economic activities with institutional tekke movements and worked with methods such as new production techniques and production planning. These places, in which Islamic science, morality and art were taught and practiced, has become the spiritual institutions that directed the society economically in Anatolia. This study was conducted to investigate the economic structure and effects of the Ali Semerkandi lodge during the Islamization process of Anatolia. Ali Semerkandi, who is believed to have a great role on the Turkification and Islamization of Anatolia, is one of the great guardians with a spiritual identity who was born in Isfahan, one of the intersection point of Iran. He was a descendant of Umar and grandson of his father, Umar. He developed himself in religious sciences and Sufism, worked as an imam in the Kaaba for a long time, then went to Medina and worked as a tomb keeper in Ravza-ı Mutahhara for 7 years. Later, he moved to Anatolia with the people under his protection and settled first in Konya and then in Alanya. Upon his dream, he came to the Çamlıdere airport of today's Ankara, worked to spread Islam in Anatolia and shaped the religious-mystical life. Ali Semerkandi first built a lodge building in Kuzviran, which is a completely uninhabited and unmanned place, and settled here with his family. He bought mills and land to provide economic finance of his lodge, where he met the needs of his lodge and made the surplus capital of the product. With the arrival of His Majesty Ali Semerkandi, the region began to get prosper and the people supply their livelihood by trading. With the income of his mill, he bequeathed to his descendants that would meet the expenses of his lodge with this income.

*Orcid ID: 0000-0003-1561-9896*

**ÖZET**

Tarihi ve kültürel özellikleri ile dikkat çeken Siirt, kadim şehirlerden biridir. Mezopotamya ile Anadolu'nun kesiştiği bir alanda kurulan ve tarihi süreç içerisinde birçok devletin egemenliğine giren Siirt'te cami, mescit, hamam, han, medrese, çeşme, zaviye gibi pek çok dini, sosyal ve ekonomik yapı inşa edilmiştir. Şehirdeki bu yapıların uzun yıllar ayakta kalmasında İslâm ve Osmanlı dünyasında etkili olan vakıfların büyük bir payı olmuştur. İyilik ve yardımlaşma gibi esaslara dayanan vakıf sistemi sayesinde Siirt'teki bu yapılar için çok sayıda mülk vakfedilmiş ve buralarda birçok personel istihdam edilmiştir. Vakfedilen mülklerden elde edilen gelirler ile bu yapıların personel ücretleri ve diğer masrafları karşılanmıştır. Siirt'teki vakıflarla ilgili bilgi alınabilecek en önemli ana kaynaklardan biri evkaf defterleridir. Bu defterler sayesinde vakıfların isimlerini, personellerini, gelir ve gider kalemlerini tespit etmek mümkündür. Bunlardan biri de bu çalışmanın kaynağı olan 13011 numaralı evkaf defteridir. Osmanlı arşivinde yer alan bu defterde Siirt merkez kaza vakıflarının 1848-1861 yılları arasındaki bilgileri kayıtlıdır. Defterdeki bilgiler incelendiğinde Siirt merkez kazada cami, mescit, han, zaviye, ziyaret ve çeşme gibi yapılara ait vakıfların mevcut olduğu belirlenmiştir. Ayrıca defterde Bitlis, Mardin ve Muş vakıfları ile Siirt'in Şirvan kazasındaki vakıflara dair bilgiler de bulunmaktadır. Defterde yer alan veriler ışığında hazırlanan bu çalışmada 1848-1861 yılları arasında Siirt merkez kazada bulunan vakıflar üzerinde durulmuştur. Çalışmada öncelikle Siirt merkez kazadaki vakıfların isimleri ortaya konulmuştur. Ardından bu vakıfların gelir ve gider kalemlerinin nelerden oluştuğuna dair bilgi verilmiştir. Son olarak bu vakıflarda görev yapan personellere ilişkin bilgiler ele alınmıştır.

**Anahtar kelimeler:** Siirt, evkaf defteri, vakıf

**SOME ASSESSMENTS ON SIİRT WAQFS IN THE LIGHT OF 13011 NUMBERED  
WAQF BOOK (1848-1861)**

**ABSTRACT**

Siirt, attracting attention with historical and cultural features, is one of the ancient cities. In Siirt, which is established in the area where Mesopotamia and Anatolia intersect and which has been dominated by a number of states throughout the history, many religious, social and economic structures such as mosques, masjids, baths, inns, madrasas, fountains and hermitages were built. For the survival of these buildings in the city for years, the waqfs, effective in Islamic World and Ottoman State, had great share. Thanks to waqf system based on the rules such as benefaction and solidarity, many estates were donated for the survival of these buildings in Siirt; and many personnel were employed there. With the revenues obtained from the estates donated to the waqfs, the salaries of the employees and other expenses were paid. One of the most important sources that information about waqfs in Siirt can be obtained is waqf books. Thanks to these books, it is possible to find out the names of waqfs, staff, and income and expense items. One of these books is 13011 numbered waqf book, the source of this study. In this book kept in Ottoman archive, waqf information of Siirt centre and provincial towns between 1848 and 1861 are recorded. When information in the book is examined, it can be found out that there were waqfs for mosque, masjid, inn, hermitage, shrine and fountain in Siirt central town. In addition, there is information in the book about presence of waqfs in Bitlis, Mardin and Muş and waqfs in Şirvan, a provincial town of Siirt. In this study prepared in the light of information taking place in the book, waqfs located in Siirt city centre between 1848 and 1861 were investigated. In the study, initially, waqf names in Siirt central town were put forth. Then, information was given about income and expenditure items of these waqfs. Finally, information about staff working for these waqfs was studied.

**ZÜLFÜ LİVANELİ’NİN BALIKÇI VE OĞLU ROMANINDA GÖÇ UNSURU**

**Fatma ÇAVDAROĞLU**

*Yüksek Lisans Öğrencisi, Siirt Üniversitesi Sosyal Bilimler Enstitüsü Türk Dili ve Edebiyatı Anabilim Dalı, ORCID No: 0000-0003-0602-2043*

**ÖZET**

Göç, yüzyıllar boyu süregelen bir unsur olarak insanlığın hayatında var olmuştur. Göç unsuru, kişilerin yaşadıkları yerlerden gitmeye karar verdikleri anda başlayarak göç sonrasında hayatlarını devam ettirdikleri yerlerde de kendisini hissettiren ve bireyi ve toplumu etkileyen bir duygu, olgu olarak karşımıza çıkar. Göçü ve göç eden kişileri tanımlamada, iç-dış göç, ekonomik-siyasi göç, sürekli-geçici göç, gönüllü-zorunlu göç gibi değişik göç tanımları yapılabilir. Göçün ekonomik, sosyolojik, psikolojik nedenleri ve sonuçları vardır. Göç etmek kişisel bir eylem gibi görülecek olsa bile ortaya çıkışı, arada geçen süreç ve sonucu bakımından muhakkak toplumsallığa bağlanır. Birey, toplumun en önemli parçalarındandır. Göç olgusu bireyin ve toplumun konu alındığı bütün bilimlerin konusu haline gelmiştir. Sanat da bireyin olduğu her yerdedir denilebilir. Bu nedenle insana bağlı ve insan merkezli eylem olan göç unsuru da edebiyatın dışında tutulmamıştır. Geçmişten günümüze toplumun bir parçası olan sanatçılar gerek konu gerek tema olarak göç unsuruna eserlerinde yer vermişlerdir. Türkiye’den Almanya’ya yapılan göçler sonucunda ortaya çıkan “göçmen edebiyatı” terimi ve bu edebiyat içine dahil edilen eserler veren yazarlar karşımıza çıkmaktadır. Günümüzde ise başta Suriye olmak üzere Orta Doğu’dan gelen göçmenler gerek transit geçiş noktası olarak gerekse yerleşmek üzere Türkiye’yi seçmeleri Türk edebiyatında son yıllarda daha fazla göç konulu eserler verilmesini etkilemiştir. Buradan toplumsal olayların edebiyatı etkilediğini görmek mümkündür. Kendisi de göç etmek zorunda kalan ve hayatının bir dönemini göçmen olarak geçiren Zülfü Livaneli son zamanlarda göç mücadelesinin ağır sonuçlarına, göçün hayatlara etkisine Balıkçı ve Oğlu adlı romanında yer verir. Bu bilgiler doğrultusunda yapılan çalışmada Balıkçı ve Oğlu adlı romanında göç olgusu üzerine inceleme yapılmak istenmiştir.

**Anahtar Kelime:** Göç, göçmen, Zülfü Livaneli, Balıkçı ve Oğlu

**ABSTRACT**

Migration has existed in the life of humanity as an ongoing element for centuries. The element of migration emerges as a feeling and phenomenon that makes itself felt in the places where people continue their lives, starting from the moment they decide to leave their place of residence, and affecting the individual and the society. Different definitions of migration such as internal-external migration, economic-political migration, permanent-temporary migration, voluntary-forced migration can be made to define migration and people who migrate. Migration has economic, sociological and psychological causes and consequences. Even though migrating may be seen as a personal act, it is bound to be social in terms of its emergence, intervening process and outcome. The individual is one of the most important parts of society. The phenomenon of migration has become the subject of all sciences that deal with the individual and society. It can be said that art is wherever the individual is. For this reason, the element of migration, which is a human-based and human-centered action, has not been excluded from literature. Artists, who have been a part of society from past to present, have included the element of migration in their works, both as a subject and as a theme. The term "immigrant literature", which emerged as a result of the migrations from Turkey to Germany, and the authors who wrote works included in this literature, appear before us. Today, immigrants from the Middle East, especially Syria, choosing Turkey both as a transit point and to settle, have affected the publication of more migration-themed works in Turkish literature in recent years. From here, it is possible to see that social events affect literature. Zülfü Livaneli, who had to immigrate herself and spent a period of her life as an immigrant, has recently included the heavy consequences of the migration struggle and the effects of migration on lives in her novel *Balıkçı ve Oğlu*. In line with this information, in the study, it was desired to examine the phenomenon of migration in his novel *Balıkçı ve Oğlu*.

**Keywords:** Migration, migrant, Zülfü Livaneli, *Balıkçı ve Oğlu*

**SOSYO KÜLTÜREL FARKLILIĞIYA SIİRT'in GÜNDELİK HAYAT İLİŞKİLERİ**

**Murat TOPRAK**

*Dr. Öğr. Üyesi, Siirt Üniversitesi Fen Edebiyat Fakültesi Sosyoloji Bölüm, ORCID No: 0000-0002-3732-6026*

**ÖZET**

Kentler farklı sosyo kültürel yapılara sahip olması onların gündelik hayatta önemli insan ilişkilerini bünyesinde barındırmasına sebep olmaktadır. En yalın, sade, rutin durumdan karmaşık olana dek ilişkiler, değişik etkileşim örüntüleriyle kendisini göstermektedir. Yüz yüze etkileşimlerin yoğun olduğu kentsel mekânlarda farklı sosyo kültürel topluluklar arasında söz konusu etkileşim örüntüsü anın içinde farklılaşarak süreç haline gelmektedir. Zamandan ve mekândan bağımsız olmaksızın gündelik hayattaki insan ilişkilerinde bütünleşmenin temel dinamiklerinden olan etkileşim örüntüleri arasında çatışma, rekabet, uyum, işbirliği ve asimilasyon/benzeş(tiril)me dikkat çekmektedir. Etkileşim örüntülerinin yoğun olarak yaşandığı Siirt ilinin “Helvacılar Çarşısı”ndaki insan ilişkileri bu çalışmanın konusunu oluşturmuştur. Ayrıca bu çalışma, çarşı içinde bulunun esnafın sosyo kültürel aidiyetleri ve özellikleri, komşuluk ve müşteri ilişkilerinin gündelik hayatta nasıl inşa edildiğini açıklamayı amaçlamıştır. Bunu yaparken kuramsal açıdan gündelik hayat konusunda kavramsal repertuvarlarıyla katkıda bulunan önemli isimler göz önünde bulundurulmuştur. Henri Lefebvre ve Michel De Certeau'nun doğrudan gündelik hayat ve mekân ilişkisine, Pierre Bourdieu ve Erving Goffman'da ise bireyler arası etkileşimde belirleyici etmenlere dikkat edilmiştir. 1990'lardan bu yana demografik açıdan önemli bir değişim yaşayan Siirt'in mekânları belirgin farklılaşmayla karşı karşıya kalmıştır. Göçle beraber şehre yerleşme telaşında olan Kürtler ve Koçerler<sup>1</sup> merkezde Araplarla bir araya gelerek zorunlu bir birliktelik artık kaçınılmaz olmuştur. Helvacılar Çarşısı, bir arada yaşamının zorunluluğunun olduğu çarpıcı mekânların başını çekmiştir. Buradan hareketle çalışmada yeni hayata adapte olma sürecinin nasıl, topluluklar arasında etkileşimde belirleyici unsurların neler olduğuna yönelik sorulara yorumlayıcı bir perspektifle cevaplar aranmıştır.

**Anahtar Kelimeler:** Siirt, Helvacılar Çarşısı, Gündelik Hayat.

---

<sup>1</sup> Koçer, yerel dilin tanımlama şeklidir. Yaylalarda yaşayan insanların çeşitli sebeplerle şehir merkezine göç etmiştir. Yerleşik hayata geçen bu topluluklar etnik kimlik olarak kendilerini genellikle Kürt olarak tanımlasalar da kültürel anlamda ayrıştığı görülmüştür. Dolayısıyla ayrı bir araştırma nesnesi olması gerektiği düşünülmüştür.

**EVERYDAY LIFE RELATIONS of SIIRT'S with ITS SOCIO CULTURAL  
DIFFERENCE****ABSTRACT**

The fact that cities have different socio-cultural structures causes them to contain important human relations in everyday life. From the simplest, simplest, routine to the most complex, relationships show themselves through different interaction patterns. In urban spaces where face-to-face interactions are intense, the interaction pattern between different socio-cultural communities differentiates in the moment and becomes a process. It draws attention to conflict, competition, harmony, cooperation and assimilation/similarity among the interaction patterns, which are the basic dynamics of integration in human relations in everyday life, regardless of time and space. The human relations in the "Helvacilar Bazaar" of Siirt province, where interaction patterns are experienced intensively, constituted the subject of this study. In addition, this study aims to explain the socio-cultural affiliations and characteristics of the tradesmen in the bazaar, and how neighborly and customer relations are built in everyday life. While doing this, important names who contributed with their conceptual repertoires on everyday life theoretically were taken into consideration. Attention was paid to the direct relationship between everyday life and space in Henri Lefebvre and Michel De Certeau, and the determining factors in the interaction between individuals in Pierre Bourdieu and Erving Goffman. Siirt, which has undergone a significant demographic change since the 1990s, has faced significant differentiation. Kurds and Koçers, who were in a hurry to settle in the city with the migration, came together with the Arabs in the center and a compulsory union became inevitable. Helvacilar Bazaar has taken the lead among the striking places where it is necessary to live together. From this point of view, in the study, answers were sought with an interpretive perspective to the questions about how the process of adapting to the new life and what the determining factors are in the interaction between communities.

**Keywords:** Siirt, Helvacilar Bazaar, Everyday Life

**ÖZET**

Edebi metinleri farklı araştırma metotlarıyla incelemek, böylece eserin görünmeyen kısımlarını gün yüzüne çıkarmak mümkündür. Her disiplin kendi içinde tutarlı olmakla birlikte diğer alanlarla da temas halindedir. Psikoloji biliminde kullanılan metotlar, insanı anlama ve anlatmaya yöneliktir. Edebi metin incelemelerinde kullanılan psikoloji bilimi ise edebi ürün ve yazarına dair tahlilleri içermesi bakımından önemlidir. Edebî metinlerde insanlığın bilinç dışında asırlardır devam ettirdiği yaşamın ilk izlerini bulmak mümkündür. Bu izlerin edebî ürünlerdeki yansımaya “arketip” (ilk örnek) adı verilir. Yazarın eserinde kullandığı arketiplerin peşinde olan arketipçi eleştiri anlayışındaki hedef ise arketiplerin tespit edilerek bunların işlevini metnin estetik yönünü zedelemekten değerlendirmeyi ve edebî metni yeniden anlamlandırmaktır. 20. yüzyılda ortaya çıkan Arketipsel Eleştiri, C. Gustav Jung’un kurduğu ve sistemleştirdiği analitik psikolojinin temelleri üzerine inşa edilir. Bu çalışmada, Serdar Özkan’ın *Kayıp Gül* adlı romanı arketipsel eleştiri bağlamında tahlil edilmektedir. Romanın anlamlandırılması ve karanlıkta kalan yönlerinin ortaya çıkartılması noktasında arketiplerin etkisi incelenmektedir. Bu arketiplerin romanın kurgu ve yapısına olan etkisi karakterlerin diyalog ve eylemlerinden anlaşılmaktadır. Türk edebiyatında en çok okunan romanların başında yer alan *Kayıp Gül* romanında Diana’nın kendini keşfetme serüveni anlatılmaktadır. Diana’nın kendi menkıbesinin izinde çıkacağı yolculukta yazar, okura kurmaca ile gerçek arasında bir dünya sunmaktadır. Bu romanda kahramanın kendini keşfetme serüveni, Jung’un arketipsel eleştirisi ekseninde “anima-animus”, “persona”, “gölge”, “bilge kişi”, arketipleri bağlamında değerlendirilmiştir. *Kayıp Gül* romanı Bu belirgin arketipler ışığında arketipsel eleştiri bağlamında tahlil edilirken roman kurgusunun da daha açık hale geldiği görülmektedir.

**Anahtar Kelimeler:** C. G. Jung, Arketip, Arketipsel Eleştiri, Serdar Özkan, Kayıp Gül

**FOLLOWING SERDAR ÖZKAN'S NOVEL TITLE "KAYIP GÜL" AN  
ARCHETICAL JOURNEY****ABSTRACT**

By examining the literary texts with different research methods, it is possible to reveal the invisible parts of the work. While each discipline is coherent within itself, it is also in contact with other fields. The methods used in psychology are aimed at understanding and explaining people. The science of psychology, which is used in the analysis of literary texts, is important because it contains analyzes about the literary product and its author. In literary texts one can find the first traces of the life that mankind has unconsciously continued for centuries. The reflection of these traces in literary products is called "archetype" (first example). The goal in the understanding of archetypal criticism, which is after the archetypes used by the author in his work, is to identify the archetypes and evaluate their function without damaging the aesthetic aspect of the text and to re-interpret the literary text. The archetypal criticism, which emerged in the 20th century, is based on the foundations of analytical psychology, which was founded and systematized by C. Gustav Jung. This study analyzes the novel *The Lost Rose* by Serdar Oezkan in the context of archetypal criticism. The effect of archetypes is examined at the point of making sense of the novel and revealing its obscure aspects. The effect of these archetypes on the fiction and structure of the novel can be understood from the dialogues and actions of the characters. Diana's adventure of self-discovery is recounted in the novel *The Lost Rose*, which is one of the most widely read novels in Turkish literature. In Diana's journey in the footsteps of her own legend, the author presents the reader with a world between fiction and reality. In this novel, the hero's adventure of self-discovery is evaluated in the context of the archetypes "anima-animus," "persona," "shadow," and "wise person" in the axis of Jung's archetypal criticism. While the novel *The Lost Rose* is analyzed in the light of these characteristic archetypes in the context of archetypal criticism, it becomes apparent that the fiction of the novel has also become clearer.

**ÖZET**

YouTube dünya genelinde video paylaşma platformların başında gelmektedir. Milyonlarca kullanıcıya sahiptir. YouTube'de aynı zamanda videolar hakkında yorumlar yapılmaktadır. Ancak bu yorumların büyük bir çoğunluğunu istenmeyen yorumlar oluşturmaktadır. Bu çalışmada videolar hakkında istenmeyen (spam) yorumların filtrelenmesi için yeni bir çerçeve önerilmiştir. Çerçeve, en iyi bilinen öznitelik seçme yaklaşımlarından bilgi kazanı (ig), ki-kare testi (chi2) ve gini index (gi) yardımı ile ayırt ediciliği en yüksek öznitelik alt kümesi belirlenir. Daha sonra destek vektör makineleri (SVM), en yakın k-komşu (KNN) ve Naive Bayes (NB) sınıflandırıcılar kullanılarak spam yorumlar tespit edilir. Çerçeve, meşru ve spam yorumlardan oluşan büyük bir veri kümesi üzerinde değerlendirilmiştir. Deneysel çalışmalarda dikkat çekici derecede doğru sınıflandırma sonuçları elde edildiği görülmüştür.

**Anahtar Kelimeler:** YouTube spam, spam filtreleme, metin sınıflandırma, metin madenciliği

**NEW FRAMEWORK FOR YOUTUBE SPAM FILTERING****ABSTRACT**

YouTube is one of the leading video-sharing platforms worldwide. It has millions of users. There are also comments on videos on YouTube. However, the vast majority of these comments are unwanted (spam) comments. In this study, a new framework is proposed for filtering spam comments about videos. The framework determines the feature subset with the highest distinctiveness with the help of the best-known feature selection approaches information gain (ig), chi-square test (chi2) and gini index (gi). Then, spam comments are detected using support vector machines (SVM), K-Nearest Neighbor (KNN) and Naive Bayes (NB) classifiers. The framework was evaluated on a large dataset of legitimate and spam comments. It has been observed that remarkably accurate classification results have been obtained in experimental studies.

**ÖZET**

Bakım veren ile çocuk arasında kurulan güçlü duygusal ilişki olarak ifade edilen bağlanma araştırmalarının büyük bir çoğunluğu çocuğun bağlanma sistemi üzerine yoğunlaşmıştır. Bu araştırmalar güvenli, kararsız, kaçınan ve düzensiz/dağınık bağlanma türlerinin öncülleri ve sonuçları hakkında önemli bilgiler vermektedir. Bunun yanı sıra çok az araştırma çocuğun bağlanma sistemini tanımlayan bakıcıların davranış sitemlerini ele almıştır. Özellikle önemli bir bağlanma figürü olarak kabul edilen babaların davranış sistemleri ve bakıcı olma konusundaki duygularını karakterize eden süreçler hakkında çok az bilgimiz bulunmaktadır. Ayrıca düzensiz/dağınık bakım vermenin ölçümü genel olarak uzun süren ve yoğun emek gerektiren görüşmeler ve gözlemlerle sınırlı kalmıştır. Bu çalışmada, bakım vermede çaresizlik, rol değiştirme ve korkmuş/korkulu bakım verme gibi düzensiz/dağınık bakım vermenin farklı yönlerini değerlendirmek için ebeveyn algılarına dayalı olarak tasarlanan Çocuk Bakımında Çaresizlik Ölçeği (ÇBCÖ)'nin Türk babalar için tekrarlanabilirliği ve psikometrik özellikleri araştırılmıştır. Araştırmaya 12-36 ay arası çocuğa sahip 817 baba katılmıştır. Ölçeğin Türk babalar için

geçerliliğini değerlendirmek amacıyla yapılan açımlayıcı ( $N=272$ ) ve doğrulayıcı ( $N=545$ ) faktör analizi sonuçları 17 maddelik ve iki boyutlu bir yapıyı göstermektedir. Ölçeğin orijinalinde yer alan “baba çaresizliği” ve “baba-çocuk korkusu” birleşerek birinci faktörü (Cronbach’s alpha .73) oluştururken, “bakım veren olarak çocuk” ise ikinci faktör (Cronbach’s alpha .73) olarak belirlenmiştir. Ölçeğin zamandaş geçerliliğini değerlendirmek amacıyla katılımcı babalar Ebeveynlik Stres Ölçeği ( $N=92$ ), Sosyal ve Duygusal Değerlendirme Ölçeği ( $N=187$ ) ve Kısa Semptom Envanteri’nin Depresyon ( $N=169$ ) ve Anksiyete ( $N=198$ ) alt ölçeklerini tamamlamışlardır. Çocuk Bakımında Çaresizlik Ölçeği’nin “baba çaresizliği ve baba-çocuk korkusu” alt boyutu ile ebeveynlik stresi, anksiyete ve depresyon arasında pozitif yönlü ilişkiler belirlenirken, “bakım veren olarak çocuk” alt boyutu ile anlamlı herhangi bir ilişki belirlenmemiştir. Bunun yanı sıra Sosyal ve Duygusal Değerlendirme Ölçeği’nin problem alt boyutu ile “baba çaresizliği ve baba-çocuk korkusu” ve yeterlik alt boyutu ile “bakım veren olarak çocuk” alt boyutları arasında pozitif yönlü anlamlı ilişkiler bulunmuştur. Ayrıca çalışmaya katılan 157 baba üç hafta arayla ÇBÇÖ’yü tekrar tamamlamışlardır. Bulgular test-tekrar test güvenilirliğinin “baba çaresizliği ve baba-çocuk korkusu” için .480 ve “bakım veren olarak çocuk” için .551 olduğunu göstermektedir. Sonuç olarak ÇBÇÖ, 2 boyutlu ve 17 maddeli olarak erken çocuklukta babaların yaşadıkları çocuk bakımında çaresizlik özelliklerini belirlemek için geçerli ve güvenilir bir ölçme aracı olarak Türk kültürüne uyarlanmıştır.

**Anahtar kelimeler:** Bağlanma, çocuk bakımında çaresizlik, baba, ölçek uyarlama,

**ADAPTATION OF THE CAREGIVING HELPLESSNESS SCALE TO TURKISH**

**ABSTRACT**

The majority of attachment research, which is expressed as the strong emotional relationship between the caregiver and the child, has focused on the child's attachment system. These studies provide crucial information about the antecedents and consequences of secure, anxious, avoidant, and disorganized/scattered attachment types. Additionally, little research has addressed the behavioral systems of caregivers that define the child's attachment system. Especially, to the best of author's knowledge, little report about the behavioral systems of fathers, who are considered to be an important attachment figures, and the processes that characterize their feelings about being caregivers. Moreover, the measurement of disorganized/scattered care has generally been limited to long and labor-intensive interviews and observations. In this study, the repeatability and psychometric properties of the Child Care Helplessness Scale (CCHS) for Turkish fathers, which was designed based on parental perceptions, were investigated to evaluate different aspects of disorganized/scattered caregiving, such as helplessness in caregiving, role switching, and scared/fearful caregiving. Participants were gathered among 817 fathers with children aged 12-36 months. The results of the exploratory (N=272) and confirmatory (N=545) factor analysis performed to evaluate the validity of the scale for Turkish fathers show a two-dimensional structure with 17 items. Father helplessness in the original scale and father-child fear combined to form the first factor (Cronbach's alpha .73), while the child as a caregiver was determined as the second factor (Cronbach's alpha .73). In order to evaluate the concurrent validity of the scale, the fathers completed the Parenting Stress Scale (N=92), Social and Emotional Evaluation Scale (N=187), and Depression (N=169) and Anxiety (N=198) subscales of the Brief Symptom Inventory. While there were positive relationships between father helplessness and fear of the father-child sub-dimension of the Caregiving Helplessness Scale and parenting stress, anxiety, and depression, no significant relationship was found with the child as the caregiver sub-dimension. Additionally, significant positive relationships were found between the problem sub-dimension of the Social and Emotional Evaluation Scale and the sub-dimensions of father helplessness and fear of father-child, and efficacy and child as caregiver sub-dimensions. Moreover, the gathered 157 fathers re-completed the CCHS at three-week intervals. Results show that test-retest reliability was .480 for the father's helplessness and fear of the father-child, and .551 for the child as a caregiver. As a result, CCHS has been adapted to Turkish culture as a valid and reliable measurement tool in order to determine the helplessness characteristics experienced by fathers in early childhood as a 2-dimensional and 17-item.

## İBN HALDUN'A GÖRE KAMU HARCAMALARININ İKTİSADİ HAYATA ETKİSİ

**Mücahit KUMANDAVEREN**

*Doktora Öğrencisi, Siirt Üniversitesi Sosyal Bilimler Enstitüsü İktisat Anabilim Dalı, ORCID No:  
0000-0003-0766-2982*

### ÖZET

On dördüncü yüzyıl İslam dünyasının en parlak ve sıra dışı ismi olan İbn Haldun, modern maliye politikasının kurucusu olarak kabul edilen Keynes'ten yaklaşık 600 yıl önce kamu harcamalarının önemine vurgu yaparak, maliye politikasının ilk örneğini ortaya koyma başarısı göstermiştir. Devleti en büyük ve en önemli harcama birimi olarak tanımlayan İbn Haldun'a göre, maliye politikası aracı olarak kamu harcamaları, ekonomi için kritik öneme sahiptir. Ona göre kamu harcamaları, iktisadi hayatın canlandırılması ve üretimin geliştirilmesi noktasında önemli bir yere sahiptir. Öyle ki onun, devletin iktisadi hayattaki rolüyle ilgili en çarpıcı tespiti, kamu harcamalarının toplam talep içindeki ağırlığının yanı sıra, iktisadi faaliyetleri ve üretim hızını artırıcı fonksiyonuna dair görüşüdür. İbn Haldun'a göre kamu harcamalarının teşvik edici ve yönlendirici rolü göz ardı edilemeyecek kadar önemlidir. Kamu gelirleri ve harcamalarında meydana gelen bir azalma tüm ekonomiyi olumsuz yönde etkilerken, bilhassa toplam talebi oluşturan en önemli parametre olan kamu harcamalarında bir düşme, ekonomide bir daralmaya ve durgunluğa yol açacaktır. Kamu harcamalarının, iktisadi faaliyetlerle olan ilişkisini nehir metaforuyla açıklayan İbn Haldun, devleti bit nehir gibi tasavvur ederken iktisadi faaliyetleri bitkilere benzetir. Tıpkı nehirden uzaklaştıkça cılızlaşan bitkiler gibi, devletin merkezinden uzak ve kamu harcamalarından mahrum iktisadi faaliyetlerin cılız kaldığını söyler. Ayrıca devletin hazinede altın ve para biriktirmesine şiddetle karşı çıkarak, bunun ekonomiyi daraltacağını savunur. Ona göre servet saklanarak değil harcanarak çoğalır. Bu yüzden devlet, malı hazinede toplamamalı, dağıtmalıdır; zira iktisatta dolaşım esastır. İbn Haldun'a göre devletin harcamalar kalemini oluşturan ihsan ile devletin gelir kalemini oluşturan vergiler doğru orantılıdır. Dolayısıyla ihsan azalırsa vergiler de azalır. Kalkınma ve kamu harcamaları arasında da bir bağ kuran İbn Haldun'a göre, mülkle beraber gelen zenginliğin asıl kaynağı vergilerdir. Mülk ne kadar geniş ve refah seviyesi ne kadar yüksek olursa, vergi gelirleri de o kadar çok olur. Bu da mülkün yani devletin harcamalarını ve ihsanlarını artırır. Artan devlet gelirin harcamaya dönmesiyle giderlerin de artacağını ve gelir-gider dengesinde, gelirden meydana gelecek artışın harcamaları aynı oranda artacağını, dolayısıyla meydana gelecek genişlemenin refah artışına yol açacağını söyler.

**THE EFFECT OF PUBLIC EXPENDITURES ON ECONOMIC LIFE ACCORDING TO IBN HALDUN****ABSTRACT**

Ibn Khaldun, the most brilliant and extraordinary name of the fourteenth century Islamic world, has succeeded in presenting the first example of fiscal policy by emphasizing the importance of public expenditures about 600 years before Keynes, who is regarded as the founder of modern fiscal policy. According to Ibn Khaldun, who defines the state as the largest and most important expenditure unit, public expenditures as a fiscal policy tool have a critical importance for the economy. According to him, public expenditures have an important place in the revival of economic life and the development of production. So much so that his most striking determination about the role of the state in economic life is his view of the weight of public expenditures in total demand, as well as his function of increasing economic activities and production rate. According to Ibn Khaldun, the stimulating and guiding role of public expenditures is too important to ignore. While a decrease in public revenues and expenditures will affect the entire economy negatively, a decrease in public expenditures, which is the most important parameter that constitutes the total demand, will lead to a contraction and recession in the economy. Explaining the relationship between public expenditures and economic activities with the metaphor of a river, Ibn Khaldun, while imagining the state as a river, likens economic activities to plants. He says that economic activities far from the center of the state and deprived of public expenditures become weaker, just like plants that become weaker as they move away from the river. He also strongly opposes the state's saving of gold and money in the treasury, arguing that this will shrink the economy. According to him, wealth increases not by hiding, but by spending. Therefore, the state should not collect the goods in the treasury, but should distribute them; because circulation is essential in economics. According to Ibn Khaldun, *ihsan*, which constitutes the expenditure item of the state, and taxes, which constitute the revenue item of the state, are directly proportional. Therefore, if *ihsan* decreases, taxes also decrease. According to Ibn Khaldun, who also establishes a link between development and public expenditures, the main source of wealth that comes with property is taxes. The larger the property and the higher the welfare level, the greater the tax revenues. This increases the expenditures and grants of the property, that is, the state. He says that expenditures will increase with the period of increasing government income to expenditures and that the increase in income in the income-expenditure balance will increase the expenditures at the same rate, so the expansion that will occur will lead to an increase in welfare.

**ÖZET**

Savaşın hükmettiği topraklardan yeni ülkeye göç eden bir ailenin öyküsünü ele alan kitapta göç ve sağkalım olguları ailenin kız çocuğu Rama'nın gözünden aktarılmaktadır. Kitabın görselleri mülteci sanatçı Nizar Ali Badr'ın taşlar kullanarak yarattığı, mülteci olma hikayelerini anlatan eserlerinden oluşmaktadır. Görsellerde acı ve hüznün psikodramanın temel kavramlarından eylem ve yaratıcılık aracılığıyla insan öykülerine dönüşmüştür. Bu çalışmada kitaptaki psikolojik dayanıklılık öğelerinin psikodramatik bakış açısından incelenmesi amaçlanmıştır. İçerik incelenirken tarama modeli ve içerik çözümleme yöntemi kullanılmıştır. Öykü, ailenin göç öncesi sürecini betimleyerek başlamış, çatışma ve sınırlamalar “Şarkılarımızı söyleyip dans edemiyorsak gerçekten özgür sayılır mıydık” ifadesiyle görünür olmuştur. “Savaş gelip kapımıza dayandı,... Zamanı geldi o insan nehrine karışmanın, ...Herkes karaya varacak kadar şanslı değildi,...Sadece anıları taşıyordum yüreğimde.” ifadeleriyle savaş kaynaklı duygular ve zorunlu göç yaşantıları vurgulanmıştır. Yeni ülkelere ulaştıklarında, Rama'nın anne ve babası özgürlüğe kavuşmadan ölenlerin anısına çiçek tohumları ekmişlerdir. Ekilen tohumlar tanıdık olanla vedalaşmayı, yeni olanla tanışmayı ve geri dönmeye ilişkin umudu temsil etmekteyken, zor dile gelen travma, yas ve vedanın tohum ekme eylemiyle yaşama geçirilmesi psikodramadaki eylem kavramının gücünü göstermektedir. Öykü dayanıklılık vurgusu ile sonlanmış; göç sonrasındaki psikolojik dayanıklılığı destekleyen güvende hissetme, göç edilen ülkede algılanan sosyal destek ve geleceğe yönelik umut öğelerine yer verilmiştir. Hem kitabın yazarının hem de öyküsü aktarılan kahramanın “mülteci olmaya” ilişkin ortak teması, yazarın bu katılımcı rolünün de yaratıcılık ve eylemde bulunma çerçevesinde değerlendirilebileceğini gösterir niteliktedir.

**Anahtar kelimeler:** Psikodrama, göç, psikolojik dayanıklılık, eylem

**EXAMINING THE PSYCHOLOGICAL RESILIENCE ELEMENTS FROM A  
PSYCHODRAMATIC POINT OF VIEW IN THE BOOK TITLED “STEPS OF  
STONE: THE JOURNEY OF A REFUGEE FAMILY”****ABSTRACT**

In the book that tells story of a family that migrated from the lands ruled by the war to the new country, migration and survival phenomena are conveyed through the eyes of Rama. Visuals are the works of a refugee artist Nizar Ali Badr, he used stones for telling stories of being a refugee. In these images pain and sadness turned into human stories through action and creativity. It is aimed to examine psychological resilience elements in book with psychodramatic perspective. Survey research model and content analysis method<sup>4</sup> were used while analyzing content of the book. Story begins with describing family's pre-immigration process, conflicts and restrictions have been visible with expression “If we could not sing and dance our songs, would we really be considered free”. With expressions “War came to our door, ...It was time to get involved in that river,...Everyone wasn't lucky enough to be stranded,...I was carrying only memories in my heart” feelings of war and forced migration experiences were emphasized. When reached their new country, her parents planted flower seeds in memory of those who died before couldn't get freedom. These seeds represent goodbye to familiar, meeting the new, and hope. Implementing trauma, grief and farewell with action of sowing seeds shows the power of action in psychodrama. Story ended with an emphasis on resilience; items supporting psychological resilience after migration such as feeling safe, perceived social support in the immigrant country and hope for the future are included. The common theme of "being a refugee" of both the author of the book and the hero whose story is told, shows that this participatory role of the author can also be evaluated within the framework of creativity and taking action.

**TERM-STRUCTURE OF FOREIGN DIRECT INVESTMENT INTO VIETNAM  
ECONOMY**

**Ly Dai Hung**

Vietnam Institute of Economics, Hanoi

1ORCID ID: <https://orcid.org/0000-0003-2693-7996>

**ABSTRACT**

**Objective:** The paper investigates the term structure of foreign direct investment into Vietnam economy by dividing medium-term with long-term contribution on the domestic economic growth. The data is an annual sample of Vietnam economy over 2007-2021. **Methodology:** The research methodology is first based on the recent literature review on the impact of foreign direct investment on the economic growth rate of the host economy. Then, the paper examines the contribution of foreign direct investment into the Vietnam's economic growth by the term structure. **Findings:** The empirical evidence records that the foreign direct investment stimulates the domestic economic growth by promoting the net exports in the medium-term and by the capital accumulation process in the long-term. Therefore, the foreign direct investment is a crucial growth engine for the Vietnam economy. **Implications:** The evidence suggests that the foreign direct investment can be a priority for the public policy to enhance the domestic economic growth rate. Beside the domestic sector, including the state-owned firms and private firms, the foreign direct investment needs to be managed so that its contribution to domestic economic growth is maximized.

**ABSTRACT**

At this time, cyberspace has collapsed all the walls and everything is accessible to everyone. So this message is quickly conveyed to everyone and brings a group with it, just like a stone that throws a person in the middle of a quiet pond, starts from the same point ... when the Backgrounds of dissatisfaction are in a favorable community and in fact people with People with restrictions and deprivation. They are restrictions and deprivation; they cannot express their hearts thought as they wish. They inevitably resort to a device that can express their opinion. The best and most accessible option is to resort to these challenges. In more democratic societies, these challenges may not be objected to by the social system of that society, but in a traditional and conservative society, every move is considered by the modernists, because that society is not willing to undermine its traditional values, it does not want to change society within society. The death of zhina (Mahsa) Amini, a Kurdish woman who was arrested by the guidance patrol and died, at the same time as the economic collapse, poverty and marginalization and destruction of the country's ecosystem, we also witness the devastating policies of the Islamic Republic. The subjugation of half of the country's population with anti -feminine and patriarchal laws is one of the strong and highly protected policies of the Islamic Republic, with the character of the gender apartheid appearance of more than four decades of anti -female rule of the Islamic Republic. So, reacts. We also see the devastating policies of the Islamic Republic. The subjugation of half of the country's population with anti - women's and patriarchal laws is one of the strong and highly protected policies of the Islamic Republic, with the character of the gender apartheid appearance of more than four decades of anti - women's rule of the Islamic Republic. We are the devastating policies of the Islamic Republic. The subjugation of half of the country's population with anti - women's and patriarchal laws is one of the strong and highly protected policies of the Islamic Republic, with the character of the gender apartheid appearance of more than four decades of anti - women's rule of the Islamic Republic. The national uprising of the Iranian people in hundreds of cities of Iran and the world in September is a huge and multilateral political event that has transformed the Iranian public arena. Its geographical area learned at least hundreds of Iranian cities and the world and had a significant appearance in the capital. The wave of recent popular protests against the current sovereignty in Iran has shown the biggest point of view: Forty - three years after the revolution, the government has not yet been able to provide an efficient economic model. The protests, the widespread and largest scene of opposition to the regime ruling Iran, has been to express public dissatisfaction since the Green Movement to the present day. The Slogans of " *Women, Life, Freedom* " and "*Death on the Dictator*" of the demonstrators have specifically targeted the undisputed power of Ayatollah Ali Khamenei and the Velayati -e Faqih. The issue of compulsory hijab became a window for the widespread emergence of accumulated dissatisfaction and demands that had not been answered. In the public space of the country, there is no opportunity to provide alternative views for running the country such as the mandatory Hijab

(veil) of separation of religion and government, referendum, and ending regional military interventions. The uprising of November and October 2019, like the recent uprising, was the accumulation of a collection of economic, political, social, cultural, environmental and international people that led the country to a compound crisis, which is virtually impossible to get rid of the existence of the Islamic Republic. Thus, the most important factor that created the recent explosive conditions was nothing more than a comprehensive bankruptcy of the Islamic Republic and the overwhelming majority of the Iranian people from the public right and the pervasive calamities that require this hellish system. It has become a spark of explosion and a turning point in social uprisings against the Islamic Republic throughout its life. This is a promise of transition from single -case and separate street movements, though the former chain and destructive to the first "super movement" and "women's revolution" in Iran. The recent movements of the Iranian people are highly motivational and activated, with more warrior and militancy that, overall, makes it more radical and puts more pressure on the political system. But organizing and leadership does not work effectively and relies on the short -term and short -term field forces. Thus, it does not have the essential characteristics of the social movement. So, the main question of the article is whether the social uprisings of the Iranian people with the spark of the "super movement" and the " women's revolution" in Iran lead to the revolutionary and transformative social movement? In order to answer the research question, In considers the framework of the theory of the Neil Smelser (sociologist) for six stages to form a revolutionary and transformative social movement: out of the six essential stages that Neil Smelser is for the formation of a pervasive and transformative social movement. , Of the six essential stages that Neil Smelser considers to form a pervasive and transformative social movement, recent protests have taken the four steps of "structural background, structural pressure, expansion of generalized beliefs and accelerator factors", but still in the fifth stage. The formation of a coordinated group for political and social mobilization has not been reached that the boundary between the social movement with "social uprisings, street riots and violent conflicts" is considered. The research question is how social movements can be correlated and more effective in social change in a country such as Iran, where neither the presence of democracy nor the presence of powerful news parties, and the economic and class divisions and other social breaks have expanded sharply, and more effective in social change. Find? The answer to the question of the article is here in a country such as Iran, where neither the presence of democracy nor the presence of powerful news parties, and economic and class divisions and other social ruptures have expanded sharply, how social movements can be correlated and more effective in an effective role in Find social developments? In Iran today, along with classical social movements such as the labor movement, modern social movements such as the environment movement, women, youth, and oppressed ethnic movement. Movements that are generally unique, non -ideological, demand -based, anti -power and supernatural and do not necessarily derive from the position of individuals in production and have a horizontal, fluid, and jelly structure, but a religious and chain, and without centralized leadership and duality. Revolutionary or reformist is raised against structures. Pandemic Corona and imperialist crippling sanctions are not only the factors that have brought the country's economy to the catastrophe, but the deeply corrupt structure of the Islamic Republic itself is one of the main causes of the current deep economic crisis. The fierce collapse of the Rial rate against the Dollar, part of which is due to increased liquidity inhibition, monetary inflation caused by non -supportive printing, psychological factors resulting in large policies such as the continuation of nuclear gambling and its resulting sanctions, or other harmful economic policies, or other economic policies. There are a few rates of the Dollar, threw the Rial out of value. The single case of most of the demands of these movements, although reflects a kind of kinetic pluralism and their independence that enhances their ability to mobilize and dynamism, also limits their universality. But in a situation where not only the necessity but also the transformations of the liberation of a real possibility, and the developments ahead, not the calendar that will be historical, this uprising must become an organized and efficient force with a song commensurate with the rapid developments of the present fateful era. If the Iranian popular uprising in the current historical opportunity fails to overcome the barriers to their organization, change in the Islamic Republic will at best lead to a "Passive Revolution" and conservative, and the formation of an alternative democratic system will emerge. It will be impossible to do so...

**ÖZET**

Bu makale, iş yerindeki titreşimler için Portekiz mevzuatının en alakalı gerçeklerini özet olarak sunmaktadır.

2002 yılında, Avrupa Parlamentosu, topluluk düzeyinde, çalışmalarını sırasında maruz kalan işçilerin korunması için asgari gereklilikleri getirmeyi amaçlayan, işçilerin titreşimlerden kaynaklanan risklere maruz kalmasına ilişkin bir yönergeyi onayladı. titreşimlerden kaynaklanan riskler. Avrupa Birliği'nin tüm ülkeleri, mevzuatlarını bu direktifte belirtilen asgari gerekliliklere uyarlamak zorunda kaldı. İşçilere iletilen titreşimler el-kol sistemi ile, elin avuç içi ve parmakları aracılığıyla olabileceği gibi, işyerinde makine veya araçlarla koltuk veya ayaklar aracılığıyla tüm vücuda iletilebilir. Elleri düzenli olarak el-kol titreşimine maruz kalan işçiler, topluca el-kol titreşim sendromu olarak bilinen semptomlara neden olan el ve kol dokusu hasarına maruz kalabilirler. El-kol titreşim tehlikeleri birçok endüstri ve meslekteki insanları etkiler. Daha yüksek titreşimli ekipmanların kullanımı ve bu tür ekipmanların uzun süreli ve düzenli kullanımı ile riskler büyük ölçüde artar. Yüksek düzeyde tüm vücut titreşimine maruz kalmak sağlık ve güvenliği tehlikeye atabilir ve sırt ağrısına ve diğer hastalıklara neden olduğu veya bunları şiddetlendirdiği bilinmektedir. Titreşimlerin genliği yüksek olduğunda, maruz kalma süreleri uzun, sık ve düzenli olduğunda ve titreşimler şiddetli şoklar ve sarsıntıları içerdiğinde riskler daha fazladır. İyi yönetim uygulamaları yoluyla titreşim tehlikeleri ortadan kaldırılabilir ve riskler kontrol edilebilir ve kabul edilebilir seviyelere indirilebilir. Titreşim kontrol önlemleri birçok durumda verimliliğin artmasına yol açmıştır. Portekiz mevzuatı, el-kol ve tüm vücut sistemlerine iletilen titreşimlerden kaynaklanan risklerin kontrolü için minimum standartlar belirler. Ulusal mevzuat, Direktifin gerektirdiğinden daha elverişli hükümler uygulayabilir ve önceden var olan herhangi bir ulusal mevzuatın işçilere sağladığı korumayı azaltmamalıdır.

**Anahtar Kelimeler:** İşyerinde titreşimler, Portekiz mevzuatı, Çalışma koşulları

**RELEVANT FACTS OF PORTUGUESE LEGISLATION FOR VIBRATIONS AT  
WORK****ABSTRACT**

This article presents, in summary form, the most relevant facts of the Portuguese legislation for vibrations in the workplace. In 2002, the European Parliament approved a directive on the exposure of workers to the risks arising from vibrations, which aims to introduce, at the community level, minimum requirements for the protection of workers who, in the course of their work, are exposed to risks due to vibrations. All the countries of the European Union had to adapt their legislation to the minimum requirements set out in this directive. The vibrations transmitted to workers can be by the hand-arm system, through the palm and fingers of the hand, or to the whole body, transmitted through the seat or feet by machines or vehicles in the workplace. Workers whose hands are regularly exposed to hand-arm vibration can suffer hand and arm tissue damage that causes symptoms collectively known as hand-arm vibration syndrome. Hand-arm vibration hazards affect people in many industries and occupations. The risks increase greatly with the use of higher-vibration equipment and with prolonged and regular use of such equipment. Exposure to high levels of whole-body vibration can endanger health and safety, and is known to cause or aggravate back pain and other diseases. The risks are greater when the amplitude of the vibrations is high, the periods of exposure are long, frequent, and regular, and the vibrations involve violent shocks and jolts. Vibration hazards can be eliminated and risks controlled and reduced to acceptable levels through good management practices. Vibration control measures have, in many cases, led to improved efficiency. Portuguese legislation establishes minimum standards for the control of risks resulting from vibrations transmitted to hand-arm and whole-body systems. National legislation may apply more favorable provisions than those required by the Directive and must not reduce the protection afforded to workers by any pre-existing national legislation.

**ABSTRACT**

Plastic particles are everywhere in the living environment and food chain. These new yet pervasive materials have changed the way we live and revolutionized the modern world. Recent research has highlighted the possible adverse effects of exposure to microplastics on humans and the environment. The measurement of the data was done based on the sedimentation rate of particles in one square meter. In this study, the distribution, composition and morphology of microplastics in indoor air and residential environment were done. The data from this research showed that the main microplastics found in the indoor air samples were pieces or polyethylene fibers that were different from the particles in the outdoor air. The amount of microplastic particles in the indoor environment was significantly higher than the outdoor air.

**ABSTRACT**

Osteoporosis is a devastating disease affecting approximately 10 million people in the United States , 80% of whom are women . The prevalence of osteoporosis in different settings ( India , Saudi Arabia) varies between 24 -9% . Similarly, in Pakistan prevalence for osteopenia and osteoporosis is 27- 44 % although it varies in different settings.

We conducted this cross-sectional study in a tertiary care hospital in Karachi catering lower and lower middle income population using convenient sampling technique. Demographic information is taken, weight and height measured and a questionnaire is used after informed consent to identify the risk factors like smoking or/and alcohol intake, menstrual history , family history of fractures , endocrine disorders , sedentary life style , rheumatic disorders , previous history of fractures , intake of medication for any chronic illness .Bone Mineral density is recorded by using Quantitative Ultrasound Scan of patients heel by a portable instrument (Hologic ) . Results are compiled in SPSS version 16 for statistical analyses. A total of 313 subjects were enrolled in the study with 33 males and 280 females with a male to female ratio of 1: 8 . 25(8%) subjects had normal BMD , 187(60%) had osteopenia and 101 (32%) had osteoporosis Age range is categorized in 15-30yrs , 31-45 yrs, 46-60 yrs and > 60 yrs . All age groups have shown a very high prevalence of osteopenia which is very alarming since the majority of subjects belonged to young- middle aged productive individuals which were students and mothers.

**Conclusion:** The prevalence of osteoporosis and osteopenia is alarmingly high in this study and needs immediate facilitation in health system planning and policymaking to reduce the morbidity and mortality related to this hidden condition .

**ABSTRACT**

The energy transition is deploying in an accelerated way giving broad access to renewable energy opportunities faster and easier. The energy sector faces real challenges in terms of diversification of energy sources and supply. Moreover, conversion and storage of energy are directly connected to the growing potential and use of renewable energy sources (RES) and the developed breakthrough technologies. Fuel Cell and Hydrogen (FCH) energy systems are regarded as one of the best paths for the energy transition, providing multiple prospects for resilience and improvement of the economics of energy supply systems. FCH technologies and large scale battery development emphasizes on particular social goals and market drivers, such as reducing carbon emissions, reducing dependability on supply and dropping consumption of fossil fuels. Furthermore, various aspects have to be addressed in a straightforward way for the accelerated deployment and market penetration of breakthrough innovations, such as policy issues, evaluation and barriers to deployment, market potential, alternative applications. FCH technologies systems and innovative batteries are considered to be one of the best paths to store, convert and exploit the energy generated from intermittent renewable sources. The aim of the present research is to give an overview of the existing clean technologies for production, conversion and storage of energy in line with the circular economy objectives.

**ABSTRACT**

Under the background of "double carbon" target, the Vacuum Insulation Panel (VIP), the new high-efficiency thermal adiabatic material, has been widely concerned all over the world. The excellent performance is the advantage, but the service life is the key consideration to its application and promotion. The components and insulation mechanism of VIP was introduced. And the numerical prediction model of service life, based on Schwab, was established. The influence of temperature, humidity, size and other factors on service life were involved and analyzed. Experimental VIP with glass fiber core, polyester based composite membrane barrier was prepared. The change rule of thermal conductivity of VIP versus temperatures, humidity, alternating high and low temperatures and sizes were experimentally explored. The results shew that, the thermal conductivity changed sharply while the temperature exceeded 97 °C, and it increased with the temperature increased. While the range of relative humidity was 30% RH to 50% RH, the thermal conductivity changed flatly. The thermal conductivity increased with the relative humidity (over 50%RH) increasing. In the alternating high and low temperature experiments, it has been found that the growth rate of thermal conductivity of vacuum insulation panel was large at high and small at low temperatures. The experimental measured values were compared with the model calculated values. The results shew that the change pattern was consistent overall, and the error was within 0.6%. The reliability of this numerical prediction model was verified. The article also proposes a performance optimization scheme for studying the influential factors of service life.

**ABSTRACT**

At the end of 2019, a cluster of pneumonia cases occurred in Wuhan, China. It then quickly spread to other parts of the world causing a pandemic situation popularly termed as Coronavirus (CoV) Disease-2019 (COVID2019). It has highlighted an urgent need for the development of new antiviral drugs. In this investigation, in silico studies were performed using the quantitative structure-activity relationship (QSAR) between biological activity against SARS-CoV-2 and the molecular structures of twenty-nine cyclic sulfonamide derivatives to predict the anti-SARS-CoV2 activity. The quantum chemistry DFT-B3LYP/6-31G method was used to optimize the complete set of cyclic sulfonamide derivatives, then various classes of molecular descriptors have been generated using the Chem3D software. The principal component analysis (PCA) was used to eliminate redundant and non-significant descriptors. After that, statistically robust models were developed using multiple linear regression (MLR) techniques, corresponding to the rigorous Organization for Economic Co-operation and Development (OECD) requirements. Furthermore, all derived models were subjected to thorough external and internal statistical validations, Y-randomization, and applicability domain. The drug-likeness properties of the compounds with the greatest activity value were also calculated using Lipinski rules properties.

**ABSTRACT**

Literature and neurobiology seem to be two completely different fields of science. Literature is the world of works of art, and neurobiology is a branch of science that studies the function, development, genetics, pathology of the human nervous system, in short, the human brain. This article analyzes two objects at the same time: the object of literary study - the influence of the reception of a work of art on human cognition, intuition and consciousness, the object of the neurobiology of reading - a description in the scientific language of the changes that occur in the human brain when reading a work of art. The neurobiology of reading as a field of science has been actively analyzed and discussed in the scientific works of American linguists and literary critics, in articles by cognitive scientists and literary critics over the past twenty years. The purpose of the article is to take a step towards the introduction of the neurobiology of reading into the Kazakh literature. In the course of writing the article, such scientific methods as the comparative historical method, observation, compilation, clarification, hypothesis, analysis and compilation are used. Reading is a complex set of all verbal and non-verbal human cognitive skills: planning, planning, forecasting, critical thinking, memory, grammatical literacy, retention of new words in long-term memory and productivity, recognition of the content of what has been read. At present, the neurobiology of reading is not only an automatic mechanism for text recognition, but has also taken a course in recognizing cognitive functions carried out in the right and left parts of the human cerebral cortex. Since the neurobiology of reading is a new concept in the science of Kazakh literary study, the results of this scientific article allow using the book as a new teaching method, a different way of perceiving the artistic world, not only in the process of teaching fiction, but also in higher educational institutions.

**SENIOR HOUSING COMMUNITIES IN ALBERTA: INDEPENDENT AND ASSISTED LIVING**

**Ananda Majumdar**

*ORCID ID: 0000-0003-3045-0056*

**ABSTRACT**

Canada's fourth most populous province is Alberta. An estimated 4.4 million people live in Alberta (Kertis, 2022). Alberta is a landlocked province with various climates. The older population in Alberta is growing, which will be one in five by 2046. <sup>2</sup>Estimated 715,000 Albertans are now over 65 and have become senior as of June 30, 2022. In Alberta, retirement living provides excellent opportunities for aging adults. (Kertis, 2022) Edmonton and Calgary are the most common cities in Alberta for retirement living. These cities have more options for choosing old houses, city life attractions, lifestyles etc.; when selecting the best kind of retirement houses, the level of care needs to be reminded during choosing retirement houses in Edmonton or Calgary or anywhere in Alberta. Many services are available that improve the feeling of well-being and make the place livable. The average monthly cost of senior housing in Alberta is estimated at \$2500 per month (Kertis, 2022). The Alberta Senior Citizens Housing Association represents all residents and communities in taking care of Alberta's senior citizens. The article discusses the seniors in Alberta and their safe and accessible accommodation after retirement for lonely seniors. The article's outcome is to understand the scenarios of Alberta senior housing and their protection through resilience. The methodology has been conducted by documentary analysis. The feature question is, why do seniors want to stay in their own houses even in old age?

**ABSTRACT**

It is found that so many wastes which can be used in traditional concrete as replacement of original constituent. The coconut shell is also a main waste which can be used in traditional concrete. Generally, coconut shells are used in traditional concrete in the form of coconut shell aggregate and coconut shell fibre. This paper describes coconut shell used as replacement of coarse aggregates. The compressive and flexural strength test were conducted based on 10%, 20% and 30% replacement of coarse aggregate to coconut shells. It is observed that the compressive strength of concrete is reduced in some extent and the flexural strength also reduced as replacement of coconut shell is increased, but the 10% replacement is possible to use in construction work and 20% and 30% replacement are possible to use for less important construction work under some conditions. It is found that, workability of concrete is increased than traditional concrete as percentage replacement is increased. Total cost of concrete is get reduced by replacement of coarse aggregate to coconut shells. The volume of concrete is also increased as replacement is increased, hence, the total quantity of concrete required is getting reduced and the cost is again getting reduced. Finally, this paper concluded that, the possibility of using coconut shell as a replacement of coarse aggregate is economical

**Keywords:** Coconut shell, compressive strength, flexural strength, workability, waste material, coarse aggregate.

CULTURE AND MANAGEMENT PRACTICES WITH REFERENCE TO RIO  
GRANDE DO SUL, BRAZIL**

**Anjali Ganesh**

*Professor, Department of Business Administration  
St. Joseph Engineering College,*

**ABSTRACT**

In the globalized world, people have to work with people of different cultural heritages. Cultural differences should be taken in to account when communicating and interacting across nations and across cultures within nations. Understanding the cultural traits is regarded as the starting point for managers working across cultures. Cultural differences should be taken in to account when communicating and interacting across nations and across cultures within nations. The live socio-cultural experiences of the author gathered through interaction with Brazilians when she went through Group Study Exchange Programme of Rotary International is the spotlight of the paper. Learning different cultures and languages help us appreciate diversified cultures and enable us to overcome culture shock successfully when we visit foreign country or when the foreigners visit us. It is very difficult to create a cultural framework which succeeds in being diverse to capture all the differences between cultures with universal application. Cultural adaptation though difficult is not impossible.

**ABSTRACT**

Research and application of thermal insulation materials have become an important way for global energy conservation and CO<sub>2</sub> emission reduction. Vacuum insulation panels (VIPs) with excellent adiabatic properties attract worldwide attention. VIPs are widely used in building insulation, household appliances, cold chain logistics, and other fields. The study of VIPs in China started at the beginning of the 21st century. There are a lot of research achievements on VIPs packaging, internal core material, and microscopic scale. In fact, VIPs are installed as an envelope structure. The thermal insulation effect is not only affected by the performance of VIPs, but also by different installation sequences. In cold chain transportation, the relative position between cold source and VIPs has an important influence on the overall thermal insulation. In this paper, the influence of the relative position of VIPs and refrigeration devices on the insulation effect was studied. Two installation positions were designed. One was “VIPs -temperature guide plate - refrigeration device”, defined as internal insulation (INI), in which the VIPs were placed on the innermost side, wrapped with the temperature guide plate, and the refrigeration device was placed close to the temperature guide plate. The other was “temperature guide plate - refrigeration device - VIPs, described as external insulation (EXI). Thermo Electric Cooler (TEC) was adopted as a refrigeration device. The physical model and numerical heat transfer model were established. The results of the experiment and simulation are analyzed synthetically. It was found that the insulation effect was much better when the VIPs were in INI design, and the maximum duration was 35 hours. Moreover, the internal temperature distribution of the collector was more uniform, and the cold quantity was not easy to dissipate. In a word, experimental results provide a practical reference for applying VIPs coupled semiconductor refrigeration in cold chains.

**ABSTRACT**

Vacuum insulated panels (VIP) are considered to be the most promising super insulation material to date. It has the double advantage of saving energy and improving space utilization. However, the high cost of core limits its application. With the continuous promotion of the national carbon neutral strategies, energy-saving and emission-reduction technologies have gained worldwide attention. A new type of VIP with recycled and economical cotton fiber core material was innovated in this paper. The thermal conductivity was experimentally and mathematically analyzed. A vacuum measurement device was designed to analyze the variation of thermal conductivity of VIP under different pressure conditions. Three typical barrier envelopes were presented and their performance parameters were measured to investigate their adiabatic properties. Three typical barriers, respectively AF, MF-I, MF-II, were involved to investigate the effect of sustainability. The results showed that the VIP with AF as the barrier layer may perform well than other VIP considering the service life and thermal conductivity. The VIP with cotton fiber core material not only have good thermal insulation performance but also have the characteristics of low price and environmental protection. As a potential candidate for the VIP core material, the recycled wasted cotton fiber core material is a new development direction.

**A REAPPRAISAL OF KARL MARX'S CRITIC OF CAPITALISM: GLOBAL  
SYSTEM FOR MOBILE COMMUNICATION (GSM) NETWORK PROVIDERS IN  
NIGERIA AS CASE STUDY****Olubanjo-Olufowobi, Olufunso***Philosophy/Religion Department**Mountain Top University***ABSTRACT**

Communication which is the exchanging of information is fundamental to the existence and survival of humans as well as to an organization for it involves the process of creating and sharing ideas, information, views, facts, and feelings from one place, person or group to another. *Of a significant form of electronic media is the telecommunication which is a range of information-transmitting technologies and communications infrastructures, such as wired phones; mobile devices, for example cellphones; microwave communications; fiber optics; satellites; radio and television broadcasting; the internet; and telegraphs.* The quantum development in the telecommunication industry all over the world is very rapid as one innovation replaces another in a matter of weeks. A major breakthrough is the wireless telephone system, which comes in either fixed wireless lines or the Global System for Mobile Communication. With the introduction of GSM, Nigerians have access to different services which have helped to stimulate the Nigerian economy. In Nigeria, telecommunication has been made efficient and cost effective through the private sector in the last twenty-one years. Prior to these years, telecommunication sector which was owned, managed and controlled by government player called Nigerian Telecommunication Limited (NITEL) was inefficient. Yet, people like Karl Marx are against private ownership of property. This work with the use of pragmatic method aims at discussing the roles of capitalism in telecommunication sector in Nigeria with particular reference to global system for mobile communication (GSM) network providers' roles in the socio-political and socioeconomic development of the country. Hence, advocates for the adoption of humanistic capitalism; a form of capitalism that gives priority to human dignity and well-being above profit/market.

**CAN BLENDED LEARNING STRATEGY HELP BRIDGE THE GENDER GAP IN  
BIOLOGY CLASSROOMS?****Umar Ayotunde Adam***Department of Science and Technology Education, Lagos State University***Soladoye Lameed***Department of Science and Technology Education, Lagos State University***Uthman Mariam***Department of Science and Technology Education, Lagos State University***Benjamin Benson Ayodele***Department of Science and Technology Education, Lagos State University***ABSTRACT**

The performance gap between male and female students in biology have been acknowledged by science educators around the world, and there have been several attempts and interventions through research and workshops to overcome these gaps. This study examined whether using blended learning strategy as an intervention would improve the performance of female students relative to male students in senior school biology in Alimosho, Nigeria. A total of 75 biology students in senior secondary year two (SS2) comprising 42 males and 33 Females participated in the study. The average age of the students was 14 years. The research design was quasi-experimental (a pre-test post-test non-equivalent group) design. The instrument used to gather data was the variation and evolution achievement test (VEAT) which had a reliability coefficient of 0.76. The experimental group was taught with the blended learning strategy while the control group was taught with the conventional lecture method. The data (pre-test and post-test scores) collected were analysed using ANCOVA since the participants were not randomly assigned to the groups. The study found no statistically significant difference between the performance of the male and female students [ $F(1,37) = .46; p > .05$ ]. While there was a statistically significant difference in the achievement of students taught using the blended learning and those taught using the conventional lecture method [ $F(1,72) = .00; p < .05$ ]. Hence, the study concluded that the use blended learning strategy can help bridge the gap between male and female students' performance in biology and overall, boost the performance of the students. Recommendations which concern the government, school owners and biology teachers for the implementation of the findings of this study and further research were made

**ABSTRACT**

Non-steroidal anti-inflammatory drugs (NSAIDs) are among the most commonly used therapeutic groups of agents in the world for the treatment of pain, inflammation and fever. However, their utility is inadequate due to a higher prevalence of gastrointestinal damage such as gastric ulceration, perforation and their allied complications. These findings suggested that the safety of these agents in long-term usage is questionable, and some of these therapeutic agents have been withdrawn from the market. As a result, the preliminary enthusiasm for development of selective COX-II inhibitors has been distressed, but the prerequisite for safer design and development of NSAIDs remains. For a long time, it has been recognized that the involvement of several reactive oxygen species (ROS) and free carboxylic acid (-COOH) groups are accountable for gastric ulcer formation accompanied by long-term NSAIDs usage. These findings suggest that antioxidant compounds may be beneficial in preventing NSAID-induced gastric ulcers. It has been anticipated that the concomitant usage of NSAIDs and antioxidant compounds may reduce the peril of gastrointestinal (GI) toxicity, and make the remedy harmless. These conjugated NSAIDs liberate the parent molecules after absorption by enduring chemical or enzymatic hydrolysis. Thus, the synthesis of these hybrid compounds with/without spacer groups as gastrosparring agents would likely found to be chemically stable, biolabile, and show retention of analgesic and anti-inflammatory potential while having significantly lower ulcerogenicity. The lack of ulcerogenicity of these hybrid molecules can be accredited to the antioxidants and enhanced physicochemical characteristics.

**Keywords:** NSAIDs, prodrugs, gastric ulcers, ulcerogenicity, inflammation, reactive oxygen species.

**ABSTRACT**

Approximatley 47 million individuals are suffering from dementia all across the globe and it is expected to increase by three times i.e., about 131 million by 2050. The most important causes of dementia are Alzheimer's disease (AD). AD is a severe age-related neurodegenerative disorder characterized by short-term memory loss, aphasia, mood imbalance, and executive function. Although the etiology of AD is still unknown, and the exact origin of the disease is still under review, the major hypothesis behind development of AD is an aggregation of Amyloid  $\beta$  ( $A\beta$ ) plaques or neurotoxic  $A\beta$  oligomer outside the neuron. Current evidence showed that the processing of amyloid precursor protein (APP) by  $\beta$  secretase and  $\gamma$  secretase leads to the production of abnormal  $A\beta$  monomer. This aggregation of  $A\beta$  and NFT is promoted by various genes like BACE1, ADAM10, PIN1, GSK-3, APOE, PPAR $\alpha$ , etc. Identification of these genes can lead to discover a number of therapeutics targets that have been useful to study the pathogenesis and underlying treatments. From recent studies, it can be concluded that melatonin modulates the activities of these gene thereby reducing  $A\beta$  production and increasing its clearance. Melatonin also reduces the expression of APP by attenuating cAMP thereby enhancing the non-amyloidogenic process. In the present manuscript, author explore and discuss the neuroprotective role of melatonin against  $A\beta$ -dependent AD pathogenesis. Authors also discussed the potential molecular and genetic mechanism of melatonin on the production and clearance of  $A\beta$  that could ameliorate neurotoxicity.

**ÖZET**

Çevrenin insan algısı, insan yaşamına "kalkınma için sürdürülemez" olarak katkıda bulunmuştur. Kaynakları sürdürmek yerine çevreyi manipüle eden insan faaliyeti nedeniyle insan varlığının istikrarsız olduğu bir durum. İnsanlar, çevreyi korumayı görmezden gelmenin yanı sıra artan bir kullanım haline gelebilir, bu da muhtemelen böyle bir çevresel felakete neden olabilir. Bakış açısı farklılıkları gerçekten de insanın ekolojik bütünlüğünü azaltabilir, ki bu o zaman aslında doğayla hem mekansal hem de zamansal bağlantıya sahiptir. İnsanlar, doğayla ilişki kurmaya istekli katılımcılar olarak varoluşta bir etkiye sahiptir. İnsanlar hala doğayı istedikleri gibi kullanabilirler ya da sürdürülebilirlik, sükunet ve canlı bir uyum sağlamak için doğayı bilincine göre denetleyebilirler. Bu çalışmanın amacı, bir banliyö okulunda eko pedagojik okulların nasıl yapılandırıldığını bilmek ve anlamak olacaktır. Bu tür araştırmalar, böyle bir durum çalışması yöntemiyle nitel bir araştırma yaklaşımı kullanır. İkincil veri toplama yöntemleri, mevcut literatür ve dokümantasyon çalışmaları ile gözlemler ve görüşmeler gibi veri toplama yöntemlerini kapsar. Elde edilen bulgulara göre, banliyö okullarında kullanılan eğitim dizisi rasyonalist bir eğilim, dini bir örüntü ve ilerlemeci bir örüntüdür. Konu alanlarının ve öğrenme destek işlevlerinin dahil edilmesi yoluyla öğrencilerin potansiyel büyümesine odaklanan eğitim eğilimi.

**Anahtar Kelime:** Ekopedagojik, Eğitsel Örüntüler; sürdürülebilir kalkınma.

**EDUCATIONAL PATTERNS IN SUBURBAN SCHOOLS ANALYSIS****ABSTRACT**

Human perception of the environment has contributed to human life as "unsustainable for development." A circumstance wherein human existence is unstable because of human activity which manipulate the environment instead of sustaining the resources. Humans can become increasingly use as well as ignore to maintain the environment, likely to result in such an environmental catastrophe. Viewpoint discrepancies could indeed reduce the human ecological integrity, which then in fact have such both spatial and temporal connection with nature. Humans have an impact in existence as participants with eagerness to engage with nature. People can still use nature according to their will, or they may oversee nature to his\her consciousness in order to achieve sustainability, tranquility, as well as living harmony. The goal of this study would be to know and understand how the configuration of eco pedagogic schools in a suburban school. Such research uses a qualitative research approach with such a method of case study. Secondary methods for data collection encompass existing literature and documentation studies, as well as methods for collecting data such as observations and interviews. As according to findings, the education sequence being used suburban schools is a rationalist trend, a religious pattern, and a progressive pattern. The educational trend which concentrates on students' potential growth thru the inclusion of subject areas and learning support functions.

**Keywords:** Ecopedagogic, Educational Patterns; sustainable development.

**ABSTRACT**

This article demonstrates Kazakh folklore in animated films, which are directly related to children's education today. It is a bitter truth that in the civilized age, where science and technology have developed together, we have begun to lose touch with our common Turkish values of yesteryear. One of the reasons for this is that the Kazakh folklore heritage does not take its proper place on the internet, the internet space. Therefore, to instil this folklore heritage in the younger generation, it is necessary to study their portraits in one way or another. In the course of the study, it was proved in detail that along with mythical characters in prose folklore, it is necessary to create a unified list of heroic poems, love poems, and historical poems that are valuable exhibits of Kazakh folklore. In particular, in the performance of the popular images of the Kazakh people, such as "ER Tostik and The Dragon", "Karazhay batyr", "Koblandy batyr", as well as Aldar Kose, various genres of folk prose, in particular fairy tales, mythical stories, are filtered, which prove that the heroes have a lot to give to the younger generation. The purpose of the article is to instil in the minds of Kazakh children and Kazakh society as a whole the characters of our native oral literature, to prove the importance of their unification. In the course of the study, the authors of the article prove as much as possible that this gap should be filled by creating a gallery of folklore characters using the achievements of innovative technologies. The result of this issue will be interesting not only for young people but also for anyone who wants to learn about the spiritual heritage of the nation. When the art of speech takes its place in the minds and thoughts of our people, the demand of young people for folklore heritage and the desire for knowledge increases.

**Keywords:** Oral literature, child rearing, animated films, unification, character, innovative technologies, the younger generation, multi-faceted.

**ABSTRACT**

New anti-breast cancer drug research is known to be a difficult, costly, time-consuming and challenging project. Recently, computer-aided drug discovery (CADD) and computational methods have emerged as a potent and promising tool for faster, less cheap and more efficient drug design. This research tried to enhance and suggest novel anti-breast cancer drugs by studying the 3D-QSAR and molecular docking of thioquinazolinone derivatives with the aromatase enzyme (PDB ID: 3S7S). The best model with high  $r^2$  values has been built using comparative molecular similarity indices analysis (CoMSIA). The fitted model's predictive ability was checked using an external validation strategy based on a test set. The results indicated that the electrostatic, hydrophobic, and hydrogen bond donor/acceptor fields all had a vital role in the treatment of breast cancer. In light of these results, we developed a number of new potent aromatase inhibitors and used the most promising model to predict their inhibitory activities. Furthermore, the pharmacokinetic properties of drug candidates were analyzed using ADMET investigations.

**Keywords:** CADD; Cancer; Thioquinazolinone; QSAR; Molecular docking; ADMET.

**KEY PERFORMANCE INDICATORS FOR ASSESSING FACULTY AND STAFF****Baan Jafar Sadiq***Prof. Dr. at College of Education for Women/ Baghdad University***ABSTRACT**

A key performance indicator (KPI) is a type of performance measurement that helps to understand how the organization, department, or institution is performing and allows one to understand if the institution is headed in the right direction or not. The current paper aims at assessing the faculty and staff by using metrics of KPI through analyzing the data collected from Baghdad University/ College of Education – Departments of English. Finally, the paper reveals the wrong direction of Baghdad University in managing the faculty and staff category by loading the staff with more hours without any rewards or even research grants and training broad thus, these reasons affect the learning process and the whole performance of the university. The Baghdad University would pay more attention to its staff by increasing the number of instructors and employees and sending the staff for training and rewarding the production staff for improving the performance of the university. Baghdad University is one of the ancient universities and it should keep the attention to the global list of universities.

**Keywords:** KPI, faculty and staff, Assessing, performance measurement

**SOME BASIC PROPERTIES AND CONNECTIVITY INDICES  
OF WEAKLY ZERO-DIVISOR GRAPH OF A RING****SHABIR AHMAD MIR***Department of Mathematics, Aligarh Muslim University, Aligarh-  
202002, India***NADEEM UR REHMAN****ABSTRACT**

Consider  $R$ , a commutative ring with unity  $1 = \{0\}$ ,  $Z(R)$  denotes the set of zero-divisors of  $R$  and  $Z^*(R) = Z(R) \setminus \{0\}$ . The notion of weakly zero-divisor graph, denoted by  $W\Gamma(R)$ , was given by Mohammad et al. [?] in which the vertex set is the set of nonzero zero-divisors of  $R$  and adjacency relation is followed by two distinct vertices  $u$  and  $v$  if and only if there exists  $r \in \text{ann}(u)^*$  and  $s \in \text{ann}(v)^*$  such that  $rs = 0$ , where  $\text{ann}(u) = \{v \in R; uv = 0, \text{ for } u \in R\}$ . It can be note that  $\Gamma(R)$  is a spanning subgraph of  $W\Gamma(R)$ . In this paper, we study some basic properties of weakly zero-divisor graph of the ring  $Z_p \times Z_q \times Z_r$ , denoted by  $W\Gamma(Z_p \times Z_q \times Z_r)$ , where  $p$ ,  $q$  and  $r$  are prime numbers greater than 2 and not necessarily distinct. Further, we discuss about Weiner index, Gutman index, first K Banhatti index, second K Banhatti index, Forgotten topological index, Forgotten topological coindex and degree distance index of  $W\Gamma(Z_p \times Z_q \times Z_r)$ .

**ÖZET**

Yem bitkileri ekolojik istekler açısından çok seçici olmayan, protein ve karbonhidrat içerikleri dengeli kaliteli ve ucuz kaba yem kaynaklarıdır. Yem bitkileri içerisinde dünyanın hemen hemen her yerinde yetişme alanı bulabilen, Dünya’da ve Türkiye’de yem bitkileri içerisinde en fazla yetiştiriciliği yapılan yonca uzun ömürlü çok yıllık bir bitkidir. Geniş uyum yeteneği, yüksek ot verimi ve besleme değeri, uzun ömürlülüğü, biçim sayısının yüksekliği gibi özellikleri ile yem bitkileri arasında çok önemli bir yer almaktadır. Yonca tarımında biyotik ve abiyotik birçok etmen büyük ölçülerde ekonomik kayıplar meydana getirmektedir. Bu biyotik etmenlerden birisi olan Yonca hortumlu böceği, *Hypera postica* (Gyllenhal, 1813) yonca üretim alanlarının başlıca zararlıları arasındadır. Yonca tarımında önemli ekonomik kayıplara neden olan zararlıların biyolojisi, tanımlanması uygun mücadelenin başlatılmasında büyük önem arz etmektedir. Bu çalışmada, zararlıların biyolojik yaşam döngüsü, şeker pancarındaki zarar semptomları ve ekonomik zarar eşiği altında tutmak için uygun mücadele yöntemleri incelenmiştir.

**Anahtar Kelimeler:** Yonca hortumlu böceği, *Hypera postica*, yonca zararlıları

**BIOLOGICAL LIFE CYCLE AND CONTROL OF THE CLOVER PEST****ABSTRACT**

Forage crops are low-quality and inexpensive roughage sources that are not very selective in terms of ecological demands and whose protein and carbohydrate contents are balanced. Alfalfa is a long-lived perennial plant that can be grown in almost every part of the world among forage crops and is the most cultivated among forage crops in the world and in Turkey. It has a very important place among forage crops with its wide adaptability, high forage yield and nutritional value, longevity, high number of forms. Many biotic and abiotic factors in alfalfa cultivation cause economic losses to a large extent. Alfalfa proboscis beetle, *Hypera postica* (Gyllenhal, 1813), which is one of these biotic factors, is among the main pests of alfalfa growing areas. The biology and identification of the pest, which causes significant economic losses in alfalfa cultivation, is of great importance in initiating appropriate control. In this study, the biological life cycle of the pest, the damage symptoms in sugar beet and the appropriate control methods to keep it under the economic damage threshold were examined.

**Keywords:** Alfalfa proboscis beetle, *Hypera postica*, clover pests

**THE USE OF DIFFERENT RESTRICTION ENZYMES FOR REDUCED-REPRESENTATION SEQUENCING IN CHICKPEA****Duygu SARI**

Department of Field Crops, Faculty of Agriculture, Akdeniz University, TR-07058, Antalya, Turkey,  
ORCID No: 0000-0002-7909-2627

**ABSTRACT**

Reduced-representation sequencing (RRS) is a next-generation sequencing technology (NGS) platform which plays important roles in genetic diversity, gene/QTL mapping, linkage map construction, marker assisted selection (MAS) studies on a genome-wide scale. In different NGS platforms, RRS is more feasible for high diversity and large genome species. It provides low-cost adapters and highly multiplexed system for SNP discovery. In this approach, genome complexity is reduced by one or two restriction enzymes to produce multiplex sampling for lower cost sequencing. The type of restriction enzymes affects the number and position of fragments represented in RRS libraries, which in turn influences the number and genomic position of SNPs. Here we reported optimum restriction enzyme within *silico* distribution of digested fragments suitable for sequencing among the *ApeKI* (partially methylation sensitive), *PstI-MspI* (methylation sensitive-partially methylation sensitive) and *PstI-TaqI* (methylation sensitive-methylation insensitive) enzymes across the chickpea reference genome with the GBSX toolkit integrated Galaxy™ which is web-based cloud computing system. Results revealed that *ApeKI*, *PstI-TaqI* and *PstI-MspI* enzymes created approximately 266917, 540627 and 84129 fragments varied from 100 to 1000 bp. Genome reduction with double digestion system provides the higher number of fragments and also potentially more SNPs in chickpea.

**Keywords:** chickpea, restriction enzyme, RRS, SNPs

**ŞIRNAK İLİ SÜT SIĞIRI İŞLETMECİLERİ ÜZERİNE BİR ARAŞTIRMA**

**Emrah GÜLEN**

*Orcid ID: 0000-0001-6272-8089*

*Ziraat Fakültesi, Tarımsal Yapılar ve Sulama Bölümü, Konya*

**ÖZET**

Bireylerin yaşamı için gerekli hayvansal gıdalardan olan et ve süt ürünlerinin %85-90'ı sığır grubu çiftlik hayvanlarından elde edilmektedir. Ülkemizde üretilen sütün %90'ı ineklerden, %9'u koyun ve keçilerden, geriye kalanı ise mandalardan elde edilmektedir. Süt üretiminin büyük paydaşı olan süt sığırlarının strese girmeden verimli olabilmesi için barınak yapısının elverişli olması, hayvanların bakımın ve beslenmesinin uygun olarak yapılması gerekmektedir. Şırnak İli genelinde süt sığırcılığının mevcut durumunun belirlenebilmesi için bölgeyi temsil edebilecek 20 adet süt sığırı işletmesinde anket ve saha çalışması yürütülmüştür. İşletmeler aile bireyleri tarafından yönetilmekte, iş ve işlemlerin tamamı kendilerince yerine getirilmektedir. Etüt edilen işletmelerin tamamı bağlı duraklı barınaklar halinde planlanmıştır. Araştırma yapılan işletmelerin çoğunluğu işletme sahiplerinin ikamet ettiği konutun altında veya çok yakınında konumlandırılmış ev tipi işletmelerdir. Bu tip işletmelerde barınakların konut biçiminde olmasından dolayı yetersiz havalandırma ve alan yetersizliği gibi yapısal eksikliklerle karşılaşabilmektedir. Etüt edilen işletmeler arasında işletme bünyesinde çalışan sorumlu bir veteriner hekim bulunmamaktadır. İşletmelerin tamamı merkeze yakın bir konumda bulunduğundan il ve ilçe merkezinde bulunan veteriner kliniklerinden veteriner hekim hizmetine ulaşabilmektedirler. İşletmelerde hayvanların suni tohumlama uygulamalarında veterinerlik hizmeti alınırken, koruyucu hekimlik uygulamaları konusunda yeterli düzeyde bir hizmet alınmadığı gözlemlenmiştir. İşletme sahiplerinin hayvancılık konusunda bir eğitim alma durumları sorulduğunda herhangi bir eğitim alınmadığı, geleneksel yöntemler ile hayvancılık yaptıkları görülmektedir. İşletme sahiplerinin ortalama yaşı 44 olarak bulunmuştur. İşletmecilerin eğitim düzeyleri ise %85 oranında ilk ve ortaokul, %10 oranında lise ve %5 oranında ise lisans seviyesi olduğu ortaya çıkmaktadır. İşletme sahiplerinin %5'i 10 yıl ve altı bir süredir hayvancılık faaliyeti yürütmekteyken, %25'i 11-15 yıl arası, %40'ı 16-20 yıl arası ve %30'u ise 20 yıl ve üstü zamandır hayvancılık faaliyeti yürütmektedir. İşletme sahiplerinin hayvancılık yapma süreleri, yaş ortalamaları ve eğitim durumları göz önünde bulundurulduğunda bölgedeki genç ve eğitilmiş bireylerin iş alanı olarak hayvancılığa yönelimlerinin oldukça az olduğu sonucu ortaya çıkmaktadır. İşletmelerde genellikle Simental ırkı hayvanlar yetiştirilmekte ve hayvan başına elde edilen süt verimi ise günlük ortalama 15,3 lt olarak ortaya çıkmaktadır. İşletmeler hayvan refahı yönünden değerlendirildiğinde yapısal ve beslenme ve bakım konusunda eksiklikler olduğu gözlemlenmiştir. İşletme sahiplerinin hayvancılık konusunda eğitim almaları, veteriner hizmetlerinin yaygınlaştırılması, yapısal eksikliklerin tamamlanmasının bölgede hayvancılığın geliştireceği ve hayvan başına süt veriminin yükseleceği öngörülmektedir.

**Anahtar kelimeler:** Tarımsal yapılar, süt sığırcılığı, süt sığırı işletmeciliği

---

**A RESEARCH ON DAIRY CATTLE OPERATORS IN ŞIRNAK PROVINCE**

---

**ABSTRACT**

85-90% of meat and dairy products, which are essential animal foods for the life of individuals, are obtained from cattle group farm animals. 90% of the milk produced in our country is obtained from cows, 9% from sheep and goats, and the rest from buffaloes. In order for dairy cattle, which is a major stakeholder in milk production, to be productive without stress, the shelter structure must be suitable, and the animals must be properly cared for and fed. In order to determine the current situation of dairy cattle in Şırnak Province, a survey and field study were carried out in 20 dairy cattle enterprises that could represent the region. Businesses are managed by family members, and all work and transactions are carried out by them. All of the surveyed enterprises were planned as shelters with connected stops. The majority of the surveyed businesses are home-type businesses located below or very close to the residence of the business owners. In this type of establishments, due to the fact that the shelters are in the form of housing, they can be met with structural deficiencies such as inadequate ventilation and lack of space. There is no responsible veterinarian working within the enterprise among the enterprises studied. Since all of the enterprises are located close to the center, they can access veterinary services from the veterinary clinics located in the city and district centers. It has been observed that while veterinary services are received in artificial insemination practices of animals in enterprises, an adequate level of service is not received in preventive medicine practices. When the owners of the enterprises are asked whether they have received training on animal husbandry, it is seen that they do not receive any training and they do animal husbandry with traditional methods. The average age of business owners was found to be 44. The education level of the operators is 85% primary and secondary school, 10% high school and 5% undergraduate level. While 5% of the business owners have been carrying out livestock activities for 10 years or less, 25% of them have been carrying out livestock activities for 11-15 years, 40% for 16-20 years and 30% for 20 years or more. Considering the length of time, average age and education level of the owners of the enterprises, it is concluded that the young and educated individuals in the region tend to animal husbandry as a field of work. Generally, Simmental animals are raised in the farms and the milk yield per animal is 15.3 liters on average per day. When the enterprises are evaluated in terms of animal welfare, it has been observed that there are deficiencies in structural and nutrition and care. It is foreseen that the owners of the enterprises should receive training on animal husbandry, expand the veterinary services, and complete the structural deficiencies, which will improve the animal husbandry in the region and increase the milk yield per animal.

ORCID No: 0000-0003-1047-5280*

**ÖZET**

Bu çalışmada kedilerde kastrasyon operasyonunda intratestiküler uygulanan lidokain ve bupivakainin etkinliğinin karşılaştırmalı olarak değerlendirilmesi amaçlandı. 20 kedi ırk ve yaş ayrımına bakılmaksızın iki gruba ayrılarak sedasyon amacıyla 80 mikrogram/kg medetomidin enjeksiyonu uygulandı. İlk gruba 4 mg/kg lidokain ikinci gruba 1 mg/kg bupivakain her iki testise eşit miktarda intratestiküler olarak enjekte edildi. Rutin yöntemlerle yapılan operasyonda hayvanların ensizyona ve funikulus spermaticusun çekilmesine verdiği tepkiler kaydedildi. Operasyon bittikten sonra hayvanlara atipamezol uygulanarak uyandırıldı ve 6 saat boyunca yarım saat aralıklarla hayvanların nabız sayıları, solunum sayıları ve ağrı skorları değerlendirilmeye alındı. Ağrı skorlarını değerlendirmek amacıyla UNESP-Botucatu kedi ağrı skalası, Grimace kedi ağrı skalası ve Glasgow kedi ağrı skalası kullanıldı. Grimace ve Glasgow ağrı skorunda postoperatif 150.dk ve 180.dk'da ki değerlendirmede gruplar arasında istatistiksel olarak anlamlı bir fark bulundu ( $p < 0.05$ ). Botucatu ağrı skorunda 60.dk, 90.dk, 150.dk, 180.dk, 300.dk ve 330.dk'da ki değerlendirmede gruplar arasında istatistiksel olarak anlamlı bir fark bulundu ( $p < 0.05$ ). Nabız ve solunum değerlerinde istatistiksel olarak anlamlı bir fark belirlenmedi ( $p > 0.05$ ). Sonuç olarak, kedi kastrasyon operasyonunda lidokainin analjezik etkinliğinin intraoperatif olarak daha güçlü olduğu, ancak uzun etkili bir lokal anestezi olan bupivakainin postoperatif analjezik etkisinin lidokainden daha güçlü olduğu sonucuna varıldı.

**Anahtar Kelimeler:** kedi, analjezi, lidokain, bupivakain, kastrasyon

**COMPARISON OF THE EFFICACY OF INTRATESTICULAR LIDOCAINE AND  
BUPIVACAINE DURING CASTRATION IN CATS**

**ABSTRACT**

In this study, it was aimed to evaluate the effectiveness of intratesticularly administered lidocaine and bupivacaine in castration in cats. 20 cats were divided into two groups regardless of breed and age. 80 microgram/kg medetomidine injection was administered for sedation. 4 mg/kg lidocaine and 1 mg/kg bupivacaine were injected intratesticularly in lidocaine and bupivacaine groups respectively. Castration operation was performed with routine methods. The reactions of the animals to the incision and the extraction of the funiculus spermaticus were recorded. After the operation, the animals were awakened by atipamezole. The pulse rate, respiratory rate and pain scores of the animals were evaluated for 6 hours at half-hour intervals. UNESP-Botucatu cat pain scale, Grimace cat pain scale and Glasgow cat pain scale were used to evaluate pain scores. A statistically significant difference was found between the groups in Grimace and Glasgow pain scores at the 150th min. and 180th min. postoperative evaluations ( $p < 0.05$ ). A statistically significant difference was found between the groups in Botucatu pain score at the 60th, 90th, 150th, 180th, 300th and 330th min. evaluation times ( $p < 0.05$ ). No statistically significant difference was found in the pulse and respiration values ( $p > 0.05$ ). As a result, it was concluded that the analgesic efficiency of lidocaine was stronger intraoperatively, on the other hand the postoperative analgesic effect of bupivacaine, a long-acting local anesthetic, was stronger than lidocaine in intratesticular use in the cat castration operation.

**Keywords:** cat, analgesia, lidocaine, bupivacaine, castration.

**TERMİK SANTRALLERDEN ÇIKAN ATIK ENERJİ İLE SEBZE SERALARININ**  
**ISITILMASI**

**Prof. Dr. H. Yıldız DAŞGAN**

*Orcid ID: 0000-0002-0403-1627*

*Çukurova Üniversitesi, Ziraat Fakültesi, Bahçe Bitkileri Bölümü*

**ÖZET**

Elektrik enerjisi elde etmek için çeşitli enerji kaynakları kullanılmaktadır. Bunlar, termik kaynaklar, hidrolik kaynaklar, nükleer kaynaklar, güneş, rüzgâr, jeotermal gibi diğer kaynaklardır. Termik santraller, enerji santrallerinin bir türüdür. Kömür, fuel-oil, motorin veya doğalgaz gibi fosil yakıtların yakılması yoluyla elektrik üretirler. Bu tip santraller, birçok ülkede olduğu gibi ülkemizde de enerji açığını kapatmakta görev üstlenmeye devam etmektedir. Termik santralın bilançosu incelendiğinde, üretilen bir kilowatt için 4000 kilojoule'dan fazla bir enerjinin soğutma suyuna harcandığı bildirilmektedir. Soğutma suyu bir akarsudan alınırsa, bu suyun en çok 7-10°C arasında ısıtılmasına izin verilmektedir; bu da büyük bir debi gerektirmektedir. Bu nedenlerden ötürü, büyük santraller ancak debisi yüksek akarsuların üzerinde ya da deniz kıyısında kurulmaktadır. Bu durumda, termik santrallerin soğutma nedeniyle yol açtığı ısı artışı, su bitkileri hayvanları ve diğer canlılar için ciddi sorunlar yaratmaktadır. Termik santrallerin soğutulması amacıyla çıkan enerji seraların ısıtılmasında kullanılabilir. Böylece termik santrallerin soğutulma sorunu çözüldüğü gibi, seralarda en önemli girdi olan ısıtma masrafları da daha uygun bir şekilde çözülebilecektir. Bu bildiriye, termik santrallerin atık enerjisinin sera ısıtılmasında kullanılması anlatılacaktır

**Anahtar kelimeler:** Atık enerji, sera ısıtması, termik santral

**HEATING VEGETABLE GREENHOUSES WITH WASTE ENERGY FROM  
THERMAL ENERGY CENTRALS****ABSTRACT**

Various energy sources are used to obtain electrical energy. These are other sources such as thermal, hydraulic, nuclear, solar, wind, geothermal. The thermal energy central generates electricity by burning fossil fuels such as coal, fuel-oil, diesel or natural gas. Such power centrals continue to undertake the task of closing the energy deficit in our country, as in many other countries. In a thermal energy central in order to produce one kilowatt energy, more than 4000 kilojoules of energy is spent for cooling water. If the cooling water is taken from a stream, this water is allowed to be heated to a maximum of 7-10°C; this requires a large flow rate. For these reasons, large energy centrals are only built on rivers with high flow rates or on the seaside. In this case, the increase in water temperature of lake or river caused for the cooling of thermal energy centrals creates serious problems for aquatic plants, animals and other living organisms. The waste energy of the thermal centrals can be used to heat greenhouses. Thus, the cooling problem of thermal centrals will be solved, and the heating costs, which are the most important inputs in greenhouses, will be solved more appropriately. In this paper, the use of waste energy of thermal centrals for the greenhouse heating will be investigated.

**Keywords:** Waste energy, thermal central, greenhouse heating

**AKUT BÜLLÖZ KERATOPATİLİ BİR KEDİDE MEDİKAL TEDAVİNİN UZUN  
SÜRELİ SONUÇLARININ DEĞERLENDİRİLMESİ**

**Dr. Öğr. Üyesi İbrahim ALAKUŞ**

*Orcid ID: 0000-0002-2031-7035*

*Veteriner Fakültesi, Klinik Bilimler Bölümü, Cerrahi Anabilim Dalı, Hatay*

**ÖZET**

Akut büllöz keratopati, genç erişkin kedilerde nadir görülen, hızla ilerleyen bir kornea hastalığıdır. Bu hastalık akut bir ödem alanının varlığı ile karakterizedir ve birkaç milimetre çap ile tam korneaya kadar değişebilen ödem (veya kabarcık) ile kendini gösterir. Birkaç küçük vezikül birleşerek daha büyük bir kabarcık oluşturabilir. Kedilerde büllöz keratopatinin etiyojisi ve patogenezi bilinmemektedir. Ancak klinik ve histopatolojik bulgular bir stromal defektin sorumlu olduğunu düşündürmektedir. Klinik olarak; hızlı kornea ödemi oluşumu, korneada büyük büllöz lezyonlar, kornea yumuşaması ve bazen kornea perforasyonu ile karakterizedir. Tanı, klinik semptomlar ve oftalmolojik muayene temeline dayanır. Tedavi edilmeyen kedi akut büllöz keratopatisi, hızla kornea perforasyonu ve göz küresinin yırtılmasına yol açtığından dolayı oftalmolojik aciller arasında yer alır ve sağaltım cerrahi müdahale gerektirir. Cerrahi sağaltım ile keratopatiye sebep olan kornea üzerindeki kabarcıkların uzaklaştırılması ve kornea ödeminin azaltılması amaçlanır. Bu çalışma akut büllöz keratopatiye sahip bir kedinin Hatay Mustafa Kemal Üniversitesi Veteriner Sağlık Uygulama ve Araştırma Merkezi Hastanesi'ne getirilmesi ve hasta sahibinin cerrahi müdahaleyi kabul etmemesi sonucu medikal tedavi yapılması ile bu tedavinin uzun süreli sonuçlarının değerlendirilmesini kapsamaktadır. Bu çalışma ile genel durum bozukluğu, kronik hastalık gibi nedenlerle anesteziye alınamayan ve bu yüzden cerrahi tedavi yapılamayan akut büllöz keratopatiye sahip kedilerde uygulanacak medikal tedavi prosedürü ve sonuçları ortaya konmuş olup hem klinisyen hekimlere hem de literatüre katkı sağlaması amaçlanmıştır.

**EVALUATION OF LONG-TERM RESULTS OF MEDICAL THERAPY IN A CAT  
WITH ACUTE BULLOUS KERATOPATHY**

**ABSTRACT**

Acute bullous keratopathy, a rare disease in young adult cats, is rapidly progressive a corneal disease. This disease is characterized by the presence of an acute area of edema and is manifested by edema (or bulla) ranging from a few millimeters in diameter to a complete cornea. Several small vesicles may coalesce to form a larger bulla. The etiology and pathogenesis of bullous keratopathy in cats are unknown. However, clinical and histopathological findings suggest that a stromal defect is responsible. Clinically; It is characterized by rapid formation of corneal edema, large bullous lesions on the cornea, corneal softening, and sometimes corneal perforation. Diagnosis is based on clinical symptoms and ophthalmologic examination. Untreated feline acute bullous keratopathy is among the ophthalmological emergencies because it rapidly causes corneal perforation and eyeball rupture and treatment requires surgical intervention. With surgical treatment, it is aimed to remove the bulla on the cornea leading to keratopathy and to reduce the corneal edema. This study includes the evaluation of the long-term results of a cat with acute bullous keratopathy brought to Hatay Mustafa Kemal University Veterinary Health Application and Research Center Hospital and medical treatment after the owner did not accept surgical intervention. In this study, the medical treatment procedure and results to be applied in cats with acute bullous keratopathy who cannot be anesthetized for reasons such as general condition disorder or chronic disease and therefore cannot be surgically treated, are presented and it is aimed to contribute to both clinicians and the literature.

**TRANSMİSSİBLE VENEREAL TÜMÖRE (TVT) BAĞLI OLARAK ŞEKİLLENEN  
ÜRETRAL RUPTURUN CERRAHİ OLARAK SAĞALTILMASI**

**Öğr. Gör. Dr. Halil ALAKUŞ**

*Orcid ID: 0000-0001-9265-2310*

*Veteriner Fakültesi, Klinik Bilimler Bölümü, Cerrahi Anabilim Dalı, Hatay*

**ÖZET**

Trafik kazaları, ateşli silah yaralanmaları, ısırık yaraları ve iyatrojenik yaralanmalar üretral yırtılmalara neden olabilmektedir. Üretrostomi, üretral lümen açığa çıkarıldıktan sonra penil mukozanın deriye dikilmesiyle kalıcı bir idrar saptırma işleminin oluşturulduğu cerrahi bir prosedürdür. Köpeklerde üretrostomi için en yaygın endikasyonlar arasında üretral travmalar, taş tıkanıklığı, stenoz, konjenital anomaliler ve neoplaziler bulunmaktadır. Üretrostomi erkek köpeklerde preskrotal, skrotal, perineal, transpelveik veya prepubik olmak üzere 5 farklı bölgeden uygulanabilmektedir. Üretrostominin tipini ve yerini ise üretral lezyonun yeri belirlemektedir. Enfeksiyöz sarkom veya venereal granuloma olarak ta bilinen Transmissible Venereal Tumor (TVT), her iki cinsiyette de görülen köpekler arasında çiftleşme yoluyla kontrolsüz bir şekilde yayılan iyi huylu retiküloendotelial tümördür. Tümör erkeklerde genellikle penisin kaudal kısmında dişilerde ise vajinal kanal içerisine yerleşir ve burada gelişim gösterir. Tümör lezyonları karnabahar görünümündedir ve üreme organından kan gelmesi ile klinik bulgu gösterir. Bu vaka çalışmasında penis bölgesinde kanama şikayeti ile Hatay Mustafa Kemal Üniversitesi Veteriner Sağlık Uygulama ve Araştırma Merkezi Hastanesi'ne getirilen 8 yaşında, melez ırkı, erkek köpeğin teşhisi ve tedavisi hakkında değerlendirmelere yer verildi. Sitolojik analiz sonucu TVT teşhisi konulan hastanın yapılan kan muayenesinde değerlerin çok düşük olmasından dolayı kemoterapiye hemen başlanamadı. Bölgedeki neoplaziye bağlı olarak şekillenen üretral kanalın rupturu sonucu zorunlu olarak perineal üretrostomi operasyonu uygulandı. Kan değerlerindeki düşüklük sebebiyle yara iyileşmesi gecikse de hasta tamamen sağlığına kavuştu. Bu vaka çalışmasında, TVT ye bağlı olarak meydana gelen üretral rupturun üretrostomi operasyonu yapılarak sağaltımının sunulması amaçlanmaktadır.

**SURGICAL TREATMENT OF URETHRAL RUPTURE DUE TO TRANSMISSIBLE  
VENEREAL TUMORE (TVT)****ABSTRACT**

Traffic accidents, gunshot wounds, bite wounds and iatrogenic injuries can cause urethral ruptures. Urethrostomy is a surgical procedure in which a permanent urinary diversion is created by suturing the penile mucosa to the skin after exposing the urethral lumen. The most common indications for urethrostomy in dogs include urethral trauma, stone obstruction, stenosis, congenital anomalies, and neoplasia. Uretrostomy can be performed in 5 different regions in male dogs: prescrotal, scrotal, perineal, transpelvic or prepubic. The type and location of the urethrostomy is determined by the location of the urethral lesion. Transmissible Venereal Tumor (TVT), also known as infectious sarcoma or venereal granuloma, is a benign reticuloendothelial tumor that spreads uncontrollably through coitus between dogs of both sexes. The tumor is usually located in the caudal part of the penis in males and in the vaginal canal in females and develops here. Tumor lesions have the appearance of cauliflower and show clinical signs with blood coming from the reproductive organ. In this case study, evaluations were made about the diagnosis and treatment of an 8-year-old cross breed male dog brought to Hatay Mustafa Kemal University Veterinary Health Application and Research Center Hospital with the complaint of bleeding in the penile region. The patient, who was diagnosed with TVT as a result of cytological analysis, could not start chemotherapy immediately because the values were very low in the blood examination. Perineal urethrostomy operation was performed as a result of the rupture of the urethral canal due to the neoplasia in the region. Although the wound healing was delayed due to low blood values, the patient regained his full health. In this case study, it is aimed to present the treatment of urethral rupture due to TVT by urethrostomy operation.

**ABSTRACT**

The COVID-19 pandemic forced learning institutions across the world to employ virtual education during lockdown. Some of these virtual learning platforms can be found free on the Internet, while the most advanced ones are developed by the institutions themselves. These advanced platforms were made up of learning management systems that were used to integrate virtual instruction through audio, video, and text, e-mail, live chat sessions, online discussions, forums, quizzes, and assignments. Through these kinds of electronic systems, the delivery of instruction and discourse between teachers and learners can be accomplished. Thus, this study aims to assess the integration of virtual education at Sokoto State University. The study employs a survey research design. An online questionnaire made from Google forms was shared on all students' social media platforms, including WhatsApp groups, the Facebook handle of the university and the Student Union Government (SUG), and their Telegram groups. A total of 629 responses were retrieved and used for further analysis. The result reveals that there is poor enrolment for the online instructions of the university. Except for the multimedia, the results show that more than half of the 2.5% of respondents agreed with the quality of the online materials suited for successful learning. Finally, the results reveal that the quality of instruction offered by the teachers is viewed favourably by the respondents. The study concludes that tertiary institutions in Sokoto state need training in online, mobile, and web-based learning to enable them to compete with other universities in the world.

**ABSTRACT**

Chemical bonding is one of the key and basic concepts in chemistry, on which most of the understanding of the fundamental ideas of chemistry is based. Unfortunately, this chemical concept is perceived as difficult by both teachers and students due to its abstract nature, leading to misconceptions. The task of learning chemistry at the macroscopic, microscopic, and symbolic levels by the chemistry triplet requires the student to make use of subject-specific as well as highly abstract verbal and nonverbal thinking skills. Visual understanding, a conceptual competence based on verbally mediated sense-making processes, is critical because it influences both theoretical and experimental concepts of the subject. These representational competences are essential for assigning the correct meaning to abstract chemical content through visualization and generating correct mental models, and they cannot be overlooked. The PhET Interactive Simulations Project focuses on understanding and leveraging the potential for improving science education with interactive simulations through research and development. Thus, the study investigated the effectiveness of PhET interactive simulation in facilitating learning of chemical bonding and structures and compared the students' performance between instruction with and without the aid of PhET interactive simulation. The researchers adopt a quasi-experimental design. Two instruments were designed to gather data from 54 SS1 "A" and "B" students of Nagarta College, Sokoto. The result reveals that about 80% of the participants who learned chemical bonding with the aid of technology believed that PhET interactive simulation is "very effective," while 20% say it is "effective". Similarly, all of them were "very satisfied" with the instruction aided by the PhET interactive simulation. Finally, Spearman's rho correlation analysis reveals that the correlation coefficient of  $r_s = .786$  indicates that there is no relationship between the chemical bonding instruction aided by PhET Interactive Simulation and the instruction without PhET Interactive Simulation. The study concluded that PhET interactive simulation is very effective in facilitating learning and understanding of chemical bonding.

**ABSTRACT**

In recent years, obesity has become a major health problem worldwide, affecting people across all ages, sex, ethnicities, and races, and its prevalence has been increasing at an alarming rate and it is known to be linked to cardiovascular and cerebrovascular diseases. Appropriate lifestyle and behavior interventions are still the crucial cornerstone to weight loss success, but maintaining such a healthy lifestyle is extremely challenging. In addition to this, obesity causes or is closely linked with a large number of health conditions, including heart disease, stroke, diabetes, high blood pressure, unhealthy cholesterol, asthma, sleep apnea, gallstones, kidney stones, infertility, and as many as 11 types of cancers, including leukemia, breast, and colon cancer and ultimately death. The safety of these medications requires improvement. Herbal medicine has been used for treatment of disease for more than 2000 years, and it has proven efficacy. In conclusion, Moringa leaf extract controlled body weight gain when given concurrently with HFD, which indicates a lower obesity state. This effect was accompanied with improvements in serum lipid fractions, glucose, metabolic hormones and lower oxidative stress and liver function. Many studies have confirmed that herbal medicine is effective in the treatment of obesity,

**ABSTRACT**

The purpose of this study was to determine the effect of learning motivation (X1) and self-efficacy (X2) with academic procrastination (Y) on students. This study uses quantitative methods with measurements using a Likert scale. In this study, class XI students of SMKN 14 Jakarta were selected as the population with a sample of 161 students. Proportional random sampling technique is a technique used for sampling. This study obtained the results of the hypothesis on the T test and F test. This study obtained the results of the hypothesis on the T test and F test. In the T test results it can be concluded that there is a negative and significant influence between learning motivation and academic procrastination. Furthermore, there is a negative and significant influence between self-efficacy and academic procrastination. Then, the F test resulted between learning motivation and self-efficacy there is a simultaneous influence on academic procrastination.

**Keywords:** Learning Motivation, Self-Efficacy, Academic Procrastination.

**ABSTRACT**

Peramun Hill is one of the geo-sites in Belitong Geopark, Belitung Regency, with a 1.15 km<sup>2</sup> range area and 22 mdpl. Peramun Hill has unique biodiversity in the environment. Therefore, carrying out an inventory to obtain basic data that can be used as guidelines for managing conservation areas is necessary. This study aims to obtain basic data on wildlife biodiversity in the Peramun Hill area. Purposive sampling methods were used in this study and analysed with richness index, diversity, evenness and Kruskal-Wallis test. As many as 12 species of Pisces, six species of amphibians, eight species of reptiles, 18 species of aves, and seven species of mammals were recorded, including the endemic species *Cephalopachus bancanus saltator*. Three species are categorised as endangered, two species are categorised as vulnerable, seven species are categorised as near threatened, and two species are declared data deficient by the IUCN and no informative data in Indonesia. Four species are protected in Indonesia. Based on the above results, Peramun Hill still has a representative wildlife habitat.

**ABSTRACT**

Sustainable development requires us to do what it takes to rationalize energy consumption, minimizing the latter has become an industrial issue with the traditional issues (quality and price). The objective of this work is to propose mathematical models to predict the power consumed ( $P_c$ ) and the cutting energy ( $E_c$ ). the exploitation of these models leads us to make a multi-objective optimization of these two factors during the intermittent machining of SKD1 steel, a difficult manufacturing process because of the discontinuity in cutting of a steel intended for the cold work SKD1 which has special characteristics, Experimental tests are made to study the influence of four 04 cutting parameters, namely tool nose radius ( $r$ ), cutting speed ( $V_c$ ), feed per revolution ( $f$ ) and depth of cut ( $a_p$ ) on the two performance parameters: power consumption ( $P_c$ ) and cutting energy ( $E_c$ ). A triple CVD coated carbide cutting tool ( $Al_2O_3/TiC/TiCN$ ) was used, adopting a Taguchi L9 ( $4^3$ ) experimental design. Response surface method (RSM) and analysis of variance (ANOVA) were exploited to propose predictive models. A multi-objective optimization to minimize ( $P_c$ ) and ( $E_c$ ) simultaneously was done by exploiting the desirability function (DF) method.

**ABSTRACT**

Historically, surface potential studies and their modelling have been carried out mainly in connection with several fields of applied research. A dielectric, charged at the surface, has a local surface potential. In the course of time, this potential value decreases and this fact clearly represents the ability of the material to evacuate, by several mechanisms, this deposited charge. The work presented in this paper consists in studying, by non-contact measurements of the material surface potential, the flow of electric charges deposited by corona discharge on the PET surface for two different thicknesses (0.1mm, 1mm). The influence of the electrical parameters (initial voltage and thickness) on this charge flow is analysed. Furthermore, the influence of the wettability of PET allowed us to show the importance of water absorption on the DPS. This work allowed us to highlight the cohabitation of two processes: surface conduction and charge injection. We show that the surface potential decay is strongly conditioned by the electric field and the thickness of the sample.

**Keywords:** Surface Potential Decay, Corona Discharge, PET, Charge Injection, Surface Conduction

**EEG BASED AUTISM SPECTRUM DISORDER (ASD) DETECTION: A  
BIBLIOMETRIC ANALYSIS****Ilker TURKER***Department of Computer Engineering, Karabuk University, Karabuk, Turkey***Ehssan ALJANABI***PhD Student, Karabuk University, Karabuk, Turkey***ABSTRACT**

Autism Spectrum Disorder (ASD) is a common disease in society. Many parents suffer from ignorance of these disorders. Despite the wide prevalence and severity of these disorders, we know little about the neurological basis of the interventions for the purpose of identifying these disorders. One of popular method to detect ASD is the Electroencephalography (EEG) signal analysis. Due to non-invasive, inexpensive and accessible compared to other neuroimaging technologies. This paper contains an overview of detecting ASD with EEG in a bibliometric analysis on the publication statistics provided from the Web of Science database. This analysis includes basic statistical inferences on the publication counts, yearly distributions, citation performances, distribution on indexing, publication title, countries etc., in a comparative manner to outline how EEG based diagnosis differs from the general ASD detection studies.

**Keywords:** Autism Spectrum Disorder, ASD, EEG, Autism Detection, Deep Learning.

**ON CENTRAL IDENTITIES EQUIPPED WITH SKEW LIE PRODUCT INVOLVING  
GENERALIZED DERIVATIONS****MOHAMMED ALI AYEDH***Department of Mathematics, Aligarh Muslim University, 202002 Aligarh, India*  
*ORCID ID: <https://orcid.org/0000-0003-0878-2249>***ABSTRACT**

Let  $R$  be a  $*$ -ring. For any  $x, y \in R$ , we denote the skew Lie product of  $x$  and  $y$  by  $\nabla[x, y] = xy - yx^*$ . An additive mapping  $F: R \rightarrow R$  is called a generalized derivation if there exists a derivation  $d$  such that  $F(xy) = F(x)y + xd(y)$  for all  $x, y \in R$ . The objective of this paper is to characterize generalized derivations and to describe the structure of prime rings with involution  $*$  involving skew Lie product. In particular, we prove that if  $R$  is a 2-torsion free prime ring with involution  $*$  of the second kind and admits a generalized derivation  $(F, d)$  such that  $\nabla[x, F(x^*)] \pm \nabla[x, x^*] \in Z(R)$  for all  $x \in R$  then  $R$  is commutative or  $F = \pm I_R$  where  $I_R$  is the identity mapping of  $R$ . Moreover, some related results are also obtained. Finally, we provide two examples to prove that the assumed restrictions on our main results are not superfluous.

**Keywords:** Prime ring, involution, skew Lie product, generalized derivation.

**ABSTRACT**

Automated lung segmentation is a critical step in computer-aided diagnosis of chest X-rays. It is critical to build an effective automated lung segmentation model because to rib cages and the distinct modalities of each person's lungs. This study proposes a dependable approach for segmenting Chest radiographs show the lungs. The majority of existing lung segmentation techniques are accomplished by a succession of methods, with each stage requiring manual empirical parameter changes My model overcomes the difficulties by learning to disregard unnecessary parts of the original Chest Radiograph and stress key traits for lung segmentation. I have tested my model on publicly available datasets. The proposed model has a DICE coefficient of 98.3%, demonstrating its dependability.

**ON COMPLETENESS IN *QTAG*-MODULES****Ayazul Hasan***College of Applied Industrial Technolgy, Jazan University, Jazan  
Kingdom of Saudi Arabia**ORCID ID: <https://orcid.org/0000-0002-2895-8267>***Rafiquddin***Department of Applied Mathematics, Aligarh Muslim University,  
Aligarh, India**ORCID ID: <https://orcid.org/0000-0001-6843-9798>***ABSTRACT**

The purpose of this paper is essentially to study some elementary concepts of completeness in *QTAG*-modules. We introduce the notion of completeness, which we term semi-complete modules and obtain some interesting results. Certain basic properties of *h*-purecomplete modules are investigated with the help of *h*-pure submodules and socles. Also, we define totally quasi-complete modules and study the inter relations between various type of completeness.

**Keywords:** *QTAG*-modules, semi-complete modules, *h*-pure-complete modules, totally quasi-complete modules.

**ABSTRACT**

Uncertainty in the world economy has and will continue to overshadow any composite stock price index anywhere. This study aims to examine the effect of domestic inflation, the Fed's interest rate and the volume of stock transactions on the composite stock price index of the Consumer Goods Sector in Indonesia for the period January 2018 – April 2021, a period before the Russia-Ukraine war. Multiple linear regression equations were used to analyze the data, sourced from Bank Indonesia, the Indonesia Stock Exchange, and The Federal Reserve. The results showed that all proposed variables had a significant effect on the composite stock price index of the consumer goods sector. These results provide an indication that the inflation rate in a country and the interest rate policy of the United States Central Bank, its can affect a country's composite stock price index, while the volume of consumer goods stock transactions also affects its stock price index.

**Keywords:** The composite stock index of the Consumer Goods; Inflation; the Fed Interest Rate; Stock Transaction

**ABSTRACT**

Economic growth is still the main indicator to see the development of economic activity. This study aims to determine the effect of consumer confidence, business confidence, government spending, and exports on economic growth in Asian countries, before the Covid pandemic occurred. Panel data were collected during the period 2015 - 2019 in Asian countries, which were analyzed using multiple linear regression equations. The results show that all the proposed variables have a positive effect on economic growth in Asia, except for the Government Expenditure factor. These results also show that before the Covid pandemic, consumer confidence, business confidence and exports in each country still contributed to economic growth, although based on the determination test, only 50.27% of these variables explained the movement of economic growth in Asia.

**Keywords:** Economic Growth; Consumer Confidence; Business Confidence; Government Expenditures; Export.

**NUMERICAL SIMULATIONS OF MHD BOUNDARY LAYER STAGNATION  
POINT FLOW OF CASSON FLUID OVER A NON - LINEAR STRETCHING SHEET  
WITH SUCTION****Ramya Dodda***Pallavi Engineering College***Sravani Ittedi***Pallavi Engineering College***ABSTRACT**

Magneto hydrodynamics, stagnation point of non-Newtonian Casson fluid and heat transfer towards a nonlinear stretching sheet is studied in this paper. The effect of suction or injection is also investigated. Implementing similarity transformations, the governing momentum, energy and concentration equations are transformed to self-similar nonlinear ODEs and numerical computations are performed to solve those. The investigation reveals many important aspects of flow and heat transfer. If velocity ratio parameter ( $B$ ) and magnetic parameter ( $M$ ) increase, then the velocity boundary layer thickness becomes thinner. On the other hand, for Casson fluid it is found that the velocity boundary layer thickness is larger compared to that of Newtonian fluid. The magnitude of wall skin-friction coefficient reduces with Casson parameter ( $\beta$ ). The velocity ratio parameter, Casson parameter, and magnetic parameter also have major effects on temperature distribution. The heat transfer rate is enhanced with increasing values of velocity ratio parameter. The rate of heat transfer is enhanced with increasing magnetic parameter  $M$  for  $B > 1$  and it decreases with  $M$  for  $B < 1$ . Moreover, the presence of thermal radiation reduces temperature and thermal boundary layer thickness. The results are benchmarked with previously published results.

**Keywords:** stagnation point, Casson nano fluid, Boundary layer, stretching sheet.

**PHYSIOLOGICAL STATE OF THE YOUTH ORGANISM IN THE CONDITIONS  
OF CENTRAL RUSSIA****Anastasia Vyacheslavovna Makhova***Faculty of Medicine, Russian State Social University, 129226, Moscow, Russia***ABSTRACT**

Adolescence implies the optimal functioning of the whole organism and high resistance to any adverse environmental factors. The place of residence of young men in some cases can affect the state of their body. **The purpose of the study:** to evaluate the functional characteristics of seventeen-year-old boys in the Moscow region of Russia. **Methodology and organization of the study.** Clinically healthy 22 young men aged 17 years who lived in Moscow and the Moscow region of Russia during their life were examined. All surveyed were first-year university students. They evaluated the results of the main functional tests. The results obtained in the work were processed statistically. **Research results.** Young men who lived in the Moscow region of Russia during their life had low coordination abilities, average motor abilities and a low level of general vestibular stability. In the presence of low general physical fitness, the observed young men were capable of a slight clarity in the execution of movements. The emerging situation was associated with the high involvement of the surveyed young men in the process of studying at the university. **Conclusions.** First-year male students of the University of Moscow, due to their high involvement in educational activities, have low indicators of strength, endurance, coordination and speed characteristics.

**Keywords:** young men, Moscow region, physiology, physical development, physical training.

**ON CLOSEDNESS OF SOME PERMUTATIVE POSEMIGROUP IDENTITIES****RIZWAN ALAM***Aligarh Muslim University, Faculty Of Science, Department Of Mathematics, Aligarh, India.**ORCID ID: <https://orcid.org/0000-0003-3162-6885>***ABSTRACT**

A partially ordered semigroup, briefly posemigroup is a pair  $(S, \leq)$  comprising a semigroup  $S$  and a partial order  $\leq$  on  $S$  that is compatible with its binary operation, i.e. for all  $s_1, s_2, t_1, t_2 \in S$ ,  $s_1 \leq t_1$  and  $s_2 \leq t_2$  implies that  $s_1 s_2 \leq t_1 t_2$ . If  $S$  is a monoid, we call  $(S, \leq)$  a partially ordered monoid, shortly pomonoid. Further, we call  $(U, \leq_U)$  a subposemigroup of a posemigroup  $(S, \leq_S)$  if  $U$  is subsemigroup of the semigroup  $S$  and  $\leq_U = \leq_S \cap (U \times U)$ . The corresponding notion of a subpomonoid is defined analogously. As we know that all non-trivial permutation identities are not preserved under epimorphisms of partially ordered semigroups. In this paper towards this open problem, first we show that certain non-trivial identities in conjunction with the permutation identity  $z_1 z_2 \cdots z_n = z_1 z_2 \cdots z_n$  ( $n \geq 2$ ) with  $i_1 \neq n$  [ $i_1 \neq 1$ ] are preserved under epimorphisms of partially ordered semigroups. Further, we extend a result of Ahanger and Shah which showed that the center of a partially ordered semigroup  $S$  is closed in  $S$  and show that the normalizer of any element of a partially ordered semigroup  $S$  is closed in  $S$ . Let  $U$  be a subposemigroup of a posemigroup  $S$  and  $d \in S$ . We say that  $U$  dominates  $d$  if for all  $\alpha, \beta : S \rightarrow T$  posemigroup morphisms, such that  $\alpha(u) = \beta(u)$  for all  $u \in U$ , one has  $\alpha(d) = \beta(d)$ . The set of all elements of  $S$  that are dominated by  $U$  is called the posemigroup dominion of  $U$  in  $S$  and is denoted by  $\text{Dom} [(U, S)]$ . An identity  $u = v$  is said to be preserved under posemigroup epis if for all posemigroups  $U$  and  $S$  with  $U$  as a subposemigroup of  $S$  and such that  $\text{Dom} [(U, S)] = S$ ,  $U$  satisfies  $u = v$  implies,  $S$  also satisfies  $u = v$ . A variety  $\mathcal{U}$  of posemigroups is said to be epimorphically closed if for all  $U \in \mathcal{U}$  and for any posemigroup  $S$  containing  $U$  properly as a subposemigroup such that  $\text{Dom} [(U, S)] = S$  implies,  $S \in \mathcal{U}$ .

**Keywords:** Posemigroups; Dominion; Zigzag; Variety

### **ABSTRACT**

Micronutrient deficiency, commonly referred to as "hidden hunger," is a type of undernutrition that happens when vitamin and mineral intake or absorption are insufficient to maintain optimal health children's growth and typical physical and mental development adults. Micronutrient deficiency, is a serious public health issue in underdeveloped nations brought on by a diet low in vital nutrients like vitamin A, zinc, iron, and iodine. People who experience concealed hunger consume inadequate amounts of micronutrients in their meals. Poor diet, illness, or increased micronutrient intake are potential causes unmet requirements during lactation and pregnancy. The symptoms of this type of malnutrition are frequently "hidden," since people may "appear fine" but experience highly detrimental effects on their health and wellbeing. Children could have stunted growth, poor night vision, or a history of illness. For instance, adults may also succumb to illness and exhaustion more frequently. Hidden hunger, especially among women and children in underdeveloped nations, can result in disease, blindness, premature death, decreased productivity, and hampered mental development. Children's stunting and related micronutrient deficiencies are serious health issues. Patients between the ages of 13 and 24 months are more undernourished and more affected by micronutrient deficiencies. The most prevalent micronutrient deficiency in malnourished children is anaemia, which was diagnosed in 78% of patients, 88% of whom had iron deficiency. They frequently consume significant quantities of calories-dense, low-micronutrient staple foods like corn, wheat, and rice as well as little amounts of foods high in micronutrients including fruits, vegetables, animal, and fish products.

**ABSTRACT**

Due to good affordability and safety, the plant mediated metal nanoparticles synthesis has been gaining more attention. The synthesis of silver oxide nanoparticles was done using the dried fruit extract of *Carissa edulis*. Utilizing Box-Behnken Design, the microwave extraction procedure was optimized. It was discovered that 400 W, 70 °C, and 30 mL of solvent were the best optimization settings. This yielded 0.17 g of extract. Several analytical techniques were used to examine the green synthesized Ag<sub>2</sub>O NPs. Ag<sub>2</sub>O NPs formation is confirmed by the absorption peak at 420 nm. Furthermore, the SEM and TEM results revealed cube and ellipsoid shapes with 1.5-2 nm dimensions. The photocatalytic activity of Ag<sub>2</sub>O NPs demonstrated 95.8% Congo red degradation with a rate constant of 0.0233 min<sup>-1</sup>, and the antibacterial activity of Ag<sub>2</sub>O NPs demonstrated a high zone of inhibition (10 mm) against *E. coli*. Also, the synthesized Ag<sub>2</sub>O NPs showed good insecticidal activity against *C. medinalis*, *S. incertulas*, and *S. mauritia* with LC<sub>50</sub> values are 42.13 ± 0.6, 30.17 ± 1.2 and 36.38 ± 0.56 ppm respectively. As a result, *Carissa edulis* extract-mediated Ag<sub>2</sub>O NPs can be used in future environmental and biotechnology research.

**Keywords:** *Carissa edulis*, Ag<sub>2</sub>O, Dye degradation, Antibacterial, Insecticide.

**ABSTRACT**

The study is to (1) identify the distribution of top-down and bottom up signs in a campus area, (2) find out the language choices there, and (3) describe the functions of the signs. This is case study done in a specific area of a private college in a small town in Indonesia. The data were taken by surveying and taking shots of all signs visible in the area. Then, the data were looked closely to categorize according to the objectives. The data were then analyzed based common theories in such an investigation. Based on the analysis, the bottom-up signs are more dominant than the top-down. For such a specific complex, the top-down here refers to the college as the central institution, while others only stand and live by. The finding implies that the space is being dominated by the peripheral entities, mostly are business selling goods and services for the students living in the area. From the languages used there, bilingual signs are dominant, with the national language and English. In fact, geographically the community there is a local language speaker, Javanese; people speak this in their daily. Thus, it seems to us that Javanese has a limited domain of use. The national is chosen for its lingua franca and information delivery. Meanwhile, English is adopted for its commercial and prestige values, though the meaning can be blurry for most audience. Seen from their function, the signs are informative, instruction, warning notices and prohibition, building name, advertising, and direction.

**Keywords:** *top-down, bottom-up, linguistic landscape, languages, signs*

### **ABSTRACT**

Communication is essential in social work both for building a functional relationship between social worker and client, and for the success of the intervention. That is why different communication techniques are used in order to build and maintain efficient relationships between those who communicate in social work and contribute, in this way, to the fulfilment of the proposed objectives of the intervention. However, sometimes communication is disrupted by various factors and obstacles, referred to as communication barriers. These can be both verbal and nonverbal. The more such disruptive factors are in social work communication, the more the outcomes in this field are affected. Therefore, it is recommended that the typical communication barriers are known by social workers in order to avoid them. This paper deals with the most common nonverbal barriers that can affect communication in social work. In addition to defining and discussing them, various examples from the practice of social work are provided, as well as several suitable recommendations for avoiding them.

**Keywords:** social work communication, communication barriers, nonverbal communication barriers.

**FACTORS INFLUENCING VIOLENT BEHAVIOR IN FOOTBALL STADIUMS IN  
KENITRA CITY (MOROCCO)****Abdelkarim Elkhatir***Biology and Health Laboratory, Department of Biology, Faculty of Sciences, Ibn Tofail University,  
Kenitra, Morocco.***Miloud Chakit***Biology and Health Laboratory, Department of Biology, Faculty of Sciences, Ibn Tofail University,  
Kenitra, Morocco.***Ahmed O. T. Ahami***Biology and Health Laboratory, Department of Biology, Faculty of Sciences, Ibn Tofail University,  
Kenitra, Morocco.***ABSTRACT**

The violent behaviors developed by football fans, traditionally known as hooliganism, are deeply rooted in history and widely spread geographically. They relate to the physical aggression and vandalism of the spectators. In Morocco, hooliganism has undergone a considerable evolution. To study the factors involved in the violence at the football stadium, questionnaires were written and filled out to the spectators of the Boutola football matches. The questionnaire include questions about age, socio-occupational status and drug use. The results showed a relationship between age and socio-economic level and soccer stadium violence. A significant difference in the number of cases of violence ( $p < 0.5\%$ ) between drug users and non-users was shown. According to these results, it seems necessary to Sensitize the young people on the negative effects of violence, bring together sports leaders, former athletes, representatives of supporters' groups (Ultras) and relevant government departments and integrate young people into society.

**Key words:** Violence, behavior, spectators, soccer, Kenitra.

**DEVELOPMENT OF DEXIBUPROFEN LOADED SOLID LIPID NANOPARTICLES  
TO ENHANCE ORAL BIOAVAILABILITY****Muhammad Jawad***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Fakhar Ud-Din***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Sibgha Batool***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Aimen Saleem***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***ABSTRACT**

Dexibuprofen (DBPN), a non-steroidal anti-inflammatory drug (NSAID), exhibits its action by inhibiting COX enzymes. It belongs to BCS class II drugs, owing to its poor dissolution and reduced oral bioavailability. Herein, solid lipid nanoparticles (SLNs) were prepared by modified micro emulsion method followed by their optimization via Design-Expert® (version 12). The optimized formulation was evaluated using various techniques including, Transmission electron microscopy (TEM), Fourier transform infrared spectrophotometer (FTIR), Powder x-ray diffractometer (PXRD) and Dynamic scanning calorimeter (DSC). In-vitro release and pharmacokinetic studies of DBPN-SLNs were executed and compared with drug suspension. A 12-weeks stability study was performed at 4 °C and 40 °C. Optimized formulation has spherical morphology including particle size (PS) of 213.8 nm, polydispersity index (PDI) of 0.201, zeta potential (ZP) of -33.6 mV and %EE of 92%. FTIR analysis showed no chemical interaction of the constituents of SLNs, whereas XRD and DSC respectively demonstrated the conversion of crystalline drug to amorphous and thermal behavior of the optimized formulation. In-vitro dissolution data indicated that SLNs has momentarily retarded the drug release at various pH levels when compared with drug suspension. Pharmacokinetic study revealed a significantly enhanced (9-fold) oral bioavailability of DBPN-SLNs than DBPN suspension. Moreover, DBPN-SLNs were stable for at-least 12 weeks. Hence, it can be concluded that incorporation of DBPN into SLNs produce sustained release behavior with improved bioavailability.

**Key words:** Dexibuprofen, Solid lipid nanoparticles, Bioavailability, Pharmacokinetic study

**ON NORMALIZED DISTANCE LAPLACIAN EIGENVALUES OF  
THE RING  $Z_n$** **Nadeem ur Rehman***Department of Mathematics Aligarh Muslim University Aligarh, India***Nazim ur Rehman***Department of Mathematics Aligarh Muslim University Aligarh, India***ABSTRACT**

Let  $R$  be a commutative ring with identity  $1 \neq 0$  and  $Z(R)$  denotes the set of zero-divisors of  $R$ . The zero-divisor graph of  $R$ , denoted by  $\Gamma(R)$ , is a simple undirected graph having vertex set  $Z(R)^*$  (set of nonzero zero-divisors of  $R$ ) and two distinct vertices  $x$  and  $y$  are joined by an edge if and only if  $xy = 0$ . In this paper, we describe the normalized distance Laplacian spectrum of the graph  $\Gamma(Z_n)$ , where  $n = p^S q^T$ ,  $p$  and  $q$  are primes ( $p < q$ ) and  $S, T$  are positive integers.

**Keywords:** Zero-divisor graph, normalized distance Laplacian matrix, normalized distance Laplacian spectrum

## PHYSIOLOGICAL FEATURES OF BLOOD IN COWS DURING THE FIRST PREGNANCY

**Ilnura Ibragimovna Fayzullina**

*Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia*

**Ilya Nikolaevich Medvedev**

*Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia*

### ABSTRACT

Pregnancy greatly affects the health of young cows, especially before their first calving. This greatly affects hematological parameters, which are a reflection of the oxidant-antioxidant balance, metabolic rate and overall viability. **Purpose:** to find out the hematological features of first-calf heifers 2 weeks before calving. **Materials and methods.** 22 first-calf heifers were examined. The animals were crossbreds - 50% blood of the Black-and-White breed and 50% blood of the Holstein breed. Inspection and blood sampling was performed from them 2 weeks before calving. The content of formed elements, levels of glucose, total protein, albumin, cholesterol, triglycerides, globulin, non-esterified fatty acids, haptoglobin, malondialdehyde, and total antioxidant capacity were determined in the blood of first-calf heifers using traditional methods. Mathematical processing of the received results is carried out. **Results.** First-calf heifers two weeks before calving had all the indicators taken into account at the normal level. The content of total protein in their blood was  $68.1 \pm 0.92$  g/l. The amount of albumin and globulin they also had was optimal. The content of haptoglobin in their blood at the time of observation was  $2.3 \pm 0.22$  mmol/l. The glucose level in the animals was within the normal range, indicating the normal functioning of carbohydrate metabolism. The amount of non-esterified fatty acids in their blood was found to be low, with average levels of cholesterol and triglycerides. The total antioxidant capacity of blood in first-calf heifers was low -  $0.66 \pm 0.11$  mmol/l, which provided a slightly increased content of malondialdehyde in their blood. The amounts of erythrocytes and hemoglobin in the blood of first-calf heifers were quite high with a high content of total leukocytes, lymphocytes and neutrophils in it. This indicated a very high resistance of their organism against various infections. **Conclusion.** For first-calf heifers, 2 weeks before calving, the perfection of metabolic and oxidative processes in their body is characteristic. The optimal level of their hematological parameters shows their high viability and overall resistance to any infectious agents. The found levels of malondialdehyde and antioxidant activity in first-calf heifers confirm their metabolic health and readiness of their body for calving.

**Key words:** cattle, blood, heifers, pregnancy, protein, lipids, lipid peroxidation.

**PHYSIOLOGICAL CAPABILITIES OF PLATELETS FOR HEIFERS AGED OVER ONE YEAR****Maya Dmitrievna Shumova***Russian State Social University, 129226, Moscow, Russia**Department of Epizootology and Microbiology, Vologda State Dairy Farming Academy named after N.V. Vereshchagin, Vologda, Russia***ABSTRACT**

Animal husbandry is a profitable branch of agriculture, strategically important for many countries of the world. Increasing demand for milk and beef requires close attention to the health status of replacement young animals. For this, it is necessary to monitor its hematological parameters, which are a marker of the state of the entire animal organism. An important component of maintaining the overall viability of the body of heifers is the hemostasis system. Platelets are a very physiologically significant component of it. The state of their activity in growing heifers with different ways of keeping remains poorly studied, which dictates the need to close this gap in scientific knowledge. **Purpose:** to assess the state of platelet activity in heifers on growing at the age of 12 months. **Materials and research methods.** 35 heifers aged 12 months, tethered, were examined. The body was examined once. They underwent a series of hematological tests. The platelets of the observed heifers were subjected to a standard washing and resuspension procedure. In platelets of animals, the concentration of cholesterol, the levels of malondialdehyde and acyl hydroperoxides were determined by traditional methods, the content of actin and myosin, the content of adenosine diphosphate and the intensity of its secretion were determined. In all cases, platelet aggregation in response to its main inducers was assessed using a visual micromethod. The results were processed by Student's t-test. **Research results.** The platelets of heifers showed a low content of cholesterol. In heifers in blood platelets, the intensity of lipid peroxidation was low. The amount of actin and myosin in their inactive platelets was optimal. Their additional formation under conditions of platelet aggregation was small. The platelets of the examined animals showed an average level of ADP with a low level of its secretion. In rearing heifers, platelet aggregation in response to collagen, ADP, ristomycin, and thrombin occurred within the standard time, which is considered optimal for this process. **Conclusion.** At the age of 12 months, the hemostatic capabilities of platelets in growing heifers were optimal. This is due to the normal functioning of their membrane receptors and intracellular hemostatic mechanisms, which ensures the optimum of their viability, growth and maturation.

**Key words:** heifers, rearing, platelets, hemostasis, physiology.

**PLATELET FUNCTIONS IN PIGLETS BEGINNING TO CONSUME VEGETABLE FEED****Elena Sergeevna Tkacheva***Department of Epizootology and Microbiology, Vologda State Dairy Farming Academy named after N.V. Vereshchagin, Vologda, Russia***ABSTRACT**

The growing demand of society for pork dictates the need to improve approaches to accelerating the cultivation and improvement of the bulk of pigs. This can be ensured by obtaining new knowledge of animal physiology. This can help improve the conditions for breeding and raising pigs. The hemostasis system is considered to be very significant for maintaining the overall viability of young pigs. Its extremely important component are platelets. Changes in their activity can affect the state of microcirculation, and hence the severity of anabolism in the growing body of animals, including piglets during the phase of milk and vegetable nutrition. **Purpose:** to reveal the dynamics of platelet activity in piglets during the phase of milk and vegetable nutrition. **Materials and research methods.** 37 piglets of the Large White breed were examined at the age of 21 days, 25 days, 30 days, 35 days and 40 days. Their platelets were washed and resuspended. In their membranes, the amount of cholesterol, malondialdehyde and acyl hydroperoxides, actin, myosin, ADP was estimated by traditional methods, and the severity of adenosine phosphate secretion was taken into account. Using a visual micromethod, platelet aggregation was recorded in response to standard inducers in plasma standardized by the number of platelets in it (up to  $200 \times 10^9$  platelets/l). The results obtained were processed by Student's t-test. **Research results.** In the platelets of piglets during the phase of milk and vegetable nutrition, the cholesterol level gradually increased, reaching  $0.62 \pm 0.009$   $\mu\text{mol}/10^9$  platelets by the 40th day of life. Lipid peroxidation gradually decreased in their platelets. The content of actin and myosin in inactive platelets in piglets increased during the observation period. Their additional formation during platelet aggregation increased. In the platelets of animals during the observation period, the level of ADP increased by 12.5% with an increase in its secretion by 14.1%. At the first examination in piglets, collagen platelet aggregation on average occurred within  $29.0 \pm 0.08$  s. As their age increased, this indicator accelerated, reaching the level of  $24.5 \pm 0.05$  s by the end of the observation. A similar acceleration of platelet aggregation in animals was found in response to ADP (by 15.2%) and to ristomycin (by 13.3%). Somewhat later, platelet aggregation with thrombin (by the end of the phase  $36.0 \pm 0.07$  s) and platelet aggregation with adrenaline (by the end of the phase  $85.0 \pm 0.06$  s) occurred. **Conclusion.** Piglets develop an increase in the hemostatic function of platelets during the lacto-vegetarian nutrition phase. This is due to their membrane-receptor changes and increased intracellular mechanisms that ensure the participation of platelets in hemostasis.

**Key words:** phase of milk and vegetable nutrition, piglets, platelets, hemostasis, physiology

## **PLATELET FUNCTIONS IN YAROSLAV CALVES IN THE MIDDLE OF EARLY ONTOGENESIS**

**Nadezhda Viktorovna Vorobyeva**

*Department of Physical Education, South-West state University, Kursk, Russia*  
*All-Russian Research Institute of Physiology, Biochemistry and Nutrition of Animals, Institute of Village, Kaluga region, Borovsk, Russia*

### **ABSTRACT**

The purpose of the study is to determine the state of platelet functions in young animals of the Yaroslavl breed during the phase of milk and vegetable nutrition. 42 calves of the Yaroslavl breed, born as a result of normal pregnancy from cows of optimal functional status, were examined. In calves, there was an acceleration of the onset of platelet aggregation with all used aggregation stimulators by the age of 45 days of life. She returned to the outcome by the end of the third phase of early ontogenesis. In animals, by day 45, the total number of activated platelets in varying degrees increased by 27.9% in the blood for a short time. The found short-term increase in the severity of platelet function by the age of 45 days developed due to an increase in the synthesis of thromboxane molecules by 30.3%. Also, in platelets of calves, a short-term increase in the content of adenosine phosphate in platelets and an increase in its secretory release were found. In animals, by day 45, an increase in platelet activity was also caused by a short increase in the amount of actin and myosin in them by 35.7% and 43.0%. Their content in platelets returned to the outcome at the end of the study. During the implementation of platelet aggregation in calves by the 45th day of life, an additional increase in the synthesis of actin and myosin by 35.7% and 43.0% was noted, disappearing by the end of the third phase of early ontogenesis.

**Key words:** Yaroslavl breed, calves, phase of milk and vegetable nutrition, physiology, platelets, hemostasis.

## **PHYSIOLOGICAL REACTION OF ASTENIZED ORGANISM TO MODERATE PHYSICAL LOADS**

**Svetlana Yurievna Zavalishina**

*Faculty of Medicine, Russian State Social University, 129226, Moscow, Russia*

### **ABSTRACT**

Systematic physical activity as a whole strengthens the body due to the general stimulation of all internal organs. Of great importance are the consequences of playing basketball in relation to the state of the body of astenized young men. **The purpose of the study:** to trace the effect of regular basketball training on the body of astenized young men. **Methodology and organization of the study.** 26 young men aged 18 were observed, who had an acute respiratory viral infection about 2 weeks ago. They were divided into a main group of 12 people who started playing basketball, and a control group consisting of 13 young men who retained their previous lifestyle. Conducted a number of conventional functional tests to assess the state of the organism. The results obtained were processed using Student's t-test (t). **Research results.** Regular basketball lessons eliminated asthenia, improved coordination, motor characteristics and vestibular stability of the body. Young basketball players showed an increase in the level of general physical fitness and an increase in the clarity of sports movements. In the boys of the control group, all parameters taken into account remained unchanged. **Conclusions.** Regular basketball training increases the main functional indicators, endurance level, coordination and speed parameters in astenized young men.

**Key words:** Adolescence, asthenia, consequences, acute respiratory viral infection, basketball training, physical activity.

**PSYCHO-SOCIAL PROBLEMS OF JUVENILE DELINQUENCY AMONG MINORS

**ABSTRACT**

In We decided to research the deviant phenomenon and juvenile delinquency to have a better understanding of teenagers who resort to acts that violate social and legislative norms. It is becoming a common phenomenon among the middle and poor society, where there are no suitable inclinations and models for future young people. Among the psycho-social problems, some theories support the juvenile behaviors of minors, in addition to the cases studied during the work. The seriousness of delinquency in Romania is increasing every year, thefts and rapes are present in almost every county and must be combated. We proposed, first of all, to seek an understanding of their behavior, and why they resort to criminal acts if there is someone behind the actions if there is blackmail or some type of abuse in their families. There is a large increase in crimes after 1989 in cases of school dropouts, lack of parental supervision, and precarious or disorganized families that become criminals. The work is divided into several general chapters, the theory, and the research part. In theory, we mentioned the legislative norms, normative acts, and the Penal Code, together with theories that help us better understand the factors of juvenile influences on minors and adolescents.

**Keywords:** deviant, juvenile, behavior, society, minors, delinquency.

## **METHODOLOGY OF TEACHING ENGLISH FOR SPECIFIC PURPOSES: UNIQUE OR GENERAL**

**Abbas Ali Rezaee, PhD**

*Associate Professor, University of Tehran, IR Iran*

### **ABSTRACT**

Language teaching has a long history; however, the method era of teaching English dates back to the beginning of the 20<sup>th</sup> century. Within this period of more than a century, the pendulum concerning the ways English can be taught and learnt has swung. In these fluctuations, extremes, due to the effect of various schools of psychology resulting in newer perspectives of language learning, have been significant. Audio-lingual Method is known as the first language teaching method affected by an established psychology, i.e., behaviorism. When behaviorism gradually swayed away, cognitive psychology took its place and, partly because of socio-cultural theory, the approach of language teaching shifted to communicative. In between, some so-called methods, i.e., suggestopedia, the silent way, and total physical response, mainly developed by psychologists, found some proponents. In was in mid-1960s when, due to the change in linguistics, the needs of language learners in academic contexts and business as well as the promises of the new industrial world, teaching English for Specific Purposes (ESP) emerged. The issue at hand is whether innovative teaching methodology had to be developed or the existing methods could be used. From one standpoint, ESP was language teaching, but the specialized language, and from another perspective, it had its own demands. What is observed in the short history of ESP is not specific methodology but just a list of trends: ‘register analysis’, ‘rhetorical analysis’, ‘study skills and needs analysis’, and ‘genre analysis’ What makes ESP methodology different from that of English Language Teaching (ELT) are mainly ‘scaffolding’ and ‘consciousness-raising’. The present paper intends to deal with these methodological options.

**Keywords:** Teaching methodology, ESP, ELT, scaffolding, consciousness-raising

**TRANSFORMATIVE HIGH ENTROPY ALLOYS FOR ADDITIVE MANUFACTURING****Dhanesh G. Mohan***Department of Material Processing Engineering, Zhengzhou Research Institute of Harbin Institute of Technology, Zhengzhou, China.**ORCID: <https://orcid.org/0000-0002-4652-4198>.***Anatoliy Zavdoveev***Paton Electric Welding Institute of NAS of Ukraine, K.Malevicha 11, 03150 Kiev, Ukraine..**ORCID ID: <https://orcid.org/0000-0003-2811-0765>***Jacek Tomków***Faculty of Mechanical Engineering and Ship Technology, Gdańsk University of Technology, Poland.**ORCID: <https://orcid.org/0000-0003-1096-7779>***ABSTRACT**

Materials scientists have worked hard to find a solution to the problem of a sudden deterioration in engineering materials while they are in use. This served as inspiration for the development of several types of alloys, including stainless steel, deformed and partitioned steels, metastable Ti alloys, and recently created high entropy alloys (HEAs). They demonstrated outstanding work hardenability as a result of continuous evolution from single-phase to multi-phase HEAs, which is necessary for increased failure resistance in metallic systems. Accordingly, newly created transformational high entropy alloys (T-HEAs) showed intriguing results in enhanced damage tolerance (UTS 1.2 GPa and ductility 20% with 1.5% defect density) during normal processing, significant deformation, and laser-assisted 3D printing. Due to the activation of the transformation-induced plasticity (TRIP) effect close to the defects, these results were attributed to the localised WH activity within the stress concentration zones. On the other hand, due to their flaws, these T-HEAs exhibit a strong transformation-induced crack retardation (TRICR) effect, which delays the onset of damage and increases failure resistance while in use. In conclusion, the design of transformative high entropy alloys (T-HEAs) has shown to be a very effective method for achieving flexible microstructural evolution and encouraging unexpected strength-ductility synergy at ambient temperature. Additionally, these transformative high entropy alloys' tailored metastability made them more likely to possess outstanding qualities such as a high damage tolerance and tolerable printability in additive manufacturing. The synergistic activation of numerous deformation modes, including transformation-induced plasticity, non-basal slip-assisted plasticity in the phase, and stacking fault (SF) strengthening at various stages of deformation, is thought to be the cause of this cocktail effect in T-HEAs. Therefore, T-HEAs can be viable candidates for creating stronger, printable, and damage-tolerant materials for future environmentally friendly metal additive manufacturing.

**DOES BIG DATA USE IMPACT FIRM EXPORT PERFORMANCE? INVESTIGATING THE  
JOINT MODERATIONG ROLES OF ENTREPRENEUR ORIENTATION AND RESOURCE  
COORDINATION****Zulqurnain ALI***IRC for Digital Economy and Finance,**KFUPM Business School,**King Fahd University of Petroleum and Minerals, Dhahran, Saudi Arabia.**ORCID ID: <http://orcid.org/0000-0002-2133-7409>***ABSTRACT**

Due to the emergence of technological development, small and medium enterprises (SMEs) are adopting different innovative technological methods to enhance their productivity. Big data use (BDU) is one of the information-oriented method that assists the SMEs to increase their process and export performance. Therefore, the purpose of this papers is to predict textile SMEs export performance via BDU in the light of resource based view theory. Moreover, this research seeks to explore the moderating role of entrepreneur's orientation (EO) and resource coordination (RC) in the association between BDU and SME export performance. Using the survey methods, we recruited the SMEs entrepreneurs from textile sector located in the region of Punjab, Pakistan and tested the proposed model and associations in Mplus 7.4. The findings suggest that BDU is positively linked to business process performance (BPP) and SMEs export performance (SEP). EO and RC moderates the association between BDU and BPP and BDU and SEP. Our study assists the SMEs entrepreneurs to enhance their textile SEP through proper adoption of big data in their production system. Moreover, individuals with high EO in SMEs will stronger the association between BDU and BPP, and BDU and SCP. Finally, we discuss the research discussions, implications, limitations and future research directions.

**Keywords:** Big data use, SMEs export performance, Business process performance, Entrepreneurs orientation, and Resource coordination.

**ASSESSMENT OF LIVESTOCK FEED RESOURCES AVAILABILITY, FEEDING PRACTICES AND CONSTRAINTS TO LIVESTOCK PRODUCTION IN DIFFERENT AGRO-ECOLOGICAL ZONES IN GERA DISTRICT, JIMMA ZONE, OROMIA REGIONAL STATE, SOUTHWEST ETHIOPIA**

**ABSTRACT**

The study was conducted to assess feed resources, feeding practices and major constraints to livestock production in Gera district of Jimma Zone, oromia Regional State, Ethiopia. A baseline survey was conducted to obtain the information at three agro-ecological zones (AEZs), viz., highland (> 2300 masl), midland (1500-2300 m) and lowland (<1500 m). A total of 190 (80, 60 and 35 in highland, midland and, lowland, respectively) smallholder livestock keeping households were randomly selected for the study. Primary data were collected using a pre-tested semi-structured questionnaire through face-to-face interviews, focus group discussions, key informant interviews and field observations. The data collected were analyzed using Statistical Package for Social Sciences (SPSS) to generate descriptive statistics. Descriptive analysis and Chi-square were used to test the statistical significance of categorical and continuous data respectively. Weighted average index (WAI) was also used to rank farmers' perceived available feed resources in dry and wet seasons and constraints to livestock. The results revealed that the overall average herd/flock size per household was 7.29±0.16 cattle, 6.08±0.20 sheep, 2.08±0.19 goats, 0.26±0.04 donkeys and 1.52±0.07 horses, and differed significantly ( $p<0.05$ ) between the AEZs, except for mules. The primary reason for keeping cattle was for draught power while sheep and goat were kept mainly for income generation and equines for transportation. The main sources of household income were livestock (64.6%), cereal crops (25.46%), coffee (9.5%) and honey (1.3%) sales. The predominant breeding method was natural/bull service (85.6%) followed by both natural and artificial insemination services (14.4%). No respondent reported using AI in the lowland. River (93%) was the main source of livestock drinking water. About 100% and 82.4% of respondents watered their animals once and twice a day in wet and dry season, respectively. The main types of livestock housing were family dwelling, separate sheds, family backyard, and open air. External and internal parasites, black leg, bloat, lumpy skin diseases, and trypanosomiasis were reported as the most common animal health

problems in the study area. Feed resources availability varied according to season. Natural pasture (mean rank = 0.384) was ranked as the major livestock feed resource available during the wet season. Private (64.3%) and communal (35.7%) pasture were the main sources of natural pasture. In the dry season, natural pasture (mean rank = 0.395) followed by crop residues (mean rank = 0.331) were ranked as the main feed resources available. The major sources of crop residues were barley, maize, sorghum, teff and wheat. Free grazing (54.5%) was the dominant livestock feeding system followed by tethering (34%). Of the respondents, few (11.5%) practiced improved forage production. The main supplementary feeds provided to their animals were household leftovers (35.7%), cereal mill house leftovers (*Bullullee*, 19.8%) maize (16.5%), household leftovers and maize (11.1%), *Atella* (traditional brew by-product, 9.52%), *bullulle* and *atella* (7.14%). None of the respondents used mineral supplements, except common salt (71.8%). The major constraints to livestock production identified by respondents were shortage of feed, limited grazing land, high incidences of diseases and parasites, water scarcity, poor access to veterinary services, inadequate extension services, low prices of livestock, in that order of importance. Based on the findings of this study, efficient utilization of the locally available feed resources, forage production, intensive feed-food production, strategic supplementary feeding, improved access to veterinary, extension and market services, and water development would be essential interventions as long-term strategies to improve feed supply and enhance livestock productivity thereby household income in the study area.

**INSIGHTS INTO THE TURNING PROCESS CUTTING PERFORMANCE WITH  
COTTON SEED OIL ENRICHED WITH NANO-ADDITIVE****Nishant Kumar Singh***Department of Mechanical Engineering, Harcourt Butler Technical University, Kanpur, UP, India***Yashvir Singh***Department of Mechanical Engineering, Graphic Era Deemed to be University, Dehradun,  
Uttarakhand, India***Virendra Kumar***Department of Mechanical Engineering, Harcourt Butler Technical University, Kanpur, UP, India***ABSTRACT**

Vegetable oil functions poorly in terms of high resistance, viscosity, and friction when compared to mineral oil; thus, it has been combined with various types of additives to enhance its qualities. The goal of this study is to evaluate the machining performance of modified Cotton Seed oil (MCSO) with zinc oxide (MCSOz) and Activated Carbon (MCSOc) at 0.20, 0.40, and 0.60 wt. percent, respectively. The machining efficacy of nanofluids (MCSOz1, MCSOz2, MCSOz3, MCSOc1, MCSOc2, and MCSOc3) was evaluated to that of a commercial synthetic ester (SE) in terms of cutting temperature, chip thickness, and tool chip contact length during the turning process with the minimal quantity lubrication (MQL). In terms of machining performance, the outcomes show that MCSOc surpasses MCSOz. In terms of cutting temperature, chip thickness, and tool chip contact length, the MCSO + 0.40wt. percent activated carbon demonstrated the best machinability. Additionally, (MCSO + 0.20wt. percent ZnO) has superior machining performance among MCSOz. Finally, the best individual machining performance is found in MCSOc2 (MCSO + 0.40 wt. percent Activated Carbon). In the context of ecological and energy efficiency, this has the potential to be a lubricant industry player.

**Keywords:** Modified cotton seed oil; Nanofluid; Nanoparticles; Metalworking Fluid; turning; Zinc oxide; Activated Carbon

**AN EMPIRICAL STUDY ON COMMUNITY CAPACITY BUILDING AND  
PROMOTION OF TRIBAL TOURISM IN KBK DISTRICTS OF ODISHA**

**Dr. Bidhu Bhusan Mishra,**

*Retd. Professor (Marketing), Utkal University, Odisha, India*

*Assistant Professor (Marketing),*

*Astha School of Management, Odisha, India*

**ABSTRACT**

Local capacity becomes an essential component in the sustainability of tourism resource management. Local capacity is an instrument of social aspects that can organize complexity, through regulation, cooperation and empowerment of the parties involved. Comprising 22.85% population of Odisha, tribal people constitute the lowest strata of the informal economy in the state. Faced with development challenges on account of social, economic, and geographic exclusion, a steadily depleting livelihood based, illiteracy, and lack of awareness of their rights and the market potential of their skills and resources, they are particularly vulnerable to exploitation, distress migration, and the debt trap. The growth rate of tourism has become stagnant in developed countries, while it is increasing in developing countries. Apart from that tourism also accounts for 10.6% of the world's employment and 10.4% in total, i.e., the sum of all direct, indirect, and induced employment (World Travel & Tourism Council, 2020). Besides the above-said facts, tourism has been seen as a panacea to eradicate poverty, inequality, and conflicts (Scheyvens, 2007). Tourism also can create more jobs for each unit of capital invested in tourism than for the similar capital invested in any other industry (Andriotis, 2002). The proposed study on will address the important objectives of assessing the perceptions the indigenous communities about capability building for promoting tribal tourism the study area i.e. KBK districts of Odisha. A structured questionnaire is used to collect primary data from the respondents. Statistical package like SPSS is used to analyze of data. A purposive sampling technique used to draw a sample of 250 respondents. The outcomes of the study will help in formulating and suggesting an indigenous tourism model for the sustainable development of tourism in the KBK districts of Odisha.

**THERMAL RADIATION AND VISCOUS DISSIPATION EFFECTS ON HYBRID  
NANOFLUID OVER STRETCHING SHEET****Misbah Fareed***Department of Mathematics, Division of Science and Technology, University of Education, Lahore,  
54000, Pakistan***Abid Hussanan***Department of Mathematics, Division of Science and Technology, University of Education, Lahore,  
54000, Pakistan***Amir Abbas***Department of Mathematics, Faculty of Science, University of Gujrat, Sub-Campus, Mandi Bahauddin  
50400, Pakistan***ABSTRACT**

Hybrid nanofluid has been commercialized as the advancement of traditional nanofluid. The present research work aims to investigate the significance of thermal radiation and viscous dissipation effects on hybrid nanofluid over stretching sheet. The mixture nanofluid involves copper (Cu) and iron oxide ( $\text{Fe}_3\text{O}_4$ ) nanoparticles which are diluted into  $\text{H}_2\text{O}$  to form  $\text{Cu-Fe}_3\text{O}_4/\text{H}_2\text{O}$  hybrid nanofluid. This mixture is irrotational, incompressible and electrically conducting. The appropriate similarity transformations are applied to reduce the partial differential equation into the system of nonlinear ordinary differential equation, which is solved numerically. The Runge-Kutta-Fehlberg method is used to obtain the numerical solutions for velocity and temperature field. The performance of well-known parameters against velocity and temperature field has been visualized graphically. The temperature distributions declared low performance for increasing value of Eckert number. Temperature field increases with increasing values of magnetic field and radiation parameters. The obtained results demonstrated the effective application of hybrid nanofluids.

**Keywords:** Hybrid nanofluid; thermal radiation; viscous dissipation; magnetic field.

**A BRIEF PERSPECTIVE OF ELECTROMAGNETIC BAND GAP STRUCTURES  
LOADED ON MICROSTRIP ANTENNA FOR DUAL BAND APPLICATIONS**

**ABSTRACT**

Electromagnetic Band Gap (EBG) Structures are periodic/non periodic structures which have attractive feature of suppressing surface waves in antennas which leads in enhancing the antenna parameters such as impedance bandwidth, gain, directivity etc. Many researchers have shown immense interest in designing these structures for various fields of communication due to its attractive features. This paper gives a review of various designs of EBG structures which are implemented on microstrip antenna for dual band applications.

**DO ACADEMIC SPIN-OFF PERFORM BETTER THAN OTHER FIRMS?  
EVIDENCE FROM ROMANIA****Roxana Sirbu***"1 Decembrie 1918" University of Alba Iulia, Faculty of Economics, Alba Iulia, Romania;***Lavinia Maria Mihali***Politehnica University of Timisoara, Faculty of Management in Production and Transportation,  
Management Department, Timisoara, Romania;  
ORCID ID: <https://orcid.org/0000-0002-2395-1189>***ABSTRACT**

The spin-off phenomena in East and Central Europe is not so much analysed, and there is a big gap in the literature regarding the mechanism of survival and performance of this atypical ventures. The study aims to compare the economic performance of academic spin-off companies formed in Romania using European funds during a 15 years period with companies operating in the same economic sector. A database of 119 academic spin-offs founded from 2006-2013, was created and the variables analyzed for the economic performance with specialized statistical program were: number of employees, profit, economic rentability, company turnover. A comparison of the receivables, liabilities and expenses shows that the companies have managed to maintain their receivables generally at a lower level than their turnover. The results in the case of academic spin-offs reveal that after the 10<sup>th</sup> years of functioning the liabilities increased, presumably due to an increase in fixed assets for the modernization of production/services. But, after the 12<sup>th</sup> year of operation, the liabilities increased sharply without a similar increase in fixed or current assets. As this has occurred in the same time with a mild increase in turnover and a simultaneous decrease of profit, it can be surmised that the liabilities have increased due to unpaid dues accumulated from the previous period, or new loans for covering production costs. The chronological period covers the years 2018-2020. The return on assets rate is a measure of the efficient use of assets (both fixed and current). It does not take into consideration the financing of the assets and therefore is not dependent on the financing strategy of the company. The indicator should be positive and the higher the value of ROA, the better the assets are managed (bringing profit to the company). For academic spin-offs a negative mean ROA is common for the analyzed companies with only 3 exceptions (year 3, 11, 13 and 15 of operation) with very high negative values in the first 2 years of operation. A negative value of ROA shows that either the assets are not properly managed or that the assets acquired are not adequate; meaning the the company is not able to acquire or use the assets to generate a profitable return. It may take time for a company to make proper use of the acquired assets, which would explain the very high negative ROA in the first years of operation; however a steady negative ROA shows that assets' management is faulty. As the causes can be multiple and variate, a more in-depth study of management decisions is necessary. Using the t-test for single sample, the values were compared separately (on years), but the study revealed that academic spin-offs have reached a higher turnover than the average for the same type of companies (similar number of employees and the same turnover). During the 15 years period analyzed, spin-off companies founded in Romania through the Operational Program for Competitiveness 2007-2013 have shown an economic performance that is similar and in some aspects superior (e.g. turnover) to the economic performance of companies acting in similar fields (NACE codes) and of similar class (microenterprises).

**Keywords:** academic spin-offs; technology transfer; performance

**ACCURACY OF AGE AND SEX ESTIMATION OF NIGERIAN IGBO  
POPULATION USING AURICULAR MORPHOMETRICS****Gabriel Sunday Oladipo***University of Port Harcourt, Faculty of Basic Medical Sciences, Department of Anatomy, Port Harcourt, Nigeria.*ORCID ID: <https://orcid.org/0000-0002-1780-8992>**Oghenefego Michael Adheke***University of Port Harcourt, Faculty of Basic Medical Sciences, Department of Anatomy, Port Harcourt, Nigeria.*ORCID ID: <https://orcid.org/0000-0002-6306-279X>**Janet Nneoma Eke***University of Port Harcourt, Faculty of Basic Medical Sciences, Department of Anatomy, Port Harcourt, Nigeria.***ABSTRACT**

The human ear (auricle) is an important body component in biometric studies and forensic identification. The purpose of this study was to examine the accuracy of prediction of age and sex of selected Nigerian Igbo population using auricular morphometrics for forensic applications. 300 participants (142 males to 158 females) in the age range of 16 – 65 years were randomly recruited from settlements in the South-Eastern states of Nigeria. The participants were made to sit in a Frankfurt horizontal position and auricular measurements such as, total ear height (TEH), ear width (EW), lobule height (LH) and lobule width (LW) were obtained using a digital vernier caliper (validated by calibrating to 0.01mm). The ear index (EI) and lobule index (LI) were calculated using the measurements. Data obtained were analyzed using the Statistical Package for the Social Sciences (SPSS version 23.0). Age was estimated from auricular dimensions using Multivariate Regression Analysis (MRA), while sex estimation was carried out using Discriminant Function Analysis (DFA). The following mean values were recorded for males: TEH [Right (R) = 47.01±6.30, Left (L) = 46.24±5.85], EW (R = 25.06±4.14, L = 24.68±4.32), LH (R = 13.92±2.61, L = 13.99±2.18), LW (R = 12.99±2.30, L = 13.30±1.94), EI (R = 53.47±7.23, L = 53.28±6.69) and LI (R = 95.17±18.12, L = 96.80±18.56). For females, TEH (R = 48.25±6.83, L = 48.25±6.24), EW (R = 25.19±3.93, L = 24.57±4.21), LH (R = 14.44±2.67, L = 14.89±2.55), LW (R = 13.37±2.26, L = 13.78±2.04), EI (R = 52.50±6.85, L = 50.93±7.05) and LI (R = 94.60±19.59, L = 94.30±16.63). Sexual differences were highly significant in total ear height, lobular length and width, as well as the ear index of the left auricle. Age was estimated from auricular dimensions in Igbos with just 7% accuracy in males and 13% accuracy in females. Using discriminant function analysis, there was a moderate accuracy of 56.7% for the right and 61.7% for the left ear respectively, with females better assigned than males. Conclusively, this study has provided a baseline data for auricular morphometrics of Nigerian Igbos in the age range of 16 – 65 years. Although, the accuracy in predicting age using these ear measurements in the given population is no yet reliable for forensic identification, we can say that they could be relied upon during sexual dimorphism.

**Keywords:** Auricle, morphometrics, sex, age, prediction, Igbo

**ABSTRACT**

Water recreational activities are getting popular in the country. Excessive recreational activities in the areas can cause negative effects on microbial diversity. Freshwater fungi are the fungi that all or part of their life cycles in freshwater habitats. Freshwater fungi have an important role as decomposers, endophytes, and pathogens in animals, aquatic plants, and humans. We compared the diversity of freshwater fungi in the natural and man-made lakes in the tourist destination areas. The natural lake is located in the natural forest, whereas the man-made lake is located in residential area. The different locations were selected based on differences in abiotic and biotic conditions in the two lakes. The fungal isolation was conducted by collecting lake water using sterile bottle at 20 cm depth. Fungal isolation was carried out by using serial dilution method and incubated on Potato Dextrose Agar (PDA) growth medium. Fungal identification was done by combining fungal morphology and molecular characteristics. Molecular analysis was carried out based on DNA sequences of ITS1-5.8S-ITS2 rDNA sequences. The results showed that both lakes are habitats for water fungi. The number of fungal species isolated from natural forest was higher than that of man-made lake. The number of species was almost double in the first area. Ten species of freshwater fungi were successfully isolated from natural lake, and 5 fungal species was obtained from man-made lake. The fungi isolated from Natural lakes were *Aspergillus* spp., *Parengyodontium album*, *Penicillium citrinum*, *Pestalotiopsis microspora*, *Phialemoniopsis pluriloculosa*, *Sarocladium terricola*, *Talaromyces aculeatus*, and *Trametes polyzona*. The fungi isolated from man-made lake were identified as *Acremonium polychromum*, *Fusarium proliferatum*, *Penicillium citrinum*, *Stachybotrys chlorohalonata*, and *Talaromyces pinophilus*. Most of them are of different species, except one species namely *Penicillium citrinum* obtained from both lakes. This may indicate that microclimate surrounding the area and recreation activities influence the diversity of water fungi.

**ABSTRACT**

Geotourism is a sector that has recently gained importance in the field of tourism. It is based mainly on the promotion of geological and geomorphological features, sites and processes, and abiotic landscapes as tourist attractions. The urban commune of Beni Mellal and its neighbouring communes of Foug Oudi and Foug El Anceur are located at the foot of the Middle Atlas and High Atlas Mountains junction largely known as Atlas of Beni Mellal. They belong administratively to the province of Beni Mellal, which is part of the Beni Mellal-Khenifra Region in central Morocco. These communes contains a number of geomorphological forms and geological objects, with a high value for reconstructing the geological and geomorphological history of this part of the Atlas mountains, which can be qualified as geosites and geoheritage elements. Moreover, due to their outstanding landscape integrity and beauty, these geosites have excellent potential for geotourism development. For this purpose, the inventory was made reveals the presence of geosites that are both numerous and diversified in this territory. In total, of 32 geosites resulting from geological processes such as magmatic, sedimentary and structural phenomena as well as geomorphological processes mainly fluvial and karstic. However, these geological and geomorphological richness are generally unknown to the general public and overshadowed by local actors. The aim of this work is twofold; the first objectives was the inventory and description of these geosites which represent an indispensable step to involves local actors and community in the geoconservation strategy. The second objectives is the realisation of the geotourism map where these geosites are used to establish geotourism routes which could serve as a tool to increase sustainable tourism attractivity of the geopatrimoine of this part of the Moroccan Atlas.

**ABSTRACT**

The present study has for objective to assess the spatial distribution of Ks soils the beni Moussa and its relationship with soil properties, including intrinsic silt and clay contents, organic carbon and water content in the dry, total porosity and bulk density in the surface. The links between water, soils and therefore agriculture, are inseparable, indeed, water in the soil is essential for plant growth and therefore plays a major role in the productivity of agricultural systems. The optimization of water management in agriculture is essential in semi-arid areas in order to preserve this resource which is already low and erratic due to human actions and climate change. The saturated hydraulic conductivity (Ks) is the main parameter used to determine the spatial distribution of water infiltration in soils. The saturated hydraulic conductivity of 70 samples from different soil units in the Beni Moussa irrigated perimeter, and according to the land use, was measured using an in situ method by near-test. These measurements revealed a significant spatial variability of Ks values (32-680 mm/h) in relation to the hydrodynamic properties of the soil, its texture and structure, EC (102.3 -2360  $\mu\text{S}/\text{cm}$ ) pH water (6.89- 9.31), its relationship with other soil characteristics. The IDW interpolation method is reliable.

**Keywords:** saturated hydraulic conductivity; spatial correlation;beni moussa.

**THE QUANTIFICATION OF HEMATITE AND GOETHITE IN HYDROMORPHIC SOILS USING THE SENTINEL-2 SENSOR AND XRF IN THE BENI MOUSSA PERIMETER, TADLA PLAIN, MOROCCO.**

**ABSTRACT**

The focus of this research is to assess the Sentinel-2 sensor bands ability to detect and quantify ferrous products in soil using specific spectral indices and iron absorption characteristics in the visible and near-infrared, as well as to propose a method for quantifying ferrous products in ppm using the Sentinel-2 sensor bands in combination with iron content determined by X-ray fluorescence. The hematite index (IHm) developed by Madeira Netto (1993) for the Landsat TM-5 sensor bands, as well as the ferric index (RHGt PF) developed by Baptista and Débora Teobaldo (2017) for the WorldView-2 sensor bands, were adjusted for Sentinel-2 to see if the super-spectral sensor bands of Sentinel-2 could cover the absorption characteristics of ferrous products. To examine the usefulness of Sentinel-2 data in measuring hematite and goethite minerals in Beni Moussa soils using continuum-suppressed spectral feature analysis, organic matter, carbonate, and iron concentrations were measured in soil samples to demonstrate links between them and the spectrum responses measured by the sensor on the soil sample regions. With the deployment of the Sentinel 2 super-spectral sensor bands, the spectral features of goethite, centered at 0.48 m, and hematite, centered at 0.53 m, can now be distinguished; this was previously unachievable with other multispectral data. Pearson correlation coefficient indicates that the iron content determined by X-ray fluorescence is positively correlated with the redness index ( $r = 0.9485$ ) and ferruginous minerals determined by the technique based on the depth of spectral characteristics for hematite ( $r = 0.8939$ ) and for goethite ( $r = 0.8301$ ). The redness index is positively correlated with ferruginous minerals determined by the technique based on the depth of spectral characteristics ( $r = 0.8499$ ) for goethite and ( $r = 0.8969$ ) for hematite, but it's negatively correlated with organic matter ( $r = -0.5715986$ ) and  $\text{CaCO}_3$  ( $r = -0.7796$ ), indicating that these two elements have a significant impact on the iron concentration and electrometric spectrum of the soil. The strong correlation between the concentrations ratio (hematite/hematite + goethite) given by the iron index ( $r = 0,74$ ) and the ratio (hematite/hematite + goethite) calculated by the concentrations of hematite and goethite estimated by the proposed method shows that the results obtained are more or less representative.

**Keywords:** Sentinel-2 Sensor, Hydromorphic Soils, Quantification, iron content

**IRON BEHAVIOR AND THEIR RELATION TO THE PHYSICO-CHEMICAL PROPERTIES IN THE HYDROMORPHIC SOILS OF BENI MOUSSA PERIMETER, TADLA PLAIN, MOROCCO: INSIGHT FROM THE MULTIVARIATE STATISTICAL ANALYSIS.****Abdessalam Salmi***Sultan Moulay Slimane University, Faculty of Science and Technology, Beni Mellal, Morocco***Mohammed Al Baghdadi***Sultan Moulay Slimane University, Faculty of Science and Technology, Beni Mellal, Morocco***Atika Mouaddine***Sultan Moulay Slimane University, Faculty of Science and Technology, Beni Mellal, Morocco***ABSTRACT**

This study aims to determine the iron behavior in the hydromorphic soil in the Beni Moussa perimeter. The hydromorphic soil was sampled at 17 collected sites in February 2020 to perform analysis of pH, organic matter (OM), Cation Exchange Capacity (CEC), Electrical Conductivity (EC), extractable iron, carbonate content (CaCO<sub>3</sub>), granulometry, magnetic susceptibility, and heavy metals content. The results attest that the organic matter shows very high values because the samples collection sites represent the sewerage network. The mass magnetic susceptibility measurements show that all the samples have positive and low values with an abundance of paramagnetic minerals (ilmenite, siderite, and clay minerals, etc.). The iron concentration in hydromorphic soils increases from the top to the bottom of the valleys which shows that the iron migrates in reduced form. Interrelationships between the analyzed parameters and the different samples were investigated by multivariate analyses, principal component analysis (PCA), and hierarchical cluster analysis (HCA). Pearson correlation coefficient indicates that the organic matter (OM) is positively correlated with cation exchange capacity (CEC) ( $r = 0.83$ ) and electrical conductivity CE ( $r = 0.85$ ), but it's negatively correlated with mass magnetic susceptibility high and low frequencies (MSLF and MSHF) ( $r = -0.57$ ) and iron oxide measured by X-ray fluorescence (XRF) ( $r = 0.42$ ). Calcium carbonate content (CaCO<sub>3</sub>) is positively correlated with sand ( $r = 0.49$ ), but it's negatively correlated with MSLF and MSHF and frequency dependence (FD) ( $r = -0.7$ ). Fe is positively correlated with FD ( $r = 0.7$ ), but it's negatively correlated with Sand ( $r = -0.608$ ). clay is strongly negatively correlated with silt ( $r = -0.88$ ) and FeO ( $r = -0.55$ ), respectively. All of these findings suggest that the physicochemical features of Beni Moussa hydromorphic soils are strongly linked and that iron in the soil is required for the stability of specific soil components.

**SOME CONNECTEDNESS PROPERTIES OF  
RELATOR SPACES****MUWAFIQ MAHDI SALIH***Department of Mathematics, College of Basic Education, University of  
Duhok, Iraq***ABSTRACT**

Motivated by some ordinary and extreme connectedness properties of topologies, we introduce several reasonable connectedness properties of relators (families of relations). Moreover, we establish some immediate connections among these properties. More concretely, we investigate relationships among minimalness (well-chainedness), connectedness, hyper- and ultra-connectedness, door, superset, submaximality and resolvability properties. Since most generalized topologies and all proper stacks can be derived from preorder relators, the results obtained greatly extends some former results on topologies. Moreover, they are also closely related to some former results on well-chained and connected uniformities.

**Keywords:** Generalized uniformities, connectedness properties

**RÉSUMÉ**

Le carbone organique du sol (COS) joue un rôle majeur dans le maintien des propriétés du sol, il constitue un important réservoir de carbone à l'échelle planétaire et il est très sensible au mode de gestion des terres. L'accroissement du stockage de carbone sous forme de matière organique des sols pourrait jouer un rôle important dans la lutte contre l'augmentation des gaz à effets de serre dans l'atmosphère et donc dans la prévention du changement climatique. Ce carbone se minéralise et retourne à l'atmosphère avec des durées de vie très variables, qui dépendent de nombreux facteurs, dont les occupations des sols et les pratiques agricoles. Il est donc important de connaître le potentiel offert par ce « puits » selon le type du sol. À cet égard, L'objectif global de cette étude est d'évaluer le potentiel de stockage du carbone des différents types de sol des Beni Moussa en milieu semi aride afin de déterminer les types de sol dont le potentiel de stockage du carbone est élevé et ceux qui contribuent le moins à la séquestration du carbone au niveau de la plaine de Tadla. La combinaison entre deux méthodes de travail analytique et géomatique permettra de déterminer la variation du stockage du carbone en fonction de la profondeur, et l'interaction avec les autres caractéristiques du sol.

**IMPORTANCE OF THE PEACEFUL ENVIRONMENT IN THE DEVELOPMENT  
OF SOCIETY  
(FROM ISLAMIC TEACHINGS)**

**Dr. Naseem Akhter**

*Associate Professor Dept. of Islamic Studies  
Shaheed Benazir Bhutto Women University, Peshawar, Pakistan.*

**ABSTRACT**

The concept of peace is defined as the absence of violence in any society or a healthy, positive international or inter-human relationship. In this situation, all members of society enjoy social, economic, equality, political rights, and protection. Peace is considered an essential component of the well-being of society. Historically speaking, anarchy reigned worldwide before the advent of Islam. That illiterate culture lacked any understanding of law and order. The introduction of Islam brought about a period of social stability and protection for all of humanity. But regrettably, we have lost sight of Islam's teachings throughout time, and as a result, society today still suffers from many of the same issues that existed before the arrival of Islam. So that a peaceful society can be built, people must abide by Islamic precepts. In terms of its research, this research study may be exceptional and useful to others due to its specific field.

**ABSTRACT**

The goal of this talk was to summarize the current state of knowledge about using plant by-products and supplements in aquafeed, as well as their potential for further use in aquaculture production. Fishmeal (FM) has been used as the primary protein source in aquaculture because of its beneficial necessary amino acids, high digestibility, and palatability. Between now and 2030, fishmeal costs are predicted to grow by 20% due to rising demand and greater output. This requires the search for better FM alternatives for long term aqua-feed production. Plant by-products appear to be the most viable protein source for replacing fish meal. Different types of plant-based ingredients have been assessed in a number of nutritional studies for aquaculture e.g. *Moringa oleifera* leaf meal, *Moringa oleifera* seed meal, Canola meal, Sunflower meal, and Cottonseed meal. Feed additives and supplements are one solution to reduce the negative effects of plant-based proteins. Many studies have been conducted to prove that the use of feed additives increases performance. In short, use of plant by-products may lead to a way for better coordination of fisheries with agriculture and can achieve a goal of better aquaculture production in an eco-friendly, cost effective and more sustainable way.

**KINETICS OF THE BIOSORPTION OF RH-B IN AQUEOUS MEDIUM**

**Assistant Professor Dr. Rozina Khattak**

*Department of Chemistry, Shaheed Benazir Bhutto Women University,  
Peshawar 25000, Pakistan*

**ABSTRACT**

Rhodamine-B is one of the synthetic organic dyes with a high stability and bright color that is widely used in the textile, paper, leather, stained glass, and many other industries. For this reason, it is crucial to either remove it or lower its concentration before releasing it into aquatic streams in order to lessen or limit the cause of numerous diseases. Diverse physical and chemical strategies have been explored to remove pollutants/dyes from wastewater; nevertheless, adsorption is one of the best ways currently in use because of its high efficiency and low cost. In this context, we have employed a plant based biosorbent to remove RhB from an aqueous solution, which under optimized conditions resulted in almost 86% dye adsorption. Kinetic studies show that adsorption happens via pseudo-second-order kinetics. Therefore, the chosen biosorbent can be applied in its practical applications.

**PERCEPTION OF SECONDARY EDUCATION TEACHERS ABOUT THE  
KNOWLEDGE AND USE OF ACTIVE METHODOLOGIES****Andrea María González López***University of Oviedo, Faculty of Teacher Training and Education, Department of Educational  
Sciences, Oviedo, Spain.**ORCID ID: <https://orcid.org/0000-0001-9088-8047>***María Ángeles Pascual Sevillano***University of Oviedo, Faculty of Teacher Training and Education, Department of Educational  
Sciences, Oviedo, Spain.**ORCID ID: <https://orcid.org/0000-0001-6942-6198>***ABSTRACT**

The teaching methods used in the classroom are undergoing profound changes, moving from more traditional models to more active ones, in which the student body becomes the protagonist of their teaching and learning process. They allow the development of skills and abilities that favor their academic, social and emotional involvement, achieving comprehensive development. In addition, they take into account the pace of learning, abilities and interests, favoring the inclusion of all students in the classroom. The main objective is to explore the conceptions of the teaching staff in relation to the knowledge and use of active methodologies and ICT tools used in the classroom, as well as to detect training needs in the teaching staff. The methodology of this research is the qualitative-quantitative analysis, where a descriptive study has been chosen through the application of a questionnaire. The sample is made up of 148 teachers from 6 centers in the Compulsory Secondary Education stage of the Principality of Asturias, Spain. The questionnaire collects information on active methodologies, addressing aspects related to assessment, digital resources, development of skills and training needs. It consists of 16 questions, which are multiple choice, open response, and have a five-level Likert-type scale. For the analysis, the atlas.ti software has been used for the open questions and the SPSS 27 statistical package were used to calculate the frequency, contingency and descriptive statistics tables. In addition, an analysis of variance has also been carried out to find out if there are statistically significant differences in terms of gender, teaching experience, subject and age, as well as a correlational analysis. The results point to favorable steps in the methodological transformation and pedagogical renewal that is being developed in the current educational system, where many teachers already include these aspects in their classroom programming. Specifically, it should be noted that teachers consider that active methodologies and the use of ICT improve the teaching and learning process, where they indicate that they have a good knowledge of the variety of methods, digital resources and evaluation tools that they can apply. In addition, they regularly use active methodologies and digital resources to develop skills in students and perceive the need to change the evaluation systems in accordance with the methodologies used. Lastly, teachers perceive that they need more training in active methodologies, ICT and alternative assessment systems.

**EFFECTS OF ALOE VERA SUPPLEMENTATION ON OVERALL PERFORMANCE OF CATLA CATLA FINGERLINGS FED CANOLA MEAL BASED DIETS****ZEESHAN YOUSAF**

*Government College University, Faculty of Life Sciences, Department of Zoology, Faisalabad, Pakistan.*

*ORCID ID: <https://orcid.org/0000-0002-2099-2612>*

**ABSTRACT**

The purpose of this particular study was to evaluate and determine the effect of *Aloe vera* supplementation on overall performance of *Catla catla* fingerlings fed with canola meal based diets. A total of 270 fingerlings ( $6.50 \pm 0.03$  g fish<sup>-1</sup>) were randomly divided into six dietary groups and tested in triplicates and fed on diets containing equal amount of canola meal and graded levels of *A. vera* supplementation viz., 0%, 1%, 2%, 3%, 4% and 5%. Feeding rates for fingerlings were 5% of their live wet weight. Analysis revealed that fish fed 3% of supplemented *A. vera* diet enhanced the weight gain (13.46g), weight gain % (206.14%) and feed conversion ratio (1.23) in a significant ( $p < 0.05$ ) manner. Highest apparent digestibility coefficient of nutrients in terms of gross energy (67.44%), crude protein (77.67%) and crude fat (82.20%) were also noted on 3% supplementation level. Carcass analysis showed that maximum crude protein (19.57%) and fat content (3.95%) were found at same level of *A. vera*. It was concluded that *A. vera*, especially at a level of 3% supplementation in the diet, significantly affects the growth, nutrient utilization, and carcass composition *C. catla* fingerlings.

**Keywords:** *Catla catla*, growth performance, carcass composition, nutrient digestibility

### **ÖZET**

Küresel ısınma, CO<sub>2</sub>, CH<sub>4</sub>, NO<sub>x</sub>, SO<sub>2</sub>, CFC'ler, SF<sub>6</sub>, HFC'ler ve PFC'ler gibi artan sera gazı emisyonları nedeniyle atmosferin, okyanusların ve toprağın ortalama sıcaklığındaki artıştır. Deniz çayırları, kıyı bölgelerinde atmosferden CO<sub>2</sub> gazını emme yeteneğine sahip ekosistemlerden biridir. Bu çalışmanın amacı, Kuzey Maluku ilindeki küçük adaların kıyı bölgelerinde deniz otu türleri *Enhalus acoroides*, *Thalassia hemprichii* ve *Cymodoceae rotundata*'nın biyokütle içeriği, karbon içeriği ve CO<sub>2</sub> absorpsiyon kapasitesini analiz etmektir. Örnekleme, sırasıyla 2 gözlem noktası ile Ternate ve Maitara Adası olmak üzere iki küçük adada gerçekleştirilmiştir. Sonuçlar, en yüksek deniz yosunu biyokütlesinin, karbon içeriğinin ve deniz yosununun CO<sub>2</sub>'ye absorpsiyon kapasitesinin deniz otu türü *Enhalus acoroides*'te bulunduğunu ve en düşük türün *Cymodoceae rotundata* olduğunu gösterdi. Deniz otunun en yüksek biyokütlesi, karbon içeriği ve emme kapasitesi sırasıyla 3943.52 g/m<sup>2</sup>, 1853.46 g/m<sup>2</sup>, 6802.13 g/m<sup>2</sup> değerleriyle Maitara Adası, Pasimayou Köyü'nde, en düşük ise Ternate Adası, Muhajirin Köyü'nde elde edilmiştir. , sırasıyla 1053,32 g/m<sup>2</sup>, 495,05 g/m<sup>2</sup>, 1816,88 g/m<sup>2</sup> değerleriyle. Ternate Adası'ndaki deniz otunun ortalama karbon içeriği, Maitara Adası'nda 789.875 gC/m<sup>2</sup> veya 7898.75 tonC/ha ve 1409.15 gC/m<sup>2</sup> veya 14091,5 tonC/ha idi. Regresyon analizinin sonuçları, deniz otu biyokütlesi, deniz otu yaprak uzunluğu ve deniz otu yaprak genişliğinin çalışma alanındaki deniz yosununun karbon içeriği üzerinde önemli bir etkiye sahip olduğunu göstermiştir.

**Anahtar Kelimeler:** mavi karbon, deniz otu, küçük adalar, Ternate ve Maitara, Kuzey Maluku.

**CARBON CONTENT IN SEVERAL SPECIES IN COASTAL WATERS OF SMALL ISLANDS IN INDONESIA****ABSTRACT**

Global warming is an increase in the average temperature of the atmosphere, oceans and land due to increased emissions of greenhouse gases such as CO<sub>2</sub>, CH<sub>4</sub>, NO<sub>x</sub>, SO<sub>2</sub>, CFCs, SF<sub>6</sub>, HFCs and PFCs. Seagrass meadows are one of the ecosystems in coastal areas that have the ability to absorb CO<sub>2</sub> gas from the atmosphere. The purpose of this study was to analyze the biomass content, carbon content, and CO<sub>2</sub> absorption capacity of seagrass species *Enhalus acoroides*, *Thalassia hemprichii*, and *Cymodoceae rotundata* in the coastal areas of small islands in North Maluku Province. Sampling was carried out on two small islands, namely Ternate and Maitara Island with 2 observation points respectively. The results showed that the highest seagrass biomass, carbon content, and absorption capacity of seagrass to CO<sub>2</sub> were found in the seagrass type *Enhalus acoroides* and the lowest type was *Cymodoceae rotundata*. The highest biomass, carbon content, and absorption capacity of seagrass were obtained on Maitara Island, Pasimayou Village with values of 3943.52 g/m<sup>2</sup>, 1853.46 g/m<sup>2</sup>, 6802.13 g/m<sup>2</sup>, respectively, and the lowest was on Ternate Island, Muhajirin Village, with values of 1053.32 g/m<sup>2</sup>, 495.05 g/m<sup>2</sup>, 1816.88 g/m<sup>2</sup> respectively. The average carbon content of seagrass on Ternate Island was 789,875 gC/m<sup>2</sup> or 7898.75 tonC/ha and 1409.15 gC/m<sup>2</sup> or 14091,5 tonC/ha on Maitara Island. The results of the regression analysis showed that seagrass biomass, seagrass leaf length, and seagrass leaf width had a significant effect on the carbon content of seagrass in the study site.

**Keywords:** blue carbon, seagrass, small islands, Ternate and Maitara, North Maluku.

**THERMAL PERFORMANCE ANALYSIS OF VACUUM INSULATION PANEL  
WITH AEROGEL COMPOSITE CORE****Ankang Kan***Merchant Marine College, Shanghai Maritime University, Shanghai 201306, P. R. China***Qiaoling Zhang***Merchant Marine College, Shanghai Maritime University, Shanghai 201306, P. R. China***Zhaofeng Chen***College of Material Science and Technology, Nanjing University of Aeronautics and Astronautics,  
211106, P. R. China***Jiaxiang Zhang***Merchant Marine College, Shanghai Maritime University, Shanghai 201306, P. R. China***Dan Cao***Merchant Marine College, Shanghai Maritime University, Shanghai 201306, P. R. China***ABSTRACT**

With excellent thermal insulation, vacuum insulation panel has already been extensively used for insulation purpose in many fields such as refrigerators, cold storages and buildings industry. Nanoporous aerogel has a very low thermal conductivity, which is regard as optimal materials for VIP core. Vacuum degree is a vital parameter affecting thermal conductivity. In this paper, a device was designed and verified to accurately collect the internal pressure of vacuum insulation panel. A theoretical model was developed and the accuracy of the model was verified through experiments to analyze the effective thermal conductivity of vacuum insulation panel. The density, temperature, and pressure effects on the thermal conductivity were investigated. It was found that density had a remarkable effect on effective thermal conductivity. A minimum density of  $120 \text{ kg/m}^3$  at a temperature 300K resulted in the lowest thermal conductivity. The increase in temperature caused an increase in the radiative thermal conductivity. At  $\rho_a=100 \text{ kg/m}^3$ , the gas conduction contribution became the predominant part influencing ETC when  $P>3 \text{ kPa}$ . And at  $\rho_a=200 \text{ kg/m}^3$ , gas conduction became the major part only when  $P>50 \text{ kPa}$ . As pure aerogels are fragile, the thermal conductivity of aerogel composite core with additive fibers was investigated in this paper. It was indicated that the optimal fiber content is about 5% when  $T < 550 \text{ K}$  and about 25% when  $T > 550 \text{ K}$ . At temperature  $T>400 \text{ K}$ , the total thermal conductivity increases significantly versus fiber diameter.

**THERMAL RADIATION AND VISCOUS DISSIPATION EFFECTS ON HYBRID  
NANOFLUID OVER STRETCHING SHEET****Misbah Fareed***<sup>1</sup>Department of Mathematics, Division of Science and Technology, University of Education, Lahore,  
54000, Pakistan***Abid Hussanan***<sup>1</sup>Department of Mathematics, Division of Science and Technology, University of Education, Lahore,  
54000, Pakistan***Amir Abbas***Department of Mathematics, Faculty of Science, University of Gujrat, Sub-Campus, Mandi Bahauddin  
50400, Pakistan***ABSTRACT**

Hybrid nanofluid has been commercialized as the advancement of traditional nanofluid. The present research work aims to investigate the significance of thermal radiation and viscous dissipation effects on hybrid nanofluid over stretching sheet. The mixture nanofluid involves copper (Cu) and iron oxide ( $\text{Fe}_3\text{O}_4$ ) nanoparticles which are diluted into  $\text{H}_2\text{O}$  to form  $\text{Cu-Fe}_3\text{O}_4/\text{H}_2\text{O}$  hybrid nanofluid. This mixture is irrotational, incompressible and electrically conducting. The appropriate similarity transformations are applied to reduce the partial differential equation into the system of nonlinear ordinary differential equation, which is solved numerically. The Runge-Kutta-Fehlberg method is used to obtain the numerical solutions for velocity and temperature field. The performance of well-known parameters against velocity and temperature field has been visualized graphically. The temperature distributions declared low performance for increasing value of Eckert number. Temperature field increases with increasing values of magnetic field and radiation parameters. The obtained results demonstrated the effective application of hybrid nanofluids.

**Keywords:** Hybrid nanofluid; thermal radiation; viscous dissipation; magnetic field.

**ABSTRACT**

The nontoxicity, worldwide availability and low production cost of cuttlefish bone products qualify them an excellent biocoagulant to treat food industry wastewater. In this study, cuttlefish bone liquid waste from the deproteinization step was used as a biocoagulant to treat food industry wastewater. This work concerns a waste that has never before been investigated. The objectives of this work were: the

recovery of waste resulting from cuttlefish bone deproteinization, the replacement of chemical coagulants with natural ones to preserve the environment, and the enhancement of the value of fishery byproducts. A quantitative characterization of the industrial effluents of a Moroccan food processing plant was performed. The physicochemical properties of the raw cuttlefish bone powder and the deproteinization liquid extract were determined using specific analysis techniques: SEM/EDX, FTIR, XRD and <sup>1</sup>H-NMR. The protein content of the deproteinization liquid was determined by OPA fluorescent assay. The zeta potential of the liquid extract was also determined. The obtained analytical results showed that the deproteinization liquid waste contained an adequate amount of soluble chitin fractions that could be used in food wastewater treatment. The effects of the coagulant dose and pH on the food industrial effluents were studied to confirm the effectiveness of the deproteinization liquid extract. Under optimal conditions, the coagulant showed satisfactory results. Process optimization was performed using the Box–Behnken design and response surface methodology. Thus, the optimal removal efficiencies predicted using this model for turbidity (99.68%), BOD<sub>5</sub> (97.76%), and COD (82.92%) were obtained at a dosage of 8 mL biocoagulant in 0.5 L of food processing wastewater at an alkaline pH of 11.

**Keywords:** cuttlefish bone; β-chitin; fish byproducts; industrial; biocoagulant; effluents; Box–Behnken experimental design.

**RURAL WOMEN INFORMATION SEEKING BEHAVIOUR ON HERBICIDE  
USAGE IN NSUKKA AGRICULTURAL ZONE, ENUGU STATE, NIGERIA**

**ABSTRACT**

This research assessed the information seeking behaviour of rural women farmers on herbicide usage in Nsukka agricultural zone of Enugu state, Nigeria. A structured interview schedule was to collect data from 80 respondents. Data collected were analyzed using frequency, mean, percentage and standard deviation. Result shows that the major crops grown by the respondents included cassava (76.3%), yam (55%) and cocoyam (55%). Paraforce ( =1.95) was the most frequently used herbicide among the respondents. For the herbicide practices, the results also indicates that the farmers: clean and rinse knapsack sprayer after use ( =2.95), use a separate utensil for mixing herbicide( =2.32), washed clothes used for spraying chemical separately ( =2.91), The major types of information sought by the respondents on herbicide use include: quantity of herbicide to be mixed in a sprayer (88.8%), entry period after herbicide application (81.3%), type of herbicide for land clearing (78.8%), type of post emergence herbicide for weed control (70.0%) among others. The result shows that farmers preferred information from herbicide dealers ( =2.90), previous experiences ( =1.79) and co-farmers ( =2.31). Financial constraints ( =2.15) and illiteracy ( =1.77) were the major challenges faced by the respondents on seeking information on herbicide use. The study recommends that rural women farmers in the study area should be sensitized and encouraged to source and seek agricultural information from institutional sources such as the extension agent. Herbicide dealers should be properly trained on the necessary information that farmers need to know about herbicide usage.

**PROVERBS 28:20, 22 AND NIGERIAN YOUTHS' DRIVE FOR RAPID MONEY****Favour C. Uroko***Department of Religion and Cultural Studies, Faculty of the Social Sciences  
University of Nigeria, Nsukka***ABSTRACT**

While in the last decade, the Nigerian youth quest for wealth has entered into the mainstream of Old Testament studies, Proverbs 28:20,22 have remained largely unexplored from this perspective. To address this omission, I intend to draw attention to the value of looking at the unbridled quest to get-rich-quick by Nigerian youth through the lens of the pericope. Many investors fall prey to ponzi schemes, which are a type of investment scam. They are duped into believing that their money would return 100% in a short amount of time. Many ambitious investors have lost their money as a result of such schemes, which are unlawful and offer unrealistic profits. Proverbs 28:20,22 exist in a cultural context and communicate common values and beliefs in a community such as Nigeria. The rhetor encourages his audience to be faithful so that in the short and long run they will enjoy the needed blessings. The rhetor encourages his audience to be faithful so that in the short and long run they will enjoy the needed blessings. This article explores the significance of using Proverbs 28:20,22 for interpreting youth participation in ponzi schemes. Furthermore, I demonstrated that greed and lack of patience are the remote causes of youth falling prey to ponzi schemes. The rhetoric analysis was used as the methodology due to the various rhetoric axioms that the rhetor employed in the pericope. It is believed that the pericope will speak anew to the youth quest for quick money.

**ABSTRACT**

About 5% of the population has diabetes mellitus, a metabolic condition. Potentially curing diabetes through transplanting isolated islets of Langerhans from the donor pancreas is complicated by a lack of suitable transplantation material and the need for lifelong immunosuppressive treatment. A sustainable cell supply, such as islet cells made from stem cells, could be the solution to these issues. One characteristic that sets stem cells apart from other cell types is their capacity to generate new cells and develop them into many specialized cell types. This means that differentiation can be used to cultivate these cells either in a living organism or in a laboratory setting. There is a wide variety of stem cells, from embryonic to germ to cancer to adult, in which pluripotent cell lines can be created in a lab setting. Methods of in vitro differentiation and selection have made it possible to steer embryonic stem cell differentiation toward desired endpoints and then genetically select for those lines. Cell transplants generated from embryonic stem cells that produce insulin have corrected blood sugar levels in diabetic mice. Recent research has suggested suggesting there is greater flexibility in adult stem cells than previously thought in terms of their ability to change their functions. Using embryonic stem cells for cell transplantation is morally problematic, but adult stem cells solve this problem. In light of the findings of these analyses, hope has grown that cell treatment may be a part of the diabetes solution.

**ABSTRACT**

There has been a lot of interest in stem cell therapy as a means of curing disease in recent years. Despite stem cell therapy's extensive usage in the treatment of a wide range of medical diseases, it has been hypothesised that these cells play a key part in the progression of cancer. Breast cancer is still the most frequent malignancy in women globally, but newer treatments, such as stem cell targeted therapy, are considered to be more effective in preventing recurrence, metastasis, and chemoresistance than older methods like chemotherapy and radiation. This comprehensive study explains all you need to know about stem cells, normal human breasts, and how to use stem cells to treat breast cancer.

**IMPROVED BIOAVAILABILITY OF LEVOSULPIRIDE USING SOLID LIPID NANOPARTICLES AS DRUG DELIVERY SYSTEM****Aleena Maryiam***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Fakhar ud Din***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Zakir Ali***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Uswa Shafique***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***ABSTRACT**

The aim of this study was to develop levosulpiride-loaded solid lipid nanoparticles (SLNs) with enhanced solubilization and bioavailability. The levosulpiride loaded-SLNs were composed of levosulpiride, stearic acid, and tween 80 in their respective weight ratios of (1, 5, 1.5 mg) dissolved in 1 ml distilled water. Physicochemical properties of the SLNs such as particle size, shape, crystallinity and chemical interaction were evaluated. Further, the *in-vitro* drug dissolution, pharmacokinetic and stability studies of the SLNs were performed. The SLNs were rounded shaped stable nanoparticles with average diameter of 200 nm. They demonstrate 1.5 and 3-fold better drug dissolution when compared with the commercial product and levosulpiride powder, respectively. The SLNs enhanced the bioavailability of levosulpiride 3~times and 7~times respectively, when compared with the commercial product and levosulpiride powder. It can be concluded that SLNs are capable to improve the dissolution and bioavailability of levosulpiride, even more than the commercial product.

**Keywords:** Solid lipid nanoparticles; Levosulpiride; Bioavailability; Levopraid

## A COSTRUCTIONIST ACCOUNT OF THE PERSIAN CONSTRUCTIONAL IDIOM [PA ('LEG') TO [N] [LV]]

**Ali Safari**

*Hazrat-e Masumeh University, Iran*

This paper aims to bring to light the [pa ('leg') to [N] [LV]] construction in Persian, as in *pā be toup šodan* (lit. leg to ball become, 'to start playing football') from a constructionist perspective.

(1) <i>Pā</i>	<i>be</i>	<i>tup</i>	<i>šodan-e-</i>	<i>Setāre-ye</i>	<i>sābeq-e</i>	<i>Perspolis</i>
foot	to	ball	become-EZ	star-EZ	former-EZ	Perspolis

'The starting to play football of the former Perspolis's star'

It is argued that the leg to constructional idiom has some phonological, syntactic, semantic, and discursive properties distinguishing it from a regular syntactic structure. Besides, innovative uses of this idiom suggest this construction is entrenched and, therefore, productive in Persian. The LV slot in the construction can be only filled with the verb *šodan* ('to become') and this, in turn, determines the type of the noun in N slot and also molds the polysemy links of the construction. A need for rethinking metaphorical extension links emerges as it is shown that metaphonymy, rather than mere metaphor, is of noticeable importance in the development of the constructional network of this idiom. In this paper, Using a variety of evidence from different levels of linguistic analysis, we try to show that *leg to* construction or the elicited response construction can not be regarded as a regular syntactic pattern. This and other characteristics such as having a pragmatically-constrained holistic meaning would provide safe justifications to categorize this construction as a constructional idiom. This construction also involves a schema that sanctions all its instances, including newly developed compounds of this type in modern Persian. These data- derived findings can be summarized in the following form:

[leg to [N] [LV *šodan*]] Semantics: 'to start playing with ball'

Pragmatics: the SEM is an elicited response to an urgent need in the context

Aided by palpable evidence, we argue that this schema involves one sub- schema. Without a doubt, to grasp the full understanding of such a network, one needs to synchronically and diachronically study the link of this construction to the possible upper nodes in the network. We will not consider this issue here since it goes well beyond the objectives and limits of the current paper. However, it seems plausible to hypothesize that such a construction has been diachronically generated from [[N] be ('to') [N] [V]], probably through noun incorporation, as a mechanism of compound verb development in Persian This syntactic construction permits different nouns, including body part nouns to fill its first N position. However, even a body part noun like *pa* ('leg'), when used in this construction, only allows a literal reading while it conveys a metonymic meaning in *the leg to* construction.

Thus said, we can provide a very partial network of this construction in figure (2).

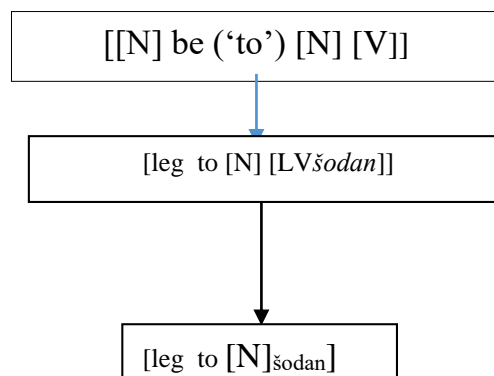

Figure (2). [leg to [N] [LVšodan]] partial construction network

The *leg to* construction is linked to the upper node through a metaphorical extension link. As an instance, *pa be toop šodan* (lit. leg to ball become, 'to start playing football') is a metaphorical extension of construction like *pa be dar šodan* (lit. leg to door hit, 'to kick the door'). As we saw earlier, in the latter construction, the metonymy part as whole goes hand in hand with metaphor to construct meaning, in contrast to the literal reading of the words in the former. The interaction of metaphor and metonymy in the network, thus, set the ground for us to tentatively propose the need for redefining the metaphorical extension links to include the cases of metaphonymy. Our analysis, somewhat, revealed that both the meanings of the components and the constructional meaning are significant in building the final meaning of the constructional idiom. This can be a provisional answer to the question as 'whether the meaning of the LVC is only dependent on the (probable figurative) meaning of its component, or whether the construction has a particular semantic as well'. In other words, the *leg to* constructional idiom, stands somewhere on the continuum of idiomaticity and compositionality. This complicated and dual nature has made complex predicates in Persian an interesting challenge for linguistics.

**Keywords:** constructional idiom; Persian language; the *leg to* construction; metaphorical extension; constructional meaning

**DETECTION TECHNIQUES FOR EXAMINEE CHEATING: A TEN-YEAR SURVEY (FEATURES AND SOLUTIONS)**

**ABSTRACT**

Exam cheating is among the most important productivity and efficiency problems that exist in all educational levels, from elementary to post-secondary. This survey will provide methods for spotting exam fraud or cheating in order to deter test-taking misconduct. In order to stop cheating, this research looks into methods for spotting unusual behavior or feelings in students throughout an exam. Systems for detecting abnormalities in videos react to cheating alarms before they become serious. Supervisors would profit from these techniques in this situation. Additionally, it provides proof of cheating and helps identify the peculiar examiner. Therefore, the goal of this essay is to identify various forms of cheating and to lessen cheating during tests.

**ABSTRACT**

The utilization of indigenous crops as a partial or total substitute for wheat is progressively expanding to solve issues including malnutrition, food allergies, and the increased price of food products. One such crop that is being investigated more and more is maize because it is widely grown in Nigeria. This study focuses on the effect of African yam bean and orange-fleshed sweet potato flour blend supplementation on the antioxidant properties and consumer acceptability of malted yellow maize flour-based cookies. The three flours were blended together using a D-optimal mixture design of response surface methodology (RSM). Sixteen (R1-R16) runs were generated and cookies were produced and evaluated for proximate analysis. Two cookie samples were selected based on higher protein and crude fibre content. The selected samples with control (100% whole wheat flour cookies) were evaluated for antioxidant properties and sensory characteristics. The incorporation of African yam bean and orange-fleshed sweet potato flours significantly ( $p < 0.05$ ) enhanced the crude protein, crude fibre, and energy value of all the formulated cookies ranging from 7.31-10.39%, 0.76-2.56%, and 486.09-508.38 kcal, respectively. Sample with orange-fleshed sweet potato show higher antioxidant properties. The fortified cookie samples were accepted by the panelists although control (100% wheat cookie) was more preferable.

**Keywords:** Supplementation, indigenous crops, antioxidant properties, acceptability, cookies

**OPTIMUM PARAMETERS FOR PHYTOPATHOGENIC FUNGUS DETECTION USING  
NANOSENSING TECHNIQUE**

**Vineet Kumar**

*Department of Biotechnology, School of Bioengineering and Biosciences, LFTS, Lovely Professional University, Phagwara, Punjab- 144111.*

**ABSTRACT**

Nanosensing techniques have been used for the detection of various analytes in different fields such as health care system, environmental pollutants as well as plant pathogenic fungi in agricultural sector. Nanosensor simply makes use of nanomaterial as integral part for its construction. Here in, we report the optimum parameters such as temperature, pH, and applied potential among others that used for the construction of the present nanosensor for detection of phytopathogen (*C.falcatum*) in sugarcane. The parameters that used for this sensing technique were investigated and optimized. Conclusively, it was also found that the optimized parameters can be used for a simple, cost effective, non-time consuming method for the detection of *C.falcatum* (fungus that causes sugarcane cancer) via sensing method.

**MACHINE LEARNING ARCHITECTURE FOR COVID-19 DETECTION USING SYMPTOMS AND LOCATION (MARCUS)****Rohith Gangaraju***B.tech Computer Science, VIT-AP University, Amaravathi- 522237***Amara Santosh Jayanth***B.tech Computer Science, VIT-AP University, Amaravathi- 522237***Dr. Karthika Natarajan***Assistant Professor, VIT-AP University, Amaravathi- 522237***ABSTRACT**

Covid-19 is a major crisis which is infecting exponentially across the human community in various blocks called waves. Advancement in Machine Learning algorithms made tremendous changes in detection of recently emerged Coronavirus. It helps to detect faster and very efficiently. Due to speed processing of data, recovery of the patient will be faster compared to traditional methods used by hospitals. The data used for processing contains the symptoms of the patients who suffered with Coronavirus. The symptoms clearly state the health status of a person. The dataset has seven major features which clearly impact their coronavirus positivity. It also contains 5 major symptoms specified by the WHO i.e.,(Fever, Tiredness, Difficulty in breathing, Dry cough, and sore throat). The proposed model MARCUS (Machine Learning Architecture for Covid-19 detection Using Symptoms and Location) helps us to fastly identify covid-19 verdict based on the symptoms mentioned above. Usage of different weights to each and every symptom gives more accurate results than existing models. This efficient algorithm is very helpful in any future crisis as this model can add up different possibilities of symptoms for a person in the upcoming waves. Our proposed model can predict coronavirus by considering many other factors like recent location of the patient, which can give more accurate spread detection on location wise too compared to existing algorithms. Using this algorithm and model, we can make people get aware earlier than they usually get to know about the severity of their suffering from coronavirus.

**Keywords:** Machine Learning Algorithms, Data processing, Detection, Covid-19

**THE EFFECT OF DUST PARTICLES ON THE EVOLUTION OF WEAK DISCONTINUITY  
IN TWO-DIMENSIONAL SUPERSONIC FLOW OF VAN DER WAALS GAS**

**Pradeep**

**L. P. Singh**

*Indian Institute of Technology (B.H.U), Prof., Department of Mathematical Sciences,  
Varanasi - 221005, India.*

**ABSTRACT**

The motive of this study is to investigate the impact of the dust particles on the shock formation in two-dimensional steady supersonic flow of the composition of van der Waals gas and small solid dust particles for the planar, cylindrically symmetric and spherically symmetric cases. It is shown that the governing equations describing the van der Waals gas with dust particles is hyperbolic in nature. Further, by employing the method of wavefront analysis, we derived the transport equations for shock wave which lead to the derivation of shock formation distance and also, provide the relations of shock formation. Also, it is determined as how to the shock formation distance is affected by the presence of dust particles, parameter of van der Waals gas and upstream flow Mach number ( $M_0 > 1$ ) by using MATHEMATICA 11 software.

**Keywords:** Quasilinear PDEs · Shock wave · Van der Waals gas · Dusty gas

## **SOLVING A COUNTERINTUITIVE PROBABILITY PROBLEM**

**Carla Santos**

*Polytechnic Institute of Beja, Portugal*

**Cristina Dias**

*Polytechnic Institute of Portalegre, Portugal*

### **ABSTRACT**

The traditional study of probabilities mainly focuses on the application of algorithms (Batanero, Green & Serrano, 1998), however, it is widely documented that, this approach does not prepare students to solve non-routine problems, nor to develop probabilistic reasoning that allows them to face situations that conflict with their intuition. Since the wrong intuitions associated with probabilistic interpretation do not disappear with spontaneous cognitive development, it is essential that students are confronted with counterintuitive situations, otherwise the errors will remain unchanged (Leviatán, 2002). In the teaching of probability, the use of counter-intuitive problems is a constructivist pedagogical strategy that allows approaching situations with a high incidence of errors in a challenging and motivating way (Contreras, Batanero, Arteaga & Cañadas, 2011). To encourage students to reflect on their thinking processes, promoting the development of mathematical abstraction skills, the resolution of these counterintuitive tasks must be complemented with discussion and in-depth analysis of the reasoning necessary for successful resolution, but also of the reasons for the mistakes made, to make students aware of the counterintuitive nature of certain probability problems and of correct strategies. The “Bertrand Box” problem is one of the most famous probability problems where our intuition leads us to ignore or misinterpret additional information we have. The use of this problem as a probabilistic intuition strengthening task is interesting due to its simplicity and challenging nature. Also, other more complex variants of the problem, such as the “Monty Hall” Problem, can be used to teach students how to make decisions in the face of uncertainty.

This work addresses the advantages of “Bertrand Box” and “Monty Hall” problems as didactic tools.

**WORK LIFE BALANCE AMONG LEBANESE WORKING MOTHERS**

**Rasheed Abou Hamdan**  
*AUCE University, Lebanon*

**ABSTRACT**

Work Life Balance means the state of equilibrium attained in an individual's personal life and professional accomplishments. Commitment is the psychological connection that binds an employee to an organization. It is a set of values, principles or beliefs towards the organization; constituting a determining factor of an organizational success. The importance of balancing work and life is becoming a key issue in the modern society, specifically with the increase of female participation in work force. This study will shed a light on the degree of work to life conflict among Lebanese working mothers. The question rose "How does Work Life Balance affect organizational commitment?" The results of this study would be helping the mothers to achieve a satisfactory Work Life Balance, which would directly influence their work performance. Internet search has been used to obtain secondary data and information. The primary data was collected through a questionnaire method survey among the Lebanese working mothers. The results have revealed no significant relationship between the Work Life Balance and Organizational commitment. The outcome shows that the Lebanese working mothers have an average WLB but clearly have a high work commitment. In light of this result, we recommend for future investigation about the reasons behind such findings and identifying other factors affecting work commitment among Lebanese working mothers. Work Life Balance, organizational commitment, Lebanese working mothers, and challenges.

**A NOTE ON GENERALIZED  $(m, n)$ -JORDAN  $*$ -DERIVATIONS IN PRIME RINGS****RAOF AHMAD BHAT***Department of Mathematics Aligarh Muslim University Aligarh, India***ABBAS HUSSAIN SHIKEH***Department of Mathematics Aligarh Muslim University Aligarh, India***ABSTRACT**

Let  $A$  be a prime ring equipped with an involution  $*$  of order 2 and let  $m = n$  be some fixed positive integers such that  $A$  is  $2mn(m+n)|m-n|$ -torsion free. Let  $Q_{ms}(A)$  be the maximal symmetric ring of quotients of  $A$  and consider the mappings  $F$  and  $G : A \rightarrow Q_{ms}(A)$  satisfying the relations  $(m+n)F(a^2) = 2mF(a)a^* + 2naF(a)$  and  $(m+n)G(a^2) = 2mG(a)a^* + 2naG(a)$  for all  $a \in A$ . Using the theory of functional identities and the structure of involutions on matrix algebras, we prove that if  $F$  and  $G$  are additive, then  $G = 0$ . We also show, in case  $*$  is any non identity anti-automorphism, that the same conclusion holds if either  $*$  is not identity on  $Z(A)$  or  $A$  is a PI-ring.

**EFFECTS OF APPLIED MAGNETIC FIELD AND PRESSURE ON THE  
DIAMAGNETIC SUSCEPTIBILITY AND BINDING ENERGY OF DONOR  
IMPURITY IN A CIRCULAR QUANTUM DISK MADE OUT OF GAAS****Ibrahim Maouhoubi***LPS, Department of physics, Sidi Mohamed Ben Abdellah University, BP 1796 Fez, Morocco***Izeddine Zorkani***LPS, Department of physics, Sidi Mohamed Ben Abdellah University, BP 1796 Fez, Morocco***ABSTRACT**

In this article, we investigate the influence of the hydrostatic pressure, magnetic field, and conduction band non-parabolicity on both the diamagnetic susceptibility and the binding energy of shallow donor impurity in a quantum disk made out of GaAs. The Hamiltonian of the investigated problem has been solved within the framework of the effective-mass approximation. The energy minimization has been performed using variational approach. Our results reveal that both the diamagnetic susceptibility and binding energy have been reduced with increasing the disk size. Moreover, the diamagnetic susceptibility increases as the impurity moves from the extremity to the center of the disk. However, both the diamagnetic susceptibility and binding energy have been improved under applied magnetic field, hydrostatic pressure, and by considering the conduction band non-parabolicity model as well. We hope that the reported results will be a modest contribution to further theoretical research in the field of nanostructures.

**Keywords:** Quantum disk; Hydrostatic pressure; Magnetic field; Non-parabolicity; Diamagnetic susceptibility; Binding energy.

**ON THE CHARACTERIZATION OF CERTAIN MAPS IN PRIME  
 $\mathbb{Z}$ -RINGS****ABBAS HUSSAIN SHIKEH***Department of Mathematics Aligarh Muslim University Aligarh, India***RAOF AHMAD BHAT***Department of Mathematics Aligarh Muslim University Aligarh, India***ABSTRACT**

Let  $S$  be a noncommutative prime ring with maximal symmetric ring of quotients  $Q_{ms}(S)$ . Consider the additive maps  $F$  and  $H : S \rightarrow Q_{ms}(S)$ . Using the theory of functional identities and the structure of involutions on matrix rings over fields, we prove that if  $F$  and  $H$  are additive such that  $2F(a^2) = F(a)a^* + aF(a)$  and  $2H(a^2) = H(a)a^* + aH(a)$  hold for all  $a \in S$ , then  $F = H = 0$  unless  $\dim_C AC = 4$ ,  $\text{char}(A) = 2$  and  $*$  is of the first kind. We also provide an example to show that  $H$  may be nonzero if  $\dim_C AC = 4$ ,  $\text{char}(A) = 2$  and  $*$  is of the first kind

**USEFULNESS OF AGRICULTURAL INFORMATION SHARED AMONGST  
ACTORS IN THE POULTRY VALUE CHAIN OF THE COMMERCIAL  
AGRICULTURAL DEVELOPMENT PROJECT IN ENUGU STATE, NIGERIA**

**Udoye, C. E.**

*Department of Agricultural Extension, University of Nigeria, Nsukka*  
*Corresponding author: Udoye C. E.,*

**ABSTRACT**

The study assessed usefulness of agricultural information shared among actors in the poultry value chain of the Commercial Agricultural Development Project (CADP) in Enugu State. Seventy-one core actors (service providers, producers, processors and marketers) in the poultry value chain were randomly selected for the study. Data was collected using structured interview schedule. Data was analysed using percentage, mean score and standard deviation. Results show that all (100%) the service providers (input dealers) of CADP were female. The service providers trust the information communicated with fellow service providers (M=3.50) and banks (M=3.00) while marketers trust information communicated with service providers (M=3.50) and fellow marketers (M=3.00) with the exception of consumers (M= 1.67). Service providers' useful sources of information communication include: fellow input dealers (M=4.00) and bank (M=3.00) while the producers' useful sources of information include: extension (M=3.45) and service providers (M=3.35). Actors trust the information sourced from actors of the same link as well as information sought from actors directly upstream or downstream of the poultry value chain. Also, the actors perceived the information sought from actors of the same or different link to be useful. Government and non-governmental organizations should embrace the value chain approach as a means for sustainable agricultural production.

**ABSTRACT**

Leishmaniasis is a disease caused by a number of species of protozoan parasites belonging to the genus *Leishmania*, is recognized as an important public health problem throughout the world. In a search of newer and potent antileishmanial drug, a series of 30 pyrimidine derivatives analogs were subjected to a quantitative structure activity relationship (QSAR) analysis, for studying, interpreting, and predicting

activities and designing new compounds by using several statistical tools, such as principal components analysis (PCA), multiple linear regression (MLR) and non-linear regression (RNLM). The statistical results of the MLR and MNLR indicate that the determination coefficients  $R^2$  were 0.824 and 0.870, respectively. Internal and external validations were used to determine the statistical quality and predictive power of QSAR of the two MLR and MNLR models. The applicability domains of MLR and MNLR models were investigated using William's plot to detect outliers and outside compounds. Also the most active compounds were docked into the active site of the protein (PDB entry code: 2JK6) to confirm those obtained results from QSAR models and identify the binding interactions responsible for antileishmanial activity of those analogs.

**Keyword:** Leishmaniasis, Pyrimidine derivatives, QSAR model, MLR, MNLR, Molecular modeling

**ADSORPTION OF AN ANIONIC DYE WITH RAW CLAY MATERIAL FROM THE

Maroc.***ABSTRACT**

It is well-recognized that the exponential growth of the world's population, along with industrial activities, has a significant impact on the natural interface of water and soil. Synthetic dyes are important water pollutants, Congo red (CR), an anionic dye causes serious eye, skin, and respiratory irritation and is a carcinogen and mutagenic. This research had as its objective the removal of this dye from an aqueous solution on Raw Moroccan Clay by adsorption. The structure and the morphology of the natural clay were characterized by X-ray diffraction (XRD), Fourier Transform Infra-Red (FT-IR) spectroscopy, Scanning Electron Microscopy (SEM), Energy Dispersive Analysis of X-rays (EDAX), thermogravimetric analysis (TGA) and differential thermal analysis (DTA), fluorescence X-rays absorption spectroscopy (FXAS). The influence of several factors such as the pH, adsorbent dosage, contact time, initial dye concentration, and the temperature was investigated. The optimal adsorption conditions were a pH of 2 and a contact time of 10 min, an initial concentration of adsorbate of 420 mg.l<sup>-1</sup>, and an adsorbent dose of 0.4 g.l<sup>-1</sup>. The adsorption capacity for the RC was found to be 518 mg/g at 45 °C. The Langmuir isotherm and pseudo-second-order kinetic model best explained the Red Congo dye adsorption process onto this natural clay. From the adsorption temperature effect study, the thermodynamic parameters, such as  $\Delta G$ ,  $\Delta H$ , and  $\Delta S$  were assessed, and their values revealed that the adsorption reaction was spontaneous, endothermic and resulted in an increase of the RC adsorbed molecules randomness on the adsorbent surface.

**ABSTRACT**

Vietnam and Cambodia are two countries with long-standing diplomatic relations. Vietnam and Cambodia are closely linked through many historical periods, especially during the first and second Indochina wars. After the end of the war in 1975, Cambodia fell into the Polpot genocidal regime, Vietnam actively helped in political and military matters, abolished this genocidal regime and supported the construction of a new Cambodian state. develop. By 2020, Vietnam and Cambodia will increasingly develop diplomatic relations between the two countries, and Vietnam will support Cambodia in economic, political, social and educational development. Cambodia regularly supports Vietnam at international and ASEAN forums. It can be said that the relationship with Cambodia is one of the pillars of Vietnam's foreign policy. However, in that diplomatic relationship, there are still some issues between Vietnam and Cambodia that need to be resolved in order to promote the two countries' diplomatic relations more and more friendly, making useful contributions to the common development of the two countries. This article aims to study the diplomatic relations between Vietnam and Cambodia with the approach to international relations and the system of diplomatic documents of the two countries, thereby clarifying this diplomatic relationship.

## CONSTRUCTION OF A NOVEL SAMPLER FOR THE SIMPLE COLLECTION OF SLUDGE AND SEDIMENT IN WASTEWATER TREATMENT PLANT PONDS

**Kimya Parnoon**

*Research Center for Environmental Determinants of Health (RCEDH), Health Institute, Kermanshah University of Medical Sciences, Kermanshah, Iran*

*Research Center for Environmental Determinants of Health (RCEDH), Health Institute, Kermanshah University of Medical Sciences, Kermanshah, Iran*

**Fig 1.** Sampler scheme and components. right: when the sampler is open, left: when the sampler is closed

### ABSTRACT

Challenges such as the inability to take wastewater samples at a certain depth without mixing the sample with the upper wastewater components, as well as the loss of the sludge sample under the influence of the sample container lid, which is not closed when taking it out of the sewage basin, insufficient safety for the sampling operator, The absence of a tool to detect the depth of sampling, the health risk for the sampling worker and other obvious issues led to the design and patenting of an innovative sampler to collect sludge and sediment from the bottom of the wastewater treatment plant ponds (Fig 1). The invention consists in two concentric cylinders (parts 1 and 2), the metal handle angle (Part 11) can be modified using the axial arm (Part 7). The inner cylinder is the transportation chamber for sludges and sediments. The opening of the outer cylinder has a blade-shaped outer edge (Part 4), which causes the sludge to penetrate into the inner cylinder after the contact of the sampler with the sludge in the depths of the pond. The inner cylinder is movable and the outer cylinder is fixed. The inner cylinder is movably connected to the lever (part 13) installed in the sampler steering wheel (part 12) by means of a wire (part 10). When the operator has not applied pressure to the lever connected to the handle, the wire is not pulled, and the opening of the inner cylinder (part 3) is not parallel to the opening of the outer cylinder, in this case, the entrance of the sludge to the inner cylinder is completely closed. When the sampler is

placed in the depth of the tube in the sewage basin, at this time the operator puts pressure on the lever of the wire, the movable inner cylinder rotates counterclockwise due to its connection with the wire, in this case the opening of the inner cylinder and the outer cylinders are exactly aligned. An indicator (part 15) is also installed on the sampler container with the help of a clip (part 8), through which the depth of the sampler cylinder is controlled in the sewage. This tool can be widely used to sample sludge and sediment at the desired depth in wastewater treatment facilities. The availability of raw materials and high efficiency are prominent features of the sampler and it can be used for sludge sampling. This tool is highly necessary in the science of sewage treatment.

**BONE MINERAL DENSITY, ACTIVE SMOKING AND ENVIRONMENTAL  
TOBACCO SMOKE AMONG YOUNG WOMEN: CROSS- SECTIONAL  
OBSERVATIONAL STUDY****Anna Kopiczko**

*Józef Pilsudski University of Physical Education in Warsaw, Faculty of Physical Education,  
Department of Human Biology, Warsaw, Poland

**ABSTRACT**

The aim of the study was to evaluate the relationships of active smoking (AS), and environmental tobacco smoke exposure (ETS) with frequency of low forearm bone mineral density (BMD) in young women Caucasians of European origin. The study involved 657 women aged 26.0±4.9 years. The densitometry (DXA) method was used in the forearm bone. The Global Adult Tobacco Survey questionnaire was used in interviews. Smoking women had significantly lower bone parameters in two parts of the forearm (large effect:  $d > 0.8$ ) compared to non-smoking women. The predictor of interactions of three variables: physical activity (MET), BMI (positive direction), and years of ETS exposure (negative direction) were significant for BMD dis and BMC dis. The predictor of interactions of physical activity (MET), BMI (positive direction), and active smoking in numbers of cigarettes per day and years of ETS exposure (negative direction) was significant for BMD prox. The predictor of interactions of MET, BMI (additive direction), age of starting smoking, and years of ETS exposure (negative direction) was significant for BMC prox. Physical activity in MET (positive direction), years of active smoking, and ETS exposure (negative direction) were significant predictors for T-score dis. The predictor of interactions of five variables: physical activity (MET), BMI, age of starting smoking (positive direction), active smoking in numbers of cigarettes per day, and years of ETS exposure (negative direction) was significant for T-score prox. Cigarette smoking and ETS are modifiable determinants of low BMD in young Caucasian women of European origin. The results expand the knowledge of the multifactorial determinants of forearm bone mineral density.

**Keywords:** bone mineralization, bone mineral content, active smoking, environmental tobacco smoke, metabolic equivalent of task, body mass index

**THE TREATMENT OF ENVIRONMENTAL POLLUTION CAUSED BY MERCURY IONS BY ADSORPTION METHOD USING AGRICULTURAL RESIDUES OF VIGNA PEEL**

**ABSTRACT**

Vigna peel (VP) was employed in this study as a novel technique to remove Hg(II) from its aqueous solutions. For this study, vigna peel (VP) was changed chemically with 25% by volume H<sub>2</sub>SO<sub>4</sub> and ultrasonication at a frequency of 20 kHz to make a high-efficiency adsorbent. The material found was used to remove Hg(II) from the sample. The SEM and BET methods were used to figure out what the VP material was like. There were different amounts of Hg(II) (10–50 mg/L), pH (1–10), time (5–60 min), and VP dosages (50–1000 mg/50 ml). Maximum Hg(II) removal was found to be 98.6% at pH 5 with 50 mg/L of Cd(II) and 250 mg/50 ml of VP for 15 minutes. Pseudo-first-order, pseudo-second-order, and intraparticle diffusion kinetic models provided the best explanations for the equilibrium data.

**Keyword:** Environmental Pollution, Vigna Peel, Mercury Ion, Adsorption, Kinetic, Equilibrium.

**ORAL ADMINISTRATION OF COPPER OXIDE NANOPARTICLES (CUO NPS) TO  
MATURE FEMALE ALBINO RATS LEADS KIDNEY DAMAGE**

*Department of Zoology, Chaudhary Charan Singh University, Meerut, Uttar Pradesh (250004)*

**D.K Chauhan**

*Department of Zoology, Chaudhary Charan Singh University, Meerut, Uttar Pradesh (250004)*

**ABSTRACT**

CuO NPs had previously been found to be hazardous to a variety of cell cultures. Metal catalysts, semiconductors, heat transfer fluids in machinery, and even antibacterial drugs all make extensive use of copper nanoparticles. Here, we look at the molecular processes that influence the toxicity of copper in its nanoparticle size. We demonstrate that the production of ROS (Reactive Oxygen Species) is essential. In the current study, 20 adult, healthy Albino rats were divided into two groups at random (n = 10 rats/group). Group I (G1) was preserved as the control group, while Group 2 received oral injections of CuO NPs for nine days at doses of 10 mg /kg body weight. Rats were slaughtered, and the organs' livers and kidneys were removed, examined histopathologically, and immunohistochemically. Additionally, our kidney-level examination revealed significant renal corpuscle and tubule degenerations, as well as glomerulus edoema and congestion, as well as mild vacuolations in the renal tubule lining epithelium. The liver of treated group revealed severe hepatocyte necrosis with completely disorganised hepatic rays, loss of hepatic architectures, severe steatosis, severe hemosiderosis, sinusoidal dilatations with congestions, as well as severe fibrous tissue proliferation with anti-inflammatory cell infiltrations specifically around portal triad with hyperplasia of bile duct. According to the results of the current work, CuO NPs may have toxicological effects on the liver and kidney tissues that could affect how well they operate.

**Keywords:** CuO NPs, nanoparticles, renal toxicity, hepatotoxicity, steatosis, and necrosis

**DEVELOPMENT OF CARBAMAZEPINE LOADED NANOSTRUCTURED LIPID CARRIERS FOR BRAIN DELIVERY TO ENHANCE IN-VIVO ANTICONVULSANT & ANXIOLYTIC ACTIVITY****Asma Tahir. Fakhar ud Din***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Kanwal Shabbir***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Mohsin Fawad***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***Faisal Ghani***Nanomedicine Research Group, Department of Pharmacy, Faculty of Biological Sciences, Quaid-i-Azam University, Islamabad, Pakistan***ABSTRACT**

The limited brain delivery of carbamazepine (CBZ) presents a major hurdle in the successful epilepsy treatment. The potential of carbamazepine-loaded nanostructured lipid carriers (CBZ-NLCs) for improved brain delivery is investigated in the current study. CBZ-NLCs were prepared by using binary mixture of trilaurin and oleic acid as a lipid core stabilized with Poloxamer 188, Tween 80 and Span 80. CBZ-NLCs were evaluated for physicochemical properties, in vitro release, in vivo brain kinetics, anticonvulsant and anxiolytic activities. The optimized CBZ-NLCs demonstrated nanometric particle size (97.7 nm), surface charge of  $-22$  mV and high drug incorporation (85%). CBZ-NLCs displayed biphasic release pattern with initial fast followed by sustained drug release. CBZ-NLCs significantly enhanced the AUC of CBZ ( $520.4 \mu\text{g}\cdot\text{h}/\text{mL}$ ) in brain compared with CBZ dispersion ( $244.9 \mu\text{g}\cdot\text{h}/\text{mL}$ ). In vivo anticonvulsant activity of CBZ-NLCs in PTZ-induced seizure model showed a significant increase in the onset time (143.0 sec) and reduction in duration (17.2 sec) of tonic-clonic seizures compared with CBZ dispersion (75.4 and 37.2 sec). The anxiolytic activity in light-dark box and elevated-plus maze models also demonstrated superiority of CBZ-NLCs to CBZ dispersion. From the results, CBZ-NLCs present a promising strategy to improve brain delivery and therapeutic outcomes of CBZ in epilepsy.

**Keywords:** Carbamazepine; Nanostructured lipid carriers; Brain delivery; Anticonvulsant activity; Anxiolytic activity

## **FUNCTIONAL PROPERTIES OF PLATELETS IN VEGETABLE CALVES**

**Svetlana Yurievna Zavalishina**

*Faculty of Medicine, Russian State Social University, 129226, Moscow, Russia*  
*Vologda State Dairy Farming Academy named after N.V. Vereshchagin, Vologda, Russia*

### **Introduction**

The final stage of the early ontogenesis of the calf is the phase of plant nutrition, during which the final maturation of all its organs and systems occurs. At the same time, platelet activity remains insufficiently studied in calves at this age. **The purpose of the study:** to establish the functional characteristics of platelets in healthy calves during the phase of plant nutrition. **Methodology and organization of the study.** Under supervision were calves of vegetable nutrition with a total number of 17, the condition of which was taken into account on the 91st day and at 6 months, 9 months. and 12 months. life. In all animals, the biochemical properties of platelets and their hemostatic activity were evaluated, followed by statistical processing of the results. **Research results.** All calves that made up the study group were under dynamic control of their condition. At each blood sampling for a planned study, the main physiological parameters were evaluated in animals and general and biochemical blood tests were performed, which gave normal values of the parameters taken into account. The content of acyl hydroperoxides in platelets of calves decreased with increasing age, as a result of increased antioxidant defense enzymes in them, primarily catalase and superoxide dismutase. Their functions increased and reached a maximum by the end of the observation. During the observation period, the content of ATP and ADP in the platelets of healthy calves gradually increased with an increase in their secretion from the composition of platelet granules. The amount of actin and myosin in intact and stimulated platelets in healthy calves gradually increased during the observation, reaching a maximum by the age of one. In the observed calves aged between 91 days and a year, a gradual reduction in the time of development of platelet aggregation with various inducers and their combinations was noted. This was accompanied by an increase in platelet activity in vivo. This was manifested in the blood of calves during the observation period by a decrease in discoid platelets and an increase in their activated varieties. In addition, during the phase of plant nutrition in the blood of calves, the number of freely moving small and large platelet aggregates gradually increased with an increase in the level of involvement in platelet aggregates, which reached the highest level by the end of the considered phase. **Conclusions.** In calves, during the plant nutrition phase of early ontogenesis, the ability of platelets to aggregate gradually increases in vitro and in vivo, which is a consequence of the interaction of environmental influences on the body with its adaptive mechanisms.

**Key words:** calves, plant nutrition phase, platelets, aggregation, secretion.

**SIGNIFICANCE OF CATTANEO-CHRISTOV HEAT FLUX ON CHEMICALLY  
REACTING NANOFUIDS FLOW PAST A STRETCHING SHEET WITH JOULE

**ABSTRACT**

This paper examined the significance of Cattaneo-Christov theories on the flow of chemically reacting fluid past a stretching surface with thermophysical parameters. The mathematical modeling of the physical problem was represented by partial differential equations. The set of partial differential equations was simplified by employing a suitable similarity variables to obtain system of coupled nonlinear ordinary differential equations. The transformed equations was later solved using the spectral relaxation method. The spectral relaxation method employs the basic concept of the Gauss-Seidel relaxation techniques. The outcome from this method was presented in graphs and tables. The thermal radiation parameter was found to enhance the velocity and temperature distributions. Also, the effect of magnetic field parameter was found to decline the velocity profile. It was found that the Brownian motion parameter greatly influences the velocity as well as temperature profiles.

**Keywords:** MHD; Thermal radiation; Cattaneo-Christov heat model; skin friction.

**ABSTRACT**

India has the highest rate of diabetes problems globally, but China has an even higher rate, according to the International Diabetes Foundation. According to recent data, diabetes negatively impacts the health of more than 50 million Indians. 7.1% of adults in India's population, or 1 million people, die each year. Diabetes is a chronic disease that develops when the body cannot create enough insulin or use it efficiently. Plants are also thought to be a source of novel chemical compounds that could be exploited to create brand-new medications. Zinc is an essential trace element for all living things, including humans, animals, plants, and microorganisms. In recent years, substantial research has been done to understand how zinc functions physiologically and biochemically. For the present study, hyperglycemia was induced in albino rats with a high sugar diet. Leaves of the *Abroma augusta* plant were collected for the preparation of ZnO nanoparticles. Blood glucose levels were measured after the treatment of nanoparticles. Several changes were observed in the liver of albino rats. Histopathological changes were observed. There was a significant difference in the blood glucose level, SGPT, SGOT of the female rats. Pyknosis, karyorrhexis, minor haemorrhage, destruction in lymphocytes was observed in the liver of albino rats.

**Keywords:** Hyperglycemia, Haemorrhage, Histopathological changes, chronic, pyknosis.

**ABSTRACT**

The world is in a special situation, war, migrations, a global pandemic... We are all obliged to collaborate in resolving these conflicts. More research is needed to open avenues for such international collaboration. Thus, from the University of Oviedo (Spain), we launch a project to show our educational system to foreign students, and to any other person interested in learning about Spanish primary schools. This is the free platform <https://www.orgtransparente.uniovi.es/en> or [www.orgtransparente.org/en](https://www.orgtransparente.org/en). The platform helps people and students who come from outside of Spain, and who are unaware of our educational system. It is an open window, a transparent organization. There we show the case of an elementary school through forty short videos. This project has been one of the 2 best educational innovation proposals of the University of Oviedo in the 2021 edition. This website is freely accessible and has no commercial or economic interests. There, in each interaction, users can analyze the differences between the information in the videos and what is happening in their previous experience. That is, they comment on the similarities between their educational life in their country and the Spanish educational system. We want to contribute to social and educational progress through trust in institutions. Our strategy shows the operation of schools using visual communication techniques. We have followed the Web Content Accessibility Guidelines (WCAG) to make this platform as accessible as possible for people with disabilities. For example, the platform is accessible to people with hearing disabilities, since the contents are mainly visual. It is also accessible for blind people since the full written transcript availability of videos, and all graphics contents have their corresponding alternative textual descriptions. Although these guidelines cover a wide range of issues, they cannot address the needs of people with all types, degrees, and combinations of disabilities.

**Keywords:** primary school, spanish education, educational website.

**ABSTRACT**

This paper presents the exergy analysis of dairy plant for the production of milk and its derivatives, located in the region of Beni Mellal / Kenifra, specifically in the province Fqih Ben saleh, the system consists of three processes, the first for the production of pasteurized milk, the second for the production of sterilized milk and the third for the production of yagurt, all these processes are fed with steam and ice water by a boiler and refrigeration system. Exergy destruction rate and exergetic efficiency are calculated for each component of each process. The results obtained show that the boiler is the first element that has a high exergetic destruction rate with a value of 6402.40 kW, followed by the sterilization line, the element that has a high exergetic destruction rate is the multi-section sterilizer of the sterilization room, then the refrigeration system, the yagurt line and finally the pasteurization line with percentages of 87.6%, 6.12%, 2.9%, 1.76%, 1.61% respectively.

**Keywords:** Energy efficiency, Exergy analysis, Exergy destruction, dairy process, process

**CONFLICT AND SOLIDARITY IN REFUGEE CAMPS: MHPSS THEORY AND PRACTICE**

**Beatriz de Barros Souza**

**ABSTRACT**

Currently, there are over 25 million people who are recognized as refugees by some country, usually underdeveloped or developing. Some 40% live in precarious camps or arrangements, where the “humanitarian aid” actions predominate. In recent years, special attention has been paid to “mental health and psychosocial support” (MHPSS) within the scope of this aid. This article derives from a thesis regarding different MHPSS actions or programs and its reflexes upon the interpersonal relations of refugees within camps and/or in similar arrangements. In addition to a literature review on the subject, ten episodic interviews were carried out with practitioners over their published field reports. The interviews were later translated by the authors for a theoretical discussion in the light of Hinde's contributions for the interpersonal relations studies in Psychology, as well as of Honneth's Hegelian theory of recognition. All interviews were exempted from analysis by an Ethics Committee, as long as respecting every participant's anonymity and privacy, in the light of the current Brazilian norm on the issue (Res. CNS 510/2016). It is hoped herein to provide analytical tools of how humanitarian aid is provided, along with its main challenges, mostly in regard to the refugees' interpersonal relationships of either conflict and/or solidarity in these camps.

**Keywords:** Interpersonal relationships, Mental health and psychosocial support, Recognition, Refugees

**ABSTRACT**

Petroleum products storage tanks, which are widely used in the urban economy and industry, are ecologically dangerous sources of technogenic influence on the environment, acting as objects of uncontrolled emissions of vapor-air or vapor-gas-air mixtures and spills of petroleum products with subsequent fires and explosions. Properly designed oil storage facilities could prevent leakage and potential contamination of soil, surface or groundwater.

The destruction of reservoirs is possible as a result of the sudden action of seismic loads of various strengths. The liquid stored in the tanks begins to sense intense sloshing. The phenomenon of sloshing in partially filled tanks could lead to high pressure on the tank walls, collapse of its structure or loss of stability and could cause leakage of hazardous liquid [1-4].

The tank model has been built in the research as a rigid cylindrical shell of radius  $R$  with an elastic bottom on the elastic Winkler base. It has been considered that the tank is partially filled with the ideal incompressible liquid to a height of  $H$ , Fig. 1. It has been denoted  $S_0$  as the free surface of the liquid,  $S_1$  as the rigid cylindrical surface, and  $S_{bot}$  as the elastic surface of the bottom.

Figure 1. Cylindrical tank with the elastic bottom on the Winkler elastic base.

The Table 1 shows the lowest frequencies of axially symmetric oscillations of the elastic shell ( $n = 0$ ) on the elastic Winkler base.

Table 1. Frequencies of axially symmetrical oscillations of the elastic shell on the elastic Winkler base [5-8]

$J$	Empty shell, Hz				Shell with liquid, Hz			
	$h, m$							
	0.01	0.005	0.003	0.0015	0.01	0.005	0.003	0.0015
6	25.336	13.254	12.692	18.353	6.381	3.330	3.305	4.634
7	42.132	21.793	15.852	15.558	15.974	8.0714	5.8718	5.7621
8	92.081	47.429	29.406	23.073	43.769	22.589	14.003	10.984

From the results presented in Table 1, it has been concluded that taking into account the Winkler elastic base, there is the increase in the lowest frequencies of elastic walls, and there is no dangerous convergence of the oscillations frequencies of elastic walls and liquid sloshing. Therefore, in the vibrations studying of thin shells partially filled with liquid, it is advisable to use methods that allow taking into account the soil influence.

**Keywords:** technogenic influence, hazardous liquid, seismic loads, storage tanks, petroleum products, sloshing.

### ABSTRACT

A greenhouse is a simple shelter or enclosure designed for the cultivation and protection of plants by providing the immediate environment of the plant to improve its productivity and quality throughout the year. Among these conditions are the influence of the external environment, carbon dioxide levels, incident light, humidity and air temperature. In addition, the climatic conditions inside a greenhouse are highly dependent on heating systems and air circulation. For these considerations, several numerical and experimental works have been performed to study the greenhouse-heating problem.

The heating of agricultural greenhouses in winter climatic conditions is essential to control the temperature inside the greenhouses. In this sense, this study consists in analyzing the thermal exchanges and the distribution of the temperature inside the agricultural greenhouses heated by heating blocks at constant temperature. Two types of greenhouses are studied, single-hood and multi-hood greenhouses with two roof shapes, triangular and spherical (Figure 1). Simulations are performed by solving the governing differential equations using the finite volume method. The algebraic systems are solved using a change-of-variable method to account for the variable shape of the greenhouse roof. The results are presented in terms of isotherms, flow lines, and local and average Nusselt number for Rayleigh number ranging from  $10^3$  to  $10^5$ . The results showed that the dominant heat transfer regime for Rayleigh numbers less than  $10^4$  is pseudo-conduction, and natural convection is for Rayleigh numbers greater than  $10^4$  and for both cases treated. Also, we found that the total Nusselt number increases with the increase of Rayleigh number, this increase has a very small effect for a mono-chapel greenhouse with triangular roof, so that the difference between the two greenhouses does not exceed a percentage of 1%.

### **ABSTRACT**

Today the WEB is growing and expanding with the unexpected high speed and recently it gained extensive attention. The world is focusing and working on the web so that it could make more ease in our life. The web start from static pages and goes towards the smart industries and factories. All the industrial machines are augmented and directly connected to the web which leads to connect with different systems. This type of systems visualizes the whole production process and these systems are autonomous to take decisions on its own. Blockchain is a new technology, based on hashing, which is at the foundation of the platforms for trading cryptocurrencies and executing smart contracts. Forth industrial revolution is the second name of industry 4.0 which includes the Internet of Things (IoT), Cognitive Computing (CC), Big Data, AI and it is fostering Industrial Internet of Things (IIoT). Advanced web is covering the maximum aspects to encourage the businessman community to make trading using technology. The blockchain version 4.0 is helping the industry to ensure the transparency of supply, immutability of records and it ensures the trust of end-to-end trading organizations. Supply chain is now using the blockchain technology. Furthermore, Blockchain has the characteristics of decentralization, stability, security, and non-modifiability. It has the potential to change the network architecture. The consensus algorithm plays a crucial role in maintaining the safety and efficiency of blockchain. Using a right algorithm may bring a significant increase to the performance of blockchain application. In this work, we reviewed the basic principles and characteristics of the consensus algorithms and analyzed the performance and application scenarios of different consensus mechanisms. We also gave a technical guidance of selecting a suitable consensus algorithm and summarized the limitations and future development of blockchain technology.

**Keywords:** Blockchain, algorithms, smart contracts

### **ABSTRACT**

Bioactive glasses were developed for use in surgery because of their ability to form a layer of hydroxycarbonate apatite (HCA) on their surface that facilitates bonding with natural bone. However, the enormous energy cost associated with the manufacture of bioglass by the melting process in which the raw materials are melted and then tempered to obtain the final glass. In order to reduce this huge energy cost is to change the glass manufacturing process. The sol-gel process is an alternative to the conventional melting method, with the advantage of obtaining glass at lower temperatures. But this method requires very expensive raw materials. This is why the sol-gel process is only used for very specific materials such as bioactive glasses used in the medical field. Sol-gel processing offers a number of advantages, including low temperature processing and precise microstructural and chemical control. Sol-gel bioactive glass not only offers a good degree of biocompatibility, but also a high specific surface area which may be a key factor in the bioactivity of the glass. The objective of our work is to synthesize a SiO<sub>2</sub>-based bioactive glass with a controlled Na<sub>2</sub>O content using the sol-gel route.

**Keywords:** Bioactive glass, hydroxycarbonate apatite Sol–gel processing, Melting

**LIFE OF A DAILY WAGE CONSTRUCTION WORKER IN CHENNAI: A SOCIO-ECONOMIC PERSPECTIVE****Bhakkeyalakshme D***VIT University, Business school, Chennai, India***Dr. L.R.K Krishnan***Professor ( OB/HR, ER&LL)**VIT University, Business school, Chennai, India***ABSTRACT**

Workers in the construction industry have physical labour every day, in places where safety is not ensured. Their income level is very low and they struggle to make ends meet, even to take care of the basic necessities of themselves and their dependents. The dependents of these workers, especially their children are greatly affected and their future is at stake. There is no job security and these people are the most affected during uncertainties like the pandemic of Covid-19. There are no proper working conditions, sanitation in particular. These workers stay at the construction site along with their dependents. The quality of life of construction workers is no close to the high growth and revenue in the construction industry. The aim of this study is to understand the issues faced by these construction workers and to come up with ways to create an improvement in their lives. This study measured the quality of life and issues faced by 1000 construction workers in Chennai, one of the metropolitan cities in India. This study also collaborates with other scholarly conversations on the subject.

**ABSTRACT**

Retail industry is one of the highest growing industries in India. Apparel is the second largest segment of the Indian retail industry. With growing competition and changing customer requirements, survival in this industry has become highly challenging. This study aims at analyzing the effect of such people practices in driving the customer preferences with special reference to Reliance Trends. One of the most effective ways to drive customers towards a retail outlet is through efficient customer service. This is possible through impressive people practices such as inclusiveness, equity, improved engagement, diversified workforce, collaborative work culture etc. The ways in which employee practices can have an impact on customer preferences on clothing and accessories were studied across various Trends outlets based out of Chennai , India. This study also suggests few people practices that can be followed in the Trends outlet that can help enhance customers footfall. Employee satisfaction and customer satisfaction are positively correlated and hence it is concluded that effective people practices has a direct impact on driving better sales especially at a retail outlet selling readymade garments. This study collaborates with other scholarly conversations.

**Keywords:** Work culture, Customer loyalty, Customer service, Customer Value proposition, Customer engagement.

**ANALYSIS OF RELATIONSHIP BETWEEN EMPLOYEE SATISFACTION  
AND CUSTOMER OUTCOMES IN THE IT INDUSTRY****Padmapriya S***VIT University, Business school, Chennai, India***Dr. L.R.K Krishnan***Professor (OB/HR, ER&LL)**VIT University, Business school, Chennai, India***ABSTRACT**

To have sustainable business in the competitive world, positive outcomes of customers is necessary. When the organization values the customers outcomes, it aims on how to improve the customer satisfaction. In order to attain it, organization must improve the employee satisfaction. Once the satisfaction of employees increased, they assist customers by improving customer service that ultimately increases retention of customers and customer loyalty. And satisfied employees stay in the organization as they are highly motivated and appreciated for their contribution in improving the customer satisfaction. Employee satisfaction improvement can be attained by providing efficient performance evaluation, offering learning culture and growth opportunities, Employee Value proposition, open communication, transparency, rewards and treating employee as partners than subordinates. To find out what makes the employee satisfied, organization must receive continuous feedback to make sure reward and recognition system align with employee needs. The purpose of study is to relate the employee satisfaction and customer outcomes in the IT Industry. This study also collaborates with other scholarly conversations on the subject.

**EFFECT OF THERMAL RADIATION AND CHEMICAL REACTION ON  
MAGNETO HYDRODYNAMICS FLOW OF BLOOD IN STRETCHING  
PERMEABLE VESSEL****Dr. Binyam Zigta**

*Wachemo University, College of Natural and Computational Science,  
Department of Mathematics  
P.O.Box 138, ETHIOPIA*

**ABSTRACT**

In this paper theoretical analysis of blood flow in the presence of thermal radiation and chemical reaction under the influence of time dependent magnetic field intensity has been studied. The unsteady non linear partial differential equations of blood flow considers time dependent stretching velocity, the energy equation also accounts time dependent temperature of vessel wall and concentration equation includes time dependent blood concentration. The governing non linear partial differential equations of motion, energy and concentration are converted into ordinary differential equations using similarity transformations solved numerically by applying ode45. MATLAB code is used to analyze theoretical facts. The effect of physical parameters viz., permeability parameter, unsteadiness parameter, Prandtl number, Hartmann number, thermal radiation parameter, chemical reaction parameter and Schmidt number on flow variables viz., velocity of blood flow in vessel, temperature and concentration of blood has been analyzed and discussed graphically. From the simulation study the following important results are obtained: velocity of blood flow increases with both increment of permeability and unsteadiness parameter. Temperature of the blood increases in vessel wall as Prandtl number and Hartmann number increases. Concentration of the blood decreases as time dependent chemical reaction parameter and Schmidt number increases.

**Keywords:** Stretching velocity, similarity transformations, time dependent magnetic field intensity, thermal radiation, chemical reaction.

## **CHALLENGES IN QUALITY OF EDUCATION IN HIGHER EDUCATION INSTITUTIONS (HEIS) OF PAKISTAN**

**Zohaib Hassan Sain**

*Faculty of Business & Management Sciences, Superior University, Pakistan*

### **ABSTRACT**

The purpose of this study is based on exploratory research to identify “Challenges in Quality of Education in HEIs of Pakistan”. The exploratory research approach is used to achieve the objectives of the study in less time and with inexpensive means. In the last few years, Pakistan is facing a lot of challenges in the education sector such as curriculum, less training institutions, corruption in education, teachers’ behavior, and less research work. Emerging issues in the education sector are fewer training institutions and the trend towards research work which is essential to follow for the growth and strength of any economy. The purpose of this research is to identify the major challenges in the educational sector in Pakistan which the educational sector is suffering for the last few years. The researcher used triangulation in order to carry out the reliability and validity of the data for results. So, to conduct this triangulation the researcher used a polling survey for the students, a questionnaire for the teachers, and interviews with the management. . In this regard primary data was collected from the focused group of students and teachers using a sample of 100 questionnaires for each university were filled by the students of the selected five universities. This attempt of conducting the research will play an important role in the development of Pakistan. The findings highlight the positive relationship of quality education with curriculum, few training institutions, corruption in education, teachers’ behavior, and less research work. These challenges caused restrictions in accomplishing competent teaching and learning with respect to quality education. According to the current situation in Pakistan, the same challenges are being faced.

**ABSTRACT**

A hybrid strategy called polyglot persistence enables the use of various databases in a single software or application. Polyglot-persistent software is defined as software that can use multiple types of data storage. The growth of the NoSQL movement has sparked the creation of non-relational data models with a variety of Big Data management strategies. Since each strategy has benefits and drawbacks, it is necessary to incorporate some relational data model elements. Monolithic systems based on a single data model started to evolve into the first multi-model systems as a result of the mixing of relational and non-relational data models. The majority of database management systems in use today can be thought of as multi-model systems (e.g. Oracle, MySQL, Microsoft SQL Server, etc.). In this proposal, we introduce a Smart Format Adapter for NoSQL Polyglot Persistence where adaptive format of NoSql is followed for each compatible storage during raw data process for various reasons, hence we can reduce data persistence fast and efficient which will same data processing and

**SILICON-MEDIATED GROWTH, PHYSIOLOGICAL, BIOCHEMICAL AND ROOT ALTERATIONS TO CONFER DROUGHT AND NICKEL STRESS TOLERANCE IN MAIZE (*ZEA MAYS L.*)****Ejaz Ahmad Waraich***Department of Agronomy, University of Agriculture, Faisalabad, 38040, Pakistan***Humaira Ishaq***Department of Agronomy, University of Agriculture, Faisalabad, 38040, Pakistan***Nasir Mahmood***Department of Fibre and textile technology, University of Agriculture, Faisalabad, 38040, Pakistan.***ABSTRACT**

Abiotic stresses are the leading environmental factors which adversely affect plant growth and development particularly drought and nickel stress. Maize is susceptible to drought and nickel stress from germination to final kernel development stage. The present study was conducted to evaluate the role of silicon to improve drought and nickel stress tolerance in maize variety **FH-1036**. Treatments of the study were, Stress, i) drought (60% field capacity at BBSC scale code 14), ii) nickel (100 mg/kg at BBSC scale code 14); and drought and nickel stress at BBSC scale code 14 and silicon applications, i) control and ii) 50mg kg<sup>-1</sup>). CRD factorial and three replications. The experiment was lay out in a completely randomized design and each treatment was replicated thrice. The result showed that silicon had significant effects on plant growth attributes, including plant height, leaf area and leaf dry weight, stem fresh weight and stem dry weight. Plant height reduced up to 24% under drought stress, and 13% under nickel stress. While, silicon mitigated these stresses and increased up to 35% shoot length in maize. Water relation parameters also had significant effects of silicon. Leaf water potential decreased under drought 25%, nickel 11% and combined stress showed 53% reduction as compared with control. Furthermore, silicon applications increased up to 12%. Gas exchange parameters photosynthetic rate, stomatal conductance, Transpiration rate and Respiration rate were significantly affected by silicon application. photosynthetic rate showed more reduction in combined stress as compared with control-no stress. At 50 mg/L silicon application protein, chlorophyll a and b (mg/g) maximum values were found in non- water stress. Because stresses showed more reduction in chlorophyll contents and soil applications of silicon increased the contents of chlorophyll a and b up to 21% and 32% in maize as compared with control. H<sub>2</sub>O<sub>2</sub> values increased under the drought and nickel stress conditions and decreased in control-no stress. Water deficit increased the catalase (CAT), peroxide dismutase (POD) and superoxide dismutase (SOD) levels in leaves of maize which aimed at counteracting the spread of H<sub>2</sub>O<sub>2</sub>. Water deficit and heavy metal stress increased the levels of (SOD), (POD) and (CAT) in maize and increased levels of these enzymes stimulate tolerance against drought stress and nickel stress are vital to reduce its adverse effects. Soil application of silicon 50mg<sup>-kg</sup> improved the values of SOD, POD and CAT. In crux, the present investigation suggested that silicon application mitigated the harmful effects of drought and nickel alone and in combination by improving antioxidant defense in maize

**Key words:** Gas exchange; water relations; antioxidants; root attributes; silicon; drought and nickel stress

**HELICOPTER PARENTING AND IT'S PSYCHOLOGICAL EFFECTS ON  
CHILDREN AND ADOLESCENTS.**

**ABSTRACT**

Gaining independence from various restriction and boundaries set by parents is overjoying for adolescent. However, things do not always go as planned. Helicopter parenting is the extreme involvement of parents such as hovering over their children to save them from danger and prevent them from failing. The goal of this study is to look at the impact of helicopter parenting on adolescent's mental health and coping skills, self-efficacy for learning. The age group of this research is 10 to 20. Using a quantitative research design with survey as method, the researcher collected the data from adolescents from school and college. As the sample of this study is 200 youth of school and college were selected. Data was collected from Lahore and Islamabad city. The sample is selected through a convenient sampling technique according to the criteria of research for data collection. A self-structured questionnaire was developed. The whole questionnaire comprised 23 items. The data was entered into SPSS. The questionnaire was designed by the researcher to consist of 23 items which are based on the effect of helicopter parenting on adolescents. Helicopter parenting had a detrimental impact on adolescent's mental health and related to low self-efficacy for learning. As a result, this study found that adolescents had their own distinct characteristics and that overprotecting them without allowing them to experience the world autonomously will impair their development, resulting in behavioral and psychological maladjustment.

## **HERITAGE, HERITAGIZATION AND HERITAGE INDUSTRY: A STUDY ON CLOTHING HERITAGE OF KERALA**

**Haritha N S**

*Research scholar, School of Cultural Heritage Studies  
Thunchath Ezhuthachan Malayalam University  
Malappuram, Kerala, India.*

### **ABSTRACT**

'Heritage' is a cultural process or performance that is concerned with the production and negotiation of cultural identity, individual and collective memory, social and cultural values. 'Heritage' is a property, something that is inherited, passed down from previous generations. In the case of "cultural heritage," the heritage doesn't consist of money or property, but of culture, values and traditions. Cultural heritage implies a shared bond, our belonging to a community. It represents our history and our identity; our bond to the past, to our present, and the future. And it is not just a set of cultural objects or traditions from the past. It is also the result of a selection process: a process of memory and oblivion that characterizes every human society constantly engaged in choosing-for both cultural and political reasons. The term "cultural heritage" typically conjures up the idea of a single society and the communication between its members. In shorts heritage is a cultural and ideological construct of the society according to the needs of the age. Clothes are one of the most creative ways of expressing individuality and lifestyle. Every community, region and culture has its own distinct way of dressing and clothing. India has a rich heritage of art and crafts which is reflected in its textiles and fabrics. Kerala is a state on the Malabar coast of the India having a common linguistic heritage manifested with textual version. And in the matter of clothing, Kerala presents through the ages a picture of astonishing variety. The clothing which has been interpreted as cultural heritage by our society. In this study tries to explore the role of 'Kerala brand' in the discourse of fashion in textile market. And demonstrate that the heritagization (heritage interpretation) process of costume is based on the memory/ nostalgia of being a Malayalee or Keralite, which is sanitized under the glorious craftsmanship of Kerala weavers. It also attempts to explain the social dynamic of costume heritage of Kerala.

**Keywords:** Heritage, Heritagization, Heritage Industry, Culture, Textile, Clothing, Memory, Sanitization, cultural Construction, Communication, Kerala, Malayalee, Nostalgia.

**THE KNOWLEDGE AND PRACTICE OF PERSONAL HYGIENE AMONG  
PRIMARY SCHOOL PUPILS IN PAKI COMMUNITY IKARA LOCAL  
GOVERNMENT AREA OF KADUNA STATES**

**Ibrahim Zailani**

*ORCID IDENTIFER (0000-0001-8670-7354)*

**Dr ABDULLAHI DAHIRU**

**ABSTRACT**

**Background:** For a healthy life personal hygiene must be maintain especially the personal hygiene of children, it is important to know for us to have a healthy adult we must first have a healthy child, and that will help to have a development of positive values about health and the use of health services. The increased spread of communicable diseases among schools children is due to poor personal hygiene practice and lack of sanitary conditions which remain concerns on the public health agenda in developing countries. Therefore school pupils need to be taught regarding importance of personal hygiene practice. The present research study was designed to assess the knowledge and practice of personal hygiene among primary school pupils in Paki community, Ikara local government area of Kaduna state. **Methods:** simple random sampling technique study was conducted with a sample size of 300 primary school pupils from four (4) selected primary schools in paki community, age group 7 to 14 years. Closed ended questionnaire was used. **Results:** The result shows knowledge of personal hygiene in Paki community is not significant at 0.57 significant value. **Conclusion:** Timely screening of health problems along with health education shall be given to the pupils in the primary school to improve their personal hygiene knowledge and thereby leading to a healthy life.

**Keywords:** Knowledge, Practices, Personal hygiene, Primary school pupils

**PROXIMATE AND MINERAL ANALYSIS OF WATERMELON SOLD AT NORTH BANK MARKET, MAKURDI, NIGERIA****Gav, Benedict. L***Department of Chemistry, Federal University of Agriculture, Makurdi, Nigeria***Anyanwu, Solomon Nonso***Department of Chemistry, Federal University of Agriculture, Makurdi, Nigeria***Oloruntoba, S. O***Department of Chemistry, Federal University of Agriculture, Makurdi, Nigeria***Tor. P***Department of Chemistry, Federal University of Agriculture, Makurdi, Nigeria***ABSTRACT**

The study was carried out on proximate and mineral analysis of watermelon sold at North bank market Makurdi. Water melon samples were purchased at North bank in January, 2018. The samples were sliced using a knife to separate the seeds, pulp and rind. These samples were dried and milled into powder and were analyzed for proximate and mineral content using standard methods and atomic absorption spectrophotometer (AAS). The results for the proximate analysis revealed the presence of moisture content ranging from 3.50 % to 10.90 %, ash content (2.80 % to 6.50 %), fibre content (5.80% to 15.30%), crude fat (0.40 % to 13.10 %), crude protein (3.20 % to 19.20 %), and carbohydrate (46.10 % to 75.50 %). The result obtained from the mineral analysis revealed the presence of selected element, with Calcium having the highest mean value (25.69 mg/100g), followed by Magnesium (3.60 mg/100g), Iron (0.22 mg/100g) and Chromium (0.11 mg/100g), there were no traces of Lead and Cadmium. The data (result) of the study showed that the proximate and mineral parameter with the exception Pb and Cd were present in the bark, pulp and seeds although their concentration in the rind, seed and pulp vary significantly and also fall below the WHO recommended standard for minerals element.

**ABSTRACT**

The excellent biological activity makes *Origanum compactum* essential oil a promising candidate for the food industry. Nevertheless, the encapsulation process is needed to enhance its physicochemical and/or preserve biological properties. In this context, a Clevenger apparatus was performed in the hydrodistillation process for the extraction of *O. compactum* essential oil. The major components thymol, carvacrol,  $\gamma$ -terpinene and p-cymene were identified and quantified using GC/MS and GC/FID analysis. The construction of metal organic frameworks (K- $\beta$ CD-MOFs) was based on potassium ions ( $K^+$ ) and  $\beta$ -cyclodextrin ( $\beta$ CD) according to the vapor diffusion method. The encapsulation procedure of the essential oil through  $\beta$ CD and K- $\beta$ CD-MOFs changed the particle shape, molecular structure and enhanced the thermal stability, according to the results of SEM, FTIR and TGA. In addition, the OCEO/K- $\beta$ CD-MOFs (w/w) and water/ethanol ratios (v/v) were investigated to improve the encapsulation efficiency (EE) by employing a response surface design, and the highest EE ( $35.34 \pm 1.23\%$ ) was achieved at 1/12 and 4/5, respectively. 1,1-diphenyl-2-picrylhydrazyl was performed to assess the antioxidant activity of the essential oil before and after the encapsulation process. As a result, *O. compactum* essential oil encapsulated by K- $\beta$ CD-MOFs sequentially exhibited higher antioxidant activity.

**Keywords** *Origanum compactum*; Essential oil; Metal organic frameworks; Beta-cyclodextrin; Response surface design; Antioxidant activity.

**CHALLENGES FACED TO ONLINE EDUCATION & LEARNING IN PAKISTAN  
DURING COVID-19 PANDEMIC****Zohaib Hassan Sain***Superior University, Faculty of Business & Management Sciences, Lahore, Pakistan.**ORCID ID: <https://orcid.org/0000-0001-6567-5963>***ABSTRACT**

This study was required to analyze the challenges/issues teachers and students encountered in the online education & learning process as it was being carried out in Pakistan during the Covid-19 pandemic. The social, economic, and political systems around the world have all experienced COVID-19 as a nightmarish. In Pakistan, one of the most damaged sectors is thought to be education. The developed nations have already switched from traditional classroom settings to online learning environments, while Third World nations like Pakistan were most negatively impacted because they lacked the necessary technology for online learning at any point during the COVID-19 pandemic. There have been several difficulties in getting teachers and students to adopt new technology. In this study, closed-ended questionnaires were used in a mixed-method research design. To improve data collection and analysis, the researcher issued questionnaires to students, teachers, and the management in addition to conducting management interviews. This study offers advice to online teachers in Pakistan on how to overcome their difficulties. The results show a negative attitude toward faculty members using online learning environments for teaching and learning. The difficulties faced by faculty members prevented them from providing effective teaching and learning. Faculty members also needed extensive expertise in teaching online and were not provided the right training to deal with the technical difficulties. This study will assist educators in improving the quality of online teaching in Pakistan by identifying suitable solutions and suggestions by exploring the experiences and difficulties faculty members have with online education and learning.

**Keywords:** Online Education & Learning, Pakistan, Covid-19 Pandemic, Online Teaching & Learning Challenges.

**ANALYSIS OF MICROBIAL GROWTH MODELS FOR MICROORGANISMS IN CHICKEN MANURE DIGESTER**

**Abdulhalim Musa Abubakar**

*Modibbo Adama University, Nigeria*

**ABSTRACT**

Several microorganisms are there in chicken manure (CM) but *Salmonella*, *Cryptosporidium* and *Escheridia coli* are the most identified. Objective of this research includes, carrying out microbial count in the CM substrate for 40 days retention time in a digester, deriving kinetic equation satisfying the process and fitting results obtained with existing microbial growth kinetic models. Results shows that microbes inside the chicken manure slurry, survived for a full period of 37 days divided into 7 days of acclimatization, 23 days of growth and another 7 days of equal rate of death and multiplication. Findings shows that the maximum specific growth rate,  $\mu_{max}$ ,

estimated from the basic Monod equation, of the organisms is  $0.0076\text{hr}^{-1}$  and the half-saturation constant,  $K_S$ , is  $3.838 \times 10^8$  mg/l which indicates how sufficient the substrate concentration is for the bacteria to feed on. Not all 26 growth kinetic models found in the literature fit the measured experimental data. However, Monod with decay rate, Wayman and Tseng, Han and Levenspiel, Luong and Moser models fit the Monod values after regressing with POLYMATH 6.10 Educational Release.

**ELECTROCHEMICAL SYNTHESIS AND CHARACTERIZATION OF  
POLY(RHODAMINE B) COATING ON FTO****Khadija Bahend****Mina El fazdoune****Sana Ben jadi****Mohammed Bazzaoui****ABSTRACT**

The electrochemical modification of electrodes is a powerful technique to enhance and improve the surface qualities of electrode material. It might provide the foundation for new future electrochemistry applications and new devices. In this work we describe the conditions of electrochemical synthesis of a homogeneous and highly adherent pink film of poly(Rhodamine B) (PRhB). The originality of our study consists in the depositing of this polymer on a conducting glass substrate, which facilitates and enables its optical characterization, together with overcoming anti-fouling problems of glassy carbon electrode. The electrosynthesis was performed by cyclic voltammetry, galvanostatic and potentiostatic techniques in 0.1 M KCl as supporting electrolytes and 1 mM Rhodamine B (RhB) as monomer on fluorine doped tin oxide (FTO) samples. The anodic peak associated with the RhB oxidation appears at 0.977 V during the first scan and shifts to 1.059 V in the following cycles, indicating the increase in the electrical resistance of the polymer coating until it reaches the overpotential to overcome the resistance. Chronopotentiometry and chronoamperometry show that the PRhB is obtained at applied current densities and potentials higher than  $10\mu\text{A cm}^{-2}$  and 0.8V, respectively and the polymer coating become thicker and darken with increasing the applied current and potential. Electrochemical methods show that the polymer growth is controlled by the maximum oxidation potential applied. The physico-chemical properties of generated PRhB film has been characterized by different microscopic and spectroscopic techniques such as scanning electron microscopy (SEM), X-ray photoelectron spectroscopy (XPS) and UV-visible spectrophotometry (UV-vis). The produced modified electrode would offer a promising candidate for future applications such as sensors and dye synthesized solar cell.

**Keywords:** Poly(Rhodamine B); electrochemical polymerization; Conductive polymers; modified electrode; Fluorine-doped tin oxide (FTO), Chronopotentiometry, chronoamperometry, cyclic voltammetry, XPS, UV-visible.

**ABSTRACT**

This study was carried out to evaluate the efficiency of metals (Pb and Co) removal from solution using *detarium microcarpum* seeds as adsorbent. The effect of initial concentration and adsorbent dosage on the adsorption process of these metals were studied, the percentage removal of these metals increased with increased in weight (0.5 -2.5g) in 50ml of the solution and the adsorption efficiency increased with increasing initial metal ion concentration (0.01-0.05 moldm<sup>-3</sup>). The percentage removal obtained for Lead and Cobalt were compared. The result of adsorption were fitted to the Langmuir models and coefficients indicated favourable adsorption of Pb<sup>2+</sup> and Co<sup>2+</sup> ions on the adsorbents. The adsorption of Pb<sup>2+</sup> and Co<sup>2+</sup> in aqueous solution was in the following order (1400µm>420µm>150µm). more than 55.4% of studied Lead cations were removed by 1400µm, 47.2% by 420µm and 29.8% by 150µm. while for Cobalt cations only 53.2% by 1400µm, 38.6% by 420µm and 24% by 150µm respectively, from aqueous solution it was concluded that, Lead with highest percentage removal can be adsorbed better than Cobalt using activated Carbon derived from *detarium microcarpum* seed..

## **ANALYSIS OF EDUCATIONAL PATTERNS IN SUBURBAN SCHOOLS**

**Bernadetha Nadeak**

*Magister of Education Administration, Postgraduate Program, Universitas Kristen Indonesia,*

### **ABSTRACT**

Human understanding of the environment has led his life in a condition called "unsustainable for development". A situation where human life is unbalanced due to human activities that tend more to exploit the environment than preserve the natural resources that exist. In other words, human beings tend to be more use and forget to keep the environment itself, so that it causes environmental crisis. The perspective errors can reduce the human ecological values, which in fact they have a relationship of space and time with nature, therefore humans play a role as subjects in life that have the will to interact with nature. They can use nature according to their will, or they will manage nature according to their conscience for the sake of sustainability, harmony, harmony of life. This research aims to find facts about the pattern of ecopedagogic education in the suburban School. This research uses a qualitative approach with a case study method. Data collection techniques in the form of interviews and observations, secondary data includes data collection techniques in the form of literature studies and documentation studies. Based on the results of research, education pattern that is applied in the suburban School, humanist pattern, a pattern of religious and democratic pattern. The education pattern oriented to the development potential of learners through the integration of subjects and learning support activities.

**A NUMERICAL COMPUTATION ON BOUNDARY LAYER ANALYSIS OF  
PERSISTENT MOVING HORIZONTAL NEEDLE IN MHD FERROFLUID****G.P. Ashwinkumar***Department of Mathematics, Vijayanagara Sri Krishnadevaraya University, Bellary-583105 India.***C. Sulochana***Department of Mathematics, Gulbarga University, Kalaburagi-585106, India.***N.Sandeep<sup>3</sup>***Department of Mathematics, Central University of Karnataka, Kalaburagi, India.***ABSTRACT**

The boundary layer analysis of a 2D forced convection flow along a persistent moving horizontal needle in electrically conducting magnetohydrodynamic dissipative ferrofluid is investigated. The energy equation is constructed with the joule heating, variable heat source/sink and dissipation effects. To check the variation in the boundary layer behaviour, we considered the two ferrofluids namely, Fe<sub>3</sub>O<sub>4</sub>-methanol and Fe<sub>3</sub>O<sub>4</sub>-water. The reduced system of governing PDEs are solved by employing the R-K process. Computational results of the flow and energy transport are interpreted with the assistance of tabular and graphical illustrations. Increasing the needle size significantly reduces the flow and thermal fields of both nanofluids. In particular, thermal and velocity fields of Fe<sub>3</sub>O<sub>4</sub>-methanol nanofluid is highly depreciated when equated with the Fe<sub>3</sub>O<sub>4</sub>-water nanofluid.

**ESTIMATION OF MANN ITERATIVE FIXED-POINT SCHEME OF  
CONTRACTIVE-TYPE CONDITIONS IN BANACH SPACES****D. John***Department of Mathematics, Faculty of Physical Sciences, University of Abuja, Nigeria***A. M. AYINDE***Department of Mathematics, Faculty of Physical Sciences, University of Abuja, Nigeria***T. O. WAHAB***<sup>2</sup>Department of Mathematics, and Statistics, Faculty of Pure and Applied Sciences, Kwara State University, Malete, Nigeria.***H. B. ALIYU***Department of Mathematics, Faculty of Physical Sciences, University of Abuja, Nigeria***ABSTRACT**

The study of estimation of the Mann iterative fixed-point scheme of contractive-type conditions in Banach space is the focus of this paper. Every nonlinear problem with a solution has at least one fixed point in estimates. This estimation investigates contraction conditions that examine strong convergence in Banach space using the Mann iterative scheme. It reveals that with the imposed conditions, Mann iteration converges strongly to a unique fixed point in Banach space. The error estimate terms  $\rho_1$ ,  $\rho_2$ ,  $\rho_3$  and  $\rho_4$  of Mann iteration with the imposed contractive conditions and data profile are obtained, demonstrating that the approximate fixed point holds. The error estimate  $\rho_2$  performs better in terms of convergence than the other error estimate terms, whereas error estimate  $\rho_4$  performs poorly better in terms of convergent rate. This means that the Mann iteration compares more favorably to a fixed point of the  $\rho_2$  conditions. Some numerical examples are considered to compare the accuracy of each condition.

**Keywords:** Banach space, Mann iterations, Strong convergence, Contractive conditions, Fixed point

**THE EFFECT OF LEARNING USING MULTIMEDIA SOFTWARE ON THE  
MOTIVATION OF NINTH GRADE STUDENTS TOWARDS LEARNING A  
COMPUTER SUBJECT****Thahaba bani-khaled****Dr.Atallah shatnawi****ABSTRACT**

This study aimed to know the effect of using multimedia software on the motivation of ninth-grade students to learn computer science, divided into groups of male and female schools. The pre-test motivation scale was distributed before starting the teaching process to both the experimental and control groups, and then the students in the experimental groups were taught using the software prepared by the researcher. The students in the control groups were taught using the usual method. Then a post-test motivation scale was distributed to both groups to verify the effect of using software on their motivation. In order to answer the study questions, the researcher prepared an educational software using the Articulate storyline 360 program. The motivation scale was adapted by looking at the theoretical literature, and with help of some studies and the opinions of the arbitrators, where the final form was reached, and the study tools were applied to the sample. The data were collected and analyzed using the (SPSS) statistical package. To verify the equivalence of the groups a binary variance analysis was used, also to the effect of the group and gender variables and the interaction between them on the grades of ninth grade students on the pre-test motivation scale. as well as the arithmetic averages and standard deviations of the grades of ninth grade students on the motivation scale in the pre-test and post-test scale according to the variables of teaching strategy and gender. The study reached a number of results, the most important of which are: There are statistically significant differences in the average motivation of students due to the teaching method, in favor of the experimental group, which used the educational software in the teaching process. The result also detected no statistical significant differences to gender (male, female) or the interaction between teaching method and gender. The study recommended several recommendations, the most important of which is working on the computerization of the curriculum and using educational software in the teaching process for its clear impact on students' desire and motivation towards learning school subjects in general, and the computer in particular. In order to take advantage of modern technologies and means to serve the educational process.

**Keywords:** multimedia software, motivation.

**RECENT ADVANCES OF MAGNETIC GOLD HYBRIDS AND  
NANOCOMPOSITES, AND THEIR POTENTIAL BIOLOGICAL APPLICATIONS**

**Mirza Muhammad Faran Ashraf Baig**

*The Hong Kong University of Science and Technology*

**ABSTRACT**

Magnetic gold nanoparticles (mGNP) have become a great interest of research for nanomaterial scientists because of their significant magnetic and plasmonic properties applicable in biomedical applications. Various synthetic approaches and surface modification techniques have been used for mGNP including the most common being the coprecipitation, thermal decomposition, and microemulsion methods in addition to the Brust Schiffrin technique, which involves the reduction of metal precursors in a two-phase system (water and toluene) in the presence of alkanethiol. The hybrid magnetic-plasmonic nanoparticles based on iron core and gold shell are being considered as potential theranostic agents. In this critical review, in addition to future works, we have summarized recent developments for synthesis and surface modification of mGNP with their applications in modern biomedical science such as drug and gene delivery, bioimaging, biosensing, and neuro-regeneration, neuro-degenerative and arthritic disorders. I shall discuss the techniques and biological applications of mGNP majorly based on my own research.

**Keywords:** nanohybrids; magnetic gold nanoparticles; nanocomposites; surface functionalization; core-shell nanocomposites; magnetic-plasmonic nanoparticles; biological applications

**THE STRUCTURAL, ELECTRONIC, MAGNETIC AND ELASTIC PROPERTIES  
OF FULL-HEUSLER CO<sub>2</sub>CRAl AND CR<sub>2</sub>MNSB: AB INITIO STUDY**

**Prof. Dr. Mohammed Abu-Jafar**

*Department of Physics, An-Najah N. University, Nablus-Palestine*

**Ms. Sara Yahya**

*Department of Physics, An-Najah N. University, Nablus-Palestine*

**ABSTRACT**

In this paper, the full-potential, linearized augmented plane wave (FP-LAPW) method was employed in investigating full-Heusler Co<sub>2</sub>CrAl's structural, elastic, magnetic and electronic properties. The FP-LAPW method was employed in computing the structural parameters (bulk modulus, lattice parameters,  $c/a$  and first pressure derivatives). The optimized structural parameters were determined by generalized gradient approximation (GGA) for the exchange-correlation potential,  $V_{xc}$ . Estimating the energy gaps for these compounds was accomplished through modified Becke–Johnson potential (mBJ). It was found that the conventional Heusler compound Co<sub>2</sub>CrAl with mBJ and GGA approaches had a half-metallic character, and its spin-down configuration had an energy gap. It was also found that the conventional and inverse Heusler Cr<sub>2</sub>MnSb and tetragonal (139) (Co<sub>2</sub>CrAl, Cr<sub>2</sub>MnSb) compounds with a half-metallic character had direct energy gaps in the spin-down configuration. To a certain degree, the total magnetic moments for the two compounds were compatible with the theoretical and experimental results already attained. Mechanically, we found that the conventional and inverse full-Heusler compound Co<sub>2</sub>CrAl was stable, but the inverse Cr<sub>2</sub>MnSb was unstable in the ferromagnetic state. The conventional Heusler compound Cr<sub>2</sub>MnSb was mechanically stable in the ferromagnetic state.

**THE IMPACT OF RENEWABLE ENERGY ON CARBON-DIOXIDE: THE NIGERIA EXPERIENCE****Isiaka, Najeem Ayodeji***Department of Banking and Finance, Federal Polytechnic, Ilaro***ABSTRACT**

The relationship between economic growth and carbon dioxide has long been established in literature. Meanwhile, efforts had been proposed on how to achieve economic growth without resulting to increase in carbon dioxide yet there is little or no success. Therefore, the study investigated the effect of renewable energy on carbon dioxide in Nigeria. Data on carbon dioxide, renewable energy consumption and renewable energy output were gathered from world development indicator. The data were analyzed using multiple regression analysis through OLS. It was revealed that renewable energy consumption reduces carbon dioxide significantly within the period under review. Therefore, the study concluded that renewable energy have a significant role and influence on carbon dioxide in Nigeria. It is therefore, recommended that more efforts should be channeled towards creating renewable energy such as solar and many others to reduce amount of carbon dioxide generating from fossil fuel.

**Keywords:** Renewable Energy, Carbon dioxide, Ordinary Least Square

**STATUS OF GASTROINTESTINAL TREMATODES INFECTIONS AMONG RUMINANTS SLAUGHTERED IN YAURI EMIRATE, KEBBI STATE, NIGERIA****Abdurrahman, U. D***Faculty of life Sciences, Department of Animal and Environmental Biology,***Hafsat, A, L***Faculty of life Sciences, Department of Animal and Environmental Biology,***Kamaluddeen, A***Faculty of Agriculture, Department of Fisheries and Forestry, Kebbi University of Science and Technology, Aliero, Nigeria.***Garba, U. A***Department of Biology, Adamu Augie College of Education, Argungu, Kebbi State, Nigeria.***Libata, A. H***Department of Biology, College of Basic and Advanced Studies, Yelwa, Yauri, Kebbi State, Nigeria***U. M. Doma***Department of Mathematics and Computer Science, College of Basic and Advanced Studies, Yelwa Yauri, Kebbi State, Nigeria***ABSTRACT**

A cross-sectional study was carried out from October 2019 to April 2020 to investigate the prevalence of gastrointestinal trematode parasites of cattle, goat and sheep in Yauri emirate. 350 fresh fecal samples were examined by using simple test tube sedimentation techniques to determine the Trematode eggs in the fecal samples. In addition culture technique was used to detect any available trematode larvae and was harvested using Baerman technique. Out of 350 examined, 79 (22.6%) were found positive for at least an egg or more of some of trematode parasites belonging to *Dicrocoelium spp*, *Echinostoma spp* and *Fasciolopsis buski*. The most prevalent helminth parasite was *Echinostoma spp* 36 (10.3%), followed by *Fasciolopsis buski* 29(8.3%) and the least was *Dicrocoelium spp* 14 (4.0%). The overall prevalence of trematode parasites among the animals examined was 22.6%. Moreover there was no significant variation ( $P>0.05$ ) between the contamination of the parasites and the animals diagnosed. This study therefore observed that prevalence of trematodes is prevalent in the study area. Therefore, there is the need to control and prevent the ruminants from grazing on feces or sewage polluted grass, It is therefore important that sufficient emphasis should also be given to this problem so as to improve health, quality and quantity of meat that may satisfy the domestic requirements..

**ABSTRACT**

According to the CAP(consistency, availability and partition tolerance.) theorem, only two of these characteristics—consistency, availability, and network partition tolerance—can be ensured at once in a distributed service. Atomic consistency is situated at the strongest end of the range, although there are other consistency models as well. Cloud platforms should support a large number of distributed services that are highly available and scalable. In certain implementations, network partitions may occur; they should be accepted. Relaxing consistency is one strategy for addressing CAP restrictions. Consequently, it is intriguing to investigate the range of consistency models that a readily available and partition-tolerant service does not provide (CAP-constrained models). When scalable services are implemented, other, weaker consistency models might still be preserved. In this proposal, we propose an introduction of additional Name-Node for extended Cache Mechanism for Fast Read Operations in HDFS which will store frequent requested records for ease access instead of performing Lookup across DataNodes. This will drastically reduce the latency in accessing records in HDFS.

**THE GROWING RATIO OF REDEMPTION (KHULA) IN THE CURRENT  
SITUATION: (FROM ISLAMIC PERSPECTIVE)**

**Dr. Naseem Akhter**

*Associate Professor Dept. of Islamic Studies  
Shaheed Benazir Bhutto Women University, Peshawar, Pakistan.*

**ABSTRACT**

Khula's concept of redemption refers to leaving her husband. In order to avoid issues and troubles, the couple should decide to separate if living together gets difficult. Islam permits redemption (Khula), but only if it becomes difficult for the couple to coexist. Otherwise, redemption (Khula) is not a suitable practice. If we look at the lives of women who underwent redemption (Khula) in modern society, the majority of the ladies go through a lot of hardships since women who have undergone redemption (Khula) are not viewed positively. The goal of this study project is to identify the causes of the growing trend toward redemption (Khula) in society and to examine how Islam teaches about it. Due to this, 120 female students from Shaheed Benazir Bhutto Women University in Peshawar were removed. Eleven questions total were posed. The conclusion reached by the perspectives was presented in various tables. As a result, media and smartphones are playing a crucial role in the society's daily expansion of the drift of redemption (Khula). The majority of women who participate in redemption (Khula) are employed women from a variety of sectors who dislike restrictions and seek freedom. The primary cause of this is the lack of adherence to Islamic beliefs. Children are not the only ones who are negatively impacted by a curse like redemption (Khula). Society is in a state of decay as a result of the growing trend of redemption (Khula). It is imperative that we live our lives in accordance with Islamic teachings. Then, the state of society might improve. For its particular field, this study work can be instructive and helpful to readers and researchers.

**ABSTRACT**

*Juniperus thurifera* is a dioecious tree belonging to the Cupressaceae family. It has important ecological, socio-economic, floristic and cultural interests. It is endemic to the western Mediterranean basin to which belongs Morocco. It is among the Moroccan species less valued and less preserved. Its stands do not cease that has degraded vigorously. It is distributed in areas with semi-arid and sub-humid bioclimates with cold to very cold variants in the Middle Atlas, the Eastern Anti-Atlas and the Eastern and Central High Atlas and on altitudes ranging from 1800 m to 3300 m and on all types of substrates.

In traditional medicine, the essential oils of juniper have been used as abortifacient and regulator of menstruation, while the wood tar is used as veterinary remedy.

The objective of the present work is to explore the effect of provenance on the yield, phenolic compounds, flavonoids and tannins contents and antioxidant activity of the extracts of the leaves of this species. The results obtained show a significant variability between the samples coming from three different biogeographic zones: the Eastern, Central and Western High Atlas. This allowed us to highlight the effect of the origin on the production of secondary metabolites. In fact, we found that the population of Eastern High Atlas has a good yield in methanolic extracts ( $9.41\% \pm 0.59$ ) and that the population of El Haouz is the richest in polyphenols ( $191.30 \pm 4.27$ ), as well as it has endowed an important reducing power ( $IC_{50} = 0.98 \pm 0.05$  mg/ml). These results can be exploited as bioindicators in any program of valorization and conservation of Moroccan juniper thurifer.

**Key words:** *Juniperus thurifera*, provenance, extract, yield, compound, Morocco.

**STUDY ON PICTURE FUZZY COMPETITION GRAPHS AND  
ITS APPLICATIONS****Sankar Das***Department of Applied Mathematics with Oceanology and Computer Programming, Vidyasagar  
University, Midnapore - 721 102, India.**ORCID ID: <https://orcid.org/0000-0002-7273-9926>***ABSTRACT**

In ecological problem, species may be of several types like lerten, non-lerten etc. Similarly, victims may be tasteful, digestive, injurious, etc. These terms have no proper meaning. They are fuzzy in nature. So the species and victims may be assumed as PFSs and inter-relation between them may be designed with a PFG. Due to uncertainty in description of species and victims, and their relationships, it is necessity to design a PFCG model. In 1968, Cohen first introduced the concept of competition graph (CG) while studying inflictions of graph theory in relation with an ecological problem. Let  $\vec{G} = (V, \vec{B})$  be the digraph corresponding to a food cycle . A vertex  $r \in V(\vec{G})$  indicates that a species in the food cycle and an edge  $(r, x) \in \vec{B}(\vec{G})$  indicate that  $r$  victims on the species  $x$ . The species  $r$  and  $s$  compete for a victim  $x$  if they have a common victim  $x$ . Due to this harmony, Cohen defined graphs representing the relationship of competition within the species of food cycle. An undirected graph  $C(\vec{G})$  of  $\vec{G}$  is the CG with  $V$  as vertex set and having an edge  $(r, s)$  in  $C(\vec{G})$  if there is a vertex  $x \in V$  such that  $(r, x), (s, x) \in \vec{B}$  in  $\vec{G}$  . In this study, the concept of picture fuzzy competition graph along with its two subclasses such as picture fuzzy  $k$ -competition graphs and  $p$ -competition picture fuzzy graphs are introduced. Picture fuzzy competition graph is one of the generalization of competition graph. Several properties of picture fuzzy competition graphs have been investigated. Some new types of picture fuzzy graphs have been introduced like picture fuzzy open neighborhood graph and picture fuzzy closed neighborhood graph. Also, the relationship between picture fuzzy  $k$ -competition graph and picture fuzzy  $k$ -neighborhood graph are established. An application of picture fuzzy competition graph in medical science is presented.

**Keywords :** Picture fuzzy digraphs, picture fuzzy competition graphs, picture fuzzy  $k$ -competition graphs,  $p$ -competition picture fuzzy graphs, picture fuzzy neighborhood graphs.

**RELATIONSHIP BETWEEN COLOR AND STRENGTH OF JUTE FIBRE****Nayab Khan***Department of Fibre and Textile Technology, University of Agriculture, Faisalabad.***Michal Vik***Department of Material Engineering, Technical University of Liberec, Liberec, Czech Republic.***Assad Farooq***Department of Fibre and Textile Technology, University of Agriculture, Faisalabad.***Farida Irshad***Department of Fibre and Textile Technology, University of Agriculture, Faisalabad.***ABSTRACT**

Jute is a natural fibre and is also known as golden fibre due to its shiny brown color. It has different grades on the basis of its length, strength, color, luster and softness. Jute fibre can be used as food packing material as it is a biodegradable fibre. Jute fibre processing mills grade the fibres according to its color values to predict their strength visually. Visual classification of jute fibres is an ancient art to grade the jute fibre. Jute fibres are not used for the fine clothing in the international market therefore; the other physical parameters (length, Strength, softness) are of less importance as compared to color. Precise and accurate color measurement through instrument is need of the hour for better grading of fibres. In this research the color measurement of jute fibre through instrument and its comparison with the visual assessment is performed. And the strength of jute fibre is studied with respect to its color values. The research shows that the color values of jute fibre predict strength of the jute fibres and its capacity to withstand load while used as packing material. Visual color assessment of jute fibre can be replaced with instrumental color measurement to obtain the precise color measurement.

**OPTIMIZATION OF PORTFOLIO REBALANCING MODEL ON AN EXTENDED  
INTERVAL VECTOR SPACE**

**Bishakha Rani Bhagwan Sahu**

*University Name: SRM Institute of Science and Technology, Tamil Nadu, India*

**ABSTRACT**

In this paper, a generalized interval vector space is considered and an order relation is defined. This order relation is used to formulate an interval optimization problem. A portfolio rebalancing problem with interval parameters is designed. A methodology has been developed to find the efficient portfolio. Further, a numerical example is illustrated for our proposed model.

**Keywords** Interval vector space, Interval Analysis theory, Interval optimization problem, Portfolio selection, Rebalancing, Efficient solution.

## **HOW GOVERNMENT POLICIES CAN SUPPORT INNOVATION DEVELOPMENT IN SOUTH AFRICA**

**Bongumusa Mdluli**

*Khazar University*

### **ABSTRACT**

This paper undertakes an examination of innovation policy and governance in South Africa. The article therefore contributes to the importance of intra-African region innovation policy dialogue by using policy developments in South Africa. The article identifies a weak and fragmented innovation system as a major challenge facing many of the African countries, exacerbated by the lack of an explicit innovation strategy. The literature indicates that Science, Technology and Innovation (STI) policies should not simply adopt a science-push way to innovation, but rather look building an entire system of innovation. The emergence of a knowledge-based economy and globalisation such as the BRICs - Brazil, Russia, India, China and South Africa are restructuring the dynamics of innovation in developing countries. The literature has also shown that several international organizations have played significant roles in the development of Science and Technology (S&T) policies among African countries. However, the international company's initiatives have mostly focused on the development of S&T with minimal emphasis on the role of policies and administration, which would increase learning and innovation performance in South Africa. The central premise of the article is that innovation policy and governance is an essential component of the National System of Innovation in South Africa.

**ANTIMYCOTIC PROPERTIES OF DIODIA SARMENTOSA, AND OCIMUM GRATISSIMUM ON NINE FUNGAL STRAINS OBTAINED FROM CHILDREN AND ADULTS IN SELECTED COMMUNITIES OF AKWA IBOM STATE, NIGERIA****Ofonmbuk Victor Joseph***University of Port Harcourt, Faculty of Science, Department of Microbiology, Port Harcourt, Nigeria***Obakpororo Ejiro Agbagwa***University of Port Harcourt, Faculty of Science, Department of Microbiology, Port Harcourt, Nigeria***Nnenna Frank-Peterside***University of Port Harcourt, Faculty of Science, Department of Microbiology, Port Harcourt, Nigeria***Iheanyi Omezuruike Okonko***University of Port Harcourt, Faculty of Science, Department of Microbiology, Port Harcourt, Nigeria*  
<https://orcid.org/0000-0002-3053-253X>**ABSTRACT**

Medicinal plants are plants in which at least one of its parts possess therapeutic properties. *Diodia Sarmentosa* and *Ocimum gratissimum* were collected from University of Uyo botanical garden. Random samples of 2991 from children of ages (5-16) and 2243 from adults (20-80above) were collected at various suspected infected body sites from six communities namely: Essien udim, Abak, Ikot ekpene, Uyo, Eket and Oron. The samples were cultured on Sabouraud dextrose agar. Nine fungal strains which includes *Rhizopus oryzae*, *Aspergillus tamaril*, *Tricholoma matsutake*, *Kodamaea ohmeri* strain, *Aspergillus awamori*, *Aspergillus fumigatus*, *Aspergillus nomius*, *Aspergillus awamori* and *Aspergillus nomius* were identified by genotypic method. The qualitative phytochemical screening of the leaf extracts showed that tannins, flavonoids, salwoski, keller-killian, liberman were present in these two plant extracts. The antifungal assay of the aqueous and ethanolic leaf extract of *Diodia Sarmentosa* and *Ocimum gratissimum* at different concentrations showed that *Ocimum gratissimum* had higher inhibition zone than *Diodia sarmentosa*. The quantitative percentage composition of phytochemical constituents such as Tannins, Alkaloids, Saponins and Flavonoids were determined and result obtained showed that Saponins had the highest average composition (5.6%) across all plant extracts followed by Tannins (5.3%), Flavonoids (4.8%) and Alkaloids (1.6%) which was the least. MIC obtained ranged between 31.25-125mg/ml. The outcome of the work justifies the use of these plants in ethno-medicine.

**ABSTRACT**

A numerical solution for the inhomogeneous hyperbolic telegraph equation based on Radial Basis Function (RBF) collocation method has been improved and presented. The telegraph equation is considered important because it appears in many areas such as propagation of electrical signals along a telegraph line, digital image processing, and telecommunication. The RBF method and collocation points with both space and time coordinates are meshless ways we used to solve this equation. Several RBFs contain a free shape parameter, and choosing an optimal one plays an important role in the accuracy of the method. The symmetric variable shape parameter (VSP) method based on Generalized Multiquadratic (GMQ) space-time RBFs is used to solve a class of the second-order hyperbolic telegraph equation. Comparison between symmetric and Trigonometric variable shape parameters proves the efficiency. The accuracy of the proposed generalized multiquadratic method is demonstrated through several test problems

**Keywords:** Radial Basis Functions, Telegraph Equations, Variable Shape Parameter.

**ABSTRACT**

The study examined the structure of Wudil cattle market Wudil local government of Kano state-Nigeria. A multi stage sampling technique was employed for the study in which purposive sampling technique was used in the selection of the market, based on the concentration and intensity of the cattle marketing activities. The second stage involved random selection a total of one hundred thirty five (135) Buyers were selected using systematic sampling by truncation on weekly basis for period of 5 weeks. Descriptive statistics and ginni co-efficient was employed to analyze the collected data. The result shows that cattle buyers fall within the age range of 22-76 years and the majority 32.60% of the cattle buyers are within age group of 33-43 years, it was discovered 99% of the respondent were male. Ginni co-efficient model shown that the markets structure were competitive with low Ginni co-efficient of 0.413 which indicated homogeneous Market, freedom to enter or exit the market. The major constraints identified were price determination because value of an animal is determined by visual and tactile examination.

**EVALUATION OF THE PERFORMANCE OF TRIMMER ROBOTS: REVIEW  
STUDY**

**Navid Nouri, Jafar Massah**

*Department of Agrotechnology, College of Abouraihan, university of Tehran, Iran*

**ABSTRACT**

In this paper, we will review the types of trimming robots such as trimmer robots along the highway, autonomous trimming robots in gardens, greenhouses, potted plants and open spaces. These robots have different types of blades depending on their application, they can move on different terrains and can approach plants like boxwood and trime them as desired. Manual trimming machines have several disadvantages, including; Low operational efficiency, inappropriate performance and high error rate, life risks for human users, risks of climbing trees for trimming, high vibration of manual trimming machine that causes injuries to human users in the long run. Its low performance speed. However, trimmer robots in agriculture have several advantages, including; Labor costs, speed change, daily working hours and also economically, they are equal to human labor. The shift to autonomous robots in agriculture will reduce the investment in implementation by about 15% and reduce the total annual labor and machinery costs by about 90%. Autonomous trimmer robots in agriculture will eliminate the time limit of work and will have the ability to increase working hours day and night, improving performance and increasing accuracy and quality in doing work. It seems that using artificial intelligence in trimmer robots will increase efficiency, speed of operation and higher accuracy in performing trimming processes.

**Vexillology** is the scientific study of the history, symbolism and usage of flags or, by extension, any interest in flags in general. The word is a synthesis of the Latin word vexillum ("flag") and the Greek suffix -logia ("study.") The constitution of the International Federation of Vexillological Associations formally defines vexillology as "the creation and development of a body of knowledge about flags of all types, their forms and functions, and of scientific theories and principles based on that knowledge. The study of flags, or vexillology, was formalized by the U.S. scholar and student of flags Whitney Smith in 1957. Vexillology is the scholarly study of flags. It is not nearly as well known as numismatics, Philately or the many other 'ologies, such as Biology (the study of life), Zoology (the study of animals) or Palaeontology (the study of fossil animals). However, Vexillology is exiting, motivating but demanding. There exist many types of flags in UK and around the world. Their categorisation, their typology and their studies are worth mentioning for a better understanding of vexillophiles.

**ABSTRACT**

Polystyrene (PS), one of the most used polymers in everyday life, has a low recycling rate due to its inexpensive virgin resin. In order to make polystyrene waste (WPS) recycling advantageous, it is possible to change it chemically, introducing heteroatoms in the polymer chain thus transforming the waste into a material with more added value. A strong polyanion, polystyrene sulfonate (PSS) a material has been investigated for the removal of various dyes from water. PSS was characterized by Fourier-transform infrared spectroscopy (FT-IR) and thermogravimetry. The adsorbent showed good adsorption performance due to its functional groups and strong adsorption strengths. Selective removal of methylene blue (MB) from the MB/wastewater mixture can be achieved using this adsorbent. The removal efficiency was over 90% even after five cycles of adsorption-desorption.

**Keywords:** polystyrene, polystyrene sulfonate, Fourier-transform infrared spectroscopy, methylene blue.

**PSYCHOLOGICAL DISTRESS AND SUICIDAL IDEATION AMONG  
ADOLESCENTS: THE MODERATING ROLE OF SOCIAL SUPPORT****Priya Chaudhary***Research scholar, Lovely Professional University, Punjab, India***Richa Gupta***PhD, Assistant Professor, Maulana Azad Memorial College, J&K, India***Neelam Kumari***Assistant Professor, Maulana Azad Memorial College, J&K, India***Shabila Wani***PhD, Assistant Professor, Maulana Azad Memorial College, J&K, India***ABSTRACT**

Concern is mounting over the rising suicide rate among Adolescents. Development of effective preventative treatments to lower suicidal behaviour and the suicide rate has been spurred by the worrisome rise in the number of suicide and attempted suicides among Adolescents. This study was conducted to assess the impact of psychological distress on suicidal ideation among adolescents. Mental health disorders among adolescents have emerged as a major public health issue in many low and middle-income countries, including India. There is a paucity of research on the determinants of psychological distress, particularly among the adolescents. The role of social support in mitigating the effect of psychological distress on suicidal ideation, if any, was analyzed. Standardized questionnaires for assessment of study variables were used. The data was collected from 182 adolescent boys and girls. The data was analyzed using SPSS 20. The results of the study revealed that psychological distress has positive relationship with suicidal ideation and leads to suicidal tendencies among adolescents. However, this relationship was moderated by social support available to the participants. This implies that adolescents with social support are less likely to have suicidal ideation when they experience psychological distress while those with low social support are less vulnerable to suicidal tendencies under psychological distress. The findings of the study project the importance of social groups and support available in this transitional phase of adolescence.

**ABSTRACT**

The onset of technological advancements in both developed and developing countries have been promising in challenging the existing power imbalances created by gender disparities. Although many critics believe that technology studies long remained gender-blind, yet the fact remains that technology fundamentally addresses the practical problems and in the modern as well as post modern era ‘gender’ has been one of the most discussed problems. The radical and eco- feminists of 1970’s have been highly critical of technology for its patriarchal nature. They believed that it further enhances and consolidates the existing power hierarchies. However, towards the end of 1980’s there was a paradigm shift in technology studies and the concepts like ‘sociotechnical systems’ came into vogue which put forth the slogan that the social and technological are inseparable – “a seamless web”. (Hughes 1986). With the result, in the very recent times, it was witnesses how “Me Too” movement in 2017 in many parts of the world especially America, used different technological platforms like Facebook, WhatsApp, Instagram etc were used by women to expose the abuses, inequalities and injustice faced by them. The technology not only became their voice to challenge the gender inequalities but also empowered them to get rid off one of their most vulnerable aspects- “biological motherhood within the established institution of marriage”. The women can now be solo mothers without getting physical with their male partners through technological motherhood-Parthenogenesis. The aim of this paper is to explore how technology in the present scenario is used to challenge long debatable issue of gender disparity. It would also designate sex as a biological phenomenon and gender as culturally constructed.

**ABSTRACT**

The traditional architecture of Lamban Gedung Paksi buay Pernong, Kepaksian Sekala Brak is one form of Indonesian culture that has socio-cultural meaning and is a characteristic of the people of Lampung. Today, the existence of traditional architecture is decreasing because many are abandoned and made changes that also affect people's understanding of the sociocultural meaning it contains. The contributing factor is the influence of globalization and the lack of availability of raw materials. This study aims to examine the Slow Architecture of the Paksi buay Pernong Building, Kepaksian Sekala Brak in the context of sociocultural meaning. The method used in this research is descriptive qualitative with data collection techniques of observation, in-depth interviews, and documentation involving traditional leaders and relatives of Paksi buay Pernong, Kepaksian Sekala Brak. Data analysis techniques were carried out through data reduction, data presentation, and data verification. The results show that the socio-cultural meaning of the architecture of Sansando Paksi buay Pernong, Kepaksian Sekala Brak is a manifestation of the Lampung people's philosophy of life as contained in "*Piil Pesengiri*" which comes from divine values (*Hablum Minallah*), human values (*Hablum Minannas*), and values of life (*Hablum Minal'Alam*). *Piil Pesengiri* includes Leadership (*Bejuluk Beadok*), Hospitality (*Nemui Nyimah*), social and environmental (*Nengah Nyappur*), and Gotong Royong (*Sakai Sambayan*).

<https://orcid.org/0000-0001-8933-8152>**ABSTRACT**

In the essay, the grayish-brown soils of the Samukh area and its surrounds are described morphologically. In the Republic of Azerbaijan's northwest is the administrative district of Samukh. The Samukh district is a component of the Middle-Kura Economic District and the Ganja-Kazakh region. It has a dry, continental climate. It has a 1,455 sq. km. area. 802 km<sup>2</sup> of the 1,082 km<sup>2</sup> total area are state-owned stock lands. 133 km<sup>2</sup> of the municipality's total area is privately owned. 708 km<sup>2</sup> of the area are used for agriculture. The district shares boundaries with the Georgian Republic, the city of Ganja, Goygol, Shamkir, Tovuz, Gakh, Yevlakh, and Geranboy districts. The Samukh district's land is primarily flat. The Alazani Valley, which flows into the Kursk Basin and the physical and geographic region of Jeyranchol, the gray Mountains massif, surrounds a portion of the land from the north. The district's land is traversed by the rivers Kura, Gabyrchay (Iori), Alazani (Ganykh), Ganjachay, and Goshgarchay. Relict Eldar pine woods are abundant on an area of 392 hectares, located exclusively in this region, on the territory of the Samukh district, on the left bank of the Gabyrchay River, at an altitude of 400–600 meters above sea level, in a mountain massif known as "Eliyoyu." For the first time in Caucasian nature, such a special location—the Eldar—was designated as a protected area in 1910 as the forestry of Eldar Pine. The Samukh district's soils are of the light gray-brown soil variety. In the inclined plumes of the surrounding strip of the Kura-Araz lowland, light gray-brown soils cover a significant region. These soils' distribution areas are characterized by non-flushing water regimes, which favor the development of the soil formation process. In this context, gypsum, readily soluble salts, and carbonates are gradually building up in the soil layers. The profile of light gray-brown soils is typically well-differentiated morphologically. The following are the primary morphological characteristics of the soil: the soil profile's structure, the depth of the soil and each individual horizon, its color, granulometric composition, structure, looseness, fresh sod-podzolic soils, and sod-podzolic soils. It is suggested that soil color is an easier-to-understand and-notice morphological characteristic. The presence of high carbonate content (CaCO<sub>3</sub>) has been established for the mentioned soils, and the external signals of the soil in the field and indoors are used to determine the granulometric composition. These soils were discovered to be saturated with absorbed bases, with an alkaline reaction in the soil medium and a clayey and severely clayey granulometric composition.

**Keywords** carbonation, humus, genetic layer, soil profile, light gray-brown, and granulometric composition

## **SURVIVAL AND CONTINUITY OF "RICE AND FISH MAKES A BENGALI" CULTURE AMONGST BRITISH BANGLADESHIS**

**Parvez I Haris**

*Faculty of Health & Life Sciences, De Montfort University, Leicester, UK*

### **ABSTRACT**

In terms of land area, Bangladesh is ranked 98<sup>th</sup> globally and yet it has the largest number of rivers in the world. These rivers provide ideal environment for a rich diversity of fish to flourish. Despite its small size Bangladesh is ranked third in the world for inland fish production. Furthermore, river water is also used for growing rice and Bangladesh is ranked third globally for rice production. Bangladeshis are very fond of their fish and rice diet and often call themselves "Mache Bhate Bengali" which can be translated as "Rice and Fish Makes a Bengali". Since the 1960s many Bangladeshis migrated to the United Kingdom (UK) and pioneered the establishment of restaurants and takeaways selling curry and rice. They are considered as the founders of "British Curry" and a large catering industry emanated from it. At the same time, the UK Bangladeshi community worked extremely hard to maintain their culture, identify and food habits. We have been conducting research on the culture, diet, lifestyle, and health of UK Bangladeshis. Our research revealed that the Bangladeshis consume the highest quantities of rice and eat fish imported from Bangladesh. Of all the different ethnic minority groups in the UK, the Bangladeshis have the highest number of shops that specialise in selling different varieties of fish, including dried fish. Furthermore, during the last decade there has been a growth of restaurants that serve traditional fish dishes for local Bangladeshis. Many different Bangladeshi owned companies import fish into the UK from Bangladesh. Local Bangladeshi media, including newspapers and television channels carry adverts promoting sale of such fish. There is clear evidence that "Rice and Fish Makes a Bengali" culture is still strong and thriving amongst the UK Bangladeshis. The third and fourth generation UK Bangladeshis are beginning to adopt a more westernised diet. However, there is a revival in traditional Bangladeshi culture and diet in the UK due to the recent migration of a large number of Bangladeshis from Europe, especially from Italy. Many of these migrants were born in Bangladesh and still maintain a traditional diet. They have re-ignited interest in Bengali culture through organisation of activities and events including food festivals promoting traditional Bangladeshi foods. In this context, one can argue that the integration of these new arrivals within the existing UK Bangladeshi community and tapping into businesses, facilities, and platforms it has established, will ensure the survival and continuity of "Rice and Fish Makes a Bengali" culture in the UK.

**CONDUCT OF STUDENTS IN FINANCIAL INCREASE TOWARDS INTEREST OF  
SOCIAL ENTREPRENEURSHIP IMPROVEMENT IN BANGLADESH****Md. Ibrahim Khalil***MBA Student, FBFAH, MAHSA University, Malaysia***Saif Ahmed***MBA Student, FBFAH, MAHSA University, Malaysia***Binoy Chowdhury***MBA Student, FBFAH, MAHSA University, Malaysia***Dr. Rasheedul Haque***Supervisor, Associated Professor, MAHSA University, Malaysia***ABSTRACT**

Certain traits, such as bravery, foresight, a clear idea of direction, creativity, intellect, and curiosity, are natural for success in the business world. This study is about the challenges which have significant influence over intention building process among the graduates in Bangladesh. As a country increases and Huse population level, unemployment is increasing day by day. There are a lot of businesses with a social aiming that are trying to improve the world (2016, Tally Press). When a country's people take up social ventures, it helps the country's economy grow and thrive in the long run. Social entrepreneurs make a well value in our society and also, they increase the of personal value. Educated people are looking for work rather than starting an entrepreneurship business where there is a trend of joining as an official employee is more respectful. Social entrepreneurship can be a good solution to reduce unemployment rate and change the trend of people. And it will assist to raise the socio-economic level, people's lifestyle and living advantage. Due to many obstacles, now social supporters well as government support are coming in front of us. This study has found social support as an indicator with other challenges such as Attitude, Education, Social Entrepreneurial Outcome Expectation and Self-efficacy in order to measure the effect on social entrepreneurship intention. Data has been collected through an online survey questionnaire and analyzed by Smart PLS3. Attitude and Education have more affect towards social entrepreneurship intention. It has been learned that some entrepreneurs are facing problems with high charge of business approval certificate. Besides, at present E-commerce is becoming a part of entrepreneurial business which is flexible, time saving and cost effective. Moreover, leadership and outcome wishing experience is also earned priority in the intention making tacking of social entrepreneur.

**Keywords:** Social entrepreneur, Own-efficacy, Output Expectations, Socio-economic, Leadership.

**RETROSPECTIVE DOSIMETRIC COMPARATIVE STUDY OF HYBRID IMRT, 3DCRT, IMRT, TREATMENT PLANNING FOR LEFT-SIDED CHEST WALL IRRADIATION.**

**Subhas Haldar**

*Department of Radiotherapy, Saroj Gupta Cancer Hospital and Research Centre, Kolkata-700063, W.B.*

**Biplab Sarkar**

**Archana Dixit**

*Department of Mathematics, Institute of Applied Science and Humanities, GLA University, Mathura-281406 (U.P.), India.*

**Introduction:** Irradiating the chest wall (CW) and lymphatic nodes is more difficult due to the small target volume and irregular body surface. Target coverage, conformity, and homogeneity in 3D-CRT are frequently insufficient at the CW and supraclavicular. Intensity-modulated radiation therapy (IMRT) and volumetric modulated arc therapy (VMAT) are two treatment delivery methods that help produce better dose coverage and homogeneity and lower doses to the heart and ipsilateral lung. The most serious worry with IMRT is an increase in the quantity of radiation administered to healthy soft tissue and a higher Monitor Unit (MU), which may raise the chance of late secondary cancer. **Methods & Materials:** The three different planning strategies (FiF [Field-in-field], IMRT, and Hybrid IMRT) were examined for ten patients with left-sided chest wall irradiation. For the planned target volume, a prescription dose of 40 Gy in 15 parts was used (PTV). To measure PTV dose conformance, homogeneity, and the quantities of normal tissues treated, dose-volume histograms were used to compare plans (DVHs). **Result:** In FiF, the D95 per cent of PTV was  $37.10 \pm 0.48$  Gy, but in IMRT ( $p=0.01$ ) and Hybrid IMRT ( $p=0.01$ ), it was  $39.32 \pm 0.34$  Gy and  $38.39 \pm 0.29$  Gy, respectively. FiF plans have the lowest CI value of  $0.931 \pm 0.026$  compared to IMRT ( $0.981 \pm 0.014$ ) and Hybrid IMRT ( $0.970 \pm 0.013$ ). The homogeneity of IMRT plans ( $0.087 \pm 0.021$ ) was found to be higher than that of the other two planning techniques ( $0.111 \pm 0.013$  [FiF,  $p=0.016$ ],  $0.107 \pm 0.021$  [hybrid IMRT,  $p=0.056$ ]). **Conclusion:** Hybrid IMRT treatment plans for the ca-breast are recommended because they provide superior and comparable PTV dose coverage and OAR sparing than IMRT and FiF plans. Hybrid IMRT plans have lower MU, BOT, and a smaller dosage area.

**POLICY MODEL FOR UTILIZING GREEN OPEN SPACE IN BANDAR LAMPUNG  
CITY DEVELOPMENT****Pitojo Budiono****Nadia K Nisa Alfathan****Harjuno Saputro****Adella Putri Aprialiani****ABSTRACT**

Green Open Space is a serious problem in every city in Indonesia, due to the rapid population growth and currently reaches 275,361,267 people. Meanwhile, the total population in Lampung Province as of August 2022 is 6,560,300 people. The consequence of population growth is that the area of green open space is the spearhead for land conversion for development. The development of a city should and should be followed by the construction of public and supporting facilities for economic, social and cultural growth. The dilemmatic government policy related to sustainable development needs to be pursued a development model that is adaptive to the needs and developments. An urban area that becomes an urban area that promises a better life and welfare. The phenomenon of environmental damage in Lampung continues to increase, green open space which is only 11.8% is a challenge for all citizens to get a good microclimate. Problems and challenges of physical and environmental facilities and infrastructure become serious problems, such as slum settlements, hills being barren or land conversion, garbage, flooding are complex problems. Development that meets the needs of its citizens which is the responsibility of the government cannot be transferred. Therefore, the implementation of policies that tend to defeat green space and the environment, and this seems to be a constant model in every leadership period that cannot be avoided. The quality of the green city of Bandar Lampung is a question that will be sought through the application of the Square Equation Model SMART PLS, which will find direct and indirect models of the influence of economic development, social development and environmental development.

**Keywords:** Green Open Space, Greencity, Policy Model.

**LOCAL WISDOM "PI'IL PESENGGIRI" FROM LAMPUNG AS A FILTER FOR

Science, Bandar Lampung, Indonesia***Harjuno Saputro***University of Lampung, Faculty of Social and Political Sciences, Master of Government  
Science, Bandar Lampung, Indonesia***Adella Putri Aprialiani***University of Lampung, Master of Environmental Science, Bandar Lampung, Indonesia***ABSTRACT**

Local wisdom is a very specific and unique value system in today's modern life. Local wisdom, which is based on the agreement of noble values, must be maintained as a cultural feature and identity. Lampung's typical value system in life uses "Pi'il Pesenggiri" which is a guideline to behave not only towards fellow humans but also to the natural surroundings. Radicalism has become a discourse of new values that is very hard and has firm boundaries with exclusive group forms and is very similar to local culture, because the nature of radicalism seeks to change the value order of truth beliefs trying to create an extreme new value order where the point is to destroy the old value system and build a paradigm. new oriented idea of a new value order. Radicalism is a global agenda in every country and has the potential to become a destroyer of the integrity of the nation, because with the local wisdom Pi'il Pesenggiri becomes the basis of regional culture that is able to filter radical values to change cultural values in maintaining the integrity of the nation.

**Keywords:** Local wisdom, Radicalism, Piil Pesenggiri

**THE ROLE OF WOMEN IN SOCIAL LIFE IN THE COUNTRY OF ANDALUSIA****Dr. Bahaa Mousa Habeeb***University of Kufa / College of Education for Girls***ABSTRACT**

Women represent a social, political and cultural position in Andalusian society in general and her life in particular through her participation in poetry clubs and the participation of men on the political stage of Andalusia directly or indirectly, so her political activity was through her influence on princes, rulers and caliphs, The Arab woman in Andalusia was also characterized by her courage and her courage in confronting princes and rulers and presenting her complaints freely and steadfastly. In addition, the Andalusian woman was interested in her external appearance and adornment. It was known that the women of Andalusia were greatly interested in adornment and demonstrated with gold and brocades, and the clothes differed according to the classes of Andalusian society, in addition to that they used decorations, ornaments, jewelry and the most expensive types of perfumes made of musk, amber, etc. And Andalusian women were famous for their beauty. The softness of her voice and sweetness, as she was preferred by many rulers, princes and polite people to sing more than men in forums and in education houses, and she was educated and given great attention by educators and teachers, so Andalusian women represented half of Andalusian society. The nature of the research necessitated dividing it into four sections and a focused conclusion that dealt with the first section dividing Andalusian women into different classes, each layer having its place and its role in life in Andalusia and its effects. Andalusian society and how the customs of engagement and marriage were carried out in the Andalusian society and the smallest details that take place between the father of the bride and the groom, in addition to that we shed light on the most important family problems in the Andalusian society (divorce) and everything related to it from child custody and divorce expense and what are the reasons that lead to divorce, The third topic was related to her clothes, her adornment, her interest in her external appearance and the adornment with gold, and he mentioned the most famous Andalusian clothes, the most prominent of which were the lace, the buttons, the shirts, and others. While the fourth topic focused on the role of women in political, cultural and intellectual life, she had a prominent role in influencing rulers and princes, as she was characterized by her courage and feet in the face of princes. As for the intellectual and cultural, women were famous poets in Andalusia and excelled in various sciences. The research relied on a group of important publications and references that enriched it with many important opinions and ideas, perhaps the most prominent of which are: Ibn Hazm Al-Andalusi in his book The Letters of Ibn Hazm, Shawish and Totah in their treatise entitled The Woman in Andalusia, and Al-Maqri in his book Nafh Al-Tayyib from the moist branch of Andalusia. that I have succeeded in accomplishing this research, and it is sufficient for me to have worked , God hard .

**JUVENILE CRIME IN INDIA: A SOCIO-PSYCHIC STUDY****Libina M H***Research Scholar, University Of Kerala, Kariavattom, India***ABSTRACT**

Tracing out the standard of living and social conditions of women and children in contemplation with historical antecedents the respective categories are treated a vulnerable in nature. They have not been given equitable status in comparison with their counterparts, to a considerable extent. Constitution of India, 1950 envisages social justice in this context the dilapidated condition of women and children. Law is an apparatus to social changes. The metamorphosis of crime across time is different. As time passes the multitude of crimes changes in the way. While analysing the time period it shows drastic differences in the status of crimes. Crimes defines no age .It doesn't have any spatial or temporal difference. Children are adult in making. The category, child itself is a social construction. They do commit crime and termed as offenders. As per rule of law everybody is equal in the eyes of law. So children are no exemption if they commit crime. Children who commit crime traditionally labelled as "deviants". Delinquent is a term used by the British and Australian criminologists tend towards juvenile of "youth offender". Children are defined by their physiological status, relatively limited experience, growing Youth offenders were created in their childhood. While coming to gender boys were more likely to commit crimes. Passing of time the trend tends to choose both. The gender gap narrowed because of the "greater gender equality". Each children needs to be treated differently to understand their specific circumstances. The paper analyses the circumstances, the law and conditions of a child offender to conduct a crime in a psychological and social perspective. It also gave emphasis on the Juvenile System in India.

**Keywords:** Juvenile Justice , Law, Gender, Crime , Psychology

**ESKİŞEHİR BASTNASİT CEVHERİNDE BULUNAN FLUORİTİN  
ZENGİNLEŞTİRİLMESİ**

**İbrahim DOLAK**

*Doç. Dr., Dicle Üniversitesi, Diyarbakır Teknik Bilimler Meslek Yüksekokulu,  
ORCID No: 0000-0002-2095-7614*

**ÖZET**

Fluorit kalsiyum florür bileşiminde ( $\text{CaF}_2$ ) olup saf olduğunda % 51.1 kalsiyum, % 48.9 flor ihtiva eder. Uluslar arası ticari ismi ‘fuorspar’ olan fluoritin esas elementi flordur. Doğal fluorit kuvars, barit, kalsit, galenit, sfalerit, siderit, sölestit, kalkopirit ve diğer sülfür mineralleri ile birlikte bulunur. Fluorit başlıca demir-çelik sanayiinde, alüminyum sanayiinde, kimya sanayiinde (HF ve türevlerinin yapımında) ve seramik sanayiinde olmak üzere cam, mobilya ve çimento sanayi dahil 30’dan fazla sanayii dalında yaygınca kullanılmaktadır. Bu çalışma Eskişehir ili Sivrihisar ilçesi sınırları içinde bulunan ve ülkemiz ekonomisi açısından oldukça büyük bir öneme sahip olan nadir toprak element içerikli bastnazit cevherinde bulunan fluoritin ( $\text{CaF}_2$ ) flotasyon işlemi ile seçici olarak cevherden ayırdıktan sonra çözelti ortamında zenginleştirilmesi amacıyla yapılmıştır. Bu çalışmanın en önemli tarafı ise flotasyondan önce cevherin kristal yapısını değiştirerek belli bir tanecik boyutunda serbestleşme derecesini sağlamak ve daha sonra elde edilen örneğin flotasyonla fluorit ( $\text{CaF}_2$ ) içeriğini ana mineralden yüksek verimle ayırmak olmuştur. Cevherin kristal yapısını değiştirerek belli bir boyutta serbestleşme derecesini arttırmak amacıyla yaptığımız işlem sülfürleme işlemidir. Bu amaçla yapılan deneylerde sülfürleme işlemine sıcaklık, süre ve  $\text{H}_2\text{S}$  miktarının etkisi, flotasyon verimine ise pH, toplayıcı miktarı, pülp yoğunluğu ve bazı canlandırıcı ve bastırıcı reaktiflerin etkisi incelenmiş olup, tespit edilen optimum koşullarda cevher içerisinde bulunan fluoritin ( $\text{CaF}_2$ ) flotasyon verimi % 94,6 olarak tespit edilmiştir. Bu şekilde elde edilen konsantrede Barit tenörü % 31,79’dan % 98,85’e kadar çıktığı tespit edilmiştir.

**Anahtar Kelimeler:** Bastnazit; Fluorit, Flotasyon; Zenginleştirme

**ENRICHMENT OF FLUORITE FROM ESKİŞEHİR BASTNAESITE ORE****ABSTRACT**

Fluorite is in calcium fluoride composition ( $\text{CaF}_2$ ) and when pure it contains 51.1 % calcium and 48.9 % fluorine. The main element of fluorite, whose international trade name is 'fuorspar', is fluorine. Natural fluorite occurs with quartz, barite, calcite, galenite, sphalerite, siderite, celestite, chalcopryrite, and other sulfide minerals. Fluorite is widely used in more than 30 industries including glass, furniture and cement industry, mainly in the iron and steel industry, aluminum industry, chemical industry (making HF and its derivatives) and ceramic industry. This study was carried out in order to enrich the fluorite ( $\text{CaF}_2$ ) found in bastnasite ore containing rare earth element, which is located within the borders of Sivrihisar district of Eskişehir province, which is of great importance for the economy of our country, in solution medium after selectively separating it from the ore by flotation process. The most important aspect of this study was to change the crystal structure of the ore before flotation, to provide a certain degree of liberation at a certain particle size, and then to separate the fluorite ( $\text{CaF}_2$ ) content of the obtained sample from the main mineral with high efficiency by flotation. The process we do in order to increase the degree of liberation in a certain size by changing the crystal structure of the ore is the sulphidation process. In the experiments carried out for this purpose, the effect of temperature, time and  $\text{H}_2\text{S}$  amount on the sulphuring process, the effect of pH, collector amount, pulp density and some invigorating and suppressive reagents on the flotation efficiency were investigated, the flotation efficiency of fluorite ( $\text{CaF}_2$ ) in the ore in the determined optimum conditions was determined as 94.6%. In the concentrate obtained in this way, it was determined that the barite grade increased from 31.79% to 98.85%.

**Keywords:** Bastnaesite; Fluorite; Flotation; Enrichment

## ALEVİLİKLE İLGİLİ TOPLUMSAL ALANDA GÖRÜNEN ÇATIŞMA BOYUTLARI: YOUTUBE YORUMLARI ÖRNEĞİ

### ÖZET

Sosyolojide toplumu birbiri ile uyumlu olarak gören düşüncelere karşın çatışmanın da doğal olarak bulunduğunu öne süren yaklaşımlar bulunmaktadır. Bu bağlamda toplumsal alanı açıklama yollarından biri de çatışmadır. Bireyler tarihsel süreç içinde toplumsal ilişkiler kurarak birbirinden farklı toplumsal kimlikler benimserler. Söz konusu kimlikler medeniyet, etnik, milli ya da dini temelli olabilmektedir. Ayrıca bu kimliklerin bireyler arası ilişkilerde çeşitli çatışma unsurlarına dönüşme potansiyeli bulunmaktadır. Dini kimlikler diğer toplumsal kimliklerden oldukça farklı motivasyon kaynaklarına sahiptir. Diğer yandan bireylerin güvenlik, saygınlık veya iç huzur gibi ihtiyaçlarını karşılaması yanında vahye dayanması nedeni ile çatışmanın meşrutiyetini güçlendirici işlev görür. Alevi-Sünni çatışması dini kimliğe dayalı bir çatışmadır. Osmanlı-Safevi arasında süregelen egemenlik mücadelesi ile siyasal olarak başlatılabilecek Alevi-Sünni çatışması, Alevilerin yeni kurulan Cumhuriyet'in laik devlet yapısı ile uyumlu bir görünüm sergilemeleri nedeni ile yumuşamış gibi görünse de 1950'li yıllarda devleti yönetenlerin dinsel temeldeki tutumları ve laiklikten ödün vermeleri nedeni ile yeniden görünür olmuştur. Devletin giderek daha fazla Sünni din anlayışını benimsemesi nedeni ile 1980 ve sonrasında Alevilerin korku ve kaygıları giderek artmış ve söz konusu çatışmayı pekiştirici bir rol üstlenmiştir. 2002 yılında iktidara gelen Ak Parti, farklı yerel kültürel ve dini unsurları kapsayıcı bir politika izlemişse de bugün toplumsal boyutta Alevi-Sünni karşıtlığının sonlandığını söylemek iyimser bir yaklaşım olur. Bu çalışmanın amacı Alevi-Sünni çatışmasının bugünkü görünürlüğüne dair toplumsal boyutların ortaya konmasıdır. Daha açık bir ifade ile Aleviler ile Sünnilerin toplumsal zeminde mutabakat noktalarını zayıflatan keskin uçların tespit edilmesi amaçlanmıştır. Bu amaç doğrultusunda "Soramazsın: Alevi" isimli Youtube programı altında yapılan 20.566 izleyici yorumu nitel araştırma tekniklerinden içerik analizi ile yorumlanmıştır. Programın seçilme nedeni hem izlenme oranının yüksek olması hem de yorumlarda Aleviliğe dair toplumsal boyutta pek çok çatışma ögesinin ortaya çıkmasıdır. Çalışma sonucunda Sünniler ile Aleviler arasında halen yoğun bir çatışma, hatta hakaret dilinin hâkim olduğu tespit edilmiştir. Ortaya çıkan bu çatışma unsurları "Dört Halife'ye Karşı Tutum, Muaviye'ye "Hazreti" Hitabının Kullanılması, Osmanlı İmparatorluğu'na Olumsuz Yaklaşım, Yavuz Sultan Selim, Cem Evlerinde Resim Bulunması, Temel İbadet Ritüellerinde Ortaya Çıkan İhtilaflar, Kadının Toplumsal Alanda ve İbadethanelerde Görünürlüğü, İslam Kültüründe Cami Olup Olmadığı ve Kız Alıp Verme olarak tespit edilmiştir.

**Anahtar Kelimeler:** Kimlik, Alevi, Sünni, Çatışma

**DIMENSIONS OF CONFLICT IN THE SOCIAL AREA RELATED TO ALAEVITY:  
EXAMPLE OF YOUTUBE COMMENTS****ABSTRACT**

In sociology, there are approaches that suggest that conflict naturally exists, despite the ideas that see society as compatible with each other. In this context, one of the ways of explaining the social sphere is conflict. Individuals adopt different social identities by establishing social relations in the historical process. These identities can be based on civilization, ethnicity, nationality or religion. In addition, these identities have the potential to turn into various elements of conflict in interpersonal relations. Religious identities have quite different sources of motivation from other social identities. On the other hand, besides meeting the needs of individuals such as security, dignity or inner peace, it strengthens the legitimacy of the conflict because it is based on revelation. The Alawite-Sunni conflict is a conflict based on religious identity. The Alevi-Sunni conflict is started politically with the ongoing struggle for sovereignty between the Ottomans and the Safavids. This conflict was softened by the fact that the Alevis were in harmony with the secular state structure of the newly established Republic. However, in the 1950s, it became visible again due to the religious-based attitudes of the rulers and their compromising from secularism. Due to the state's adoption of more and more Sunni religious understanding, the fear and anxiety of Alevis increased gradually in 1980 and after, and it played a role in reinforcing the conflict in question. The AK Party, which came to power in 2002, followed a policy that included different local cultural and religious elements. However, it would be an optimistic approach to say that the Alawite-Sunni opposition in the social dimension has come to an end today. The aim of this study is to reveal the social dimensions of the current visibility of the Alevi-Sunni conflict. To put it more clearly, it is aimed to identify the sharp ends that weaken the consensus points of Alawites and Sunnis on the social ground. For this purpose, 20,566 viewer comments made under the Youtube program called "You Can't Ask: Alevi" were interpreted with content analysis, one of the qualitative research techniques. The reason for choosing the program is both the high rate of viewing and the emergence of many elements of conflict in the social dimension regarding Alevism in the comments. As a result of the study, it has been determined that there is still an intense conflict between Sunnis and Alawites, and even the language of insult is dominant. These emerging conflict elements are "Attitude towards the Four Caliphs, Use of the Address "His Excellency" to Muaviye, Negative Approach to the Ottoman Empire, Yavuz Sultan Selim, Finding Paintings in Cem Houses, Basic Worship Rituals, The Visibility of Women in the Social Area and Places of Worship, Whether there is a Mosque in Islamic Culture and Daughter Exchange have been determined.

**Keywords:** Identity, Alawite, Sunni, Conflict

### **ÖZET**

İyi huylu mikst tümör, genellikle kıkırdak ve/veya kemik oluşumları, değişken miktarlarda fibröz stroma üreten mezenkimal hücre odaklarıyla hem epitelyal (duktal) hem de miyoepitelyal proliferasyona sahiptir. Miyoepitelyal/bazal hücrelerin kıkırdak, kemik ve/veya yağ dokusu üretebilen mezenkimal hücrelere farklılaştığı bilinmektedir. Bu olgu sunumunda, 4 yaşlı, dişi melez bir köpeğin torak 1 ve 2. inci meme lobunundan iki adet kitle cerrahi operasyonla alındı ve Patoloji Anabilim Dalına getirildi. Makroskopik olarak, ilk kitle 17x28 çapında, kesit yüzünde boz beyaz renkli alanlar ve kistik oluşumlar ile sarımsı kırmızı renkli, pis kokulu bir içerik vardı. İkinci kitle, 7x8 cm ebatlarında, sert kıvamlı ve kitlenin kesit yüzü sarımsı beyaz renkteydi. Histopatolojik incelemeler için, %10'luk formaldehit solusyonunda tespit edildi ve ardından rutin doku takibi prosedürü uygulandı ve parafine bloklandı. Parafin dokulardan kesitler mikrotom cihazında 5 µm kalınlığında alındı ve Hematoksilen-eosin boyama yöntemine göre boyandı. Mikroskopik incelemede, ductus epitellerinde ve miyoepitel hücrelerinde proliferasyon ile kıkırdak ve/veya kemik odakları vardı. Epitel, küboidal ila kolumnar olan ve orta miktarda eozinofilik sitoplazmaya sahip hücrelerle döşeliydi. Miyoepitelyal hücreler, iğsi, yıldızsı ve yuvarlak hücrelerden oluşuyordu ve bol miktarda hücre dışı matris (miksoid matris) sahipti. Ayrıca miyoepitelyal hücreler tarafından oluşturulan kıkırdağın endokondral ossifikasyonu görüldü ve bu alanın bağ dokusuyla çevrili olduğu belirlendi. Sonuç olarak yapılan incelemede, benign mix tümör olduğu belirlenmiştir.

**Anahtar kelimeler:** Bening mikst tümör, meme, köpek

**A CASE OF BENIGN MIXED MAMMARY TUMOR IN A DOG****ABSTRACT**

The benign mixed tumor has both epithelial (ductal) and myoepithelial proliferation with mesenchymal cell foci producing variable amounts of fibrous stroma, usually with cartilage and/or bone formations. Myoepithelial/basal cells are known to differentiate into mesenchymal cells capable of producing cartilage, bone, and/or adipose tissue. In this case report, two masses were surgically removed from the 1st and 2nd mammary lobes of a 4-year-old female crossbred dog and brought to the Pathology Department. Macroscopically, the first mass was 17x28 in diameter, gray white areas and cystic formations were found on the cross-sectional surface, and there was also a yellowish red colored, foul-smelling content. The second mass was 7x8 cm in size, with a hard consistency, and the cross-sectional surface was yellowish white. For histopathological examinations, it was fixed in 10% formaldehyde solution, followed by routine tissue follow-up procedure and paraffin blocking. Sections from paraffin tissues were taken at a thickness of 5µm in a microtome device and stained according to the hematoxylin-eosin staining method. In microscopic examination, proliferation of ductal epithelium and myoepithelial cells and cartilage and/or bone foci were present. The epithelium was lined with cells that were cuboidal to columnar and had a moderate amount of eosinophilic cytoplasm. Myoepithelial cells consisted of spindle, stellate and round cells and had abundant extracellular matrix (myxoid matrix). In addition, endochondral ossification of the cartilage formed by myoepithelial cells was observed and it was determined that this area was surrounded by connective tissue. As a result, it was determined that it was a benign mixed tumor.

**Keywords:** Bening mixed tumor, breast, canine

**BUĞDAY BİTKİSİNDE STRES TABANLI VE DNA METİLASYONU ÜZERİNE  
YAPILAN ÇALIŞMALARIN BİBLİYOMETRİK ANALİZİ**

**ÖZET**

Buğday bitkisi, besin-enerji profili ve dünya genelindeki kullanımı, onu dünyanın en önemli tahıl ürünlerinden biri yapmaktadır. Dünya çapında değişen iklim şartlarıyla birlikte bitkilerde stres kaynaklı düşük verimler elde edilmektedir. Stres faktörleri, dünya genelinde bitki büyüme ve gelişimini etkileyen, ürün verimliliğini kısıtlayan sorunların başında gelmektedir. Bu nedenle bitki büyümesini teşvik edecek, bitki verim ve kalitesini arttıracak çeşitli çalışmalar yürütülmektedir. Bu çalışmada Web of Science (WoS) veri tabanı kullanılarak stres tabanlı yapılan çalışmaların bibliyometrik analizi Vosviwer programı aracılığıyla görselleştirilmesi amaçlanmıştır. WoS veri tabanından “Wheat and Stress” anahtar kelimeleriyle yapılan araştırma sonucunda 2002-2022 yılları arasında toplamda 21,974 adet döküman elde edilmiştir. “Wheat, Stress” anahtar kelimelerine “DNA methylation and CRED” anahtar kelimeleri eklendiğinde toplamda 6 adet çalışmanın yapıldığı belirlenmiştir. “Wheat” dışında sadece “DNA methylation ve CRED” kelimeleri ile yapılan aramada ise sadece 32 adet çalışma olduğu belirlenmiştir. 2002 yılından beri buğday bitkisinde yapılan DNA metilasyonu ve CRED çalışmaları toplamın yaklaşık %20’sini oluşturmaktadır. Ancak DNA metilasyon çalışmaları 2002 yılından beri buğday bitkisinde yapılan stres tabanlı çalışmaların yaklaşık %0.02’sini oluşturmaktadır. Sonuç olarak dünyada en çok üretilen tahıl ürünü olan buğday bitkisinde bu çalışmaların artırılması düşünülmektedir.

**Anahtar kelimeler:** Buğday, DNA metilasyon, CRED, Vosviwer,

**BIBLIOMETRIC ANALYSIS OF STRESS-BASED AND DNA METHYLATION STUDIES IN WHEAT PLANT****ABSTRACT**

The wheat plant, nutrient-energy profile, and worldwide use make it one of the world's most important cereal crops. With the changing climatic conditions around the world, low yields due to stress are obtained in plants. Stress factors are among the leading problems affecting plant growth and development and limiting crop productivity worldwide. For this reason, various studies are carried out to promote plant growth and increase plant yield and quality. This study aims to visualize the bibliometric analysis of stress-based studies using the Web of Science (WoS) database through the Vosviewer program. As a result of the research conducted with the keywords "Wheat and Stress" from the WoS database, 21,974 documents were obtained between 2002 and 2022. When the keywords "DNA methylation and CRED" were added to the keywords "Wheat, Stress," it was determined that a total of 6 studies were conducted. The search made with only the words "DNA methylation and CRED" other than "Wheat" determined that there were only 32 studies. DNA methylation and CRED studies carried out in wheat plants since 2002 constitute approximately 20% of the total. However, DNA methylation studies have comprised about 0.02% of the stress-based studies conducted on wheat plants since 2002. As a result, it is thought to increase these studies on the wheat plant, the most produced cereal product in the world.

**Keywords:** Wheat, DNA methylation, CRED, Vosviewer,

## **SÜRDÜRÜLEBİLİR TARIM VE ÇEVRE KİRLİLİĞİ**

### **ÖZET**

Sürdürülebilir tarım kavramı doğal kaynakların korunması, çevreye zarar vermeyen tarımsal teknolojilerin kullanıldığı uzun dönem sürmesi planlanan bir tarımsal alt yapının oluşturulması ve geliştirilmesidir. Sürdürülebilir tarımın amaçları, bir yandan tarımda verimliliği korurken diğer yandan da çevreye verilen zararı azaltarak, kısa ve uzun dönemde ekonomiyi canlı tutmak, tarımla uğraşanların yaşam kalitesini yükseltmek, sürdürülebilir bir yaşam için geleceğe yönelik planlamalar yapmak ve bu planların özellikle insanların yaşam standartlarını iyileştirecek nitelikte olmasına katkı sağlamaktır. Sürdürülebilir bir tarım için doğal kaynakların korunması zorunludur. Aksi halde bilinçsizce yapılan uygulamalar sonucunda insanların gelecekte doğal kaynaklardan mahrum kalması kaçınılmaz olacaktır. Dünyada bilinçsizce yapılan bu uygulamalar sonucunda doğal kaynaklar hızla tükenirken, üretim ve tüketimden kaynaklı atıkların yeterli önlem alınmadan doğaya atılması çevre kirliliğinin oluşmasına da ortam sağlamaktadır. Doğal kaynakların bilinçsiz kullanılması çevre kirliliğinin en önemli nedenlerindedir. Bu nedenle öncelikle bu konudaki hedefler iyi belirlenmeli ve açıkça ortaya konulmalıdır. Çevrenin ve doğal kaynakların tahrip edilmeden kullanılması amacıyla özellikle tarımsal faaliyetlerde toprak işlemeden başlayarak, üretimin her aşamasının kontrol edildiği sürdürülebilir tarım uygulamaları yaygınlaştırılmalıdır. Bu derleme çalışmasında dünyada giderek artan çevre kirliliğinin sürdürülebilir tarım kapsamında incelenmesi amaçlanmıştır.

**Anahtar kelimeler:** Sürdürülebilir tarım, çevre kirliliği, doğal kaynaklar

**SUSTAINABLE AGRICULTURE AND ENVIRONMENTAL POLLUTION****ABSTRACT**

The concept of sustainable agriculture is the protection of natural resources, the creation and development of an agricultural infrastructure that is planned to last for a long time, in which agricultural technologies that do not harm the environment are used. The aims of sustainable agriculture are to keep the economy alive in the short and long term, to increase the quality of life of those engaged in agriculture, to make future plans for a sustainable life, and to contribute to the quality of these plans to improve the living standards of people, while maintaining productivity in agriculture on the one hand, and reducing the damage to the environment on the other. is to provide. Conservation of natural resources is essential for a sustainable agriculture. Otherwise, it will be inevitable for people to be deprived of natural resources in the future as a result of unconscious practices. As a result of these unconscious practices in the world, natural resources are rapidly depleted, while the wastes from production and consumption are thrown into the nature without adequate precautions, which also creates an environment for environmental pollution. The unconscious use of natural resources is one of the most important causes of environmental pollution. For this reason, first of all, the objectives on this subject should be well defined and clearly stated. In order to use the environment and natural resources without destruction, sustainable agricultural practices in which every stage of production is controlled, especially starting from tillage in agricultural activities, should be expanded. In this review study, it is aimed to examine the increasing environmental pollution in the world within the scope of sustainable agriculture.

**Keywords:** Sustainable agriculture, environmental pollution, natural resources

## **KAFA TRAVMALI BİR ÇOBAN KÖPEĞİNDE KRANIYOTOMİ OPERASYONU VE DEĞERLENDİRİLMESİ**

**Dr. Öğr. Üyesi Ömer KIRGIZ**

*Orcid ID: 0000-0002-0222-1363*

*Veteriner Fakültesi, Klinik Bilimler Bölümü, Cerrahi Anabilim Dalı, Hatay*

### **ÖZET**

Kafa travmaları hem insan hem de hayvanlarda yüksek mortalite gösterir. Acil müdahale gerektiren bir durumdur. Hayvanlarda kafa travmaları genellikle motorlu taşıt kazaları, yüksekten düşme, ezilme, ateşli silah yaralanmaları ve diğer hayvanlardan gelen saldırılar sonucu meydana gelir. Travma sonrası ölüm genellikle intrakraniyal basınçtaki artıştan meydana gelir. Hastalarda bilincin kapalı olması, nistagmus, anizokori ve schiff sherrington gibi belirtiler kafa travmasını doğrulayan klinik bulgulardır. Beşeri hekimlikte teknolojinin ilerlemesiyle birlikte travmatik beyin hasarı tedavisi için temel tedavi yolları geliştirilse, veteriner hekimlikte uygun tedavi halen tartışma konusudur. Ayrıca, retrospektif veya prospektif klinik veri eksikliği nedeniyle veteriner hekimler deneysel araştırmalara, insan kafa travması çalışma sonuçlarına odaklanmış ya da kişisel deneyimleri sonucunda netice almışlardır. Şiddetli kafa travması olan evcil hayvanlarda, veteriner hekimin asıl amacı hastayı hayatta tutmak için uygun ve hızlı bir tedavi sürecine başvurmak ve travma öncesindeki normal yaşam fonksiyonlarını yeniden kazandırmaktır. İntrakraniyal basınç oluşturacak durumlar için yapılan müdahalelerden olumlu sonuçlar alınmaktadır. Dolayısıyla yapılan tedavi uygulamasına dair verilerin paylaşılması ve klinik veteriner hekimlerine doğru uygulamanın yaygınlaştırılması ve ölümleri azaltmada katkı sağlamaktadır. Bu çalışmada taşıt çarpması sonucu bilinci kapalı halde Hatay Mustafa Kemal Üniversitesi Veteriner Sağlık Uygulama ve Araştırma Merkezi Hastanesi'ne getirilen 2 aylık erkek çoban melezi bir köpekte kraniyotomi operasyonu ve sonrasında 7 günlük iyileşme sürecinin aktarılması hedeflenmiştir. Bu kapsamda parçalı kafatası kırığı belirlenen çoban köpeği melezi çalışmanın materyalini oluşturmuştur. İlk yardım ve acil müdahalesi uygulanan köpeğin kraniyotomi operasyonu sonrası 7 günlük verileri kayıt altına alınmıştır.

Bu çalışma kafa travması bulunan hayvanlarda intrakraniyal basınçtan kaynaklanan ölümleri azaltmaya katkı sağlayabilecek bilgi ve tecrübeler sunulmuştur.

**Anahtar Kelimeler:** Kafa Travması, İntrakraniyal Basınç, Kraniyotomi, Köpek

**CRANIOTOMY OPERATION AND EVALUATION IN A HEAD-INJURED SHEPHERD DOG****ABSTRACT**

Head injuries show high mortality in both humans and animals. It is a situation that requires emergency action. Head injuries in animals often occur as a result of motor vehicle accidents, falls, crushes, gunshot and attacks from other animals. Post-traumatic death usually results from an increase in intracranial pressure. Symptoms such as unconsciousness, nystagmus, anisocoria and schiff sherrington are clinical findings confirming head trauma. Although basic treatment methods have been developed for the treatment of traumatic brain injury with the advancement of technology in human medicine, appropriate treatment in veterinary medicine is still a matter of debate. In addition, due to the lack of retrospective or prospective clinical data, veterinarians focused on experimental research, human head trauma study results, or drew conclusions from personal experience. In domestic animals with severe head trauma, the main goal of the veterinarian is to resort to an appropriate and prompt treatment to keep the patient alive and to restore normal life functions before the trauma. Positive results are obtained from the interventions made in cases of intracranial pressure. Therefore, sharing the data on the treatment practice and spreading the right practice to clinical veterinarians contribute to reducing deaths. In this study, it was aimed to convey the craniotomy operation and the 7-day recovery period after a 2-month-old male shepherd crossbreed dog, who was brought to Hatay Mustafa Kemal University Veterinary Health Application and Research Center Hospital as a result of a vehicle crash. In this context, the shepherd dog crossbred with a fragmented skull fracture formed the material of the study. After the craniotomy operation, the 7-day data of the dog, which was given first aid and emergency action, were recorded. In this study, information and experiences that can contribute to reducing deaths from intracranial pressure in animals with head trauma are presented.

**ABSTRACT**

The effectiveness of *Clonostachys rosea* against Verticillium wilt (*Verticillium dahliae*) and early blight (*Alternaria solani*) diseases, as the two most important problems in tomato cultivation with significant economic losses, was determined. It was determined that *C. rosea* was effective on *A. solani* and *V. dahliae* and suppressed mycelial growth. Also, the *C. rosea* on wheat grains inoculated to plants at 20 g, 30 g, and 40 g concentrations before and after pathogens inoculation. Then, fungal discs (2 mm in diameter) from *V. dahliae* growing colonies were inoculated on the host plant root zone. *A. solani* was also inoculated ( $1 \times 10^6$  conidia ml<sup>-1</sup>) by spraying the foliar parts of the plants. Results showed that *V. dahliae* caused 76.0% disease severity in control plants, while the disease severity indices were 58.3%, 55.3%, and 25.3% at 20 g, 30 g, and 40 g *C. rosea* application, respectively. In *A. solani* x *C. rosea* treatments, the disease severities were determined as 96.6%, 63.3%, 43.6% and 46.6% in control, 20 g, 30 g, and 40 g application of *C. rosea*, respectively. The pathogen suppression rates by *C. rosea* at 30g application dose was 54.8% against *A. solani* and at 40 g application dose was 66.6% against *V. dahliae*. The effects of *C. rosea* on plant growth parameters were also determined. Results showed that *C. rosea* had a positive effect on the morphological parameters in tomato plants.

**Keywords:** *Alternaria solani*, Biological control, *Clonostachys rosea*, Tomato, *Verticillium dahliae*

**ÖZET**

Bu çalışma Ocak 2022 tarihinde yapılmış ve Kızılırmak Nehri'nde yaşayan *Barbus anatolicus*'un karaciğer, solungaç ve kas dokularında As, Mn, Co, Ni, Cu ve Cd gibi ağır metal konsantrasyonlarının belirlenmesi amaçlanmıştır. Metal analizleri ICP-MS/MS ile yapılmıştır. Cihazın doğruluğunu saptamak amacıyla DORM-2 standart referans materyalinden metal analizi yapılarak, elde edilen değerler Kanada Ulusal Konseyi tarafından verilen değerlerle kıyaslanmıştır. Analizi yapılan tüm metaller her dokuda tespit edilmiştir. Yapılan çalışmaya göre ortalama ağır metal değerleri göz önüne alındığında *B. anatolicus*'un dokularındaki metal birikimi sırasıyla karaciğer dokusunda  $Cu > Mn > Ni > As > Cd > Co$ , solungaç dokusunda  $Mn > Cu > Ni > As > Co > Cd$  ve kas dokusunda  $Ni > Cu > As > Mn > Cd > Co$  olarak belirlenmiştir. As, Ni ve Cd konsantrasyonları kas dokusunda, Cu konsantrasyonu karaciğerde, Mn konsantrasyonu ise solungaçlarda önemli farklılık göstermiştir ( $p < 0.05$ ). Dokular arasında sadece Co birikiminin istatistiksel açıdan önemli bir farklılık göstermediği tespit edilmiştir ( $p > 0.05$ ). Çalışmamızda ayrıca balık boy ve ağırlığı ile metal miktarları arasındaki ilişkiyi belirlemek amacıyla Pearson korelasyon testi uygulanmıştır. Dokuya ve metale bağlı olarak değişmek suretiyle genel olarak metal seviyesi ile balık boy ve ağırlığı arasındaki korelasyonların net ve tutarlı olmadığı saptanmıştır. Sonuçların bazıları Dünya Sağlık Örgütü, Gıda Tarım Örgütü ve Türk Gıda Kodeksi tarafından verilen limit değerlerin üstünde bulunmuştur. Bu çalışma, gelecekte tarımın gelişmesine bağlı olarak bu bölgede bir tehlikenin oluşabileceğini göstermektedir.

**Anahtar Kelimeler:** Ağır Metaller, Kızılırmak Nehri, *Barbus anatolicus*, Balık dokuları, Balık boyutu.

**RELATIONSHIP OF CONCENTRATIONS OF SOME HEAVY METALS WITH FISH SIZE IN TISSUES OF FISH FROM THE KIZILIRMAK RIVER (TURKEY)****ABSTRACT**

This study was carried out in January 2022 and it was aimed to determine the heavy metal concentrations such as As, Mn, Co, Ni, Cu and Cd in the liver, gill, and muscle tissues of *Barbus anatolicus* living in the Kızılırmak River. Metal analyzes were performed with ICP-MS/MS. In order to determine the accuracy of the device, metal analysis was performed by the DORM-2 standard reference material and the values were compared with the values given by the Canadian National Council. All analyzed metals were detected in each tissue. According to the study, when the average heavy metal values are taken into account, the metal accumulation in the tissues of *B. anatolicus* is Cu > Mn > Ni > As > Cd > Co in the liver tissue, Mn > Cu > Ni > As > Co > Cd in the gill tissue and Ni in the muscle tissue. > Cu > As > Mn > Cd > Co. As, Ni and Cd concentrations differed significantly in muscle tissue, Cu concentrations in liver and Mn concentrations in gills ( $p < 0.05$ ). It was determined that only Co accumulation in tissues did not show a statistically significant difference ( $p > 0.05$ ). In our study, Pearson correlation test was also applied to determine the relationship between fish height and weight and metal amounts. It was determined that the correlations between metal level and fish height and weight were not clear and consistent in general, depending on the texture and metal. Some of the results were above the limit values given by the World Health Organization, Food Agriculture Organization and Turkish Food Codex. This study shows that a danger may occur in this region depending on the development of agriculture in the future.

**ÖZET**

İtalyan çimi, tek yıllık buğdaygildir ve yem bitkileri içerisinde verim oranı yüksektir ve aynı zamanda biçim sayısı da diğer buğdaygil yem bitkilerine oranla daha fazladır. Aynı mevsimde yetişen kışlık baklagil yem bitkileriyle karışım olarak ekildiğinde hayvan rasyonu için kaliteli ve verimli kuru ot alınabilmektedir. Bu araştırma, farklı lokasyonlarda Adi Fiğ (*Vicia sativa*) ve İtalyan çiminin (*Lolium multiflorum* Lam.) farklı karışım oranlarının yeşil ot verimi üzerindeki etkileri belirlemek amacıyla yürütülmüştür. Araştırma Ankara/Yenikent ve Manisa/Beydere lokasyonlarında, 2021-2022 yıllarında tesadüf blokları deneme desenine göre 3 tekrarlamalı olarak yürütülmüştür. Araştırmada, Aneto adi fiğ ve Trinova italyan çimi çeşitleri kullanılmıştır. Araştırmada; yalın Adi fiğ (AF), yalın İtalyan çimi (İÇ), %90 AF+%10 İÇ, %80 AF+%20 İÇ, %70 AF+%30 İÇ, %60 AF+%40 İÇ, %50 AF+%50 İÇ, %40 AF+%60 İÇ, %30 AF+%70 İÇ, %20 AF+%80 İÇ, %10 AF+%90 İÇ olacak şekilde 11 uygulama kullanılmıştır. Araştırma sonunda, en yüksek yeşil ot verimi 3324.4 kg/da verim değeri ile %90 AF %10 İÇ uygulaması ile Manisa/Beydere lokasyonundan elde edilmiştir. En düşük yeşil ot verimi ise 1290.0 kg/da verim değeri ile %90 AF %10 İÇ uygulaması ile Ankara/Yenikent lokasyonundan elde edilmiştir. En yüksek kuru ot verimi 650.47 kg/da değeri ile %90 AF %10 İÇ uygulaması ile Manisa/Beydere lokasyonundan elde edilmiştir. En düşük kuru ot verimi ise 265.90 kg/da verim değeri ile %80 AF %20 İÇ uygulaması ile Ankara/Yenikent lokasyonundan elde edilmiştir. Bu çalışmanın sonucunda karışım olarak ekilen baklagil ve buğdaygil yem bitkilerinin, karasal ve sahil bölgelerinde karışım olarak ekilmelerinin, verim bakımından yalın olarak ekilen hallerinden daha iyi oldukları. Hatta karışım olarak ekilen yem bitkilerinin yalın olarak ekilen baklagillerden yatmaya daha dayanıklı olduklarından verim ve kalite olarak daha avantajlı oldukları tespit edilmiştir.

**Anahtar kelimeler:** Adi fiğ, İtalyan çimi, Karışım, Verim

**THE EFFECT OF MIXED SOWING RATIOS IN DIFFERENT LOCATIONS OF  
COMMON VETCH (*Vicia sativa* L.) AND ITALIAN GRASS (*Lolium multiflorum* L.)  
PLANTED AS MIXED ON FORAGE YIELD**

**ABSTRACT**

Italian grass is an annual grassy and has a high yield among forage crops, and at the same time, the number of forms is higher than other grassy forage crops. When planted as a mixture with winter legume forage crops grown in the same season, high quality and productive hay can be obtained for animal ration. This research was carried out to determine the effects of different mixing ratios of Common Vetch (*Vicia sativa*) and Italian grass (*Lolium multiflorum* Lam.) on green forage yield in different locations. The research was carried out in Ankara/Yenikent and Manisa/Beydere locations, in the years 2021-2022, in a randomized block design with 3 replications. In the research, Aneto common vetch and Trinova Italian grass varieties were used. In the research; plain Common vetch (AF), lean Italian grass (IN), 90% AF+10% IC, 80% AF+20% IC, 70% AF+30% IC, 60% AF+40% IC, 50% AF+50% IC, % 11 treatments were used as 40 AF+60% IR, 30% AF+70% IR, 20% AF+80% IR, 10% AF+90% INT. At the end of the research, the highest green forage yield was obtained from Manisa/Beydere location with a yield value of 3324.4 kg/da with 90% AF 10% İÇ application. The lowest green forage yield was obtained from Ankara/Yenikent location with a yield value of 1290.0 kg/da and 90% AF 10% İÇ application. The highest hay yield was obtained from Manisa/Beydere location, with a value of 650.47 kg/da, with 90% AF 10% internal application. The lowest hay yield was obtained from Ankara/Yenikent location with a yield value of 265.90 kg/da with 80% AF 20% İÇ application. As a result of this study, it was found that the legume and wheat forage crops planted as a mixture were better sown in terms of yield than when planted as a mixture in terrestrial and coastal regions. In fact, it has been determined that forage plants planted as a mixture are more advantageous in terms of yield and quality since they are more resistant to lodging than legumes planted as plain.

**ÖZET**

Ruminant rasyonlarındaki inorganik elementlerin miktar ve oranlarının yanında rasyona kazandırdıkları iyonik yük de yani kation-anyon farklılığı durumu (KAD) da hayvan metabolizmasına etki etmektedir. Bu çalışma kation-anyon değişimlerinin yemlerin sindirimi ve rumen sıvısına etkilerini belirlemek amacıyla in vitro olarak DaisyII inkübatörü kullanılarak gerçekleştirilmiştir. Bu amaçla buğdaygil olarak arpa, baklagil olarak fiğ yoğun yemleri ve buğdaygil olarak arpa samanı, baklagil olarak fiğ samanı kaba yemleri kullanılmıştır. Rumen sıvısı ve yemlerin KAD değerlerini azaltmak için  $CaCl_2$  arttırmak için kaya tuzu kullanılmıştır. İki deneme halinde yürütülen çalışmada 1. denemede rumen sıvılarının, 2. denemede yem maddelerinin KAD değerleri değiştirilerek muamele grupları oluşturulmuştur. Her grup için rumen sıvısı ve yemlerin sindirim özelliklerine etkileri belirlenmiştir. Çalışma sonucunda  $CaCl_2$  gruplarında iki deneme içinde IVGS ve IVKMS değerleri en yüksek olmuştur ( $P<0.05$ ). Birinci denemede bütün sindirim değerleri için kontrol grubu değerleri en düşük olmuştur ( $P<0.05$ ). Sonuç olarak özellikle rumen sıvısındaki KAD değişimleri yemlerin sindirimini dolayısıyla rumende oluşan son ürünleri etkilediği anlaşılmıştır.

**DETERMINATION OF THE EFFECTS OF CATION-ANION DIFFERENCE ON  
RUMEN FERMENTATION AND FEED DIGESTION BY IN VITRO METHOD  
(DAISYII)****ABSTRACT**

In addition to the amount and ratio of inorganic elements in ruminant rations, the ionic load they add to the ration, that is, the cation-anion difference status (KAD), also affects animal metabolism. This study was carried out, as in vitro, using DaisyII incubator to determine the effects of cation-anion exchange on feed digestion and rumen fluid. For this purpose, barley, vetch and barley straw, vetch hay were used. CaCl<sub>2</sub> was used to decrease the CAD values of the rumen fluid and feed, and rock salt was used to increase the CAD values. In the study conducted in two trials, treatment groups were formed by changing the CAD values of rumen fluids in the first trial and feedstuffs in the second trial. The effects of rumen fluid and feeds on digestive properties were determined for each group. At the end of the study, IVTD and IVDMD values were highest in CaCl<sub>2</sub> groups (P<0.05). In the first experiment, the control group values were the lowest for all digestion values (P<0.05). As a result, it was found that especially the changes in CAD in rumen fluid affect the digestion of feeds and the final products formed in rumen.

**ÖZET**

Sinir otu (*Plantago lanceolata*) meralarımızda da yaygın olarak bulunan, içerdiği biyoaktif maddelerden dolayı alternatif tıbbi tedavide de kullanılan, içerdiği sekonder metabolitlerle ilgili bilimsel çalışmaların yürütüldüğü bir bitkidir. Bu nedenle sinir otu ekstraktının yapay rumen ortamında rumen sıvısı fermentasyonu ve yemlerin sindirimine etkisini belirlemek bu tezin amacını oluşturmuştur. DaisyII inkübatöründe in vitro olarak gerçekleştirilen bu çalışmada mezbanede kesilen 3 adet erkek sığırın rumen sıvıları kullanılmıştır. İnkübatörde 4 kavanozda bulunan rumen sıvılarına, 0mg/l, 50mg/l, 100mg/l, 150 dozlarında sinir otu ekstraktı eklenmiştir. Her doz için ayrılan bir kavanoza arpa, fiğ ve aspir dane yemlerinden 7'şer kese olmak üzere 21 ve 3 kese de şahit olarak 24 kese inkübe edilmiştir. 24 saatlik inkübasyon öncesi ve sonrası rumen sıvılarında pH, amonyak, asetik asit, propiyonik asit, ve bütirik asit ölçümleri, yemlerin besin madde analizi yapılarak in vitro gerçek, kuru madde, organik madde ve nötral deterjan fiber sindirimleri belirlenmiştir. Rumen sıvısına eklenen sinir otu ekstraktı dozları arttıkça ölçülen amonyak, asetik asit, propiyonik asit ve bütirik asit miktarları da kontrol grubuna göre önemli derecede artırmıştır ( $P<0.05$ ). İnkübe edilen yemlerin nötral deterjan fiber sindirimleri haricindeki sindirim değerleri sinir otu ekstraktı dozu arttıkça yükselmiştir ( $P<0.05$ ). Elde edilen bulgular ve kaynak bilgileri değerlendirildiğinde sinir otu ekstraktının rumen mikroorganizmalarının aktivitelerini, dolayısıyla yemlerin sindirimi üzerine artırıcı etkisi olduğu kanaatine varılmıştır. Sinir otunun yapısında bulunan sekonder komponentlerin, biyolojik olarak aktif maddelerin belirlenmesi, bunların hangilerinin ekstraktlara geçtiği ve rumende etkin olduğunun belirlenmesine yönelik çalışmaların yapılması gerekmektedir.

**THE EFFECTS OF PLANTAIN (*PLANTAGO LANCEOLATA*) EXTRACT ON THE TRUE DRY MATTER AND ORGANIC MATTER DIGESTIBILITY OF BARLEY, VETCH, SAFFLOWER SEEDS, AND RUMEN FLUID IN VIVO**

**ABSTRACT**

Plantain (*Plantago lanceolata*) is a plant commonly found in our pastures and used in alternative medicine due to the bioactive compounds it contains, and scientific studies are being carried out on its secondary metabolites. Therefore, the aim of this study was to determine the effect of Plantain extract on rumen fluid fermentation and digestion of feeds in an artificial rumen environment. A DaisyII incubator containing bovine rumen fluid was used for this study. Plantain extracts were added to 4 jars of rumen fluid at concentrations of 0, 50, 100, and 150 mg/l. A total of 24 bags were incubated in each incubation jar; 7 bags each for barley, vetch, and safflower; and 3 bags each for the validator. In order to determine the in vitro true, dry matter, organic matter and neutral detergent fiber digestibility of the feeds, nutrient analyses of the feeds before and after incubation, pH, ammonia and volatile fatty acids analyses in rumen fluids were performed. The amount of ammonia and volatile fatty acids measured with the plantain extract added to the rumen fluid increased significantly compared to the control group. Digestion values of barley, vetch, and safflower also increased, except for neutral detergent fiber values. The findings revealed that plantain extract improved the activities of rumen microorganisms and thus the digestion of feed. It was concluded that in vitro and in vivo studies should be conducted to determine the bioactive components in the structure of plantain and their activities in rumen.

**ÖZET**

Kedilerde akut böbrek hasarı (AKI)'nin belirlenmesi, mevcut teşhis yaklaşımlarının sınırlamaları ve subklinik hasarla sonuçlanan birçok böbrek hasarı nedeniyle karmaşıktır. Bu çalışma kedilerde AKI teşhisinde hematolojik ve biyokimyasal verileri sunmayı amaçlamaktadır. Çalışmaya 2-5 yaşlı hasta ve sağlıklı farklı ırklardan (Scottish Fold, Sarman/Tekir, British Shorthair ve Melez) toplamda 14 erkek kediler dahil edildi (n=7/grup). Klinik olarak AKI teşhisi konulan hasta kedilerde letarji, kusma, ishal, ağızda amonyak benzeri koku, iştahsızlık, poliüri ve polidipsi görüldü. Kedilerden tekniğine uygun olarak kanül yardımı ile vena cephalica antebrahii'den kan alındı ve hematolojik ve biyokimyasal analizler gerçekleştirildi. Hematolojik analizlerde WBC, nötrofil sayısı, lenfosit sayısı, monosit sayısı, eozinofil sayısı, nötrofil/lenfosit oranı (NLR), monosit/lenfosit oranı (MLR), RBC, Hgb, Hct, MCV, MCHC, platelet (PLT) ve platelet/lenfosit oranı (PLR) parametreleri değerlendirilmeye alındı. Biyokimyasal analizlerde kan üre nitrojeni (BUN), kreatinin, BUN/kreatinin oranı, fosfor (P) ve kalsiyum (Ca) parametreleri ölçüldü. Hasta grubu kedilerde sağlıklara göre RBC, Hgb ve Hct değerleri istatistiksel olarak düşüktü (P<0.05). Hasta kedilerde WBC, nötrofil, monosit ve MLR değerleri sağlıklı kedilere göre yüksekti (P<0.05). Hasta kedilerde BUN, Kreatinin ve P sağlıklı kedilere göre yüksekti (P<0.05). Bu bulgular kedilerde AKI'nin teşhisine katkı sağlayan öncül hematolojik ve biyokimyasal bulgular olabilir. Daha geniş katılımlı ileriki çalışmalara ihtiyaç vardır.

**Anahtar kelimeler:** AKI, kedi, hematoloji, biyokimya, klinik

**INVESTIGATION OF SOME HEMATOLOGICAL AND BIOCHEMICAL  
CHANGES IN CATS DIAGNOSED WITH ACUTE RENAL FAILURE****ABSTRACT**

Identifying acute kidney injury (AKI) in cats is complex due to the limitations of current diagnostic approaches and the many kidney injuries that result in subclinical damage. The aim of this study is to present hematological and biochemical data for the diagnosis of acute kidney injury (AKI) in cats. A total of 14 male cats (n=7/group) of 2-5 years old sick and healthy different breeds (Scottish Fold, Sarman/Tabby, British Shorthair and mixed breeds) were included in the study. Lethargy, vomiting, diarrhea, ammonia-like odor in the mouth, anorexia, polyuria, and polydipsia were observed in cats with clinical diagnosis of AKI. Blood was collected from the cephalic vein antibrachii of the cats using a cannula, and hematological and biochemical analyzes were performed. The parameters of WBC, neutrophil count, lymphocyte count, monocyte count, eosinophil count, neutrophil/lymphocyte ratio (NLR), monocyte/lymphocyte ratio (MLR), RBC, Hgb, Hct, MCV, MCHC, platelets (PLT), and platelets/lymphocyte ratio (PLR) in hematological analyzes were evaluated. Biochemical analyzes measured blood urea nitrogen (BUN), creatinine, BUN /creatinine ratio, phosphate (P), and calcium (Ca). RBC, Hgb, and Hct levels were statistically lower in cats in the sick group compared with the healthy group ( $P<0.05$ ). WBC, neutrophil, monocyte, and MLR values were higher in sick cats than in healthy cats ( $P<0.05$ ). BUN, creatinine and P levels were higher in sick cats than in healthy cats ( $P<0.05$ ). These results may be hematologic and biochemical findings that contribute to the diagnosis of AKI in cats. Further studies with larger participation are needed.

**Keywords:** AKI, cat, hematology, biochemistry, clinic

**ÖZET**

Türkiye’de geleneksel yaşamın önemli ölçüde çözülmesi ve modern yaşamın hızla yaygınlaşmasının bir sonucu olarak bireyci/bireysel temelde öne çıkan özgürlükçü anlayış, günlük hayatın tutum, davranış, ilişki ve etkileşimlerini yeniden gözden geçirmeyi gerektiren anlamlar barındırmaktadır. Geleneksel yaşamın anlam kodlarını modern dünyanın öngördüğü yaşam pratikleriyle ilişkilendirerek yeni ve farklı anlam arayışlarını denemek ve bunları yaşam tarzı haline getirmek esasen gereklidir, ancak önemli riskler de içermektedir. Örneğin erkeğin birden fazla kadınla aynı anda evli olmasını meşru gören geleneksel yaşam tarzına karşılık, cinsiyetler arası eşitliği ve dolayısıyla tekeşli olmayı zorunlu gören modern hayat arasında kalan, ne sadece birinde karar kılabilen, ne de diğerinden vazgeçebilen toplumlarda önemli ölçüde sorunlar ortaya çıkabilmektedir. Modern hayatın rahatlık öngören konforuna ulaşmayı düşünen ve aynı zamanda geleneksel yaşam tarzının ilişkilerinden uzak kalmak isteyen genç kızlar, kimi zaman tercihlerini geleneksel yaşamın bir formu olan kuma evliliklerinden yana vermektedirler. Genellikle evli erkeklerin verdikleri söz ve vaatlerden başka tutunacak bir dal bulamayan kızlar, kuma olarak evlendiklerinde ilk eşlerden daha avantajlı oldukları bazı yönleri öne çıkararak erkeğin çokeşli evliliğini olumlu bir şekilde yansıtmaktadırlar. İlk eşlerin kocaları tarafından bir kenara atılmasıyla, erkeklerin tüm ilgilerini ve ekonomik kaynaklarını yeni eşe (kumaya) harcamaya yönelmeleri, kuma evliliği yapan kadınların dışa dönük mutlu bir tablo çizmelerine etki etmektedir. Daha çok kısa süreli olan ve önemli sorunları hasıraltı eden kuma evliliğine dair bu cazibeli görünüm, sosyal çevrenin de baskısıyla evlilik planları yapan genç kızlarda soru işaretlerine neden oluşturmaktadır ve kuma evliliği, öngördükleri bir evlilik alternatifini haline gelebilmektedir. Öyle ki toplumda ‘evli erkeğin birinci karısı olarak gitmekten ve üzerine kuma gelip bir tarafa atılmaktansa, kuma olarak gidip kocanın gözdesi olmak daha iyidir’ şeklinde değerlendirmeler dahi yapılmaktadır. Bu çalışma, kuma evliliklerinin avantajlı olduğuna dair dışa dönük yüzünün, evlenme döneminde ve çabasında olan genç kızlarda oluşturduğu etkilerin yanında kuma evliliklerinin, olumsuzluklarını da içeren, genel bir değerlendirilmesi yapılmaktadır. Eğitim seviyesinin düşüklüğü ve ekonomik kaynakların azlığıyla doğrudan, toplumsal ve kültürel yapı dolaylı yünden ilişkili olan kuma’lık uygulaması, alan araştırmasıyla elde edilen veriler ve literatürden edinilen bulgular ışığında tartışılmaktadır.

**Anahtar Kelimeler:** Kuma, Çokeşlilik, Polijini, Evlilik.

**BE ATTRACTED OF 'BEING A SECOND WIFE': RIGHT KNOWN MISTAKES****ABSTRACT**

As a result of the disintegration of traditional life and the rapid spread of modern life in Turkey, the libertarian understanding that stands out on an individualist/individual basis has meanings that require reconsidering the attitudes, behaviors, relationships and interactions of daily life. It is essential to try new and different meaning quests by associating the meaning codes of traditional life with the life practices envisaged by the modern world and to turn them into a lifestyle, but it also includes significant risks. For example, in societies that are between the traditional lifestyle that sees it as legitimate for a man to be married to more than one woman at the same time, and the modern life that sees equality between the sexes and therefore monogamy, and that can neither decide on only one nor give up the other, significant problems may arise. Young girls who want to reach the comfort of modern life and at the same time want to stay away from the relations of the traditional lifestyle, sometimes prefer marriage to the second wife, which is a form of traditional life. Generally, the girls, who cannot find a branch to hold on to other than the promises and promises made by married men, reflect the polygamous marriage of the man in a positive way by highlighting some aspects that they are more advantageous than the first spouses when they get married as a second wife. The fact that the first wives are cast aside by their husbands, and that men tend to spend all their attention and economic resources on the new wife (kuma), affects the outwardly happy picture of the women who are married to second wife. These attractive appearances of marriage in second wife, which are mostly short-term and hide important problems, cause question marks in young girls who make marriage plans under the pressure of the social environment, and marriage to second wife can become a marriage alternative they envision. So much so that there are even evaluations in the society that 'it is better to go to the second wife and be the husband's favorite, rather than going as the first wife of a married man and being thrown aside. In this study, a general evaluation is made, including the negative effects of the outward-looking face of the advantage of co-marriages on young girls who are trying to get married, as well as the negative effects of co-marriages. The practice of second wife, which is directly related to the low level of education and the scarcity of economic resources, and indirectly to the social and cultural structure, is discussed in the light of the data obtained from the field research and the findings obtained from the literature.

**ÖZET**

Epilepsi popülasyonun yaklaşık %1'ini etkileyen nörolojik bir hastalıktır. Günümüzde yaklaşık 20'den fazla antiepileptik ilaç olmasına rağmen epileptik nöbetlerin yaklaşık %30'luk bölümü mevcut ilaçlar ile kontrol altına alınamamaktadır. Epileptik nöbetler ile ilgili en ağır tablolardan bir tanesi status epileptikustur. Bu durum araştırmacıları status epileptikusun tedavisine yönelik deneysel çalışmalar yapmaya yönlendirmektedir. Araştırmalarda kullanılan status epileptikus hayvan modelleri, tek bir status epileptikus atağının kronik epilepsiye geçişini incelemek için kullanılmaktadır. Ayrıca nöronal hasar ve duyarlılık mekanizmaları, sinaptik reorganizasyon, hipokampal skleroz, nöbet, gen ekspresyonunda ve nörojenezde değişiklikler ve yeni antikonvülsan ilaçların geliştirilmesi çalışmalarında da status epileptikus modellerinden faydalanılmaktadır. İdeal hayvan modeli, insandaki status epileptikusa benzer bir patofizyolojiyi yansıtmalıdır. İnsanda görülen status epileptikus birçok etiolojik neden ve nöbet fenotipini kapsayan karmaşık bir nörolojik bozukluk olduğundan herhangi bir hayvan modelinin, status epileptikusa ilişkin özelliklerin tüm spektrumunu sergilemesi pek olası değildir. Bu nedenle, test bileşiklerinin bir dizi hayvan modelinde ve ayrıca refrakter status epileptikus paradigmasında taranması gereklidir. Kemirgenlerde epilepsinin birçok formu, kimyasal, elektriksel veya genetik olarak indüklenen nöbetlerle modellenilebilir. İdeal bir status epileptikus modeli için istenen bazı özellikler vardır: Uygun nöbet fenotipini sergilemelidir. İnsandaki status epileptikusun nöropatolojik özellikleriyle uyumlu olmalıdır. İlk ataktan sonra uygun latent süreye sahip olmalıdır. Status epileptikus sonrası kronik aşırı uyarılabilirlik ve nöronal plastisite göstermelidir. Latent dönemden sonra spontan nöbetler olmalıdır. İlaç tedavisine yanıt vermeli ve belirli antikonvülzanlara direnç göstermelidir. Yeni bileşiklerin hızlı taranmasına izin vermelidir. Status epileptikusun çok sayıda hayvan modeli arasında, status epileptikusun elektriksel stimülasyon modelleri (Perforan yol stimülasyonunu, Kendi kendini sürdüren stimülasyon modeli), farmakolojik modeller (Kainik asit, Pilokarpin, Lityum-pilokarpin, Organofosfatlar, Flurotil, Kobalt-homosistein tiyolaktan tarafından indüklenen modeller), termal modeller (Hipertermi veya Ateşli nöbetler) ve refrakter modeller (Diizopropil florofosfat) bulunmaktadır. Bu kadar farklı hayvan modeli arasından model mekanizmalarını, olumlu ve kısıtlı yönlerini değerlendirerek tercihte bulunmak yapılacak araştırmanın sonuçlarını doğrudan etkileyecektir. Bildiride araştırmalara yönelik en doğru hayvan modelinin seçimi için bu modellerin özellikleri karşılaştırmalı olarak değerlendirilecek ve önerilerde bulunulacaktır.

**Anahtar kelimeler:** Epilepsi, deneysel status epileptikus, status epileptikus hayvan modeli

## **COMPARISON OF STATUS EPILEPTICUS ANIMAL MODELS FOR EXPERIMENTAL EPILEPSY STUDIES**

### **ABSTRACT**

Epilepsy is a neurological disease that affects approximately 1% of the population. Although there are more than 20 antiepileptic drugs available today, approximately 30% of epileptic seizures cannot be controlled with current drugs. Status epilepticus is one of the most severe manifestations of epileptic seizures. This situation leads researchers to conduct experimental studies on the treatment of status epilepticus. Animal models of status epilepticus used in research are used to examine the transition of a single episode of status epilepticus to chronic epilepsy. In addition, status epilepticus models are also used in studies of neuronal damage and sensitivity mechanisms, synaptic reorganization, hippocampal sclerosis, seizures, changes in gene expression and neurogenesis, and the development of new anticonvulsant drugs. The ideal animal model should reflect a pathophysiology similar to human status epilepticus. Because human status epilepticus is a complex neurological disorder encompassing many etiologic causes and seizure phenotypes, it is unlikely that any animal model will exhibit the full spectrum of status epilepticus features. Therefore, it is necessary to screen test compounds in a number of animal models as well as refractory status epilepticus paradigms. Many forms of epilepsy in rodents can be modeled by chemically, electrically, or genetically induced seizures. There are some desirable features for an ideal status epilepticus model: It should exhibit the appropriate seizure phenotype. It should be compatible with the neuropathological features of human status epilepticus. It should have an appropriate latent period after the first attack. It should show chronic hyperexcitability and neuronal plasticity after status epilepticus. Spontaneous seizures should occur after the latent period. It must respond to drug therapy and resist certain anticonvulsants. It should allow rapid screening of new compounds. Numerous animal models of status epilepticus include electrical stimulation models of status epilepticus (Perforating pathway stimulation, Self-sustaining stimulation model), pharmacological models (Kainic acid, Pilocarpine, Lithium-pilocarpine, Organophosphates, Flurotyl, Cobalt-homocysteine thiolactone-induced models), thermal models (Hyperthermia or Febrile seizures) and refractory models (Diisopropyl fluorophosphate). Choosing among so many different animal models by evaluating the model mechanisms' positive and limited aspects will directly affect the results of the research to be conducted. In this paper, the characteristics of these models will be evaluated comparatively and recommendations will be made for the selection of the most accurate animal model for studies.

**Keywords:** Epilepsy, experimental status epilepticus, animal model of status epilepticus

## SON DÖNEM ARAP BELÂGATİ KİTAPLARINDA KİNAYE TANIMLARI VE TASNİFLERİ

### ÖZET

Arap belâgatinde mecaz teşbih ve istiareyle birlikte beyan ilminin dört ana konusundan biri olan ve sözlükte *bir şeyden söz edip başka bir şeyi kastetmek* anlamına gelen kinaye, terim olarak; *bir sözü hakiki manasına gelecek şekilde anlamı dışında kullanmak* demektir. Klasik dönemden beri çeşitli tanımları yapıp farklı açılardan değerlendirmeye tabi tutulan kinayenin günümüz Arap belâgati kitaplarında benzer şekilde tanımları ve tasnifleri yapılmıştır. Örneğin 20. yüzyıl belâgat müelliflerinden Ahmed Mustafa el-Merâğî *‘Ulûmü’l-belâğa* kitabında kinayeyi; *“Lafzın kendisi için vazedildiği manada kullanılıp o mananın bizatihi kastedilmemesi ve örfî bir gereklilikten dolayı farklı bir anlamı kendi içinde barındırması”* şeklinde tanımlamıştır. Merâğî, kinayeyi meknâ bih yönüyle sıfat, mevsuf ve nispet olarak üç kısımda; vasıtalar yönüyle ta’rîz, telvîh, remz ve îmâ olarak dört kısımda, hüsün ve kubuh olarak iki kısımda değerlendirmiştir. Muhammed Ahmed Kâsim - Muhyiddîn Dîb ise *‘Ulûmü’l-belâğa: el-Bedî’ ve’l-beyân ve’l-me’ânî’* adlı eserlerinde klasik dönem müelliflerin tanımlarından örnekler vermiş ve kinayeyi; sıfat, mevsuf ve nisbet olarak üç kısma ayırmıştır. Ayrıca Kâsim - Dîb, sıfattan kinayeyi kendi içinde karîbe ve ba’îde olarak iki alt başlıkta ele almış, vasıtalar yönüyle kinayeyi Merâğî gibi dört kısma ayırmalarına rağmen diğer taksime değinmemiştir. Bu dönemin Arap belâgati müelliflerinden Ahmed el-Hâşimî (ö. 1943), Muhammed b. Sâlih el-‘Useymîn (ö. 2001) ve Ali Bulut ise belâgat kitaplarında Kâsim - Dîb gibi tasnif yapmışlardır. Diğer belâgat müellifleri Alî el-Cârim (ö. 1949) - Mustafa Emîn, Abdülaziz Atîk (ö. 1976), Hasen Habenneke el-Meydânî (ö. 2004) ve Fadl Hasan Abbâs (ö. 2011) eserlerinde kinâyeyi sadece sıfat, mevsuf ve nisbet yönüyle üç kısma ayırmalarına karşın Mustafâ es-Sâvî el-Cüveynî (ö. 1988) sadece kinayeyi anlatmakla yetinmiştir. Bu çalışmadaki amaç, modern dönem Arap belâgati kitaplarında kinaye ile ilgili çeşitli tanımları ve tasnifleri birbiriyle karşılaştırmak ve farklı metodolojik yaklaşımları tespit etmektir.

**Anahtar Kelimeler:** Arap Belâgati, Belâgat, Belâgat Kitapları, Kinaye, Kısım.

**THE DEFINITIONS AND CLASSIFICATIONS OF KINĀYA IN THE RECENT  
ARABIC RHETORIC BOOKS****ABSTRACT**

In Arabic rhetoric, kināya, which is one of the four main subjects of the science of *al-bayān* together with majāz, tasbīh and isti'āra, and which means to *mention one thing and mean another* in the dictionary, as a term; It means to *use a word out of its meaning in a way that means its true meaning*. The kināya, which has been variously defined and evaluated from different perspectives since the classical period, has been similarly defined and classified in today's Arabic rhetoric books. For example, Aḥmad Muṣṭafā al-Marāghī, one of the 20th century rhetoric writers, used the allusion in his book '*Ulūm al-balāgha*'; He defined it as "*the word is used in the meaning that exists for it, but that meaning is not meant, and it contains a different meaning in itself due to a customary necessity*". Marāghī is divided kināya into three parts as al-ṣifa, al-mawsūf and al-nisba in terms of *maknā bih*; In terms of *wasāit*, he evaluated it in four parts as ta'rīḍ, telwīḥ, ramz, īmā', and in two parts as ḥusn and qubḥ. Muḥammad Aḥmad Qāsim and Muḥyiddīn Dīb, on the other hand, gave examples from the definitions of the authors of the classical period in their book called '*Ulūm al-balāgha: al-badī' al-bayān, al-ma'ānī*' and divided the kināya into three parts as al-ṣifa, al-mawsūf and al-nisba. In addition, Qāsim and Dīb divided the kināya from the al-ṣifa into two as qarība and ba'īda, and although they divided the kināya into four parts like Marāghī in terms of means, they did not mention the other division. Aḥmad al-Hāshimī (d. 1943), one of the Arab rhetoric writers of this period, Muḥammad b. Ṣāliḥ al-'Uthaymīn (d. 2001) and Ali Bulut made classifications like Qāsim and Dīb in their rhetoric books. Other rhetoric writers, Alī al-Jārim (d. 1949) and Muṣṭafā Emīn, Abdul'azīz Atīq (d. 1976), Ḥasan Ḥabannaka al-Maydānī (d. 2004) and Faḍl Ḥasan 'Abbās (d. 2011) divided kināya only as al-ṣifa, al-mawsūf and al-nisba. Although they divided it into three parts, Muṣṭafā al-Ṣāwī al-Juwaynī (d. 1988) was content with only telling the kināya. The aim of this study is to compare various definitions and classifications of kināya in modern Arabic rhetoric books and to identify different methodological approaches.

**Keywords:** Arabic Rhetoric, Rhetoric Theory, Rhetoric Books, Kināya, Classification.

**GÜNEYDOĞU ANADOLU BÖLGESİNDE ATOPIK DERMATİT TANISI ALAN  
ÇOCUKLARIN KLİNİK VE EPİDEMİYOLOJİK ÖZELLİKLERİ**

**Uzm. Dr. Mehmet Emin Parlak**  
*Orcid ID: 0000-0002-3115-6812*  
*Çocuk Sağlığı ve Hastalıkları, Kahta, Adıyaman*

**ÖZET**

Bu çalışmanın amacı Güneydoğu Anadolu bölgesinde atopik dermatit tanısı alan çocukların değerlendirilmesidir. Çalışma Adıyaman'ın Kahta ilçesinde farklı okullarda, en düşük yaşı 13 en yüksek yaşı 14 olan 162 çocuğa yüz yüze anket yapılarak düzenlenmiştir. Çalışmada son 1 yılda döküntüsü olan hastalar, döküntü sıklıkları, ilk atopik tanı aldıkları yaş ve döküntünün şiddeti incelenmiştir. İstatistiksel analiz: Veriler SPSS 20 paket programında değerlendirilmiştir. Nitel özellikte olan veriler sayı ve yüzde (%) olarak sunulmuştur. Kategorik verilerin analizinde Chi-Square ve Fisher's exact testleri yapılmıştır. İstatistiksel önemlilik için p değerinin <math>0.05</math> olması anlamlı kabul edilmiştir. Bu çalışmada Babasında egzema bulunan çocuklarda egzema görülme oranı, babasında egzema olmayanlara göre anlamlı düzeyde yüksektir ( $p=0,005$ ). Çalışmamızda atopik dermatiti olan hastaların genellikle ailelerinde de benzer şikayetler olduğu, diğer alerjik hastalıklarla birlikteliğinin sık olduğu görülmüştür. Sonuç olarak eğer ailede alerjik hastalık öyküsü varsa aileler atopik dermatit açısından yakından takip edilmeli ve çocuklara gerekli destekler verilmelidir.

**Anahtar kelimeler:** Atopik dermatit, egzama, alerjik hastalıklar.

**CLINICAL AND EPIDEMIOLOGICAL FEATURES OF CHILDREN DIAGNOSED WITH ATOPIC DERMATITIS IN SOUTHEASTERN ANATOLIA REGION****ABSTRACT**

The aim of this study is to evaluate the children diagnosed with atopic dermatitis in the Southeastern Anatolia region. The study was conducted by conducting face-to-face questionnaires on 162 children, whose minimum age is 13 and the highest age is 14, in different schools in the Kahta district of Adiyaman. In the study, patients who had a rash in the last 1 year, the frequency of the rash, the age at which they were first diagnosed as atopic, and the severity of the rash were examined. Statistical analysis: Data were evaluated in SPSS 20 package program. Qualitative data are presented as numbers and percentages (%). Chi-Square and Fisher's exact tests were used in the analysis of categorical data. For statistical significance, a p value of <0.05 was considered significant. In this study, the incidence of eczema in children whose fathers had eczema was significantly higher than those whose fathers did not have eczema (p=0.005). In our study, it was observed that patients with atopic dermatitis generally had similar complaints in their families, and its association with other allergic diseases was common. In conclusion, if there is a family history of allergic disease, families should be followed closely in terms of atopic dermatitis and necessary support should be given to children.

**Keywords:** Atopic dermatitis, eczema, allergic diseases.

## **ÖZET**

**Amaç:** HPV virüsü ve HPV aşılı hakkında literatüre dayalı güncel bilgileri sunmaktır. **Giriş:** Human papilloma virüs (HPV) Papillomaviridae ailesinde yer alan, sadece insanları enfekte eden ve cinsel yolla bulaşan bir DNA virüsüdür.Serviks, vajina, vulva, penis, testis, anogenital bölge ve baş boyun bölgelerinde kansere ve siğillere neden olabilir. HPV enfeksiyonu servikal kanser gelişimi için en önemli neden olup,dünyada her iki dakikada bir kadının ölümüne neden olan kadınlarda meme kanserinden sonra en sık görülen ikinci kanser türüdür. HPV ye karşı geliştirilmiş etkin aşılı mevcuttur. Bunlar şu an için kullanımda olan ikili (bivalent), dörtlü (quadrivalent) ve dokuzlu (nonavalent) HPV aşılı mevcuttur. **Yöntem:** Araştırma literatüre dayalı bir derleme çalışmasıdır. **Sonuç:** HPV ile ilişkili hastalıklar önemli bir halk sağlığı problemi olarak görülmektedir ve serviks kanseri HPV ilişkili kanserlerin çoğunluğunu oluşturmaktadır. Hastalıkla mücadelede HPV aşılı çok önemlidir. Etkenin tiplerine karşı geliştirilmiş etkin ve güvenli aşılı mevcuttur. DSÖ tarafından önerilmesine ve birçok ülkede ulusal aşılılama programına dâhil edilmesine rağmen Türkiye’de HPV aşılı ücretsiz olarak sunulmamaktadır. Bu durum kişilerin sağlık hakkından etkin bir şekilde yararlanamamalarına sebep olmaktadır. Ayrıca Türkiye’de yüksek meblağlar ödenmek kaydıyla temin edilebilen HPV aşılı sosyal hizmetin özünde yer alan sosyal adalet ilkesini sekteye uğratmaktadır. Aşının tercih edilmesinin önündeki engeller ise temel halk sağlığı stratejileri ile ortadan kaldırılmalıdır. HPV aşılı aşı programına alınmalı ya da aşılılanmak isteyen bireylerin desteklenmesinin önemli olduğu düşünülmektedir.

**Anahtar kelimeler:** HPV, HPV Aşılı,Serviks Kanseri,Halk Sağlığı

**HPV (HUMAN PAPILLOMA VIRUS) VACCINES****ABSTRACT**

**Objective:** In this study, HPV (human papilloma virus) vaccines were evaluated through literature review.intended to examine. **Introduction:** Human papillomavirus (HPV) is a DNA virus in the Papillomaviridae family that infects only humans and is sexually transmitted. It can cause cancer and warts in the cervix, vagina, vulva, penis, testis, anogenital region and head and neck regions. HPV infection is the most important reason for the development of cervical cancer and it is the second most common cancer type after breast cancer in women, which causes the death of a woman every two minutes in the world. Most of the cervical cancers (99.7%) are related to HPV and in 70% of the patients HPV infection It develops due to -16 and HPV-18. There are effective vaccines developed against HPV. WHO has been recommending the HPV vaccine since 2009. The HPV vaccine has been developed against some types of HPV. These vaccines have been reported to play an important role in the reduction of HPV-related diseases as well as being effective. Currently, there are dual (bivalent), quadrivalent and nine (nonavalent) HPV vaccines in use. HPV types endemic in Turkey; Considering 16, 51, 31, 52, 56, 39, 58 45, 33 and 18, it has been reported that the need for Nonavalent HPV vaccine for our country will be understood more clearly. **Method:** In this study, national and international original studies, field-specific books and guides were used in obtaining the evidence and creating the theoretical infrastructure of the compilation. Google Academy, PubMed, National Thesis Center, Dergipark, Medline were scanned. No time limit was applied during the literature review. **Conclusion:** HPV-related diseases are seen as an important public health problem and since cervical cancer constitutes the majority of HPV-related cancers, HPV vaccine immunization should be the main point. There are effective and safe vaccines developed against the types of the agent. Although recommended by WHO and included in the national vaccination program in many countries, HPV vaccine is not offered free of charge in Turkey. This situation causes people to not be able to benefit from the right to health effectively. In addition, the HPV vaccine, which can be obtained by paying high amounts in Turkey, disrupts the principle of social justice, which is at the core of social work. Barriers to vaccine preference should be eliminated with basic public health strategies. HPV vaccines should be included in the vaccination program or individuals who want to be vaccinated should be supported.

**ÖZET**

Bu çalışma; lise öğrencilerinin internet bağımlılığı ve prososyal becerileri arasındaki ilişkinin incelenmesi amacıyla yapılmıştır. Çalışma grubunu; Ankara ilinde eğitimine devam eden 300 lise öğrencisi oluşturmuştur. Araştırmada veri toplama aracı olarak araştırmacılar tarafından hazırlanan ‘Genel Bilgi Formu’ Taş (2019) tarafından geliştirilmiş ‘Ergenler İçin İnternet Bağımlılığı Ölçeği’ ve Ata ve Artan (2021) tarafından geliştirilmiş ‘Ergen Prososyallik Ölçeği’ kullanılmıştır. İstatistik aşamasında öncelikle verilerin normal dağılım gösterip göstermediği incelenmiş ve normal dağılım elde edilememesinden dolayı, ikili gruplar arasındaki karşılaştırmalarda Mann-Whitney U testi, üç veya daha fazla gruplar arasındaki karşılaştırmalarda Kruskal Wallis H Testi, değişkenler arası ilişkilerde ise Spearman korelasyon testi analizi kullanılmıştır. Araştırma sonucunda; Ergenler İçin İnternet Bağımlılığı Ölçeği’nden alınan puanlarda cinsiyet değişkeni açısından anlamlı bir farklılık bulunmazken; ‘Ergen Prososyallik Ölçeği’ dışsal prososyal alt boyutunda farkın kız öğrenciler lehine anlamlı olduğu bulgusuna ulaşılmıştır. Anne eğitim durumu değişkeni açısından her iki ölçekten alınan puanlarda anlamlı bir farklılığa rastlanmazken; baba eğitim durumu değişkeni açısından Ergenler İçin İnternet Bağımlılığı Ölçeği’nden alınan puanlarda anlamlı farklılıklar saptanmıştır. Ergenler İçin İnternet Bağımlılığı Ölçeği’ ve ‘Ergen Prososyallik Ölçeği’ toplam puanları arasındaki ilişkinin negatif yönde ve anlamlı olduğu sonucu elde edilmiştir. Araştırmadan elde edilen bulgular doğrultusunda; ergenlik döneminde internet bağımlılığın önlenmesi ve olumlu davranış içeren prososyal becerilerin artırılması için birtakım derslerin müfredata eklenmesi, seminer, konferans, panel gibi çalışmaların lise bünyesinde artırılması önerilebilir.

**Anahtar Kelimeler:** İnternet bağımlılığı, prososyallik, ergenlik.

**EXAMINATION OF THE RELATIONSHIP BETWEEN HIGH SCHOOL STUDENTS' INTERNET ADDICTION AND PROSOCIAL SKILLS****ABSTRACT**

This study was carried out in order to analyze the relationship between high school students' internet addiction and prosocial skills. The study group consisted of 300 high school students whose attend in Ankara. General Information Form” prepared by the researchers, Internet Addiction Scale for Adolescents developed by Taş (2019), Adolescent Prosociality Scale developed by Ata and Artan (2021) were used as data collection tools in the study. At the statistical stage, it was first examined whether the data showed normal distribution or not. Due to the inability to obtain a normal distribution, the Mann-Whitney U test was used for comparisons between paired groups and the Kruskal Wallis H Test for comparisons between three or more groups. Spearman correlation test analysis was used for the relations between variables. As a result of the research; while there was no significant difference in the scores obtained from the Internet Addiction Scale for Adolescents in terms of gender; it was found that the difference in the external prosocial sub-dimension of the “Adolescent Prosociality Scale” was significant in favor of female students. While no significant difference was found in the scores obtained from both scales in terms of the mother's educational status variable; significant differences were found in the scores obtained from the Internet Addiction Scale for Adolescents in terms of the father's educational status variable. It was concluded that the relationship between the total scores of the "Internet Addiction Scale for Adolescents" and the "Adolescent Prosociality Scale" was negative and significant. In line with the findings obtained from the research; in order to prevent internet addiction in adolescence and to increase prosocial skills including positive behavior, it can be suggested that some courses be added to the curriculum, and studies such as seminars, conferences and panels should be increased within the high school.

**Key Words:** Internet addiction, prosociality, adolescence.

**IN SILICO EVALUATION OF THE ANTIMALARIAL POTENTIAL OF THE  
PHYTOCONSTITUENTS OF THE AZADIRACHTA INDICA PLANT****Ekundayo T. AREH***Department of Chemistry, Confluence University of Science and Technology, P.M.B. 1040, Osara,  
Kogi State, Nigeria***Olubunmi ATOLANI***Department of Chemistry, University of Ilorin, P.M.B. 1515, Ilorin, Nigeria***Learnmore KAMBIZI***Department of Horticulture, Cape Peninsula University of Technology, South Africa***ABSTRACT**

**Background and objectives:** Malaria, a parasitic protozoan disease caused primarily by Plasmodium falciparum, has killed millions of people in Africa, particularly those with meager or no access to orthodox medical facilities and therapies. Extracts from the Azadirachta indica (neem) plant is believed to possess antimalarial properties among the locals that rely on herbs. Numerous in - vivo studies have suggested the antimalarial properties of neem extract and phytochemicals. This study employs an in - silico method through molecular docking techniques to provide insight while adding credence to the antimalarial potential of phytochemicals of neem plants as claimed in folkloric medicine. **Methods:** The crystal structure of P. falciparum, a causative parasite of malaria, was retrieved from the Protein Data Bank, and Azadirachta indica phytochemicals were obtained from the PubChem database. Molecular docking through virtual screening was carried out on the characterized phytochemicals. The bioactive compounds from the Azadirachta indica plant were investigated by docking with the crystal structure of the P. falciparum receptor and compared with standard antimalarial drugs (lumefantrine and artemisinin). **Results:** Three Azadirachta indica phytochemicals (gedunnin, nimbinene and salanin) shows a competing binding energy and affinity when compared to the approved antimalarial drugs (lumefantrine and artemisinin). While the binding affinities for azadirachtin, nimbandiol and quercetin is lower than the affinity in artemisinin but comparable with lumefantrine. **Conclusion:** This virtual screening verified and identified a potential phytochemical component of antimalarial properties against a protein target: 1m7o, P. falciparum triosephosphate isomerase (PfTIM).

**Keywords:** In silico, Azadirachta indica, Plasmodium falciparum, Phytochemical, 3-Phosphoglycerate (3 PG).

**ABSTRACT**

Sertraline hydrochloride (Ser-HCl), a commonly used antidepressant, enters the environment through metabolic waste and incorrect disposal; nevertheless, it is undetermined how Ser-HCl impacts freshwater microbiota. The current research looks into the impact of Ser on the microstructure of green algae. Ser-HCl treatment significantly reduced the proliferation of the green alga *C. vulgaris*, lowering chlorophyll content and nutrient uptake. Because of its widespread use and manufacture, Ser-HCl is likely to remain an environmental pollutant. The current study illustrates how Ser-HCl may provide an ecological concern to biota. These results indicate that the harmful consequences of these biologically active contaminants on freshwater environments should indeed be given more emphasis.

**Keywords:** Sertraline hydrochloride; Ecotoxicity; antidepressant; *C. vulgaris*

**ABSTRACT**

The past few decades has evidenced the flooding out of the emergence of infectious diseases with a cornucopia of impacts globally. It should be noted that lion part of the emerging human pathogens are zoonotic in nature. The predisposing factors leading to the emergence and spread of zoonotic diseases are geared by pathogen, host and vector or ecological determinants and in many cases a combination of all. The reservoir and vector dynamics are very much influenced by climate change which opens new avenues of ecological niches for vectors thereby altering temporal and spatial distribution of diseases. The nexus between climate change, anthropogenic and natural factors in the emergence of zoonotic diseases like West Nile fever, Chikungunya fever and Lyme disease are well established. In the case of vector-borne diseases, such as Dengue or Malaria, climate change is contributing in expanding its geographical range. As a result of global warming, infectious diseases which are confined to warmer latitudes are slowly and steadily expanding their range with scattered outbreaks to even epidemics. Moreover, climate change has accelerated the stepwise process of pathogen spillover from wild/domestic animals to humans. Outbreaks of human diseases like leptospirosis are often associated with increases in rodent population after heavy rainfall or floods. The emergence of Hantavirus is another example where climatic change is influencing population dynamics of the rodent reservoir. To conclude, climate change is an ecological exigence, but its repercussions for human disease caused by zoonotic infectious agents remains understudied. Thus the paper divulges into the impact of climate change on zoonotic diseases emergence with crippling public health and economic impacts.

**ÖZET**

Brezilya ıspanağı (*Alternanthera sissoo*), yüksek vitaminler, diyet lifi ve antioksidanlar içeren çok yapraklı bir sebzedir. Sınırlı araziye ve dalgalı iklime sahip tropik kentlerde yetiştirilecek Brezilya ıspanak potansiyeli. Bu çalışma, kurak mevsim ve Brezilya ıspanak büyümesi sırasında mikro iklim üzerinde en iyi yetiştirme sistemini ve yetiştirme ortamının etkisini belirlemeyi amaçlamaktadır. Çalışma, ana arsa olarak yetiştirme sistemleri ve alt arsa olarak yetiştirme ortamı ile bölünmüş bir arsa deneysel tasarımı kullandı. Sonuçlar, yüzen kültür (FC) sisteminin SPAD değerlerini, gölgelik alanını (CA), yaprağın kuru ağırlığını (DWL), kuru dal ağırlığını (DWB) ve gövdenin kuru ağırlığını (DWS) teşvik ederek Brezilya ıspanak büyümesini arttırdığını göstermiştir. ). Yüzen kültür (FC) sistemi, diğer yetiştirme işlemlerinden daha yüksek pazarlanabilir verimin kanıtlandığı gibi daha iyi verim sağlayabilir. Yüzen kültür (FC) sistemi ayrıca toprak nemi (SM) ve gölgelik sıcaklığı (CT) yoluyla daha iyi büyüme için daha iyi mikro çevresel koşullar yaratır. Öte yandan, yetiştirme ortamına dayalı olarak ince kum + pirinç kabuğu biyokömürü (%12.5 + %12.5 v) vejetatif büyüme ve yetiştirme ortamı durumu için, önemli ölçüde farklı olmasa bile, diğer işlemlerden daha iyi bir eğilim göstermiştir. Muamele yetiştirme ortamı ince kum + pirinç kabuğu biyokömürü (% 12.5 + %12.5 v) toprakta suyu tutabildi, ancak gölgelik sıcaklığı görsel olarak ne yetiştirme sistemine ne de yetiştirme ortamı muamelelerine göre tanınmadı. Bu arada, hava ve toprak sıcaklığının katkısı, gölgelik sıcaklığında doğrusal olarak etkili olmuştur ( $R^2 = 0.9042$ ). Yaprak Brezilya ıspanağının morfolojik tanımlaması yaprak genişliği (LW) belirleyicisi, doğrusal sıfır kesişim regresyonu ( $R^2 = 0.9502$ ) yoluyla yaprak alanının belirlenmesinde etkili olmuştur. Yaprak genişliği tahmincisi, ortalama spesifik yaprak alanının belirlenmesinde de doğrusal olarak etkiliydi ( $R^2 = 0.9935$ ). Bu nedenle, yüzen kültür sistemi ve ince kum + pirinç kabuğu biyokömürü (%12.5 + %12.5 v) en iyi uygulamalardı ve yaprak genişliği, Brezilya ıspanağının yaprak alanı tahmincisi olabilir.

**Anahtar Kelimeler:** besleyici yapraklı sebzeler, tahribatsız tahmin, kentsel çevre uygunluğu, büyüme analizi, uyarlanabilir yetiştirme.

**CULTIVATION SYSTEMS AND GROWING MEDIA EFFECT ON  
MICROCLIMATE DURING DRY SEASON AND BRAZILIAN SPINACH GROWTH****ABSTRACT**

Brazilian spinach (*Alternanthera sissoo*) is a leafy vegetable perennial with high vitamins, dietary fiber, and antioxidants. Brazilian spinach potential to be cultivated in tropical urban that have limited land and fluctuating climate. This study aims to determine the best cultivation system and growing media effect on microclimate during dry season and Brazilian spinach growth. The study used a split-plot experimental design with cultivation systems as the main plot and growing media as the subplot. The results showed that the floating culture (FC) system increased Brazilian spinach growth by promoting the SPAD values, canopy area (CA), dry weight of leaf (DWL), dry weight of branch (DWB), and dry weight of stem (DWS). The floating culture (FC) system could maintain better yields as evidenced by the marketable yield was higher than other cultivation treatments. Floating culture (FC) system also creates better microenvironmental conditions for growing better through soil moisture (SM) and canopy temperature (CT). On other hand, based on growing media fine sand + rice-husk biochar (12.5% + 12.5% v) showed a better trend for vegetative growth and growing media condition than other treatments, even not significantly different. Treatment growing media fine sand + rice-husk biochar (12.5% + 12.5% v) was able to retain water in the soil, although visually the canopy temperature could not be recognized either based cultivation system or growing media treatments. Meanwhile, the contribution of air and soil temperature was linearly influential in canopy temperature ( $R^2 = 0.9042$ ). The morphological of leaf Brazilian spinach describe leaf width (LW) predictor was influential to determining leaf area through linear zero intercept regression ( $R^2 = 0.9502$ ). The leaf width predictor was also linearly influential to determining the average specific leaf area ( $R^2 = 0.9935$ ). Therefore, floating culture system and fine sand + rice-husk biochar (12.5% + 12.5% v) were best treatments and leaf width could be a leaf area predictor of Brazilian spinach.

**Keywords:** nutritional leafy vegetable, non-destructive estimation, urban environmental suitability, growth analysis, adaptable cultivation.

**ABSTRACT**

Many opinions and theories have been put forward about how the dam's body accepts the fetus that is different in the genetic structure, an antigenic foreign body and a stimulant for the dam's immune system. The first theory was based on the fact that the fetus is considered immature from an immunological point of view. Therefore, the maternal immune system remains dormant. The second theory explains the decline in the activity of the dam's immune system due to the embryonic secretory activity of gonadotropins, estrogen and corticosteroids, which the dam's body deals with as foreign bodies that interact with maternal antibodies during pregnancy. As a result, the dam's immune system becomes stressed and ineffective. Supporters of the third theory assume that the placenta acts as an immunological barrier that protects the fetus from antibodies. Thus, the placenta is the primary target for immune reactions (the interaction between antigens and antibodies). The aforementioned theories remain insufficient to explain these phenomena. The reason is that the occurrence of the complete contact between the fetal membranes and the endometrium is not necessary, as a large part of the fetal membranes are naked and exposed to the *in vivo* environment. It was also found that maternal cells or embryonic cells are interchangeable and have the ability to survive in the host, whether the dam or the fetus, without secreting antibodies. The fourth theory was widely welcomed and became an alternative theory to the previous ones. According to the theory, the cells of the trophoblast act as an immune barrier that protects the fetus by secreting hormones (HCG, PMSG) and proteins that pass into the dam's blood stream and inhibiting T-Type cells responsible for tracking foreign bodies. Moreover, the cells of the trophoblast carry on their surfaces antigens that receive the antibodies, where an equilibration takes place and the fetus remains healthy and safe.

**Keywords:** embryonic implantation, placental immunity, farm animal.

**FARMERS' INFORMATION NEEDS ON HERBICIDE USAGE IN ENUGU STATE, NIGERIA****Okoro, John C***Department of Agricultural Extension, University of Nigeria, Nsukka***Unuchi Maryann***Department of Agricultural Extension, University of Nigeria, Nsukka***Agaba Juliet***Department of Agricultural Extension, University of Nigeria, Nsukka***Ezema Chizoba***Department of Agricultural Extension, University of Nigeria, Nsukka***Enemuo Judith***Department of Agricultural Extension, University of Nigeria, Nsukka***Onah, S.O<sup>2</sup>.***Department of Psychology, University of Nigeria, Nsukka***ABSTRACT**

The study assessed herbicide information needs of rural farmers in Enugu State, Nigeria. Structured interview schedule was used to obtain information from 200 rural farmers. Data collected were analyzed using frequency counts, percentage, mean score and factor analysis. The major crops grown by the farmers were maize (89.0%), cocoa yam (77.0%) and yam (73.0%). The farmers' herbicide practices were not of international best standard as only 53.5% read users' manual, 66.0% wear nose mask during spraying, and 76.5% checked expiry date of herbicide before use. On the farmers' knowledge level on herbicide usage, the majority (91.5%) had moderate knowledge while only 8.5% has high knowledge on herbicide usage. The farmers' major source of information on herbicide usage were from friends (71.0%), neighbours (69.0%) and input suppliers (65.5%). Farmers perceived constraints to assessing information on herbicide usage were categorized into financial constraints, communication constraints and ignorance constraints. Their perceived areas of information needs were on herbicide hygiene, personal protective measures, herbicide specification and herbicide poisoning respectively. The study concluded that farmer herbicide knowledge and practices were poor basically because their major sources of information on herbicide usage were not scientific based as they were mostly from non institutional sources. Therefore farmers should seek scientific based information for informed decision making on herbicide usage.

**Key words:** Herbicide usage, information needs, rural farmers

**ABSTRACT**

Natural extracts have been proposed as preservatives to increase the safety of various food products. In this work, the phytochemical and antioxidant profiles of *Mentha* extracts were studied. The antioxidant activity of the different extracts of this plant was evaluated by three spectrophotometric methods; DPPH, FRAP and TAC. The contents of polyphenols, flavonoids, flavones and flavonols were determined. The evaluation of the antioxidant activity of these same extracts by different tests shows that they have an important antioxidant power.

**Mots clés :** *Mentha, antioxidant activity, polyphenols, flavonoids, flavones and flavonols*

**PREVALENCE OF FASCIOSIS IN COWS IN THE CENTER OF RUSSIA****Igor Gennadievich Glamazdin***Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia***Ilya Nikolaevich Medvedev***Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia***Ilnura Ibragimovna Fayzullina***Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia***Natalya Yuryevna Sysoeva***Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia***Marina Mikhailovna Goryacheva***Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia***Galina Mikhailovna Kryukovskaya***Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia***Tatyana Olegovna Maryushina***Department of Veterinary Medicine, Moscow State University of Food Production, 125080, Moscow, Russia***ABSTRACT**

A major task of modern animal husbandry is to increase the productivity of the dairy herd. It is possible to solve it, including under the condition of a decrease in the prevalence of the level of parasites among cows of the dairy herd. Currently, fascioliasis is very common in cows. The difficulty of identifying this parasite is due to the fact that fascioliasis in cattle is very often asymptomatic. However, at the same time, it contributes to a significant decrease in the level of productivity of infected cows. For this reason, the widespread detection of this parasite in the bulk of cows is very relevant. Previous studies have shown that the frequency of occurrence of this parasite is very high, and with its prevalence up to 25%, the milk productivity of a dairy herd changes little. The completed study was conducted in October 2021. The level of antibodies to fasciolas *Fasciola hepatica* (ODRf) and *Ostertagia ostertagi* (ODRo) in milk collected from cows in the Moscow region of Russia was assessed. The relationship between the content of these antibodies and the level of productivity of dairy cows of these herds was revealed. The determination of the level of antibodies was carried out by multivariate linear regression models. Their connection with the level of protein in milk, % of milk fat and the time between calving in cows was traced. The increase in ODRf from the 25% quantile (0.412) to the 75% quantile (0.976) was associated with a decrease in the average milk yield per year by 0.8 kg ( $p=0.002$ ), with a decrease in milk fat content by 0.07% ( $p<0.001$ ), with an increase in the value of time intervals between departments by 4.6 days ( $p=0.04$ ). It was noted that there was no relationship between the level of antibodies and the amount of protein in milk. The relationship between ODRf and ODRo levels turned out to be complementary rather than synergistic in the case of simultaneous infection with helminths.

**Key words:** cows, milk productivity, parasites, *Fasciola hepatica*, *Ostertagia ostertagi*, antibodies, milk

### **ÖZET**

İslam'ın Altın Çağı olarak bilinen 8. ve 13. yüzyıllar arası dönemde Müslüman düşünürler sosyal ve beşeri ilimler alanında sayısız eserler vererek özgün fikirler ortaya koymuşlardır. İslam dini ve kültürü çerçevesinde bilhassa insanın yaşamdaki amacının ne olduğunu sormuşlar, onun akıl sahibi bir varlık olmasından yola çıkarak insanı amacı bakımından diğer varlıklardan ayıran ve kendisine özgü olan bir yaşayış biçimi ortaya atmışlardır. Farabi, İbn Sina ve İbn Miskeveyh gibi Meşşai filozoflar insanın dünyaya gelişinin nihai amacını mutluluğa ulaşmak olarak tayin etmiş, bunun yolunun da onun kendini gerçekleştirmesinden geçtiğini bildirmişlerdir. İnsanın kendini gerçekleştirme ve yetkinliğine ulaşabilmesi için kendisine bahşedilen ve onu diğer yaratılmışlardan ayıran düşünme ve eyleme gücünü amacına uygun olarak kullanabilmesi elzemdir. Tüm bunları göz önünde bulundurmak suretiyle ilk olarak İslam filozoflarının ekseriyetinin nefsin güçleri olarak tasvir ettiği düşünme, arzu ve öfke gücünü kontrol altına almak gerekmektedir. Nitekim bu üç güce karşılık gelen hikmet, iffet ve şecaat erdemleri nefste bir ahenk meydana getirdiğinde adalet erdemi ortaya çıkmaktadır. Dolayısıyla adalet erdemi, insanın kendi yetkinliğini gerçekleştirmesinde kilit rol oynamaktadır. Zira aklını kullanarak yaşamının yegane amacına, bir diğer ifade ile mutluluğa ulaşmak için kendi yetkinliğini gerçekleştirmek isteyen insan, tüm bu erdemleri kendinde toplamalı ve davranışlarıyla dışarıya yansıtmalıdır. Bu da nefsin üç erdeminin uyumlu bir bütünlük oluşturmasıyla ortaya çıkan adalet erdeminin zaruri olduğunu gözler önüne sermektedir. Yetkin insan, düşünme ve eyleme gücünü kullanmanın yanı sıra nefsin üç gücüne tekabül eden erdemleri kendinde uyumlu bir bütün oluşturmasını sağlayarak adalet erdemine ulaşır. Adalet erdemi başlı başlıca bir yetkinlik olmakla birlikte insanın gücü ölçüsünde sahip olabileceği en yüksek iyi, en değerli mertebedir. Bu çalışmamızda adalet erdeminin Meşşai düşünürler tarafından insanın yetkinliğine ulaşması çerçevesinde nasıl ele alındığını araştıracağız. Yetkin insanın mutluluğa ulaşma yolunda düşünme ve eyleme gücünü ortaya koyarken kendini keşfedip potansiyelini açığa çıkarmasında adalet erdeminin üstlendiği rolü ortaya koyacağız.

**Anahtar Kelimeler:** Yetkinlik, Adalet, Erdem, Mutluluk

## **THE ROLE OF THE VIRTUE OF JUSTICE IN REALIZING HUMAN'S COMPETENCIES IN THE TRADITION OF ISLAMIC MESHAI THOUGHT**

### **ABSTRACT**

In the period between the 8th and 13th centuries, known as the Golden Age of Islam, Muslim thinkers put forward original ideas by giving countless works in the field of social and human sciences. Within the framework of Islamic religion and culture, they especially asked what the purpose of man is in life, and they put forward a way of life that distinguishes man from other beings in terms of its purpose and is unique to man, based on his being a rational being. Peripatetic philosophers such as Farabi, Ibn Sina and Ibn Miskeveyh have determined the ultimate goal of man's coming into the world as reaching happiness, and they have stated that the way to achieve this is through self-realization of man. Man's self-realization and attainment of his competence depend on the ability to properly use the power of thought and action, which is bestowed upon him and distinguishes him from other creatures. Considering all these, first of all, it is necessary to control the power of thinking, desire and anger, which most of the Islamic philosophers describe as the powers of the nafs. As a matter of fact, the virtue of justice emerges when the virtues of wisdom, chastity and courage, which correspond to these three powers, create a harmony in the soul. Therefore, the virtue of justice plays a key role in the realization of one's own competence. Because a person who wants to realize his own competence in order to realize his purpose in life, in other words, to reach happiness by using his mind, should collect all these virtues in himself and reflect them to the outside with his behaviors. This reveals that the virtue of justice, which emerges when the three virtues of the soul form a harmonious whole, is essential. In addition to using the power of thinking and acting, a competent person achieves the virtue of justice by ensuring that the virtues corresponding to the three powers of the soul form a harmonious whole. Although the virtue of justice is a major competence, it is the highest good and the most valuable rank that a person can have in proportion to his power. In this study, we will discuss how the virtue of justice is revealed by Peripatetic thinkers within the framework of reaching human competence. We will reveal the role of the virtue of justice in self-discovery and revealing the potential of a competent person while realizing the power of thinking and acting on the way to happiness.

**ÖZET**

Zooplankton çeşitlerinden Copepoda faunasının varlık kompozisyonu yıl içerisinde değişim göstermektedir. Copepoda faunasının kompozisyonu, mevsimsel değişimi aylık periyotlarla ve üç aylık periyotlar halinde 12 ay boyunca incelenmiştir. Çalışmanın örnekleme aşaması için konum olarak Şanlıurfa – Adıyaman il sınırları içinde yer alan Atatürk baraj gölünün Set- Tünel girişi bölgesinden 4 istasyon belirlenmiştir. Bu çalışmada Copepoda filumlarından 2 taksona ait 3 türün varlığı ortaya konmuştur. Bu türler; Calanoid copepod Cyclopoid copepod ve Nauplius olarak belirlenmiştir. Teşhis edilen bu türler Atatürk Baraj Gölü için ilk kayıttır.

**ATATÜRK DAM LAKE SET- TUNNEL REGION COPEPODA DIVERSITY, NEW SPECIESSES, SEASONAL AND MONTHLY CYCLE****ABSTRACT**

The asset composition of Copepoda fauna, one of the zooplankton varieties, changes throughout the year. The composition and seasonal variation of the Copepoda fauna were studied in monthly and quarterly periods for 12 months. For the sampling phase of the study, 4 stations were determined from the Set-Tunnel entrance area of the Atatürk dam lake located within the provincial borders of Şanlıurfa - Adıyaman. In this study, the existence of 3 species belonging to 2 taxon from Copepoda phylum was revealed. These species are; Calanoid copepod has been designated as Cyclopoid copepod and Nauplius. These identified species are the first record for Atatürk Dam Lake.

**ÖZET**

Divan şiirinde aşk ve şarap kavramları kadın olsun, padişah olsun, çoban olsun Osmanlı toplumunda her kesimden şairler için her zaman en önemli malzemeler olmuştur. Şarap ve sevgili kavramları en yüksek dinî ve ilmî otoriteyi temsil eden şeyhülislam şairler tarafından da kendilerine özgü bir anlayışla ve divan şiir geleneği de göz önünde bulundurularak çeşitli imgelerle aktarılmıştır. Osmanlının ciddi kurumlarından biri olan şeyhüislamlık makamında oturan bazı şeyhülislamların usta divan şairleri gibi şiir yazmaları dikkate değer bir konudur. En zarif söyleyişlerle sevgili ve şarap kavramlarına şiirlerinde yer veren şeyhülislam şairler, derin tasavvufî manaları da içerek şekilde imgeler oluşturarak gelenek çerçevesinde kendilerini ifade etmeyi amaçlamışlardır. Bu çalışmayla; şairlik yetenekleri pek bilinmeyen, beşeri olarak algılanabilecek bir aşkı ve sevgiliyi öven; meyden, meyhaneden söz eden, duygularını açık veya örtük bir şekilde şiirle ifade etmekten, yanlış anlaşılmaktan korkmayan divan sahibi şeyhülislam şairlerin divanlarından seçilen kimi beyitlerinin divan şiir geleneği bağlamında irdelenip divan şiir geleneği ile tasavvufî anlayışın şeyhülislamlar üzerindeki etkisini ortaya koyma amaçlanmaktadır.

**Anahtar Kelimeler:** Divan şiiri, tasavvuf, şeyhülislam, şarap, sevgili,

**WINE AND BELOVED IN THE FRAMEWORK OF TRADITION AND SUFFIC AT  
THE DIVAN OWNER SEYHULISLAMIC POETS****ABSTRACT**

In Divan poetry, the concepts of love and wine have always been the most important materials for poets from all walks of life in Ottoman society, whether they are women, sultans or shepherds. The concepts of wine and lover were conveyed by the shaykh al-Islam poets, who represent the highest religious and scientific authority, with a unique understanding and with various images taking into account the divan poetry tradition. It is noteworthy that some of the sheikhulislams who sat in the office of şeyhülislam, one of the serious institutions of the Ottoman Empire, wrote poems like master divan poets. The shaykh al-Islam poets, who included the concepts of lover and wine in their poems with the most elegant expressions, aimed to express themselves within the framework of tradition by creating images in a way that included deep Sufi meanings. With this study; who praises a love and lover whose poetic talents are not well known, which can be perceived as human; It is aimed to examine some of the couplets selected from the divans of the divan owner şeyhülislam poets who talk about meyden and meyhane, who are not afraid of expressing their feelings openly or implicitly with poetry and being misunderstood, in the context of divan poetry tradition and to reveal the effect of divan poetry tradition and Sufi understanding on shaykh al-Islams.

**Keywords:** Divan poetry, mysticism, sheikh al-Islam, wine, beloved.

## TÜRKİYE'DE ERKEN EMEKLİLİK SORUNU ÜZERİNE BAZI DÜŞÜNCELER

### ÖZET

Bu çalışmanın amacı yeni bir erken emeklilik tartışması başlatmak değildir. Bu ne mümkündür, ne de doğrudur. Fakat günümüz sorunları üzerine önceki yüzyıllardan kalma kavramlar ile düşünmek de tartışmaların esasının iskanmasına yol açmaktadır. Zaman zaman şiddetini artırıp azaltarak uzun zamandan beri gündemimiz işgal eden, emeklilik, erken emeklilik gibi sorunlar da önceki yüzyıllardan kalma kavramlarla düşünüldüğünde çözümsüz kalmakta, ya da geliştirilen çözümler beklenen karşılığını bulamamaktadır. Bugün bilinen anlamı ile çalışma, modern zamanların bir icadıdır. Çalışma hayatı, endüstrileşmenin getirdiği fabrika sistemi ile doğanın ritmi dışına çıkılarak, günlük çalışma süresi yirmi dört saat esasına göre düzenlenirken, yaşamın bu tempoya en uygun evresi ile sınırlandırılarak da hayatın ritmi dışına çıkarılmıştır. Bir başka ifade ile sadece çalışma bir modern zaman icadı değil aynı zamanda çalışma sonrası yaşam, yani emeklilik de, bir modern zaman icadıdır. Kısaca çalışma, endüstrileşme ile birlikte, doğanın ve hayatın ritmi dışında, yeniden tanımlanarak toplumsal ve bireysel yaşamın merkezine yerleştirilmiştir. Bu gelişme üretimde ve maddi zenginlikte muazzam artışlara yol açarken bir çok temel sorunu da beraberinde getirmiş, sosyal bilimlerde bu sorunlar ve çözüm yolları üzerine yapılan çalışmalar konu hakkında zengin bir literatürü ortaya çıkarmıştır. Bu çalışma ile sosyoloji literatüründe kullanılan kurucu isimlerin geliştirdiği anomi, rasyonelleşme ve yabancılaşma kavramları üzerinden çalışma ve emeklilik tartışmalarına farklı bir bakış açısı getirmeye çalışılmaktadır. Bu çalışmanın hareket noktası, emekliliğin çalışma hayatından çekilmek anlamına gelmediğidir. Çoğu emekçi için çalışma, temel ihtiyaçlarını piyasa ilişkileri içinde karşılayabilmek için hayatlarından ayırdıkları zorunlu karşılık gibidir. Bu karşılık ne kadar kısa tutulursa, hayatın geri kalan o kadar uzun dönemini, piyasa ilişkilerinin dışında, bu ilişkilerin baskısından ve yabancılaştırıcı etkisinden bağımsız olarak, yeniden tanzim edebilme imkanına sahip olunacaktır. Bu yeniden tanzim çabası, çalışma hayatının sonu olarak değil, emeğin, “temel ihtiyaçlardan” bağımsızlaşarak “kendini gerçekleştirmeye” doğru, evrimi olarak görülmelidir. Bu evrime uygun politikalar, sosyal güvenlik sisteminde yaşanan sorunların daha kalıcı çözümlerini de beraberinde getirecektir.

**Anahtar kelimeler:** İş, emek, yabancılaşma, erken emeklilik, temel ihtiyaçlar, kendini gerçekleştirme

**SOME THOUGHTS ON THE PROBLEM OF EARLY RETIREMENT IN TURKEY****ABSTRACT**

The purpose of this study is not to start a new early retirement debate. This is neither possible nor right. However, thinking about today's problems with the concepts from previous centuries also causes the fundamentals of debate to be missed. Problems such as retirement and early retirement, which have been occupying our agenda for a long time by increasing and decreasing their severity from time to time, remain unsolved when considered with concepts from previous centuries. The solutions developed to solve the problems in this respect never matched the expected response. As known presently work is an invention of modern times. With the start of the factory system brought about industrialization, working life has been taken out of the rhythm of life and the rhythm of nature. Then the daily works has been arranged on the basis of twenty-four hours, and limited to the most suitable phase of life cycle. In other words, not only work is an invention of modern times, but life after work, namely retirement, is also an invention of modern times. In short, with industrialization, apart from the rhythm of nature and life, work has been redefined and placed at the center of social and individual life. Although this development created an enormous production and material wealth, it also caused too many fundamental problems such as exploitation, alienation and anomy. In this paper, it is tried to bring a different perspective to the discussions of work and retirement through the concepts of anomie, rationalization and alienation developed by the founding names used in the sociology literature. The starting point of this study is that retirement does not mean withdrawing from working life. For most workers, work is like a necessary compensation from their lives in order to meet their basic needs within market relations. The shorter this response is, the longer the rest of life will be able to reorganize outside of market relations, independent of the pressure and alienating effect of these relations. This reorganization effort should not be seen as the end of working life, but as the evolution of labor towards "self-realization" by becoming independent of "basic needs". Policies suitable for this evolution will bring along more permanent solutions to the problems experienced in the social security system.

**Keywords:** Work, labor, alienation, early retirement, basic needs, self-actualization

**ÖZET**

Bu bildiri; din etkenin Türk milli mücadele dönemi boyunca nasıl bir işlev gördüğü ele alınmıştır. Bununla beraber, sürecin şekillenmesini resmetmek için, Osmanlı devletinin parçalanmasıyla başlayan bağımsızlık mücadelesinde, ülkeyi işgalden kurtarmak için çareler aranmıştır. Bu noktada birleştirici unsurları öne çıkarmak, milli güç unsurlarını etkin kullanmak açısından kritik öneme sahiptir. Tarih boyunca bütünleyici ve etkinlik sağlayıcı en önemli unsur din ögesi olmuştur. Milli mücadelenin yönetici kadrosu bunun önemini erken fark etti. Öyle ki bu güç onlar için maddi güçten daha etkili konuma sahip olmuştur. Böylelikle hareketin tüm faaliyetlerinde dini unsurlar belirgin olarak kendini göstermiştir. Dini motivasyonu arkasına alan milli mücadele hareketinin, imparatorluk topraklarının bakiyesinin bir kısmını kurtarıp düşmanı Anadolu'dan süpürerek bağımsız bir devlet kurmaya muvaffak olduğu görülmüştür.

**Anahtar Kelimeler:** Milli Mücadelede Din, Atatürk ve Din, İttihat Terakki ve Din, Kurtuluş Savaşı

**THE EFFECT OF RELIGIOUS CONCEPTS ON THE WINNING OF THE TURKISH  
NATIONAL STRUGGLE****ABSTRACT**

In this notification; The function of religion factor during the Turkish national struggle period is discussed. However, in order to illustrate the shaping of the process, in the struggle for independence that started with the disintegration of the Ottoman state, remedies were sought to save the country from occupation. At this point, it was critical to highlight the unifying elements and to use the elements of national power effectively. Throughout history, religion has been the most integral and effective factor. The administrative staff of the national struggle realized the importance of this early. So much so that this power has had a more effective position for them than physical force. Thus, religious elements were evident in all the activities of the movement. It has been seen that the national struggle movement, which was motivated by religion, was able to save some of the remnants of the imperial lands and to establish an independent state by sweeping the enemy from Anatolia.

**Keywords:** Religion in the National Struggle, Atatürk and Religion, Union and Progress and Religion, War of Independence

**ÖZET**

Sosyolojinin kurucu isimlerinden Durkheim'e göre "din bir toplumun kendi üzerine düşünme biçimidir". Kişisel olarak dinin metafizik önermelerine mesafeli ve/ya kayıtsız olan birinin böyle bir söz söylemesi şaşırtıcı gelebilir. Kuşaklar boyu haham yetiştiren bir aileden gelen Durkheim'in, kendisinde ergenlik dönemine kadar haham mektebine devam etmiş olduğu, dinle yollarının ilk gençlik yıllarında ayrıldığı dikkate alındığında Durkheim sosyolojisinde dinin işgal ettiği yerin önemi daha iyi anlaşılacaktır. Durkheim kadar açık olmasa da benzer ilişkiyi Weber düşüncesinde de görebiliriz. Siyasi ikbal peşinde koşan liberal politikacı bir baba ile püriten Kalvinist bir annenin oğlu olarak yetişen Weber'in Protestan ahlakına, kapitalizmin gelişmesine, karşılaştırmalı dinler ve rasyonelleşmeye olan ilgisinde dinin köklerini de görmek şaşırtıcı olmayacaktır. Kurucu isimler arasında dine yaklaşımı ve mesafesi en şaşırtıcı olan ise Karl Marx'tır. Marx'ın diyalektik materializme dayalı düşünceleri ilk bakışta dine en karşıt olandır. Ancak düşünce sisteminin dayandığı temel kavramlara bakıldığında ise Marx'ın karşıt olan konumunun teolojik geleneğe en yakın düşünce sistemi olduğu görülecektir. insanın doğası, emek, emeğin doğası, yabancılaşma, komünist toplum gibi kavramlar Marx'ın içine doğduğu ve yetiştiği teolojik gelenekle diyalektik bir ilişkinin yansımalarıdır. Bu bildirinin amacı sosyolojik düşüncede uzun zamandan beri unutulmuş görünen bu teolojik bağlantıya dikkat çekmektir. Bildirinin temel iddiasına göre, yerli bir sosyolojinin imkanı ilgili toplumun teolojik geleneğine aşinalık, onu kavrama ve anlama kabiliyeti ile doğrudan ilişkilidir.

**Anahtar kelimeler:** Yerli sosyoloji, kültür, gelenek, teolojik gelenek, din, din sosyolojisi.

**THE POSSIBILITY OF A NATIVE SOCIOLOGY OR THE CHALLENGE OF  
SOCIOLOGY WITH THEOLOGY****ABSTRACT**

According to Durkheim, one of the founding names of sociology, “religion is a society's way of thinking about itself”. It may come as a surprise for someone who is personally distant and/or indifferent to the metaphysical propositions of religion to make such a statement. The importance of religion in Durkheim's sociology will be better understood when it is taken into account that Durkheim, who came from a family that trained rabbis for generations, attended the rabbinical school until his adolescence, and his religious paths diverged in his early youth. We can see a similar relationship in Weber's thought, although not as obvious as Durkheim. It would not be surprising to see the roots of religion in Weber's interest in the Protestant ethic, the development of capitalism, comparative religions and rationalization, who grew up as the son of a liberal politician father who sought political fortune and a puritanical Calvinist mother. Among the founding names, Karl Marx is the most surprising in his approach to religion and his distance. Based on dialectical materialism, Marx's ideas are at first glance the most anti-religious. However, when we look at the basic concepts on which his thought is based, it will be seen that Marx's opposing position is the system of thought closest to the theological tradition he was familiar. Concepts such as human nature, labor, nature of labor, alienation, communist society are of a dialectical reflections with the theological tradition in which Marx was born and raised. The purpose of this paper is to draw attention to this theological connection that seems long forgotten in sociological thought. It claims that the possibility of an indigenous sociology is directly related to the familiarity, comprehension and understanding of the theological tradition of the related society.

**Key words:** Native sociology, culture, tradition, theological tradition, religion, sociology of religion.

### **ÖZET**

İnsan ilişkilerinin karmaşık ve küreselleşmenin hüküm sürdüğü günümüzde birey ve demokratik yurttaş profilinin ana boyutları içinde eleştirel düşünmenin vazgeçilmez yeri vardır (Gürkaynak, Üstel ve Gülgöz, 2003). Eleştirel düşünme, gözlem ve bilgiye dayanarak sonuçlara ulaşma (Paul, 1991) olarak tanımlanmaktadır. Bilgi çağında okullar, eleştirel düşünebilen, ihtiyaç hâlinde bilgiye ulaşabilen ve bilgiyi üreten bireylerin yetiştirildiği yerlerdir (Balay, 2004). Okulda bireylerin eleştirel, özgün ve yenilikçi düşünebilmeleri öğretim programlarının amaçları arasında yer almaktadır. Bu bağlamda çalışmada, öğrencilerde eleştirel düşünme becerisinin geliştirilmesine ilişkin öğretmen görüşlerinin incelenmesi hedeflenmiştir. Çalışmada nitel araştırma yöntemi kullanılmıştır. Çalışma deseni ise program yürütme durum çalışmaları desenidir. Nitel durum çalışmasının en belirgin özelliği bir ya da birkaç durumun derinliğine araştırılmasıdır (Yıldırım ve Şimşek, 2018). Durum çalışmasında amaç, birtakım karar ya da kararların neden alındıklarını, nasıl uygulandıklarını ve sonuçlandıklarını aydınlatmaya çalışmaktır (Yin, 2003). Bu kapsamda öğrencilerde eleştirel düşüncenin geliştirilebilmesi için okul müdürleri ve öğretmenlerin yapması gereken çalışmaların neler olabileceği konusunda öğretmenlerin görüşlerine başvurulmuştur. Araştırmada amaçlı örnekleme yöntemlerinden ölçüt örnekleme yöntemi kullanılmıştır. Ölçütler en az 3 yıllık mesleki kıdeme sahip olmak, farklı branş ve okul kademelerinde görev yapıyor olmak şeklinde belirlenmiştir. Buna göre araştırmanın çalışma grubunu okul öncesi, ilkokul, ortaokul ve liselerde görev yapan 17 öğretmen oluşturmaktadır. Araştırmada veri toplama aracı olarak yarı yapılandırılmış görüşme formu kullanılmıştır. Soruların geçerliği için eğitim bilimleri alanında bir doçent ve iki doktor öğretim üyesinin görüşüne başvurulmuştur. Araştırmanın soruları şu şekilde oluşturulmuştur:

- Öğrencilerde eleştirel düşünme becerisinin geliştirilmesi için okul yöneticilerinin yapması gereken çalışmalar nelerdir?
- Öğrencilerde eleştirel düşünme becerisinin geliştirilmesi için öğretmenlerin yapması gereken çalışmalar nelerdir?

Verilerin analizinde içerik analizi tekniği kullanılmıştır. Analizde güvenilirliği sağlamak için iki alan uzmanı görev almıştır.

Öğretmen görüşlerine göre öğrencilerde eleştirel düşünme becerisinin geliştirilmesi için okulun yapması gereken çalışmalar arasında öğrencilere değer vermek, demokratik bir okul ortamı oluşturma, karar alma süreçlerine öğrencileri dâhil etme, uygun bir okul iklimi oluşturma ve öğrencilere bu konuda model olmaktır. Öğretmenlerin yapması gereken çalışmalar arasında öğrencilerin fikirlerine değer verme, özgür ve demokratik bir öğrenme ortamı oluşturma, derste öğrenci merkezli yaklaşımlar kullanma ve eleştirel düşünme konusunda onları cesaretlendirme şeklindedir.

**Anahtar kelimeler:** Düşünme, eleştirel düşünme, öğretmen görüşleri

**EXAMINATION OF TEACHERS' OPINIONS ON DEVELOPMENT OF CRITICAL THINKING SKILLS IN STUDENTS****ABSTRACT**

Today, in which human relations are complex and globalization prevails, critical thinking has an indispensable place among the main dimensions of the individual and democratic citizen profile (Gürkaynak, Üstel, & Gülgöz, 2003). Critical thinking is defined as reaching conclusions based on observation and knowledge (Paul, 1991). . In the information age, schools are places where individuals who can think critically, access information when needed, and produce information are raised (Balay, 2004). One of the aims of the curriculum is to enable individuals to think critically, authentically and innovatively at school. In this context, the aim of the study is to examine the views of teachers on the development of critical thinking skills in students. Qualitative research method was used in the study. The study pattern is the program execution case studies pattern. The most distinctive feature of the qualitative case study is the in-depth investigation of one or more cases (Yıldırım & Şimşek, 2018). The purpose of the case study is to try to illuminate why some decision or decisions were made, how they were implemented and resulted (Yin, 2003). In this context, teachers' opinions were sought on what the school principals and teachers should do in order to develop critical thinking in students. The criterion sampling method, one of the purposive sampling methods, was used in the research. The criteria were determined as having at least 3 years of professional seniority, working in different branches and school levels. Accordingly, the study group of the research consists of 17 teachers working in pre-school, primary, secondary and high schools. A semi-structured interview form was used as a data collection tool in the research. For the validity of the questions, the opinions of an associate professor and two doctoral faculty members in the field of educational sciences were consulted. The research questions were formed as follows: 1. What are the studies that should be done by school administrators in order to develop critical thinking skills in students? 2. What are the studies that teachers should do in order to develop critical thinking skills in students? Content analysis technique was used in the analysis of the data. Two field experts took part in the analysis to ensure reliability. According to the teachers' opinions, among the activities that the school should do in order to develop critical thinking skills in students are to value students, to create a democratic school environment, to include students in decision-making processes, to create an appropriate school climate and to be a model for students in this regard. Valuing students' ideas, creating a free and democratic learning environment, using student-centered approaches in the lesson and encouraging them to think critically are among the activities that teachers should do.

**Keywords:** Thinking, critical thinking, teacher views

## **TÜRKİYE’DE KAPALI KONUT SİTELERİ: GAZİANTEP ÖRNEĞİ**

*Orcid ID: 0000-0003-2019-5151*

*Fen-Edebiyat Fakültesi, Coğrafya Bölümü, Bölgesel Coğrafya, Gaziantep*

### **ÖZET**

Türkiye’de kapalı konut siteleri ve etkilerine dair farklı bilim dallarına mensup araştırmacılar araştırma yapmaktadır. Araştırmalar, bu konut tipinin mekân ve toplum üzerinde önemli etkiler bıraktığını göstermektedir. Bu araştırmalardaki etkiler genellikle fiziksel ve toplumsal ayrışma, güvenlik açısından ele alınmaktadır. Böyle bir perspektifte çıktılar ağırlıklı olumsuz etkileri ile ön plana çıkmaktadır. Dışa kapalı, duvarla çevrili, 24 saat güvenlik önlemlerinin alındığı fiziki alanlar kamusal mekânların ortadan kalkmasına neden olmaktadır. Ayrıca kendini dışarıdan yalıtmış nüfus grupları çoğu durumda dışarısını suç unsuru olarak görme eğiliminde olabilmektedir. Türkiye’de kapalı konut sitelerine dair yapılan araştırmalar ilk olarak İstanbul, Ankara, İzmir gibi büyük kentlere odaklanırken, günümüzde küçük kentler özelinde yapılmış çalışmalar da bulunmaktadır. Bu çalışmada Gaziantep’in 2000’li yıllardan sonraki kentleşme sürecinde baskın hale gelmeye başlamış kapalı konut siteleri ele alınmıştır. Gaziantep Büyükşehir Belediyesi’nden edinilmiş planlar yardımıyla Gaziantep’te kapalı konut özelliği gösteren konutlar haritalandırılmıştır. Yapılan saha araştırmaları ile kapalı konut olma özelliği gösteren yerler ArcGIS 10.7 programı vasıtasıyla haritalandırılmıştır. Elde edilen bulgular kapalı konut sitelerinin Gaziantep’in planlı gelişmiş mahallelerinde yaygınlaştığını göstermektedir. Bu mahalleler arasında 15 Temmuz, İbrahimli, Beştepe, Osmangazi gibi mahalleler bulunmaktadır. Kentte en fazla bilinen kapalı konut siteleri ise Iconova ve Antepia Yaşam Sitesidir. Her iki konut tipi de dışarıdan yüksek duvarlarla ayrılan, 24 saat güvenliklerin bulunduğu yapıdadır. Ayrıca her iki konut da 24 saat kameralarla denetim yapılmaktadır. Bu yapılarıyla hem Iconova hem de Antepia literatürde tartışılan fiziksel ve sosyal ayrışma, güvenlik gibi parametrelere uygun çıktılar sunmaktadır.

**Anahtar kelimeler:** Kapalı Konut Siteleri, fiziksel ve mekânsal ayrışma, Gaziantep

**GATED COMMUNITIES IN TURKEY: THE CASE OF GAZIANTEP****ABSTRACT**

Researchers from different disciplines conduct research on gated communities and their effects in Turkey. Researches shows that this type of housing has significant effects on space and society. The effects in these studies are generally discussed in terms of physical and social segregation and security. Outcomes are characterized by negative effects in such a perspective. Physical spaces such as closed to the outside surrounded by walls and where 24-hours security measures are taken caused the disappearance of public spaces. In addition, population groups that are isolated from the outside may tend to consider the others as a criminal element. While researches first focused on big cities such as Istanbul, Ankara and Izmir about gated communities in Turkey, there is recent studies on small cities. In this study, gated communities, which started to become dominant in the urbanization process of Gaziantep after the 2000s, are discussed. With the help of the plans obtained from Gaziantep Metropolitan Municipality, the houses that show the characteristics of gated communities in Gaziantep were mapped. With the field research, the places that are gated communities were mapped by the ArcGIS 10.7 program. The findings show that gated communities have become widespread in the planned neighborhoods of Gaziantep. These neighborhoods include neighborhoods such as 15 Temmuz, İbrahimli, Beştepe, and Osmangazi. The most well-known gated communities in the city are Iconova and Antepia Life Site. Both housing types are in a structure that is separated from the outside by high walls and has 24-hour security. In addition, both residences are monitored 24 hours a day by cameras. With these structures, both Iconova and Antepia have a structure that is suitable for parameters such as physical and social separation and security discussed in the literature.

**ÖZET**

Kadmiyum elementi doğaya ve özelinde insan sağlığına zarar veren bir ağır metaldir. Adsorpsiyon yöntemi ucuz ve basit olduğu için ağır metallerin gideriminde sıklıkla başvurulan bir ayırma yöntemidir. Adsorpsiyon izoterm analizi yapmak ancak izoterm modellerinin adsorpsiyon verilerine uygulanmasıyla mümkündür. Ağır metallerin adsorpsiyonu çoğunlukla kimyasaldır. Kimyasal adsorpsiyondan önce akla ilk gelen model olan Langmuir modeline ait izoterm doğrusal değildir. Bununla beraber Langmuir modelinden 6 tip doğrusal denklemler türetilmiştir. Bu denklemlerden hangisinin kullanılacağını bilmek önemlidir. Bu çalışma, bu denklemlerden hangisinin adsorpsiyona daha uygun olduğunu anlamak için yapılmıştır. Bu çalışmada 318 K sıcaklığında gerçekleştirilen adsorpsiyon işlemi Siirt Kurtalan Koçpınar bölgesinden elde edilen kile uygulandı. Sonrasında elde edilen veriler, Langmuir izoterm modelinden türetilmiş 6 doğrusal denkleme uygulandı. Denklemlerin karşılaştırılması için regresyon modeli olarak en küçük kareler yöntemi kullanıldı. Yapılan regresyon analizi sonucunda modellerin adsorpsiyona uygunluk derecelerinin; tip 3 = tip 6 < tip 1 = tip 4 < tip 2 = tip 5 olduğu görüldü.

**COMPARATIVE ANALYSIS OF 6 TYPE LINEAR EQUATIONS OF THE  
LANGMUIR ISOTHERM MODEL ON THE ADSORPTION OF Cd (II) ION BY  
SIIRT KURTALAN KOÇPINAR CLAY**

**ABSTRACT**

Cadmium is a heavy metal that harms nature and human health in particular. Because of the adsorption method is cheap and simple, it is a frequently used separation method for the removal of heavy metals. Performing adsorption isotherm analysis is only possible by applying isotherm models to adsorption data. Adsorption of heavy metals is mostly chemical. The isotherm of the Langmuir model, which is the first model that comes to mind when chemical adsorption is mentioned, is not linear. However, 6 types of linear equations were derived from the Langmuir model. It is important to know which of these equations to use. This study was conducted to understand which of these equations is more suitable for adsorption. In this study, the adsorption process carried out at 318 K temperature was applied to the clay obtained from Siirt Kurtalan Koçpınar region. The obtained data were applied to 6 linear equations derived from the Langmuir isotherm model. The least squares method was used as the regression model to compare the equations. As a result of the regression analysis, the degrees of suitability of the models for adsorption; type 3 = type 6 < type 1 = type 4 < type 2 = type 5.

**Keywords:** Adsorption, isotherm, Langmuir, linear regression, cadmium, clay

### **ÖZET**

Bu araştırma ile sınıf öğretmenlerinin ilerleyen bilim ve teknolojik gelişmeler karşısında farklılaşan becerileri kazanmaları yolunda sergilemiş oldukları tutumları gözlemleyerek “Dijital Yeterlilik” hakkında kendilerine yönelik değerlendirmelerini belirlemek ve bu değerlendirmelerin bağımsız değişkenler açısından anlamlı bir farklılık oluşturup oluşturmadığının belirlenmesi amaçlanmıştır. Amacı gerçekleştirmek üzere nicel araştırma yöntemi kapsamında olan tarama yöntemi kullanılmıştır. Araştırmanın örneklemini 2020-2021 eğitim öğretim yılında Doğu Anadolu’da bulunan bir ilde görev yapan 92 sınıf öğretmeni katılmıştır. Veriler normal dağılım gösterdiği için parametrik testlerden t testi ve ANOVA uygulanmıştır. Araştırma sonucunda elde edilen bulgular şöyle özetlenebilir: Ölçeğin tüm boyutlarında cinsiyet ve yaş değişkenlerine göre anlamlı bir farklılık görülmezken, yalnızca “Öğretme ve Öğrenme” boyutunda mesleki hizmet yılı değişkenine göre anlamlı bir farklılık belirlenmiştir.

**Anahtar Kelimeler:** Dijital yeterlilik, teknoloji, öğretmen becerileri

**EXAMINATION OF CLASSROOM TEACHERS' OPINIONS ON DIGITAL  
QUALIFICATION LEVELS****ABSTRACT**

With this research, it was aimed to determine the self-assessments about "Digital Competence" by observing the attitudes of classroom teachers towards gaining different skills in the face of advancing science and technological developments, and to determine whether these evaluations create a significant difference in terms of independent variables. In order to achieve the aim, the survey method, which is within the scope of the quantitative research method, was used. 92 classroom teachers working in a province in Eastern Anatolia participated in the sample of the research in the 2020-2021 academic year. Since the data showed normal distribution, t-test and ANOVA were applied from parametric tests. The findings obtained as a result of the research can be summarized as follows: While no significant difference was observed in all dimensions of the scale according to gender and age variables, a significant difference was determined only in the "Teaching and Learning" dimension according to the variable of years of professional service.

**Keywords:** Digital competence, technology, teacher skills.

### **ÖZET**

Görünürlük ya da görünmezlik dalga boylarında ışınım yapan ışınım kaynakları, gerçekleştirdikleri aydınlatma, radyo dalgaları vb. görevlerin yanı sıra enerji salınımı da gerçekleştirirler. Güneş, en önemli yerde değerlendirilmesi gereken bir ışık kaynağı olup, aydınlatmamızın yanı sıra enerji ihtiyacımızı da karşılar. Güneşten elde ettiğimiz ışığın yapısal özellikleri, dünyanın konumuna göre gün içerisinde ve mevsimler içerisinde değişkenlik arz ettiği gibi, yararlanmış olduğumuz enerji miktarı da değişkenlik arz eder. Benzer biçimde suni ışık kaynağı olarak yararlandığımız lambalar da, aydınlatma işlevlerinin yanı sıra enerji yayılımları gerçekleştirirler. Işınımsal enerji yayılımı etkisi, frekans ve dalga boyuna bağlı olarak, planck sabiti esaslı hesaplanabilmekle beraber, ışınım türü ya da ışık kaynağı enerji miktarı için temel belirleyici etken olmaktadır. Bu kapsamda, burada yapılan çalışmalarda, farklı ışık türü ya da ışık kaynağı esaslı olarak, ışınım dalga boylarının enerji etkilerinin ölçümleri, aynı ışınım miktarları ölçütünde değerlendirilmiştir. Öncelikle, deneysel çalışmalarda elde edilen veriler kullanılarak aynı ışık kaynağı için enerji-dalga boyu ilişkisi, fonksiyonel olarak ortaya konulmaya çalışılmıştır. Ayrıca farklı ışık kaynakları için de enerji-dalga boyu ilişkisi ele alınarak, aynı dalga boyu için ışık kaynağı farklılığının enerji oranını etkileyebildiği görülmüştür.

**LIGHT SOURCE BASED ENERGY DIFFERENCE ANALYSIS****ABSTRACT**

Light sources emitting radiation in visibility or invisibility wavelengths, while they perform facilities of lighting, radio waves, etc., also release energy. The sun is the light source that should be evaluated in the most important context and provides our energy needs as well as our lighting. As the structural features of the light we obtain from the sun vary during the day and seasons according to the location of the earth, also the amount of energy we benefit from it is differed. Similarly, lamps that we use as artificial light sources, besides their lighting functions, they also perform energy emissions. Although the effect of radiative energy dissipation can be calculated on the basis of Planck's constant, depending on the frequency and wavelength, the type of radiation or the light source is the main determining factor for the amount of energy. Here, in the studies carried out in this context, the measurements of the energy effects in radiation wavelengths based on different types of light or light sources are evaluated in the same radiation amount criterion. First of all, the energy-wavelength relationship for the same light source is tried to be revealed functionally by using the data obtained in experimental studies.

### **ÖZET**

Taşıma bantları, üretim tesisleri için aktarma organları olarak görev yaparlar. Hammaddeler, ara ürünler, nihai ürünler ve yardımcı maddeler taşıma bantları yardımıyla işletme içerisinde transfer edilirler. Farklı taşıma bandı konstrüksiyonları bulunmakla beraber, polimerik kaplı taşıma bantları sıklıkla karşımıza çıkmaktadır. Gıda sektörü, insan sağlığını direkt olarak etkileyen bir endüstri dalı olduğu için, kullanılacak taşıyıcı bantların da dikkatle seçilmesi gerekir. Taşıma bantları sonsuz sistemlerdir ve taşıma bandının herhangi bir noktasında oluşacak bakteriyel üreme o noktaya temas eden tüm gıdaların kontamine olmasına sebebiyet verecektir, bu durum, çapraz kirlenme olarak adlandırılmaktadır. Gıda patojenlerinin neden olduğu hastalıklar ölümle sonuçlanacak kadar ciddi sonuçlar doğurabilmektedir. Hatta bu mikroorganizmalar, salgınlara neden olarak birden çok insanın etkilenmesine sebep olabilirler. Bu çalışma kapsamında, bakteriyel üreme olduğunda renk değiştirerek görsel uyarı veren bir taşıma bandı geliştirilmiştir. Bu sayede, üretim esnasında anında müdahale imkanı oluşturulması hedeflenmiştir. Çalışmanın temelinde bakteriyel üreme olduğunda ortam pH'nın asidik olması fikri yatmaktadır. Bu amaçla, doğal kaynaklı halokromik antosiyanin boyarmadde kullanılmıştır. Hedefte gıda endüstrisine yönelik bir taşıyıcı bant üretimi olduğu için doğal boyarmadde seçilmiştir. Halokromik boyarmadde termoplastik nişastaya yüklenmiş ve daha sonra nişasta, su bazlı poliüretan polimer pastası içerisine doplanmıştır (doplanan nişasta konsantrasyonu %15'tir). Bıçaklı kaplama yöntemiyle, pamuklu kumaş üzerine yapılan kaplamalar sonunda kürleme işlemi gerçekleştirilmiştir. pH değişimi ile gerçekleşen renk değişimi, CIE  $L^*$   $a^*$   $b^*$  değerlerinin spektrofotometrede ölçülmesi ile değerlendirilmiştir. Kumaş üzerinde bakteri kültürü oluşturularak renk değerleri ayrıca ölçülmüştür. Asidik pH altında ve bakteri kültürü yapılan bölgede belirgin kırmızı lekelenme oluşumu tespit edilmiştir. Taşıyıcı bandın renk değiştirme özelliği tekrarlı yıkamalara karşı test edilmiştir. Ayrıca, nişasta katkısının mukavemete olan etkisi belirlenmiştir.

**Anahtar Kelimeler:** Akıllı taşıyıcı bant, bakteriyel üreme tespiti, halokromik boyarmadde, poliüretan, termoplastik nişasta

**SMART CONVEYOR BELT THAT CHANGES COLOR WITH BACTERIAL  
REPRODUCTION MANUFACTURING****ABSTRACT**

Conveyor belts act as transfer systems for facilities. Raw materials, intermediate products, final products and auxiliary materials are transferred within the company with the aid of conveyor belts. Although there are different conveyor belt constructions, polymeric coated conveyor belts are frequently encountered. Since the food industry directly affects human health, the conveyor belts to be used must be carefully selected. Conveyor belts are endless systems and bacterial growth at any point of the conveyor belt will cause contamination of all foods that come into contact with that point, this is called cross contamination. Diseases caused by food pathogens may have serious consequences, including death. Moreover, these microorganisms can cause epidemics and affect a large population. Within the scope of this study, a conveyor belt was developed that gives a visual warning by changing color when bacterial growth occurs. In this way, it is aimed to create an opportunity for immediate intervention during production. The basis of the study is that the pH of the environment is acidic when there is bacterial growth. For this purpose, natural originated halochromic anthocyanin dyestuff was used. Natural dyestuff was chosen as the target is the production of conveyor belts for the food industry. The halochromic dyestuff was loaded into thermoplastic starch and then the starch was doped into a water-based polyurethane polymer paste (doped starch concentration was 15%). The curing process was carried out at the end of the coatings made with the blade coating method on cotton fabric. Color change depending on the pH change was evaluated by measuring CIE  $L^* a^* b^*$  values in a spectrophotometer. Color values were also measured on a bacterial culture that was created on the fabric. Significant red staining formation was detected under acidic pH and on the bacterial culture area. The color change feature of the conveyor belt has been tested against repeated washings. In addition, the effect of starch additive on the tenacity was determined.

**Keywords:** Smart conveyor belt, detection of bacterial reproduction, halochromic dyestuff, polyurethane, thermoplastic starch

**ÖZET**

Sağlık kuruluşuna başvuran hastaların kimlik bilgilerinin kayıt altına alınmasında ve tıbbi işlemlerde kullanılan onaylı defterlere Protokol Defteri denir. Tıbbi mevzuat gereği uygulamada tutulması zorunlu olan bu defterlerde muayene edilecek hastaların bilgilerine, istirahat raporlarına ve doktor görüşlerine yer verilmektedir. Bu kayıt defteri girdileri genellikle el ile sağlanır. Hasta kayıtlarının arşivlenmesinde en önemli konu saklama alanı ve birçok belgenin uzun arşiv süreleri içerisinde güvenli bir şekilde saklanmasıdır. Sicil girişlerinin manuel olarak sağlanması, verilerin elektronik ortamda korunması gibi durumlar sağlık sektöründe bazı değişikliklerin yapılması gerektiğini ortaya çıkarmıştır. Günümüzde farklı sektörlerdeki birçok işin tasarlanan modellerle çözülmesi, manuel olarak sunulan problemlerin otomatik olarak gerçekleştirilmesini zorunlu kılmıştır. Bu çalışmada, son yıllarda önemli bir araştırma konusu haline gelen Blockchain teknolojisinin kullanılması amaçlanmaktadır. Sağlık sektöründe girişler manuel olarak yapılıp daha sonra elektronik ortama aktarılsa dahi takibin zorlaşması ve geçmiş süreçte veri kaybı ihtimali olması büyük bir sorundur. Tasarlanacak model ile bu sorunun çözülmesi ve veri gizliliğinin ve korunmasının sağlanması planlanmaktadır.

**USE OF BLOCKCHAIN TECHNOLOGY IN ELECTRONIC HEALTH  
REGISTRATION SYSTEMS****ABSTRACT**

The approved books used in the registration of the identity information of the patients who applied to the health institution and the medical procedures are called the Protocol Book. In these books, which are obligatory to be kept in practice in accordance with medical legislation, information about the patients who will be examined, rest reports and doctor's opinions are included. These registry entries are generally provided manually. The most important issue in archiving patient records is the storage area and the safe keeping of many documents within long archive periods. Situations such as providing the registry entries manually and protecting the data in the electronic environment have revealed that some changes should be made in the health sector. Today, solving many jobs in different sectors with designed models has necessitated the automatic realization of the problems that are offered manually. In this study, it is aimed to use Blockchain technology, which has become an important research topic in recent years. Even if the entries are made manually in the health sector and then transferred to the electronic environment, it is a big problem that the follow-up becomes difficult and there is a possibility of data loss in the past process. With the model to be designed, it is planned to solve this problem and to ensure data confidentiality and protection.

**ÖZET**

Neredeyse bütün biyolojik sistemleri etkileyen birçok ağır metal çevrede farklı dozajlarda karışımlar halinde bir arada bulunmakta ve kontaminasyona sebep olmaktadır. Bu nedenle metal karışımları ve onların muhtemel zararlı etkileri ile ilgili yapılan çalışmalar gün geçtikçe artmaktadır. Bu karışımlardan birisi olan Cd-As karışımları ile ilgili çalışmalar oldukça azdır. Cd ve As karışımlarının tekli hallerine göre daha toksik olduğu ifade edilmiştir. Bu çalışmada literatürde daha az çalışılmış Cd-As karışımı tercih edilmiştir. Biyoaktif bileşiklerin kullanımı, çevresel kirleticilerin neden olduğu toksisiteyi azaltmak için potansiyel bir yaklaşım olarak ortaya çıkmıştır. Polifenolik biyoaktif bir bileşik olan Curcumin (CUR)'in antioksidan, antiinflamatuvar, antitümör ve antibakteriyel, antiviral ve sitoprotektif etkilere sahip olduğu ve fenolik grupları sayesinde süperoksit anyonu, peroksinitrit, nitrik oksit, peroksil radikalleri ve hidrosil radikallerini temizlediği gösterilmiştir. CUR'in, süperoksit dismutaz (SOD), katalaz (CAT), glutasyon peroksidaz (GPx) gibi antioksidan proteinlerin ekspresyonunu dolaylı olarak indüklediği düşünülmektedir. CUR'in toksik kimyasalların neden olduğu karaciğer hasarına karşı sitoprotektif etkili olduğunu gösteren araştırmalar varsa da metal karışımı nedeni hematolojik hasarı önleme ile ilgili herhangi bir çalışmaya rastlanmamıştır. Bu çalışmada CUR'in, Cd-As karışımı nedeni hemotoksosite ve myelosupresiyona karşı muhtemel koyucu etkilerini belirlemek için, sıçanların periferik kanında eritrosit, lökosit, trombosit hücreleri ve hemoglobin ve hematokrit değerleri, kemik iliği çekirdekli hücreleri (KİÇH) ve antioksidan aktivite indikatörleri olan glutation (GSH), katalaz (KAT) ve Glutasyon Peroksidaz (GPx) aktiviteleri belirlenmiştir. Sadece 0.44+5.55 mg/kg Cd-As karışımı verilen grupta lökosit sayıları ciddi bir inflamasyonu gösterecek şekilde artmış ( $p<0.001$ ), eritrosit, hemoglobin ve hematokrit seviyeleri kayda değer şekilde azalmış ( $p<0.001$ ), trombosit ve KİÇH'nin sayıları önemli oranda değişmemiş ( $p>0.001$ ), GSH, KAT, GPx aktiviteleri büyük oranda azalmıştır ( $p<0.001$ ). 0.44+5.55 mg/kg Cd-As karışımı ile birlikte 100 ve özellikle 200 mg/kg CUR verilen gruplarda periferik kan hücreleri, KİÇH ve antioksidan aktivite indikatörleri kontrol grubuna yakın seviyelere gelmiştir. Deneysel sonuçlarımız CUR'in, Cd-As karışımı tarafından indüklenen hemotoksosite ve myelosupresiyonu büyük ölçüde önlediğini göstermiştir. CUR'in fenolik grupları, reaktif türlerle reaksiyona girme yeteneğinden sorumludur ve dolayısıyla CUR uygulamasının etki mekanizmalarından birinin hücreleri oksidatif hasardan koruma şeklinde olması muhtemeldir. Bu araştırma Eskişehir Osmangazi Üniversitesi Bilimsel Araştırma Projeleri birimi tarafından (Proje no: FHD-2022-2251) desteklenmiştir.

**Anahtar Kelimeler:** Curcumin, Hemotoksosite, İmmunsupresyon

**PROTECTIVE EFFECTS OF CURCUMIN AGAINST METAL MIXTURE-INDUCED  
HEMOTOXICITY AND IMMUNOSUPPRESSION IN RATS**

**ABSTRACT**

Many heavy metals, which affect almost all biological systems, coexist in the environment as mixtures at different dosages and cause contamination. For this reason, studies on metal mixtures and their possible harmful effects are increasing day by day. Studies on Cd-As mixtures, which is one of these mixtures, are very few. It has been stated that mixtures of Cd and As are more toxic than their single forms. Cd-As mixture, which has been less studied in the literature, was preferred in this study. The use of bioactive compounds has emerged as a potential approach to reduce toxicity caused by environmental pollutants. It has been shown that Curcumin (CUR), a polyphenolic bioactive compound, has antioxidant, anti-inflammatory, antitumor and antibacterial, antiviral and cytoprotective effects, and scavenges superoxide anion, peroxynitrite, nitric oxide, peroxy radicals and hydroxyl radicals thanks to its phenolic groups. CUR is thought to indirectly induce the expression of antioxidant proteins such as superoxide dismutase (SOD), catalase (CAT), glutathione peroxidase (GPx). Although there are studies showing that CUR has a cytoprotective effect against liver damage caused by toxic chemicals, no study has been found on preventing hematological damage caused by metal mixture. In this study, in order to determine the possible protective effects of CUR against hemotoxicity and myelosuppression caused by Cd-As mixture, erythrocyte, leukocyte, platelet cells and hemoglobin and hematocrit values, bone marrow nucleated cells (BNC) and glutathione (antioxidant activity indicators) in the peripheral blood of rats were investigated. GSH, catalase (KAT) and Glutathione Peroxidase (GPx) activities were determined. In the group given only 0.44+5.55 mg/kg Cd-As mixture, leukocyte counts increased ( $p<0.001$ ) indicating severe inflammation, erythrocyte, hemoglobin and hematocrit levels were significantly decreased ( $p<0.001$ ), platelet and BMD counts were significant. unchanged ( $p>0.001$ ), GSH, CAT, GPx activities were greatly decreased ( $p<0.001$ ). In the groups given 100 and especially 200 mg/kg CUR together with 0.44+5.55 mg/kg Cd-As mixture, peripheral blood cells, RBC and antioxidant activity indicators were close to the control group. Our experimental results showed that CUR greatly inhibited the hemotoxicity and myelosuppression induced by the Cd-As mixture. The phenolic groups of CUR are responsible for its ability to react with reactive species, and thus it is likely that one of the mechanisms of action of CUR administration is to protect cells from oxidative damage. This research was supported by Eskişehir Osmangazi University Scientific Research Projects Unit (Project no: FHD-2022-2251).

**Keywords:** Curcumin, Hemotoxicity, Immunosuppression

**G20 ÜLKELERİNİN FAALİYETLERİNDE EKOSİSTEMİ KORUMA  
PERFORMANSLARININ GRİ ANALİZ YÖNTEMİ İLE KARŞILAŞTIRILMASI**

**Semin PAKSOY**

*Doç.Dr. Çukurova Üniversitesi, İktisadi ve İdari Bilimler Fakültesi Ekonometri Bölümü,  
ORCID No: 0000-0003-1693-0184

ORCID No: 0000-0002-5420-1823*

**ÖZET**

Özellikle sanayisi ve ekonomisi gelişmiş ülkeler ile yükselen ve gelişmekte olan ülkelerin pek çoğu ekolojik ayak izi yüksek olan ülkelerdir. Bazı gelişmiş ülkeler ise ekolojik ayak izinin biyokapasitelerini aşmayacak ölçüde diğer bir ifade ile ekosistemde yarattıkları zararın onarılabılır düzeyde ya da tahribatın yıkıma dönüşmeyecek şekilde olmasına dikkat ederek ekonomik faaliyetlerini sürdürmektedir. Ekolojik ayak izi ölçümünde sadece kara parçası olarak tarım arazisi, otlak ve tarım alanı ile yapılandırılmış alanlar değil, deniz ve atmosfere salınan karbon miktarı da dahil edilerek, insanoğlunun her faaliyetinde doğabilecek zarar göz önünde bulundurulmaktadır. Ülkelerden istenen temel şey ekolojik açık yaratmamalarıdır. Ülkelerin sırf tüketim güdümlü üretim yapmamaları, ekosistemi koruyup sürdürülebilirliğini sağlamaları ve biyokapasitelerin tüketilmesinde günümüz ihtiyaçları karşılırken gelecek nesillerin ihtiyaçlarını da karşılayacak kaynak bırakılması konusunda ısrarlı olunması arzu edilmektedir. Klasik yöntemler ile ekolojik ayak izinin iyi yada kötü olmasına göre ülkeleri değerlendirmek mümkün iken birbirine zıt olan kişi başına düşen ekolojik ayak izleri ve biyokapasite miktarları baz alınarak karşılaştırılması için ÇKKV tekniklerine ihtiyaç duyulmaktadır. Bu amaçla Gri ilişki analiz yöntemi, erişimi sağlanan en güncel veri olan 2018 yılına ait, her alandaki kişi başına düşen ayak izi ve biyokapasite miktarlarından oluşan veri seti üzerine uygulanarak, G20 ülkelerinin tüm faaliyetlerinde ekosistemi gözetme düzeyleri karşılaştırılmaktadır. Böylece karşılaştırmada ülkelerin korudukları biyokapasite miktarı için pozitif, bıraktıkları ayak izinin büyüklüğü ölçüsünde de negatif puanlama yapılarak ülkelerin ekosistem içindeki gerçek durumlarını yani performanslarını sergilemek mümkün olmaktadır. Yapılan analiz sonucuna göre Avusturya, Kanada ve Arjantin ekosistemi gözetten en iyi ülkeler arasında yer almaktadır. Hindistan ise faaliyetlerini gerçekleştirirken ekosistemi gözetme konusunda en başarısız ülkedir. Çalışmanın, diğer performans değerlendirme çalışmalarında olduğu gibi konu ile ilgili karar verici ve politika yapıcılara ülkelerin reel profilini sergilemesi açısından fayda sağlayacağı düşünülmektedir.

**Anahtar Kelimeler:** Gri ilişki analizi, Performans ölçme, Çok kriterli karar verme tekniği, Ekosistem, Ekolojik ayak izi

## **COMPARISON OF ECOSYSTEM PROTECTION PERFORMANCES OF G20 COUNTRIES WITH GRAY ANALYSIS METHOD**

### **ABSTRACT**

Especially industrial and economically developed countries and many emerging and developing countries are countries with high ecological footprints. Some developed countries, on the other hand, continue their economic activities by paying attention to the extent that the ecological footprint does not exceed the biocapacity, in other words, the damage they create in the ecosystem is at a repairable level or the destruction does not considerable. In the ecological footprint measurement, not only the cropland, grazing and built-upland land but also see area and the amount of carbon released to the atmosphere have been included. The ecological damage that may arise in every activity of human beings is taken into consideration. The main thing required for the countries is that they do not create ecological deficits. It is desired that countries do not produce purely for consumption, protect the ecosystem and ensure its sustainability, and it is desirable to insist on leaving resources to meet the needs of future generations while meeting the needs of the present in the consumption of biocapacities. While it is possible to evaluate countries according to whether the ecological footprint is at good or bad level using classical methods, MCDM techniques are needed to compare the countries in terms of the opposite criteria such as ecological footprints and the amount of biocapacity per capita. For this purpose, the Gray relationship analysis method is applied on the data set of 2018, which is the most up-to-date data available, consisting of the amount of footprint and biocapacity per capita in each area. Thus, in comparison of the G20 countries, it is possible to show the real stance of the countries in the ecosystem, namely their performance, by scoring positive for the amount of biocapacity they protect and negative for the size of the footprint they leave. According to the results of the analysis, Australia, Canada and Argentina are among the best countries in taking care of the ecosystem while carrying out their activities. India, on the other hand, is the most unsuccessful country in this sense. It is thought that the present study will be beneficial in terms of presenting the real profile of the countries to the decision makers and policy makers on the subject, as in other performance evaluation studies.

### ÖZET

Kanser vücudtaki anormal hücrelerin kontrolsüz bölünmesi ile başlayan çok faktörlü bir hastalık grubu olarak tanımlanmaktadır. Birçok farklı nedenle ortaya çıkabilen kanser, dünyada ve Türkiye’de yüksek ölüm oranlarına neden olan önemli sağlık problemleri arasında ilk sıralarda yer almaktadır. Günümüzde kanser tedavisinde kullanılan birçok farklı tipte kemoterapötik mevcuttur. Bu ajanların kombine veya tek başlarına kullanımı ile birçok kanser türü tedavi edilmeye çalışılmaktadır. Bu uygulamalar meme kanseri gibi yüksek mortaliteye sahip bazı kanser türlerinde yetersiz olup klinik vakalarda direnç gelişimi ile karşılaşılmasına neden olmaktadır. Meme kanserinde ve diğer kanser türlerinde ilaç direnci gelişimi intrinsik veya kazanılmış olabilmektedir. Kazanılmış direncin sebebi terapi sırasında uygun olmayan doz veya ilaç kullanımına bağlanmaktadır. Özellikle meme kanserinde kemoterapi sonrasında vakaların önemli bir kısmında yaklaşık 6 ay veya bir yıllık süreçte çoklu ilaç direnci gelişimi sebebiyle rekürrens meydana gelmektedir. Bu nedenle meme kanserinin tedavisi için farklı ilaçlar ve uygulamalara ihtiyaç vardır. Son yıllarda kanser araştırmalarında hücre içi hedeflere yönelik tedavi yaklaşımları ve yeni etkili ajanların araştırılması odak noktası haline gelmiştir. Bu hücre içi hedeflerin birçoğu sfingolipid metabolizması moleküllerden oluşmakta ve bunların modülasyonu ile kanser hücreleri efektif olarak ölüme yönlendirilebilmektedir. Sfingolipid metabolizmasının kilit enzimlerinden olan seramidazların inhibitörleri kanser araştırmalarında geliştirilen ve potansiyel etkinlikleri ortaya konulmuş ilaç adayları olarak literatürde yer almaktadır. Asit seramidaz enzimlerinin inhibitörü olan n-Oleoyethanolamine (NOE)’nin dirençli meme kanseri hücre hatlarındaki antikanser etkilerini gösteren çalışmaların sayısı literatürde oldukça azdır. Bu çalışmada dirençli insan meme kanseri hücrelerinde NOE’nin sitotoksik etkileri dirençli olmayan insan meme kanseri hücreleriyle karşılaştırmalı olarak araştırılmıştır. NOE’nin sitotoksik etkileri MTT kolorimetrik testi ile, morfolojik değişiklikleri ise konfokal mikroskopik yöntemle değerlendirilmiştir. NOE, hücre proliferasyonunu doza ve zamana bağlı olarak inhibe etmiş ve düşük dozlarda etkin sitotoksositeye neden olmuştur. Konfokal mikroskopik incelemelerde NOE’nin hücre çekirdeğinde parçalanma, membran tormurcuklanması, kromatin kondenzasyonu, hücre iskeletinde delinmelere neden olduğu gözlemlenmiş ve bu değişiklikler apoptotik gösterge olarak değerlendirilmiştir. Tüm sonuçlarımız meme kanseri tedavisinde direnç gelişiminin kırılması ve etkin tedavi ajanı ve stratejilerinin geliştirilmesi konusunda NOE’nin yüksek potansiyele sahip olduğunu vurgulamaktadır. Daha ileri farmasötik ve farmakokinetik araştırmalardan sonra antikanser ilaç geliştirilmesi konusunda hem *in vitro* hem de *in vivo* uygulamalar için NOE molekülünü önermekteyiz.

**Anahtar Kelimeler:** Seramidaz inhibitörü, Meme kanseri, Konfokal mikroskopi, Sitotoksosite.

**APOPTOTIC EFFECTS OF A CERAMIDASE INHIBITOR ON RESISTANT AND  
NON-RESISTANT BREAST CANCER CELLS****ABSTRACT**

Cancer is defined as a multifactorial disease group that begins with the uncontrolled division of abnormal cells in the body. Cancer, which can occur for many different reasons, is one of the most important health problems that cause high death rates in the world and in Turkey. There are many different types of chemotherapeutics used in cancer treatment today. Many types of cancer are being treated with the combined or singular use of these agents. These applications are insufficient in some cancer types with high mortality such as breast cancer and cause resistance development in clinical cases. The development of drug resistance in breast cancer and other cancer types may be intrinsic or acquired. The cause of acquired resistance is attributed to inappropriate dosage or drug use during therapy. Especially in breast cancer, after chemotherapy, recurrence occurs in a significant part of the cases due to the development of multi-drug resistance in a period of about 6 months or one year. Therefore, different drugs and applications are needed for the treatment of breast cancer. In recent years, treatment approaches for intracellular targets and the search for new effective agents have become the focus of cancer research. Many of these intracellular targets are composed of sphingolipid metabolism molecules, and by their modulation, cancer cells can be effectively driven to death. Inhibitors of ceramidases, one of the key enzymes of sphingolipid metabolism, take place in the literature as drug candidates that have been developed in cancer research and whose potential efficacy has been demonstrated. The number of studies showing the anticancer effects of n-Oleylethanolamine (NOE), which is an inhibitor of acid ceramidase enzymes, in resistant breast cancer cell lines is very few in the literature. In this study, the cytotoxic effects of NOE in resistant human breast cancer cells were investigated in comparison with non-resistant human breast cancer cells. Cytotoxic effects of NOE were evaluated by MTT colorimetric test, and morphological changes were evaluated by confocal microscopic method. NOE inhibited cell proliferation in a dose- and time-dependent manner and caused effective cytotoxicity at low doses. In confocal microscopic examinations, it was observed that NOE caused fragmentation in the cell nucleus, membrane blebbing, chromatin condensation, and hole formation in the cytoskeleton, and these changes were evaluated as apoptotic indicators. All of our results emphasize that NOE has a high potential in breaking the development of resistance and developing effective treatment agents and strategies in the treatment of breast cancer. After further pharmaceutical and pharmacokinetic studies, we propose the NOE molecule for both *in vitro* and *in vivo* applications in anticancer drug development.

**Keywords:** Ceramidase inhibitor, Breast cancer, Confocal microscopy, Cytotoxicity.

## TOPLUMSAL BİR KAVRAM OLARAK MİTLER VE MODERN DÜNYANIN YENİ MİTLERİ

**Büşra ÖZÜDOĞRU**

*Dr. Öğr. Üyesi, Trabzon Üniversitesi İktisadi İdari ve Sosyal Bilimler Fakültesi Sosyoloji Bölümü,

### ÖZET

Mitsel anlatılar, insan ve evrenin var oluşuna dair bizlere bir izah sunar. Bu sayede bireyin yaşamını ve tüm tecrübelerini anlamlandırmasını sağlar. Öte yandan mitler inanç ve anlam dünyası oluşturma işlevi ile içinde buldukları toplumun kültür taşıyıcı ve değer koruyucu görevine sahiptir. Toplum içinde karmaşık bulunan deneyimler, bilgiler ve davranış modelleri mitler sayesinde bir düzen ve anlam kazanmaktadır. Toplumun kutsal olana ve doğaüstü olana yaklaşımını belirlemede etkisi olan mitlerin, Aydınlanma ile birlikte itibarının azaldığını ve geçersiz sayıldığını düşünebiliriz. Zira akılcılığın ön planda tutulduğu modernite ile birlikte, mitler metafizik bir alanın garip ve anlaşılmaz ürünü olarak kabul edilerek değersiz ve akılcılık dışı olarak kabul edilmiştir. Ancak kutsal ve doğaüstüne ait kabul edilen, bilgi ve mantık bakımından rasyonel dışı olarak görülen mitlerin yerini modern dönemde yeni bir forma büründüğünü görebiliriz. O halde mitleri ilkel ve modern olarak ayırmak mümkün müdür? Mitler ile bilimi birbirinin zıddı olarak kabul edebilir miyiz? Modern insanın bu dünyaya ait kendi kutsallarını yarattığı ve bunun üzerinden kendi mitlerini oluşturduğu yönündeki fikir bu çalışmanın temel tartışma alanlarından biridir. Süperman miti, Özgürlükler Ülkesi Amerika miti, modern kadının bedeni üzerinden kurulan mitler, uzay yolculuğu mitleri vb. modern insanın mitlere olan ihtiyacının devam ettiğini göstermektedir. Mitler, hala kuşaklar arası aktarılan ve önemli bir iletişim aracı olan toplumsal bağın korunmasında, değerleri ve inançları canlı tutmada, toplumların kendi varlıklarına anlam kazandırma çabasında işlevsel olmaya devam etmektedir.

**Anahtar Kelimeler:** Mitler, Toplumsal İşlev, Modernite

**MYTHS AS A SOCIAL CONCEPT AND NEW MYTHS OF THE MODERN WORLD****ABSTRACT**

Mythical narratives offer us an explanation for the existence of man and the universe. In this way, it enables the individual to make sense of his life and all his experiences. On the other hand, myths, with their function of creating a world of belief and meaning, have the duty of cultural carrier and value protector of the society they are in. Experiences, knowledge and behavior patterns that are complex in society gain an order and meaning thanks to myths. We can think that the myths, which have an impact on determining the approach of the society to the sacred and the supernatural, have been discredited and considered invalid with the Enlightenment. Because, together with modernity in which rationality was prioritized, myths were accepted as a strange and incomprehensible product of a metaphysical field and were accepted as worthless and irrational. However, we can see that the myths, which are considered sacred and supernatural, and seen as irrational in terms of knowledge and logic, take a new form in the modern period. Is it then possible to separate myths into primitive and modern? Can we accept myths and science as opposites? One of the main discussion areas of this study is the idea that modern people create their own sacred belonging to this world and create their own myths over it. The myth of Superman, the myth of America, the land of the free, myths based on the body of the modern woman, myths of space travel, etc. shows that modern man's need for myths continues. Myths continue to be functional in preserving the social bond, which is an important communication tool that is still transmitted between generations, keeping values and beliefs alive, and societies' efforts to give meaning to their own existence.

**ÖZET**

Kur'ân-ı Kerîm'deki hakikatleri insanlara en iyi öğretecek olan, Kur'ân'ın kendisine inzâl olunduğu ve onun ilk muhâtabı olan Hz. Peygamber'dir. Hz. Peygamber, Kur'ân âyetlerini tefsîr ederken ilk olarak âyetleri yine başka âyetlerle tefsîr etmektedir. Çünkü Kur'ân âyetlerinden pek çoğu birbirlerini îzâh eder mâhiyette indirilmiştir. Bu âyet öbeklerinden biri olan Beled sûresi yirmi âyetten oluşan kısa bir sûre olmasına rağmen konu açısından oldukça kapsamlıdır. Sûre, insanın bazı davranışlarına değinmektedir. Bu davranışlardan bir kısmı onun Allah'a, bir kısmı da topluma karşı sergilediği davranışlarıdır. Beled sûresi, aynı zamanda insanın bu dünyada olgunlaşmasını hedeflemektedir. Bu çalışmada Beled sûresinin tahlil ve değerlendirmesiyle birlikte insanın söz konusu durumu ve sorumluluğu açıklanmakta, bu bağlamda Allah'ın ona sunduğu seçenekler betimlenmektedir. Dolayısıyla Beled sûresi, insana bu konuda yol göstermekte ve seçtiği yolun sonuçlarını açıklamaktadır.

**Anahtar kelimeler:** Tefsir, Tahlil, Kur'ân, Sûre, Beled.

**AN ANALYSIS AND EVALUATION ON THE BELED SURAH: REVIEWING  
HUMAN VIRTUES****ABSTRACT**

The one who will best teach people the truths in the Quran is he is a prophet. While the Prophet was interpreting the verses of the Quran, he first interpreted the verses with other verses. Because many of the verses of the Quran have been sent down in a way that explains each other. One of these verses al-Balad is a short surah of twenty verses but topic of surah is quite comprehensive. Surah touches on some behaviors of human. Some of these behaviors are his behaviors towards Allah and some towards society. Surah al-Balad, at the same time, intends to mature of the human in this world. In this study, together with the analysis and evaluation of the Surah al-Balad, the situation and responsibility of the human being are explained, and in this context, the options God offers to him are described. Because of, Surah al-Balad guidances to the human at this subject and explains results of human's preferences.

**Keywords:** Tafsir, Analysis, Qurân, Surah, Al-Balad.

### ÖZET

Dünya genelinde özellikle son yıllarda yaşanmakta olan iklim değişikliği, kuraklıklar, salgınlar, savaşlar, beraberinde ekonomik belirsizlikler ve piyasa dalgalanmaları, yöneticileri yeni fırsatlar keşfetmeye, yeni yönetim modelleri geliştirmeye ve alternatif stratejiler geliştirmeye yönlendirmiştir. Yöneticilerin bunu başarabilmesi ise çalışanlarına bir itici güç unsuru, teşvik etme, başarıya özendirme iklimi yaratması gibi etkin bir motivasyon ile doğrudan ilişkilidir. Motivasyon eksikliğinin hâkim olduğu durumlarda çalışanların depresif tutumlar sergileyerek örgütün amaç ve hedeflerine giden yolda sorunlar oluşmasını tetikleyebilir. Çalışanlar da ancak etkin motivasyon sayesinde iş ve meslek hayatında ilerleyebilmek, başarı elde edebilmek, maddi anlamda hayatlarını kazanmalarını sağlamak, kendilerini gerçekleştirmek ve sosyal statülerini belirlemek durumu diye nitelendirebileceğimiz kariyerlerini gerçekleştirebilmektedirler. Bireylerin temel çalışma nedeni, yaptıkları iş karşılığında elde ettikleri gelir ile kendi çıkarlarını maksimize ederek kariyer yolunda ilerlemek suretiyle rahat bir şekilde yaşamak istemesi arzusu vardır. Bu açıdan bakıldığında çalışanların ekonomik açıdan yetersiz kalması, yaptığı işin karşılığını alamadığı düşüncesi ile hareket etmesi, çalışanı gelirini arttırmak için birden fazla işte çalışmasına yönlendirmektedir. Ayışığı sorunu olarak nitelendirdiğimiz bu durum, bireylerin asıl işinde göstermeleri gereken performansı, ikinci veya üçüncü işlerinde kullanmaları sonucunda düşük performans sergilemeleri, işe devamsızlık, iş sadakatinden taviz verme gibi birçok sorunu beraberinde getirmesi münasebetiyle yöneticiler tarafından kabul edilebilir değildir. Bu sebeple yöneticiler, çalışanlara yaptıkları işin karşılığını vermek, kar paylaşımı, ekonomik teşvik ve ödüller ve ek yararlar sağlamak suretiyle özendirici araçları etkin bir şekilde kullanarak çalışanların motivasyonlarını arttırmak suretiyle önemli bir kariyer sorunu olan ayışığı sorununu aşabilmeleri mümkündür. Bu çalışmanın amacı, önemli bir kariyer sorunu olan ayışığı sorununu motivasyon ile ilişkisi üzerinden değerlendirmektir. Ayrıca sorunların giderilmesi için yapılması gerekenleri de sunmak çalışmanın bir diğer amacıdır.

**Anahtar Kelimeler:** Ayışığı sorunu, Kariyer, Motivasyon.

**AN ASSESSMENT OF THE RELATIONSHIP BETWEEN EMPLOYEES'  
MOONLIGHT CAREER PROBLEM AND MOTIVATION****ABSTRACT**

Climate change, droughts, epidemics, wars, along with economic uncertainties and market fluctuations in the world, especially in recent years, have led managers to discover new opportunities, develop new management models and develop alternative strategies. The ability of managers to achieve this is directly related to an effective motivation such as creating a driving force element for their employees, encouraging them and encouraging them to succeed. In situations where lack of motivation prevails, employees may exhibit depressive attitudes and trigger problems on the way to the goals and objectives of the organization. Only through effective motivation, employees can progress in business and professional life, achieve success, enable them to earn a living financially, realize themselves and determine their social status. The main reason for working of individuals is the desire to live comfortably by maximizing their own interests with the income they earn in return for the work they do, and by advancing on the career path. From this point of view, the fact that employees are economically inadequate and act with the idea that they cannot get paid for their work directs the employee to work in more than one job to increase his income. This situation, which we define as the moonlight problem, is not acceptable to the managers due to the fact that it brings along many problems such as low performance as a result of using the performance that individuals should show in their main job, absenteeism and compromise on job loyalty. For this reason, it is possible for managers to overcome the problem of moonlight, which is an important career problem, by increasing the motivation of employees by using incentive tools effectively by providing employees with compensation for their work, profit sharing, economic incentives and rewards and additional benefits. The aim of this study is to evaluate the problem of sore, which is an important career problem, through its relationship with motivation. In addition, it is another purpose of the study to present what needs to be done to eliminate the problems.

**Keywords:** Moonlight problem, Career, Motivation.

**ÖZET**

Asparagaceae dünyada geniş bir alanda yayılış göstermektedir. Hemen hemen kozmopolit bir familyadır. Familya üyelerine tropik, ılıman ve kurak alanlarda rastlanmaktadır. Dünyada 128 cins ve 2929 türle, Türkiye’de ise 19 cins ve bu cinslere ait 182 türle temsil edilmektedir. Ülkemizde bu familyanın tür bakımından en zengin cinsleri sırasıyla *Ornithogalum* L., *Muscari* Mill., *Bellevalia* Lapeyr., *Scilla* L., *Asparagus* Tourn. ex L. ve *Hyacinthella* Schur’dır. *Ornithogalum* cinsi dünyada doğal olarak Avrupa’dan Afganistan’a, Etiyopya’dan Güney Afrika’ya kadar yayılış göstermektedir. Ülkemizde son yayımlanan türler de dikkate alınarak toplamda cinsin tür sayısı 61’ e çıkmıştır. Bunların 31 tanesi endemiktir. Genel olarak “Ak Yıldız” adıyla bilinen *Ornithogalum* türlerine halk arasında ayrıca “Kurt Soğanı, Tükrük otu, Köpek soğanı, Kurtkirişi, Karga soğanı, Akbaldır” gibi isimler de verilmiştir. Bazı *Ornithogalum* türleri, halk arasında etnobotanik öneme sahip olup, hem gıda hem de tıbbi bitki olarak kullanılmaktadır. *Ornithogalum* cinsine ait bazı türler ekonomik olarak da ayrı bir öneme sahiptir. Bundan dolayı dünyada kültüre alınmış türleri bulunmaktadır. Bu çalışmada, Asparagaceae familyasının önemli cinslerinden biri olan *Ornithogalum* cinsine ait üç tür (*Ornithogalum pyrenaicum*, *Ornithogalum alpigenum* ve *Ornithogalum persicum*) karyolojik yönden incelenmiştir. Sitotaksonomik çalışmalar için toplanan örneklerin soğanlarından yararlanılmıştır. Bölünür somatik hücrelerde yapılan çalışmalar sonucunda, türlerin kromozom sayıları ve karyotip analizleri yapılarak ideogramları çizilmiştir. Kromozom sayısı *Ornithogalum pyrenaicum* türünde  $2n=18$  ve karyotip formülü  $M+5m+3sm$  olarak, *Ornithogalum alpigenum* türünde  $2n=18$  ve karyotip formülü  $4m+3sm+2st$  olarak, *Ornithogalum persicum* türünde ise  $2n=24$  ve karyotip formülü  $M+3m+5sm+3st$  olarak tespit edilmiştir.

**Anahtar kelimeler:** Geofit, *Ornithogalum*, Kromozom, Karyotip, Karyolojik Analiz

## KARYOLOGICAL INVESTIGATION OF SOME *ORNITHOGALUM L.* SPECIES

### ABSTRACT

Asparagaceae is widespread in the world. It is almost a cosmopolitan family. Family members are found in tropical, temperate and arid areas. It is represented by 128 genera and 2929 species in the world, and 19 genera and 182 species belonging to these genera in Turkey. In our country, the richest genera of this family in terms of species are respectively; *Ornithogalum L.*, *Muscari Mill.*, *Bellevalia Lapeyr.*, *Scilla L.*, *Asparagus Tourn. ex L.* and *Hyacinthella Shur.* *Ornithogalum* genus naturally spreads from Europe to Afghanistan, from Ethiopia to South Africa in the world. Considering the recently published species in our country, the total number of species in the genus has increased to 61. Also 31 of them are endemic. *Ornithogalum* species, generally known as "Ak Yıldız", are also given names such as "Kurt Soğanı, Tükrük otu, Köpek soğanı, Kurtkirişi, Karga soğanı, Akbaldır" among the people. Some *Ornithogalum* species have ethnobotanical importance among the people and are used both as food and medicinal plants. Some species belonging to the genus *Ornithogalum* are of economic importance. For this reason, there are species cultivated in the world. In this study, three species of *Ornithogalum* genus (*Ornithogalum pyrenaicum*, *Ornithogalum alpigenum*, and *Ornithogalum persicum*), one of the important genera of the Asparagaceae family, were examined in terms of karyological aspects. For cytotaxonomic studies, chromosomes of the collected samples were used. As a result of the studies carried out on dividing somatic cells, idiograms were drawn by counting the number of chromosomes and conducting karyotype analyses of the species. The chromosome number and karyotype formula as  $2n=18, M+5m+3sm$  in *Ornithogalum pyrenaicum* species; as  $2n=18, 4m+3sm+2st$  in *Ornithogalum alpigenum* species; as  $2n=24, M+3m+5sm+3st$  in *Ornithogalum persicum* species was determined.

**Keywords:** Geophyte, *Ornithogalum*, Chromosome, Karyotype, Karyological Analysis

**ÖZET**

Bu araştırmanın amacı, ortaöğretim kademesinde bulunan öğrencilerin okul rehberlik ve psikolojik danışmanlık servislerinden yararlanma düzeylerini incelemektir. Öğrencilerin okul rehberlik ve psikolojik danışmanlık servislerinden yararlanma düzeylerine ilişkin öğrenci görüşlerinin incelendiği bu çalışmada tarama modeli kullanılmıştır. Araştırmanın verileri Siirt ili Merkez ilçesinde ortaöğretim kademesinde öğrenim görmekte olan 818’i erkek (%57), 619’u kadın (%43) toplam 1437 öğrenciden toplanmıştır. Araştırmada veri toplama aracı olarak; “Kişisel Bilgi Formu” ve Oran (2013) tarafından geliştirilen “Öğrenci Anketi” kullanılmıştır. Araştırmada elde edilen nicel verilerin istatistiksel çözümlenmesinde frekans, yüzde, aritmetik ortalama, bağımsız gruplar için t- testi ve tek yönlü varyans analizi (ANOVA) kullanılmıştır. Araştırma bulgularına göre öğrencilerin PDR servisinde yararlanma alt boyutlarına göre en çok katılım gösterdikleri alt boyut “PDR servisini ihtiyaç olarak görme”; en az katılım gösterdikleri alt boyut “danışmana güven duyma” alt boyutudur. Ortaöğretim öğrencilerinin demografik değişkenlere göre okul rehberlik servisinde yararlanma düzeylerinin farklılıklarına ilişkin sonuçlar bakımından daha önceden rehberlik servisinde yararlanma durumuna göre tüm alt boyutlarda anlamlı farklılık tespit edilmiştir. Cinsiyet değişkenine göre “eğitsel ve mesleki rehberlik alanında PDR servisinde yararlanma”, “sosyal problemlerin çözümünde ve çevreyle ilişkilerini geliştirmede PDR servisinde yararlanma” ve “PDR servisini ihtiyaç olarak görme” alt boyutlarında anlamlı farklılık tespit edilmiştir. Ayrıca öğrencilerin öğrenim gördükleri lise türü, anne ve baba eğitim düzeyine göre de anlamlı farklılık bulunmuştur. Araştırmadan elde edilen sonuçlara göre öğrenciler rehberlik servisini bir ihtiyaç olarak görmekte ve her okulda bir rehberlik servisinin bulunması gerektiğini düşünmektedirler. Araştırmaya katılan öğrencilerin okul rehberlik servisinde en fazla eğitsel rehberlik konularında destek aldıkları sonucuna ulaşılmıştır. Öğrenciler rehberlik servisinin problemlerini çözmelerinde ve doğru kararlar almalarında yol gösterdiğini düşünmektedir. Kişisel bilgilerinin rehberlik servisinde gizli tutulduğuna inanan öğrenciler, rehberlik servisiyle sorunlarını paylaşmalarının kendilerini rahatlattığını düşünmektedirler. Ayrıca öğrenciler okula ve çevreye uyum sağlamada, PDR servisinin veli ve öğretmenlerle iletişimi konusunda da olumlu düşünceye sahip oldukları sonucuna ulaşılmıştır.

**Anahtar Kelimeler:** Rehberlik ve Psikolojik Danışmanlık Servisi, Rehberlik Hizmetleri, Ortaöğretim Öğrencileri.

**INVESTIGATION OF HIGH SCHOOL STUDENTS' LEVELS OF BENEFITING FROM SCHOOL COUNSELING SERVICE****ABSTRACT**

The aim of this research is to examine the level of students in secondary education benefiting from school guidance and psychological counseling services. The survey model was used in this study, in which students' views on the level of benefiting from school guidance and psychological counseling services were examined. The data of the study were collected from a total of 1437 students, 818 male (57%) and 619 female (43%) studying in the central district of Siirt province. As a data collection tool in the research; "Personal Information Form" and "Student Questionnaire" developed by Oran (2013) were used. Frequency, percentage, arithmetic mean, t-test for independent groups and one-way analysis of variance (ANOVA) were used in the statistical analysis of the quantitative data obtained in the study. According to the research findings, according to the sub-dimensions of benefiting from the school guidance service, the most common sub-dimension of the students is "seeing the guidance service as a need"; the sub-dimension that they least agree with is the sub-dimension of "trusting the school counselor". In terms of the results of the differences in the level of benefiting from the school guidance service according to the demographic variables of the secondary school students, there was a significant difference in all sub-dimensions according to the status of using the guidance service before. According to the gender variable, a significant difference was found in the sub-dimensions of "utilizing the guidance service in the field of educational and vocational guidance", "utilizing the guidance service in solving social problems and improving relations with the environment" and "seeing the guidance service as a need". In addition, a significant difference was found according to the type of high school students are studying and the education level of their parents. According to the results obtained from the research, the students see the guidance service as a need and they think that there should be a guidance service in every school. It was concluded that the students participating in the research received the most support from the school guidance service in educational guidance issues. Students think that the guidance service guides them in solving their problems and making the right decisions. Students who believe that their personal information is kept confidential in the guidance service think that sharing their problems with the guidance service relieves them. In addition, it was concluded that the students had positive thoughts about adapting to the school and the environment, and the communication of the guidance service with the parents and teachers.

**ÖZET**

Tarihi süreçte çeşitli tanımların yapıldığı demokrasi kavramı, günümüzde de farklı disiplinlerde en çok tartışılan konu başlıklarından biridir. Demokrasi, günümüzde çokça karşımıza çıkan ve fazlaca anlam ile anlamlandırmalarla işlenen bir kavramdır. Tarihi süreçte çeşitli tanımların yapıldığı demokrasi kavramı üzerine çeşitli tartışma yapılmıştır ve halen bir sonuca varılmamıştır. Çünkü buradaki en önemli nokta demokrasi kavramının topluluklara göre anlamlandırılması ve bu çerçevede toplumların kendi hukuk sistemi, hakikat anlayışı, ekonomik ile siyasi yapılarına işaret edebiliriz. Geçtiğimiz yüzyılda demokrasi kavramı ideal bir yönetim tarzı olarak güçlenmesine rağmen kavramın hem içeriği hem de uygulamaları derin krizlerle karşı karşıya kalmıştır. Bu noktada demokrasinin yeniden tanımlanmasına, içeriğinin yeniden biçimlendirilmesine ihtiyaç duyulmaya başlanmıştır. Post demokrasi, müzakereci demokrasi gibi tartışmalar da bu ihtiyacın sonucunda ortaya çıkmıştır. Çalışmada Neoliberal dönemde demokrasinin yaşadığı sıkıntıların nedenleri ve sonuçları incelenecektir. Demokrasi krizi bağlamında geliştirilen *post demokrasi* ve *müzakereci demokrasi* kavramları etrafında nasıl bir demokrasinin kurgulanması gerektiği sorusuna cevap aranacaktır. Çalışma, demokrasinin yaşadığı krizde müzakereye dayalı bir demokrasini kavrayışının katılım kanallarını daha fazla etkinleştireceği varsayımı üzerine kurgulanmıştır.

**Anahtar kelimeler:** Neoliberalizm, Demokrasi, Post demokrasi, Müzakereci Demokrasi

**ALTERNATIVE QUESTS ON THE CRISIS OF NEOLIBERAL  
DEMOCRACY: AN EFFORT TO DEVELOP A POSTDEMOCRATIC  
NEGOTIATION DISCOURSE****ABSTRACT**

The concept of democracy, in which various definitions have been made in the historical process, is one of the most discussed topics in different disciplines today. Democracy is a concept that we encounter a lot today and is processed with many meanings and interpretations. Various discussions have been made on the concept of democracy, in which various definitions have been made in the historical process, and still no conclusion has been reached. Because the most important point here is the meaning of the concept of democracy according to the communities, and in this context, we can point to the communities' own legal system, understanding of truth, and economic and political structures. Although the concept of democracy has been strengthened as an ideal management style in the past century, both its content and applications have faced deep crises. At this point, there is a need to redefine democracy and reshape its content. Discussions such as post-democracy and deliberative democracy have emerged as a result of this need. In this study, the causes and consequences of the problems experienced by democracy in the neoliberal period will be examined. An answer will be sought to the question of what kind of democracy should be built around the concepts of post-democracy and deliberative democracy developed in the context of the democracy crisis. The study is based on the assumption that a deliberative understanding of democracy in the crisis of democracy will activate the channels of participation more.

**Keywords:** Neoliberalism, Democracy, Post democracy, Deliberative democracy

**METİNLERARASILIK AÇISINDAN NÂBÎ'NİN HAYRÂBÂD'I**

**ÖZET**

Metinlerarasılık, iki veya daha fazla metin arasındaki alışveriş yahut bir metnin başka metinlerle arasındaki ilişki şeklinde ifade edilebilir. Metinlerarasılığın ortaya çıkışında; hiçbir metnin daha evvel var olmuş metinlerden ayrı düşünülmemeyeceği, her metnin aslında geçmiş yazınsal geleneği taklit ya da bu birikimden etkilenme ile meydana geldiği düşüncesi etkili olmuştur. Bu düşünce doğrultusunda bakıldığında her eser aslında bir metinlerarası ilişkiler ürünüdür denebilir. 1960'lı yılların sonlarında şekillenen ve esasen bir kuram niteliği taşıyan metinlerarasılığın daha ziyade modern edebiyat incelemelerinde, anlatım yöntemleri bahsinde ele alındığı görülmektedir. Metinlerarasılığın mantığı ve kapsamı dikkate alındığında Klasik Türk edebiyatının ürünlerini de aynı çerçevede incelemenin mümkün ve gerekli olduğu anlaşılır. Böylece söz konusu eserlerde kadim metinlerin izlerini araştırmak açısından elverişli bir yol elde edilebilir. Metinlerarasılık düşüncesinden hareketle bu çalışmada 17. yüzyıl şairlerinden Nabî'nin, İran edebiyatından izler taşıyan, *Hayrabad* adlı mesnevîsi metinlerarası ilişkiler bağlamında ele alınmakta ve eser; alıntı, gönderge, aşırma, anıştırma gibi yöntemler ışığında incelenmektedir. Nitekim *Hayrabad*; ünlü İran mutasavvıflarından Feridüddün-i Attar'ın *İlahînâme* mesnevisinde, Fahr-ı Cürcan ve Padişahın Kölesi arasında vuku bulan öyküsünün hem şahıs hem de olay yönünden eklemeler yapılarak yeniden kurgulanmış şeklidir. Öte yandan Attar'ın yazdığı öykü hazin bir sonla nihayet bulmasına rağmen Nabî, yaptığı eklemelerle öyküyü bambaşka bir sona taşımıştır. Hayrabad'da hikayenin kahramanlarının İbrahim Edhem, Hatem-i Tayy, Kerem ile Aslı hikayesinin kadın kahramanı gibi tarihsel-efsanevi veya hayali şahsiyetlerin çeşitli yönlerini hatırlatacak şekilde onların hikayelerine yapılmış anıştırmalar ve başta Kuran-ı Kerim kaynaklı olmak üzere birçok tarihsel anlatı, inanış ve olaya yapılan göndergelerle metinlerarası ilişkiler kurulmuştur.

**Anahtar kelimeler:** Metinlerarasılık, Hayrabad, anıştırma, gönderge.

**IN TERMS OF INTERTEXTS, NABI'S HAYRABAD****ABSTRACT**

Intertextuality can be expressed as the exchange between two or more texts or the relationship between a text and other texts. In the emergence of intertextuality; The idea that no text can be considered apart from previously existing texts and that every text actually comes into existence by imitating the past literary tradition or being influenced by this accumulation has been influential. When viewed in line with this thought, it can be said that every work is actually a product of intertextual relations. It is seen that intertextuality, which was shaped in the late 1960s and is essentially a theory, is mostly discussed in modern literary studies, in the subject of expression methods. Considering the logic and scope of intertextuality, it is understood that it is possible and necessary to examine the products of Classical Turkish literature within the same framework. Thus, a convenient way can be obtained in terms of investigating the traces of ancient texts in the works in question. Based on the idea of intertextuality, in this study, one of the 17th century poets, Nabi's masnavi named Hayrabad, which has traces of Iranian literature, is discussed in the context of intertextual relations and the work; It is examined in the light of methods such as quotation, reference, plagiarism, allusion. As a matter of fact, Hyrabad; It is a reconstructed version of the story that took place between Fahr-i Curcan and the Sultan's Slave in the Ilahinâme masnavi of Feridüddun-i Attar, one of the famous Iranian mystics, by making additions in terms of both personality and event. On the other hand, although the story written by Attar ended with a sad ending, Nabi brought the story to a completely different end with the additions he made. In Hayrabad, the heroes of the story, such as İbrahim Edhem, Hatem-i Tayy, Kerem and the heroine of the story of Ashi, remind various aspects of historical-legendary or imaginary personalities, and many historical narratives, beliefs and events, primarily from the Qur'an, intertextual relations were established with the references made.

**Keywords:** Intertextuality, Hyrabad, allusion, send.

## $C_\lambda(X, E)$ RIESZ UZAYININ SIRA-KURAMSAL ÖZELLİKLERİ ÜZERİNE

**Dr. Öğr. Üyesi Mehmet VURAL**

### ÖZET

$X$  topolojik bir uzay olmak üzere  $X$  üzerinde tanımlı reel değerli sürekli fonksiyonların uzayı  $C(X)$  uzayı diğer yönler bir tarafa her Banach uzayın bazı  $X$  kompakt topolojik uzaylar için  $C(X)$  uzayının bir alt uzayına izomorfik olmasından dolayı önem arz eder. Yakınsama yapısı  $\lambda$ ,  $X$  kümesinden  $X$  kümesinde tanımlı filtrelerin kuvvet kümesine tanımlı ve (i.) esas filtre  $[x]$ ,  $\lambda(x)$  'in elemanıdır. (ii.)  $\lambda(x)$  'in keyfi iki elemanının birleşimi de  $\lambda(x)$  'tedir. (iii.)  $\lambda(x)$ 'teki keyfi bir elemanı kapsayan filtrede  $\lambda(x)$ 'in elemanıdır., aksiyomlarını sağlayan bir haritadır.  $(X, \lambda)$  ikilisi de topolojik uzayın bir genellemesi olarak yakınsama uzayı adını alır, çünkü  $\lambda(x) = \{F: F \text{ bir filtre ve } x \text{ 'e yakınsıyor}\}$  tanımlanmak üzere  $x \rightarrow \lambda(x)$  haritası bir yakınsama yapısı belirtir. Reel sayılar üzerindeki standart norm ve standart sıralama ile birlikte bir Banach kafesidir. Bu çalışmada topolojik uzay yerine yakınsama uzayı ve reel sayılar yerine de Banach kafesi alınarak  $C(X)$ 'in bir genellemesi çalışılmıştır, şöyle ki  $f, C_\lambda(X, E)$  uzayının bir elemanıdır, yani  $f$  süreklidir ancak ve ancak  $X$ 'in her bir elemanı  $x$  için  $F, \lambda(x)$  'in bir elemanı olduğunda  $\|x_\alpha\| \rightarrow f(x)$  sağlanır. Burada  $(x_\alpha)$ ,  $F$  filtresi tarafından üretilen nettir.  $C_\lambda(X, E)$  uzayının temel sıra-kuramsal yapısı çalışılmıştır.

**Anahtar kelimeler:** Riesz uzay, Yakınsama Yapısı, Yakınsama Uzayı, Banach kafesi

**ON THE ORDER-THEORETIC PROPERTIES of THE RIESZ SPACE  $C_\lambda(X, E)$** **ABSTRACT**

The importance of the structure of the set of all Real-valued continuous functions on a topological space  $X$  could be emphasized that every Banach space is isomorphic to a subspace of  $C(X)$  for some compact topological space  $X$  without other aspects. A convergence structure  $\lambda$  is a mapping from  $X$  into the power set of all filters on  $X$  with the axioms; (i.) principal filter  $[x]$  belongs to  $\lambda(x)$  (ii.) The union of two element of  $\lambda(x)$  belongs to  $\lambda(x)$  (iii.) The filter covering the element of  $\lambda(x)$  belongs to  $\lambda(x)$ . The ordered pair  $(X, \lambda)$  is called convergence spaces as a generalization of topological spaces since the map  $x \rightarrow \lambda(x)$  where  $\lambda(x) = \{F: F \text{ is a filter and converges to } x\}$  defines a convergence structure. Real numbers with the standard norm and the standard order is a Banach lattice. In the present study the generalization of  $C(X)$  studied as taking convergence structure instead of topological space and Banach lattices instead of Real numbers with the appropriate definition give as; Let  $f$  be a function in  $C_\lambda(X, E)$  if for each  $x$  in  $X$ ,  $F$  belongs to  $\lambda(x)$  implies  $\|x_\alpha\| \rightarrow f(x)$  where  $(x_\alpha)$  refers to net generated by the filter  $F$  then it is said that  $f$  is continuous on  $X$ . The order-theoretic structure of  $C_\lambda(X, E)$  has been studied.

**ÖZET**

Ülkemiz, Avrupa’da ortak eğitim uygulamalarını öngören Socrates Projesine 24 Ocak 2000 tarihinde 253/2000/EC sayılı Avrupa Konseyi kararıyla katılmıştır. Bu nedenle, Avrupa ülkelerindeki yabancı dil öğretim uygulamaları ülkemizde de benimsenmiştir. Avrupa ülkelerinde yabancı dil öğretimi, Avrupa Konseyi Modern Diller Bölümünce belirlenen eğitim politikalarına göre yapılmaktadır. Avrupa’da ortak bir yabancı dil öğretim programı ve yabancı dil öğretiminde ortak bir standart, ortak ölçütler ve buna dayalı bir araç geliştirmeyi amaçlayan Avrupa Konseyi Modern Diller Bölümü, Avrupa Dilleri Öğretimi Ortak Çerçeve Programı (The Common European Framework of Reference for Languages)’ni oluşturmuştur. Bugün tüm Avrupa ülkelerinde yabancı dil öğretimi bu çerçeve programa dayalı olarak gerçekleştirilmektedir. Avrupa Konseyi, kültürel ve dilsel çeşitlilik için hoşgörü ve saygı gibi ortak değerlere dayalı daha büyük bir Avrupa’yı inşa etmeyi amaçlamaktadır. Her yaştaki ve alt yapıdaki insana daha fazla dil öğrenmesi ve diğer kültürlerle tanışması için uygulamalı bir yardım aracı olarak Avrupa Dil Portfolyosu kullanımını geliştirmiştir. Bu araştırmanın amacı Türkçenin yabancı dil olarak eğitim ve öğretiminde, Avrupa Dil Portfolyosunda nasıl konumlandığını, literatür tarama yöntemi uygulanarak, bu yöntemde konu ile ilgili daha önceden yazılmış olan ulusal ve uluslararası yüksek lisans ve doktora tezleri, kitaplar, makaleler, bildiriler ve çeşitli çalışmalar incelenmiş ve toplu sentezler oluşturulmaya çalışılmıştır.

**Anahtar kelimeler:** Türkçe, Yabancı Dil Eğitimi, Avrupa Dil Pasaportu

**THE EFFECT AND IMPORTANCE OF THE EUROPEAN LANGUAGE PASSPORT  
(PORTFOLIO) IN EDUCATION OF TURKISH AS A FOREIGN LANGUAGE****ABSTRACT**

Our country participated in the Socrates Project, which envisages common education practices in Europe, on January 24, 2000, with the European Council decision numbered 253/2000/EC. For this reason, foreign language teaching practices in European countries have also been adopted in our country. Foreign language teaching in European countries is carried out according to the education policies determined by the Council of Europe's Modern Languages Department. Aiming to develop a common foreign language teaching program in Europe and a common standard, common criteria and a tool based on this in foreign language teaching, the Council of Europe's Department of Modern Languages has created the Common European Framework of Reference for Languages. Today, foreign language teaching in all European countries is based on this framework program. The Council of Europe aims to build a greater Europe based on common values such as tolerance and respect for cultural and linguistic diversity. He developed the use of the European Language Portfolio as a practical help tool for people of all ages and backgrounds to learn more languages and meet other cultures. The aim of this research is how Turkish is positioned in the European Language Portfolio in education and training as a foreign language, by applying the literature review method, previously written national and international master's and doctoral theses, books, articles, papers and various studies on the subject were examined and collective syntheses were tried to be formed.

**Keywords:** Turkish, Foreign Language Education, European Language Passport

## **PENDNÂME-İ İBN SİNAN**

**Ömür ERBAY**

*Dr. Öğrt. Üyesi, Bayburt Üniversitesi İlahiyat Fakültesi İslam Tarihi ve Sanatları Bölümü İslami Türk Edebiyatı Ana Bilim Dalı, (Sorumlu Yazar), ORCID No: 0000-0001-7694-847X,*

### **ÖZET**

Pendnâmeler, topluma ve fertlere yön vermek amacıyla yazılmış eserler olup yanlış giden bir durumu değiştirmek doğru olan bir tutumu ise pekiştirmek gayesi güder. Pendnâmeler/nasihatnâmeler, bu özellikleri yönüyle köklü bir geçmişe sahip olup Arap, Fars ve Türk edebiyatlarında sıklıkla kullanılmışlardır. Öğüt vermek maksadıyla yazılan bu kitapların manzum ve mensur şekilleri mevcuttur. Milli Kütüphane Yazma Eserler Kataloğu'nda bulunan 06 Mil Yz A 8294 numaralı bir mecmuada rastladığımız ve 06 Mil Yz A 8294/7 numarayla İbn Sinan adına kayıtlı olan pendnâme üzerine yapmış olduğumuz çalışmamızda pendnâmenin müellifine, eserin biçim ve muhteva özelliklerine ve transkripsiyonlu metnine yer verdik. Pendnâme/nasihatnâme; mesnevi nazım şekli ile Aruz vezninin Hezec Bahri'nin Mefâ'îlün Mefâ'îlün Fe'ûlün kalıbıyla kaleme alınmıştır. Eser, dinî-tasavvufî bir mesnevi olup nefsin aldatmaları ile dünya hayatına dalıp Allah'tan uzaklaşmanın insana ne kadar zarar verebileceği hususu üzerine bina ettirilmiştir. Eserde, ömrün kısalığı ve yapılması gerekenlerin çok olduğu özellikle vurgulanmış olup Allah'ın rızasına kavuşmanın ancak gaflet uykusu denilen sarhoşluktan uzak kalmakla mümkün olacağı gözler önüne serilmiştir. Ayrıca pendnâme/nasihatnâmede; dünyaya bağlı olmanın insanı felakete sürükleyeceği, Allah'ın rızasını kazanmanın oruç tutup, zekat verip, namazı kurallarına uygun olarak kılmakla mümkün olacağı, dilini kötü işler için kullanmayanların feraha ereceği ön plana çıkarılmıştır. İslamî bir yaşam tarzının nasıl olması gerektiğini ifade eden beyitlerle örülü pendnâme, bu yaşam tarzının daima Allah'la beraber olmayı hedeflediğini ve bunu sağlayabilmek için de çoğu zaman bir uzlet halinde olup halktan uzak kalmayı gerektirdiğini dikkatlere sunmaktadır. Eser, 4 varak olup 88 beyitten oluşmaktadır.

**Anahtar Kelimeler:** Pendnâme, İbn Sinan, Mesnevi

**İBN SİNAN'S PENDNÂME****ABSTRACT**

Pendnames are works written to give direction to society and individuals and they aim to change a wrong situation and reinforce a right attitude. Pendnames/nasihathnames have a deep-rooted history in terms of these features and have been frequently used in Arabic, Persian, and Turkish literature. These books were written to give advice, and have a verse and prose forms. In our study on the pendname which we found in a journal with the number 06 Mil Yz A 8294 in the National Library Manuscripts Catalogue and registered with the name of Ibn Sinan with the number 06 Mil Yz A 8294/7, we included the author of the pendname of the form on content features of the work and the transcribed text. Pendname Mefâ'îlün Mefâ'îlün Fe'ûlün was written by Hezec Bahri in the mesnevi verse form of the Aruz meter. The work is a religious-mystical masnavi and is built on the issue of how much harm can be done to a person by immersing himself in world lifeworldlythe deceptions of the soul and turning away from Allah. In the work, it is especially emphasized that life is short and there are many things to be done, and it is revealed that it is possible to attain Allah's approval only by staying away from the drunkenness called heedlessness sleep. In addition, in pendname; it is emphasized that being attached to the world will lead people to disaster, disasterning Allah's approval will be possible by fasting, paying zakat performing prayers by the rules, and that those who do not use their tongues for bad deeds will be relieved. The pendname, which is knitted with couplets expressing how an Islamic lifestyle should be draws attention to the fact that this lifestyle always aims to be with Allah and to achieve this, it is often necessary to stay away from the public by being in a state of isolation. The work consists of 4 leaves and 88 couplets.

**Keywords:** Pendname, İbn Sinan, Masnavi

### **ÖZET**

Tarih öğretimi, özellikle ulus devletler için, akademik bilgi haricinde milli bilinç oluşturmak için de önem taşımaktadır. Bu nedenle özellikle örgün eğitimde tarihsel bilginin kavratılması konusu ayrı bir ehemmiyete sahiptir. Tarih konularının öğretiminde yaşanan sıkıntılardan birisi, konunun anlatıldığı sınıfın seviyesine uygun bilgilerin verilmesi olarak dikkat çekmektedir. Sorunun netleştirilmesi açısından öğrencilerin tarihsel bilgiye yönelik görüşlerinin belirlenmesi önem taşımaktadır. Bu araştırmanın amacı ortaokul öğrencilerinin tarihsel bilgiye yönelik görüşlerinin belirlenmesidir. Bu kapsamda sosyal bilgiler eğitimi dahilinde tarih eğitiminin incelenmesi ve ortaokul öğrencilerinin tarihsel bilgiye dair görüşlerin saptanması amaçlanmaktadır. Araştırmanın çalışma grubu 5, 6, 7. sınıfları içeren 614 ortaokul öğrencisinden oluşmaktadır. Araştırmanın amacına ulaşmak için nitel ve nicel araştırma yöntemlerinden yararlanılarak bir nedensel tarama araştırması yapılmıştır. Araştırmanın problemine "Orta Okul Öğrencilerinin Tarihsel Bilgiye Yönelik Görüşlerini Belirleme Ölçeği", "Kaynak Çalışmalarından" oluşan veri toplama araçları yoluyla veri çeşitlenmesine gidilerek cevap aranmıştır. Orta Okul Öğrencilerinin Tarihsel Bilgiye Yönelik Görüşlerini Belirleme Ölçeği, Kaynak Çalışmaları veri toplama aracı olarak birlikte kullanılmıştır. 5, 6, 7. sınıfları içeren öğrenciler arasından toplanan 614 veri, nicel verileri oluşturmaktadır. Nicel veriler SPSS programı kullanılarak çözümlenmiştir. Sonuç olarak öğrencilerin cinsiyet değişkenlerinin tarihsel bilgiye yönelik görüşlerinde herhangi bir anlamlı farklılığa sebep olmadığı görülürken; özel ders alma durumu, anne eğitim düzeyi, baba eğitim düzeyi ve aile gelir durumu ile tarihsel bilgiye yönelik görüşlerinde anlamlı bir farklılığın olduğu görülmektedir. Bu kapsamda özel ders almayan öğrencilerin alanlara göre, anne ve babalarının eğitim düzeyleri düşük öğrencilerin anne ve baba eğitim düzeyleri yüksek öğrencilere göre ve aile gelir durumları düşük seviyede olan öğrencilerin aile gelir durumları yüksek seviyede olan öğrencilere göre tarihsel bilgiye yönelik görüşlerinin daha yüksek olduğu sonucuna ulaşılmıştır.

**DETERMINING SECONDARY STUDENTS' OPINIONS ON HISTORICAL KNOWLEDGE****ABSTRACT**

History teaching, especially for nation states, is also important for creating national consciousness besides academic knowledge. For this reason, the subject of comprehending historical knowledge, especially in formal education, has a special importance. One of the problems experienced in teaching history subjects draws attention as giving information appropriate to the level of the class in which the subject is taught. In order to clarify the problem, it is important to determine the students' views on historical knowledge. The aim of this research is to determine the views of secondary school students on historical knowledge. In this context, it is aimed to examine history education within the scope of social studies education and to determine the views of secondary school students on historical knowledge. The study group of the research consists of 614 secondary school students from 5th, 6th and 7th grades. In order to achieve the aim of the research, a causal survey research was conducted by using qualitative and quantitative research methods. The answer to the problem of the research was sought by using data collection tools consisting of "Scale for Determining Middle School Students' Views on Historical Knowledge" and "Source Studies". The Scale for Determining Secondary School Students' Views on Historical Knowledge and Resource Studies were used together as a data collection tool. 614 data collected from students in 5th, 6th and 7th grades constitute the quantitative data. Quantitative data were analyzed using the SPSS program. As a result, it is seen that the gender variables of the students do not cause any significant difference in their views on historical knowledge; It is seen that there is a significant difference in their views on taking private lessons, mother's education level, father's education level and family income status, and historical knowledge. In this context, it has been concluded that the students who do not take private lessons have higher views on historical knowledge than the students whose parents' education level is low compared to the students whose mother and father education level is high, and the students whose family income status is low compared to the students whose family income status is high.

**ABSTRACT**

There is high demand for herbicides based on the necessity to increase crop production to satisfy world-wide demands. Trifluralin (TFL) is one of the most widely herbicides used in weed control. Increased application of these compounds may affect non-target organism's particularly aquatic organisms. The aim of this study is to assess the effects of TFN administered at different concentrations (C1=5µg/L; C2=100µg/L and C3=150µg/L) for 4 days to evaluate antioxidant status in the digestive gland of *Mytillus galloprovincialis*. Hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>), Malondialdehyde (MDA), Protein carbonyl (PCO) levels were increased in treated groups compared to controls. Moreover, an enhancement of the reduced glutathione levels (GSH) was observed when compared to the control. Our study provided the evidence that TFL may induce toxicity via oxidative stress installation in *Mytillus galloprovincialis* digestive gland.

**ABSTRACT**

Licorice is a wild plant widely distributed over all surfaces of the globe. It has been used since ancient times in the treatment of various diseases, but it received real recognition after the COVID pandemic, when all other means were powerless in treating and saving millions of lives, while the valuable components contained in licorice helped control immunomodulation with immunosuppression in such a way as to include one mechanism and turn off the process that is not suitable for this segment of the disease. Various fractions of saponins and flavonoids are the main active ingredients of this plant. Possessing a multifaceted effect on receptor-mediated signaling, pro- and anti-inflammatory processes, licorice compounds have long been used in the East. Only medicinal plants created by the Almighty Creator have such unique properties, which makes them fundamentally excellent and indispensable tools in the treatment of diseases. The hepatoprotective properties of this plant are manifested in fatty degeneration of the liver, the plant is effective in bronchitis, anorexia, weakness, inflammation and infectious diseases, etc. This work presents a diverse spectrum and mechanism of action of licorice as a harmless effective herbal remedy indispensable in various therapeutic aspects

**Keywords:** inflammation, licorice, receptors, saponins, therapy, triterpenoids

**CONCENTRATION OF SPRAYING SOLUTION EFFECT ON THE STRUCTURAL,  
MORPHOLOGICAL AND OPTICAL PROPERTIES OF NIO THIN FILMS****Radhiyah M. Aljarrah***Iraq/University of Kufa/ Faculty of Science/ Department of Physics***ABSTRACT**

The aim of this work is the production of nickel oxide thin films with a suitable properties using simple and inexpensive homemade spray system of various component of nickel nitrate salt ( $\text{Ni}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$ ) dissolving on 100 ml of distilled water to prepare various solution concentration (0.01, 0.03, 0.05, 0.07 and 0.1 M) and deposit it on glass substrate with  $420 \pm 8$  °C substrate temperature. The thickness of the films varies between 250 to 350 nm with concentration. The effect of the solution concentration and the thickness on structural, and optical properties was investigated. The results obtained with several characterization techniques such as XRD, AFM and SEM, are well consistent and suggest that the prepared films were uniform and well adherent to the substrates. All the films are polycrystalline in nature with a cubic which is known as rock salt structure having a preferential orientation along the (111) plane., also showed that there was slightly shift in the direction of diffraction peaks with increasing the concentration . The crystalline size (D) of (NiO) films increased with increasing the molarities concentration. From the transmittance spectra, for all samples it was observed that the optical transmittance is direct allowed and the transparency values were moderate to relatively weak, it decrease by increasing the molar concentration of the spraying solution and the thickness of the films .Also this increases found to be decreasing in the band gap energy for the above mentioned reasons, and its values ranged from 3.85 to 3.15 eV.

**THE BATTLE OF AHZĀB (TRENCH) IS A GREAT MILITARY STRATEGY  
(IN THE MIRROR OF HISTORY)**

**Dr. Naseem Akhter**

*Associate Professor, Dept. of Islamic Studies, Shaheed Benazir Bhutto Women University, Peshawar,  
Pakistan.*

**ABSTRACT**

With the Battle of Badr, Islam and nonbelief have been coexisting in a chain ever since. An essential link to this pressing circumstance was the battle of Ahzab. Islam was to be completely wiped from the land, according to the infidels. However, their attempts to accomplish their objectives kept failing. Nevertheless, the Muslims lost the battle of Uhud badly. After Badr, too, Abu Sufyan asked Muslims to compete once more. The unbelievers, however, fled in terror as the Muslims arrived at the tournament. The battle of Ahzab eventually resulted from their ongoing preparations in the interim. The purpose of this study was to shed insight on the battle of Ahzab's historical context. For new academics, this research effort can be extremely valuable and important.

**FOOD SECURITY SYSTEM IN INDIA: A COMPARATIVE ANALYSIS****DR. DNOOP K***Assistant Professor, IMPSS, Kerala, India dinoopdas36@gmail.com***DR.SIM JOSEPH***Research Fellow, SIRP Kerala, India***ABSTRACT**

A food system is a composition of varieties of activities which begins from the process of planting a seedling nurturing it, preparing it manufacturing from it, finally an eatable form farm to the plate then again to the garbage can or compost pile. Food can be consider as a projectile which drives the growth of a nation. Particularly agriculture. Farming related business activities in a sustainable manner will help the individual or group of individuals and finally in turn the nation as whole. India's agriculture is directly depended on the climate of the geographical area it possess. Indian agriculture till the date depend directly or indirect on the help of monsoon. Hence the ultimate change will have a great impact on India as far as convinced there is a rise in temperature all over the world. This is reduced the rain fall and another impact of climate change is like cyclones hitting. The unexpected coast lines of India and thus causing Agricultural losses. The rising in temperature will change the perception trended and thus in turn Affect the water availability this is also out cited frequency of enhance weather conditions. But Indians case is unique one got self sufficient in its food production soon at her its independence. There are a lot of reason for it. The green revolution is the Germ that made Indian bright in the case of food production it actually tripled the Indian production of food grains soon after is implementation in 1960's it helped to reduce the food insecurity by a percentage of 50, similarly poverty too.

**E-LEARNING AND HOW TO BENEFIT FROM IT AS A STRATEGIC OPTION IN LIGHT OF THE CORONA PANDEMIC: AN ANALYTICAL STUDY FOR FACULTY AND STUDENTS IN IRAQ**

**Assistant Professor Dr. Samyiah Hani Ajeel**

**Prof. Dr. Azhar Nima Abdul Zahra**

**Assistant Professor Dr. Mariam Ibrahim Hammoud**

**ABSTRACT**

The current study aimed to identify the reality of e-learning in Iraqi universities in light of the Corona pandemic for faculty members and students, and the descriptive analytical approach was used to collect data. E-learning in light of the Corona pandemic is an important requirement and one of the basic requirements for the Ministry of Education in order to achieve its educational goals, as the World Health Organization has committed, according to the crisis, the spread of the Covid (19) epidemic since (2019) to most countries of the world, including the State of Iraq, to close universities and schools for a period of time Months. This prompted her to shift from the face-to-face study method to the electronic method, as many educational institutions followed one direction in order to complete their educational path, which is the direction of (e-learning) as a feature of education to keep pace with the general educational situation to reduce the spread of the epidemic and preserve public health, and therefore a problem was embodied The study searches for the reality of the e-learning pattern and its activation, and the extent to which it is used in the fields of education and its successes and acceptance in the Iraqi society. The selection of (110) from the total number of students and teaching staff in these Iraqi universities, and statistical methods were used for analysis based on the questionnaire forms that are valid for analysis and they number (150). Advanced Statistical SPSS v.23 SMART PLS The results of the current study showed us that the appreciation of students and faculty members in Iraqi universities for the reality of e-learning in light of the Corona pandemic is moderate, and the results of the study indicated that there is a statistically significant effect of the e-learning variable. Training and empowerment of teaching staff and students on how to use e-learning.

**RESEARCH ON LOAD SPECTRUM COMPILATION METHOD OF EXCAVATOR  
CONNECTING ROD BASED ON MIXED DISTRIBUTION****MSc ZHOU YuJie***Key Laboratory of Road Construction Technology and Equipment of Ministry of Education, Chang'an University China***ABSTRACT**

The anti-fatigue design of connecting rod is the research focus in the mechanical field. If the load spectrum accuracy is not solved well, it will bring great errors to the fatigue analysis and subsequent research. The measured load data of excavator connecting rod were processed and analyzed, and the measured data were compressed and edited. In the process of load spectrum compilation, the load amplitude and frequency relationship of connecting rod were fitted together based on the mixed distribution, and the number of mixed distribution was optimized. Compared with the single peak distribution, the mixed distribution improved the energy utilization rate. It provides reference for the precision of fatigue life evaluation of key components of construction machinery equipment.

**Keywords:** excavator; Connecting rod; mixed distribution; Spectrum compilation;

**NEXUS BETWEEN DIGITAL FINANCE AND GOVERNMENT REVENUE IN  
NIGERIA****Gbenga Festus BABARINDE***PhD Student, Department of Banking and Finance, University of Nigeria, Enugu Campus, Nigeria;***Matthew Oladapo GIDIGBI***PhD Student, Department of Economics, University of Ibadan, Ibadan, Nigeria;***ABSTRACT**

Digital finance is any financial offering to the financial market that are enabled by digital technology and channels like automated teller machine, point of sales terminals, internet, personal computer, mobile phone and others. Digital finance is a burning issue among researchers, policy makers and practitioners. Although, this financial innovation has come to stay but what remains unsettled is its application to and effect on different sectors of the economy and most particularly, the public sector fiscal management. Thus, using Vector Autoregression (VAR) technique, and Pearson correlation test, this study empirically examines the nexus between digital finance and government revenue in Nigeria during period, 2009Q1 and 2019Q4. It is confirmed in this study that a weak, positive but non-significant correlation exists between digital finance and government revenue but the relationship is not statistically significant. The study also indicates an evidence of a positive and non-significant effect of digital finance on government revenue in Nigeria and simultaneously, government revenue has negative and non-significant effect on digital finance. These suggest that there is no causal relationship between the two variables. It can therefore be concluded that there is no causal relationship between digital finance and government revenue in Nigeria in the period of study. It is therefore recommended that Government should implement policies aimed at digitalization of its fiscal operations and strengthen frameworks and institutions that will encourage full digitalization of payment system and other financial services in Nigeria.

**Dr. Naima Nawaz**

*Department of Sociology, University of Agriculture Faisalabad*

**ABSTRACT**

This study explored the impact of breakfast habits on the growth and development, academic achievements, class participation and school attendance. The study was a quantitative total of 120 adolescent girls purposively selected from three schools who participated in the study. Data were collected through interviews and Chi-square was applied to collect data to test the hypothesis. This study indicated that all the four alternate hypotheses were accepted ( $P < 0.05$ ) establishing a statistically significant relationship between breakfast habits with the growth and development ( $P < 0.05$ ), school attendance ( $P < 0.05$ ), class participation ( $P < 0.05$ ) and academic achievements ( $P < 0.05$ ). This implies that with the improvement and consistency in the breakfast habits, growth and development, class participation, class attendance and academic achievements of the students are likely to improve significantly which is directly related for decision making in future. Breakfast is important for the cognitive development of students and optimal school performance thus more attention should be given to the regular consumption of breakfast. Teachers, parents and concerned institutions should underlay their roles to let children be consistent in their breakfast habits.

**Keywords:** Breakfast habits, growth, development, school performance, adolescent girls.

**A STUDY ON THE FACTORS DETERMINING GREEN CONSUMPTION****Manita Matharu***Amity School of Business, Amity University, Noida, UP, India***ABSTRACT**

It is essential, for both environmental and economic reasons, to be familiar with ecologically sustainable purchasing habits. The purpose of this research is to investigate the factors that influence green curtailing behaviors and consumer adoption of green products including consumer adoption of technologies that are marketed as green (eco-innovations). This study develops a comprehensive conceptual framework of consumer behavioral intentions in green consumption. This study contributes to the current body of knowledge by incorporating the environmental concern perspective of consumers, about the adoption of green consumption. Our findings will enable managers and future academics to appreciate how environmentally conscious consumer attitudes may be fostered through sustainable consumption practices. In addition, they will assist firms in recognizing potential prospects, innovations, and other benefits derived from adhering to green or sustainable consumption habits.

**Keywords:** green, green consumption, values, sustainable consumption

**FUTURE IMPLICATIONS OF ARTIFICIAL INTELLIGENCE AND  
TECHNOLOGY: ANALYSIS OF THE CURRENT INTELLECTUAL PROPERTY  
LAWS AND ITS RELATIONSHIP WITH ARTIFICIAL INTELLIGENCE****Dr. Komal***Professor, Dean PG Program IILM Law School, IILM University Gurgaon***Ms. Tanya Sharma\****Research Scholar, IILM Law School, IILM University Gurgaon***ABSTRACT**

With the world continuously evolving, we are witnessing some major technological advancements. Technological tools have started to influence various facets of legal profession including those areas upon which they traditionally counted on proficient human opinion, Artificial Intelligence being the same. Intellectual property rights (IPR) are rights given to persons over the creations of original works of authors which are artistic, literary, technical, or scientific work in the fields of patent, copyrights, trademark and so on. Artificial Intelligence (AI) is the intelligence produced by machines. It is the concept which begins the moment, machines are able to accomplish the tasks in lieu of human intelligence. The researchers will theoretically analyse the Intellectual property rights (IPR) under the Indian patent and copyright law pertaining to provisions Section 6 of the Patents Act, 1970 and section 2(d) of the Indian Copyright Act. The concept to give AI status of a creator is still questionable and unfamiliar. There are no existing laws to specifically protect creations made from AI as original works. In particular Copyright law and Patent law do not recognise author other than a natural person for their inventions. Author in the Indian copyright act under section 2(d) is considered to be a human or legal person, thus making the idea of machine to be protected under this act restricted. Section 6 of the Patents Act, 1970 states inventor to be a person claiming to be the true and first inventor of the invention. The WIPO Conversation on Intellectual Property and Frontier Technologies will examine the economic potential of AI and understand the importance of issues faces by the inventors and IP offices to which can provide the best support to AI innovation.<sup>3</sup> The law does not clearly define if an original work is created by AI without human intervention then who will be considered the copyright owner? Also what will happen If a person plagiarizes or infringes another's original work of AI then who will be punished, either the coder/creator of Artificial Intelligence or the buyer of the creation. This paper is to review the existing provisions and seek answers to these questions through theoretical research. With this paper the researcher seeks to analyse technological advancements and growing usage of Artificial Intelligence and its interface with existing Intellectual Property laws.

**Keywords:** Artificial Intelligence, Intellectual Property Rights, Copyright, Patent, Innovations, Original Work.

**ADOPTION OF AMERICAN AUDITING STANDARDS AS AN INTRODUCTION TO  
PROFESSIONAL BEHAVIOR IN IRAQI AUDITING FIRMS FROM THE VIEWPOINT OF  
THEIR AUDITORS AN EXPLORATORY STUDY OF THE OPINIONS OF A SAMPLE OF  
WORKERS IN ACCOUNTING AUDITING COMPANIES**

**HUSSEN KREEM JASİM**

*University of Kufa*

*Faculty of Administration and Economics*

**ABSTRACT**

aim of the study The current measurement of the level of professional behavior in the Iraqi auditing companies from the viewpoint of the auditors working in them in the light of the American auditing standards. The study population consists of 40 auditors, who were selected by random. The descriptive approach was used in the current study. To achieve the objectives of the study, the questionnaire was adopted, and its validity and reliability were confirmed. The results showed that the level of professional behavior in the Iraqi auditing companies from the point of view of the auditors working in them was average, and the results of the study showed a significant effect of the gender variable in favor of the male category, and the absence of a statistically significant effect for the educational qualification variable, and there is no statistically significant effect for the years of experience variable. In light of the results, the study recommended that the Iraqi auditing companies' administrations attach great importance to professional behavior, as they work to stimulate conducting studies and research from time to time, in order to study the work environment in which professional behavior will grow in all its circumstances and variables.

**Key words:** Professional Conduct, Audit Firms

Djelfa University, Algeria***ABSTRACT**

A hybrid Renewable energy system (HRES) is integrated into a Nano Grid system (NG), and it's a Suitable solution to provide power to off-grid and rural areas in developing countries. This research paper focuses on the optimization of an HRES connected to a stand-alone Nano Grid system consisting of photovoltaics (PV), wind turbines (WT), batteries (BT), diesel generators (DG), and inverters for Isolated country houses units which that's far away a 250 km to the south of Algeria capital city. For our hybrid system, the meteorological data of Solar Insolation is taken for Djelfa, Algeria (Longitude 3°6.6' E, Latitude 35°13.6'N), and the pattern of load consumption of the load is studied and suitably modeled for optimization of the hybrid energy system using HOMER software. HOMER (Hybrid Optimization Model for Electric Renewable) is a design model that determines the hybrid system's optimal architecture and control strategy. This result is validated through evolutionary computing such as GA (genetic algorithm). Our objective is selected as minimizing the total capital cost, subject to the constraint of the Loss of Power Supply Probability (LPSP). Studies have proved that the genetic algorithm converges very well and the methodology proposed is feasible for optimally sizing standalone hybrid power systems, On the other hand, the fuzzy logic is applied to the boost converter to develop characteristics of its performance like response time and steady-state error under different conditions like irradiation a temperature as well as to non-linearity of the I-V characteristic by tracking the maximum power point of the solar energy system. So, to demonstrate the effectiveness of this study we tried to make the simulation program with MATLAB/ Simulink which was used with several scenarios applied with different changes in parameters like the irradiation and temperature.

**PREVALENCE AND ASSOCIATED RISK FACTORS OF STRONGYLOIDIASIS AMONG ORPHANAGES AND SOME ALMAJIRI SCHOOLS IN SOKOTO METROPOLIS, SOKOTO STATE, NORTH-WESTERN NIGERIA****Yusuf Muhammad Sanyinna***Department of Biology, Faculty of Natural and Applied Sciences, Nigerian Army University Biu, P.M.B. 1500, Biu, Borno State, Nigeria.**Department of Animal and Environmental Biology, Faculty of Life Sciences, Kebbi State University of Science and Technology, P.M.B. 1144, Aliero, Kebbi State, Nigeria.***Daniel Dan-Inna Attah***Department of Animal and Environmental Biology, Faculty of Life Sciences, Kebbi State University of Science and Technology, P.M.B. 1144, Aliero, Kebbi State, Nigeria.***Victoria Ebere Ukatu***Department of Animal and Environmental Biology, Faculty of Life Sciences, Kebbi State University of Science and Technology, P.M.B. 1144, Aliero, Kebbi State, Nigeria.***ABSTRACT**

Strongyloidiasis is a serious public health problem in under-developed and developing countries like Nigeria. Therefore, comprehensive local epidemiological data are very vital for successful control and prevention of this infection particularly among orphanage homes and *Almajiri* schools. This study was carried out to determine the prevalence and associated risk factors of strongyloidiasis among orphanages and some *Almajiri* schools in Sokoto Metropolis, Sokoto State, North-Western Nigeria. A descriptive cross-sectional survey was conducted among a total of 400 orphans and *Almajiris* in the study area. Stool samples were collected and examined using both direct wet-mount and formalin-ether concentration techniques by following standard operating procedure. Data were analyzed using the SPSS Version 26.0 and Chi-Square ( $X^2$ ) test, and  $P < 0.05$  was considered to be statistically significant. The prevalence of strongyloidiasis was calculated and expressed in percentages. The overall prevalence of strongyloidiasis was found to be 08 (2.00%). Based on institutions, the infection rate was greatly higher in the *Almajiri* schools 07 (1.75%) than in the orphanages 01 (0.25%). In relation to gender, the infection rate was higher in males 05 (1.25%) than in females 03 (0.75%). Also, based on age-group, the subjects aged 8 – 10 years were more infected 05 (1.25%) than the rest 03 (0.75%). However, there was no statistically significant difference ( $P > 0.05$ ) between the prevalence of strongyloidiasis among orphanages and *Almajiri* schools. Type of food normally eaten, fruit/vegetable washing before eating, going to fishing/swimming, and coming in contact with refuse/sewage were significant factors ( $P < 0.05$ ) for strongyloidiasis in this study. The study revealed the prevalence of *Strongyloides stercoralis* infection among the subjects in the study area. Therefore, provision of safe food and drinking water, regular deworming exercise, government interventions, health education and discouragement of open defecation are recommended.

**Keywords:** Prevalence; Epidemiology; Risk Factors; *S. stercoralis*; Orphanage Homes; *Almajiri* Schools; Sokoto Metropolis; North-Western Nigeria.

**SPEECH ACTS AND METACOMMUNICATIVE ATTITUDES AS A SOURCE OF GENRE FORMATION AND A FACTOR OF GENRE PERCEPTION. POETRY OF ASANA KAİGY**

*The article was written within the framework of the project «Scientific concept of Kazakh rhetoric: rhetorical ideal, identity, argumentation and speech practice»*

**Sholpan Zharkynbekova**

*Doctor of Science in Philology, Professor, Russian Philology Department, Faculty of Philology, L.N. Gumilyov Eurasian National University, Astana, Kazakhstan, ORCID ID: <https://orcid.org/0000-0002-4160-6215>*

**ABSTRACT**

The report is devoted to the study of Kazakh rhetoric in terms of the processes of genre formation and genre perception. The identification of the connection between speech acts and metacommunicative attitudes based on the material of the works of the poet of XV century zhyrau Asan Kaigy allows us to substantiate a new approach to the structure of the genre of a lyrical work. On the other hand, the systematization of the poet's methods of influencing the reader contributes to understanding the communication between the author and the recipient. The subject of the analysis are such types of speech acts as "imperative", "interrogative", "narrative sentence", etc. as the most frequent in the poet's style. Their influence on the structure of genres such as parable, appeal to the khan, tolgau, instruction, philosophical and landscape lyrics reveals in the utterance of the Asan such a communicative attitude as the speaker's conscious idea of communication and focus on the listener. On the other hand, this approach contributes to the study of the pre-linguistic and post-linguistic phases of communication, namely the intention and style of implementing the author's intention. Thus, the algorithm of communication as a sequence of components: the speaker's personality – the form / content of the message – the listener's personality reflects the correlation of three levels of linguistic personality (Y.N. Karaulov): verbal-semantic, cognitive and pragmatic allows through the reconstruction of the act of communication, to describe the picture of the world of zhyrau and the techniques of controlling the listener's consciousness with the help of linguistic means, as well as the activation of the unconscious through the use of symbols of the Kazakh folklore consciousness. The pragmatic nature of communication between zhyrau and his recipient raises the problem of fascination (Yu. Knorozov). The report examines the impact of the author on the addressee as the ability to generate lively interest or attract attention. Such a view becomes a source of analysis of the poet's psychological and artistic skill and indicates the connection between the method of influence considered in the system of tropes and the grammatical / syntactic organization of the text as a source of genre strategy. The popular concept of fascination and fascinativity in modern science, studied as a communicative phenomenon, contributes to such a promising direction as the description of the processes of genre formation and genre perception in the Kazakh lyrics of the Middle Ages. At the same time, reception as an individual perception of the text by the reader becomes the object of consideration in comparison with the supposed author's understanding of the text, known since the days of German receptive aesthetics as the idea of an 'implied reader'.

**Keywords:** genre, reception, fascination, speech act, utterance

**EVALUATION OF THE EFFECTS OF BROMELAIN AND PINEAPPLE STALK EXTRACT ON HISTOMORPHOMETRY OF THE UTERUS IN FEMALE ALBINO RATS**

**ABSTRACT**

A total of thirty-six female albino rats (of the age 4-6 weeks) were randomly assigned to four groups of nine rats each. Group A served as the control group and received 0.3 ml of distilled water daily *per os*. Group B and C received 200 mg/kg and 400 mg/kg of pineapple stalk extract *per os* respectively, while Group D received 30 mg/kg of bromelain *per os*. All the rats were allowed to mate after 2 days of treatment. After 3 weeks of treatment, histopathology of the uterus was conducted on the rats. It was observed that bromelain and pineapple stalk extract did not produce any significant change in the histomorphometry of the uterus. Photomicrographs obtained showed normal uterine histological features of rats in all the groups consisting of the endometrium, myometrium and perimetrium. Normal histological architecture of the uterine horns was observed in all the groups. There was no significant difference ( $p \geq 0.05$ ) in the endometrial and myometrial thickness in groups A, B, C and D.

**Keywords:** Bromelain, pineapple, uterus, histology, rats.

**ABSTRACT**

Oil and gas drilling is an important phase in petroleum industry life. it is the most important phase and the most expensive in terms of cost and time. this phase “drilling” associated with many constraints and incidents. The most common is lost-of circulation, fire explosion, blowout, explosion...etc. this paper analyze over than 26 incidents and accidents occurred around the world during the period between 2000 and 2018 based on reports and research articles, The results showed that the number of incidents doubled over the period 2012-2015 by 31%. also the results showed that explosion is the most common incident by 31%. finally in the period between 2016 and 2018 the number of fatalities has increased by 54%.

**Key words:** Drilling incident, Fishbone Diagram fire explosion, statistical analyses, industrial hazards.

**ALLEE EFFECT ON THE PREY-PREDATOR MODEL OF HOLLING TYPE-I  
FUNCTIONAL RESPONSE****Nisad Sardar**

**Dr. Sudip Mishra**

Department of Applied Mathematics, MAKAUT, WB, Nadia 741249

**ABSTRACT**

It is quite well-known that the study of dynamic behavior of the prey-predator models has emerged as one of highly researched topics in recent days. In our paper, we have tried to establish a prey-predator model of functional response of Holling type-I along with the allele effect. The dynamic behaviors of this model have also been discussed in detail. With the help of numerical simulation, the theoretical analysis has been illustrated elaborately. The equilibrium points of this model have been located by means of numerical analysis and the stability of these equilibrium points has also been analyzed. The position of these equilibrium points has been shown graphically by means of computational simulation. To analyze equilibrium points we use Hartman-Grobman theorem and for non-hyperbolic critical points we use numerical simulation.

**MARKSİST EDEBİYAT ELEŞTİRİSİ BAĞLAMINDA “BACAYI İNDİR BACAYI  
KALDIR” HİKÂYESİ**

**Yüksek Lisans Öğrencisi Alper CİNOĞLU (Orcid ID: 0000-0002-8916-7653)**

**E-posta:** [alpacino-37@hotmail.com](mailto:alpacino-37@hotmail.com)

**ÖZET**

Bir felsefe olan Marksizm her alanda olduğu gibi sanatı dolaylı olarak edebiyatı da etkilemiştir. Marksist Edebiyat felsefesi Sovyet Yazarlar Birliği Kongresi'nde devletin resmi bir edebiyatı olmuş ve Toplumcu Gerçekçi olarak adını değiştirmiş toplumun istekleri doğrultusunda eserler vermeye başlamıştır. Bu felsefe ve akım her toplum gibi Türk toplumunu da 1930lu yıllardan itibaren politik, felsefe, ekonomi ve sanat alanlarında yeni çağrışımlar açmaya başlamıştır. Özellikle köy enstitü çıkışlı öğretmenler edebiyatla ilgilenmiş ve bu bağlamda öğretmenlik yaptıkları yerlerdeki köy halkının dertlerini Marksist felsefe açısından ele alarak eserlerini bu doğrultuda yazmaya başlamışlardır. Türk edebiyatının hikâye ve roman türlerinde önemli eserler veren Sadri Ertem Toplumcu Gerçekçi akımından etkilenmiştir. Sadri Ertem'in babasının asker olması ve görev yerinin değişmesinden dolayı farklı illerde ve köylerde bulunmuş ve köy halkını yakından tanıma fırsatı yakalamıştır. Sadri Ertem'in felsefe ile uğraşması ve felsefe öğretmenliği yapması da onun Marksist felsefeye yönelmesine ve bu bağlamda eserlerinde Marksist edebiyat eleştirisinin oluşmasına katkı sağlamıştır. Bu çalışmada Marksist edebiyat eleştirisi kurumsal açıdan bahsedilmiş bu kuram Türk edebiyatında toplumcu gerçekçi yazar olan Sadri Ertem'in Bacayı İndir Bacayı Kaldır adlı hikayesi üzerinde incelenmiştir.

**Anahtar kelimeler:** Marksizm, Marksist Edebiyat Eleştirisi, Toplumcu Gerçekçilik

**THE STORY OF "BACAYI İNDİR BACAYI KALDIR" IN THE CONTEXT OF  
MARXIST LITERARY CRITICISM**

**ABSTRACT**

As a philosophy, Marxism has indirectly affected literature as well as art. Marxist philosophy of literature became an official literature of the state at the Congress of the Union of Soviet Writers and changed its name as Socialist Realist and started to produce works in line with the demands of the society. This philosophy and movement, like every society, has started to open new connotations in the fields of politics, philosophy, economy and art in the Turkish society since the 1930s. Especially teachers from village institutes were interested in literature and in this context, they started to write their works in this direction by considering the problems of the village people in the places they teach in terms of Marxist philosophy. Sadri Ertem, who produced important works in the story and novel genres of Turkish literature, was influenced by the Socialist Realist movement. Due to the fact that Sadri Ertem's father was a soldier and his place of duty changed, he had been in different cities and villages and had the opportunity to get to know the people of the village closely. Sadri Ertem's dealing with philosophy and his teaching as a philosophy teacher also contributed to his orientation to Marxist philosophy and in this context, to the formation of Marxist literary criticism in his works. In this study, Marxist literary criticism is mentioned from an institutional point of view, and this theory is examined on the story of Sadri Ertem, a socialist realist writer in Turkish literature, named Bacayı İndir Bacayı Kaldır.

**Keywords:** Marksizm, Marxist Literary Criticism, Social Realizm, Sadri Ertem

**A SYSTEMATIC ANALYSIS OF THE IMPACT OF COVID-19 LOCKDOWN ON  
SLEEP HEALTH IN ATHLETES****Dr. Asif Ali**Associate Professor, Department of Physical Education & Sports Science, Government College  
University, Lahore. Email: asif.ali@gcu.edu.pk**Fariq Ahmed**BS student, Department of Physical Education & Sports Science, Government College University,  
Lahore.**Abstract**

**Background:** The role of sleep on the sports performance and psychophysical health of the athletes is considered to be vital. Covid-19 epidemic is reported to have negative impact on psychological health of the masses. Critical analysis regarding the impact of Covid-19 on athletes sleep remains unaddressed yet. **Objective:** The objective of this systematic review is to determine the effect of COVID-19 pandemic on the sleep in athletes. **Methods:** The major research data bases such as PubMed, Science Direct, Taylor & Francis, Google scholar etc., were used to conduct the systematic search for relevant articles. A total of 5128 article titles and their abstracts were retrieved by conducting preliminary search. Following further screening, 68 full text articles were identified. This resulted in obtaining 16 research studies found to be related to the objective of this study that were finally selected for quality assessment. Finally, only 13 eligible studies had sufficient quality and were included for the final analysis. Among those, ten studies (N=10) were cross-sectional, two were experimental, and one study used quasi-experimental approach, respectively. **Results:** Nine out of thirteen (9/13) studies demonstrated a significant negative impact of Covid-19 on sleep health, whereas, three studies (3/13) showed positive effect. However, only one study proclaimed no effect of pandemic on sleep in athletic population. **Conclusions:** The results of the systematic analysis showed mix results, as 69% of the included studies showed negative impact, 23% of the studies showed positive impact and only 7% studies showed no significant effect. Based on these findings, there is some tendency to suggest that Covid-19 might have impacted negatively to the sleep health of athletes, since, majority of the studies provided support to this view. Even though, the findings are conclusive in this regard. Most of the studies used self-reported measures to assess sleep health. Hence future research should be conducted using direct measures such as (triaxial accelerometer) to measure sleep health.

**ABSTRACT**

Government introduces tax reforms to finance additional expenditure and budget deficit. However, efficient implementation is crucial to achieve economic goals. Government faces number of challenges while implementing tax reforms due to tax evasion, difficult tax filing procedures and public resentment. Moreover, government faces another challenge when to analyze whether certain tax reform was successful in achieving its goals or not and proposes measures that must be introduced to make it successful. The aim of broadening tax base reforms is either to lower budget deficit or to increase the expenditure budget in the economy. Therefore, this study utilizes a model to analyze the effectiveness of GST reform and its further Withholding scheme measures in attaining its objectives in the context of Pakistan. The paper helps policy makers understand the upshots of GST reform and to get a view of possible implications and glitches in its implementation if was ineffective. Otherwise, this study would also aid policy makers understand possible reasons and measures taken to make the reform successful. The paper analyses 28 years of GST, Budget Deficit and Expenditure Budget data from 1990 to 2018 of Pakistan by using Ordinary Least Square model. As evident by the results of the study, there is a significant impact of GST revenue on Budget Deficit (P-value<0.05) and Expenditure Budget (P-value<0.05). Moreover, GST predicts 91.56% and 98.88% variation in Budget Deficit and Expenditure Budget. The results also suggested that GST after the implementation of Withholding Sales tax still have significant impact on both of the independent variables i.e. Budget Deficit and Expenditure Budget, explaining 74.88% and 97.41% variation.

Acknowledgment: This research is not supported by any funding agency

**ABSTRACT****Purpose**

The purpose of this case study is to analyze the organizational development and adaptation of innovative technological advancements of kababjees regarding customer services on utmost priority, policy maker's problems and what are the prospects of their business and how they can make their business more profitable and successful.

**Methodology**

This study is exploratory based on primary data collected from an interview, and we have not run any software because our data is not quantity wise it is quality-wise.

**Findings**

This study aims to examine how food restaurants like kababjees lead to success with the help of organizational development. With this important and effective information, strategy planners or marketers can formulate or develop an appropriate strategy on these factors that enable them to outdo the competitors.

**Practical Implications**

Findings of the case study for kababjees that clients have no more than five values, so the values are easy for employees to remember and understand what is important to the company that kababjees can improve through organizational development.

**Keywords:** Development, intervention, successful kababjees, organization structure.

**PATTERN OF PSYCHOTROPIC MEDICATION AMONG INPATIENT ADMITTED

ORCID:0000-0003-0878-8384

**ABSTRACT**

**Aim:** To assess the psychotropic drug prescribing patterns among the inpatients psychiatric ward.

**Introduction:** The incidence of psychosis worldwide has been estimated at approximately 50 in 100,000 people, while the incidence of schizophrenia (the most frequent eventual diagnosis among cases of first episode psychosis) is approximately 15 in 100,000 per year. Antipsychotic medications have been used since the 1950s to treat psychosis; they can be used to treat acute psychosis from any cause and to manage chronic psychotic disorders such as schizophrenia. If an effective method of identifying patients with probable psychiatric disorder can be implemented, utilization data summarizing prescribing patterns of agents used in their treatment should be informative. Large pharmacy databases with nationwide scope can be useful sources of data for investigating utilization rates for specific treatments.

**Key words:** Psychotropic Medication, psychosis, First and second-generation antipsychotic medications

**ABSTRACT**

For most professionals to succeed in today's business market, they need certain entrepreneurial skills. This paper aimed to describe and systematize these competencies, to highlight the impact of entrepreneurial education platforms in developing entrepreneurial and managerial competencies given the current phenomena of globalization and digital transformation. Documentary analysis and critical reflection on the data to be collected will allow us to identify the impact of education on entrepreneurs, and the socio-economic and sociocultural reasons behind the relevance of this issue. As a result, the development of a framework is designed to be relevant to the needs of professionals in the current global and digital era. This paper will present evidence that entrepreneurial skills are necessary for professional success in today's job market. Today's complexity and unpredictability require this type of capability to enable global and digital transformation, create valuable products, and develop innovative services as a team. In this sense, skills that support behaviors enable focus and openness to novelty, value creation, and effective communication. We will analyze the entrepreneurial competencies - openness to the new, self-education, creating solutions to emerging problems, and communicating effectively - that will integrate the following competencies: creativity and innovation, initiative, self-efficacy and resilience, strategic planning and evaluation, problem-solving and decision making, transformational leadership, clear and visual communication, teamwork and networking and digital communication. We will create and validate an entrepreneurial competency model, which will allow us to measure the degree of development of these competencies.

**MINIMUM CAPITAL REQUIREMENTS, CORPORATE RESTRUCTURING AND BANKS  
PERFORMANCE–AN EMPIRICAL ANALYSIS OF MERGED BANKS IN PAKISTAN**

**Mehwish Darakhshan Zia**  
Lecturer Department of Commerce  
Jinnah University for Women

**ABSTRACT**

This study has been done with the purpose to evaluate the impact of Mergers of banks for increasing paid up capital as required by SBP on the performance of the Banking companies. Bank of international Settlement suggest through its Basel recommendations regarding capital adequacy requirements. It's a regulation that banks should be merged with other banks so as to increase their paid up capital requirement as prescribed by State bank of Pakistan. Otherwise for smaller banks there exist risk of Liquidity, risk of market Failure, credit risk ,operational risk and other types of risk. Theoretically, the suppositions are that Mergers improves the performance of the company due to increased market power, and provide other internal and external boost. Banks performances are directly connected with the economic progression in the country as they channelized the funds from surplus unit to deficit unit. They are considered the lifeblood of an economy. This study after examining the financials and profitability ratios before and after consolidation shows that Banks solely were going into profit but after merger they couldn't do much to contribute positively in the performance improvement. The study therefore recommends that to increase the paid up capital requirements merger may not be a good option or it should be an efficient merger. Management of banks and Regulatory Authorities should go some other strategic plans to ensure that adequate measure is being put in place to determine increasing rate of all profitable returns. Consolidation of banks is hardly successful to improve the banking sector financials.

**Keywords:** Bank's profitability, merger, capital Adequacy, economic growth.

**THE BATTLE OF AHZĀB IS A GREAT MILITARY STRATEGY OF THE HOLY  
PROPHET (PBUH) (THE ACTUAL FACTS OF THE HISTORY)**

**Dr. Naseem Akhter (Associate Professor)**

Dept. of Islamic Studies, Shaheed Benazir Bhutto Women University, Peshawar, Pakistan.  
khtr\_nsm@yahoo.com

**Abstract**

With the Battle of Badr, Islam and nonbelief have been coexisting in a chain ever since. An essential link to this pressing circumstance was the battle of Ahzab. Islam was to be completely wiped from the land, according to the infidels. However, their attempts to accomplish their objectives kept failing. Nevertheless, the Muslims lost the battle of Uhud badly. After Badr, too, Abu Sufyan asked Muslims to compete once more. The unbelievers, however, fled in terror as the Muslims arrived at the tournament. The battle of Ahzab eventually resulted from their ongoing preparations in the interim. The purpose of this study was to shed insight on the battle of Ahzab's historical context. For new academics, this research effort can be extremely valuable and important.

**PEACE IS A BASIC BRICK OF DEVELOPING SOCIETY (UNDER ISLAMIC DIRECTIVES)**

**Dr. Naseem Akhter (Associate Professor)**

Dept. of Islamic Studies, Shaheed Benazir Bhutto Women University, Peshawar, Pakistan.

khtr\_nsm@yahoo.com

**ABSTRACT**

The concept of peace is defined as the absence of violence in any society or a healthy, positive international or inter-human relationship. In this situation, all members of society enjoy social, economic, equality, political rights, and protection. Peace is considered an essential component of the well-being of society. Historically speaking, anarchy reigned worldwide before the advent of Islam. That illiterate culture lacked any understanding of law and order. The introduction of Islam brought about a period of social stability and protection for all of humanity. But regrettably, we have lost sight of Islam's teachings throughout time, and as a result, society today still suffers from many of the same issues that existed before the arrival of Islam. So that a peaceful society can be built, people must abide by Islamic precepts. In terms of its research, this research study may be exceptional and useful to others due to its specific field.

**TERMINOLOGY AND TRANSLATION RELATIONSHIP**

**Teodora FLORICĂ (DRAGOTĂ)**

Universitatea din Craiova, Școala Doctorală „Alexandru Piru”

E-mail address: florica.teodora.w5b@student.ucv.ro

**Abstract**

Relationship between Terminology and translation in specialised translation A language has to adapt to all situations of communication with the necessary terminology in consonance with their technological and commercial developments or it is doomed to disappearance. Linguists have generally shown little interest in terminological studies and not all experts agree that terminology constitutes a separate discipline, or a theoretical subject. Understood as a process of creating, compiling, processing and choosing terms of specialized subject in one or more languages, terminology supports the standardization of a language and its implications by optimizing communication among specialists and professionals and providing help to translators. Maybe not independent, but terminology has gradually become rather an interdisciplinary and transdisciplinary discipline linked to a range of subdisciplines, from Linguistics, Lexicology, Semantics, Sociolinguistics, Communication to Philosophy, Logics, Sciences or even Computer Science.

\*Presenting author

**ABSTRACT**

In the western semi-arid regions of India, severe drought occurs every 8-9 years and has become a common phenomenon. Therefore, two drought indices, namely Temperature Condition Index (TCI) and Vegetation Condition Index (VCI), were derived from Landsat datasets to assess and monitor the drought patterns during the pre-monsoon and post-monsoon seasons between 1996 and 2022 in Latur district of western India. In addition, the average frequency layers (AFL) of all drought and land use indices were constructed to study the relationship between them. The findings indicate that during the study period, there was a significant increase in the region classified as high, very high and severe drought. The largest increase was observed in the high drought class, which increased from 2532.45 to 4792.49 km<sup>2</sup> and from 1559.84 to 3342.32 km<sup>2</sup>, respectively, based on the TCI for the pre-monsoon and post-monsoon seasons, and from 1269.81 to 1787.77 km<sup>2</sup> based on the VCI for the post-monsoon season. The spatial correlation results show a significant although heterogeneous relationship between land use and drought indices. Both the VCI and TCI are cost-effective, less time-consuming methods and provide reliable results with good accuracy in drought monitoring analysis. The results of this study can help in drought management planning and mitigation in the study area. A similar tool can be used in other parts of the world, advancing the global literature.

**Keywords:** Semi-arid region; Drought pattern; Temperature condition index (TCI); Vegetation condition index (VCI); Average frequency layer (AFL); Land use indices.

**ABSTRACT**

Global population has reached 8 billion with a baby girl Vinis Mabansag born in Tondo, Manila on 15<sup>th</sup> November 2022, Tuesday as per the United Nations. As the population increases the material requirements will also be increased. Manufacturing has to cater the needs of the people on Earth with the available resources including technology. With the advent of technologies in the yester- centuries like Steam engine, Electricity, Computers, the Internet & Robotics various industrial revolutions have been evolved. These include Industrial Revolution 1.0 (1760-1840), Industrial Revolution 2.0 (1871-1914), Industrial Revolution 3.0 (1970-2012), Industrial Revolution 4.0 (2011 and beyond) and Industrial Revolution 5.0 (2020 and beyond). After the initialization of digital India, AI and Internet, the manufacturing industry has undergone significant changes on the technology front. Most of the industries are embedding emerging technologies into various manufacturing machines/ processes to improve productivity, quality, reducing cycle time and quantities down to 1 with flexibility. Industry 5.0 emphasis on the integration of human hands and brains back into the industrial framework which focuses on transforming factories into the Internet of Things (IoT), smart facilities that use cognitive computing, collaboration with robots (cobot) and link via cloud servers. Man and machine coming together to improve the means and effectiveness of production are known as the Fifth Industrial Revolution 5.0. In India there are large number of micro small medium enterprises which produces 40 percent of national Industrial production. It seems not much work has been done in industry 5.0 application domains and hence in the present work, an attempt has to be made to identify specific engineering application domains for Industry 5.0 considering its sub-systems for global society.

**COLORING R-DISTANCE GRAPHS****Yegnanarayanan Venkataraman**

Department of Mathematics, Kalasalingam Academy of Research and Education, Krishnankoil, TN,  
India. Pincode-626126  
e-mail: prof.yegna@gmail.com

**ABSTRACT**

A vertex  $k$ -coloring  $f$  of a simple graph  $G = (V, E)$  is a function from  $V(G)$  to the set  $\{1, 2, \dots, k\}$ . It is called proper, if any two adjacent vertices of  $G$  are colored differently. The least number of colors used in the above coloring is called the chromatic number  $\chi(G)$  of  $G$ .  $f$  is called a  $r$ -distance coloring if any pair of vertices separated by a distance of at most  $r$  is colored differently. The least number of colors used in such a  $2$ -distance coloring is denoted by  $\chi_r(G)$ . A probe on  $r=2$ -distance coloring was started by the authors in [1, 2]. It was continued especially for planar graphs by several others in [3-9]. The  $r$ -distance coloring possess vast scope in the study of frequency assignment challenge in communication networks. Coloring  $r$ -distance graphs handles this task nicely when a pair of transceivers separated by a distance  $r$  precludes due to interference the same channel use.[10]. We review in this article certain general results concerning both upper and lower bounds of  $\chi_r(G)$  subject to certain restrictions on the minimum degree of  $G$ , girth of  $G$ , connectivity of  $G$  and also on the spectral radius depending on the adjacency matrix of  $G$ .

**Keywords:** graphs, coloring,  $r$ -distance coloring, distance graphs

**PRODUCTION OF BAMBOO PRODUCTS TO ENCOURAGE SUSTAINABLE  
CONSUMPTION FOR ENVIRONMENTAL PROTECTION****Aamna Imran**

Jinnah University for Women Department of Business Administration

**Yumna Ali**

Jinnah University for Women Department of Business Administration

**ABSTRACT**

The world is moving towards the use of sustainable products for a better environment. There are many positive outcomes of using sustainable products including environmental protection, waste minimization, and most importantly cost-effectiveness. While, in Pakistan, around 3.9 million tons of plastic waste is recorded and increasing annually. Deforestation is another main environmental concern in our country, unfortunately in Pakistan, only 5.7 pc of the land area is covered with forests. Our project idea is to manufacture “Sustainable Bamboo Products to save our Planet” which addresses these main environmental concerns. The UN has already given some goals for the betterment of the world. One of its SDGs is SDG 12 “To ensure sustainable consumption and production patterns”. It aims for the world to ‘do more with less: reducing unsustainable resource use, which can result in deforestation and pollution. Bamboo products are renewable and have a low or even negative carbon footprint across their lifecycle. Bamboo plants have many uses and can replace materials with high carbon emissions, such as PVC, steel, and concrete. This reduces pressure on the use of forest timber resources. Increasingly, bamboo can create products that are very useful for sustainable public infrastructure. Our project consists of three main stages including the collection stage, the manufacturing stage, and the final product. In the first stage, the cleaned bamboo plants will be obtained from the suppliers at wholesale prices, then comes the manufacturing stage where the bamboo will be cut down into strips, and these strips will be passed through the lamination process to give them the shape of a board, then the final products will be made through these boards. All this work is done by small machines and through the labor force, making our project cost-effective. Our target market is retail stores, as well as these products, can also be used in normal households. So, in the last stage, our product will be supplied to these potential customers. This is our motive to promote the use of our local resources and by doing value addition, we can serve our own people by keeping the environment safe. We are motivated to work on creating more sustainable products through bamboo in the future.

**Keywords:** SCP, Bamboo Products, SDG 12, Environmental protection, Local resources

**TOPOLOGICALLY REGULAR OPEN SETS IN RELATOR SPACES****Muwafaq Mahdi Salih**Department of Mathematics, College of Basic Education, University of Duhok, Iraq.  
muwafaq.mahdi@uod.ac**Abstract**

A family  $\mathcal{R}$  of relations on a set  $X$  is called a relator on  $X$ , and the ordered pair  $X(\mathcal{R}) = (X, \mathcal{R})$  is called a relator space. Relator spaces of this simpler type are already substantial generalizations of not only ordered sets and uniform spaces, but also topological, closure and proximity spaces.

As it is usual, for any  $x \in X$  and  $A \subseteq X$ , we write

(1)  $x \in \text{int}_{\mathcal{R}}(A)$  if  $R(x) \subseteq A$  for some  $R \in \mathcal{R}$ ;

(2)  $x \in \text{cl}_{\mathcal{R}}(A)$  if  $R(x) \cap A \neq \emptyset$  for all  $R \in \mathcal{R}$ .

Regular open sets were first introduced by Kuratowski with reference to a paper of Henri Lebesgue. However, their importance became completely clear only after the consideration of Stone.

Following Kuratowski's definition, we introduce the regular open sets in relator spaces as follows.

A subset  $A$  of the relator space  $(X, \mathcal{R})$  will be called topologically regular open if

$$A = \text{int}_{\mathcal{R}}(\text{cl}_{\mathcal{R}}(A)).$$

Moreover, we investigate some important properties and characterizations of topologically regular open sets in relator spaces. For instance, we prove that if  $\mathcal{R}$  is a reflexive relator on a set  $X$  and  $A \subseteq X$  such that  $\text{int}_{\mathcal{R}}(\text{cl}_{\mathcal{R}}(A)) \subseteq A \subseteq \text{int}_{\mathcal{R}}(A)$ ,

then  $A$  is topologically regular open set.

Furthermore, if  $\mathcal{R}$  is a topological relator on a set  $X$ , then for any  $A \subseteq X$  we have  $\text{int}_{\mathcal{R}}(\text{cl}_{\mathcal{R}}(A))$  is topologically regular open. The above results published in a joint paper with Themistocles M. Rassias and Árpád Szász.

2010 Mathematics Subject Classification. 54E15, 54D05, 54G15, 54G20.

**Key words:** Generalized uniformities, Generalized open sets, Relator spaces

**FACTORS AFFECTING PEDESTRIANS' FREE-MOBILITY AND SOCIAL DISTANCING TO COMBAT COVID-19: EVALUATION OF PEDESTRIANS' MOBILITY AND URBAN SPACE IN DOWNTOWN OF NEKEMTE CITY, ETHIOPIA**

**ABSTRACT**

Peoples' free mobility and social distancing in urban centers are among the methods to combat the pandemic of COVID-19. Proper implementation of social distancing needs adequate roads infrastructures to support basic human movement within the urban areas. However, socio-economics, transportation and urban space facilities of developing countries like Ethiopia are the challenging factors for free mobility and to implement social distancing. Thus, this study is used downtown of Nekemte city as case study to identify the factors affecting the pedestrians' free mobility and implementation of social distancing to fight against corona virus. A survey questionnaire containing 11 parameters explaining factors affecting pedestrians mobilities were distributed for pedestrians' and factor analysis was used to identify the most influencing parameter for the free mobility and social distance in the city. The result showed that *in adequate walkways* (i.e. narrow, deteriorated and overcrowded walkways and streets), *using pedestrians' ways for other function* and *in adequate urban public service spaces* such as at banks, shops, taxi and hospitals, are the major factors affecting the free mobility and implementation of social distancing against COVID-19. To achieve appropriate implementation of social distancing in down town areas, it needs a programs and policy to restrict on streets parking, streets vendors and using pedestrians' ways for others rather than for pedestrians' mobility hence enable to achieve healthy social and environment.

**ABSTRACT**

The role of oxide perovskites is very fascinating and technologically very important in electronic circuits in the form of capacitors, ferro-electric random-access memories (FeRam), sensors, actuators and energy storage applications. Dielectric materials with perovskite structure are widely used for above discussed practical applications. Capacitors are most widely used component in electronic devices. However the Multilayer ceramic capacitors are dominated over a single layer due to their volumetric efficiency. Barium titanate (BaTiO<sub>3</sub>) based ceramics are of special interest for MLCCs applications. In the present research project, 0.5 BaTiO<sub>3</sub>–Bi<sub>x</sub>Na<sub>x</sub>(Mg<sub>0.67</sub>Nb<sub>0.33</sub>)<sub>1-x</sub>Nb<sub>x</sub> ( $x = 0.10, 0.20, \text{ and } 0.30$ ) ceramics solid solution were synthesized by conventional solid state sintering route. While the obtained properties of samples were characterized by using different characterization tools. X-ray diffraction, Scanning Electron Microscopy for microstructural analysis, LCR meter and Ferroelectric tester were used for the study of energy storage characteristics of the sample. Phase identification of the samples showed the formation of a single phase cubic perovskite-structure (space group Pm-3 m) which was further confirmed using Raman spectroscopy. The Raman spectroscopy result are in agreement with the XRD. Microstructural analysis of the samples revealed some voids in the samples while grain size was observed to decrease with increasing NaNbO<sub>3</sub> concentration. The addition of NaNbO<sub>3</sub> shifted maximum temperature  $T_m$ , to below room temperature and the stability range of 0.5BaTiO<sub>3</sub>–0.5Bi(Mg<sub>2/3</sub>Nb<sub>1/3</sub>)O<sub>3</sub> previously reported ceramics sample was enhanced. The sample with  $x=0.20$  exhibited  $\epsilon_r(\text{mid})$  with minimum variation of  $\pm 15\%$  stable over a wide temperature range from - 85 to 500 °C and most importantly a low dielectric loss of  $< 0.05$  stable across a wide temperature range - 100 to 426 °C was maintained. The thermally stable dielectric properties of sample  $x = 0.2$  suggests that it could be useful candidate material for capacitor applications in both low (X9R) as well as harsh environment applications.

**Abstract**

Due to its financial benefits, the static synchronous compensator is now utilized more and more in electrical networks. This paper intends to propose a method for reactive energy compensation by optimizing a complex electrical system maintenance based on a reliability procedure. The intricacy of electrical system architecture is simply one facet of its complexity; the electrical network and interactions with reactive energy compensators (STATCOM) are equally important. In order to address this complexity constraint and evaluate the time-variant dependability of an electrical system, Bayesian networks are used. In order to optimize the electrical system's preventive control interval, a global cost that takes into account additional expenses associated with system operational uncertainty is included into the probabilistic technique. The found results can be applied to enhance the performance of the electrical system reliability.

### **ABSTRACT**

The trend of urbanization and industrialization has granted the world with a lot of applicable and remarkable benefits. Along with the various advantages it also brings some issues and the revolution of industry comes with environmental problems. Like other industries, development in textile industry has brought the contamination of soil and water with effluent dyes, Therefore treatment of dye-contaminated wastewater discharged from the textile and other dye-stuff industries is necessary to prevent contamination of soil surface and ground water. The cost effective biological strategy is the need of the time to complete mineralization of organic pollutants. The current study is design to treat the toxic synthetic dyes that is present in textile waste effluent by using different microorganism in an environmental friendly manner. Total forty bacterial strains were isolated from effluent and dye contaminated soil samples using MSM (Minimal Salt) medium. After wards, the isolates were exploited for their dye degradation activity by employing agar well diffusion and calorimetric methods. Six out of forty bacterial cultures presented maximum dye degradation efficiency against five different azoic dyes. This suggests that these bacteria release extracellular enzymes which showed dye degradation ability. However, this research is beneficial to explore biodegradation potential of bacteria so that they can be used in the treatment of different waste effluents release from textile dyeing sector.

**CHITOSAN-DOPED STRONTIUM OXIDE NANOCOMPOSITE TO REMOVE  
METHYLENE BLUE AND CIPROFLOXACIN FROM WASTE WATER****Dr. Muhammad Ikram**Assistant Professor (Physics), Solar Applications Research Lab, Department of Physics,  
GC University Lahore, Pakistan**ABSTRACT**

Strontium oxide (SrO) and various concentrations of chitosan (CS)-doped SrO were synthesized via co-precipitation method. A variety of characterization techniques including XRD, EDS, FTIR, PL, UV-vis-spectroscopy and HRTEM were employed to synthesize the product. XRD affirmed cubic and tetragonal structure of SrO and CS-doped SrO with a decrease in crystallinity upon doping. FTIR spectrum endorsed existing functional groups on CS/SrO surfaces while d-spacing was estimated using high resolution TEM images. UV-Visible and PL spectra showed an increase in band gap energies with an increase in doping concentration. Elemental composition of SrO deposited with different doping concentrations was studied using EDS. Addition of CS resulted in the formation of quantum dots and rod-like structures that led to enhanced catalytic activity during Methylene Blue Ciprofloxacin (MBCF) degradation in the presence of reducing agent NaBH<sub>4</sub>. Improved antibacterial performance for doped samples was noted against both gram positive and negative bacteria. At high concentration, significant inhibition zones were measured against *S. aureus* ranging (0.95-9.20 mm) and (0-3.45 mm) at low concentration and (0.9-7.05 mm) at high concentration (0.5 and 1.0 mg/50uL) for *E. coli*. Prepared nanocatalysts are expected to be highly efficient for removal of pollutants from wastewater as well as exhibit enhanced antibacterial potential against *S. aureus* and *E. coli*.

**ABSTRACT**

When the cow's milk kumiss technology is developed, the consumption of kumiss will become widespread. This study was carried out with the aim of improving the technology of cow's milk kumiss. Horse milk was not available in sufficient quantities to be used in the study. However, commercial horse kumiss was purchased and used as Controls in the analysis. Whole-fat cow's milk that was not modified was used as Controls. The ideal acidity and pH were improved in the Control samples. However, the panel members did not like them since they were more viscous and prosaic for a kumiss drink. The samples were not liked even after dilution them by water and homogenizing. The taste of the commercial mare's kumiss was not also liked by the panel members. However, a citizen of Turkmenistan liked and praised this mare's kumiss. The most admired samples determined to be modified cow's milk kumiss. Modification made as addition of 50% water to full-fat cow's milk, then fortification of this milk with 3.8% (w/v) lactose and 0.9% (w/v) whey protein. Inoculation with multi strains, incubation statically for 24 hours at 28 °C were determined to be suitable applications. Acidity and pH values in the samples were found to be in accordance with the values reported in the Turkish Food Codex. Even on the 14<sup>th</sup> d of cold storage, the alcohol rate remained below 0.5%, which is the suited value in the Turkish Food Codex Communiqué on Fermented Dairy Products (Communiqué No: 2009/25). The samples were kept fresh in storage at + 4 °C for 14 d. We believe that the "cow's kumiss" development should be extensively investigated to ensure appropriate taste and flavor for different cultural areas.

**Key words:** Kumiss, cow's milk, modified milk, kumiss culture, process

## **İNEK SÜTÜ KIMIZI ÜRETİMİNE UYGUN BİR PROSES GELİŞTİRİLMESİ**

### **ÖZET**

İnek sütü kımızı teknolojisi geliştirildiğinde kımız tüketimi yaygınlaşacaktır. Bu çalışma inek sütü kımız teknolojisini geliştirmek amacıyla yapılmıştır. Çalışmada kullanılacak yeterli miktarda at sütü mevcut olmadığı için ticari at kımız satın alınmış ve analizde Kontrol olarak kullanılmıştır. Kontrol olarak modifiye edilmemiş tam yağlı inek sütü kullanıldı. Kontrol numunelerinde ideal asitlik ve pH gelişti. Ancak, bir kımız içeceği için daha viskoz ve yavan oldukları için panel üyeleri tarafından beğenilmedi. Bu numuneler su ile seyreltikten ve homojenize edildikten sonra dahi beğenilmedi. Ticari kısrak kımızın tadı da panel üyeleri tarafından beğenilmedi. Ancak bir Türkmenistan vatandaşı bu kısrakın kımızını beğenmiş ve övmüştür. En beğenilen örneklerin ise modifiye inek sütü kımız olduğu belirlendi. Tam yağlı inek sütüne %50 su ilavesi ve ardından bu sütün %3,8 (a/h) laktoz ve %0,9 (a/h) peynir altı suyu proteini ile zenginleştirilmesi şeklinde yapılan modifikasyon yapıldı. Çoklu suşlarla inokülasyon, 28 °C'de 24 saat statik inkübasyon uygun uygulamalar olarak belirlendi. Örneklerdeki asitlik ve pH değerleri Türk Gıda Kodeksi'nde belirtilen değerlere uygun bulunmuştur. Soğuk muhafazanın 14. gününde bile alkol oranı Türk Gıda Kodeksi Fermente Süt Ürünleri Tebliği'nde (Tebliğ No: 2009/25) uygun değer olan %0,5'in altında kalmıştır. Numuneler +4 °C'de 14 gün depoda taze kalmıştır. Farklı kültürel alanlara uygun tat ve lezzeti sağlamak için “inek kımızı” geliştirme konusunun daha kapsamlı bir şekilde araştırılması gerektiği kanaatine varılmıştır.

**Anahtar Kelimeler:** Kımız, inek sütü, modifiye süt, kımız kültürü, proses

## 1. INTRODUCTION

Food safety and public health are at risk due to microbiological and chemical contaminants, especially in underdeveloped countries [1]. Tourists are particularly affected by this situation [2]. The majority of diarrheal diseases are related to food hygiene [3]. It is known that Kumis is an acidic and slightly alcohol-containing dairy product that has been traditionally produced by Central Asian communities using horse milk since ancient times [6]. It has been reported that horse milk contains properties similar to human milk in terms of nutritional value and health benefits, and no side effects have been observed, although it has been consumed for thousands of years [7]. Kumis has started to become widespread outside of these communities as well [8]. As the positive effects of functional dairy products such as cumys and kefir on health are revealed, their prevalence is accelerating [9, 10]. Another feature of kumis is that it offers the opportunity to meet the water needs in rural areas where access to potable water is difficult. Kumis is a product that also meets the vitamin C needs of people such as herdsmen who do not have the opportunity to consume vegetables and fruits in the Asian steppes for a long time [11,12]. Today, kumiss is used as a product that supports health tourism [13]. There are researchers who describe kumiss as a unique beverage [14]. It has been reported that kumiss has significant health gains as a result of studies performed on experimental animals [15,16]. Studies on both the nutritional and therapeutic properties of kumis have been compiled and presented in great detail [17].

Horse milk has its own characteristics [18]. Since the traditional form of kumis is made from horse milk, it has high lactose and low protein content [19,20]. However, where kumiss has the potential to become widespread, sufficient horse milk cannot be supplied in commercial kumiss production, Milk of the other farm animals, especially cow's milk, which is more economically produced in every month of the year, is recommended for kumiss production [21]. It is not easy to obtain the characteristics of traditional kumiss by using cow's milk. For this reason, when milk other than horse milk is used, it has been suggested that the milk should be modified as to horse milk. There are differences among researchers in terms of material, method and starter cultures used for cow's milk kumiss production [22-25].

Kumiss culture consists of a consortium of bacteria and yeasts. The dominant culture consists of lactobacilli, lactococci, leuconostocs and yeasts (*Saccharomyces* sp., *Candidia* sp. and *Torula* sp.) [26]. Along with these microorganisms, *Streptococcus* (*Sc.*) and *Enterococcus* (*Ec.*) *faecium* were also isolated in horse milk [27]. It has been reported that while *Enterobacter* and

*Rhodotorula* constitute the dominant flora in horse milk, *Lactobacillus* and *Dekkera* are the dominant flora during the formation of kumiss, and the flora and the metabolites that give its character to kumiss, differ [28]. *Lactobacillus*, *Lactococcus*, *Acetobacter*, *Streptococcus*, *Serratia* and *Leuconostoc* bacteria and the fungi *Kazachstania*, *Kluyveromyces*, *Trichosporonaceae*, *Pichia*, and *Candida* were predominantly isolated in traditionally produced horse milk kumiss [29]. It was reported that 112 volatile substances detected in the same study were mainly produced by 4 groups of bacteria (*Lactobacillus*, *Acetobacter*, *Lactococcus* and *Pseudomonas*) and 2 groups of fungi (*Kazachstania* and *Candida*). Yao et al. [30] have identified *Lc. otakiensis*, *Sc. macedonicus*, and *Ruminococcus torques*. The use of raw horse milk in production causes the diversity of the flora. So, the use of pasteurized milk in commercial production has been suggested [22]. Researches continue to achieve the technological development that will contribute to the spread of commercial kumiss production [31,32]. In this study, it was aimed to modify UHT cow's milk and to develop a kumiss production model suitable for consumers' palate by fermenting this milk with horse milk kumis.

## **2. MATERIAL AND METHODS**

### **2.1. Standard parameters used in the study**

UHT cow's milk purchased from a local market was transferred aseptically in autoclaved (121 °C for 15 min) erlenmeyer flasks before use. Horse milk kumiss (as 200 mL in glass bottle) purchased from the manufacturer was used as inoculant by adding at a rate of 5% to UHT milk at room temperature. The horse milk kumiss was also used as controls in the taste panels. Inoculated kumiss milk samples as 250 mL in 500 mL erlenmeyer flasks were incubated at 28 °C for 24 hours. By keeping these standard parameters constant, the effects of inoculant, water, sugar and whey proteins (WP) on the cow's milk kumiss acidity, pH and flavor. Effects of static and/or shaking incubation (100 rpm) were also investigated. Acidity and pH analyzes were performed on the 1<sup>st</sup> h, 7<sup>th</sup> and 14<sup>th</sup> d of cold storage (+ 4 °C) in kumiss samples. General liking tests were performed by six laboratory staff [30].

Analysis of UHT milk and modified milk samples were made by using autoanalyzer (Lactoscan S). The pH was measured using a digital pH meter (HI 9024; Hanna Instruments Ltd, Leighton Buzzard, UK). Titratable acidity (lactic acid, %) was made by using phenol phthalein indicator and a 0.25 N NaOH solution [24]. Alcohol analysis was determined by evaporation technique in kumiss samples [33].

For hygiene analysis, coliforms and *Staphylococcus aureus* were enumerated. VRB Agar (Violet Red Bile Agar, Fluka, Switzerland) was used for enumeration of coliforms. In order to provide an aerobic environment in the petri dishes, the surface was covered by pouring the same agar into the petri dishes again. Baird Parker Agar with egg yolk and potassium tellurite was used for *Staphylococcus aureus* count. Petri dishes were incubated at 37 °C for 48 hours. When 10 or more typical colony growths were observed in each petri dish, confirmatory tests were performed on the colonies from these petri dishes [19,20,22].

## 2.2. Process development

Unmodified UHT milk was used for making Control samples. Modified samples were prepared by adding autoclaved (121 °C for 15 min) drinking water to the UHT milk at a 1: 1 rate (v/v), then sugar (sold as food additives) and/or whey protein (WP, Maybi, Smart code: 058.320.50) were added in the diluted UHT milk. Each of the sugars (sorbitol, sucrose, glucose, maltodextrin, inulin and lactose) was added to the samples at a rate of 3.8% (v/w). The effect of adding 0.9% (v/w) WP to the samples with or without adding sugar was investigated. Static incubation or one from 5 different shaking procedures (continuous, 30 min shaking in every 3 h, 6 h static + 30 min shaking in every 3 h, 12 h static + 30 min shaking in every 3 h, 12 h static + 12 h continuous) were applied during incubation. The pH analysis result of the first step of the study were not given in detail.

## 2.3. Inoculant characterisation

Possible starter culture members were selected from Modified Cow's Milk Kumiss (MCMK). MCMK was obtained at the end of static incubation after adding 50% water, 3.8% lactose and 0.9% WP to cow's milk. Serial dilutions of the sample up to  $10^{-7}$  were prepared. A 100 µL from each of the last three serial dilution tubes were streaked on 10 parallel petri dishes [16]. de-Man Rogosa Sharpe Agar (MRS, Merck, Germany) was used for the isolation of lactobacilli and M17 Agar was used for the isolation of lactococci. Petri dishes were incubated at 37 °C for 3 d. [21 - 23]. For the isolation of yeasts, the petri dishes of Potato Dextrose Agar (PDA) pH adjusted to 3.5 with 10% lactic acid were inoculated and incubated for 4 d at 24 °C [18]. Colonies were randomly picked from the plates, and each colony was purified on its own agar plate (MRS, M17 or PDA). A total of 300 colonies, 100 colonies from each, were selected on MRS, M17 and PDA agar. Gram - positive, catalase negative, citrate negative bacteria that can utilise lactose, fructose, sucrose, glucose, maltodextrin and inulin were selected from these colonies. Among the yeasts, those that were catalase positive, citrate negative and able to use

lactose, fructose, sucrose, glucose, maltodextrin and inulin were selected. Carbohydrate fermentation tests were made according to Bansal et al. [34] using Phenol red Carbohydrate Broth. Ten colonies belonging to each petri dish were selected. So, each group of 10 isolates were made. Then, each group strains were multiplied by incubating them together in their own broth (MRS, M17 or PDA) for 24 hours at 30 °C. One mL from each of these broth cultures was inoculated to 100 mL of milk by making different combinations of MRS, M17 and PDA colonies. The most liked sample was used as inoculum for the next kumis production. The process was repeated three consecutive times. Colony selection and isolation procedures reported above were repeated from the most favored sample. Finally, selected 15 isolates, 5 from each of the MRS, M17 and PDA colonies, were propagated and used as kumiss milk inoculant as stated above. Identifications of the 15 colonies were made using a mass spectrometer “Matrix-assisted laser desorption/ionization-Time of Flight (MALDI-TOF)” system [35].

Data were analyzed using the general linear model procedure in SAS soft-ware [36]. Differences between the samples were determined using the least significant difference (LSD) test. A probability level of  $P < 0.05$  was considered statistically significant.

### 3. RESULTS

The results of the analyzes performed on the cow's milk and modified cow's milk (MIS) used in the study are given in Table.

**Table.** Analysis of UHT milk and modified UHT milk samples used in the experiments.

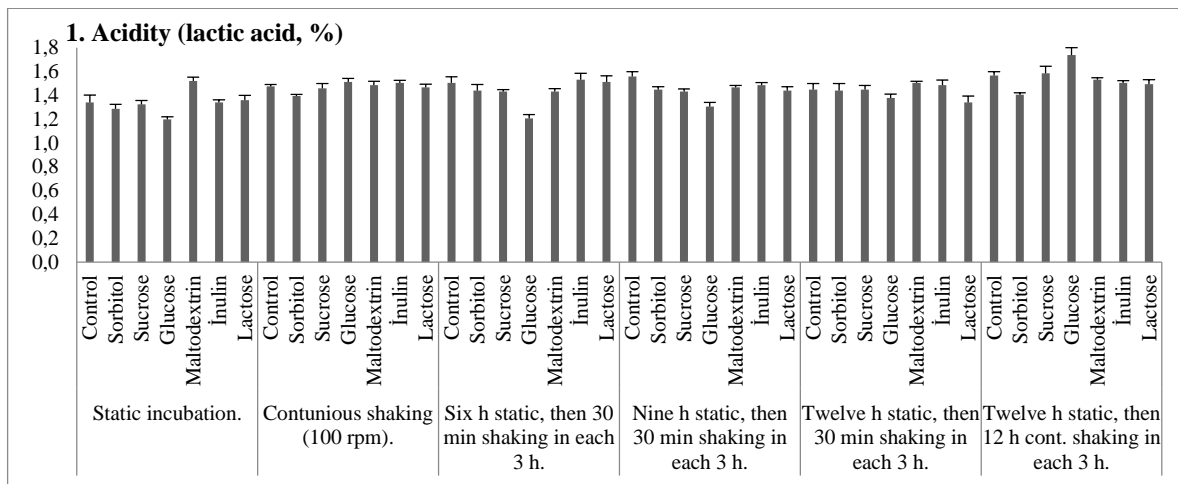

<b>Additives</b> Water: milk 1:1 (v / v) Lactose 3.8%, (w / v) Whey protein (WP) 0.9% (w / v)	Density	Conductivity (ms/cm)	Freezing point	Water, %	Nonfat dry mater, %	Fat, %	Protein, %	Lactose, %	Minerals, %	pH	Lactic acid, %
UHT cow's milk (as Controls)	26	5,6	0,5	82	7.6	3.2	2.8	4.2	0.6	5.7	0.31
Milk + water	15	3.9	0.3	49	4.4	1.7	1.6	2.4	0.4	5.4	0.23
Milk + water + lactose	21	3.7	0.4	31	5.9	1.9	2.2	3.2	0.5	5.2	0.23
Milk + water + whey proteins (WP)	15	3.6	0.3	49	4.5	1.8	1.6	2.4	0.4	6.0	0.24
Milk + water + lactose+ WP	20	3.1	0.3	33	5.8	1.5	2.1	3.2	0.5	6.1	0.23

Sugars and WP added to UHT milk made it difficult for the device to read. There was no information in the user manual of the device that such an analysis could be made. Therefore, only pH and acidity values were considered in this study. It was observed that the pH value decreased by 0.3 units when water and sugar were added to the milk, and increased by 0.3 units when WP was added together with water and sugar (Table).

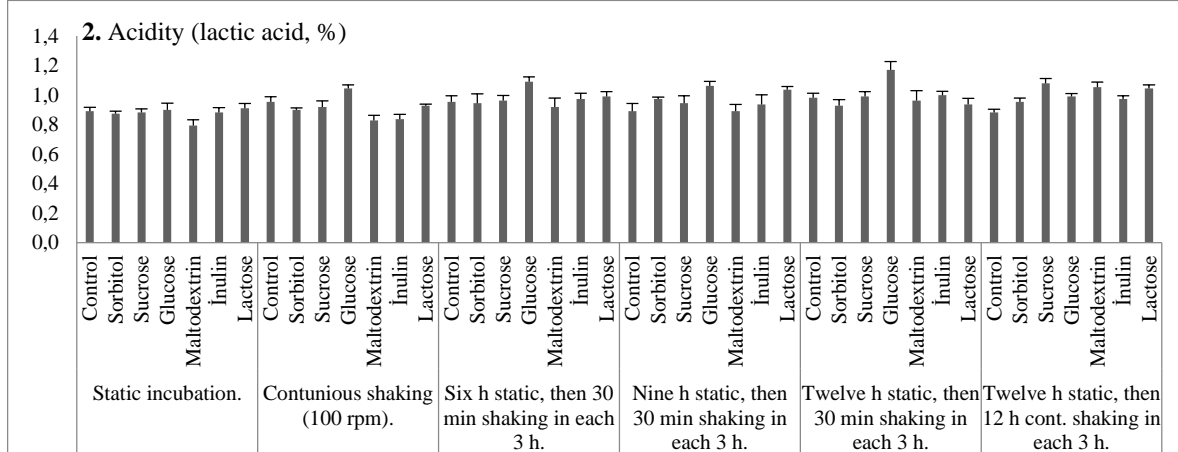

### 3.1. Results of process development

In the 1<sup>st</sup> stage of the process development, Control and modified milk samples (Table) were fermented by adding 5% of natural horse kumiss, and then stored at + 4 °C after 24 hours of incubation at 28 °C. Analyzes were made on the 7<sup>th</sup> d of storage. No coliforms or *Staphylococcus* was detected in the samples. The acidity values obtained are given in Figure 1-3. The average pH values of this step are given below.

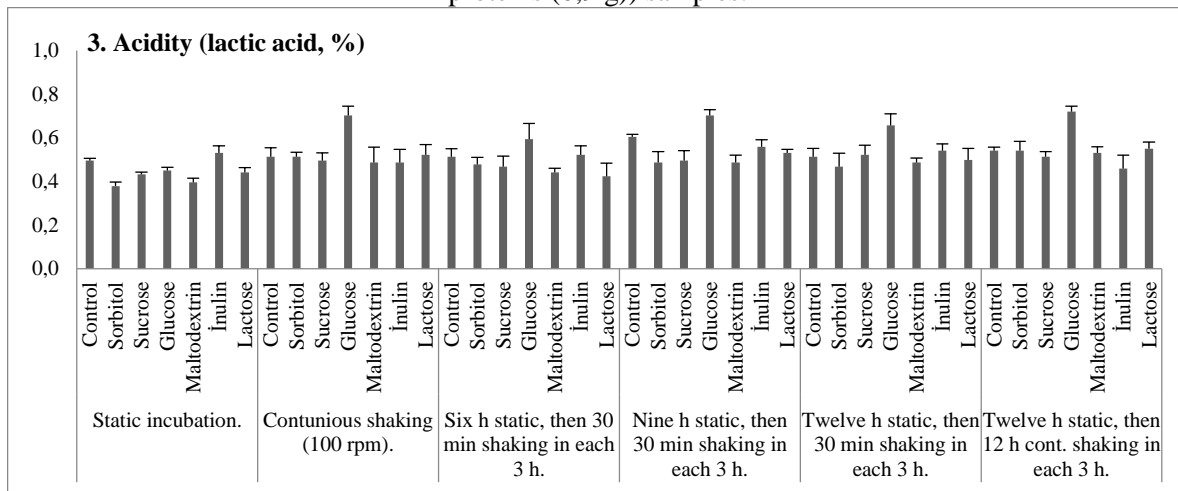

**Fig. 1:** Acidity (lactic acid, %) of Control (cow's milk) samples.

**Fig. 2:** Acidity (lactic acid, %) of CWS (cow's milk (50 mL), Water (50 mL), sugar (3,8 g)) samples.

**Fig. 3:** Acidity (lactic acid, %) of CWSP (cow's milk (50 mL), water (50 mL), sugar (3,8 g), whey proteins (0,9 g)) samples.

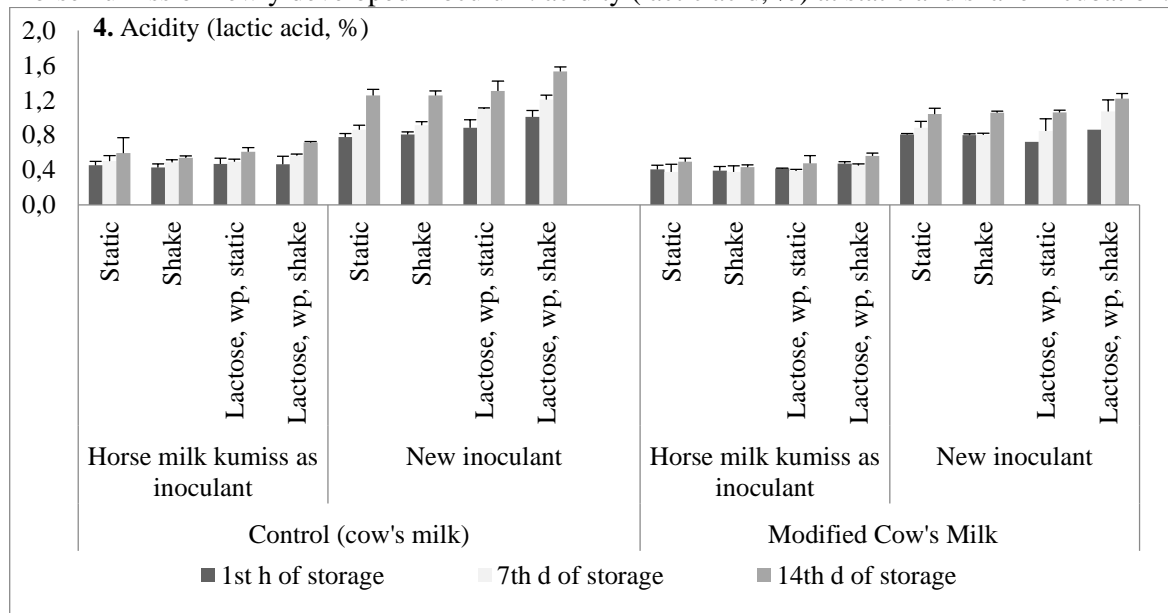

On the 7<sup>th</sup> d of cold storage, the mean % lactic acid value was  $0.52 \pm 0.07$  in the samples that did not add water to the milk (Figure 1), while it was  $0.95 \pm 0.08$  in the samples that added water and sugar (Figure 2), and  $1.45 \pm 0.1$  in the samples that water, sugar and WP were added (Figure 3). These average values of the each group are not given separately. There was no effect of shaking in terms of acidity development between the groups ( $p > 0.05$ ). No factor that significantly changed the acidity was observed among the added sugars or the shakes. Although not obvious, it was observed that the addition of glucose had a greater effect on the development of acidity (Figure 1-3). It was observed that the addition of water, sugar and PASP to the samples supported the fermentation. The taste panel members found these samples to be very thick, difficult to drink and tasteless (data not shown).

On the 7<sup>th</sup> d of cold storage, the mean pH value was  $5.68 \pm 0.13$  in the sample that did not add water to the milk. Also,  $4.79 \pm 0.04$  in the samples that added water and sugar, and  $4.68 \pm 0.03$  in the samples that added water, sugar and WP. There was no effect of shaking in terms of pH development between the groups ( $p > 0.05$ ). No significant pH changes were observed between added sugars or shakes. The addition of water, sugar and PASP to the samples supported pH reduction ( $p < 0.05$ ) (data not shown).

In the second stage of the process development, 16 different samples inoculated with 2 different inoculants and incubated with static or shaking process were compared with the Control samples. Acidity, pH and sensory analyzes were performed at the 1<sup>st</sup> h, 7<sup>th</sup> d and 14<sup>th</sup> d of cold storage (Figure 4 - 6).

**Fig. 4:** Effects of addition of water, lactose and whey proteins (WP) to cow's milk inoculated with horse kumiss or newly developed inoculum: acidity (lactic acid, %) at static and shake incubation.

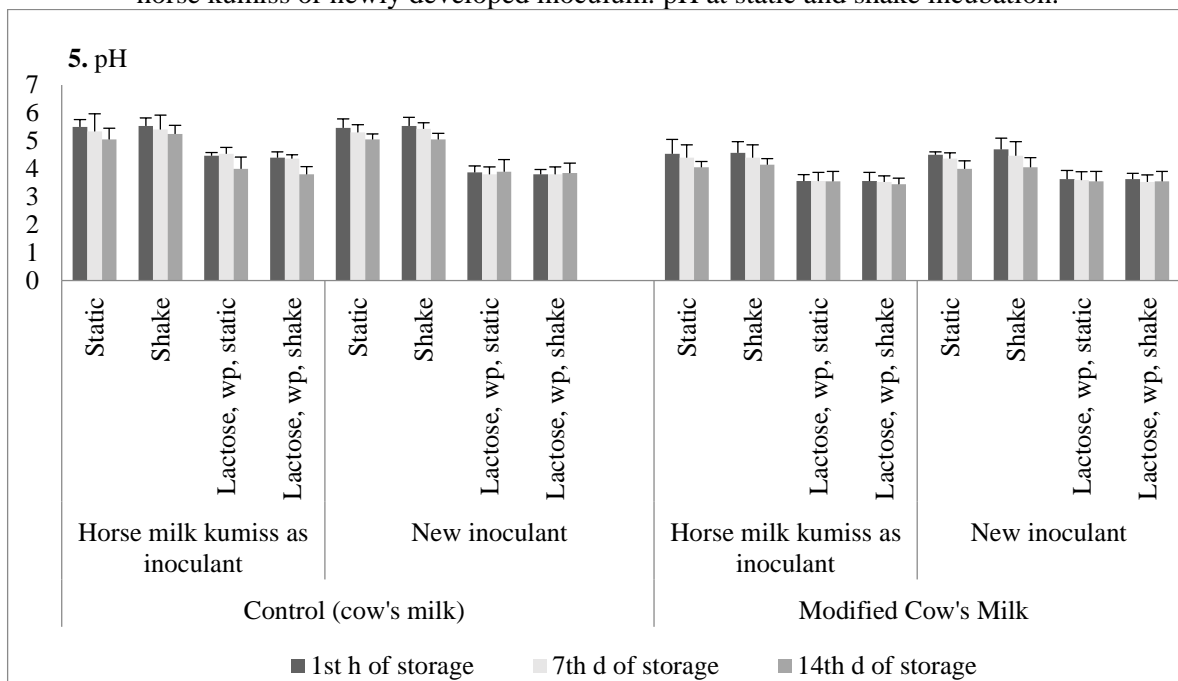

Acidity values in cold storage were higher in samples inoculated with fresh cow's kumiss (Figure 4). In addition, it was observed that the addition of lactose and PASP had a positive effect on acidity in both Control and modified samples (Figure 4). Acidity development continued during the 14 d of cold storage. However, the increase in acidity in the modified samples was less than in the Control samples. When the group averages (4 groups, analysis results of three different d) were taken into consideration, the acidity was  $0.52 \pm 0.08$  in control samples, while it was  $1.08 \pm 0.24$  in those fermented with new inoculant. These values were  $0.44 \pm 0.05$  in the experimental samples, in those fermented with horse milk kumiss, and  $0.93 \pm$

0.15 in those fermented with new inoculant. While the mean % lactic acid value was  $0.52 \pm 0.07$  in control samples, it was  $0.95 \pm 0.08$  in water and sugar added samples. In both control samples, the mean acidity value was  $1.45 \pm 0.1$  as the highest value in the samples to which water, lactose and PASP were added (data not shown). There was no effect of shaking in terms of acidity development between the groups. Sugar type or shaking regime were not effective on the acid development. The effect of lactose and WP on the acidity of 7<sup>th</sup> d and 14 d was clearly demonstrated (Figure 4) ( $p < 0.05$ ). It was observed that the addition of water, sugar and WP to the samples supported the fermentation. The horse kumiss culture adapted to cow's milk was used as inoculant in repeated incubations, making it more effective in acidity development. The Control samples were quite viscous, difficult to drink and tasteless even after shaken incubations (data not shown).

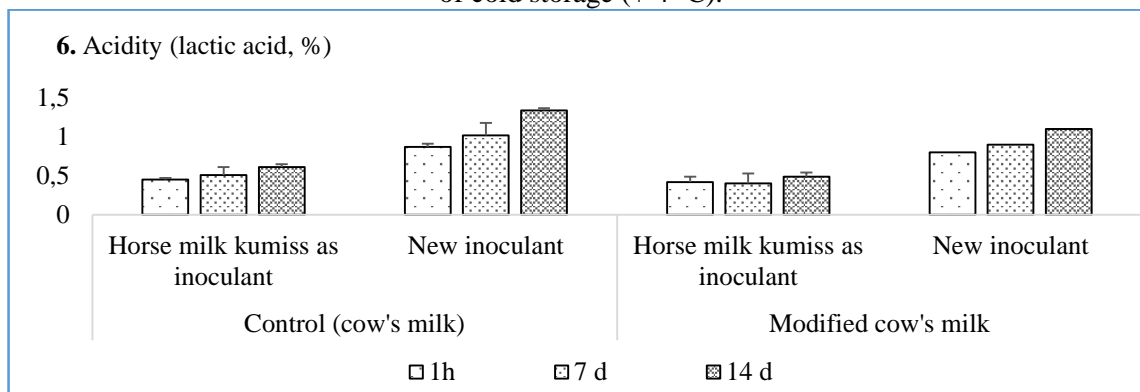

**Fig. 5:** Effects of addition of water, lactose and whey proteins (WP) to cow's milk inoculated with horse kumiss or newly developed inoculum: pH at static and shake incubation.

In the 1<sup>st</sup> h, 7<sup>th</sup> d and 14<sup>th</sup> d of cold storage, pH in both Control and MCMK samples were found to be lower in samples fermented with new inoculum than kumis inoculum (Figure 5). It was observed that adding lactose and PASP to the samples had a positive effect on pH ( $p < 0.05$ ). The pH became more stable with the addition of lactose and WP in all samples in 14<sup>th</sup> d of cold storage. The pH decrease in the experimental samples was less than in the Control samples.

While the mean pH was  $4.8 \pm 0.4$  in Control samples fermented with horse milk kumis, it was calculated as  $4.46 \pm 0.3$  in Control samples fermented with new inoculant. In the experimental samples, the pH was  $3.9 \pm 0.3$  in the samples fermented with horse milk kumiss, while the pH was  $4.0 \pm 0.3$  in the samples fermented with new inoculant (the values are not given separately). There was no effect of shaking in terms of pH decrease between groups. It was observed that the addition of water, lactose and WP to the samples supported the pH decrease ( $p < 0.05$ ).

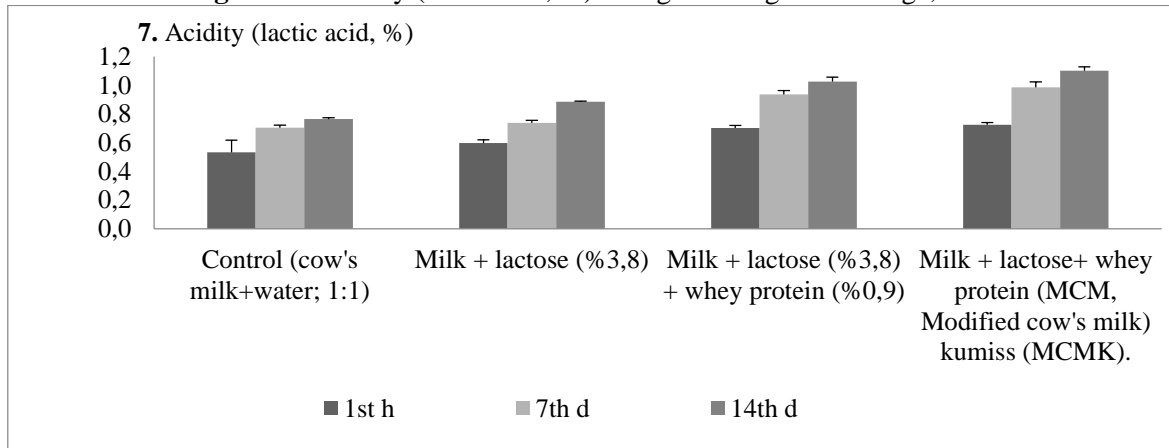

**Fig. 6:** Acidity, % lactic acids: Mean  $\pm$  SD of 4 different kumiss samples during 1<sup>th</sup> h, 7<sup>th</sup> d and 14<sup>th</sup> d of cold storage (+ 4 °C).

As can be seen in Figure 6, the acidity values of the samples made with modified cow's milk increased gradually in the 14<sup>th</sup> d cold storage. The highest acidity value ( $1.34 \pm 0.13$ ) was observed in samples of cow's milk fermented with new inoculant and kept in cold storage for 14 d. Acidity were found in modified cow's milk fermented with fresh yeast as  $1.1 \pm 0.8$  in cow's milk fermented with horse kumiss as  $0.61 \pm 0.07$  and in modified milk fermented with horse kumiss as  $0.49 \pm 0.05$ . Observation of  $1.1 \pm 0.12\%$  acidity on the 14<sup>th</sup> d of cold storage in the samples of modified cow's milk inoculated with new inoculum indicated that the product will have a longer shelf life. As a result of taste panel, it was seen that the samples made with cow's milk were thick and tasteless. By adding an equal amount of water as if making buttermilk, these samples became tmore tasteless to drink (data not shown).

In the 3<sup>rd</sup> stage of the process development, the most admired sample (MCMK) was used as inoculant at a rate of 5%. Static incubation was applied to the samples and analyzes were made at the 1<sup>st</sup> h and 7<sup>th</sup> and 14<sup>th</sup> d of the cold storage (Figures 7 - 9).

**Fig. 7:** The acidity (lactic acid, %) changes during cold storage, 4 °C.

It was observed that adding lactose, WP or both lactose and WP to the ware added milk was important for the development of acidity during cold storage, which was not obvious at the end of the incubation. The best acidity development was observed on the 14<sup>th</sup> d of storage in the samples added water, lactose and WP ( $1.1 \pm 0.1$ ) (Figure 7).

**Fig. 8:** The pH changes during cold storage, 4 °C.

No difference was observed in terms of pH change in the kumiss samples produced after adding lactose and/or PASP to the milk to which water was added. However, on the 7<sup>th</sup> d of cold storage, the highest pH decrease was observed in the samples added together with lactose and WP. This change did not persist and no significant difference was observed between the groups in the 7<sup>th</sup> and 14<sup>th</sup> cold storage d (Figure 8).

The average tasting scores of the samples are given in Figure 9.

**Fig. 9:** General liking scores of the different kumiss samples.

### 3.2. Results of Inoculant characterisation

Control samples were liked the least and the MCMK samples the most (Figure 9). The panelists sought this taste because they were familiar with the taste of buttermilk. Control samples were reported to be thick, sticky, and tasteless. It was reported that some of the water added samples were bitter and tasteless. Adding lactose to milk together with water created a more sour taste, and adding WP created a more aromatic and tart taste. All of the panelists reported that there was no similarity between this new product (MCMK) and horse kumiss, but that they would prefer to consume this product over horse kumiss (data not shown). After this step, 4 different inoculants were prepared by selecting 5 each from MRS, M17 and PDA colonies. After the obtained MCMK samples were kept at + 4 °C for 1 h, acidity, pH and taste tests were performed (Fig. 10). The results of the analysis were compared with the results obtained from the commercial horse kumiss.

**Fig. 10:** Acidity (lactic acid, %), pH and general liking scores of horse kumiss and modified cow's milk kumiss samples inoculated with consortia of different strains of bacteria and yeasts.

**Horse milk kumiss;** a commercial product purchased for using as benchmark sample. Five colonies from each **MRS;** *de-Man Rogosa Sharpe* agar, **M17;** *M17* agar and **PDA;** *Potato dextrose* agar.

Horse kumiss had a taste score of  $3.4 \pm 2.1$  and panelists did not like the acrid and bitter taste in it. The M17 + PDA sample had the lowest appreciation score, with the highest acidity and lowest pH values. MRS + M17 + PDA samples containing 15 isolates were the best samples from other samples in terms of acidity development, pH decrease and taste score. As a result of Maldi-Toff analysis, 9 out of 15 isolates could not be identified. Two of the isolates were *Lb. bulgaricus*, 2 of them *Str. thermophilus*, one was *Saccharomyces* sp. and the other was *Torula* sp.

#### **4. DISCUSSION**

Kumis is a product developed by the Central Asian and Caucasian communities in the historical process and produced and traded in homes and industry until today [6]. It is known that horse milk is different from cow, sheep, goat and buffalo milk [18]. It is similar to albuminous milks such as human and goat milk in terms of serum proteins and high lactose content [18]. It is known that more than a century ago, products obtained as a result of fermentation of cow's milk with kumiss instead of horse milk are used in the treatment of sick and weak individuals [7,17,37]. It has been reported that kumiss has the potential to be consumed widely in other communities [8,14]. However, the biggest reason limiting this potential is the inability to produce sufficient horse milk [9,10]. Efforts are constantly being made to produce kumiss by using other milks, especially cow's milk, which is the most abundant milk in the world. In his research published in 1874, Legielski [38] mentioned that soft kumiss, hard kumiss and diabetic kumiss are made from cow's milk. In this study, although horse kumiss was not liked by the panelists, MCMK was liked.

In some studies, kumiss was produced without adding water to cow's milk [22,23]. Modification from the cow's milk has been made in different ways. The water ratio that add to milk is not similar in studies [39, 40]. In this study, after adding water to milk at a ratio of 1: 1, 3.8% lactose and 0.9% WP were added to increase lactose to 6% and WP to 1.2%, as in horse milk. We could not find any other study that modified cow's milk in this way. Therefore, comparing the findings of this study with the findings of other studies may not be confirmatory. Because, many different parameters may affect one or more qualities of kumis [23,40,41].

There is no production and consumption of horse milk in Turkey. On the other hand, horse kumiss is produced only by a Kyrgyz family business and sold directly to the consumer. Kumiss obtained from this family business was used as inoculant in the study and as reference sample

in taste tests. The acidity of the kumiss we supplied was  $1.57 \pm 0.1$  and the pH was  $3.9 \pm 0.1$ . The samples came in 24 of 250 mL glass bottles in a parcel. It was observed that there was no difference between the samples in the analyzes performed on 3 randomly selected samples. None of the panelists liked these kumiss and refused to drink it. However, one of our students, who is a citizen of Turkmenistan, stated that this kumis, which we do not like, is very tasty, very pleasant and has the same characteristics as the horse milk kumiss that he is accustomed to drinking in his country. This result showed us that food consumption habits should be taken into consideration more. Even if enough of our MCMK is produced in Turkey, it will not be easy for its consumption to become widespread. For this reason, it may not be appropriate for horse kumiss consumers. The MCMK developed in this study, which our panelists liked to drink and defines as a product that does not resemble yoghurt, kumiss or ayran, may not have pleasant taste for some other consumers.

In this study, UHT market milk from the same batch was used. In this way, we have avoided the mistakes that may arise from heating, cooling, homogenization and standardization. Coliform group bacteria and staphylococci were not found in milk, commercial kumiss and experimental samples. In this study, MCMK was obtained by adding 5% of kumiss to milk. Then MCMK itself was used as 5% inoculant. Later, the inoculating culture was developed. More than 5% inoculant has been used in traditional kumiss production [42-44]. Traditional horse milk is made in the form of increasing the amount by adding raw horse milk to the kumis made before [43]. Possibly, thanks to the constantly high acidity value in the product and the continued fermentation of the kumiss dominant culture, the reproduction of harmful bacteria in raw milk is suppressed and the hygienic quality of the product increases as the product is fermented. It is probably possible to use raw milk in this way. However, there are also researchers who report that the use of raw horse milk in kumiss may be harmful in terms of hygiene and public health [42, 45, 46]. Probably such a production method is not suitable for commercial kumiss production. It is clear that this production model will cause difficulties in hygienic and standard production. For this reason, it has been suggested that milk should be pasteurized, as in yoghurt, ayran and kefir, for the standard production [39,47,48].

While there is less protein and fat in the composition of horse milk than cow's milk, there is more serum protein and lactose [8]. In order to make these values of cow's milk similar to horse milk, full-fat cow's milk was modified. Values are given in Table. The MCMK is easy to produce, cheap and have the qualities to set an example for technological applications. Very

different incubation methods have been used in the production of horse kumis and other experimental kumiss studies. Shaking incubations were mostly made [41,49]. Studies using static incubation have also been made [21,48]. In this study, it was determined that a bitter and tasteless taste was formed in the shaken kumiss samples made after adding water to the cow's milk. These flavors did not occur in the shaken samples of cow's milk without modification. It was seen that excessive shaking would not be appropriate in the samples with added water. Static incubated samples yielded results similar to those produced with static for 12 hours and shaking every 3 hours for 12 hours (Figure 5). In the light of these results, it was concluded that it would be appropriate to use static incubation because it is more suitable for the industry and economy and probably has a longer shelf life of kumiss.

In the Turkish Food Codex Communiqué on Fermented Dairy Products (Communiqué No: 2009/25), kumiss is stated as “*Lactobacillus delbrueckii spp. bulgaricus* and *Kluyveromyces marxianus* cultures are used as fermented milk product”. In this communiqué, although it was not stated that horse milk should be used in production, no information was given about the milk to be used. The reason for this may be that kumiss is not yet traded in Turkey. The communiqué may not be fully detailed. The protein content of kumis is not reported in the Communiqué. The standard parameters are for ethanol content is at least 0.5%, the amount of lactic acid is at least 0.7, the number of specific microorganisms (cfu/g) is at least  $10^7$ , the number of added microorganisms (cfu/g) is at least  $10^6$  and the number of yeast is at least  $10^4$  (cfu/g). Salt content is not reported. The findings obtained from this study were found to be in compliance with the Communiqué. The acidity of MCMK was at least 0.7% lactic acid (Figures 1 - 4, 6, 7, 10). The amount of alcohol in the MCMK did not exceed 0.5%. It was observed that the bacteria and yeast contents were in compliance with the criteria reported in the Communiqué even on the 14<sup>th</sup> d of cold storage. In order for the kumis produced in this study to fully comply with the Communiqué, it is necessary to increase the amount of alcohol. Alcohol content naturally increases especially in the first week of cold storage [44,50,51]. However, on the 14<sup>th</sup> d of cold storage in this study, the alcohol rate remained below 0.5%, which was the desired value in the communiqué. Since the alcohol content is not higher than 0.5%, it is not possible to produce and trade this kumis in Turkey. Because the product does not provide the values required in the Communiqué. In this study, it was aimed to produce non-alcoholic kumiss and our findings are suitable for the purpose of our study. It has been reported that *Saccharomyces lactis* is the main yeast producing alcohol in kumiss, there are differences in the amount of

alcohol according to the fermentation time, and the amount of alcohol is 1% even in sweet kumis [52]. In this study, samples were taken from low alcohol beer production models [53]. Salt was not added to the samples for easier evaluation of the resulting flavors.

It has been mentioned that the trade of kumiss will be increased thanks to the development of production technology [54,55]. Küçükçetin [47] modified cow's milk using the membrane filtration technique and it was reported that the produced kumiss was more popular than horse milk kumiss. In another study, the shelf-life of the kumiss has been increased [56].

In previous studies, similar to our study, kumiss milk has been prepared by adding water, sugar, whey and other supplements to cow's milk [21,39,48]. However, there is no complete similarity and harmony between the studies. Our study is probably most similar to the study by Küçükçetin [47]. The researcher used horse kumiss as the main inoculant at a rate of 20% to modified cow's milk (90% water, 6.4% PAST and 3.6% milk powder). We obtained kumiss from the same farm as the researcher and used as inoculant at first step of the study. In our study, the process was simplified by adding water to cow's milk in equal proportions, adding lactose and PAST to make the content look like horse milk. The researcher reported that horse kumiss received the highest score in sensory tests. However, in this study, horse kumiss was not liked by the panelists and MCMK was the most liked (Figure 10c). Küçükçetin [47] made his inoculant at a different way from us. Inoculant production medium and the kumiss milk were incubated at 22 °C with shaking. We did it statically at 28 °C. Differences in alcohol levels may be due to different applications. It may not be accurate to make a one-to-one comparison with Küçükçetin's and our results.

Since different materials and methods were used in the researches, it is difficult to compare the results. Although the starter cultures of kumiss are traded, standard strains have not yet been found. In this study, horse kumiss was used to develop inoculant and sequential MCMK were made for inoculant adaptation. We tried to select culture strains from MCMK dominant flora. At this stage, more research should be done to develop best starter culture appropriate for material, method and cultural demands. Rakhmanova et al. [22] selected a strain from horse kumiss (colonies that grew by incubating the MRS agar plates used in strain selection at 37 °C and PDA agar plates at 28 °C) for cow's milk kumiss and fermented with a combination of the two strains. Researchers suggested incubation at 36 °C for 16 hours by adding 4% of culture obtained by the combination of a bacterium and yeast to milk. The researchers determined that yeasts were dominant in the horse milk and bacteria in cow's milk. It has also been reported

that acidity and pH development are higher in horse milk kumiss. Although our study and this study are designed differently from each other, the purpose of both is the same.

## **5. CONCLUSION**

Six of the 15 strains selected from MCMK were identified. The use of 5% inoculant in the standardization of process parameters, static incubation of fermented milk at 28 °C for 24 h, and 4.4 pH and 0.7% lactic acid levels in kumiss were found to be sufficient in terms of flavor development. A pH of 3.5 to 4, a maximum of 1.5% lactic acid formation was accepted in 14<sup>th</sup> d of cold storage. It was concluded that more detailed studies on the subject are needed to develop a cow's milk kumiss which is suitable for the taste, aroma and flavor criteria of the society in which it will be consumed.

**ABSTRACT**

A total of 19 production and sales points were inspected for their technical and hygiene status. Hygienic inadequacy and labeling deficiencies were determined in the relevant workplaces and products. A total of 20 herby cheese samples taken from the sales points were also analysed for their quality control. The mean±standard deviation (%) values of the samples were determined to be 1.9±0.7 for lactic acid, 49.6±4.8 for dry matter, 46.8±9.2 for fat in dry matter, 5.6±1.5 for ash, 2.9±0.7 for salt in dry matter and 65.7±6.1 moisture in cheese fat-free mass. The mean ( $\log_{10}$  cfu/g) values of the samples were determined as for total mesophilic aerobic bacteria; 8.7±0.99, *Enterobacteriaceae*; 6.8±2.7, coliform group bacteria; 4.6±2.8, coagulase positive staphylococci; 5.0±1.3 and yeasts - moulds; 8.1±1.3. The cheese has economic importance for the province of Siirt. But, production and sales have been remained at the traditional scale. The contribution of Siirt herby cheese to the economy of the city could be increased by applying standard and hygienic procedures for the cheesemaking.

**Key words:** Siirt herby cheese, Economy, Regulations, Hygiene, Quality

## **SIİRT OTLU PEYNİRİNİN TEKNİK, FİZİKSEL, KİMYASAL VE MİKROBİYOLOJİK ANALİZLERİ**

### **ÖZET**

Toplam 19 üretim ve satış noktası teknik ve hijyen açısından denetlendi. İlgili işyerlerinde ve ürünlerde hijyenik yetersizlikler ve etiketleme eksiklikleri gözlemlendi. Satış noktalarından alınan toplam 20 adet otlu peynir numunesi de kalite kontrolleri için analiz edildi. Örneklerin ortalama±standart sapma (%) değerleri laktik asit için  $1.9\pm 0.7$ , kuru madde için  $49.6\pm 4.8$ , kuru maddede yağ için  $46.8\pm 9.2$ , kül için  $5.6\pm 1.5$ , kuru maddede tuz için  $2.9\pm 0.7$  ve peynir yağsız kitlesinde nem için  $65.7\pm 6.1$  olarak belirlendi. Örneklerin ortalama ( $\log_{10}$  cfu/g) değerleri toplam mezofilik aerobik bakteriler için  $8.7\pm 0.99$ , Enterobacteriaceae için  $6.8\pm 2.7$ , koliform grubu bakteriler için  $4.6\pm 2.8$ , koagülaz pozitif stafilokoklar için  $5.0\pm 1.3$  ve mayalar -küfler için  $8.1\pm 1.3$ . Bu peynir Siirt ili için ekonomik öneme sahiptir. Ancak üretim ve satışlar geleneksel ölçekte kalmıştır. Siirt otlu peynirinin şehir ekonomisine katkısı, peynir yapımında standart ve hijyenik prosedürler uygulanarak arttırılabilir.

## **1. INTRODUCTION**

Many varieties of cheese are produced in Turkey. White pickled cheese, kashar cheese and tulum cheese are the most produced ones among them. It has been reported that the consumption of herby cheese per capita is 14.74 kg/year and the Turkey average is 3.2 kg/year in the Eastern and Southeastern regions, where herby cheese consumption is intense (1). There are Siirt, Batman, Bitlis, Hakkari, Erzincan and Trabzon herby cheeses in Turkey. Among them, only Van herby cheese has geographical indication certificate (2). The herbs sirmo, mendo, heliz, wild mint, thyme and siabo and 13 other herbs are mostly used for herby cheese production. The cheese should be left in ripening for at least 4 m when raw milk is used in production and 30-60 d when pasteurized milk is used. Siirt herby cheese, which is an indispensable dairy product on the tables of the people of Siirt, is a type of cheese similar to Van herby cheese which is a semi-hard cheese. It is produced from raw sheep's milk or from a mixture of sheep, cow and goat milk. While the main herb added to cheese is sirmo (sirik, *Allium sp.*), heliz (*Ferula orientalis*) and çiriş (*Eremurus spectabilis*) are also used (2). Differences among Siirt herby cheese and other herby cheeses produced in Turkey has not been investigated yet. Also, chemical composition and hygienic quality of the Siirt herby cheeses have not been investigated extensively yet (3). The minimum technical and hygienic criteria for cheeses are set by official documents and official inspections are carried out accordingly (4-8).

Numerous studies have been conducted on Van herby cheese (9-14). However, very little research has been done on Siirt herby cheese. Due diligence on field samples is necessary in terms of providing basic data for scientific studies. In this study, Siirt herby cheese samples taken from sales points were analyzed to the economic and public health aspect of Siirt herby cheese was evaluated. In addition, observations were conducted at production and sales points. The Turkish Standards Institute (TSE) Herby Cheese Standard (TS 13205) (15), Turkish Patent Institute (TPE) Van Herby Cheese Geographical Indication (No: 405) (2) and Turkish Food Codex (TFC) Cheese Communique (No. 2015/6) was benefited for evaluations (4).

## **2. MATERIALS and METHODS**

### **2.1. Status of Production and Sales Points**

The findings obtained by observations and interviews with the officials of 14 small production and/or sales points and 5 chain market branches in Siirt city center were evaluated for their compliance with the Turkish Food Codex (4, 5, 7, 8) and related Turkish Standard (6).

## **2.2. Analysis of Siirt Herby Cheese Samples Taken from Sales Points**

At least 250 g sample from each of 20 randomly selected sales points in Siirt province, were brought and transferred to the lab within 2 hours. After each sample was mixed thoroughly in a sterile sample bag and turned into a homogeneous sample, it was used in analyzes. Each analyze was repeated 3 consecutive times.

The pH was measured by using a digital pH meter (Milwaukee AZ8686, USA). Titratable acidity (lactic acid, %) was determined by using 0.1 N NaOH and phenolphthalein indicator. The dry matter and ash were determined gravimetrically. The fat content was determined by using Van Gulik method. The salt was determined titrimetrically (15).

For microbiological analysis, reference methods were applied as mentioned in the book of Pouch and Iko (16). Briefly, 10 g of each sample was used for making ten-fold serial dilutions in diluted in 90 ml of steril physiological saline (PS). For mesophilic aerobic bacteria (MAB), Plate Count Agar (PCA, Oxoid CM 0463) was used and the petri dishes were incubated at  $30\pm 2^{\circ}\text{C}$  for 72 hours. For *Enterobacteriaceae*, Violet Red Bile Glucose Agar (VRBGA, Oxoid-CM0485) was used for the enumeration of the coliforms, and procedures were performed as instructed on the medium. For coliforms, Violet Red Bile Lactose Agar (VRBLA, Oxoid CM0107) was used. Petri dishes were incubated for 24 hours at  $30^{\circ}\text{C}$ , the growing pink-red colonies with a pink precipitation ring around were counted. For coagulase positive staphylococci, Baird Parker Agar plates including Baird Parker Agar Base (BPA, Oxoid CM1127) and Egg Yolk Tellurite Emulsion (Oxoid SR0054) were used. The plates were incubated at  $37^{\circ}\text{C}$  for 48 hours. Black shiny coagulase positive colonies with a diameter of 1.5 - 2.5 mm with a transparent zone around were counted. For yeast – moulds, Yeast Extract Glucose Chloramphenicol Agar (YGCA, Merck 1.16000) was used and the petri dishes were incubated at  $25^{\circ}\text{C}$  for 5 d. Colonies formed on the medium were counted.

## **2.3. Statistical analysis:**

The mean values of the samples and the standard deviation values between the samples were calculated by using the Microsoft Excel program.

### **3. RESULTS**

#### **3.1. Status of Production and Sales Points**

##### ***- Local herby cheese production and sales points (14 businesses):***

During the visits, we personally have inspected some inconveniences at the production and sales points. There were no adequate hygienic prequestions from production places. The cheese making staff had no adequate hygiene prequations during cheese making. Cheese curd and prepared cheese bags were mostly left at room temperature because of unavailability of adequate refrigerators. There were no labels on the prepared cheese bags. We could not demonstrate the sales points as hygienic as required.

***-Chain Market Branches (5 businesses):*** One branch of each of 5 different national chain markets operating in the city center of Siirt was visited and the sales department managers were interviewed. It has been observed that the cheeses are the products of local producers, they are kept in plastic bins of 1, 2, 5, 10 and 20 kg, on the cold shelf or in the refrigerator of the market, there are letters and/or numbers on the products with a felt-tip pen, but there is no label. Although there is Van herby cheese in these businesses, its sales are reported to be at most 5% of Siirt herby cheese. In these enterprises, it was observed that the market aisles were cleaner than the above-mentioned production areas and the products were kept under the cold chain. It was understood that these markets bought and sold these products from the herby cheese production points mentioned above, and they did not produce their own. Siirt herby cheese is sold in most of the grocery stores and markets in the city center.

#### **3.2. Analysis of Siirt Herby Cheese Samples Taken from Sales Points**

The pH, acidity, dry matter, fat, ash and salt levels in the samples are shown in Table 1. The mean values of the analyzes were  $5.3 \pm 0.5$  for pH,  $1.9 \pm 0.7$  % lactic acid,  $49.6 \pm 4.8$  for % dry matter,  $46.8 \pm 9.2$  for % fat in dry matter,  $5.6 \pm 1.5$  for ash and  $2.9 \pm 0.7$  for salt in dry matter.

**Table 1.** Physical and chemical analysis results of Siirt herby cheese samples taken from sales points in Siirt.

#### 4. DISCUSSION ANA CONCLUSION

It has been reported that raw milk and raw milk cheeses are responsible for 96% of food poisonings caused by consumption of dairy products in the USA (17). Çetin and Durlu Özkaya (18) have demonstrated that cheese is playing an important role in food poisoning cases, and health risks of some dairy products in Turkey between the years 2014 and 2018

Minimum requirements for production, packaging, labeling and sales points for cheese are stated in the Turkish Food Codex Cheese Communiqué (4). In the codex (4), packaging (Article 13/1), labelling (Article 14/1), product names (Article 4) or local/national names (Article 14/1a)

have been regulated as standards for retailed cheese. Cheeses produced from raw or thermized milk are ripened under cold storage for at least 4 months (Article 5/c). The ripening time period of the cheeses is stated as “has been ripened at least ...d or mo” on their labels. Our inspection results have demonstrated that the regulations mentioned above have not fully followed as minimum requirements for production and sales process by the relatives.

In many studies, it is concluded that herby cheeses sold in Turkey are unhealthy, poor quality, risky for public health (19-23). Kurt and Akyüz (24) reported in 1984 that primitive conditions should be abandoned and production should be carried out in modern factories. Likewise, the results of this study and formerly made studies demonstrate that the total amount of Siirt herb cheese produced under primitive conditions, and thus the hygienic quality and chemical parameters are variable as seen in Tables 3 and 4.

According to the Codex on the Supply of Raw Milk (8), only the supply of raw milk produced in a milk producing livestock enterprise with permission from the competent authority is allowed (Article 5/1). Farms must have a disease-free certificate (Article 5/2). Siirt herby cheese is made from raw sheep’s and/or goat’s milk. We don’t have information about the control and certification of herds and raw milk used for Siirt herby cheese production. Also, we could not find any production time or ripening time period for the cheese at the retail.

In the Herby Cheese Standard (6), it is stated that the amount of milk fat in dry matter should be at least 45%, humidity at most 60% and salt ~~amount~~ at most 7.5%. The minimum, (average) and maximum values (%) for the cheese are listed in the Geographical Indication Certificate as such: dry matter (%) 46.78 (43.81) 47.78, protein (%) 22.17 (20.60) 25.52, fat (%) 17.29 (16.75) 19.21, ash (%) 6.85 (5.07) 7.45, salt (%) 5.73 (4.60) 6.9. When it is classified in terms of % Moisture in Cheese Fat-Free Mass in cheese standards, herby cheese has been reported to be from the semi-hard cheese group, which falls between 57-64% values (6, 20). The % of Moisture in Cheese Fat-Free Mass of cheese samples analyzed was not less than 57%. The mean percentage was determined as  $65.7 \pm 6.1\%$  (data not given elsewhere).

According to the herby cheese standard (6), herby cheeses should contains at least 45% milk fat in dry matter, that is, it should be in the full-fat cheese category. It was observed that the average findings of the samples were compatible with the value specified in the Standard as shown in Table 1, and 15 samples were in the full-fat cheese category. However, 6 samples from the brined herby cheese samples and seven samples from the dry salted samples did not comply with the Standard as shown in Table 3. It has also been revealed in other studies that

herby cheeses sold in the market have not been standardized in terms of fat contents. The results of this and formerly made studies were comparatively given in Table 3. The non-standardization of the production process and the variables from milk used in the production during traditional production has been shown to cause this situation (25). We also demonstrated in this study non-standardized fat contents from the cheese samples.

The findings of previously made studies and this study were evaluated in the light of the Turkish Herby Cheese Standard (6). As shown in Table 3, the most of the samples analyzed was out of the Standard values. Only dry matter and results obtained from this study were in compliance with the Herby Cheese Standard (6). Nevertheless, dry matter rates of the two (10%) samples dry matter were minimum 45%), and did not comply with the Standard. Dry matter values found in these two samples are also below the value (at least 43.81%) reported in the Van herby cheese geographical indication certificate (2). Although the production methods of pressed herby cheese are different, their chemical compositions are similar to Erzincan tulum cheese. The humidity rate for Erzincan Tulum cheese has been reported to be 45% at most (50% in low-fat and fat-free tulum cheeses) in the Standard (20). However, this value was reported to be higher (at most 60%) in herby cheese. This value is similar to the value of white cheese. In addition, the minimum 45% dry matter and maximum 60% moisture values in the herb cheese standard do not complement each other. As shown in Table 3 and Table 4, many of the samples analyzed in previously made studies and in this study have not been in compliance with the standard regulations.

Salt values have been reported as maximum 7.5% in Herby Cheese standard (6), and maximum 6.9% in Van Herby Cheese Geographical Indication Certificate (2). However, we suggest that the maximum value allowed in other tulum cheeses, which is 6%, is also in non-brined herby cheeses, which we prefer to express as herby Tulum cheese in this study. In the Cheese Communiqué (4), a maximum of 7.5% salt rate in dry matter is allowed in brined cheeses. As shown in Table 3, the values given belong to herby tulum cheeses and there are samples containing 2-3 times more salt than allowed. In order to produce herby cheese with salt content in accordance with the standards, first of all, its technology must be developed and then its production must be carried out in licensed enterprises that have a technological competence certificate. Officially inspected licensed production facilities are needed

In the Turkish Food Codex Microbiological Criteria Regulation (9), it is stated that, as a hygiene criterion, the number of coagulase-positive staphylococci in cheese should not exceed the  $10^4$

cfu/g. The values of other microorganisms analyzed (total mesophilic aerobic bacteria, coliforms and yeast-mold) were used only in comparison with the findings of other researchers as shown in Table 4. Since these values were not included in the communiqué, they were not evaluated according to the Communiqué (4). Thirteen (60%) of the 20 samples examined in our study contained coagulase positive staphylococci more than  $4 \log_{10}$  cfu/g. As shown in Table 4, staphylococcal analysis was not performed in 5 of the 9 studies in which microbiological analysis was performed (19, 24, 26, 27). In the other 3 studies in which staphylococcal analysis was performed, it was reported that there was contamination above the values reported in the Communiqué (21, 22, 28). In a study, it was reported that the staphylococcal numbers were within standard values (29). When examined in terms of coagulase-positive staphylococci, which is the only value included as a hygiene criterion in the legal document, it was seen that the herby cheeses on sale did not comply with the standard as shown in Table 4.

Herby cheeses made after pasteurization of different milks were vacuum packed and their chemical changes have been investigated for 90 d (30). No significant changes have been observed in the average values of 50% for dry matter and 28% for fat. Although it is not possible to compare the findings of our study with the study, the findings of the study may be useful for industrial production models to be developed using pasteurized milk. High numbers of coliform bacteria and yeast-mold numbers were found to be high in our study and in some other studies as shown in Table 4. Herby cheese produced from raw milk poses a great risk in terms of pathogenic microorganisms, and although the antimicrobial activities of herbs are known, they carry the same risk, and pasteurization of milk and herbs is necessary for hygiene reasons (31-34). Although pathogenic bacteria analysis was not performed in our study, it can be predicted that the number of bacteria accepted as hygiene criteria is quite high, and pathogenic bacteria may also be present in the samples we examined.

When Tables 3 and 4, in which the findings of this study and previous studies are presented comparatively, are examined, it is understood that the sale of these cheeses should be controlled because they do not comply with the minimum chemical and microbiological criteria. It has been reported that pickled herbs are also unhygienic and carry health risks (32). Antibiotic residues have also been found in herby cheeses (21).

**Table 3.** Comparison of the results of physical and chemical analysis of Siirt herb cheese samples taken from sales points (as given in the Table 1) with the results of previous researches.

In conclusion, the production and trade of Siirt herby cheese should be produced and sold in more hygienic places by expert staff. When this progress is achieved, it is certain that the contribution of this cheese to the provincial economy will increase even more. Considering the goat presence and transhumance in Siirt province, the production process should be determined by scientific studies in order to produce Siirt herby cheese from a mixture of sheep and goat milk. Modern Siirt herby cheese production facilities should be established in the province. The brand value of the product should be created and this value should be established as a wide market network and used as a tourism-developing product. For this, the industry-appropriate technology of this cheese should be developed and the possibilities of using pasteurized milk and starter culture in production should be provided.

**ABSTRACT**

Ovariohysterectomy (OVH), which is one of the surgical sterilization methods, can be applied with two different operation approaches: median celiotomy (median-OVH) and lateral laparotomy (lateral-OVH). The aim of the study is to reveal the bacteria isolation and antibiotic susceptibility from the samples taken at the surgical site after median-OVH and lateral-OVH in cats and dogs. The study was carried out on 22 cats and 21 dogs, whose health checks were made before the operation. The animals included in the study were randomly divided into two groups as median-OVH (cat, n=11; dog, n=11) and lateral-OVH (cat, n=11; dog, n=10). Swap samples were taken from the surgical site for microbiological examination before the operation and on the 1st, 2nd, and 3rd days after the operation. Bacteria were identified in 50 (29.0%) of 172 swap samples, and a total of 70 bacteria were isolated. *Staphylococcus intermedius* (38.5%) was the most isolated bacteria from the surgical site, followed by *Enterococcus faecium* (10%) and *Staphylococcus lentus* (8.5%). The number of bacteria isolated from the median-OVH (59.5%; 50/84) was higher than in lateral-OVH (22.7%; 20/88) in cats and dogs. *Staphylococcus intermedius*, the most isolated bacteria (n=27); while 23 of them (85.1%) were beta-lactamase positive, 11 of them were also found to be methicillin resistant (40.7%), 2 of them were both beta-lactamase positive and clindamycin resistant (7.4%). Antimicrobial resistance is a growing problem in human and animal health, and the necessity of determining antimicrobial susceptibility in order to raise awareness about rational antibiotic use is a fact. In conclusion, this study revealed that the selection of the operation site in ovariohysterectomy may affect the bacterial population and it is necessary to determine the bacteria and antibiotic susceptibility in possible complications.

**Keywords:** Ovariohysterectomy, cat, dog, bacterial isolation, antimicrobial susceptibility

**KEDİ VE KÖPEKLERDE FARKLI HATLARDAN YAPILAN  
OVARİOHİSTEREKTOMİ SONRASI OPERASYON BÖLGESİNDEN İZOLE  
EDİLEN BAKTERİLER VE ANTİMİKROBİYAL DUYARLILIKLARI**

**ÖZET**

Cerrahi sterilizasyon yöntemlerinden bir tanesi olan ovariohisterektomi (OVH) median celiotomi (median-OVH) ve lateral laparotomi (lateral-OVH) olmak üzere iki farklı operasyon bölgesi seçimi ile uygulanabilmektedir. Çalışmanın amacı, kedi ve köpeklerde median-OVH ve lateral-OVH sonrası operasyon bölgesinden alınan örneklerden izole edilen mikroorganizmaları ve antibiyotik duyarlılıklarının ortaya konulmasıdır. Çalışma, operasyon öncesi sağlık kontrolleri yapılan 22 adet dişi kedi ve 21 adet dişi köpek üzerinde gerçekleştirildi. Çalışmaya alınan hayvanlar rastgele median-OVH (kedi, n=11; köpek, n=11) ve lateral-OVH (kedi, n=11; köpek, n=10) olmak üzere iki gruba ayrıldı. Operasyon öncesi ve operasyon sonrası 1., 2. ve 3. günlerde ensizyon hattından mikrobiyolojik inceleme için swap örnekleri alındı. Alınan 172 swap örneğinin 50 (%29,0) tanesinde bakteri identifikasyonu yapılırken toplamda 70 bakteri izole edildi. Ensizyon hattı kültürlerinde en çok izole edilen bakteri *Staphylococcus intermedius* (%38,5) olurken, bunu *Enterococcus faecium* (%10) ve *Staphylococcus lentus* (%8,5) izledi. Kedi ve köpeklerde median-OVH hattından izole edilen bakteri sayısı (%59,5; 50/84) lateral-OVH'ye (%22,7; 20/88) göre daha fazla bulundu. En fazla izole edilen bakteri olan *Staphylococcus intermedius*'un (n=27); 23 adedi (%85,1) beta-laktamaz pozitifken bunlardan 11 adeti aynı zamanda metisiline dirençli bulunmuş (%40.7) olup, 2 adeti ise hem beta-laktamaz pozitif hem de klindamisine dirençli (%7.4) bulunmuştur. Antimikrobiyal direnç, insan ve hayvan sağlığında büyüyen bir problemdir ve akılcı antibiyotik kullanımı konusunda bilinçlenilmesini sağlamak için antimikrobiyal duyarlılıklarının belirlenmesi gerekliliği ortaya konulmuş bir gerçektir. Sonuç olarak, bu çalışma ovariohisterektomide operasyon bölgesi seçiminin bakteri popülasyonunu etkileyebileceğini ve olası komplikasyonlarda mikroorganizmaların ve antibiyotik duyarlılıklarının belirlenmesi gerekliliğini ortaya koymuştur.

**Anahtar kelimeler:** Ovariohisterektomi, kedi, köpek, bakteri izolasyonu, antimikrobiyal duyarlılık

## 1.GİRİŞ

Evcil hayvanlarda üremenin denetlenmesi amacıyla siklusun belirli dönemlerde baskılanması ya da cerrahi olarak kısırlaştırılma operasyonu gibi çözümler bulunmaktadır. Ovariohisterektomi (OVH) operasyonu, kedi ve köpeklere uygulanan en yaygın cerrahi sterilizasyon işlemlerinden birisi olarak kabul edilmektedir (Alaçam, 2008). Ovariohisterektomi operasyonu, uterus ile iki ovaryumun, uygun şekilde ligatüre edildikten sonra birlikte uzaklaştırılması işlemine denir (Alaçam, 2008). İstenmeyen östrus davranışlarının önlenmesinin yanı sıra pyometra, uterus torsiyonu, kistik endometriyal hiperplazi, uterus rupturu, ve uterus neoplazilerinde bir tedavi seçeneği olarak uygulanmaktadır (Fingland, 1998). Karnivorlarda ovariohisterektomi median celiotomi veya lateral laparotomi uygulaması şeklinde iki farklı bölgeden yapılabilmektedir. Ovariohisterektomi operasyonunda lateral laparotomi İngiltere’de sıklıkla kullanılırken, median laparotomi Amerika’da tercih edilmektedir (Coe ve ark., 2006). Karnivorlarda operasyon bölgesinin seçiminin karşılaştırıldığı çalışmalarda genellikle postoperatif ağrının değerlendirilmesi yapılmıştır (Holly ve ark., 2004; Coe ve ark., 2006). Lateral-OVH ilk bilateral ovarioektomi operasyonunun yapıldığı yöntemdir. Daha sonraki yıllarda ventral median yöntem geliştirilmiştir. Her iki yöntemde kendine göre avantaj ve dezavantajları yapılan çalışmalar ile gösterilmiştir. Özellikle meme hiperplazisi veya laktasyon döneminde ki kedilerde lateral-OVH uygulaması gelişmiş olan meme dokusunun olumsuz etkilerinden kaçınmak için tercih sebebidir. Sonuç olarak laktasyon döneminde OVH operasyonu yapılması gereken hayvanda lateral laparotomi uygulaması ile median celiotomi de karşılaşılabilecek olan yara iyileşmesinde gecikme veya enfeksiyon, memelerden süt sızması, deri ya da subkutan dokudan kaynaklı hemoraji gibi potansiyel komplikasyonlardan kaçınılmış olacaktır (Holly ve Hardie, 2004). Özellikle agresif ya da sokak hayvanlarında operasyon bölgesi olarak lateral hat yaklaşımı cerrahi yara bölgesinin uzaktan da rahatlıkla gözlenebilmesini sağlamaktadır, bu şekilde postoperatif dönemde oluşabilecek ensizyon bölgesinin açılması ve tespit edilmemesi riski azalmaktadır (Levy, 2004). Laktasyondaki hayvanlarda olduğu gibi, meme hiperplazisi olan hayvanlarda lateral hattın kullanılması, meme bezlerine yakın diseksiyondan kaçınılmış olunur ve meme bezi hasarına bağlı oluşabilecek perioperatif komplikasyonları en aza indirir (McGrath ve ark., 2004). Cerrahi yara enfeksiyonu en sık görülen postoperatif komplikasyonlardan birisidir ve bu tür enfeksiyonlarla karşılaşma olasılığı veteriner hastanelerinde giderek artan bir problem haline gelmiştir. Yapılan ensizyon ile birlikte derinin koruyucu bariyerinin kırılması nedeniyle,

tüm cerrahi alanlar kontaminasyon riski altındadır, ancak tüm cerrahi alanlarda postoperatif enfeksiyon şekillenmez. Bakterilerin bir alanı enfekte etme yeteneği, kontaminasyon düzeyine bağlıdır. Ayrıca, tüm bakteriler aynı patojenite ve virülansa sahip değildir (Mangram, 1999). Ameliyat sonrası profilaktik antibiyotik uygulaması cerrahi yara enfeksiyonu insidansını azaltsa da uygun antibiyotik seçimi gereksiz antibiyotik kullanımını ve antibiyotik direncini önlemek açısından önemlidir (Bratzler, 2004).

Bu çalışmanın amacı, farklı hatlardan yapılacak ovariohisterektomi operasyonu sonrası kedi ve köpeklerde operasyon bölgesinden izole edilecek bakteri türlerinin belirlenmesi ve bu bakterilerin antibiyotik dirençlerini değerlendirmektir.

## **2. ARAŞTIRMA ve BULGULAR**

Bu çalışma, klinik araştırmalara başlamadan önce Siirt Üniversitesi Hayvan Araştırmaları Yerel Etik Kurulu (No:2019/10) tarafından onaylanmıştır.

Bu çalışma Siirt Üniversitesi Veteriner Fakültesi Doğum ve Jinekoloji Anabilim Dalı'na rutin ovariohisterektomi operasyonu talebiyle getirilen sağlıklı hayvanlar üzerinde yapıldı. Yaşları 1 ile 3 arasında değişen, ortalama ağırlığı  $2,7 \pm 0,5$  kg olan 22 kedi ve yaşları yaklaşık 4 ay ile 3 yıl arasında, vücut ağırlığı 13 ile 36 kg arasında olan 21 köpek çalışmaya dahil edildi. Tüm hayvanların operasyona uygun olduğunu belirlemek için genel klinik muayeneleri (beden sıcaklığı, pulzasyon ve respirasyon sayısı, lenf nodülleri, trakheal palpasyon, akciğer oskültasyonu) yapıldı. Uygun görülen hayvanlara operasyondan bir gece önce yemek ve su kısıtlaması önerildi ve ertesi gün operasyona alındı. Ovariohisterektomi yapılacak hayvanlar median celiotomi yaklaşımına (11 kedi ve 11 köpek) veya lateral laparotomi yaklaşımına (11 kedi ve 10 köpek) göre rastgele dağıtıldılar. Ovaryohisterektomi operasyonunda kullanılan anestezi protokolünde 2 mg/kg dozda kas içi (im) ksilazin HCl (Xylazinbio%2, Bioveta PLC) enjeksiyonu ile hayvanların sedasyonu sağlandı. Ksilazin HCl uygulamasından 10 dk sonra ise 10 mg/kg im ketamin HCl (Ketasol ® %10, Richter Pharma) enjeksiyonu ile genel anesteziye geçişi sağlandı.

### **Ovariohisterektomi Operasyonunun Yapılması**

Ovariohisterektomi operasyonları, standart aseptik koşullar altında, tek bir operatör tarafından gerçekleştirildi. Median- OVH'de ensiyon göbek skatriksinin 2 parmak altından deriye düz bir şekilde yapıldı. Linea albadan abdominal boşluk içerisine girilerek ovaryumlar bulundu ve ovaryuma yakın gelmeyecek şekilde suspensiyör ligament üzerine ligatür uygulandı, daha sonra

standart prosedürlere uyularak corpus uteri ligatüre edildi ve vücut dışına alındı. Lateral-OVH'de ise operasyon bölgesi sol tarafta, kraniyalden son kosta, kraniokaudal yönde iliak kanat ve lumbal omurlar üçgeninin orta noktasına denk gelecek şekilde seçildi. Deri altı kaslar moskito pensi ile küt diseksiyon şeklinde tek seferde geçildi. Bir hemostatik pens ile operasyon bölgesi genişletildi. Uterusun bulunması, ovaryum ve kornuların çıkartılmasında aynı işlemler yapıldı. Devamında sırasıyla periton, kaslar ve deri 2/0 eriyebilir dikiş materyali ile dikilerek operasyonlar tamamlandı (Fingland, 1998). Araştırmaya alınan tüm hayvanlar aynı postoperatif bakım ve besleme koşulları altında tutuldu. Tüm hayvanlara ameliyattan önce analjeziyi sağlamak amacıyla subkutan meloksikam enjeksiyonu yapıldı (Demelox©, Denova, Türkiye, 0,2 mg/kg SC).

Operasyon süresi boyunca hiçbir hayvanda komplikasyon gözlenmedi. Aseptik hazırlıktan hemen önce ve operasyondan sonraki üç gün boyunca çalışmaya alınan hayvanlardan cerrahi operasyon bölgesinden mikrobiyolojik inceleme için swap örnekleri alındı. Örnekler Stuart-transport besiyeri (BD, Heildelberg, Almanya) ile soğuk zincir altında inceleme amacıyla Mikrobiyoloji laboratuvarına gönderildi. Postoperatif dönem sürecinde operasyon bölgesinde görülen komplikasyonlar kaydedildi.

#### **Bakteri Kültürü ve Antibiyogram**

Alınan örneklerden kanlı agar (Merck, Almanya) üzerine ekim yapıldı ve aerobik durumda 37 °C'de 24-96 saat inkübe edildi. Kolonilerin mikroskopik morfolojisi Gram boyama ile incelendikten sonra bakteri tanımlama sistemi (BD, Phoenix<sup>100</sup>) kullanılarak tür düzeyinde identifikasyonu üretici firma kılavuzuna göre yapıldı. Bakterilerin antimikrobiyal duyarlılığının belirlenmesi için PMIC/ID-87 Gram pozitif combo panel ve NMIC/ID-450 Gram negatif combo panel kullanıldı.

### **3. SONUÇ ve DEĞERLENDİRME**

Ovariohistektomi rutin olarak hayvan popülasyonlarını kontrol altında tutmak amacıyla uygulanan bir operasyon olmasının yanı sıra yavru alınması istenmeyen hayvanlarda görülebilecek komplikasyonların (pyometra, kistik endometriyal hiperplazi, meme tümörü) önlenmesi amacıyla da uygulanmaktadır (Levy, 2004). Ovariohistektomi operasyonu median celiotomi veya lateral laparotomi olarak iki farklı operasyon bölgesinden yapılabilmektedir. Genellikle operasyon bölgesinin seçimi uygulamayı yapan hekimin tecrübesine kalmıştır. Her iki yöntemin faydalarının karşılaştırıldığı çalışmalarda, median-OVH operasyon sırasında daha

iyi bir gözlem alanı sunar ve sonrasında daha az postoperatif ağrıya neden olurken, lateral-OVH'nin ise daha kısa operasyon süresine ve daha az hipotermi ve fitik riskine neden olduğu bildirilmiştir (Coe ve ark., 2006). Farklı yaşlarda 38 kedi üzerinde yapılan çalışmada median-OVH operasyonu sonrası yara bölgesinde şişme riski fazla görülürken lateral-OVH yapılmış kedilerde de palpasyonda fazla ağrı tespit edilmiştir (Swaffield ve ark., 2015). Başka bir çalışmada (yaş aralığı 6 ay-10 yaş kedi) lateral-OVH sonrası yara hassasiyeti ve yaradan akıntı görülme insidansı median-OVH'ye göre daha fazla tespit edilmiştir (Grint ve ark., 2006).

Cerrahi yara enfeksiyonlarından korunmak için postoperatif dönemde profilaktik olarak antibiyotik kullanımı insan ve hayvanlarda sıklıkla yapılan bir uygulamadır (Bratzler ve Houck, 2004). Köpek ve kedilerde cerrahi yara enfeksiyonu riski ortalama %5.7 olarak çeşitli çalışmalarda bildirilmiştir (Eugster ve ark, 2004; Nichols, 2004). Postoperatif dönemde cerrahi yara riskine neden olan bakteriler hastaneden hastaneye farklılık göstermektedir. Bu dönemde profilaktik amaçla kullanılan antibiyotikler enfeksiyon oranını azaltmasına rağmen, uygun olmayan antibiyotik seçimine bağlı olarak bakterilerin direnç kazanmasına ve süperenfeksiyona kadar gidebilen ciddi bir problem haline dönüşebilir (Turhanoglu ve ark., 2018). Bu nedenle profilaktik ya da tedavi amacıyla da olsa antibiyotikler seçilirken ortamın bakteri florasının bilinmesinin, mikroorganizma tipinin belirlenmesi için kültür testlerinin yapılmasının ve bakteriyel direnç şekilleri ile antibiyotik duyarlılık test sonuçlarının bilinmesi önemlidir (Dunning, 2003). Stafilokoklar, uygun ortam şekillendiği zaman çeşitli enfeksiyonlara neden olabilen normal deri florasının fırsatçı patojen üyelerindedir. Bu çalışmada izole edilen bakteri türlerinin çoğu, genellikle normal deri mikrobiyotasında bulunur ve fırsatçı patojenler olabilirler. Bu çalışmada alınan 172 swap örneğinin 50 (%29,0) tanesinde bakteri identifikasyonu yapılırken toplamda 70 bakteri izole edildi. Davarcı ve arkadaşları (S6) toplam 4492 yara örneği değerlendirmişler, %55'inden etken izole etmişlerdir. Kedi ve köpeklerde median-OVH hattından izole edilen bakteri sayısı (%59,5; 50/84) lateral-OVH'ye (%22,7; 20/88) göre daha fazla bulundu. Davarcı ve arkadaşları (2018) yara kültürlerinde en çok E. coli, Staphylococcus aureus ve Pseudomonas spp. izole etmişlerdir. Bu çalışmada ise enfeksiyon hattı kültürlerinde en çok izole edilen bakteri Staphylococcus intermedius (%38,5) olurken, bunu Enterococcus faecium (%10) ve Staphylococcus lentus (%8,5) izledi. Bu mikroorganizmaların ciddi enfeksiyonlara neden olabileceğini ve kayda değer dirençlilik geliştirebilecekleri çalışmalarda ortaya konulmuştur (Daniel ve ark., 2016; Davarcı ve ark., 2018). Çalışmamızda da izole edilen bakterilerin identifikasyon sonuçlarından çok bu bakterilerin antibiyotik

dirençlilikleri dikkat çekmektedir. En fazla izole edilen bakteri olan *Staphylococcus intermedius*'un; 24 adedi (%82.75) Beta-laktamaz pozitifken bu 24 Beta-laktamaz pozitifin 11 adedi aynı zamanda MRS bulunmuş, 2 adedi ise hem Beta-laktamaz pozitif hem de klindamisine dirençli bulunmuştur. Çalışmamızda 3 adet *Enterococcus faecium*; yüksek seviye streptomisin direnci (HLSR), 1 adet *Enterococcus faecium*; HLSR ve HLGR bulunmuştur.

Antimikrobiyal direnç, insan ve hayvan sağlığında büyüyen bir problemdir ve operasyona özgü profilaktik antibiyotik seçiminin özenle yapılması gerekliliği bildirilmiştir. Bu nedenle doğru antibiyotik kullanımının ancak bu çalışmaya benzer çalışmalarla sağlanabileceği görülmektedir. Sonuç olarak, bu çalışma ovariohisterektomide operasyon bölgesi seçiminin bakteri popülasyonunu etkileyebileceğini ve olası komplikasyonlarda mikroorganizmaların ve antibiyotik duyarlılıklarının belirlenilmesi gerekliliğini ortaya koymuştur.

**ABSTRACT**

In this study, it was aimed to compare by measuring Troponin I, CK-MB, NT-proBNP and D-Dimer levels the cardiac effects of two different anesthesia protocols in castrated healthy and noncardiac dogs. The animal material of the study was formed by 30 healthy, noncardiac male dogs who reached sexual maturity between the ages of 1 and 3, who were brought to the animal hospital affiliated to the Animal Health Application and Research Center of Siirt University for castration. The animals were sedated with 1-2 mg/kg, intramuscular xylazine HCL and intramuscular 8-10 mg/kg Ketamine HCL were administered. The animals were intubated and connected to the closed-circuit anesthesia device. Following the injectable general anesthesia application, one group (G1) (n=15) was administered with 2-3% Isoflurane inhaler, the other group (G2) (n=15) was administered with 2-3% Sevoflurane inhaler to maintain anesthesia. Blood samples were collected before and 12. hours after anesthesia. Serum D-dimer and NT-proBNP concentration were measured using FIA meter commercial test kits with Fluorescent Immunassay quick tester. Serum Troponin I and CK-MB concentrations were measured with an automated biochemistry analyzer. In CK-MB values obtained after Sevoflurane and Isoflurane applications, it was observed that 0th hour measurements did not create a statistically

significant change on the measurements obtained 12 hours after anesthesia ( $p = 0.465$ ) however, a statistical difference was observed in CK-MB values due to the use of different anesthetic agents ( $p = 0.002$ ). In troponin values obtained after Sevoflurane and Isoflurane applications, it was observed that 0. hour measurements did not create a statistically significant change on the measurements obtained 12 hours after anesthesia ( $p = 0.811$ ). It was determined that there was no statistically significant difference in Troponin values due to the use of different anesthetic agents ( $p = 0.829$ ). Nt-ProBNP values were measured 12 hours after anesthesia, and a statistically significant difference was found between the 0th hour measurement ( $p < 0.001$ ) however, Sevoflurane and Isoflurane applications did not make a statistically significant difference on this change ( $p = 0.198$ ). Serum D-Dimer values could not be statistically evaluated because they were measured within normal limits. With this study presented, the effects on the heart of anesthetic agents used continuously in the field of veterinary medicine have been revealed, and the risk on patients in the selection of anesthetic agents will be determined in advance and anesthesia protocols will be made according to it..

**Keywords:** D-Dimer, Cardiac, Troponin- I, Nt-ProBNP

**KASTRASYON YAPILAN KÖPEKLERDE İKİ FARKLI ANESTEZİ PROTOKOLÜ ÖNCESİ VE SONRASI CK-MB, TROPONİN-1, D-DİMER VE NT-proBNP DÜZEYLERİNİN DEĞERLENDİRİLMESİ****ÖZET**

Sunulan bu çalışmada kastrasyon yapılan sağlıklı nonkardiyak köpeklerde iki farklı anestezi protokolünün kardiyak etkilerini Troponin I, CK-MB, NT-proBNP ve D-Dimer değerlerine bakılarak karşılaştırılması amaçlandı. Araştırmanın hayvan materyalini Siirt üniversitesi Hayvan Sağlığı Uygulama ve Araştırma Merkezine bağlı hayvan hastanesine kastrasyon amacı ile getirilen 1-3 yaş arasında, cinsel olgunluğa ulaşmış, sağlıklı, nonkardiyak 30 adet erkek köpek oluşturdu. Hastalara sedasyon için ksilazine Hcl 1-2 mg/kg i.m. indüksiyon için ketamine Hcl 8-10mg/kg i.m. uygulandı. Anestezinin devam ettirilebilmesi için hasta entübe edilerek kapalı devre anestezi cihazına bağlandı. Enjektale genel anestezi uygulamasının akabinde bir grup (G1) (n=15) % 2-3 oranında İzofluran ile, diğer grupta (G2) (n=15) % 2-3 oranında Sevofluran inhaler uygulanmak sureti ile anestezinin devamı sağlandı. Anestezi öncesi 0. saat ve sonrasında 12. Saatte kan örnekleri alındı. Serum D-Dimer ve NT-proBNP konsantrasyonu FIA meter ticari test kitleri kullanılarak Flöresan Immunassay hızlı test cihazıyla ölçüldü. Serum Troponin I ve CK-MB konsantrasyonları otomatik biyokimya analiz cihazı ile ölçüldü. Sevofluran ve İzofluran uygulamaları sonrasında elde edilen CK-MB değerlerinde, 0. saat ölçümlerinin anesteziden 12 saat sonra elde edilen ölçümler üzerinde görülen istatistiksel açıdan anlamlı bir değişiklik yaratmadığı görülmüştür ( $p = 0.465$ ) ancak farklı anestezi ajanlarının kullanılması sebebiyle CK-MB değerlerinde farklılık olduğu gözlemlenmiştir ( $p = 0.002$ ). Troponin değerlerinde ise, 0. saat ölçümlerinin anesteziden 12 saat sonra elde edilen ölçümler üzerinde görülen istatistiksel açıdan anlamlı bir değişiklik yaratmadığı ( $p = 0.811$ ) ve farklı anestezi ajanlarının kullanılması sebebiyle Troponin değerlerinde istatistiksel açıdan aynı şekilde anlamlı farklılığa neden olmadığı gözlemlenmiştir ( $p = 0.829$ ). Sevofluran ve İzofluran uygulamaları sonrasında elde edilen Nt-ProBNB değerlerinde, 0. saat ölçümlerinin anesteziden 12 saat sonra elde edilen ölçümler üzerinde görülen istatistiksel açıdan anlamlı bir değişiklik yarattığı tespit edilmiştir ( $p < 0.001$ ) ancak bu değişim üzerinde Sevofluran ve İzofluran uygulamalarının anlamlı bir farklılık yaratmadığını gözlemlenmiştir ( $p = 0.198$ ). Serum D-Dimer değerleri normal sınırlar içinde ölçüldüğünden istatistik değerlendirmeye alınamamıştır. Sunulan bu çalışma ile veteriner hekimlik alanında sürekli kullanılan anestezi ajanlarının kalp üzerine etkileri ortaya konulmuş olup anestezi madde seçiminde hastalar üzerindeki risk önceden belirlenerek anestezi protokollerinin ona göre yapılması sağlanmış olacaktır.

**Anahtar kelimeler:** D-Dimer, Kardiyak Troponin- I, Nt-ProBNP

## **GİRİŞ**

Genel anestezi uygulanan hastalarda seçilen anestezi türüne göre birçok hemodinamik parametre etkilenmektedir. Otonom sinir sistemi aracılığı ile kalp hızı, ritmi, myokard kontraktilitesi ve damar tonusunda değişiklikler olmaktadır. Genel anestezi uygulanan hastalarda indüksiyonda aşırı heyecana ve entübasyona bağlı ketokalamın artışı ve myokard kontraktilitesinin depresyonu, myokard iskemi ve postoperatif ağrıya bağlı hipertansiyon görülebilir. Bunun yanında yetersiz solunum sonucu gelişen hipoksi, hiperapni ve asidoz myokardı deprese edebilir ve aritmi eğilimini artarabilir. Genel anestezide kullanılan farmakolojik ajanların kardiyovasküler sistem üzerine etkileri doza bağımlı olarak değişebilir (Esener, 2004).

İnhalasyon ajanların hemen hepsi myokardiyal depresyon atım hacmi ve kan basıncında düşmeye neden olabilir. İnhaler ajanlardan Sevofluran, myokard kontraktilitesini hafif derecede deprese eder. Sistemik vasküler direnç ve arteriyal kan basıncında düşmeye neden olabilir. İzofluran ise, myokardı deprese eder ventriküler iletimi deprese etmez. Sistemik vasküler dirençte düşme ile kan basıncını düşürülebilir (Morgan ve Maget, 2008).

Troponin (Tn) çizgili kasın ince filamanlarının düzenleyici proteindir. Troponinler kana T, I, C kompleksleri (cTnT-I-C üçlü kompleksi ve cTnI-C ikili kompleksi) şeklinde ve serbest alt gruplar olarak salınırlar. Troponin T ve I çizgili kasta kasılma işleminin önemli bileşenleri olarak beraber görev alırlar. Çizgili kaslarda troponin kompleksi benzer şekilde yer alırsa da troponin T ve I'nın izoformları kardiyak kasta farklıdır, çünkü proteinler bu dokuda farklı genler tarafından kodlanırlar. Kardiyak troponinler kardiyomiyosit hasarına spesifik biyobelirteçlerdir (Liquori ve ark, 2014). Kardiyak hasar, miyosit yıkımını ve membran rupturunu indüklediğinde, serbest kalp troponin yüksek konsantrasyonlarda kan dolaşımına salınır. Bu süreci yapısal olarak bağlı troponinlerin yavaş ve sürekli bir şekilde salınması izler ve böylece sürekli yükselmiş serum konsantrasyonun nedeni açıklanmış olmaktadır (Wells ve Sleeper, 2008).

Köpek serumunda cTnI, 4-6 saatte saptanabilmekte ve insanlara göre daha hızlı, indüklenen bir travmadan (deneysel miyokardiyal infarktüs) sonra 10-16 saatte pik yaptığı bildirilmektedir (Cummins ve Cummins, 1987). Kardiyak Troponin ,mitral kapak hastalığına bağlı kalp yetmezliğinde tarif edilen patolojik değişikliklerde, arteriyoskleroz fibroz ile bağlantılıdır ve bu fibroz şiddetli derecede iskemi nedeniyle oluştuğu bildirilmektedir (Falk ve ark, 2013).

Kardiyak biyobelirteçlerden kardiyak troponin I ve kardiyak enzimlerden kreatin kinaz MB (CK-MB) insan hekimliğinde iskemi, travma ve septik miyokardiyal hasarın varlığının ortaya konulmasında tanı ve prognozun belirlenmesinde değerli bir belirteç olarak kullanılmaktadır (Slack ve ark, 2005). Birçok türde dolaşımdaki cTnI miktarının tespiti akut ve kronik miyokardiyal hasarın varlığının belirlenmesinde kullanılmaktadır ayrıca thoraks radyografisi, elektrokardiyografi ve ekokardiyografi gibi diğer tanı yöntemlerine yapılacak olan yönlendirmelerde öncülük etmekte ve yapılan bu testlere ek bilgi sağlamaktadır. Aynı zamanda dolaşımdaki cTnI miktarı kalpte meydana gelen hasarın ne derecede olduğu yönünde de bilgi vermektedir (Suzuki ve ark, 2012)

Kreatin fosfokinaz (CK-MB) izoenzimi miyokard infarktüsü tanısı için kullanılmakla birlikte, iskelet kası, vasküler düz kaslar, beyin, uterus ve plasenta gibi doku ve organlarda da bulunduğu için miyokardiyal hasarı belirlemedeki etkinliği tartışmalıdır (Abramov ve ark., 1996). Miyokardiyal hasar için, CK-MB diagnostik olarak sensitif olduğu halde, spesifik değildir. İskelet kası daha yüksek CK aktivitesine sahip olup, % 3 kadar CK-MB aktivitesine sahiptir (Adams ve ark., 1993). Ancak yinede serumda CK-MB'nin yüksek saptanması genellikle miyokardiyal hücre hasarı lehine değerlendirilmektedir. Kreatin kinaz organizmada kassal aktivasyonun bir ürünü olarak bulunmaktadır. İki alt ünitesi vardır. Alt ünitelerin birbirleri ile yapmış oldukları iletişim sonucu üç izo-enzimi bulunmaktadır. M (kas) ve B (beyin) alt ünite olmak üzere; CK-MM, CK-MB ve CK-BB izo-enzimler olarak nitelendirilmektedir (Boyd, 1983).

Organizmada farklı doku ve organlarda farklı oranlarda bulunmaktadır. Birçok türde iskelet kasında CK-MM %100 oranında tespit edilebilir. Kalp kasında CK-MM çoğunlukta olmak kaydı ile CK-MB köpeklerde %3, atlarda ise yaklaşık olarak %10 oranında bulunur (Aktas ve ark, 1994). İnsan hekimliğinde kalpte meydana gelen özellikle akut hasarlarda CK-MB prognostik amaçla kullanılmaktadır. Veteriner hekimliğinde ise tam olarak etkinliği bilinmemekle beraber üzerinde çalışmaların yapılmasının gerekliliği tavsiye edilmektedir (Guan ve ark, 2014).

D-Dimer koagülasyon sisteminin herhangi bir nedenle aktivasyonu ve fibrinolizin genel bir göstergesidir ve bu nedenle trombotik aktivitenin dolaylı bir belirteci olarak kullanılmaktadır. Tıp Hekimliğinde D-dimer seviyelerinin sağlıklı bireylerde çok nadiren artmış olabileceği saptanmıştır. D-dimer klinikte en sık olarak venöz tromboemboli (VTE) ve dissemine intravasküler koagülasyon (DİK) tanısı ve takibinde kullanılır. Ayrıca akut koroner sendromlar,

periferik damar hastalıkları, derin ven trombozu, pulmoner emboli, akut inme, gebelik, orak hücreli anemide hemolitik krizler, kötücül hastalıklar, cerrahi sonrası, konjestif kalp yetersizliği, kronik böbrek yetersizliği gibi fibrinin oluşumunu ve yıkılmasını arttıran her durumda D-Dimer seviyeleri yükseldiği bildirilmiştir ( Hager ve Platt., 1995; Chapman ve ark., 1990).

Natriüretik peptitler, vücut sıvısı homeostazını natriüretik ve diüretik etkiler yoluyla kontrol eden ve renin-anjiyotensin-aldosteron mekanizması üzerinde etkili olan bir hormon sınıfını temsil etmektedir (Liquori ve ark, 2014). ANP ve BNP dolaşımdaki ana kardiyak hormonlardır ve kardiyak natriüretik peptidler olarak adlandırılırlar. ANP'nin büyük kısmı atriyal miyositlerde sentezlenir. Sağ atriyumda sola göre daha fazla olan polipeptittir. Temel depolanma yeri atriyum olan ANP'nin aksine BNP'nin temel kaynağı kalp ventrikülleridir. Bu nedenle diğer natriüretik peptidlerden farklı olarak ventriküler hastalıkların tanısında BNP spesifik bir göstergedir ( İçen ve ark., 2009). Atriyal natriüretik peptid (ANP) ve B tipi natriüretik peptid (BNP), kardiyak hastalıkların tanısını değerlendirmede kullanışlı bulunduğu bildirilmekteyken, C-tipi natriüretik peptid (CNP) ekspresyonu parakrin fonksiyon ile ilişkilendirilmiş ve ayrıca vasküler tonunun düzenlenmesinde bir rolü bulunduğu bildirilmektedir. (Ciaramella ve ark, 1995; Van Kimmenade ve Januzzi, 2009).

Beyin natriüretik peptid (BNP) kalp ventriküllerinden salınmakta olup, ventrikül genişlemesi ve basınç artışıyla doğru oranda yükselerek kardiyak performans hakkında fikir vermektedir B-tipi natriüretik peptidin, dolaşıma bırakıldıktan sonra ANP'den daha kararlı olduğu kanıtlanmıştır (Van Kimmenade ve Januzzi, 2009)..BNP ile aynı duyarlılık ve özgüllük ile NT-pro BNP'nin biyolojik yarılanma ömrü yüksek olduğu bildirilmektedir (Fox ve ark., 2009).. BNP ve NT-proBNP'nin (N-terminal pro-beyin natriüretik peptit) iki fraksiyonu, kalp yetmezliğini, akut koroner sendromu veya iskemik kalp hastalığını değerlendirmek ve ayrıca beşeri hekimlikte kalp yetmezliği sağaltımının monitörizasyonu için başarı ile kullanılmış ve veteriner hekimliği için bir model olarak hizmet ettiği bildirilmektedir (Maisel ve ark, 2002; Braunwald, 2008; Liquori ve ark, 2014).

Özellikle NT-proBNP, son yıllarda veteriner hekimlikte kalp yetmezliği ve kalp hastalıklarının tanısında oldukça önemli rol almıştır. ProBNP; Özellikle asemptomatik kalp hastalıklarında, semptomlar ortaya çıkmadan hastalık hakkında bilgi verebilir (Uçar ve Turhan, 2005). Miyokardiyal lezyonların takibi için kardiyak fonksiyonun izlenmesi önem kazanmaktadır. Bu amaçla atriyal natriüretik peptid (ANP), B-tip natriüretik peptid (BNP), N-terminal pro-

BNP (NT-proBNP) ve kardiyak troponin gibi çeşitli hormonlar ve peptidler kalp yetmezliğinin tanısında kullanılmaktadır (Gönül ve ark., 2017).

Kardiyak sorunu olan hastalarda otonom sistem aktivitesi, vücut ısısı kan basıncı, ventriküler dolma basıncı, kalp hızı ve kan volümündeki değişiklikler ek stres oluşturur. Anesteziye ek olarak ameliyat ile ilişkili kanama, enfeksiyon, ateş, akciğer embolisi ve myokard infarktüsü gibi komplikasyonlarda düşünüldüğünde, kardiyovasküler sistem yükü artmaktadır. Kardiyovasküler komplikasyona bağlı gelişebilecek olası durumları azaltmak adına hastalardaki riskler önceden belirlenmeli ve önlem alınmalıdır. Bu kadar önemli bir konuda anestezinin hastalar için taşıdığı risk ile getireceği yararı seçilecek anestezi ajanları ile belirlemek önemlidir. Ameliyat sırasında kardiyak komplikasyonları arttıran çeşitli risk faktörleri vardır. Kardiyak risklerin bilinmesi intraoperatif dönemde meydana gelebilecek olumsuzluklara hazırlıklı yakalanmak için önemlidir.

Sunulan çalışmanın amacı, kastrasyon yapılan sağlıklı nonkardiyak köpekler de iki farklı anestezi protokolünün kardiyak etkilerini Troponin I, CK-MB, NT-proBNP ve D-Dimer değerine bakarak karşılaştırmaktır.

## **YÖNTEM**

### **1. Materyal:**

#### **1.1 Hayvan Materyali:**

Araştırmanın hayvan materyalini Siirt üniversitesi Hayvan Sağlığı Uygulama ve Araştırma Merkezine bağlı hayvan hastanesine kastrasyon amacı ile getirilen 1-3 yaş arasında, cinsel olgunluğa ulaşmış, sağlıklı, nonkardiyak 30 adet erkek köpek oluşturdu. Hastaların klinik ve laboratuvar değerlendirilmelerinde herhangi bir anormallik saptanmayan ve alınan anamnez bilgileri doğrultusunda sağlıklı olduklarına kanaat getirilen köpekler çalışmaya dahil edildi.

#### **2. Uygulanan anestezi protokolleri:**

Hastalara preanestezi döneminde ilk olarak V. cephalica antebrachi'den damar yolu açıldı. Ardından sedasyon için ksilazine Hcl 1-2 mg/kg i.m. (Xylazinbio %2, Bioveta, Çek Cumhuriyeti), indüksiyon için ketamine Hcl 8-10mg/kg i.m. (Ketasol %10, Arion, Türkiye) uygulandı. Anestezinin devam ettirilmesi için hasta entübe edilecek ve kapalı devre anestezi cihazına bağlandı (SMS 2000 Klasik Otomatik Anestezi Cihazı CWH 1020, SMS, Türkiye). Enjektale genel anestezi uygulamasının akabinde bir grup (n=15) % 2-3 oranında İsoflurane (Isoflurane USP, Pirimal Critical Care, ABD) ile, diğer grupta (n=15) % 2-3 oranında

Sevofluran (Sevofluran, Aeseica Qeenborough Ltd., İngiltere) inhaler uygulanmak sureti ile anestezinin devamı sağlandı.

### **3. Numunelerin Alınması ve Değerlendirilmesi:**

#### **3.1 Numunelerin alınması ve saklanması:**

Kastrasyon yapılacak köpeklerden anestezi öncesi ve sonrası 12. saat'te kan örnekleri steril jelli biyokimyasal tüplerine alınarak ivedilikle 3000 r.p.m de 15 dk. da santrifüj edilerek serum örnekleri çıkarılıp analiz yapılana kadar -20 derecede muhafaza edildi.

#### **3.1 D-Dimer analizi**

D-Dimer konsantrasyonunun ölçümü Flöresan Immunassay hızlı test (Fineware, Wondfo Biotech Co. Ltd, Fineware, Atateknik, Türkiye) cihazıyla ölçüldü. Serum D-dimer konsantrasyonu ölçümünde FIA meter ticari test kitleri (D-Dimer test, Fineware, Wondfo Biotech Co. Ltd) kullanıldı. Serum örnekleri analiz süresine kadar -20 °C'de saklandı.

#### **3.2 NT-proBNP analizi**

NT-proBNP konsantrasyonunun ölçümü Flöresan Immunassay hızlı test (Fineware, Wondfo Biotech Co. Ltd, Fineware, Atateknik, Türkiye) cihazıyla ölçüldü. Serum NT-proBNP konsantrasyonu ölçümünde FIA meter ticari test kitleri (NT-proBNP test, Fineware, Wondfo Biotech Co. Ltd) kullanıldı. Serum örnekleri analiz süresine kadar -20 °C'de saklandı.

#### **3.3 Troponin I ve CK-MB**

Serum Troponin I ve CK-MB konsantrasyonları ADVIA 1800 Otomatik Biyokimya analiz cihazı ile ölçüldü. Serum örnekleri analiz süresine kadar -20 °C'de saklandı.

### **4. İstatistiksel Analizler**

Çalışmada anestezi uygulamasından 12 saat sonra yapılan ölçümler bağımlı değişken olarak kabul edilerek, 12.saat ölçümleri değişken olarak Sevofluran ve İzofluran grupları dışında anestezi öncesi (0. saat) ölçümleri bağımsız değişken üzerinde etkisi olan kovaryant olarak değerlendirildi. Bu amaç doğrultusunda, elde edilen verilerin istatistiksel olarak analizinde Kovaryant Analizi (Analysis of Covariance) kullanıldı. Hipotez testi öncesinde normal dağılım, doğrusallık ve regresyon eğimlerinde etkileşim varsayımlarının kontrolleri sağlandı. Kullanılan bütün testlerde anlamlılık kriteri olarak  $p < 0.05$  kabul edildi ve analizlerin yürütülmesinde SPSS v26 istatistik programından yararlandı.

## BULGULAR

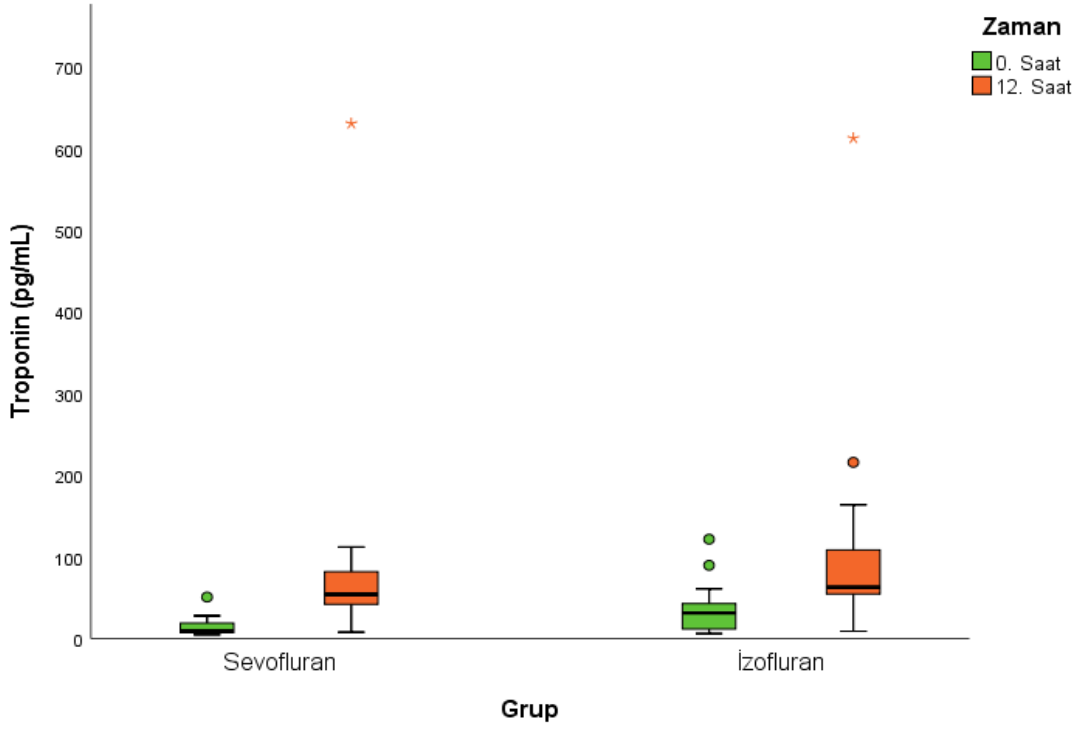

Sevofluran ve İzofluran uygulamaları sonrasında elde edilen CK-MB değerlerinde; 0. saat ölçümlerinin anesteziden 12 saat sonra elde edilen ölçümler üzerinde görülen istatistiksel açıdan anlamlı bir değişiklik yaratmadığı görülmüştür ( $p = 0.465$ ) ancak farklı anestezi ajanlarının kullanılması sebebiyle CK-MB değerlerinde farklılık oluştuğu gözlemlenmiştir ( $p = 0.002$ ) (Grafik 1). Troponin değerlerinde ise, 0. saat ölçümlerinin anesteziden 12 saat sonra elde edilen ölçümler üzerinde görülen istatistiksel açıdan anlamlı bir değişiklik yaratmadığı ( $p = 0.811$ ) ve farklı anestezi ajanlarının kullanılması sebebiyle Troponin değerlerinde istatistiksel açıdan aynı şekilde anlamlı farklılığa neden olmadığı gözlemlenmiştir ( $p = 0.829$ ) (Grafik 2). Sevofluran ve İzofluran uygulamaları sonrasında elde edilen Nt-ProBNB değerlerinde, 0. saat ölçümlerinin anesteziden 12 saat sonra elde edilen ölçümler üzerinde görülen istatistiksel açıdan anlamlı bir değişiklik yarattığı tespit edilmiştir ( $p < 0.001$ ) ancak bu değişim üzerinde Sevofluran ve İzofluran uygulamalarının anlamlı bir farklılık yaratmadığını gözlemlenmiştir ( $p = 0.198$ ) (Grafik 3). (Tablo 1). Serum D-Dimer değerleri normal sınırlar içinde ölçüldüğünden istatistik değerlendirmeye alınamamıştır.

**Grafik 1:** CK-MB düzeyinin zamana ve anesteziklere göre değişimi

**Grafik 2:** Troponin düzeyinin zamana ve anesteziyelere göre değişimi

**Grafik 3:** NT-proBNP düzeyinin zamana ve anesteziyelere göre değişimi

**Tablo 1:** Ck-MB, Troponin ve NT-proBNP düzeylerinin zamana ve anesteziye göre değişimi

Parametre	Zaman	Sevofluran	İzofluran	p	
				Anestezik Ajan	Kovaryant (0. Saat)
CK-MB	0. Saat	236.7±21.6	207±31.6	0,002	0,465
	12. Saat	201.1±15.6	344.8±39.3		
Troponin	0. Saat	14.5±3.1	35.5±8.6	0,829	0,811
	12. Saat	94.1±39.2	113.2±38.4		
NT-proBNP	0. Saat	845.7±95.9	1255±206.8	0,198	<0.001
	12. Saat	1203±141.2	1415.5±323.3		

## TARTIŞMA VE SONUÇ

Cerrahi müdahale yapılması planlanan hastalarda girişim öncesi risk sınıflamasını içeren dikkatli bir değerlendirme, uygun bir anestezi yönetimi ile uygulanacak anestezi ajanlarının seçimi için büyük önem taşımaktadır. Seçilen anestezi yönetimi ve ajanı hastanın ve cerrahi girişimin tolere edilebileceği uygunlukta ve sınırlarda olmalıdır. Genel anestezinin bilinen kardiyovasküler etkilerinin hangi oranlarda olduğunun değerlendirmek için birçok parametre vardır. Biz çalışmamızda kastrasyon yapılan sağlıklı nonkardiyak köpekler de Troponin I, CK-MB, NT-proBNP ve D-Dimer değerlerine bakarak anestezi yöntemlerinin kardiyovasküler etkilerini değerlendirmeyi amaçladık.

Sevofluran 1960'lı yıllarda sentezlenen, ancak 1990'lı yıllarda klinik kullanıma giren kan gaz eriyebilirlik katsayısı 0.63 olan yeni bir inhalasyon anestetikidir. Kan gaz eriyebilirlik katsayısı düşük olduğu için anestezi indüksiyonu ve anestezi denetlenen izoflurana göre daha hızlı olmaktadır (Girard F ve ark, 2002; Rossignol B ve ark, 2003). Bundan dolayı çalışmamızda inhalasyon anestetikleri olarak Sevofluran ile izofluran'ı değerlendirmeyi amaçladık.

BNP ve NT-proBNP'nin iki fraksiyonu, kalp yetmezliğini, akut koroner sendromu veya iskemik kalp hastalığını değerlendirmek ve ayrıca beşeri hekimlikte kalp yetmezliği sağaltımının monitörizasyonu için başarı ile kullanılmış olduğu ve veteriner hekimliği için bir model olarak hizmet ettiği bildirilmektedir (Maisel ve ark, 2002; Braunwald, 2008; Liquori ve ark, 2014). Köpeklerde, 900 pmol/l'den az NT-proBNP konsantrasyonu, artmış miyokardiyal hasar ve stresle uyumlu değildir. Buna karşın Doberman pinschers'de 735 pmol/l'den fazla olması dilate kardiyomiopati için artmış bir riski gösterdiği bildirilmektedir (Baisan ve ark, 2016). Yapılan çalışmalarda sağlıklı köpeklere kıyasla mitral kapak hastalığı ve dilate kardiyomiopatisi bulunan köpeklerde, kardiyak hastalık ve şiddetinin derecesinin değerlendirilmesine yönelik

olarak, NT-proBNP'nin serum konsantrasyonlarının daha yüksek olduğunu göstermektedir. Ayrıca kardiyak hastalıklı köpeklerde, NT-proBNP konsantrasyonlarının kalp hızı, solunum sayısı, ekokardiyografik değişiklikler ve böbrek fonksiyonu ile korelasyon gösterdiği ve NT-proBNP konsantrasyonlarının kardiyak hastalıkların teşhisinde ve ayrıca şiddetin değerlendirilmesinde yararlı olabileceği sonucuna varıldığı bildirilmektedir (Oyama ve ark, 2008; Baisan ve ark, 2016). Önceki bir çalışmada, kardiyak ve kardiyak olmayan dispneyi ayırt etmek için BNP konsantrasyonunu değerlendirilmiştir. Konjestif kalp yetmezliği nedeniyle dispnesi bulunan 22 köpek ve kardiyak kökeni olmayan dispneli 26 köpek karşılaştırıldığında, konjestif kalp yetmezliği olan köpeklerde (ortalama 34.97 pg/ml) kardiyak olmayan dispnesi bulunan köpeklere oranla (ortalama 12.8 pg/ml) daha yüksek BNP konsantrasyonu olduğu bildirilmiştir (Prosek ve ark, 2007). Kas distrofisi kardiyomiyopatisi bulunan Golden retriever ırkı köpeklerin, sağlıklı köpeklere (ortalama  $\pm$  standart sapma  $46 \pm 22$  pg/ml) oranla daha yüksek (ortalama  $\pm$  standart sapma  $117 \pm 92$  pg/ml) konsantrasyonlarda BNP'si olduğu saptanmıştır (Chetboul ve ark, 2004). Ayrıca, NT-proBNP, babesiosisde farklı şiddet dereceleri ile gruplar arasında farklı konsantrasyonlarda gösterilerek değerlendirilmiş ve NT-proBNP konsantrasyonunun, hastalığın ciddiyetini ve indüklenen kardiyak stresini öngörebileceğini düşündürdüğü bildirilmektedir (Lobetti ve ark, 2012). Bizim çalışmamızda da diğer çalışmaları destekler nitelikte çalışmanın Sevofluran ve İzofluran uygulamaları sonrasında elde edilen Nt-ProBNB değerlerinde, 0. saat ölçümlerinin anesteziden 12 saat sonra elde edilen ölçümler üzerinde görülen istatistiksel açıdan anlamlı bir değişiklik yarattığı tespit edilmiştir ( $p < 0.001$ ) ancak bu değişim üzerinde Sevofluran ve İzofluran uygulamalarının anlamlı bir farklılık yaratmadığını gözlemlenmiştir ( $p = 0.198$ ).

D-dimer, koagülasyon sisteminin herhangi bir nedenle aktivasyonu ile çapraz bağlarla oluşan fibrin pıhtısının plazmin tarafından yıkılması sonucu oluşur (Blomback ve ark, 1978). D-dimer klinikte en sık olarak venöz tromboemboli (VTE) ve dissemine intravasküler koagülasyon (DİK) tanısı ve takibinde kullanılır. Tıp Hekimliğinde D-dimer seviyelerinin sağlıklı bireylerde çok nadiren artmış olabileceği saptanmıştır. Ayrıca akut koroner sendromlar, periferik damar hastalıkları, derin ven trombozu, pulmoner emboli, akut inme, gebelik, orak hücreli anemide hemolitik krizler, kötücül hastalıklar, cerrahi sonrası, konjestif kalp yetersizliği, kronik böbrek yetersizliği gibi fibrinin oluşumunu ve yıkılmasını arttıran her durumda D-Dimer seviyeleri yükseldiği bildirilmiştir (Hager ve Platt., 1995; Chapman ve ark., 1990). Bizim çalışmamızda

da diğer çalışmaları destekler nitelikte sağlıklı nonkardiyak hayvanlarda D-Dimer seviyelerinin normal sınırlar içinde ölçüldüğü saptanmış olup istatistiksel değerlendirmeye alınamamıştır. Kalp hasarında AST, CK, CK-MB ve LDH gibi enzim düzeylerinde artış şekillenebilir (Burgener ve ark 2006, Gupta ve ark 2008). Miyokard hücre hasarını en iyi yansıtan CK-MB (Wells ve ark 2002), kTnI (Bader ve ark 2006, Diniz ve ark 2007) ve nörohormonal belirleyicilerden markırlardan natriüretik peptidlerdir (Oyama ve ark 2008, Boswood 2009). İnsanlarda kardiyak belirleyiciler kTnI ve CK-MB, hastalarda işemik, travmatik ve septik miyokardiyal hasarın ve nekrozisin teşhisinde kullanılmaktadır. Kalp hasarını gösteren önemli bir enzimde CK-MB'dir. Kalp kası hasarında kanda bu enzim düzeyi 24 saat içinde yükselir ve kısa süre içinde düzeyi azalır (La vecchia ve ark 2000, Burgener ve ark 2006). Serum CK-MB düzeyinin, insan ve hayvanların kalp yetmezliği, aortik stenozu ve korener hastalıklarında önemli oranda yükseldiği bildirilmiştir (Vartner ve Ingwall 1984). Miyokardiyal hasarlarda kan kTnI düzeyi, ilk 4 saat içinde artar, 12 ve 24 saat içinde pik seviyeye ulaşır (Ooi ve ark 2000, Colantonio ve ark 2002, Diniz ve ark 2007). Bizde çalışmamızda benzer şekilde değerlendirmemizin daha sağlıklı olabilmesi için örneklememizi 0.saat ve 12. Saatte yaptık. (Oyama ve Sisson 2004) kardiomyopati, kalp kapağı yetmezlikli ve aortik stenozlu köpeklerde kTnI düzeylerinin arttığını belirlemişlerdir. (Çakıroğlu ve ark 2009) kardiyak kTnI'nin hayvanlarda önemli bir kardiyak belirleyici olmaya aday olabileceğini bildirmektedir. (Burgener ve ark 2006) köpeklerin akut miyokardiyal hasarlarında serum kTnI (>0.29 µg/L) ve CK-MB (>2.2 µg/L) düzeylerinin önemli ölçüde yükseldiğini bildirmişlerdir. (Cummins ve Cummins 1987, rucchiuti ve ark 1998) kTnI ve kTnT markırlarının köpeklerde miyokardiyal hasarının belirlenmesinde önemli indikatör olduğunu ortaya koymuşlardır. Sunulan çalışmada Sevofluran ve İzofluran uygulamaları sonrasında elde edilen CK-MB değerlerinde; 0. saat ölçümlerinin anesteziden 12 saat sonra elde edilen ölçümler üzerinde görülen istatistiksel açıdan anlamlı bir değişiklik yaratmadığı görülmüştür (p = 0.465) ancak farklı anestezik ajanların kullanılması sebebiyle CK-MB değerlerinde farklılık oluştuğu gözlemlenmiştir (p = 0.00). Ancak Troponin değerlerinde ise herhangi bir istatistiksel farklılık hem saatler hem de anestezik maddeler arasında saptanmamıştır (p = 0.829).

Genel anestezi uygulanan hastalarda otonom sinir sistemi aracılığı ile kalp hızı, ritmi, myokard kontraktilitesi ve damar tonusunda değişiklikler olmaktadır. Kardiyovasküler komplikasyona bağlı gelişebilecek olası durumları azaltmak adına hastalardaki riskler önceden belirlenmeli ve önlem alınmalıdır. Bu kadar önemli bir konuda anestezinin hastalar için taşıdığı risk ile

getireceği yararı seçilecek anestezi ajanları ile belirlemek önemlidir. Veteriner hekimlik alanında kalp üzerine birçok çalışma yapılmıştır ancak sunulan çalışmadaki gibi farklı anestezi protokollerinin kalp üzerine etkileri daha önce araştırılmamıştır. Sağlıklı nonkardiyak köpekler de iki farklı anestezi protokolünün kardiyak etkilerini Troponin I, CK-MB, NT-proBNP ve D-Dimer değerine bakarak karşılaştırılarak veteriner hekimlik alanında sürekli kullanılan anestezi ajanlarının kalp üzerine etkileri ortaya konulmuş olup anestezi seçiminde hastalar üzerindeki risk önceden belirlenerek anestezi seçimleri ona göre yapılması sağlanmıştır.

**Fırat AŞIR**

Dicle Üniversitesi Tıp Fakültesi Histoloji- Embriyoloji ABD, Diyarbakır, Türkiye

**Amaç:** Honokiol, çeşitli mekanizmalar yoluyla anksiyolitik, analjezik, antidepresan, antitrombotik, antimikrobiyal, antispazmodik, antitümörjenik ve nöroprotektif özellikleri uygulayan poli-fenolik bir bileşiktir. Geleneksel olarak Güneydoğu Asya'nın çoğunda tıbbi uygulamalarda kullanılmıştır, ancak son zamanlarda pleiotropik etkileri nedeniyle daha geniş çapta incelenmiştir. Bu çalışmadaki amacımız gingivida oluşturulan deneysel yara modelinde irrigatör olarak verilen honokiolün gingivida meydana gelen histolojik değişimleri araştırmaktır.

**Materyal ve metod:** Tüm deney protokolü, Dicle Üniversitesi Hayvan Deneyle Yere Etik Kurulu tarafından onaylandı. 12 haftalık 48 Sprague Dawley sıçanı paslanmaz çelik kafeslerde 22±2 °C'de normal diyet ve çeşme suyu ile 12 saat aydınlık ve 12 saat karanlıkta herhangi bir kısıtlama olmaksızın beslendi. Genel anestezi altında 90 mg/kg ketaminhidroklorür ve 8 mg/kg ksilazin (kas içi) kullanılarak Povidon iyot solüsyonu ile sterilizasyon sağlandı ve sol molar bölgeden 4 mm çapında gingivida flep kaldırılarak eksizyonel yara alanı oluşturuldu. İrrigasyon ajanı olarak honokiol gingiva yara modeli oluşturulduktan sonra 1cc irrigasyon solüsyonu şeklinde uygulanmaya başlandı ve her gün aynı saatte günde bir kez 30 saniyelik uygulamalar olarak 1 hafta boyunca verildi.

**Bulgular:** Yara grubundaki bulgularımıza göre gingiva epitel hücrelerinde çekirdek kaybı ve dejenerasyon, epitel altındaki bağ doku alanlarında kollajen lif kaybı ve organizasyon bozukluğu, inflamasyon ve vasküler dilatasyon ve konjesyon izlendi. Yara+Honokiol uygulanan grupta epitel tabakasında rejenerasyon, kollajen liflerde ve ara maddede artış, inflamasyonda azalış gözlemlendi.

**Sonuç:** Gingivada oluşturulan yara histopatolojik olarak değişikliklere neden olmuştur ancak honokiol anti inflamatuvar ve diğer özellikleri yoluyla bu değişiklikleri tersine çevirmiştir.

**Anahtar kelimeler:** Gingiva, histopatoloji, honokiol, yara modeli

## EFFECT OF HONOKIOL ON HISTOPATHOLOGICAL CHANGES IN A GINGIVAL WOUND MODEL

**Objective:** Honokiol is a poly-phenolic compound exerting anxiolytic, analgesic, antidepressant, antithrombotic, antimicrobial, antispasmodic, antitumorogenic and neuroprotective properties through various mechanisms. It has traditionally been used in medicinal applications throughout much of Southeast Asia, but has recently been more widely studied for its pleiotropic effects. Our aim in this study is to investigate the histological changes in the gingiva of the honokiol given as an irrigator in the experimental wound model in which the gingiva was created.

**Material and method:** All experimental protocol was approved by Dicle University Animal Experiments Local Ethics Committee. 48 12-week-old Sprague Dawley rats were fed in stainless steel cages at  $22\pm 2$  °C with normal diet and tap water for 12 hours in light and 12 hours in darkness without any restriction. Sterilization was achieved with Povidone iodine solution using 90 mg/kg ketamine hydrochloride and 8 mg/kg xylazine (intramuscular) under general anesthesia, and an excisional wound area was created by lifting a 4 mm diameter gingival flap from the left molar region. As an irrigation agent, honokiol was started to be applied in the form of 1cc irrigation solution after the gingiva wound model was created, and it was administered as 30-second applications once a day at the same time every day for 1 week.

**Results:** According to our findings in the wound group, nuclear loss and degeneration in gingival epithelial cells, collagen fiber loss and disorganization in the sub-epithelial connective tissue areas, inflammation and vascular dilatation and congestion were observed. In the group treated with Wound+Honokiol, regeneration in the epithelial layer, increase in collagen fibers and intermediate, and decrease in inflammation were observed.

**Conclusion:** The wound created on the gingiva caused histopathological changes, but honokiol reversed these changes through its anti-inflammatory and other properties.

**Key words:** gingiva, histopathology, honokiol, wound model

## **GİRİŞ**

Dişeti yaralanmaları kimyasal,fiziksel,termal ve mikroorganizma kaynaklı olabileceği gibi travmatik nedenlere bağlı olarak ta meydana gelmektedir.Önemli olan oluşan lezyonun semptomlarını,etiyojijisini ve anamnezini iyi bilmektir.Tedavide genellikle etkenin ortadan kaldırılması ya da semptomatik tedavi uygulanır.Kalıcı dişeti kusurları meydana gelmişse periodontal plastik cerrahiye kadar varabilen uygulamalar söz konusudur.

Nedeni ne olursa olsun ağız içinde meydana gelen lezyonlar diş etini de kapsar.(1)

Diş eti ve oral mukozanın kimyasal olarak yaralanmalarında hidrojen peroksit,fenol,gümüş nitrat,sodium hipoklorit,paraformaldhit gibi kimyasallar sayılabilir.(2,3)Salisilik asit,sıcak ve soğuk fiziksel etkenler de kimyasal yaralanmalara neden olmaktadır.Tütün ürünlerinin sürekli kullanımı dişetinde lezyonlara yol açmaktadır.(4,5)

Ayrıca kokainin topikal uygulamaları da kimyasal etkenler arasındadır.(6,7)Topikal alkol kullanımı oral mukozanın ve dişeti yaralanmalarının nedenlerinden biridir. (7,8)Travmatik lezyonlar genellikle kazara gerçekleşen fiziksel yaralanmalardır.Bunlar arasında tam ölçüsünde yapılmamış takma dişler,agresif ve uygun olmayan ağız hijyeni uygulamaları(fırçalama,diş ipi),oral piercingler,derin ısırılmalar,diş tedavilerinde kullanılan aletlerin kazara yaralamaları gibi nedenler sayılabilir.(9)Özellikle çocuklarda tırnaklar ve kalem batmaları keratoz,sıyrık gibi lezyonlara neden olmaktadır.(10)

Honokiol manolya ağaçlarının kabuk ve köklerinin ekstrakte edilmesiyle elde edilen polifenol bir bileşiktir.Antioksidan, antiinflamatuvar, antioksidan, analjezik ve nöroprotektif etkiler dâhil olmak üzere birçok farmasötik özelliğe sahiptir (11,12,13,14).

Yapılan bir çalışmada honokiolun in vivo ve in vitro şeklinde incelemesi sonucunda endoplazmik retikulum (ER) stresini teşvik ettiğini, kalretikülinin azalmış ekspresyonuna ve sonrasında tümör ilerlemesini önleyerek metastazın gerilemesine katkıda bulunduğu belirtilmiştir (15).

Oral skuamöz hücreli karsinomda Honokiol uygulmasının ardından anti-proliferatif etki sergilediği ve glioblastoma hücrelerinde kanser kök hücrelerini ortadan kaldırdığı ve ilaç direncini azalttığı kanıtlanmıştır. Kanser hücrelerinin kendini yenileyebilme özelliğini azalttığı görülmüştür. Ayrıca kanser biyobelirteci olan ALDH1 VE CD44'ü aşağı doğru regüle etmiştir (16).

Bu maddenin esas olarak apoptozun indüklenmesi yoluyla birçok kanser türüne karşı antikanser etkileri vardır (17,18).

Yapılan başka bir çalışmada Honokiolden elde edilen nanopartiküllerin kanser ilacı olan fluorourasil'in toksik etkisini azalttığı tespit edilmiştir. Sistemik toksisitede belirgin bir azalma ile kanserojenler tarafından indüklenen tümörleri önemli ölçüde geriletmediği gösterilmiştir (19).

### **ARAŞTIRMA VE BULGULAR**

Tüm deney protokolü, Dicle Üniversitesi Hayvan Deneyleri Yerel Etik Kurulu tarafından onaylandı. 12 haftalık 48 Sprague Dawley sıçanı paslanmaz çelik kafeslerde  $22\pm 2$  °C'de normal diyet ve çeşme suyu ile 12 saat aydınlık ve 12 saat karanlıkta herhangi bir kısıtlama olmaksızın beslendi. Genel anestezi altında 90 mg/kg ketaminhidroklorür ve 8 mg/kg ksilazin (kas içi) kullanılarak Povidon iyot solüsyonu ile sterilizasyon sağlandı ve sol molar bölgeden 4 mm çapında gingivida flep kaldırılarak eksizyonel yara alanı oluşturuldu. İrrigasyon ajanı olarak honokiol gingiva yara modeli oluşturulduktan sonra 1cc irrigasyon solüsyonu şeklinde uygulanmaya başlandı ve her gün aynı saatte günde bir kez 30 saniyelik uygulamalar olarak 1 hafta boyunca verildi.

Yara grubundaki bulgularımıza göre gingiva epitel hücrelerinde çekirdek kaybı ve dejenerasyon, epitel altındaki bağ doku alanlarında kollajen lif kaybı ve organizasyon bozukluğu, inflamasyon ve vasküler dilatasyon ve konjesyon izlendi. Yara+Honokiol uygulanan grupta epitel tabakasında rejenerasyon, kollajen liflerde ve ara maddede artış, inflamasyonda azalış gözlemlendi.

**Yara grubu:** Diş etinin transversal kesitinde özellikle bazal membranın alt kısımlarına doğru dökülen agregat oluşturulmuş bazı dejeneratif hücre toplulukları yer almaktadır. Bununla beraber alt kısımda kollajenize yapıların bozulmuş olup arada yer yer ödem tablolarının geliştiği görüldü. Damar duvarında yırtılmayla birlikte serbest halde dağılmış eritrosit akümülyasyonu ve bunla yine küçük topluluklar şeklinde agregat oluşturmuş. Lökositler yapılar mevcut olup alt taraflara doğru geniş yağ hücreleri vakuoller yapılar dikkat çekmekteydi. Damar yapısının önemli ölçüde bozulduğu ve inflamasyonun kanamanın belirgin ölçüde arttığı görüldü.

**Yara+honokiol grubu:** Diş eti epitelinin yine transversal kesitinde parakeratinize epitel yapısının lümene doğru belirgin bir şekilde pembemsi görüldüğü alt kısımlara doğru bazal membran boyunca dizilmiş silindirik hücreler görüldü. Epitelde herhangi bir dejeneratif değişikliğe rastlanılmamakla birlikte bazı spinosum hücrelerinde vakuoler yapıların belirgin olduğu tespit edildi. Mikroskopik papillar derin olmamakla birlikte alt kısımlara doğru özellikle kollajen bantların belirgin bir demet oluşturduğu endotel yapısının damarda düzgün lümene doğru çıktığı yapıları soliter tarzda bağ doku hücrelerinin yer aldığı ancak inflamatuvar hücrelerin sayısında azalma olduğu görüldü.

## SONUÇ

Gingivada oluşturulan yara histopatolojik olarak değişikliklere neden olmuştur ancak honokiol anti inflamatuvar ve diğer özellikleri yoluyla bu değişiklikleri tersine çevirmiştir.

**Amaç:** Resveratrol, çeşitli terapötik etkileri olan bir nutrasötiktir. Kalorik kısıtlamanın etkilerini taklit ettiği, anti-inflamatuar ve anti-oksidatif etkiler uyguladığı ve çeşitli mekanizmalar yoluyla birçok hastalığın başlamasını ve ilerlemesini etkilediği gösterilmiştir. Resveratrol (3,4',5-trihidroksistilben), üzüm, yer fıstığı ve çilek gibi birçok bitkide bulunan bir fitoaleksindir. Resveratrol mikrobiyal ve mantar enfeksiyonuna karşı direnç sağlama yetenekleriyle bilinir. Bu çalışmadaki amacımız gingivida oluşturulan deneysel yara modelinde irrigatör olarak verilen resveratrolün histopatoloji üzerindeki etkisini incelemektir.

**Materyal ve metod:** Tüm deney protokolü, Dicle Üniversitesi Hayvan Deneyle Yerel Etik Kurulu tarafından onaylandı. 12 haftalık 48 Sprague Dawley sıçanı paslanmaz çelik kafeslerde 22±2 °C'de normal diyet ve çeşme suyu ile 12 saat aydınlık ve 12 saat karanlıkta herhangi bir kısıtlama olmaksızın beslendi. Genel anestezi altında 90 mg/kg ketaminhidroklorür ve 8 mg/kg ksilazin (kas içi) kullanılarak Povidon iyot solüsyonu ile sterilizasyon sağlandı ve sol molar bölgeden 4 mm çapında gingivida flep kaldırılarak eksizyonel yara alanı oluşturuldu. Irrigasyon ajanı olarak resveratrol travma oluşturulduktan sonra 1cc irrigasyon solüsyonu şeklinde uygulanmaya başlandı ve her gün aynı saatte günde bir kez 30 saniyelik uygulamalar olarak 1 hafta boyunca verildi.

**Bulgular:** Histopatoloji sonuçlarımıza göre yara oluşturulan grupta dişeti epitelinde dejenerasyon, bağ doku ara maddesinde ve kollajen liflerinde bütünlük kaybı, damarlarda dilatasyon ve konjesyon, ödem ve inflamatuvar hücre infiltrasyonu izlendi. Yara sonrası resveratrol uygulanan grupta epitel yenilenmiş, kolajen lifleri belli bir düzende yerleşmiş, inflamasyon azalmıştır

**Sonuç:** Gingival yara sonrası resveratrol doku bütünlüğünü korumuş ve antiinflamatuvar özelliği sayesinde inflamasyonu azaltmıştır.

**Anahtar kelimeler:** Gingiva, inflamasyon , resveratrol, yara modeli

**INVESTIGATION OF THE PROTECTIVE EFFECT OF RESVERATROL IN  
EXPERIMENTAL WOUND MODEL CREATED WITH GINGIVIDA**

**Objective:** Resveratrol is a nutraceutical with various therapeutic effects. It has been shown to mimic the effects of caloric restriction, exert anti-inflammatory and anti-oxidative effects, and influence the onset and progression of many diseases through a variety of mechanisms. Resveratrol (3,4',5-trihydroxystilbene) is a phytoalexin found in many plants such as grapes, peanuts, and strawberries. Resveratrol is known for its ability to provide resistance against microbial and fungal infection. Our aim in this study is to examine the effect of resveratrol given as an irrigator on histopathology in an experimental wound model created on the gingiva.

**Material and method:** All experimental protocol was approved by Dicle University Animal Experiments Local Ethics Committee. 48 12-week-old Sprague Dawley rats were fed in stainless steel cages at  $22\pm 2$  °C with normal diet and tap water for 12 hours in light and 12 hours in darkness without any restriction. Sterilization was achieved with Povidone iodine solution using 90 mg/kg ketamine hydrochloride and 8 mg/kg xylazine (intramuscular) under general anesthesia, and an excisional wound area was created by lifting a 4 mm diameter gingival flap from the left molar region. As an irrigation agent, resveratrol was started to be applied in the form of 1cc irrigation solution after trauma was created, and it was given as 30-second applications once a day at the same time every day for 1 week.

**Results:** According to our histopathology results, degeneration of the gingival epithelium, loss of integrity in the connective tissue intermediate and collagen fibers, dilatation and congestion in the vessels, edema and inflammatory cell infiltration were observed in the wound group. In the post-wound resveratrol group, the epithelium was renewed, the collagen fibers were arranged in a certain order, and the inflammation decreased.

**Conclusion:** Resveratrol preserved tissue integrity after gingival wound and reduced inflammation thanks to its anti-inflammatory properties.

**Keywords:** Gingiva, inflammation, resveratrol, wound model.

## **GİRİŞ**

1999’da Dünya Çalıştayında diş eti hastalıkları travmatik,termal,kimyasal ve fiziksel nedenler başlıkları altında sınıflandırılmıştır.Oral mukozada meydana gelen geniş termal yanıklar özellikle sıcak içeceklerden kaynaklanmaktadır.Kimyasal yanıklardan ise prifosfatlar, deterjanlar, tütün gibi maddeler sorumlu tutulmuştur(1).Diş etindeki fiziksel yaralanmalar A,B ve C olmak üzere üç katagoriye ayrılmıştır.A tipi fiziksel yaralanmada önceden var olan bir herpetik lezyon ya da lokalize diş eti enfeksiyonu söz konusudur.B tipi yaralanmalar parmak emme alışkanlıkları ile tırnak yemeye bağlı olan vakalardır.C tipi yaralanmalar ise psikolojik sorunlardan kaynaklanan bir durumdur(2).

Gingivada meydana gelen artefaktlar ise iki grupta incelenmiştir.Bunlardan gingivitis artefakta minor şiddeti az ve lokalize bir lezyon olarak değerlendirilmektedir(3).Gingivitis major ise tekrarlanan lezyonların ya da diş fırçalama işlemlerinin sert bir şekilde uygulanmasıyla ortaya çıkan ve yaygın lezyonlara neden olan bir vakadır(4).Bu durum kadın ve çocuklarda erkeklere oranla daha sıklıkla görülmektedir(5).

Son yıllarda terapotik etkisi keşfedilmiş olan resveratrol başta üzüm olmak üzere pek çok farklı bitkide var olan doğal bir fitoaleksindir. İlk keşfi 1982 yılında kardiyoprotektif etkiler olarak belirlenmiştir.Sonraki çalışmalarda cilt kanseri için kimyasal önleyici bir ajan olarak ortaya konmasının ardından sirtuin deasetilazları aktive ettiği ve daha düşük organizmaların yaşam sürelerini uzattığına dair raporlar bildirilmiştir (6,7).

Resveratrol antioksidan mekanizmasını, oksidatif stres sonucu ortaya çıkan reaktif oksijen türlerini temizleyerek hücre zarında meydana gelen DNA hasarını ve lipid peroksidasyonu azaltarak yaptığı rapor edilmiştir (8).

Yakın zamanda yapılan çalışmada resveratrolün omurgalı bir balıkta yaşa bağlı lokomotor aktivitenin ve bilişsel performansın bozulmasını geciktirdiği ve beyindeki nörofibriler dejenerasyonu azaltarak bu hayvanların yaşam süresini max %59 oranında uzattığı ortaya konulmuştur (9).

Farelerle yapılan başka bir çalışmada resveratrolün yüksek kalori tüketen farelerin fizyolojisini standart bir diyetteki farelerinkine doğru kaydırıldığı, hayatta kalma, motor fonksiyon, insülin duyarlılığı, organ patolojisi, PGC-1 $\alpha$  aktivitesi ve mitokondriyal sayıyı düzelttiği belirtilmiştir (10).

Resveratrolün iskemi referfüzyona etkisi (11) deneysel omurilik yaralanmasında (12) kullanılmıştır. Bunun yanında kulak dermişinde intradermal enfeksiyon modeli oluşturulduktan

sonra, fotoaktive olarak resveratrol kullanılan havanların, drene olan lenf düğümünde bakteri yükünü azalttığı ve miyeloperoksidaz ekspresyonunda bir artışı desteklediği gözlemlenmiştir. Bunun yanında, fotoaktive edilmiş RSV ile tedavi edilen hayvanların drene olan lenf düğümü, IL-10 üretimi yoluyla iltihabı kontrol edilerek antimikrobiyal etkinliği ortaya konulmuştur (13). Ayrıca güçlü antioksidan (14), anti-inflamatuar , anti-kanserojenik etkisi, östrojenik aktivitesi birçok çalışmada ortaya konulmuştur (15,16).

Başka bir çalışmada, ratların tibialarında deneysel olarak oluşturulan kemik defektlerine resveratrolün sistemik olarak, dental pulpa kaynaklı mezenkimal kök hücrelerle birlikte uygulanmasının yeni kemik oluşumu üzerine olan etkilerinin immünohistokimyasal yöntemlerle incelenmiştir. İzole resveratrol ve izole dental pulpa kaynaklı mezenkimal kök hücre uygulamasının oluşturulan defekt sonrası kemik gelişimini kısmen uyardığı ve yeni kemik trabeküllerinin gelişimini desteklediği izlenmiştir (17).

#### **ARAŞTIRMA VE BULGULAR**

Tüm deney protokolü, Dicle Üniversitesi Hayvan Deneyleri Yerel Etik Kurulu tarafından onaylandı. 12 haftalık 48 Sprague Dawley sıçanı paslanmaz çelik kafeslerde 22±2 °C'de normal diyet ve çeşme suyu ile 12 saat aydınlık ve 12 saat karanlıkta herhangi bir kısıtlama olmaksızın beslendi. Genel anestezi altında 90 mg/kg ketaminhidroklorür ve 8 mg/kg ksilazin (kas içi) kullanılarak Povidon iyot solüsyonu ile sterilizasyon sağlandı ve sol molar bölgeden 4 mm çapında gingivida flep kaldırılarak eksizyonel yara alanı oluşturuldu. İrrigasyon ajanı olarak resveratrol travma oluşturulduktan sonra 1cc irrigasyon solüsyonu şeklinde uygulanmaya başlandı ve her gün aynı saatte günde bir kez 30 saniyelik uygulamalar olarak 1 hafta boyunca verildi.

Histopatoloji sonuçlarımıza göre yara oluşturulan grupta dişeti epitelinde dejenerasyon, bağ doku ara maddesinde ve kollajen liflerinde bütünlük kaybı, damarlarda dilatasyon ve konjesyon, ödem ve inflammatuar hücre infiltrasyonu izlendi. Yara sonrası resveratrol uygulanan grupta epitel yenilenmiş, kolajen lifleri belli bir düzende yerleşmiş, inflamasyon azalmıştır

**Yara grubu:** Diş eti ve alveol kemik bölgesindeki bağlantı alanında kan damarlarında belirgin dilatasyon ve konjesyon görüldü. Kan damarı etrafında yer yer kollajen dejenerasyonları ve ara kısımlarda yer yer ödem tabloları görüldü. Bununla beraber epitel kısmında diş epitelinde yer yer dejeneratif özellikle bazal membran hizasında dejeneratif görüntülere rastlanıldı. Genelde ara kısımlarda yer yer inflamasyonların soliter tarzda dağıldığı gözlemlendi.

**Yara+resveratrol:** Oral kavitenin transversal kesitinde diş eti epitelinde parakeratize tablonun belirgin olduğu görüldü. Mikroskopik papillaların derinlik kazanmasıyla birlikte bazal hücrelerin silindirik ya da prizmatik görünümlü olduğu görüldü. Kollajen bağlantıları demet şeklinde yer almıştır. Damar yapıları düzenli endotelde değişiklik görülmemekle birlikte lifsel yapı ve ara maddenin belirgin olduğu bir lamina propria kısmı yer almaktadır.

## **SONUÇ**

Gingival yara sonrası resveratrol doku bütünlüğünü korumuş ve antiinflamatuvar özelliği sayesinde inflamasyonu azaltmıştır

### ÖZET

Kedi ve köpek dahil olmak üzere birçok memeli türünde hemolitik anemiye sebep olan hemotropik mikoplazmalar (hemoplazma), Gram negatif, küçük, pleomorfik morfolojiye sahip ve eritrosit yüzeyine tutunabilen mikroorganizmalardır. Daha önce *Haemobartonella* spp. ve *Eperythrozoon* spp. olarak bilinen etkenler, *Rickettsiales* dizisinden çıkarılıp *Mollicutes* dizisi içinde yeniden sınıflandırılmıştır. *Mycoplasma (M.) haemofelis*, *Candidatus M. turicensis* ve *Candidatus M. haemominutum* kedilerde enfeksiyöz anemiye neden olmaktadır. Kedilerde hastalığa neden olan hemoplazmalar arasında virülensi en yüksek türün *M. haemofelis* olduğu bildirilmektedir. Hastalığın bulaşmasında kan emen eklem bacaklılar önemli rol oynamaktadır. Enfekte hayvanlarda hemolitik anemi, ateş, anoreksi, dehidratasyon, durgunluk gibi klinik bulgular gözlemlenir. Akut olgular ölümle sonuçlanabilmektedir. Virülensi düşük etkenlerle enfekte hayvanlarda ise klinik bulgular görülmeyebilir. Hemoplazmaların mikroskopik teşhisinde şüpheli hayvanların kan frotileri Romanowsky boyama yöntemiyle boyanarak incelenmektedir. Ancak bu yöntemle hemoplazma etkenleri Howell-Jolly cisimcikleri ile karıştırılabilmekte ve türler arası ayırım yapılamamaktadır. Bu nedenlerden dolayı hemotropik mikoplazmaların teşhisinde 16S r RNA gen analizine dayalı kantitatif real-time PCR yöntemi tercih edilmektedir. Bununla birlikte etkenlerin teşhisinde Western immunoblot ve immunofluoresan gibi serolojik test yöntemlerinden de faydalanılmaktadır. Kedi enfeksiyöz anemisinin tedavisinde doksisisiklin, enrofloksasin ve marbofloksasin gibi antimikrobiyal maddeler kullanılabilir. Ayrıca kesin teşhis koyulamayan olgularda antimikrobiyal terapi ile birlikte prednizolon kullanımı da önerilmektedir. Sistemik lupus eritematosusa sahip insanların kan örneklerinde hemoplazma benzeri mikroorganizmaların bulunması bu etkenlerin zoonotik özelliklerinin araştırılması gerektiği gerçeğini ortaya koymaktadır.

**Anahtar kelimeler:** Hemotropik mikoplazma, *M. haemofelis*, *Candidatus M. haemominutum*, *Candidatus M. turicensis*

## HEMOPLASMAS AND FELINE INFECTIOUS ANEMIA

### ABSTRACT

Hemotropic mycoplasmas (hemoplasmas) that can cause haemolytic anemia in a wide range of mammalian species including cat and dog, are Gram negative, small, pleomorphic microorganisms attached to erythrocyte surface. These agents known as *Haemobartonella* spp. and *Eperythrozoon* spp. were excluded from *Rickettsiales* and reclassified in *Mollicutes*. *Mycoplasma (M.) haemofelis*, *Candidatus M. turicensis* ve *Candidatus M. haemominutum* cause infectious anemia in cats. It is reported that *M. haemofelis* is the most virulent species among the feline hemoplasmas. Arthropod vectors play important role in terms of transmission of infection. Clinical findings such as hemolytic anemia, fever, anorexia, dehydration and stagnation can be observed in infected animals. Acute cases can result in death. Clinical signs might not be observed in animals infected with low-virulent species. Blood smears of infected animals are examined by staining with Romanowsky method for the microscopic diagnosis of hemoplasmas. But, with this method, Howell-Jolly bodies can be identified as hemotropic mycoplasmas and the species can not be distinguish from each other. Because of these reasons, quantitative real-time PCR method based on the amplification of 16S r RNA sequence is preferred for the diagnosis of hemotropic mycoplasmas. In addition, serological test methods such as Western immunoblot and immunofluorescence are also used for the diagnosis of the agents. Antimicrobial agents such as doxycycline, enrofloxacin and marbofloxacin can be used in the treatment of feline infectious anemia. Also, the use of prednisolone together with antimicrobial therapy is recommended in cases that a definitive diagnosis can not be achieved. The presence of hemoplasma-like microorganisms in the blood samples of people with systemic lupus erythematosus reveals the fact that the zoonotic properties of these agents should be investigated.

**Keywords:** Hemotropic mycoplasma, *M. haemofelis*, *Candidatus M. haemominutum*, *Candidatus M. turicensis*

## 1. GİRİŞ

Daha önce *Haemobartonella* (*H.*) ve *Eperythrozoon* (*E.*) spp. olarak bilinen hemotropik mikoplazmalar küçük, pleomorfik, Gram negatif boyanma özelliğine sahip, *in vitro* kültürleri yapılamayan mikroorganizmalardır. Çomak biçimli, küresel veya yüzük şeklinde olabildikleri gibi bireysel ya da zincirler halinde birçok omurgalı hayvanın eritrositlerinin yüzeyinde bulunurlar. *Eperythrozoon* türleri daha sık olarak plazmada serbest halde ve yüzük formunda bulunurlar (Messick, 2004).

Farelerde (*E. coccoides*) ve köpeklerde (*H. canis*) kan parazitleri ilk defa 1928 yılında Almanya’da gözlenmiştir (Alder ve Ellenbogen, 1934). Bundan yaklaşık 6 ay sonra aynı araştırmacılar Filistin’de anemik sığırlarda benzer paraziter bulguları rapor etmişlerdir. 1930’lu yılların başında domuzlarda sarılık ve anemi ile karakterize *Eperythrozoon* enfeksiyonları ilk olarak Amerika’da fark edilmiştir. 1941 yılında, Lotze ve Yiengst Amerika’da bir sığırdaki *E. wenyonii* enfeksiyonunu rapor etmiş ve bundan kısa bir süre sonra Jensen (1943) yerli Louisiana koyunlarında yaygın bir kan paraziti olan *E. ovis*’i bildirmiştir. Daha sonra, *H. felis*’in kedilerin bulaşıcı hastalığı olan kedi enfeksiyöz anemisine neden olduğu bildirilmiştir (Flint ve Moss, 1953). Amerika Birleşik Devletleri’nde 1935’li yılların başında köpeklerde sporadik heamobartonellosis vakaları bildirilmiş (Knutti ve Hawkins, 1935; McNaught vd., 1935) ve 1959 yılında Benjamin ve Lumb tarafından yayınlanan bir raporda da köpeklerde benzer bir hastalık tanımlanmıştır.

Enfeksiyöz anemiye neden olan bu patojenler birçok memeli hayvanda enfeksiyona neden olabilmektedir. *Eperythrozoon* türlerine domuzlarda (*E. suis* ve *E. parvum*) (Henry, 1979; Uilenberg vd., 1981 ), koyun ve keçilerde (*E. ovis*) (Sheriff vd., 1966; Harbutt vd., 1969), sığırlarda (*E. wenyonii*, *E. teganodes* ve *E. tumoi*) (Sutton vd., 1977; Messick, 2004), farelerde (*E. coccoides*) (Messick, 2004) ve yarasalarda (*E. mariboi*) (Ewers vd., 1971) rastlanmıştır. *Haemobartonella* enfeksiyonları da köpeklerde (*H. canis*) (Benjamin ve Lumb, 1959; Donovan ve Loeb, 1960), ratlarda (*H. muris*) (Elko ve Cantrell, 1968), maymunlarda (Peters vd., 1974) ve insanlarda (Ristic ve Kreier, 1979; Archer vd., 1980) rapor edilmiştir.

Kedilerde iki *Haemobartonella* türü tanımlanmış olup, Ohio mikroorganizması olarak bilinen *H. felis*’in büyük formu kedi enfeksiyöz anemisine neden olurken, küçük formu olarak bilinen Kaliforniya mikroorganizmasının düşük virulense sahip olduğu bildirilmiştir (Foley vd., 1998; Berent vd., 2000).

*Haemobartonella* ve *Eperythrozoon* türlerine yönelik moleküler genetik yöntemler ile yapılan filogenetik ve taksonomik çalışmalar sonucunda her iki bakteri cinsi içindeki türlerin *Mycoplasma* cinsi içinde sınıflandırılması önerilmiştir (Messick, 2004; Willi vd., 2007; Barker ve Tasker, 2013).

## **2. HEMOPLAZMALAR**

### **2.1. Sınıflandırma**

*Rickettsiales* dizisi içinde değerlendirilen mikroorganizmalar, 1993 yılına kadar *Bartonellaceae*, *Rickettsiaceae*, ve *Anaplasmatacea* olmak üzere 3 ayrı ailede sınıflandırılmıştır (Messick, 2004). *Haemobartonella* ve *Eperythrozoon* türleri morfolojik olarak küçük olmaları, kan emen eklembacaklılar aracılığı ile bulaşmaları, Gram negatif boyanmaları dikkate alınarak *Anaplasmatacea* ailesine dahil edilmişlerdir. *Haemobartonella* ve *Eperythrozoon* türlerinin bu özelliklerine rağmen hücre duvarı ve flagellaya sahip olmamaları, intrasellüler olmamaları, penisilin ve türevlerine dirençli; tetrasiklinlere duyarlı olmaları nedeniyle Riketsiyal mikroorganizmalar içinde değil, daha çok Mollicutes dizisi içinde değerlendirilmesine yönelik şüpheler bulunmaktaydı (Willi vd., 2007). Buna bağlı olarak 1997 yılında *Haemobartonella* ve *Eperythrozoon* türlerinin 16 S rRNA genleri ilk kez polimeraz zincir reaksiyonu (PCR) ile amplifiye edilmiş ve sekans analizi yapılmıştır (Rikihiş vd., 1997). Yapılan çalışmalar sonucunda *Haemobartonella* ve *Eperythrozoon* türlerinin *Mycoplasma* cinsi ile filogenetik benzerliklerinin yansıtılması için taksonomik sınıflandırmanın değiştirilmesi ve tam olarak tanımlanamayan suşlara *Candidatus* ön ismi verilmesi önerilmiştir (Neimark ve Kocan, 1997; Neimark vd., 2002).

Bu doğrultuda *H. felis* suşlarının büyük formu (Ohio mikroorganizması) ile *H. muris* (ratlarda) ve *H. canis* suşları *Mycoplasma* cinsi içinde sırasıyla *Mycoplasma (M.) haemofelis*, *M. haemomuris* ve *M. haemocanis* olarak yeniden sınıflandırılmıştır (Rikihiş vd., 1997; Messick vd., 2002). *H. felis* suşlarının küçük formu (Kaliforniya mikroorganizması) ile kemirgen ve alpakadan izole edilen ve tam olarak tanımlanamayan yeni hemotropik mikoplazma suşları da *Candidatus M. haemominutum*, *Candidatus M. haemodidelphis* ve *Candidatus M. haemolamae* olarak tanımlanmıştır (Neimark vd., 2001; Foley ve Pedersen, 2001; Messick vd., 2002,).

### **2.2. Morfoloji**

Daha önce yapılan bir çalışmada *H. muris*'in transmisyon elektron mikroskopik özellikleri *E. coccoides* ve *M. pulmonis* ile karşılaştırılmış (Tanaka vd., 1965) ve morfolojik özellikleri

birbirine benzeyen *H. muris* ve *E. coccoides* türleri hücre duvarı olmayan, yuvarlak ve 350-700 nm çapında çekirdeksiz hücreler olarak tanımlanmıştır. *M. pulmonis* ise şekil ve büyüklük olarak daha pleomorfik olup, diğer morfolojik özellikleri *H. muris* ve *E. coccoides* ile benzerlik göstermektedir (Messick, 2004). *H. felis*, *H. canis*, *E. ovis*, *E. wenyonii* ve *E. suis* türlerinin ışık ve transmisyon elektron mikroskopik özellikleri incelendiğinde ise bu mikroorganizmaların yapısal özelliklerinin önemli ölçüde benzerlik gösterdiği bildirilmiştir (Messick vd., 2000). Bu mikroorganizmaların sitoplazmalarında çekirdek bulunmamakla birlikte küçük granüller ve birkaç filamentöz yapının tespit edildiği rapor edilmiştir. Eritrositlerin yüzeyine tutunabilen hemoplazmalar hücre içine penetre olamazlar ve eritrositlerin yüzeyindeki çöküntülerde ve derin katlanma bölgelerine yerleşirler. Hemoplazmaların eritrosit yüzeyinde yerleştikleri bölgede, etken ve eritrosit arasında 15-25 nm'lik açık bir bölge, etkeni eritrosit yüzeyinden ayırmakta ve etkenin hassas fibrilleri, bu bölge boyunca uzanarak etkenin konakçı eritrositlerine tutunmasını sağlamaktadır (Messick, 2004).

### **2.3. Konak Hücreye Adhezyon**

Mikoplazmalar hayvanlarda ve insanlarda ürogenital epitel hücrelerine ve solunum sistemi epitel hücrelerine tutunarak enfeksiyon oluşturmaktadırlar (Kirchhoff vd., 1984). Bu tutunma işlemini adezin ve yüzey proteinlerinden oluşan özel bir uç organeli bulunan bir eklenti sayesinde yapabilmektedirler. Benzer uç yapılara sahip olan hemoplazmalar, mikoplazmalardan farklı olarak eritrosit yüzeyine tam anlamıyla tutunabilmektedir. Hemoplazmalar bu özellikleri ile ilişkili genlere ve proteinlere sahip olabilir veya hemoplazmalarda alternatif bir yüzey parazitizm mekanizmasının gelişmiş olabileceği düşünülmektedir (Messick, 2004).

### **2.4. Genomik Özellikleri**

Hemoplazmalar, amino asit, yağ asidi, kolesterol ve vitamin gereksinimleri açısından konakçı hücreye bağımlı mikroorganizmalardır (Miles, 1992). Hemoplazmalar 0.3-0.6 µm büyüklük ve 745 kb'lık küçük bir genoma sahip, teorik olarak bölünebilen en küçük mikroorganizmalar arasında yer almaktadır (Messick vd., 2000). Hemoplazma DNA'sı sirküler yapıda, çift sarmallı moleküller olup, hücrenin replikasyon, transkripsiyon ve protein sentezi için gerekli genetik bilgileri taşımaktadır. Bu mikroorganizmalar ayrıca protein sentezini sağlayan ribozom ve sitoplazmayı dış çevreden ayıran tek katlı hücre zarına da sahiptir (Berent ve Messick, 2003).

### **3. FELİN ENFEKSİYÖZ ANEMİ**

#### **3.1. Etiyoloji**

*M. haemofelis*, *Candidatus M. haemominutum* ve *Candidatus M. turicensis* evcil ve yabani kedigillerde enfeksiyöz anemiye neden olan hemoplazma türleridir.

#### **3.2. Epidemiyoloji ve Patobiyoloji**

##### **3.2.1. Prevalans**

Evcil kedilerde PCR yöntemi ile yapılan çalışmalarda bu güne kadar *M. haemofelis*, *Candidatus M. haemominutum* enfeksiyonları ve *Candidatus M. turicensis* enfeksiyonları İsviçre, İngiltere, ABD, Güney Afrika, Japonya, Yeni Zelandada, Kanada ve Avustralya'da rapor edilmiştir (Willi vd., 2006a; Willi vd., 2006b; Barker ve Tasker, 2013). Kedilerde hemoplazma enfeksiyonlarına yönelik PCR tabanlı prevalans çalışmalarında *Candidatus M. haemominutum* prevalansının (%8.1 - %46.7), *Candidatus M. turicensis* (%0.1-%26.1) ve *M. haemofelis*'den (%0.6-%21.7) daha yüksek bulunduğu bildirilmiştir. Ayrıca hemoplazma DNA'sı tespit edilen hayvanların genellikle birden fazla felin hemoplazma türü ile enfekte olduğu belirlenmiştir (Barker ve Tasker, 2013).

##### **3.2.2. Bulaşma, taşıyıcı ve rezervuarlar**

Feline hemoplazmalar deneysel koşullarda enfekte taze kanın, deri altı, damar içi veya peritoneal yolla verilmesi suretiyle iatrojenik yolla bulaşabilmektedir. Enfekte kanın oral yolla verilmesi durumunda bulaşmanın başarısızlıkla sonuçlandığı bildirilmiştir (Flint vd., 1958; Willi vd., 2006a; Museux vd., 2009; Sykes, 2010). İsviçre'de yapılan bir çalışmada hayvanlardan direkt toplanan bazı *Ixodes* sp. ve *Rhipicephalus* spp. türleri felin hemoplazma DNA'sı yönünden pozitif bulunurken (Willi vd., 2007), Japonya'da yapılan bir çalışmada kan emmemiş *Ixodes ovatus* kenelerinde *Candidatus M. haemominutum* DNA'sı bulunduğu rapor edilmiştir (Taroura vd., 2005). Ayrıca kedilerden toplanan pirelerde (*Ctenocephalides felis*) ve pire dışkısında *Candidatus M. haemominutum* ve *M. haemofelis* DNA'sı tespit edilmiştir (Lappin vd., 2006; Shaw vd., 2004). Deneysel olarak *Candidatus M. turicensis* ve *Candidatus M. haemominutum* ile enfekte edilen kedilerin tükürük ve tükürük bezi örneklerinde hemoplazma DNA'sı saptandığı rapor edilmiştir (Willi vd., 2007). Kedi hemoplazmalarında anneden yavruya vertikal bulaşma da bildirilmiş, fakat bu hipotezi destekleyen deneysel bir veri henüz yayınlanmamıştır (Harvey ve Gaskin, 1977).

### 3.2.3. Patojenite

Kedilerde hemolitik anemiye sebep olan kedi hemoplazmaları, *M. haemofelis*, *Candidatus M. turicensis* ve *Candidatus M. haemominutum* türlerini içermektedir (Peters vd., 2008; Rosenqvist vd., 2016) ve enfeksiyon, kırmızı kan hücrelerine bu etkenlerin yapışıp bağlanması sonucunda meydana gelmektedir. *M. haemofelis*, feline hemoplazma türleri arasında en patojenik türdür (Tasker vd., 2003b; 2009). *M. haemofelis* ile enfekte olan kedilerde çoğunlukla şiddetli anemi ve hemoliz meydana gelirken, *Candidatus M. turicensis* ve *Candidatus M. haemominutum* ile enfekte olan kedilerde immunsupresyon dışında, genellikle klinik anemi oluşmaması ile birlikte, eritrosit parametrelerinde azalma görülmektedir. Bununla birlikte anemi belirtileri özellikle *Candidatus M. haemominutum* ve *Candidatus M. turicensis* enfeksiyonlarında ortak olarak bildirilmiştir (Hornok vd., 2008; Do vd., 2020). Bu nedenle bireysel olgularda anemi belirtileri ile bu etkenlerin ayırt edici teşhisi yapılamamaktadır (Willi vd., 2006b). Deneysel olarak intravenöz yolla *M. haemofelis* ile enfekte edilen kedilerde kanda hemoplazma sayısı hızlı bir şekilde artmakta ve enfeksiyondan yaklaşık 2-4 hafta sonra en üst düzeye ulaşmaktadır (Barker ve Tasker, 2013). *M. haemofelis* enfeksiyonlarının aksine *Candidatus M. haemominutum* ve *Candidatus M. turicensis* ile enfekte kedilerin kanında mikroorganizma sayısında zamanla meydana gelebilecek değişikliklerin daha az gözlemlendiği ileri sürülmüştür (Tasker vd., 2009). Retrovirus enfeksiyonlarının (Feline immunodeficiency virüsü (FIV) ve kedi lösemi virüsü (FeLV) ) hemoplazma enfeksiyonları için predispoze faktör olduğu ve hastalığın şiddetini arttırdığı rapor edilmiş (Bobade vd., 1988; Harrus vd., 2002; Bergmann vd., 2017) hatta yapılan retrospektif çalışmalarda FeLV enfeksiyonunun *M. haemofelis* ile enfekte olma riskini arttırdığı ve bu iki etkenin birlikte meydana getirdiği enfeksiyonlarda daha şiddetli anemi olgusunun meydana geldiği bildirilmiştir (George vd., 2002).

### 3.2.4. Klinik Bulgular

Hemoplazmalar vertebralı konakçılarda akut hemolitik anemi ve kronik hastalığa neden olabilmektedir. Konakçının duyarlılığına bağlı olarak hastalık asemptomatik olabilir veya öldürücü seyredebilir. Yaş, geçirilmekte olan diğer enfeksiyonlar, immunsupresyon ya da splenektomi yapılması hayvanları akut enfeksiyonlara karşı predispoze kılabilir (Messick, 2004). Kedilerde hem doğal hem de deneysel enfeksiyonlarda görülen başlıca bulgular durgunluk, anoreksi, ateş ve anemidir. Buna karşın *Candidatus M. haemominutum* gibi daha küçük hemoplazmalar ile deneysel enfekte edilen sağlıklı kedilerde akut hastalıkla ilgili olarak minimal düzeyde klinik belirtiler gözlenmiştir (Foley vd., 1998). Ayrıca,

enfeksiyonun bulaşma yolu ve maruz kalınan doz enfeksiyonun şiddetinde etkili olabilmektedir (Messick, 2004).

### **3.3. Teşhis**

#### **3.3.1. Mikroskopik**

Hemoplazmaların *in-vitro* olarak kültürleri yapılmamaktadır (Rosenqvist vd., 2016; Kamyngird vd., 2021). Etkenler, kan frotilerinin Romanowsky boyama yöntemi ile boyanması sonucunda kokoid formda görülmeleri ile teşhis edilmektedirler. Ancak bu yöntem ile görülen formlar Howell-Jolly cisimcikleri ile karıştırılabilmektedir (Tasker ve Lappin, 2002; Tasker vd., 2003a). Ayrıca *Candidatus M. haemominutum* ile *M. haemofelis*'in birbirinden ayırımının güç olması ve *Candidatus M. turicensis*'in mikroskopik olarak tespit edilememesi nedeniyle hemoplazmaların teşhisinde güvenilir bir yöntem olarak görülmemektedir (Willi vd., 2007).

#### **3.3.2. Moleküler ve genetik yöntemler**

PCR günümüzde hemoplazma etkenlerinin teşhisinde tercih edilen bir yöntemdir. Günümüzde kullanılan tüm PCR analizleri 16 S rRNA gen analizine dayalı olarak yapılmaktadır. Bu yöntemle EDTA katılmış kan örneklerinden veya enfekte hayvanların doku örneklerinden hedef olarak seçilen spesifik genlerin amplifikasyonu gerçekleştirilmektedir (Willi vd., 2007). Kedigillerde *M. haemofelis* ve *Candidatus M. haemominutum* tespitine yönelik konvansiyonel PCR yöntemleri geliştirilmiştir (Berent vd., 1998; Jensen vd., 2001; Criado-Fornelio vd., 2003). Fakat bu yöntemlerle *Candidatus M. turicensis* amplifiye edilememiş ve *M. haemofelis*' den ayırt edilememiştir (Willi vd., 2007). Bu nedenle bu üç hemoplazma türünü birbirinden ayırt etmek için kantitatif real-time PCR yöntemi geliştirilmiştir (Tasker vd., 2003b; Willi vd., 2005; Willi vd., 2006a). Bu yöntem hastaların kanındaki hemoplazma miktarının belirlenerek enfeksiyonun önemi ve hastaya uygulanan antibiyotik sağaltımının etkinliğinin değerlendirilmesinde yardımcı olabilmektedir (Willi vd., 2007).

#### **3.3.3. Serolojik testler**

Hemoplazma etkenlerinin *in-vitro* kültürlerinin yapılamaması ve bu sebeple antijenlerin deneysel yollarla üretilmesi (Wolf-Jackel vd., 2010) nedeniyle hastalığın indirekt teşhisine yönelik spesifik proteinlerin kullanıldığı serolojik testler geliştirilememiştir. Ancak, hastalığın serolojik teşhisi için Western immunoblot ve immunofluoresan yöntemi kullanılmıştır. Serolojik testler özellikle hemoplazma enfeksiyonunun izlenmesinde ve antibiyotikle tedavi edilen kedilerde tedavinin etkinliğinin değerlendirilmesinde yararlı olabilmektedir (Foley vd.,

1998; Alleman vd., 1999; Novacco vd., 2012). Son yıllarda hemoplazma enfeksiyonlarına yönelik yapılan genetik çalışmalar, rekombinant *M. haemofelis* DnaK antijeninin (ısı şok protein 70) kullanıldığı ELISA testinin geliştirilmesini sağlamıştır (Barker ve Tasker, 2013). Kedilerde yapılan deneysel çalışmalarda *M. haemofelis* r-DnaK antijeni, *M. haemofelis*, *Candidatus M. haemominutum*'a karşı oluşan humoral immun yanıtın tespiti ve karakterizasyonu amacıyla Western blot ve ELISA testlerinde kullanılmıştır (Barker vd., 2010; Wolf-Jackel vd., 2010; Navacco vd., 2012; Wolf-Jackel vd., 2012).

### 3.3.4. Sağlıkım ve koruma

Enfeksiyonun tedavisinde kullanılan marbofloksasin, doksisisiklin ve enrofloksasin gibi antibiyotikler her ne kadar enfekte kedilerin kanında bulunan mikroorganizmaların sayısını ve klinik belirtileri azalttığı görülsede (Berent vd.,1998; Dowers vd., 2002; Foley vd., 1998; Tasker vd., 2006a,b) henüz enfeksiyonu tam olarak ortadan kaldıran uygun antibiyotik tedavisi bulunmamıştır. Ayrıca yapılan çalışmalar üç kedi hemoplazması arasında antibiyotiklere verilen yanıt açısından farklılıklar olduğunu ileri sürmektedir (Tasker vd., 2006a,b; Willi vd., 2006a). *M. haemofelis* ve *Candidatus M. hemominutum* etkenleri üzerinde yapılan çalışmalar neticesinde 4 hafta boyunca günde 2 mg/kg oral olarak uygulanan marbofloksasinin, *M. haemofelis* ile enfekte olan kedilerin kanındaki bakteri sayısını azalttığı ve tedaviden sonra aralıklı negatif sonuçların alındığı, ancak *Candidatus M. hemominutum* ile enfekte olan kedilerde etkinin daha az olduğu bildirilmiştir (Willi vd., 2007; Baumann vd., 2013). Deneysel olarak enfekte olmuş kedilere günlük 5 mg/kg oral yolla verilen enrofloksasinin klinik olarak iyileşme sağladığı ve kanda bulunan mikroorganizma sayısında da azalma olduğu tespit edilmiştir. Ancak hayvanlarda akut körlük ve retina dejenerasyonu meydana getirebileceğinden günlük verilen dozun 5 mg/kg üzerinde olması tavsiye edilmemektedir (Dowers vd., 2002; Tasker vd., 2004). Kedi ve köpeklere oral olarak verilen doksisisiklinin tedavi sonrasında özofagus darlıkları ve özofajitise neden olduğu (McGrotty ve Knottenbelt, 2002; German vd., 2005) ve tahriş edici etkisinden dolayı ülser neden olabileceği bildirilmiştir. Ancak ülser oluşumunun tüm doksisisiklin formülasyonlarında görülmediği ve doksisisiklin hidroklorür tuzlarının oldukça asidik çözelti oluşturmasının yanında, doksisisiklin monohidrat tuzlarının daha az asidik olduğu bildirilmiş hatta kedi ve köpeklerde kullanım için macun tarzında kullanılacak formülasyonları da hazırlanmıştır (Willi vd. 2007; Baumann vd., 2013). Standart (5 mg/kg günlük oral) ve daha yüksek (10 mg/kg günlük oral) dozlarda pradofloksasin uygulanmasının *M. haemofelis* enfeksiyonunun eliminasyonunda doksisisiklinden daha etkili

olabileceği, böylece pradofloksasinin enfeksiyonun eliminasyonunun maksimize edilmesi istendiğinde veya inatçı olgularda kullanılması gerektiği ileri sürülmüştür (Dowers vd., 2009).

#### **4. SONUÇ**

Kene ve pire gibi kan emici artropodlar hemoplazmaların bulaşmasında vektör rolü oynamaktadırlar. Birçok çalışmada farklı konakçı türlerinde birbirlerine yakın hemoplazma türlerinin saptandığının bildirilmesi bu patojenlerin türler arasında bulaşmasının söz konusu olabileceğini düşündürmektedir. Sistemik lupus eritematosusa sahip insanların kan örneklerinde hemoplazma benzeri mikroorganizmaların bulunması (Kallick vd., 1972) bu etkenlerin zoonotik özelliklerinin araştırılması gerektiği gerçeğini ortaya koymaktadır.

***Nasturtium officinale* (Su Teresi) UÇUCU YAĞININ ANTIOKSİDAN ÖZELLİĞİ  
ÜZERİNE ARAŞTIRMA**

**Doç. Dr. Nurullah AKCAN (Orcid ID: 0000-0003-3960-9553)**  
Siirt Üniversitesi, Sağlık Bilimleri Fakültesi, Beslenme ve Diyetetik Bölümü

**Prof. Dr. Veysi OKUMUŞ (Orcid ID: 0000-0002-5505-2700)**  
Siirt Üniversitesi, Tıp Fakültesi, Tıbbi Biyoloji Anabilim Dalı

**ÖZET**

İnsan sağlığı sorunlarına yönelik birçok çözüm, büyük oranda çeşitli şifalı bitkilerden elde edilen fitokimyasalların zenginliğinde şifrelidir. Uçucu yağlar, belirli bitkilerden elde edilen doğal, uçucu ve aromatik yapıda sıvılar olup yağlı bir kıvama sahiptir. Bitki uçucu yağları bitkilerin çeşitli kısımlarından (kökler, çiçeklerden, tohumlardan, yapraklardan ve meyvelerden) elde edilmektedirler. Son zamanlarda, kullanımları eczacılık ve gıda endüstrinde önemli yer tutmaktadır. Avcılarına (mantarlar, böcekler vb.) karşı bitkiler evrimsel olarak uçucu yağlar gibi biyoaktif metabolitler üretmektedirler. Alkaloidler, flavonoidler, fenolik asitler, monoterenler, izoflavonlar, aldehitler, oksijenli ve oksijensiz terpen hidrokarbonları gibi bir dizi aromatik bileşen, uçucu yağların ana bileşenleri olarak bilinmektedir ve bunların çoğu basit lipofilik bileşiklerdir. Uçucu yağların antibakteriyel, antiviral, antikanser, antiparaziter, antifungal, antioksidan ve böcek öldürücü gibi biyolojik özellikleri kanıtlanmış ve bu doğal biyoaktif maddeler eski çağlardan beri insanoğluna hizmet etmektedir. Bu açıdan bitki bazlı gıda bileşenleri arasında uçucu yağlar gibi doğal bileşiklerin yapı ve işlevlerini keşfetmek ve karakterize etmekle uğraşan araştırmacıların büyük ilgisini çekmiştir. Atomik yörüngelerinde eşleşmemiş bir elektron içeren serbest radikaller memelilerde hücresel oksidasyon sonucunda meydana gelirler. Bunun sonucunda doku lezyonlarına ve sitotoksik olaylara neden olabilirler. Vücut bu zararlı etkilerden korunmak için serbest radikalleri bertaraf eden antioksidan ajanlara gereksinim duymaktadır. Bu zararlı kimyasal türlerin etkilerini kontrol etmek ve azaltmak için bitkiler tarafından antioksidan özellik gösteren sekonder metabolitler üretilmektedir. Son zamanlarda aromatik bitkilerden üretilen uçucu yağlar birçok biyolojik özelliklerinden dolayı ilgi çekmektedir. Bu amaçla yaptığımız çalışmada materyal olarak Dicle Üniversitesi Ziraat Fakültesi Tarla Bitkileri Bölümü, Tıbbi Bitkiler Koleksiyon Bahçesinde bulunan su teresi (*Nasturtium officinale*) bitki herbalarından elde edilen uçucu yağın antioksidan etkisi araştırılmıştır. *N. officinale*'den elde edilen uçucu yağın, yapılan çalışmada güçlü antioksidan aktivite gösterdiği tespit edilmiştir.

**Anahtar Kelimeler:** Antioksidan, uçucu yağ, *Nasturtium officinale*.

**RESEARCH ON THE ANTIOXIDANT PROPERTIES OF *Nasturtium officinale*  
(Watercress) ESSENTIAL OIL****ABSTRACT**

Many solutions to human health problems are cryptic in the wealth of phytochemicals, largely derived from various herbs. Essential oils are natural, volatile and aromatic liquids obtained from certain plants and have an oily consistency. Plant essential oils are obtained from various parts of plants (roots, flowers, seeds, leaves and fruits). Recently, their use has an important place in the pharmaceutical and food industry. Against their predators (fungi, insects, etc.), plants evolutionarily produce bioactive metabolites such as essential oils. A number of aromatic compounds, such as alkaloids, flavonoids, phenolic acids, monoterpenes, isoflavones, aldehydes, oxygenated and nonoxygenated terpene hydrocarbons, are known to be the main components of essential oils, and most of them are simple lipophilic compounds. The biological properties of essential oils such as antibacterial, antiviral, anticancer, antiparasitic, antifungal, antioxidant and insecticide have been proven and these natural bioactive substances have been serving mankind since ancient times. In this respect, it has attracted great interest from researchers who are interested in discovering and characterizing the structure and functions of natural compounds such as essential oils among plant-based food ingredients. Free radicals containing an unpaired electron in their atomic orbital are formed as a result of cellular oxidation in mammals. As a result, they can cause tissue lesions and cytotoxic events. The body needs antioxidant agents that scavenge free radicals in order to be protected from these harmful effects. In order to control and reduce the effects of these harmful chemical species, secondary metabolites with antioxidant properties are produced by plants. Recently, essential oils produced from aromatic plants have attracted attention due to their many biological properties. For this purpose, the antioxidant effect of the essential oil obtained from the watercress (*Nasturtium officinale*) herb in the Medicinal Plants Collection Garden of Dicle University Faculty of Agriculture, Department of Agronomy was investigated as a material. It was determined that the essential oil obtained from *N. officinale* showed strong antioxidant activity in the study.

**Keywords:** Antioxidan, essential oil, *Nasturtium officinale*.

## 1. GİRİŞ

*Nasturtium officinale* (su teresi), Avrupa'da ve Asya'nın bazı bölgelerinde yayılış gösteren çok yıllık bir bitkidir. Avrupa'da yaprak, sebzeler, otlar ve yenilebilir çiçekler sınıfında olan güvenli yenilebilir bitki olarak kabul edilmektedir. Su teresi İran ve Türkiye'nin bazı bölgelerinde salatalarda, çorbalarda taze olarak yaygın olarak tüketilmektedir. (Karami vd., 2018; Doustimotlagh vd., 2020). *N. officinale*, besinsel özellikleri bilinen, ancak keşfedilmemiş ve yaygın olarak bilinmeyen değerli biyolojik özelliklere sahip bir bitkidir (Klimek-Szczykutowicz vd., 2018). Su teresi yaprakları yaygın olarak bir gıda ürünü olarak kullanılmasının yanında, ayrıca antiinflamatuvar, idrar söktürücü, balgam söktürücü, hipoglisemik, antihipertansif, idrar yolu enfeksiyonları ve kardiyovasküler hastalıklarda ve yara iyileşmesi için sıcak kompres olarak harici olarak uygulanır. kullanılmaktadır (Amiri, 2012; Boligon vd., 2013; Shahani vd., 2016). Bu etkilerinin birçoğu zaten bilimsel olarak kanıtlanmıştır (Hadjzadeh vd., 2015; Zeb, 2015; Shahani vd., 2016; Camponogaraa vd., 2019) Geleneksel ilaçlar olarak kullanılan bitkilerin taranması, yeni biyoaktif formülasyonlar bulma şansını artırmaktadır. Etnofarmakolojik ve etnobotanik çalışmalar, şifalı bitkilerin önemli biyoaktif etkiye sahip olabileceğini göstermiştir (İseri vd., 2014). Bu amaçla, yaptığımız çalışmada *N. officinale*'den elde edilen uçucu yağın etanol ekstraktlarının in vitro antioksidan aktivitelerini incelenmiştir.

## 2. MATERYAL VE METOT

### 2.1. Bitki Materyali

30 g kuru bitki numunelerinin (*N. officinale*) uçucu yağı, bir Clevenger tipi aparat kullanılarak sürekli buhar altında 2.5 saat boyunca hidrodistilasyon yoluyla izole edildi. İzole edilen uçucu yağ, analize kadar 4°C'de uygun kapta saklandı.

### 2.2. Antioksidan Aktivite

Su teresi ekstresinin antioksidan aktivitesi, Blois yöntemi ile stabil 1,1-difenil-2-pikril hidrazil radikali (DPPH) kullanılarak ölçüldü (Blois, 1958). Her numuneye 0,5 mM DPPH eklendi. Karanlık ortamda 30 dakika inkübasyondan sonra 517 nm'de absorbans alındı ve DPPH radikalinin % inhibisyonu hesaplandı (Burali vd., 2013). Standart kontrol olarak bütihidroksianisol (BHA) kullanıldı. Ferröz iyon şelatlama aktivitesi küçük değişiklikler ile Hsu'ya göre yapılmıştır (Hsu vd., 2004).

### 3. BULGULAR VE TARTIŞMA

Bu çalışmada, su teresi ekstraktlarının antioksidan aktivitesi DPPH testi kullanılarak ölçüldü. Tüm veriler Şekil 1'de sunulmuştur. Serbest radikallerin biyolojik hasarlarda önemli bir faktör olduğu bilinmektedir ve DPPH, doğal radikallerin serbest radikal yakalama aktivitesini değerlendirmek için kullanılmıştır. Metanol, fenolik bileşenler de dahil olmak üzere antioksidan bileşenleri ekstrakte etmek için en yaygın şekilde kullanılır (Mehmod vd., 2011). Çakır'a göre metanol gibi polar organik çözücülerle elde edilen ekstraktların antioksidan aktivitesi de heksan ve kloroform gibi polar olmayan organik çözücülerle elde edilen ekstraktlardan daha yüksektir (Çakır vd., 2006). Fenolik gibi polar bileşiklerin esas olarak antioksidan aktiviteden sorumlu olduğunu önerebilir (Hossain vd., 2008; Haro vd., 2018).

Şekil 1. *N. officinale* uçucu yağının serbest radikal yakalama aktivitesi.

Su teresinin antioksidan aktivitesi, fenolik asitlerin ve ayrıca antioksidan lipo-çözünür beta-karotenin varlığına bağlanabilir. Hassimoto vd.. (2009) on sebze için  $\beta$ -karoten ağartma yöntemine göre antioksidan kapasiteyi belirlemiş, en yüksek antioksidan kapasite *N. officinale* için 9.6  $\mu$ mol BHT eşdeğer/g olarak bulunmuştur. Son yıllarda, şiddetli oksidatif strese muzdarip hastaların yaşam kalitesini iyileştirmek için antioksidan özelliklere sahip diyet bitkilerinin uygulamaları odak noktası olmuştur (Schubert vd., 2007; Boligon vd., 2009; Tung vd., 2009; Boligon vd., 2013). Serbest radikallerin katılımı, özellikle artan üretimleri, kardiyovasküler hastalıklar ve kanser de dahil olmak üzere tüm insan hastalıklarının olmasa da çoğunun özelliği. Bu nedenle, *N. officinale*, hücrel DNA, lipidler ve proteinlere serbest

radikal hasarına karşı koruma sağlayarak bu hastalıklarla mücadelede özellikle önemli olabilir.  $Fe^{2+}$  ferrozin kompleksinin absorbansı, ekstrakt tarafından doza bağlı bir şekilde erken azaltılmıştır, bu da ekstraktın şelatlama aktivitesine sahip olduğunu ve demir iyonlarını yakaladığını gösterir (Şekil 2). EDTA'nın bu koşullar altında metal yakalama etkisi pozitif kontrol olarak kullanıldı ve daha yüksek aktiviteye sahipti. Yapılan önceki bir çalışmada araştırmacılar, *N. officinale* uçucu yağının gözlemlenen  $Fe^{2+}$ -şelatlama kapasitesi, ekstrakttaki aktif bileşen(ler)in bu geçiş metali iyonu ile kararlı kompleksler oluşturabildiğini öne sürmüşlerdir (Hsu vd., 2004).

Şekil 2. *N. officinale* uçucu yağının şelatlama kabiliyeti.

#### 4. SONUÇ

Bu çalışmanın sonuçları *N. officinale* uçucu yağının in vitro olarak güçlü antioksidan aktiviteye sahip olduğunu açıkça göstermektedir. Serbest radikalleri yok etme özelliği, bu bitkinin hem bir gıda maddesi hem de geleneksel bir ilaç olarak faydalı olmasının mekanizmalarından biri olabilir. Gözlemlenen faaliyetlerden sorumlu spesifik biyoaktif bileşikleri karakterize etmek için ilave çalışmalara ihtiyaç vardır. Böylece *N. officinale*, erişilebilir bir doğal antioksidan kaynağı ve olası bir gıda takviyesi olarak görülebilir ve kullanılabilir.

**ÖZET**

Bitki alemi, çeşitli ilaçların kaynağını temsil etmektedir. Gerçekten de, antik çağlardan beri şifalı bitkiler sağlık hizmeti popülasyonunda önemli bir rol oynamakta ve çoklu ilaca dirençli mikroorganizmalarla mücadele için önemli bir yeni antimikrobiyal ilaç kaynağını temsil etme potansiyeline sahiptir. Bu yeni antimikrobiyal ajanlar, şifalı bitki özleri ve uçucu yağlarda saklı olabilir. Uçucu yağlar, tohumlar, kökler, gövdeler, ağaç kabuğu, meyveler, çiçekler ve yapraklar olmak üzere farklı bitki kısımlarından çeşitli ekstraksiyon metotlarıyla elde edilmektedirler. Uçucu yağlar temel olarak fitokimyasallardan oluşan ve anti-kanser, anti-viral, anti-spazmodik, anti-bakteriyel, anti-diyabetik, antioksidatif özellikler gösteren doğal biyoaktif bileşiklerdir. Uçucu yağlar önemli oranda izoprenoid bileşikler içeren ve sadece organik çözücüler içinde ayrışabilen oldukça karmaşık bileşiklerdir. Yüksek moleküler reaktiviteleri terpenler, alkaloidler ve fenoller gibi içerdikleri düşük moleküler ağırlıklı maddelerden kaynaklanmaktadır. Ayrıca çeşitli özelliklerine göre uçucu yağlar farmasötik, kozmetik, parfüm veya aroma olarak çeşitli uygulamalara sahiptir. Doğal beslenmeye yönelik artan güçlü talep, kronik ve dejeneratif hastalıkların önlenmesini sağlayan çok çeşitli bitki türlerinden elde edilen uçucu yağların gıda koruyucuları olarak kullanılması gıda endüstrisinin dikkatini çekmiştir. Yaptığımız çalışmada, *Hyssopus officinalis* L. (Çördük otu) bitkisinden elde edilen uçucu yağın antimikrobiyal etkisini incelemek amacıyla farklı konsantrasyonlarda ve inkübasyon sürelerinde üç Gram pozitif (*Enterococcus hirae* ATCC 10541, *Bacillus cereus* ve *Staphylococcus aureus* ATCC 6538) ve üç Gram negatif (*Pseudomonas aeruginosa* ATCC 9027, *Escherichia coli* ATCC 10536 ve *Legionella pneumophila* ATCC 33152) olmak üzere altı patojen mikroorganizmaya karşı etkisine bakıldı. Elde edilen sonuçlara göre konsantrasyon miktarlarının artmasıyla birlikte zon çaplarında artışlar meydana gelmiştir. Elde ettiğimiz sonuçlar, gıdaların korunması için kullanılan sentetik kimyasallar yerine baharat uçucu yağlarının gıdaların korunmasında antimikrobiyal olarak kullanılabileceği fikrini desteklemektedir.

**Anahtar Kelimeler:** *Hyssopus officinalis*, uçucu yağ, antibakteriyel.

**RESEARCH ON ANTIBACTERIAL EFFECT OF *Hyssopus officinalis* L. (Hyssop grass) ESSENTIAL OIL****ABSTRACT**

The plant kingdom represents the source of various medicines. Indeed, herbs have played an important role in the healthcare population since ancient times and have the potential to represent an important source of new antimicrobial drugs to combat multidrug-resistant microorganisms. These new antimicrobial agents may be hidden in herbal extracts and essential oils. Essential oils are obtained by various extraction methods from different plant parts such as seeds, roots, stems, bark, fruits, flowers and leaves. Essential oils are natural bioactive compounds consisting mainly of phytochemicals and showing anti-cancer, anti-viral, anti-spasmodic, anti-bacterial, anti-diabetic, antioxidative properties. Essential oils are highly complex compounds that contain significant isoprenoid compounds and can only decompose in organic solvents. Their high molecular reactivity is due to the low molecular weight substances they contain such as terpenes, alkaloids and phenols. In addition, according to their various properties, essential oils have various applications as pharmaceuticals, cosmetics, perfumes or aromas. The growing strong demand for natural nutrition and the use of essential oils from a wide variety of plant species as food preservatives have attracted the attention of the food industry. In our study, in order to examine the antimicrobial effect of the essential oil obtained from the *Hyssopus officinalis* (hyssop grass) plant, its effect against six pathogenic microorganisms, three Gram positive (*Enterococcus hirae* ATCC 10541, *Bacillus cereus* and *Staphylococcus aureus* ATCC 6538) and three Gram negative (*Pseudomonas aeruginosa* ATCC 9027, *Escherichia coli* ATCC 10536 and *Legionella pneumophila* ATCC 33152), was examined at different concentrations and incubation times. According to the results obtained, the zone diameters increased with the increase in the concentrations. Our results support the idea that spice essential oils can be used as antimicrobials for food preservation instead of synthetic chemicals used for food preservation.

**Keywords:** *Hyssopus officinalis*, essential oil, antibacterial

## 1. GİRİŞ

Bitki kaynaklarından elde edilen uçucu yağlar, insan, hayvan ve organizmaların metabolizması ve fizyolojisinde hayati biyolojik roller oynar (Zucca vd., 2019; Sidiropoulou vd., 2020; Sattayakhom vd., 2021). Çok eski zamanlardan beri, aromaları ve kokuları nedeniyle uçucu yağlar ve bunların bileşenlerini içeren doğal aktif bileşikler kullanılmıştır. Bilinen 3000 çeşitten 300'ü ticari olarak gıda ve ilaç endüstrilerinde kullanılmaktadır. Son yıllarda, dikkat çekici biyolojik aktiviteleri ve sağlık yararları nedeniyle uçucu yağlar üzerine yapılan çalışmalar büyük ölçüde artmıştır. Sonuç olarak, farmakolojik özellikleri, doğal ve güvenli alternatif terapötikleri belirlemede çok büyük bir rol oynamışlardır (Ni vd.,2021). Uçucu yağlar, tüm bitki organları (tomurcuklar, çiçekler, yapraklar, tohumlar, ağaç, ağaç kabuğu vb.) tarafından sentezlenebilen güçlü bir aroma ile karakterize edilen doğal, karmaşık ve oldukça uçucu maddelerdir ve bitkilerin sekonder metabolizma ürünleri olup bitkilerin mantarlara, bakterilere, virüslere, böceklere ve otçullara karşı savunma mekanizmasında rol oynamaktadırlar (Teixeira vd., 2022). Uçucu yağların antimikrobiyal aktivitesi, genellikle, aromatik veya alifatik karbon zincirleri olan, çoğu terpenler ve terpenoidler olan düşük moleküler ağırlıklı bileşiklere atfedilir (Bakkali vd., 2008).

*Hyssopus officinalis* L. (Lamiaceae), genel olarak çördük olarak bilinir, güney Avrupa, Akdeniz ve Asya'nın ılıman bölgelerine özgü çok yıllık bir çalıdır. Ülkemizde Güney Anadolu ve Karadeniz'in kuzeyine özgüdür (Kızıllı vd., 2008; Dzamic vd., 2013). *H. officinalis* zengin bir aromatik kokuya ve güçlü bir tada sahiptir. Hafif acı bir tada sahip olmasına rağmen, *H. officinalis*, gıda endüstrisinde sıklıkla nane aroması ve çeşnisi olarak kullanılmaktadır (Fathiazad ve Hamedeyazdan, 2011). Özleri ve yağı, acı ve likörler dahil olmak üzere çeşniler ve içecekler gibi birçok gıda ürünüde kullanılmaktadır. Koku endüstrisinde sabunlarda, kozmetiklerde ve parfümlerde kullanılır (Wesolowska vd., 2010). *H. officinalis*'in yaprak özleri/uçucu yağları antimikrobiyal, antifungal, spazmolitik, antioksidandır ve HIV'e karşı güçlü antiviral aktivite sergiler (Letessier vd., 2001; Ozer vd., 2006; Wesolowska vd., 2010). Bitkinin antiviral aktivitesi muhtemelen kafeik asit, tanenler ve tanımlanamayan yüksek moleküler ağırlıklı bileşiklerin varlığından kaynaklanmaktadır (Letessier vd., 2001). *H. officinalis*'in uçucu yağ bileşimleri, Dünya'nın farklı bölgelerinde araştırılmış, farklı fenotiplerden veya bölgelerdeki bitki uçucu yağları kimyasal bileşiminde önemli ölçüde değişkenlik gösterdiği bulunmuştur (Pandey vd., 2014).

## **2. MATERYAL VE METOT**

### **2.1. Bitki Materyali ve Uçucu Yağ Ekstraksiyonu**

50 g kuru bitki numunelerinin uçucu yağı, bir Clevenger tipi aparat kullanılarak sürekli buhar altında 2.5 saat boyunca hidrodistilasyon yoluyla izole edildi. İzole edilen uçucu yağ, analize kadar 4°C'de uygun kapta saklandı.

### **2.2. Antimikrobiyal Test**

*H. officinalis*'in etanolik özütleri, *Enterococcus hirae* ATCC 10541, *Bacillus cereus*, *Staphylococcus aureus* ATCC 6538, *Pseudomonas aeruginosa* ATCC 9027, *Escherichia coli* ATCC 10536 ve *Legionella pneumophila* ATCC 33152 mikroorganizmalarına karşı disk difüzyon yöntemi kullanılarak in vitro antimikrobiyal özellikleri açısından araştırıldı. Uçucu yağ disklere 20 µl emdirildi. 24 saatlik inkübasyondan sonra, tüm petri kapları büyüme inhibisyonu bölgesi için incelendi ve bu bölgelerin çapı milimetre olarak ölçüldü. Pozitif kontrol olarak imipenem (IMP) 10 µg kullanıldı.

## **3. BULGULAR VE TARTIŞMA**

Son yıllarda yaygınlaşan antibiyotik kullanımı, enfeksiyonların tedavisinde kullanılan ilaçlara dirençli bakterilerin ortaya çıkmasına ve yayılmasına neden olmaktadır. Antibiyotik direncinin en önemli nedenlerinden biri de mikropların biyofilm yapılarında kalmasıdır. Bu yapı, antimikrobiyal ajanların penetrasyonunu engellediği gibi, bu ajanların etkin fonksiyonlarını da engellemektedir. Patojen bakterilerle başa çıkmak için yeni yolların edinilmesi gereklidir (Potera, 1999; Cowan, 1999). Bu alandaki araştırmalar özellikle biyolojik bileşikler üzerinde yoğunlaşmıştır, çünkü bu maddelerin biyolojik yapıları geleneksel kimyasal ajanlara kıyasla etkileri azaltmıştır. Biyolojik türevler arasında tıbbi bitki seçeneği daha çok patojenik bakterilerle mücadelede iyi bir yol olarak dikkat çekmektedir (Hayacibara vd., 2005; Abubakar vd., 2009; Hassanshahian vd., 2017).

**Tablo 1.** Uçucu yağ (*H. officinalis*) ve İmipenem antibiyotığının çeşitli mikroorganizmalara karşı antimikrobiyal etkisi.

Mikroorganizma	Uçucu yağ ( <i>H. officinalis</i> )	İmipenem
	Zon çapı	Zon çapı
<i>E. hirae</i>	18	36
<i>B. cereus</i>	20	30
<i>S. aureus</i>	18	34
<i>P. aeruginosa</i>	14	26
<i>E. coli</i>	12	28
<i>L. pneumophila</i>	16	20

**Not:** Zon çapları milimetre (mm) olarak ölçülmüştür.

Uçucu yağın farklı mikroorganizmalara karşı antimikrobiyal aktivitesinin sonuçları Tablo 1'de özetlenmiştir. Çördük otu esansiyel yağının antimikrobiyal aktivitesi 20 µl hacim kullanılarak test edildi. *H. officinalis* uçucu yağına karşı Gram-negatif bakteriler, Gram-pozitif bakterilerden daha az duyarlı görünmektedir. Bu durum güçlü geçirgenlik bariyeri görevi gören Gram negatif bakterilerin dış zarı ile ilişkili olabilir (Cabrera vd., 2006). Diğer şifalı bitkilere benzer şekilde bu bitkinin kimyasal yapısında fenolik ve aromatik metabolitler açığa çıkmıştır. Bu metabolitlerin antibakteriyel aktivitesi, diğer bitkilerdeki bazı yayınlarda açıklanmıştır. Farklı coğrafik bölgelerden elde edilen çördük otları farklı kimyasal içeriklere sahiptir. Uçucu yağların çok sayıda bileşenden oluşması nedeniyle belirli hedefleri yok gibi görünmektedir. Tipik lipofiller gibi hücre duvarından ve sitoplazmik zardan geçerek tabakalarının yapısını bozarlar. Ayrıca, sitoplazmayı pıhtılaştırabilirler (Gustafson vd., 1998; Carson vd., 2002) ve lipitlere ve proteinlere zarar verebilirler (Ultee vd., 2002; Burt, 2004). İmipenem antibiyotığına karşı bütün test bakterilerinde antimikrobiyal etki göstermiştir.

### 3. SONUÇ

Antibiyotiğe dirençli suşların prevalansı artmakta ve bu enfeksiyonlar için güvenli ve etkili alternatif ajanların belirlenmesi çok önemlidir. *H. officinalis* uçucu yağı, çalışmada kullanılan bakteriler üzerindeki antibakteriyel etkisi nedeniyle potansiyel bir antimikrobiyal ajan olarak değerlendirilebilir.

**SIİRT BÖLGESİNDEN TOPLANAN *Agrocybe aegerita*'NİN ANTIOKSİDAN VE ANTIÖBEZİTE AKTİVİTELERİNİN BELİRLENMESİ**

**Prof. Dr. Veysi OKUMUŞ (Orcid ID: 0000-0002-5505-2700)**

Siirt Üniversitesi, Tıp Fakültesi, Temel Tıp Bilimleri Bölümü, Tıbbi Biyoloji Anabilim Dalı

**Doç. Dr. Nurullah AKCAN (Orcid ID: 0000-0003-3960-9553)**

Siirt Üniversitesi, Sağlık Bilimleri Fakültesi, Beslenme ve Diyetetik Bölümü

**ÖZET**

Tıbbi amaçla ve gıda endüstrisinde sık bir şekilde kullanım alanı olan sentetik antioksidanların sebep olduğu yan etkiler sürekli tartışma konusu olmaktadır. Bu alanlarda yaşanabilecek olumsuz durumlara karşı bilim insanları farklı doğal kaynaklardan yeni antioksidan ve antiobezite aktivitesine sahip bileşiklerin tespit edilmesi için araştırmalarına hız vermiştir. Tıbbi amaçla kullanılan mantarların, uzun yıllardan beri geleneksel ve yöresel tedavilerde kullanımı ile ilgili tarif ve kürler bulunmaktadır. Çin başta olma üzere birçok uzak doğu ülkesinde çeşitli mantar türleriyle hazırlanmış preparatların modern tıbbi uygulamaları yapılmaktadır. Son yıllarda yapılan araştırmalarda mantarların biyolojik aktiviteleri üzerine çok sayıda bilimsel çalışma mevcuttur. Ülkemizde de bu alanda önemli çalışmalar yürütülmektedir. Bu çalışmada, Siirt ili Eruh ilçesinden toplanan *Agrocybe aegerita* 'nın etanol özütü kullanılarak antioksidan ve antiobezite aktiviteleri belirlendi. Antioksidan aktiviteyi belirlemek için serbest radikal süpürme ve indirgeme gücü aktiviteleri test edildi. DPPH serbest radikal süpürme aktivitesi 20 mg/ml konsantrasyonda % 86.5 olarak ölçüldü. Ayrıca özütlerin lipaz enziminin inhibisyonu üzerindeki etkisi ölçülerek antiobezite aktiviteleri belirlendi. Etanol özütünün 2.0 mg/ml konsantrasyonunda yapılan deneyde, en yüksek lipaz enzimi inhibisyon oranının % 17.6 olduğu tespit edildi. Obezite tedavisinde kullanılan ve lipaz enzimi inhibitörü olan orlistat çalışmada standart referans madde olarak kullanıldı. Çalışma sonucuna göre yenilebilir bir mantar çeşidi olan *A. aegerita* 'nın doğrudan besin maddesi olarak tüketilerek veya işlenerek gıda, farmasotik ve tıp alanında kullanıma uygun olduğu gösterilmiştir.

**Anahtar Kelimeler:** *Agrocybe aegerita*, antioksidan, antiobezite.

**DETERMINATION OF ANTIOXIDANT AND ANTI-OBESITY ACTIVITIES OF  
*Agrocybe aegerita* COLLECTED FROM SIIRT REGION**

**ABSTRACT**

Side effects caused by synthetic antioxidants used for medical purposes and in the food industry are often the subject of discussion. Against undesirable situations in this regard, scientists have accelerated their research to detect compounds with new antioxidant and anti-obesity activities from different natural sources. There are recipes and cures for the use of mushrooms used for medicinal purposes in traditional and local treatments for many years. In many Far East countries, especially in China, modern medical applications of preparations prepared with various types of mushrooms are carried out. In recent years, there are many scientific studies on the biological activities of fungi. In our country, important studies are carried out in this field. In this study, antioxidant and anti-obesity activities of *Agrocybe aegerita* collected from Eruh district of Siirt province were determined by using ethanol extract. Free radical scavenging and reducing power activities were tested to determine antioxidant activity. DPPH free radical scavenging activity was measured as 86.5% at 20 mg/ml concentration. In addition, the effect of the extracts on the inhibition of Lipase enzyme was measured and their anti-obesity activities were determined. It was determined that the highest lipase enzyme inhibition rate was 17.6% at 2.0 mg/ml concentration of ethanol extract. Orlistat, a lipase enzyme inhibitor used in the treatment of obesity, was used as a standard reference substance in the study. According to the results of the study, it has been shown that *A. aegerita*, an edible mushroom variety, is suitable for use in the field of food, pharmaceuticals and medicine by directly consuming or processing as a nutrient.

**Keywords:** *Agrocybe aegerita*, antioxidant, anti-obesity.

## 1. GİRİŞ

Antioksidan özellik gösteren doğal ürünler, canlıları serbest radikallerden koruma amacıyla kullanılır. Tıbbi önemine ek olarak, antioksidan aktiviteye sahip bileşikler, gıda endüstrilerinde radikal türlere bağlı hasarları önleyebilir. Antioksidanlar, gıda bozulmasına ek olarak başta lipidler olmak üzere çeşitli muhtelif içeriklerin oksidasyonunu önleyerek gıda besin değerlerini destekleyen değerli gıda koruyucuları olarak tanımlanabilir (Salimi vd., 2022). Bütillenmiş hidroksitoluen ve bütillenmiş hidroksilanizol gibi sentetik antioksidanlar, 1940'larda gıda endüstrisine yer almaya başladı (Berdahl vd., 2010). Bunlar ucuz ve etkili antioksidanlardır, ancak potansiyel karsinogenez ile bağlantılıdır (Chen vd., 1992; Sun ve Fukuhara 1997). Rapor edilen yüksek maliyetler ve insan sağlığı üzerindeki tehlikeli etkileri ve tüketici tercihi ile birlikte bu risk, doğal antioksidanlar için artan bir talebe yol açmıştır (Berdahl vd., 2010). Doğal antioksidanların bir avantajı, kullanımdan önce kapsamlı güvenlik testleri gerektirmemeleridir (Huang vd., 2011). Günümüzde önemli sorunlardan olan obezite vücutta fazla yağ birikimi olarak karşımıza çıkmaktadır. Dünyada ve ülkemizde görülme oranı gittikçe artış gösteren obezite sağlık harcamalarındaki yük ve iş gücündeki kayıplardan dolayı ekonomik olarak ağır yükleri beraberinde getirmektedir. Lipaz inhibitörlerinden orlistat obezite tedavisinde kullanılmakla birlikte sindirim sistemi üzerinde çeşitli yan etkilere sahiptir. Bu çalışmadaki amaç, doğal ortamından toplanan *Agrocybe aegerita* 'nın etanol ve sıcak su özütleri kullanılarak antioksidan ve antiobezite aktivitelerini belirlemektir.

## 2. MATERYAL VE METOT

### Mantar Özütlerinin Hazırlanması

Etanol özütlemesi için, doğal ortamından mantarlardan 5.0 gram tartıldı. Örnekler blendırda öğütüldü ve oda sıcaklığında 100 mL etanol ile 24 saat boyunca 150 rpm'de çalkalayıcıya karıştırıldı. Sıcak su özütü için 50 ° C'de çalkalamalı inkübatöre 5.0 gram örnek ve 100 ml su 24 karıştırıldı. Toplanan özütler filtre kağıdından süzüldü. Etanol ve su özütü, kuru özüt elde etmek için 40 ° C'de evaporatörde uçuruldu. Balonun altında kalan kuru özüt tartıldı ve stok çözeltisi (20 mg/mL) hazırlamak için etanol ve saf su içinde çözüldü (Dündar ve ark., 2016).

### Serbest Radikal Süpürme, İndirgeme Gücü ve Lipaz İnhibisyon Aktiviteleri

Mantar özütlerinin serbest radikal süpürme ve indirgeme gücü aktiviteleri Chu ve ark. (2000) yaptığı yonteme belirlendi. Lipaz inhibisyon aktivitesini belirlemek için Venkatesagowda ve ark., (2012) yontemi kullanıldı.

### 3. ARAŞTIRMA VE BULGULAR

*A.aegerita* etanol ve su özütlerinin verimleri Tablo 1'de verilmiştir. Ekstraksiyon verimi etanol için % 12.2 ve sıcak su için % 7.4 olarak elde edilmiştir.

**Tablo 1. Mantar etanol ve su ekstraktlarının verimi**

Çözücü	Mantar kuru ağırlığı (g)	Ekstraksiyon verimi (g)	Ekstraksiyon (%)
Etanol	5	0.61	12.2
Su	5	0.37	7.4

### Serbest Radikal Süpürme ve İndirgeme Gücü Aktivitesi

Mantar özütleri ve pozitif kontrol olarak kullanılan BHA standartının DPPH radikallerini süpürme kapasitesi, spektrofotometrede 517 nm'de absorbanstaki azalma ile belirlendi. Serbest radikal süpürme aktivitesinin yüzdesi olarak Şekil 1'de gösterilmiştir. Yapılan çalışmada mantar etanol özütünün, su özütüne göre daha iyi aktivite gösterdiği belirlenmiştir. 20 mg/ml konsantrasyonda aktivite etanol özütü % 86.5 ve su özütü için ise % 71.4 olarak ölçüldü.

Şekil 1. Serbest radikal süpürme aktivitesi

*A.aegerita* etanol ve su özütlerinin indirgeme gücü aktiviteleri Şekil 2'de gösterilmiştir. Yapılan çalışmada konsantrasyon artıkça (1-20 mg/ml), özütlerin indirgeme gücünün de arttığı belirlendi. Test edilen bütün konsantrasyonlarda pozitif kontrol olarak kullanılan BHA'nın her iki özütten de daha yüksek aktiviteye sahip olduğu belirlendi.

Şekil 2. İndirgeme Gücü Aktivitesi

### Antiobezitik Aktivite

*A. aegerita*'nın sıcak su ve etanol özütlerinin antiobezitik aktiviteleri Tablo 2'de verilmiştir. Sonuçlara göre, etanol özütü 2 mg/ml konsantrasyonda % 17.6 ile en yüksek lipaz inhibisyon aktivitesini göstermiştir. Aynı konsantrasyonda sıcak su özütü % 8.1 inhibisyon aktivitesi sergilemiştir. Özütlerin standart olarak kullanılan orlistat kadar etkili olmadıkları belirlenmiştir.

Tablo 2. Mantar özütlerinin lipaz inhibisyon aktivitesi

	Ekstrakt	Inhibisyon <sup>a</sup>
<i>A. aegerita</i>	Etanol	17.6 ± 0.42
	Su	8.1 ± 0.38
	Orlistat	63.2 ± 1.44

<sup>a</sup> Mantar ekstraktlarının 2.0 mg/ml konsantrasyonundaki % inhibisyonu

#### 4. SONUÇ

*A. aegerita*'nın sıcak su ekstraktlarının ortalama düzeyde, etanol ekstraktlarının ise iyi düzeyde antioksidan aktivite gösterdiği, bu nedenle bu mantar türünün kolayca erişilebilen bir doğal antioksidan kaynağı olarak kullanılabilceği açıkça görülmektedir. Ayrıca çalışma sonucunda ülkemizde doğal yayılış gösteren *A. aegerita*'nın lipaz inhibitör aktivitesi ile ilgili literatüre yeni bilgiler kazandırılmıştır.

Siirt Üniversitesi, Tıp Fakültesi, Temel Tıp Bilimleri Bölümü, Tıbbi Biyoloji Anabilim Dalı

**Doç. Dr. Nurullah AKCAN (Orcid ID: 0000-0003-3960-9553)**

Siirt Üniversitesi, Sağlık Bilimleri Fakültesi, Beslenme ve Diyetetik Bölümü

**ÖZET**

Yenilebilir mantarlar içerdikleri zengin polisakkarit, vitamin, protein ve minerallerden dolayı kaliteli besin maddeleri olarak kabul edilirler. Gıda olarak tüketilen birçok mantar türünün modern tıbbi tedavi yaklaşımlarına alternatif olarak, farklı terapötik özelliklere sahip olduğu belirlenmiştir. Yapılan çalışmalarda doğal ortamlarından toplanan birçok fungus türünün, yetiştiği bölgenin ekolojik koşullarına bağlı olarak aktif biyolojik maddeler içerdiği bilinmektedir. Bu çalışmada Siirt Eruh'ta doğal ortamından toplanan *Lactarius deliciosus*'un mantar sıcak su özütü ve mantar etanol özütü kullanılarak antimikrobiyal ve antidiyabetik aktiviteleri test edildi. Hazırlanan su ve etanol ekstraktları kullanılarak disk difüzyon yöntemi ile 2 Gram pozitif ve 2 Gram negatif bakteriye karşı oluşan inhibisyon zonlarına göre antibakteriyel aktivite belirlendi. Ayrıca özütlerin  $\alpha$ -amilaz enziminin inhibisyonu üzerindeki etkisi sonucunda antidiyabetik aktivite de belirlendi. *L. deliciosus*'un su ve etanol özütlerinin antimikrobiyal aktiviteleri incelendiğinde 0-14 mm çapında inhibisyon zonlarının olduğu ve en yüksek aktivite (14 mm zon çapı) *Bacillus cereus*'a karşı mantar etanol özütünde elde edildi. 2.0 mg/ml konsantrasyonunda ekstraktların antidiyabetik aktiviteleri test edildi. En yüksek enzim inhibisyon aktivitesinin % 20.7 olarak etanol özütünden elde edildiği ve sıcak su özütünde inhibisyon oranının % 11.5 olduğu gözlemlendi. Diyabet tedavisinde kullanılan ve  $\alpha$ -amilaz inhibitörü olan akarboz çalışmada standart referans madde olarak kullanıldı. Çalışma sonucunda antimikrobiyal ve antidiyabetik aktiviteye sahip olmasından dolayı, *L. deliciosus*'un aktif biyolojik bileşikler içerdiği, bu nedenle diyetle bulunmasının hastalıkların önlenmesi veya azaltılabilmesinde faydalı olacağı düşünülmektedir.

**Anahtar Kelimeler:** *Lactarius deliciosus*, antimikrobiyal, antidiyabetik.

**DETERMINATION OF THE ANTIMICROBIAL AND ANTIDIABETIC  
ACTIVITIES OF HOT WATER AND ETHANOL EXTRACTS OF THE EDIBLE  
MUSHROOM *Lactarius deliciosus***

**ABSTRACT**

Edible mushrooms are considered to be quality nutrients due to the rich polysaccharides, vitamins, proteins and minerals they contain. It has been determined that many mushroom species consumed as food have different therapeutic properties as an alternative to modern medical treatment approaches. It is known that many fungal species collected from their natural habitats contain active biological substances depending on the ecological conditions of the region where they grow. In this study, antimicrobial and antidiabetic activities of *Lactarius deliciosus* collected from its natural environment in Siirt Erüh were tested using mushroom hot water extract and mushroom ethanol extract. Antibacterial activity was determined according to the inhibition zones formed against 2 Gram positive and 2 Gram negative bacteria by disk diffusion method using prepared water and ethanol extracts. In addition, antidiabetic activity was determined by the effect of the extracts on the inhibition of  $\alpha$ -amylase enzyme. When the antimicrobial activities of the water and ethanol extracts of *L. deliciosus* were examined, it was observed that inhibition zones with a diameter of 0-14 mm were formed and the highest activity (14 mm zone diameter) was obtained in the ethanol extract of the fungus against *Bacillus cereus*. The antidiabetic activities of the extracts were tested at a concentration of 2.0 mg/ml. It was observed that the highest enzyme inhibition activity was obtained from the ethanol extract with 20.7%, while the inhibition rate was 11.5% in the hot water extract. Acarbose, an  $\alpha$ -amylase inhibitor used in the treatment of diabetes, was used as a standard reference substance in the study. As a result of the study, it is thought that *L. deliciosus* contains active biological compounds, due to its antimicrobial and antidiabetic activity, and therefore its presence in the diet may be beneficial in preventing or reducing diseases.

**Keywords:** *Lactarius deliciosus*, antimicrobial, antidiabetic.

## 1. GİRİŞ

Mantarlar flavonoidler, fenolik bileşikler ve terpenler gibi farklı doğal ürünler üretme yeteneğine sahip çok özel canlılardır. Besin çeşidi olarak mantarlar insan diyetinde önemli bir yer tutmaktadır. Mantarlar özütlerinin doğal antimikrobiyal özelliğe sahip olduğuna dair çok sayıda çalışma rapor edilmiştir. Binlerce yıl önce, uzakdoğuda mantar özütleri diğer bitkisel özütlerle beraber hastalıkları tedavi etmede ve besin maddesi olarak kullanılıyordu (Manzi ve ark., 1999). Antimikrobiyal ve antidiyabetik aktivite gösteren mantarların da içinde bulunduğu farklı gıdaların tüketiminin artması, hastalıkların önüne geçilmesi ve sentetik maddelerin yan etkilerinden korunmak için önemli etkenlerdir (Dündar ve ark., 2013). Yaptığımız bu çalışmada Siirt Erüh'tan toplanan ve yenilebilir mantarlardan olan, *Lactarius deliciosus*'un antimikrobiyal ve antidiyabetik özellikleri belirlenmeye çalışıldı.

## 2. MATERYAL VE METOT

### Mantar Özütlerinin Hazırlanması

Etanol özütlemesi için, doğal ortamından mantarlardan 5.0 gram tartıldı. Örnekler blendırda öğütüldü ve oda sıcaklığında 100 mL etanol ile 24 saat boyunca 150 rpm'de çalkalayıcıya karıştırıldı. Sıcak su özütü için 50 ° C'de çalkalamalı inkübatöre 5.0 gram örnek ve 100 ml su 24 karıştırıldı. Toplanan özütler filtre kağıdından süzüldü. Etanol ve su özütü, kuru özüt elde etmek için 40 ° C'de evaporatörde uçuruldu. Balonun altında kalan kuru özüt tartıldı ve stok çözeltisi (20 mg/mL) hazırlamak için etanol ve saf su içinde çözüldü (Dündar ve ark., 2016).

### Antimikrobiyal ve $\alpha$ -Amilaz İnhibisyon Aktiviteleri

Mantar özütlerinin antimikrobiyal aktivitesi Dündar ve ark. (2015) yaptığı yöntemle belirlendi. Özütlerin enzim inhibisyonu üzerindeki etkisi, Sayah ve arkadaşlarının (2017) yönteminde küçük değişiklikler yapılarak test edildi.

## 3. ARAŞTIRMA VE BULGULAR

*L. deliciosus*'un ekstraksiyon verimleri Tablo 1'de verilmiştir. 5 gr kuru mantar kullanıldığında etanolden 0.62 gram sudan ise 0.44 g ekstrakt elde edildi. Ekstraksiyon veriminin etanol için % 12.4 ve sıcak su için % 8.8 olduğu tespit edildi.

**Tablo 1.** Mantar etanol ve su ekstraktlarının verimi

Çözücü	Mantar kuru ağırlığı (g)	Ekstraksiyon verimi (g)	Ekstraksiyon (%)
Etanol	5	0.62	12.4
Su	5	0.44	8.8

### Antibakteriyel Aktivite

*L. deliciosus*'un sıcak su ve etanol özütlerinin antibakteriyel aktiviteleri Tablo 2'de verilmiştir. Özütlerin test edilen bakterilere karşı genel olarak zayıf aktivite gösterdiği belirlendi. Mantar özütlerinin ikisinin de test edilen iki Gram pozitif bakteriye karşı antibakteriyel aktiviteye sahip olduğu ve 8-14 mm aralığında inhibisyon zonu oluşturduğu ayrıca her iki özütün de *E.coli*'ye karşı herhangi bir antibakteriyel aktiviteye sahip olmadığı gözlemlendi. Standart olarak kullanılan streptomisin ve tetrasiklinin, mantar özütlerinden daha iyi aktivite gösterdiği gözlemlendi.

**Tablo 2.** Mantar etanol ekstraktlarının antibakteriyel aktivitesi

<i>L. deliciosus</i> Ekstraktları ve Standard Antibiyotik diskler <sup>a</sup>				
Bakteri	Etanol	Su	S	TE
<i>S. aureus</i>	11	8	16	24
<i>B.cereus</i>	14	9	19	22
<i>E. coli</i>	-	-	24	23
<i>P. aeruginosa</i>	7	-	15	21

<sup>a</sup> İnhibisyon zon çapı (mm) S= Streptomisin (10 µg) and TE= Tetrasiklin (30 µg)

### Antidiyabetik Aktivite

*L. deliciosus* mantarından elde edilen etanol ve su özütlerinin antidiyabetik etkinliğinin test edilmesi amacıyla amilaz inhibitör aktiviteleri analiz edildi (Tablo.3). Çalışma sonuçları hem inhibisyon yüzdesi hem de IC<sub>50</sub> konsantrasyonu olarak ifade edildi. Sonuçlara göre, etanol özütü 2 mg/ml konsantrasyonda % 20.7 ile en iyi aktiviteyi gösterdiği belirlendi. Aynı konsantrasyonda sıcak su özütü % 11.5 inhibisyon aktivitesi sergiledi. Pozitif kontrol olarak kullanılan akarbozun özütlerine göre daha yüksek enzim inhibisyon aktivitesine sahip olduğu görüldü.

**Tablo 3.** Mantar ekstraktlarının enzim inhibisyon aktivitesi

	<u>Ekstrakt</u>	<u>Inhibisyon</u> <sup>a</sup>	<u>IC<sub>50</sub> (µg/ml)</u>
<u>L. deliciosus</u>	Etanol	20.7 ± 0.72	2152.5 ± 40.3
	Su	11.5 ± 0.44	3876.4 ± 53.1
	<u>Akarboz</u>	84.6 ± 1.91	312.9 ± 11.7

<sup>a</sup> Mantar ekstraktlarının 2.0 mg/ml konsantrasyonundaki % inhibisyonu

#### 4. SONUÇ

Bu çalışmanın sonuçları, kullanılan mantar özütlerinin sentetik maddeler yerine doğal antidiyabetik ve antimikrobiyal ajanlar olarak kullanılabileceğini göstermektedir.  $\alpha$ - Amilaz inhibitörü olan akarbozun diyabet tedavisinde kullanımı sonucunda şişkinlik, karın ağrısı ve gaz yakınmaları gibi yan etkilerin ortaya çıktığı bilinmektedir. Mantarlar gibi biyolojik aktif maddeler bakımından zengin gıdaların tüketiminin toplum sağlığı bakımından yararlı olacağı düşünülmektedir.

Batman Üniversitesi Lisansüstü Eğitim Enstitüsü Yenilenebilir Enerji Anabilim Dalı

**ÖZET**

Yenilenebilir enerji kaynakları arasında büyük öneme sahip olan güneş enerjisi, yıllardan beri ısıtma, sıcak su uygulamaları ve havalandırma sistemlerinde kullanılmaktadır. Son yüzyılda gelişen teknoloji ile beraber güneş enerjisinden elektrik üretimine de başlanmıştır. Güneş enerjisi fotovoltaik (PV) hücreler ile elektrik enerjisine dönüştürülebilmektedir. PV hücrelerin verimi yaklaşık %15-20 civarındadır. Geri kalan enerji, ısı olarak atmosfere bırakılmaktadır. Aşırı sıcaklığın doğurduğu enerji kaybı sebebiyle güneş panelinin verimi %12 gibi değerlere düşmektedir. Güneş panellerinde verimi arttırmak ve sıcaklık faktöründen doğan bu enerji kaybını en aza indirmek için çeşitli çalışmalar mevcuttur. Hava soğutmalı, sıvı soğutmalı, faz değiştiren malzeme temelli ve ısı boru temelli soğutma sistemleri güneş panellerini soğutma alanlarından bazılarıdır. Bu sistemler sayesinde, PV hücrelerin yüzeyi zarar görmeden soğutulmaktadır. Bu çalışmada; parafin, yağ asidi ve faz değiştirici malzeme (organik birleşik) kullanarak panel sıcaklığını azaltma, sıcaklık farkıyla gözlemlenebilen enerji üretimindeki verim değişikliğini incelemeyi amaçlamaktayız. Güneş panelinin arkasına montajlanacak plaka ve levhaların içine; yağ asidi, parafin ve faz değiştirici malzeme (kalsiyum klorür heksahidrat) ayrı ayrı olarak konulacaktır. Güneş panelinin sıcaklığını azaltacağı ön görülen bu malzemelerin panellere montajından sonra ölçümleri yapılacaktır. Böylelikle güneş panelinde yüksek sıcaklıktan dolayı oluşan enerji üretim kaybını ne kadar azaltılabileceği ve oluşan gerilim miktarlarındaki farklılıklar tespit edilecektir. Bu çalışmamız güneş panellerinin sıcaklık yüzünden kaybettiği ortalama %3'lük enerji kaybını en aza indirmeyi amaçlayarak enerji verimini maksimum düzeye çıkarmayı hedeflemektedir.

**Anahtar Kelimeler:** Güneş Paneli, Güneş Enerjisi, Yağ Asidi ve Parafin, PV, Kalsiyum Hidrat

**INVESTIGATION OF TEMPERATURE REDUCING USING DIFFERENT FDM IN PHOTOVOLTAIC PANELS****ABSTRACT**

Solar energy, which is of great importance among renewable energy sources, has been used for years in heating, hot water applications and ventilation systems. With the developing technology in the last century, electricity production from solar energy has also started. Solar energy can be converted into electrical energy with photovoltaic (PV) cells. The efficiency of PV cells is around 15-20%. The remaining energy is released to the atmosphere as heat. Due to the energy loss caused by excessive heat, the efficiency of the solar panel drops to values such as 12%. There are various studies to increase the efficiency of solar panels and to minimize this energy loss arising from the temperature factor. Air-cooled, liquid-cooled, phase-change material-based and heat pipe-based cooling systems are some of the areas of cooling solar panels. Thanks to these systems, the surface of the PV cells is cooled without being damaged. In this study; We aim to reduce the panel temperature by using paraffin, fatty acid and phase change material (organic compound), and to examine the efficiency change in energy production that can be observed with temperature difference. Inside the plates and plates to be mounted behind the solar panel; fatty acid, paraffin and phase change material (calcium chloride hexahydrate) will be placed separately. These materials, which are predicted to reduce the temperature of the solar panel, will be measured after they are mounted on the panels. Thus, it will be determined how much energy production loss due to high temperature in the solar panel can be reduced and the differences in the amount of voltage generated. This study aims to maximize energy efficiency by aiming to minimize the average 3% energy loss lost by solar panels due to heat.

**Keywords:** Solar Panel, Solar Energy, Fatty Acid and Paraffin, PV, Calcium Hydrate

## **GİRİŞ**

Güneş panellerinde aşırı sıcaklık sebebiyle düşen verimi minimum maliyet ile soğutma yaparak enerji üretimini arttırmak ve hangi malzemenin daha verimli olduğunu gözlemleyebilmeyi hedeflemektedir. Bu amaç ile panellerin FDM kullanılarak verimleri araştırılacaktır. Herhangi bir malzemeyle kaplanmayacak panellerin sıcaklık, akım ve gerilim gibi parametreler ölçülecektir. İdeal sıcaklığın üzerine çıkan panellerdeki verim kaybının gözlemlenmesinin ardından kullanılacak malzemelerin bu yüksek sıcaklığı ne derece azaltacak ve enerji üretimine etkisi ne kadar olacak gibi sorulara bilimsel yanıt almak amaçlanmaktadır.

Örneğin; kurulu gücü 100 kW olan bir santralin günde 7 saat elektrik enerjisi ürettiği düşünülürse bu santralin getirisi günde 700 kWh'tir. Güneş panellerindeki aşırı sıcaklığın %1-3'e varan bir enerji kaybına neden olduğu bilinmektedir. Herhangi bir kayıp yaşanmadan bu sistemde ekonomik olarak yaklaşık (lisanssız elektrik birim satış fiyatı= 54 kuruş)  $700 \times 0.54 = 378$  TL aylık 11.340 TL gelire tekabül etmektedir. Sıcaklık sebebiyle oluşan kayıplar yüzünden günlük 700 kWh yerine 686 kWh üretim gerçekleşmiştir. Çok daha büyük güçteki GES'ler için büyük enerji ve mali kayıplarına sebep olan bu durumun önüne geçecek çalışmalar yapılarak GES'lerdeki bu dezavantaja son verilebilir. Fotovoltaik Panellerin sıcaklığının düşürülmesi ile Ortalama %1.5-3 verim artışı elde edilecek ve en verimli faz değiştiren malzeme analiz edilecektir.

Litaretür incelendiğinde; güneş panellerinin ideal sıcaklığın üstünde çalışması durumunda oluşan verim kayıplarının önüne çeşitli şekillerde soğutma yapılarak önüne geçmeye çalışılmış ve sıcaklığın bu olumsuz etkisi en aza indirilmeye çalışılmıştır. Panellerin soğutulması verimi arttıran çoğu çalışmalar başarılı olsa da maliyetlerin fazla olması, alternatif çalışmalara yönelmeyi zorunlu kılmıştır. Hava soğutmalı, sıvı soğutmalı, faz değiştiren malzeme temelli ve ısı boru temelli soğutma sistemleri güneş panellerini soğutma alanlarından bazılarında örnek olarak verilebilir.

Yapılması amaçlanan çalışmada ise panel yüzeyine zarar vermeyecek şekilde panelin arka yüzüne temasının gerçekleştirileceği üç farklı malzeme ile oluşan sıcaklığın düşüş değeri ile artan akım ve gerilim değerleri karşılaştırılacaktır. Piyasada bulunan en ucuz ve verimli faz değiştirici olan malzemelerden parafin ile soğutma yapılan çalışmalar mevcut olsa da bu malzemenin aynı koşullarda aynı güçte paneller ve aynı ortamda diğer malzemelerin kullanılması ile karşılaştırılabildiği bir çalışma mevcut değildir.

çalışmanın amacına uygun olarak güneş panelinin sıcaklığının düşürülmesinde hangi malzemenin daha etkili olacağı analiz edilecektir. Elde edilen bu analizlerin, yenilenebilir enerji sistemleri sahasında ve bilimsel çalışmalarda önemli bir referans olacağı düşünülmektedir. Bu konuda yapılan çalışmaları incelediğimizde; su ile soğutulan bir PV/T sisteminin performansı analiz edilmiştir ve sistemin elektriksel verimi soğutma işleminden önce %7.58 olarak hesaplanmıştır. Soğutma işleminden sonra ise soğutma yapılmayan duruma göre ısı veriminin %50 oranında artırıldığı tespit edilmiştir [1]. FDM'nin sistem üzerindeki etkisi araştırılmıştır ve FDM'nin sistem veriminde önemli ölçüde katkısı olduğu ifade edilmiştir [2]. Fotovoltaik sistemde soğutmanın nasıl bir etki oluşturabileceği deneysel olarak incelenmiştir. Spiral bir ısı değiştiriciyi fotovoltaik panelin arkasına yerleştirerek soğutma yaptıklarında verimi %13, yapmadıklarında ise %10 olarak bulmuşlardır [3]. Yine bir diğer çalışmada faz değişim malzemeleri ile birlikte kullanılan fotovoltaik panellerin yüksek gizli ısı depolama kapasitesine sahip olmasından ötürü panel yüzey sıcaklığının azabileceğini öngörmüşlerdir. Kullanmış oldukları akışkanlar dinamiği programı ile yaptıkları ısı transferi modellemeleri sonucunda yüksek rüzgâr hızı ve eğim açısının panelin sıcaklığının azalmasında önemli rol oynadığını bulmuşlardır [4]. Fotovoltaik panellerin çıkış gücü ve çıkış gerilimi (P-V) karakteristiğinin sıcaklık farklılığına bağlı değişimini gösteren çalışmalar da mevcuttur [5]. PV panellerindeki sıcaklık artışının, güneş pili hücrelerinde üretilen akımı önemli oranda azalttığını belirtmişlerdir [6]. PV kolektörünün yüzeyini soğutmak için panelin alt yüzeyinde hava kanalı oluşturan ve bu kanaldan hava geçirerek paneli soğutmaya çalışılmış örnekler de mevcuttur [7]. Türkiye'nin çeşitli bölgelerindeki sıcaklık farklarından doğacak kayıpların PV panellerin verimliliği üzerindeki etkileri incelemişler, kullanılacak panellerdeki kayıpların en aza indirgenmesi için öneriler geliştirilmişlerdir [8]. FDM'lerin kullanımı son yıllarda artmış ve bir başka çalışmada faz değiştirici malzeme olarak tuz hidrat kullanarak, güneş panelinin sıcaklığında %38 değerinde azalma sağlayarak güneş panelinin verimi arttırmayı sağladılar [9]. Faz Değiştirici malzemelerin güneş panellerinin soğutulması için kullanılmaya başlanması her sene giderek artmaktadır. Bilimsel çalışmalar sıcaklığı düşürmek için çeşitli faz değiştirici malzemeler kullanmıştır. Kalsiyum Hidrat en etkili olan faz değiştirici malzemelerden biridir. Parafin ve Yağ Asidi de hem ekonomik olarak hem de verime etkisinin yüksek olması gibi sebeplerden tercih edilmektedir. Ancak ülkemizde yağ asidi ile güneş paneli soğutulmasına dair çalışma yoktur. Parafin ile soğutulma yapılan deneysel çalışmalar mevcuttur fakat bu

malzemelerin aynı koşullarda mukayeselerinin yapılması bilim dünyasında hemfikir olunacak sonuçlar elde edilmesine katkı sağlayacaktır

- 1- Fotovoltaik Panellerde aşırı sıcaklığın enerji üretimine etkisi gözlemlenecektir.
- 2- PV sistemlerde sıcaklık değerlerinden ötürü enerji kaybının azaltılması için yapılan soğutma çalışmalarında yağ asidi ile soğutma hakkında Türkiye’de herhangi bir bilimsel çalışmanın gerçekleşmediği tespit edilmiştir. Bundan ötürü gerçekleştirilecek çalışma sonucunda bu yönde meydana gelen literatür boşlukları doldurularak bilimsel katkı sağlayacağı düşünülmektedir.
- 3- Faz değiştirici malzemelerin güneş panellerini soğutmada sıklıkla kullanılmaya başlanması bu malzemelerin maliyetlerinin azalmasına yol açacaktır. Böylelikle büyük güçteki santrallerdeki enerji kaybı azaltılarak verim arttırılacaktır.
- 4- Gerçekleştirilecek bu çalışma sonucunda, ülkemizde ve dünyada son zamanlarda gelişme gösteren güneş enerjisi ile elektrik üretiminde çalışmalar yapan firmalar ve akademik topluluklar yararlanabilecektir.

### **PV Sistemler**

Güneş pilleri yüzeylerine gelen güneş ışınlarını doğrudan elektiriğe çeviren yarı iletken malzemelerdir. Fotonlar yarı iletken malzeme üzerine düştüğünde atomların dış yörüngesindeki kararsız ve gevşek elektronlar hareket eder ve elektrik akımını oluşturur.

**Şekil 1.** Güneş pili şeması

Bir fotovoltaik hücrenin yapısı P-tipi yarı iletken ve N-tipi yarıiletken malzeme birleştirilerek oluşturulur. Burada ışınım etkisiyle N tipi yarı iletken malzemedeki elektronlar P tipi yarı iletkendeki boşluklara geçiş yapar. Bu geçişle N tipi taraf pozitif yüklü iyon çekirdeklerini ortaya çıkarırken P tipi taraf ise negatif iyon çekirdeklerini açığa çıkarır. Bu durum iki tabaka arasında bir elektrik akımı oluşmasına neden olur.

### Faz Değiştiren Maddeler

Parafinler; faz değiştirebilen maddelerin organik kısmına giren işlenmemiş petrolden türetilmişlerdir. Yapıları genel olarak mumsu olup zehirleyici veya paslanabilir bir malzeme değildir [10]. Ekonomik olarak fiyatlarının uygun olması da sistemin verimliliği açısından aranan bir özelliktir. Depolanmaların kolay olması ve ısı iletkenlik değerlerinin düşük olması güneş panellerinde oluşan aşırı sıcaklığı azaltma amacıyla kullanılabilir en uygun malzemelerden biridir. Sahip olduğu bu özellikler sebebiyle yapılacak çalışmada, tercih edilmiştir.

Şekil 2. Parafin Kaplamalı Güneş Panelinin Dizaynı

Şekil 3. FDM Kaplamalı Güneş Panelinin Dizaynı

Kalsiyum Hidrat; tuz hidratlar sınıfındadır ve yaygın olarak kullanılmaktadır. Isıl iletkenlikleri yağ asitleri ve diğer organik faz değiştiren malzemelerinden daha yüksektir. Kimyasal formülü “CaCl<sub>2</sub>.6H<sub>2</sub>O” olan bu faz değiştirici malzeme toksik değildir ve en önemlisi yanıcı değildir [11]. Deney çalışmasında kullanılması uygun bulunmuştur.

Şekil 4. Yağ Asidi Kaplamalı Güneş Panelinin Dizaynı

Yağ Asitleri; kimyasal yapıları “ $\text{CH}_3(\text{CH}_2)_{2n}\text{COOH}$ ” şeklinde gösterilen yağ asitleri faz değiştiren malzemelerin “organik” sınıfına girmektedir. Çok yüksek olmayan sıcaklıklarda gizli ısı depolama yöntemlerinden biri olarak kullanılabilir [12]. Miristik asit ve palmitik asit gibi seçenekleri olan yağ asitlerinin de gizli ısıları yüksek olduğu için tercih edilebilmektedirler.

## MATERYAL VE YÖNTEM

### Deney Setinin Hazırlığı

Proje Fotovoltaik Panellerde Sıcaklığın Verimi Düşürücü Etkisinin Parafin, Yağ Asidi ve FDM İle Azaltılmasının Araştırılması için izlenecek yöntemler aşağıdaki gibi olacaktır.

1- Deneyler için gerekli sarf malzemeler Güneş Panelleri, Faz Değiştirici Malzemeler ve ölçüm aletleriyle soğutma sistemi için gerekli malzemelerin temini;

Deneyler için;

- 4 adet PV Güneş Paneli,
- Yağ asidi,
- Faz değiştirici Malzeme
- Cam muhafaza,
- Dataloger ,
- Multimetre ihtiyacı bulunmaktadır.

Güneş Panellerinin arka yüzüne her panel için ayrı ayrı yapılacak kaplama için cam muhafaza kullanılacaktır. Panellerin yer ile temasını kesmek için takozlar kullanılacaktır. Belirlenen parametreler kullanılarak güneş panellerin kaplama işleminin gerçekleştirilmesi cam muhafazaların yardımıyla panel ile teması sağlanarak hazır hale getirilmiş olacaktır. Kaplamaya hazır olan malzemeler, cam çerçeve içerisine yerleştirilerek güneş paneline

sabitlenecektir. Üç Güneş Paneline montajlanmış malzemeler ve herhangi bir malzeme kullanılmamış bir adet güneş paneli 8 saat güneş ışığının altında bekletilecektir. Böylelikle herhangi bir soğutma işlemine sahip olmayan güneş paneli ile diğer üç panel arasındaki enerji üretim farkı multimetrelerle ölçülebilecektir.

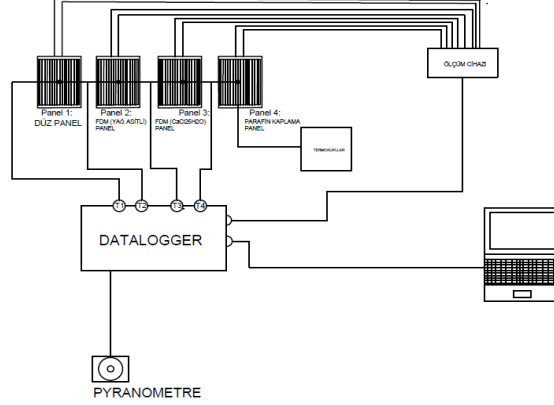

Kaplanan panellerin ve herhangi bir malzeme ile kaplanmayan panelin sıcaklık ölçümlerinin yapılması FDM ile soğutması yapılan güneş panellerinin ayrı ayrı sıcaklıkları ölçülecektir. İdeal sıcaklığın üstünde çalışan bu panellerdeki verim kaybı hesaplanacak soğutma yapılmış durumlarındaki verim ile karşılaştırılması yapılarak analizleri gerçekleştirilecektir.

Sonuçların değerlendirilerek gerekli yayın, sempozyum faaliyetlerinin yürütülmesi yapılan tüm çalışmalardan elde edilen veriler ara raporlarda verildiği gibi sonuç raporunda da detaylı olarak ele alınacaktır. Kaplama işleminde kullanılacak malzemeler, ölçüm cihazları ve güneş panelleri istenilen boyut ve ölçülerde yurtiçinde ilgili firmalardan temin edilecektir. Güneş panellerine kaplanması hedeflenen malzemeler Batman Üniversitesi Teknoloji Fakültesi Enerji Sistemleri laboratuvarlarında gerçekleştirilecektir. Güneş Panellerinin sıcaklık ölçümleri, deneyin yapılacağı ortamın rüzgâr hızı, güneş ışınım ve radyasyon miktarı, üretilen gerilim değerlerinin ölçümleri Batman Üniversitesi Batı Raman Kampüsü Teknoloji Fakültesi'nde yapılacaktır. Kaplama işlemi sonrası üretilen enerji miktarı ve sıcaklıktaki değişimlerin simülasyon üzerinde teyidi ve grafik incelemeleri yapılacaktır.

## **YÖNTEM**

Güneş Panelleri'nin ürettiği enerjinin, panelin ideal çalışma sıcaklığının üstüne çıkmasıyla verimin düşmesine sebep olduğu bilinmektedir. Yapacağımız çalışmada 3 adet fotovoltaik panelin arka kısmı şekillerde verildiği gibi 3 farklı malzeme ile kaplanacaktır. Kalan 1 diğer fotovoltaik panel herhangi bir malzemeyle kaplanmayacaktır. Aynı zaman aralıklarında malzemelerle kaplanmış diğer panellerle gerilim değerleri ölçülecektir. Fotovoltaik panellerin sıcaklığını düşürmek için kullanacağımız malzemelerin herhangi bir sızıntı, taşma veya dökülme yapmaması için kasaların içine yerleştirilecektir. Maximum gerilim değerlerine dirençler yardımı ile ulaşıldıktan sonra herhangi bir malzeme ile kaplanmamış olan fotovoltaik

panelin ürettiği enerji ile parafin, yağ asidi ve FDM ile kaplanan fotovoltaik panellerin ürettiği enerji miktarlarının ölçümleri yapılacaktır.

**Şekil 5.** Deney Setinin hazırlığı

Datalogerlar; veri kayıt cihazı olarak adlandırılan bu cihazları ile birden fazla parametreyi gözlemlenmesi mümkün olmaktadır. Deney sistemine uygun tipte olan dataloger seçilecektir. Ölçülen veriler bilgisayara aktarılarak grafiklerle gösterilecektir. Sonrasında simülasyon üzerinde; ölçüm, hata ve verim değerleri karşılaştırılarak deney ölçümlerinin doğruluğunun teyit edilmesi hedeflenmektedir.

Dataloger kullanımıyla elde edilen veriler ile gerekli verim analizleri yapılarak; sıcaklığın fotovoltaik panellerde verime etkisi incelenecektir.

Konstrüksiyon yardımıyla zemin ile teması kesilecek güneş panellerinin arka kısmına soğutma için kullanılacak malzemeler yerleştirilecektir. Böylece verimlilik açısından hangi malzemenin fotovoltaik panellerde kullanılmasının daha faydalı olacağına dair fikir elde etmemize yardımcı olacaktır. Sıcaklığın fotovoltaik panellerdeki etkisini azaltmaya yönelik deneysel çalışmaların artmasına yol açacaktır.

### **Panel Verimliliğin Sıcaklıkla İlişkisi**

Fotovoltaik sistemin güç analizini yapabilmek için panel gerilim ve akım değerlerinin bilinmesi gerekir. Ölçü aleti ile akım ve gerilim değerleri ölçülen panellerin güç analizi Denklem 1 kullanılarak yapılır [13].

$$P = I \times V \quad (1)$$

Sistemin elektriksel verim hesabında ise; panel yüzey alanı, panele düşen ışınım değeri ile akım ve gerilim değerlerinin bilinmesi gerekir. Sistemin elektriksel verimi Denklem 2 kullanılarak hesaplanabilir.

$$\eta P = (V \times I) / (A \times E) \quad (2)$$

PV panel hücre sıcaklığı ( $T_1$ ), hava sıcaklığı ( $T_2$ ) ve ışınım ( $E$ ) değeri için *NOCT* sıcaklığı için Denklem 3 kullanılır.

$$T_1 = T_2 + (NOCT - 20) / 0,8 \times E \quad (3)$$

Panelin çıkış gücü ( $Pm$ ); Denklem 4 yardımıyla ve bu denklemde  $T_1$  sıcaklık değeri ile standart test koşullarındaki panel gücü sıcaklığa bağımlılık katsayısı  $\eta P$  yerine konularak hesaplanabilir [13].

$$Pm(T_1) = Pm \times [1 - \eta P \times (T_1 - 25)] \quad (4)$$

Aşırı ısınmanın PV panellerin verimliliğini azalttığı bilinen bir gerçektir. PV panel sıcaklığı  $45^\circ\text{C}$ 'nin üstüne çıkmadan soğutma işlemi başlatılmalıdır [13]. PV/T panellerin ve PV panelin güç analizinin yapılabilmesi için öncelikle PV/T ve PV panellerin gerilim akım değerlerinin bilinmesi gerekmektedir. Panellerin artı (+) ve eksi (-) çıkışlarından gerilim ve akım değerini ölçmek için, iki adet multimetre kullanılır. Multimetrelerden biri, gerilim değerini ölçmek için devreye paralel bağlanırken diğeri akım değerini ölçmek için devreye seri bağlanır. Gerilim ve akım değerlerinin ölçümleri yapılan sistemin güç analizi aşağıdaki formül ile hesaplanır.

$$W = I \times V \quad (5)$$

Elektriksel verim hesabının yapılabilmesi için; Pyronometre cihazı ile ölçülen panel yüzeyine düşen ışınım değeri, panel yüzey alanı, gerilim ve akım değerlerinin bilinmesi gerekir. Elde edilen değerler ile eşitlik 6'da verilen formül kullanılarak sistemin elektriksel verim analizi yapılır [14].

$$\eta_{PV} = \frac{V.I}{A_{koll}.I_{ışınım}} \quad (6)$$

Isıl verim hesabının yapılabilmesi amacıyla paneli soğutmak için sistemde dolaştırılan suyun debisi, panele giriş – çıkış sıcaklıkları bilinmesi gereklidir. Bilinen değerler ile aşağıdaki formül kullanılarak ısıl verim hesabı yapılabilir.

$$\eta_{PV/Tsu} = \frac{\dot{m}.c_p.\Delta T}{A_{koll}.I_{ışınım}} \quad (7)$$

Burada,  $\Delta T$  paneli soğutmak için sistemde dolaşan suyun panele giriş – çıkış sıcaklık farkı aşağıdaki formül ile tanımlanır.

$$\Delta T = T_{\text{kollektör giriş}} - T_{\text{kollektör çıkış}} \quad (8)$$

## **SONUÇ VE ÖNERİ**

Bu çalışmayı ile her geçen yıl artan kullanımına rağmen sıcaklık sebebiyle yeterli verimi sağlayamayan fotovoltaik panellerin verimlerindeki kayıplar azaltılacaktır. En fazla verimin hangi sıcaklıkta hangi malzeme ile elde edileceği sonucuna varılacaktır. Çalışma yapılırken ayrı ayrı üç farklı malzeme ile kaplanmış aynı güçteki güneş panelleri aynı zaman diliminde ve aynı şartlarda 4 güneş paneli analiz edilecektir. Böylece kayıplarıyla beraber bir fotovoltaik panelin üretebileceği enerji değerlerine daha sağlıklı bir şekilde ulaşılabilecektir.

Fotovoltaik panellerin yüzey sıcaklıkları, ortam sıcaklığı, güneş radyasyonu gibi değerler toplanılacaktır. Fotovoltaik panellerin sıcaklığını azaltması için kullanılacak malzemelerin kaplanmasından sonra da gerekli sıcaklık ve gerilim değerlerinin ölçümleri yapılacaktır. Elde edilen bu veriler; yine gerekli formüller kullanılarak hesaplamalar yapılarak bu verilerin ışığında fotovoltaik panellerinin verim grafikleri elde edilecektir. Yapacağımız bu çalışma fotovoltaik panellerin verimlerini arttırarak güneş enerji santrallerinin ve diğer pv sistemlerin amortisman sürelerini azaltmak gibi ekonomik avantajlar sağlamakla beraber fotovoltaik panellerin verimlerini arttıracaktır.

Bu tür verimlilik arttırıcı çalışmalara bilimin merkezi olan üniversitelerde daha fazla önem verilir ise kaynakları giderek tükenen dünya ve yenilenebilir enerji potansiyeli yüksek olan ülkemiz için fotovoltaik sistemlerin kayıplarının azaltılarak dezavantajlarını ortadan kaldırmak güneş enerjisinin kullanımına yönelik artışları sağlayacaktır.

## **TEŞEKKÜR**

Bu çalışma BTÜBAP-2021-YL-06 BAP projesi kapsamında yapılacaktır. Katkılarından dolayı Batman Üniversitesine ve BAP Proje desteğine şimdiden teşekkür ederiz.

### **ÖZET**

Son yıllarda otomotiv endüstrisi, insan müdahalesi olmadan çevreyi algılayan ve çevreden aldığı ham verileri işleyerek kendi sürüş tekniklerini geliştirebilen otonom araçlar üzerine yoğunlaşmaktadır. Otonom araç teknolojisinin hedefi, sıradan bir taşıtta insanın üstlendiği, frenleme, hızlanma, direksiyon kontrolü, tabela ve şerit takibi, çevre kontrolü, yer-yön belirleme, park etme gibi işlemlerin araç tarafından otomatik olarak sağlanmasıdır. Otonom araçlarda, aracın sürüş esnasında yoldan sapmaması adına, kesintisiz olarak şerit takibi yapılmaktadır. Buna ek olarak seyahat güzergahındaki tabelaların tespit edilmesi ve tabelalardaki kurallar çerçevesinde sürüş yöntemine karar verilmesi için yazılım sistemleri geliştirilmektedir. Hız sensörü, lidar, radar, GPS gibi sensörler ve kameralar yardımı ile araç çevresinden veriler toplanmaktadır. Yazılım sistemi, kamera ve sensörlerden alınan bilgileri yorumlayarak aracın durumunu ve gerçekleştireceği stratejiyi belirlemektedir. Bu karar mekanizmasını oluşturabilmek amacıyla görüntü işleme ve derin öğrenme gibi yazılım teknikleri kullanılmaktadır. Bu çalışmada ele alınan yazılım sistemi, Java tabanlı bir merkezi kontrol yazılımı, nesne tespiti yapan derin öğrenme modeli ve soket tabanlı sunucu olmak üzere üç kısımdan oluşmaktadır. Derin öğrenme modeli ile tabela ve şerit tespiti gibi işlemler gerçekleştirilmektedir. Arka planda WebGL teknolojisi ve Tensorflow JS kütüphanesini kullanan söz konusu model, web tarayıcı üzerinde çalışacak şekilde tasarlanmıştır. Merkezi kontrol yazılımı, modelden elde edilen sonuçlar doğrultusunda aracın bir sonraki aksiyonu için gerekli stratejileri çalıştırmaktadır. Sunucu ise nesne tespit uygulamaları ile merkezi kontrol yazılımı arasında soket tabanlı bir iletim mekanizması sağlamaktadır.

**Anahtar kelimeler:** Otonom araçlar, sürücüsüz araçlar, derin öğrenme, yapay zekâ.

**JAVA-BASED SOFTWARE ARCHITECTURE PROPOSAL FOR AUTONOMOUS VEHICLES****ABSTRACT**

In recent years, the automotive industry has focused on autonomous vehicles that sense the environment without human intervention and can develop their own driving techniques by processing raw data from the environment. The goal of autonomous vehicle technology is to automatically provide operations such as braking, acceleration, steering control, sign and lane tracking, environmental control, location-orientation and parking, which are undertaken by humans in an ordinary car. In autonomous vehicles, lane detection is carried out uninterruptedly so that the vehicle does not deviate from the road while driving. In addition, software systems are being developed to detect the signs on the travel route and to decide on the driving method within the framework of the rules on the signs. With the help of sensors and cameras such as speed sensor, lidar, radar, GPS, data is collected from the vehicle environment. The software system interprets the information received from the camera and sensors and determines the status of the vehicle and the strategy to be implemented. In order to create this decision mechanism, software techniques such as image processing and deep learning are used. The software system discussed in this study consists of three parts: a java-based central control software, a deep learning model for object detection, and a socket-based server. With deep learning model, operations such as signage and pedestrian detection are carried out. The model, which uses WebGL technology and Tensorflow JS library in the background, is designed to run on a web browser. The central control software runs the necessary strategies for the next action of the vehicle in line with the results obtained from the model. The server, on the other hand, provides a socket-based transmission mechanism between object detection applications and central control software.

**Keywords:** Autonomous vehicles, self-driving vehicles, deep learning, artificial intelligence.

## 1. GİRİŞ

Geçtiğimiz son yirmi yılda yapay zekâ araştırmaları sağlık [1, 2], eğitim [3], güvenlik [4], endüstri [5], tarım [6, 7], robotik [8], akıllı şehirler [9] ve otonom araçlar [10-12] vb. gibi alanlara katkı sunmaktadır. Günlük yaşantımızın çoğu alanında hızla yayılan akıllı sistemler, son yıllarda otomotiv sektörünün de en önemli çalışma alanı haline gelmiştir. Otomobil şirketleri, insan desteğine ihtiyaç duymadan seyahat edebilen sürücüsüz araçlar üzerinde yoğunlaşmaktadır. Otomotiv sektörünün geleceğine yön veren otonom araçlar, daha az maliyet ile daha güvenli ve konforlu sürüş imkanı sunmaktadır. Ayrıca otonom araçların, çocuklar, yaşlılar ve engelli bireyler için ulaşımı kolaylaştıracağı düşünülmektedir. Otonom araçların verimli çalışabilmeleri için aracın mekanik kısmına ilave olarak, farklı kaynaklardan bilgi alan yüksek seviye teknolojilerin kullanılması gerekmektedir [13]. Hız sensörü, Lidar, radar, GPS gibi sensörler ve kameralar araç çevresini inceleyerek aracın dış algısını (eksterospsiyon) diğer sistemlere iletmektedir [14]. Sensör ve kameralardan alınan veriler yardımı ile karar mekanizması oluşturabilmek için görüntü işleme ve derin öğrenme gibi yazılım teknikleri kullanılmaktadır. Otonom sürüşte bir kontrol hareketinin sağlanması için öncelikle nesnenin algılanması ve ardından bu nesnenin tanınması gerekmektedir [15]. Nesne algılama ve tanıma yönünden güçlü makine öğrenmesi yöntemleri olması [16] sebebiyle otonom araçlarda sıklıkla derin öğrenme yöntemleri tercih edilmektedir. Region Based Convolutional Networks (R-CNN), Fast R-CNN, Faster R-CNN, Mask R-CNN, You Only Look Once (YOLO) ve Single Shot Multibox Detector (SSD) nesne tespitinde yaygın olarak kullanılan kütüphanelerdir [17]. Aracın yazılımları geliştirilirken, yazılım dili olarak Java ve Javascript, geliştirme ortamı olarak da Netbeans editörü kullanılmakta ve Açık Cezeri Kütüphanesinden (OJL) [18, 19] yararlanılmaktadır. OJL, matris, veri görselleştirme, makine öğrenmesi, derin öğrenme, sinyal ve görüntü işleme alt konularını ve modüllerini kapsayan, Java programlama dili ile yazılmış açık erişimli bir yazılım kütüphanesidir [20]. Bu kütüphanenin desteği ile kontrol yazılımı, veri etiketleme, nesne tespiti gibi neredeyse tüm işlemler özgün yöntemler ile kontrollü bir şekilde yürütülmektedir.

Bu çalışmada ele alınan yazılım mimarisi, Java tabanlı bir merkezi kontrol yazılımı, nesne tespiti yapan derin öğrenme modeli ve socket tabanlı sunucu olmak üzere üç kısımdan oluşmaktadır. Derin öğrenme modelleri ve Tensorflow JS kütüphanesi kullanılarak web tarayıcıda nesne tespiti işlemleri gerçekleştiren nesne tespiti uygulamaları oluşturulmaktadır. Merkezi kontrol yazılımı, şerit takibi, trafik lambası-trafik levhası tespiti, park yapma gibi

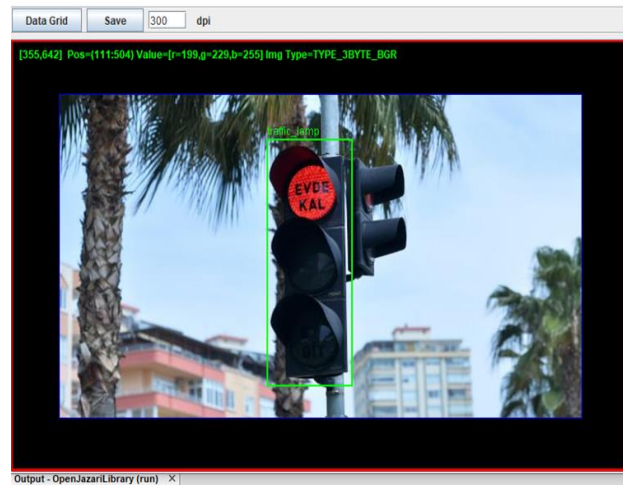

işlemleri gerçekleştiren alt programlar bulundurmakta ve nesne tespiti uygulamalarından elde edilen sonuçlar doğrultusunda aracın bir sonraki aksiyonu için gerekli stratejileri çalıştırmaktadır. Sunucu ise nesne tespit uygulamaları ile merkezi kontrol yazılımı arasında soket tabanlı bir iletim mekanizması sağlamaktadır.

## **2. TENSORFLOW JS İLE TARAYICIDA NESNE ALGILAMA**

Object detection yöntemlerinin her birinin kendine özgü güçlü ve zayıf yönleri bulunmaktadır. Önerilen mimaride Tensorflow JS kullanılarak web tarayıcıda çalışan bir nesne tespit web uygulaması geliştirilmektedir. Düşük bilgi işlem kapasitesine sahip cihazlarda dahi yüksek doğruluk performansı ile çalışan SSD MobileNet V2 modeli kullanılarak model eğitilmekte ve web uygulaması halinde web tarayıcısına eklenmektedir. Tensorflow JS, makine öğrenmesi modelleri oluşturmak, eğitmek ve çalıştırmak için geliştirilmiş, istemci tarafında çalışan, açık kaynaklı bir kütüphanedir. Tensorflow JS kütüphanesi, makine öğrenmesi işlemlerinde Javascript kullanımının önünü açmaktadır. Bu sayede hiçbir sürücü ve kütüphane kurmadan, tarayıcı üzerinden makine öğrenmesi modelleri çalıştırılabilmektedir.

### **Veri Hazırlığı**

Derin öğrenme işlemine başlamadan önce eğitim ve test aşamalarında kullanılacak olan etiketli verilerin toplanması gerekmektedir. Etiketleme işlemi ses, metin, görüntü gibi verilerde önemli olan unsur ve özelliklerin ön plana çıkarılarak isimlendirilmesi işlemidir. Etiketli veri seti oluşturmak önemli ve zahmetli bir süreçtir. Günümüzde bu işlem, bir iş kolu haline gelmiştir. Büyük şirketler etiketli veri elde etmek adına kapsamlı çalışmalar yürütmektedir. Veri etiketlemenin birçok farklı yolu bulunmaktadır. Bu kısımda görseller için kullanımı en yaygın olan etiketleme yöntemi açıklanmaktadır. İlk adım, çalışma alanına uygun görsellerin toplanmasıdır. Trafik levhası, trafik lambası, engel, yaya, şerit gibi unsurlar otonom araç tarafından dikkate alınacağından, gerçek hayattan ve simülasyon ortamından bu unsurlara ait çok sayıda görüntü toplanmaktadır. Veri toplama işlemi tamamlandıktan sonra etiketleme yazılımları kullanılarak elde edilen her veri tek tek etiketlenmektedir. Elde edilen görüntüler Şekil 1’de gösterildiği gibi OJL yazılımı ile etiketlenmektedir.

**Şekil 1.** OJL ile veri etiketleme

Etiketleme işlemi tamamladığında her bir görsel için, görsel adı, görsel yolu, görüntü genişliği ve yüksekliği, etiketli verinin sınırlayıcı kutusunun koordinatları, sınıf adı gibi bilgileri barındıran xml dosyası oluşturulmaktadır. Şekil 2’de örnek bir xml dosyası yer almaktadır. Bu dosyadaki bilgiler eğitim aşamasında kullanılmaktadır.

### **3. TRAFİK İŞARETLERİ-ENGEL TESPİT ALGORİTMASI**

Bir aracın seyri esnasında tabelalar, trafik lambaları, durak işaretleri, yayalar, engeller gibi unsurların tespiti ve incelenmesi büyük önem arz etmektedir. Trafik işaretlerinin tespiti bir nesne tespit problemi olarak ele alınmaktadır. Tensorflow JS kullanılarak geliştirilen trafik işaretleri ve engel tespit modeli web uygulaması haline getirilmektedir. Araca yerleştirilen

kameradan alınan veriler bu uygulama tarafından kullanılmaktadır. Uygulama, gelen veriler üzerinde dur, sağa dönülmez, yaya geçidi, yol çalışması gibi trafik levhalarını, yayaları, zemin ve nesne engellerini tespit etmektedir. Tespit edilen unsurlara ait koordinat bilgileri ve tespit edilen unsurun sınıf bilgisi otonom sürüş algoritmasına iletilmektedir. Otonom sürüş algoritması tespit edilen unsurun sınıf bilgisine göre gerekli stratejiyi etkinleştirmektedir. Örneğin; kırmızı ışığın tespit edilmesi durumunda aracın hızını azaltarak durması ve yeşil ışık tespit edilinceye kadar belirli bir süre beklemesi sağlanmaktadır.

#### **4. ŞERİT TAKİP ALGORİTMASI**

Şerit takibi hem otonom araç kullanıcılarının hem de trafikteki diğer araç ve yolcuların güvenliği açısından önemli bir konudur. Otonom bir araç geliştirirken dikkat edilmesi gereken durumların başında gelmektedir. Otonom araçlarda şerit takibi genel olarak yan aynalar ya da aracın ön kısmına yerleştirilen kameralar vasıtası ile yapılmaktadır. Aracın ön kısmına yerleştirilen kamera, yolu taramakta ve şerit takibi için işlenecek olan girdi verilerini sağlamaktadır. Elde edilen veriler, Tensorflow JS kullanılarak geliştirilen şerit tespit uygulamasına iletilmektedir. Şerit tespit uygulaması, bu veriler yardımıyla şerit ve yol çizgisi tespiti sağlamaktadır. Şerit tespit işleminden sonra otonom sürüş algoritmasına şeritin ve yol çizgisinin alınan görüntü üzerindeki koordinat bilgileri verilmektedir. Bu koordinat verileri kullanılarak aracın şerit ve yol çizgisine göre konumu belirlenmektedir. Aracın mevcut konumuna göre yolu ortalaması adına uygun direksiyon açısı kontrol edilmekte ve aracın şeridi ortalaması sağlanmaktadır. Şerit takip algoritması arka planda sürekli olarak çalışmaktadır.

#### **5. OTONOM SÜRÜŞ ALGORİTMASI**

Önerilen mimaride kodlamalar, Netbeans ortamında, OJL kütüphanesi kullanılarak Java dili ile geliştirilmektedir. Otonom sürüş algoritması aracın çalışır durumdaki tüm işlevlerini kapsayan bir Java uygulamasıdır. Uygulamada Strategy isminde bir soyut sınıf yazılmakta ve aracın gerçekleştireceği tüm aksiyonları barındıran somut sınıflar bu ara yüzü implement edecek şekilde tasarlanmaktadır. Bu kapsamda, engel stratejisi, durak stratejisi, dur stratejisi gibi alt sınıflar bulunmaktadır. Uygulama, arka planda sürekli olarak trafik işaretleri ve engel tespit algoritması ile şerit takip algoritmasını çalıştırmaktadır. Trafik işareti ve engel tespit algoritması ile tabela, trafik lambaları, yayalar, engeller sürekli olarak denetlenmektedir. Örneğin; trafik lambası tespiti sağlanması durumunda trafik lambasının durumu incelenmekte ve gerekli gaz-

fren işlemini gerçekleştirecek strateji sınıfı çalıştırılmaktadır. Aynı şekilde sola mecburi dönüş tespiti durumunda, gerekli strateji sınıfı çalıştırılarak direksiyonun sola dönüşünü gerçekleştirecek açıyı alması sağlanmaktadır. Şerit takibi algoritması arka planda çalıştırılarak aracın şeridinde seyretmesi mümkün olmaktadır. Hedeflenen noktaya erişilmesi durumunda park algoritması devreye alınıp diğer algoritmaların çalışması durdurularak park işlemi ile görev sonlandırılmaktadır.

## **6. JAVA TABANLI SUNUCU**

Önerilen mimaride, Java tabanlı bir sunucu (server) yazılımı kullanılmaktadır. Bu sunucu, aslında low-code tarzında geliştirilen bir sunucu uygulamasıdır. Uygulamanın asıl hedefi, programlama dilinden bağımsız (programming language agnostic), kurulumu kolay, düşük donanımlar da bile gpu gücünü kullanabilen derin öğrenme algoritmalarının çalışmasına olanak tanıyan web socket temelli bir arayüz yazılımı geliştirmektir.

## **7. SONUÇ VE DEĞERLENDİRME**

Otonom araçlar, maliyet, güvenlik, konforlu sürüş gibi birçok avantaj sağlaması sebebiyle geleceğin otomotiv sektöründe büyük bir pazar payına sahip olacaktır. Bu çalışmada, bütüncül bir otonom araç sistemi geliştirilmesi için Java ve OJL tabanlı bir yazılım mimarisi sunulmaktadır. Önerilen mimari, merkezi kontrol yazılımı, nesne tespiti yapan derin öğrenme modeli ve socket tabanlı sunucu olmak üzere üç kısımdan oluşmaktadır. SSD MobileNet V2 modeli kullanılarak eğitim yapılmakta ve tabela, trafik lambası, yaya, yol şeridi gibi unsurların tespiti için derin öğrenme modelleri geliştirilmektedir. Geliştirilen nesne tespit modelleri, Tensorflow JS kullanılarak internet tarayıcıda çalıştırılabilen nesne tespit uygulamaları haline getirilmektedir. Nesne tespit uygulamaları, araç üzerindeki kamera ve sensörlerden alınan verileri işleyerek nesne tespiti sağlamaktadır. Merkezi kontrol yazılımı, nesne tespit uygulamalarından elde edilen sonuçlar ışığında bir karar mekanizması sağlamaktadır. Merkezi kontrol yazılımı Netbeans editöründe, Java dili kullanılarak kodlanmaktadır. Socket tabanlı sunucu ise nesne tespit uygulamaları ve merkezi kontrol yazılımı arasında, ortamdaki bağımsız bir köprü görevi görmektedir. Gelecekte yapılacak çalışmalarda, Tensorflow JS desteği ile nesne tespitini kolaylaştıran bu mimari kodlanacak ve programlama dilinden bağımsız, socket tabanlı bir arayüz geliştirilecektir.

**TEŞEKKÜR**

Bu çalışma, Siirt Üniversitesi Bilimsel Araştırma Projeleri (SİUBAP) tarafından 2022-SIUMÜH-015 numaralı proje olan “(Cezeri Campus Car) Otonom Araç Yazılımı Geliştirme Projesi” kapsamında desteklenmiştir. Bu çalışmada emeği geçen CezeriLab ekibine teşekkür ederiz.

**ÖZET**

Beyin tümörlerini sınıflandırma, bilgisayar destekli tanıda önemli bir problemdir. Beyin tümörünün erken teşhisi hastalar için hayati öneme sahiptir. Hastalığa erken müdahale ve tedavi için hastalığın erken teşhisi çok önemlidir. Bu çalışmada, üç belirgin beyin tümörü tipini oluşturan glioma, meningioma ve hipofiz tümörlerini sınıflandırma problemine odaklanılmıştır. Derin öğrenme tabanlı mimariler beyin tümörü sınıflandırma için yaygın olarak kullanılmaktadır. Sınıflandırma için CNN mimarisi kullanılmıştır. Makine öğrenmesinde kullanılan diğer yöntemler, tümörün doğru sınıflandırılması için yetersiz kalabilir. Makine öğrenmesinde kullanılan diğer yöntemler zaman alıcı, yoğun ve insan hatasına açıktır. Kişiler bazen tümörün olduğu alanı gözden kaçırabilir veya hangi sınıfa ait olduğunu yanlış sınıflandırabilir. Bu ve benzeri durumlar, beyin tümörlerinin sınıflandırılması için derin öğrenmeye dayalı bir yaklaşımın önemini göstermektedir. Bir beyin tümörünün hızlı ve doğru bir şekilde sınıflandırılması, doğru klinik teşhis ve zamanında hastalığa müdahale etmek için hayati öneme sahiptir. Bu çalışmada, MRI görüntülerinde glioma, meningioma ve hipofiz dâhil beyin tümörünün doğru sınıflandırılması için derin evrişimli bir sinir ağı mimarisi önerilmiştir. Önerilen model, figshare Cheng aracılığıyla halka açık 3064 görüntüden oluşan bir beyin tümörü veri kümesi üzerinde eğitilmiştir. Önerdiğimiz CNN mimarisi ile Figshare veri seti üzerinde ki beyin tümörlerini (glioma, meningioma veya hipofiz) sınıflandırmada ortalama %96.95 doğrulukla başarı göstermiştir. Önerilen CNN mimarisini literatürde ki birçok araştırma sonucuna göre yüksek performans gösterdiği görülmüştür.

**Anahtar Kelimeler:** Beyin tümörü, CNN, Derin öğrenme

## **CLASSIFICATION OF BRAIN TUMORS FROM MR IMAGES WITH CNN ARCHITECTURE**

### **ABSTRACT**

Classifying brain tumors is an important problem in computer-assisted diagnosis. Early diagnosis of brain tumor is vital for patients. Early diagnosis of the disease is very important for early intervention and treatment. In this study, we focused on the problem of classifying glioma, meningioma and pituitary tumors, which are three distinct types of brain tumors. Deep learning-based architectures are widely used for brain tumor classification. CNN architecture was used for classification. Other methods used in machine learning may be insufficient for accurate classification of the tumor. Other methods used in machine learning are time consuming, intensive and prone to human error. Sometimes people may miss the area where the tumor is or misclassify which class it belongs to. These and similar cases demonstrate the importance of a deep learning-based approach for the classification of brain tumors. Rapid and accurate classification of a brain tumor is vital for accurate clinical diagnosis and timely disease intervention. In this study, a deep convolutional neural network architecture is proposed for accurate classification of brain tumor, including glioma, meningioma, and pituitary, on MRI images. The proposed model is trained on a brain tumor dataset of 3064 publicly available images via figshare Cheng. With the CNN architecture we proposed, it showed success with an average of 96.95% accuracy in classifying brain tumors (glioma, meningioma or pituitary) on the Figshare dataset. It has been seen that the proposed CNN architecture has high performance according to many research results in the literature.

**Keywords:** Brain tumor, CNN, Deep learning

## **1. GİRİŞ**

Kafa içi tümörler olarak da bilinen beyin tümörleri, beyinde, lenf dokusunda veya kan damarlarında kontrol edilemeyen hücre bölünmesinden kaynaklanan anormal şişlik veya hücre büyümesidir. Çoğu tıp kurumu, beyin tümörlerini tam olarak belirlemek için Dünya Sağlık Örgütü'nün (WHO) kategorizasyonunu kullanmayı tercih eder. WHO, beyindeki tümörü, hücrenin kökenine, hücrelerin davranışına ve tümörün ciddiyetine göre sınıflandırır. Not verilirken tümörün gelişimi göz önünde bulundurulur. Kategorizasyon ve bireysel tümör derecesi, davranışı tahmin etmek için kullanılır. Görüntü alma türü ve bilgileri, beyin tümörü tanısında önemli bir rol oynar. Tümör teşhisi için yaygın olarak kullanılan görüntüleme teknikleri manyetik rezonans görüntüleme (MRI), bilgisayarlı tomografi ve röntgendir. MRI taramaları, sağlıklı hücrelerden tümör hücrelerini vurgulamak için bir boya enjekte edilerek gerçekleştirilir [1-7].

Beyin tümörleri en yıkıcı hastalıklardan biridir. Hastalığın yüksek derecede olması hastalığın tedavi edilme şansını azaltmakta ve daha az bir yaşam beklentisine yol açmaktadır. Beyin tümörlerinin yanlış teşhisi, yanlış tıbbi müdahaleye neden olmakta ve hastaların hayatta kalma şansını azaltmaktadır. Beyin tümörünün doğru teşhisinin yapılması, beyin tümörü hastalığı olan hastaların varlığını iyileştirmek için uygun bir tedavi planlaması yapmak için kilit bir noktadır [8].

Beyin tümörlerinin doğru ve hızlı teşhisi, hastalığa etkili bir tedavi yönteminin uygulanması için kritik bir öneme sahiptir. Bir tedavi yönteminin seçimi, tanı anında tümörün evresine, patolojik tipine ve tümörün derecesine bağlıdır.

Gliomalar, meningeomalar ve hipofiz, araştırmacılar tarafından çalışma amacıyla üstlenilen ana beyin tümörleridir. Gliomlar kan damarları ve sinir hücreleri dışındaki beyin dokularından, meningeomalar ise merkezi sinir sistemi (CNS) çevresindeki zarlardan ortaya çıkar. Hipofiz tümörleri kafatasının içinde bulunan yumrulardır [9-12]. En sık görülen iyi huylu tümörlerden biri meningeomadır ve çoğunlukla erişkinlerde görülür. Ayrıca insanların %20'si büyüme hızının yavaş olduğu ve küre şeklinde olan meningeomadan etkilenir. Genellikle yavaş büyür ve bazıları hiç büyümeyebilir. Doktorlar, zamanla yapılan taramalarla tümörün olası büyümesini takip etmeyi seçebilir. Glioma tümörleri çoğunlukla kötü huyludur ve meningeoma tümörleri iyi huylu iken, hipofiz tümörleri iyi huylu olsa bile başka tıbbi hasarlara yol açabilir [11-12].

Menenjiomlar, beyin ve omuriliği çevreleyen ince zarlarda indüklenen en yaygın iyi huylu tümörlerdir. Gliomlar, beyin özünde büyüyen tümörlerin çeşitliliğidir. Hipofiz tümörleri beyin hücrelerinin düzensiz büyümesidir. Hipofiz tümörleri beyin hipofiz bezinde gelişir. Bu tümörler, beyin herhangi bir yerinde üretebilen düzgün bir şekle ve içsel yapıya sahiptir [13]. Bilgisayar destekli tıbbi tanı üzerine yapılan son çalışmalar, derin öğrenme kavramlarının ortaya çıkması ile birlikte gelişmiş performanslar sunmaktadır. CNN tabanlı sınıflandırıcı sistemlerin avantajı, manuel olarak segmentlere ayrılmış tümör bölgeleri gerektirmemeleri ve tam otomatik bir sınıflandırıcı sağlamalarıdır [14].

Makine öğreniminin bir alt kümesi olan derin öğrenme, beyin tümörü sınıflandırma, segmentasyon, gıda, sağlık, robotik vb. birçok farklı alanda yaygın olarak kullanılmaktadır [15-20]. Biyomedikal görüntülerin sınıflandırılmasında derin öğrenme modelleri sıklıkla kullanılır. Evrişimsel Sinir Ağları (CNN) iyi bilinen bir yöntemdir. Hiyerarşideki piksellerin uzamsal ilişkisi, görüntüleri öğrenilen filtreler aracılığıyla birleştirerek CNN yardımıyla öğrenilir ve özellik haritaları oluşturur.

Özellik çıkarımı için kullanılan manuel yöntemler, manuel olarak tanımlanmış tümör bölgelerine dayanmaktadır. Bu kısım için uzmanların tecrübe sahibi olmaları ve tümör bölgelerini gözden kaçırmamaları çok önemlidir. Önerdiğimiz mimari ile tümör bölgelerine ait özellikler Evrişimsel Sinir Ağları (CNN) ile otomatik olarak çıkarılacak ve doğru özelliklerin çıkarımı ile görüntülerin sınıflandırılması yapılacaktır.

Bu çalışmada, üç patolojik beyin tümörü tipi (glioma, meningioma ve hipofiz tümörü(Pituitary)) için tasarlanmış otomatik bir sınıflandırma sistemi sunulmaktadır. Uygulama, beyin MRI görüntülerinden özellik çıkarımı için derin bir CNN modeli kullanılmaktadır. Çıkarılan özellikler, CNN mimarileri yardımıyla sınıflandırılmaktadır. Daha sonra önerilen mimarinin kapsamlı bir değerlendirmesi yapılmış ve deneysel sonuçlar analiz edilmiştir.

## **2. MATERYAL VE METOT**

### **2.1. Veri Seti**

Figshare veri seti literatüre ilk olarak 2015 yılında tanıtılmış ve veri setinin güncel versiyonu Cheng tarafından 2017'de sunulmuştur [15]. Erişime açık olan veri setindeki görüntüler, yaygın beyin tümörlerinden üçünü (gliom, meningioma ve hipofiz tümörünü) içermektedir. Veri seti, 1426 adet gliom, 708 adet meningioma ve 930 adet hipofiz tümörü olmak üzere toplam 3064 görüntüden oluşmaktadır. Şekil 1 veri setindeki tümör tiplerinin histogramını göstermektedir.

Şekil 2’de veri setinde yer alan üç farklı patolojik beyin tümörüne ait birer örnek görüntü gösterilmiştir.

Şekil 1. Veri setinde ki her sınıfa ait görüntü sayılarının dağılımı

Şekil 2. Beyin tümörü türleri

## 2.2. METOT

Bu çalışmada, MRI'daki tümörlerin gliomalar, meningiomalar ve hipofiz tümörleri olarak sınıflandırılması için yeni bir CNN ağı tasarlanmıştır. Verisetindeki görüntüler incelendiğinde görüntülere ait görüntülerden bir kısmının 512 değerlerinin ise 256 piksel çözünürlükte kaydedildiği tespit edilmiştir. CNN ağına görüntüleri vermeden önce bu görüntüler üzerinde çeşitli ön işlemler yapılmıştır. Tüm görüntüler 256x256 olarak yeniden boyutlandırılmış ve CNN modeline görüntüler 256x256 olarak verilmiştir. Ön işleme aşamasında görüntüler üzerinde rastgele %15 döndürme, yatay olarak çevirme, %10 yakınlaştırma işlemleri

uygulanmıştır. Şekil 3’te de görüleceği gibi, önerdiğimiz model 3 evrişim, 3 havuzlama ve 2 tam bağlı katmandan oluşmaktadır.

**Şekil 3.** Önerilen CNN Mimarisi

Görüntüler ön işlem aşamasından geçtikten sonra Şekil 3’de gösterilen CNN modeline verilir. Şekil 3’ten görüldüğü gibi önerilen CNN mimarisinde girdiler ilk olarak 48 filtreden oluşan evrişim katmanına gelir ve bu işlemden sonra maksimum havuzlama katmanına verilir. Bu işlemin hemen ardından elde edilen çıktılar aynı şekilde 64 ve 128 filtreden oluşan evrişim ve maksimum havuzlama katmanına verilir. Evrişim katmanlarında filtre boyutu 3’e sabitlenmiştir. Aktivasyon fonksiyonu olarak ta RELU kullanılmıştır. Havuzlama katmanından elde edilen bilgi flatten katmanına verilir. Flatten katmanı, tam bağlı katmana gönderilecek çıktıları hazırlar. Flatten katmanında çok boyutlu veriler tek boyuta indirgenir. Flatten katmanından sonra elde edilen öznitelikler yapay sinir ağına verilir. Yapay sinir ağlarında 64 nörondan oluşan bir katman ve sonuç katmanında yer alan 3 çıkış için tam bağlantılı katman bulunmaktadır.

Modelden elde edilen çıktılar ile gerçek çıktılar arasında hatalar hesaplanarak geriye doğru yayılır. Bu yayılım ile modele ait ağırlıklar güncellenir ve minimum hata elde edilene kadar bu süreç sürdürülür. Bu süreçte kullanılan fonksiyonlara optimizasyon fonksiyonları denilir. Çalışmada optimizasyon fonksiyonu olarak “adam” yöntemi kullanılmıştır.

Havuzlama katmanı modelin ezberlemesini engellemek ve sonraki katmanların hesaplama yükünü azaltmak amacıyla kullanılır. Önerdiğimiz mimaride havuzlama katmanı olarak varsayılan değerlere sahip maksimum havuzlama katmanı kullanılmıştır.

Çalışmada, 64 nörona sahip tek tam bağlantılı katman kullanılmıştır. Sınıflandırma katmanı için çıktıların hangi sınıfa ait olduğunu belirlemek için 0-1 arasında olasılık değeri üreten softmax aktivasyon fonksiyonu kullanılmıştır.

### 2.3. Performans Metrikleri

Çalışmada, önerilen mimari ile elde edilen sonuçları, uzmanlarca belirlenen gerçek sonuçlarla kıyaslamak için duyarlılık, özgüllük ve doğruluk değerleri kullanılmıştır. Bu metriklere göre; örnek ve modelin elde ettiği sonuç pozitif (P) olarak sınıflandırılmışsa doğru pozitif (TP), örnek pozitif ancak model negatif (N) sınıflandırılmışsa yanlış negatif (FN), örnek ve model her ikisi de sonucu negatif bulmuşsa doğru negatif (TN), örnek negatif ancak model örneği pozitif sınıflandırılmışsa yanlış pozitif (FP) grupları olarak değerlendirilir. Bu gruplamaya göre duyarlılık, özgüllük ve doğruluk değerleri çıkarılır. Buna göre:

$$\text{Duyarlılık} = \frac{TP}{TP + FN}$$

Duyarlılık oranı, gerçekten tümöre yakalanan hastaların model tarafından da hastaya ait tümörün tespit edildiği bir metriktir. Hasta olanların model tarafından da hasta olarak tespit edilmesidir.

$$\text{Özgüllük} = \frac{TN}{TN + FP}$$

Özgüllük oranı, tümörün gerçekten var olmadığı durumda model tahmin sonucunun negatif çıkma olasılığı olarak tanımlanmaktadır. Hasta olmayanların model tarafından da hasta olmayanlar olarak tespit edilmesidir.

$$\text{Doğruluk} = \frac{TP + TN}{TN + TP + FP + FN}$$

Doğruluk oranı, modelde doğru tahmin edilenlerin (pozitif ve negatif) toplam veri kümesine oranı ile hesaplanmaktadır.

## 3. DENEYSEL ÇALIŞMALAR

3 sınıf ve 3064 MR görüntüsünden oluşan Figshare veri seti için yeni bir CNN mimarisi önerilmiştir. Önerilen CNN mimarisinin veri seti üzerindeki başarısını artırmak için farklı

önişlemler uygulanmıştır. Ardından en iyi mimari için farklı çalışmalar yapılmış ve CNN mimarisi ile en yüksek skorlu sonuçlar elde edilmiştir.

Şekil 4'te önerilen modelin eğitim sürecindeki kayıp ve doğruluk grafiği verilmiştir.

Şekil 4. Önerilen modelin kayıp ve doğruluk gösterimi

Önerilen model veri kümesi üzerinde eğitildikten sonra modelin test verileri üzerindeki başarısının hata matrisi (Confusion Matrix) Şekil 5'te verilmiştir.

Şekil 5. Hata matrisi (Confusion Matrix)

Elde edilen sonuçların sınıflandırma raporu Tablo 2’de gösterilmiştir.

**Tablo 2.** Sınıflandırma Raporu

	Precision	Recall	F1-Score
Meningioma	0.93	0.96	0.94
Glioma	0.98	0.96	0.97
Pituitary	0.98	1.00	0.99
Accuracy		0.97	0.97
Macro Avg	0.97	0.97	0.97
Weighted avg	0.97	0.97	0.97

Tablo 2’den görüldüğü üzere önerdiğimiz model yaklaşık %97 doğruluk başarısı göstermiştir. Kesinlik (Precision), tümör olarak tahminlediğimiz görüntülerin gerçekten kaç adedinin tümör olduğunu göstermektedir. Önerilen model meningioma türü tümör ile ilgili %93, glioma türü tümör ile ilgili %98 ve pituitary türü tümör ile ilgili %98 kesinlik oranı elde etmiştir.

Duyarlılık (Recall) ise tümör olarak tahmin etmemiz gereken işlemlerin ne kadarının tümör olarak tahmin ettiğimizi gösteren bir metriktir. Önerilen model meningioma türü tümör ile ilgili %96, glioma türü tümör ile ilgili %96 ve pituitary türü tümör ile ilgili %100 duyarlılık oranı elde etmiştir.

F1 Score, Kesinlik (Precision) ve Duyarlılık (Recall) değerlerinin harmonik ortalamasını vermektedir.

#### **4. SONUÇLAR**

Bu çalışmada beyin MR görüntülerinden 3 tipteki beyin tümörlerinin sınıflandırılması için yeni bir CNN mimarisi önerilmiştir. 3064 MR görüntülerinin %85’i eğitim, %15’i test olarak ayrılmıştır. Eğitim setindeki görüntülerin %15’i model doğrulama (validasyon) için ayrılmıştır. Eğitim verileri ile eğitilen modelimiz test verileri üzerinde en yüksek %98.21 ve ortalama %96.95 doğruluk oranı ile görüntüleri doğru sınıflandırmıştır. Gelecekte mimarinin geliştirilimesi adına yapacağımız çalışmalar sonucunda sınıflandırma performansının artırılması hedeflenmektedir.

### **ÖZET**

Günümüzde yapay zekâ; akıllı ulaşım, otonom araçlar, tarım, gıda, sağlık ve güvenlik başta olmak üzere birçok alanda verimli bir şekilde kullanılmaktadır. Akıllı ulaşım ve otonom araçlar kategorisinde bilgisayar grafikleri kullanılarak geliştirilmiş farklı simülasyon ortamları mevcuttur. Literatür incelendiğinde özellikle linux işletim sisteminde çalışabilen gazebo simülasyon yazılımı ilk etapta göze çarpmaktadır. Gazebo her ne kadar birçok simülasyon yazılımında başarılı bir şekilde kullanılıyor olsa da, programcının gazebo'nun sunmuş olduğu api'lerin dışına çıkamaması ve api öğrenme zorluğu özellikle işlemleri düşük seviyeli kod yazmak isteyen yazılımcılar açısından sorunludur. Bununla birlikte teorik olarak arka planda opengl veya directx kullanabilen bütün oyun motorları aslında simülasyon ortamınının oluşturulmasında aktif rol oynayabilir. Bu bağlamda unity ve unreal-engine oyun motorları önemli bir yer tutarlar. Ancak, bu tarz oyun motorları otonom simülasyonundan ziyade genellikle dijital oyun geliştirilmesi için tasarlandıklarından, programcuyu gazebo'da olduğu gibi yüksek öğrenme zorluğu eğrisi karşılamaktadır. Otonom araç teknolojisi üzerinde çalışan araştırmacılar için; esnek, hafif, hızlı, düşük-seviye kütüphane kodları içeren ve nispeten kolay kodlanabilen bir otonom araç simülasyon yazılım ortamına ihtiyaç duyulmaktadır. Bunun için java programlama dilini ve arka planda opengl kütüphanesini kullanan processing kütüphanesi iyi bir alternatif olabilir. Bu çalışmada, processing kütüphanesi temelli 3 boyutlu ve iki kamera açısından aracın kendisini perspektif bakış açısıyla ve parkuru üstten izleyebileceği bir otonom araç simülasyon yazılımı geliştirilmesi hedeflenmiştir. Önerilen yazılımın otonom araçlarla ilgilenen çalışmalar için sade, anlaşılır ve rahatlıkla kodlanabilir bir yardımcı kaynak olacağı düşünülmektedir.

**Anahtar kelimeler:** Yapay zekâ, modelleme ve simülasyon, otonom araçlar, bilgisayar grafikleri, processing, oyun motorları.

## **DEVELOPMENT OF A NEW AUTONOMOUS VEHICLE SIMULATION SOFTWARE WITH PROCESSING**

### **ABSTRACT**

Today, artificial intelligence is used efficiently in many fields, especially in smart transportation, autonomous vehicles, agriculture, food, health and security. There exists various simulation environments developed using computer graphics in the category of smart transportation and autonomous vehicles. When the literature is examined, especially the gazebo simulation software that can run on the linux operating system, stands out in the first place. Although gazebo is used successfully in many simulation software, the programmer's inability to go beyond the apis offered by gazebo and the difficulty of learning api are especially problematic for software developers who want to write low-level code for operations. Nevertheless, theoretically all game engines that can use opengl or directx in the background can actually play an active role in the creation of the simulation environment. In this context, unity and unreal-engine game engines have an important status. However, since such game engines are generally designed for digital game development rather than autonomous simulation, the programmer faces a high learning difficulty curve, just like the gazebo. For researchers working on autonomous vehicle technology; the requirements for an autonomous vehicle simulation software environment which are flexible, light, fast, contains low-level library implementations and can be easily implemented is inevitable. For this, the processing library established by the java programming language and the opengl library in the background, can be a good alternative. In this study, it is aimed to develop an autonomous vehicle simulation software based on the processing library, in which the vehicle can monitor itself from a perspective-view and the track from the top-view via two cameras. It is thought that the proposed software will be a simple, comprehensible and easily coded auxiliary resource for studies dealing with autonomous vehicles.

**Keywords:** Artificial intelligence, modeling and simulation, autonomous vehicles, computer graphics, processing, game engine.

## 1. GİRİŞ

Son günlerde yapay zekâ uygulamaları; dijital oyunlar ve simülasyon [1-5], otonom araçlar [6,7], sağlık [8-10], eğitim [11], güvenlik [12-15], endüstri [16, 17], robotik [18], akıllı şehirler [19] vb. alanlarında karşımıza çıkmaktadır. Özellikle yapay zekâ destekli akıllı şehirler, dijital oyunlar ve otonom araç sürüş simülasyonları günümüzde yoğun bir şekilde araştırılmakta ve yeni yeni simülasyon teknikleri ve yazılım araçları ile desteklenmektedir. Bu bağlamda Linux işletim sisteminde çalışabilen Gazebo [20] öne çıkmaktadır. Gazebo aracını diğerlerinden farklı kılan en önemli avantajlar sırasıyla [21];

- Gazebo'nun açık kaynak geliştiriliyor olması ve büyük bir kitle tarafından sürekli güncelleniyor olması.
- Unity oyun motorunun sağladığı destek ile Gazebo yazılımında 3D sahnelerin tasarlanabiliyor olması.
- Birçok sensörlerle uyumlu çalışabilmesi.
- Unity ve Blender programlarında üretilen 3D nesnelerin ortak standartlar çerçevesinde araca yüklenebilmesi.

Bunlarla birlikte Gazebo aracının bazı zayıf kaldığı yönler de mevcuttur:

- Linux ortamına odaklanılarak geliştirilmesi. Diğer işletim sistemleri için (Windows, MacOS vb.) kurulumunun çok güç olması ve çeşitli sorunlar çıkarabilmesi.
- Geliştirilen API'ler çerçevesinde problemlere müdahale edilmesi. Yapay zekâ kısımlarının geliştirilmesinin güç olması.
- Unity ile sıkı bağı olduğu için simülasyon varlıklarının neredeyse tümünü geliştirmek için Unity kullanma zorunluluğu.

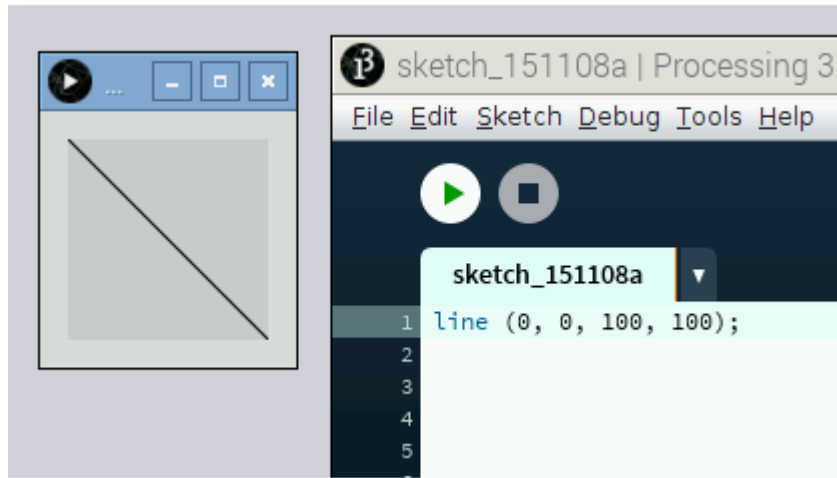

Anlaşılacağı gibi Gazebo uygulamasının avantajları yanında programcuyu kısıtlayıcı yönleri de bulunmaktadır. Gazebo dışında Google Waymo, Tesla ve Nvidia şirketlerinin kendi ürünleri için geliştirdikleri simülasyon ortamları da mevcuttur. Genellikle Gazebo'ya göre çok daha yüksek grafik kalitesi ve fizik motoru desteği sunan söz konusu simülasyon yazılımları açık kaynak değillerdir. Son zamanlarda piyasada en çok oyun motoru olarak tanıdığımız Unreal Engine-5 (UE5) uygulaması da simülasyon işlerinde oldukça profesyonel çıktılar üretebilmektedir. Ancak UE5 arka uçta C++ programlama dilini kullandığından programcı açısından karşısına oldukça güç bir öğrenme eğrisi çıkmaktadır. UE5'in görsel programlama araçlarından biri olan blueprint teknolojisi ise kullanıcıyı, geniş ve karmaşık olan API öğrenme zorunluluğu ile karşı karşıya bırakır. Benzer şekilde Matlab ve AnSYS araçları ile de

simülasyon geliştirilebilir ancak bu iki araç grafik açısından rakiplerine göre geri kalmakla birlikte genellikle matematiksel modllemelerde rakiplerinden bir adım öndedirler.

Bu bilgiler ışığında, otonom araç teknolojisi üzerinde çalışan araştırmacılara yönelik; esnek, hafif, hızlı, düşük-seviye kütüphane kodları içeren ve nispeten kolay kodlanabilen bir otonom araç simülasyon yazılım ortamına ihtiyaç duyulmaktadır. Bunun için Java programlama dilini ve arka planda opengl kütüphanesini kullanan processing kütüphanesi iyi bir alternatif olabilir. Bu çalışmada, processing kütüphanesi temelli 3 boyutlu ve iki kamera açısından aracın kendisini perspektif bakış açısıyla ve parkuru üstten izleyebileceği bir otonom araç simülasyon yazılımı geliştirilmesi hedeflenmiştir.

## 2. MATERYAL VE METOT

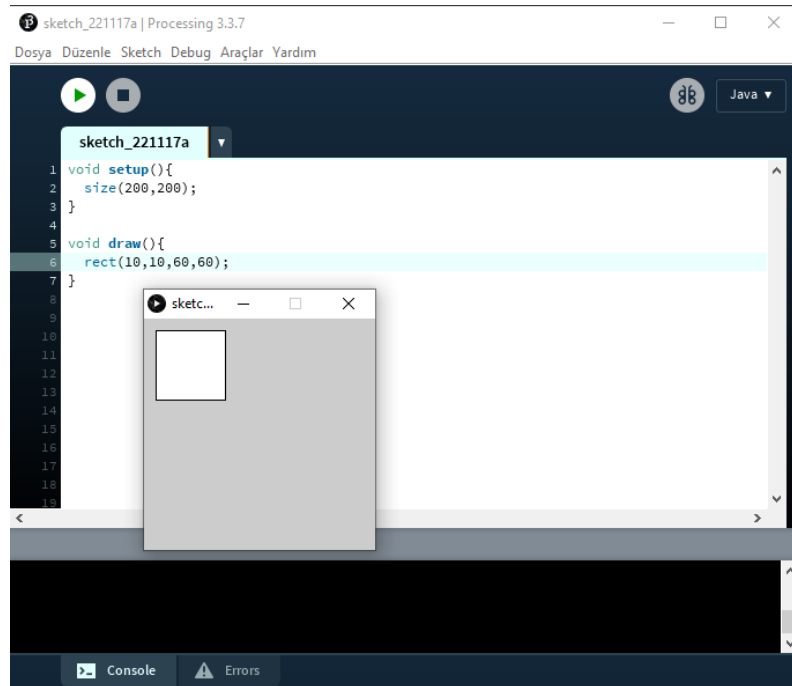

Processing [26] Java programlama dili ile açık kaynak kod olarak geliştirilmiş ancak JavaScript ve Python dillerine de çevrilebilen bir grafik pixel sanatı kütüphanesidir. Kendi geliştirdikleri Processing IDE'si kullanıcı dostu ve oldukça basit bir ara yüze sahiptir. Açık kaynak ve ücretsiz olan Processing IDE'si aynı zamanda Arduino IOT geliştiricileri tarafından da kullanıldığını görmekteyiz. Processing kütüphanesi, Şekil-1'den de görüleceği gibi düşük seviye ve karmaşık OpenGL komutları ile sizleri muhatap etmeden başarılı bir şekilde soyutlama yaparak yüksek seviyede komutları çağırmanıza imkân tanır. Bunu yaparken de performans bağlamında bir zayıflama ile karşılaşmazsınız. Processing ile hazırlanan uygulamalar masa üstünde, web sayfasında veya mobil cihazlarda çalıştırılabilirler.

Şekil 1. Processing IDE ve çıktısı. Programlama açısından sağladığı soyutlama kolaylığı.

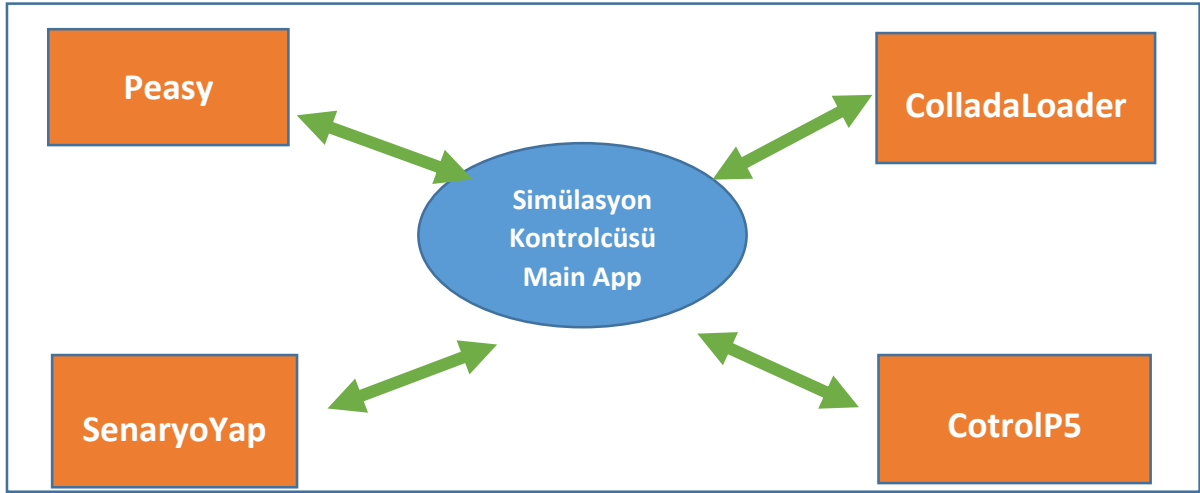

Küçük projelerde Processing IDE programcıya büyük rahatlıklar sağlar. Büyük projelerde Processing IDE'si yerine program geliştirmek için kullanılan popüler Java IDE'lerinden herhangi birisine (Netbeans, Eclipse, IntelliJ vb.) Processing core jar'ları eklenmelidir. Temel olarak bir processing uygulaması setup ve draw isimli iki metottan meydana gelir. Setup metodu program başlayacağı zaman bazı değişkenlere ilk değerlerini atamak veya processing uygulamasının grafiksel arayüz değerlerini set etmek için kullanılır. Draw metodu ise grafik kartının kabiliyetine göre varsayılan olarak saniyede 60 defa çağrılır. Şekil-2, (10, 10) sol-üst koordinatında 60x60 bir kareyi genişliği 200, yüksekliği 200 piksel olan bir pencere içine çizer. Bu görev için rect komutu kullanılır. [26] processing'de kullanılan tüm yüksek seviye metod ve sınıflarla ilgili bilgilerin ve örnek kodların tutulduğu web sayfasının linkidir.

Otonom sürüş simülasyonu geliştirirken standart Java (JDK 8)'nin yanında peasy, colladaloader, controlp5 yardımcı kütüphaneleri kullanılmıştır. Peasy simülasyondaki 3 boyutlu görünüm için gerekli olan kamera nesnesini ve ilgili metodları barındırır. ColladaLoader; simülasyonda gereksinim duyulan fiziksel varlıkların collada formundaki 3B modellerinin processing ortamına yüklenmesinden sorumludur. Benzer şekilde, ControlP5 yardımcı kütüphanesi ise, processing uygulamasına çeşitli grafiksel arayüz bileşenleri (buton, text box, label, combo vb.) eklemede işimize yarar.

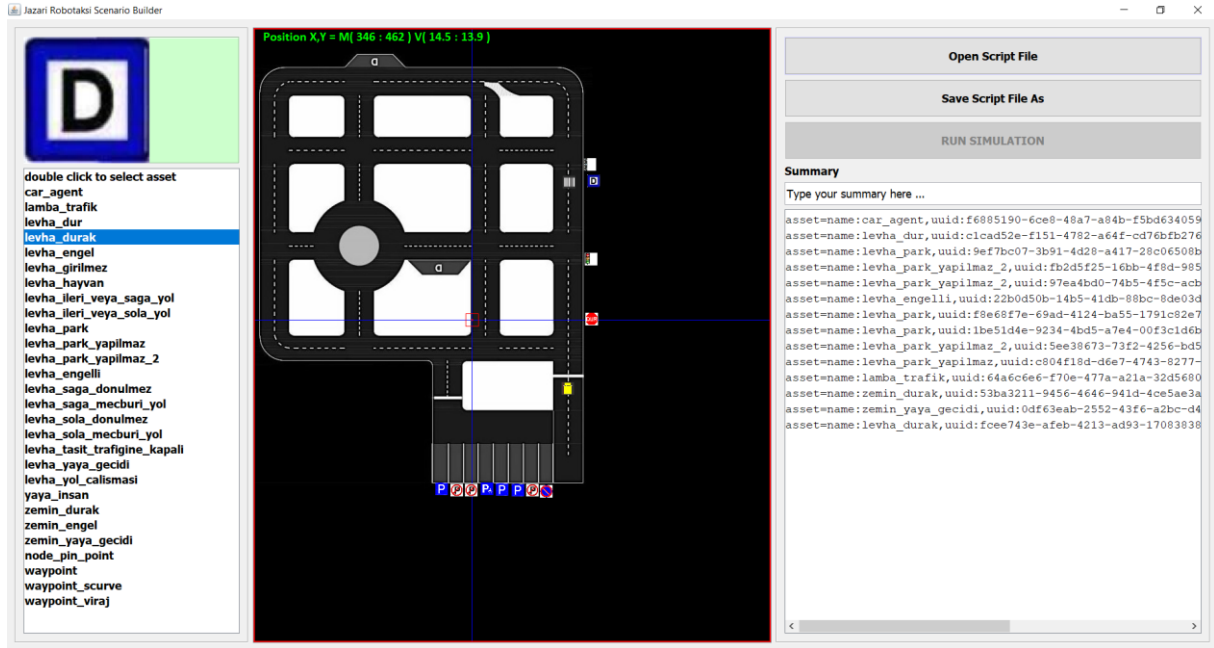

Şekil 2. Processing ile yapılmış küçük bir örnek uygulama.

Şekil-3, otonom sürüş simülasyonu yazılım mimarisinin bağlam (context) diyagramını göstermektedir. Az önce bahsi geçen yardımcı kütüphanelerin dışında modüler ve dinamik bir biçimde senaryo geliştirmemize olanak sağlayan Java swing kütüphanesi ile geliştirdiğimiz SenaryoYap aracımız da bağlam diyagramında yer almaktadır.

Şekil 3. Otonom sürüş simülasyonu bağlam (context) diyagramı.

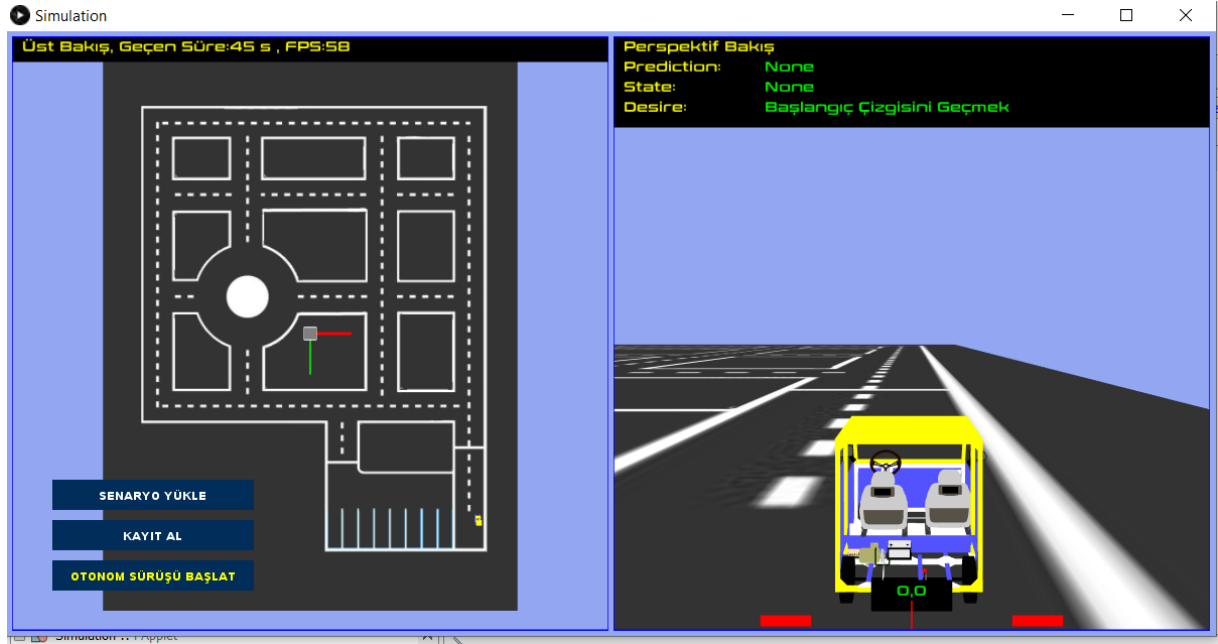

Şekil-4, SenaryoYap aracımızın genel bir görünüşünü temsil etmektedir. Arayüz temel olarak üç bölümden meydana gelmektedir. Sol kısımda parkura yüklemek istediğimiz varlıkların (assets) isimleri yer almaktadır. Kullanıcı isterse bu kısma yeni varlıklar da ekleyebilir. Bu kısımda kullanıcı parkura yüklemek istediği nesneyi seçtiğinde yukarıda ilgili nesnenin büyükçe bir resmi görünür. Kullanıcı bu kısımdan nesnenin üzerine çift tıklayıp sürükleyip bırakarak parkur üzerindeki herhangi bir koordinata varlığı taşıyabilir. İsterse parkur üzerindeki o nesneye mouse sol tuşu ile bir kez tıkladıktan sonra yeni bir yere taşıyabilir veya mouse sağ tuşuna bir kez basarak nesneyi istenilen açıda döndürerek parkur içerisinde o nesne ile ilgili doğru bakış açısı sağlayabilir. Orta kısım 2 boyutlu parkur alanına tepeden bakacak bir kamera açısını temsil eder. Bu kısımda nesnelerin ve mouse koordinatları gerçek ve sanal olarak üstte gösterilir. İstedikleri kadar nesneyi seçip parkur üzerinden silebilir. Sağ bölümde ise daha önceden katedilmiş script dosyalarını güncellememize olanak tanıyan “Open Script File” butonu ile scriptleri sabit diske kaydetmemize yarayan “Save Script File As” butonu yer alır. Hemen altında ise geliştirdiğimiz senaryoyu simülasyon ortamına yükleyen ve simülasyon programını açan “RUN SIMULATION” butonu yer almaktadır. Butonların altında ortadaki parkur alanı üzerinde yaptığımız her değişikliği text formatında kaydeden sadece okunur bir text editör yer alır.

Şekil 4. Parkur varlıklarının (assets) konumlarının belirlendiği Java swing tabanlı senaryo yapma aracı arayüzü.

### 3. DENEYSEL ÇALIŞMALAR

Otonom sürüş simülasyonu geliştirilirken geliştirici açısından karmaşıklığa neden olmayan basit bir mimari ve yaklaşım benimsenmiştir. Bunun için mümkün olduğunca simülasyon aracı yazılımında hazır üçüncü parti geliştiricilerin yaptığı açık kaynak kodlu kütüphanelerden faydalanılmıştır. Şekil-5 te görüldüğü gibi, kullanıcı simülasyon uygulamasını çalıştırdığı zaman karşısına iki farklı bakış açısını içeren bir uygulama penceresi gelmektedir. Sol tarafta tepeden bakış (top-view), sağda ise persepektif bakış (perspective-view) alt pencereleri bulunmaktadır. Peasy her bir pencereyi eş zamanlı render etmekten sorumludur.

Şekil 5. Otonom sürüş simülasyon uygulaması arayüzü.

Simülasyon üst-bakış penceresinde üç adet buton yer alır. Sağ pencerede ise aracımızı ve parkurun perspektif görünüşünün olduğu bölüm vardır. Bu kısımda mouse orta tekerliği ile araç ileri veya geriye alınabilir. Bu sayede kullanıcı isterse first person shooter veya third person shooter görünümü elde edebilir. En altta da aracın dönüş yönü ve hızının anlık olarak gösterildiği küçük bir bilgi ekranı mevcuttur. Kullanıcının klavyeden yön tuşlarına basmasıyla simülasyon bu haliyle çalışabilir bir durumdadır. Gerçek parkur senaryosunu yüklemek için “Senaryo Yükle” butonuna basılması gerekir. Buradan bir önceki bölümde anlattığımız senaryo scripti simülasyon uygulamasına yüklenir. Kullanıcı isterse parkurda gezdiği süreçleri saniyede 24 fps olacak biçimde kaydedebilir. Kayıt yaparken genelde png formatında belirli bir bölgeye odaklanarak sekans görüntüleri alınır. Ardından kullanıcı eğer isterse bu zaman sekansı imge dizisini processing ile birlikte gelen bir araç yardımıyla QuickMove video formatına dönüştürebilir. En altta bulunan “Otonom Sürüşü Başlat” butonuna tıklandığında ise programcının geliştirdiği yapay zekâ tabanlı otonom sürüş algoritması devreye girerek otonom aracın parkurda istenilen görevleri tamamlaması işlemi başlatılır.

#### **4. SONUÇ VE DEĞERLENDİRME**

Bu çalışmada Siirt Üniversitesi Bilgisayar Mühendisliğinde yer alan El-Cezeri Siberetik ve Robotik Laboratuvarındaki CezeriLab ekibi olarak 2019 yılından beridir katıldığımız Teknofest Robotaksi otonom araç kategorisinde geliştirdiğimiz otonom araç projemizin simülasyonu için Java, Processing ve Açık Cezeri Kütüphanesi [23] temelli bir otonom sürüş simülasyonu aracının tanıtımı yapılmıştır. Geliştirdiğimiz aracın piyasada bulunan ücretsiz uygulamalarla benzerliği bulunmakla birlikte özellikle arayüzünün sade, basit, anlaşılır ve kullanıcı dostu olmasından dolayı araştırmacılar tarafından kullanılabilme potansiyelinin olduğu düşünülmektedir.

#### **TEŞEKKÜR**

Bu çalışma, Siirt Üniversitesi Bilimsel Araştırma Projeleri (SIUBAP) tarafından 2022-SIUMÜH-015 numaralı proje olan “(Cezeri Campus Car) Otonom Araç Yazılımı Geliştirme Projesi” kapsamında desteklenmiştir. Bu çalışmada emeği geçen CezeriLab ekibine teşekkür ederiz.

## **BİLGİSAYARLI GÖRÜ UYGULAMALARI İÇİN YENİ BİR VERİ ETİKETLEME ARACI**

**Doç.Dr. Musa ATAŞ (Orcid ID: 0000-0002-1214-3127)**

Siirt Üniversitesi Mühendislik Fakültesi Bilgisayar Mühendisliği Bölümü

### **ÖZET**

Yapay zekâ ve makine öğrenmesinin alt alanlarından biri olan bilgisayarla görü uygulamaları tarım, gıda, sağlık, sanayi, güvenlik, askeri ve eğitim başta olmak üzere birçok alanda başarılı ve etkin bir şekilde kullanılmaktadır. Bilgisayarlı görü uygulamaları aynı zamanda nesne algılama, nesne izleme, bölütleme vb. konularını da içerir. Genellikle denetimli öğrenme stratejisinin benimsendiği bu alanda nesnelere görüntü veya video dosyası üzerinde sınırlayıcı kutu formatında etiketlenmesi gerekir. Bunun için piyasada ücretli ve ücretsiz birçok etiketleme aracı bulmak mümkündür. Her aracın, hem kullanıcı arayüzü hem de üretkenlik açısından birbirine göre güçlü veya zayıf yönleri bulunmaktadır. Özellikle büyük veri setlerinin etiketleme aşamasında, kullanılan veri etiketleme aracının pratik ve basit olmasının yanı sıra hızlı etiketlemeye imkân sunan yönleri sahip olması oldukça avantajlı olacaktır. Görüntü üzerindeki nesnelere sınırlayıcı kutu ile etiketlendikten sonra nesne algılama algoritmalarının yararlanabilmesi için PascalVOC, JSON veya YOLO formatında kaydedilir. Bu çalışmada Java programlama dili ile geliştirilen Open Cezeri Kütüphanesi ile doğrudan çağrılabilen, kullanımı kolay, basit bir arayüze sahip ve veri etiketleme hızı açısından rakiplerinden en az %30 daha iyi olan bir araç önerilmiştir. Sözü edilen aracın uzun ve meşakkatli bir iş olan veri etiketleme sürecini bir nebze olsun kolaylaştıracak hale getirmesi amaçlanmaktadır. Önerilen yeni etiketleme yazılımının açık kaynak kodlu olması, ücretsiz olması ve etiketleme süreçlerini hızlandırması nedeniyle veri bilimciler tarafından tercih edileceği öngörülmektedir.

**Anahtar kelimeler:** Yapay Zekâ, bilgisayarlı görü, derin öğrenme, nesne tespiti, nesne etiketleme araçları.

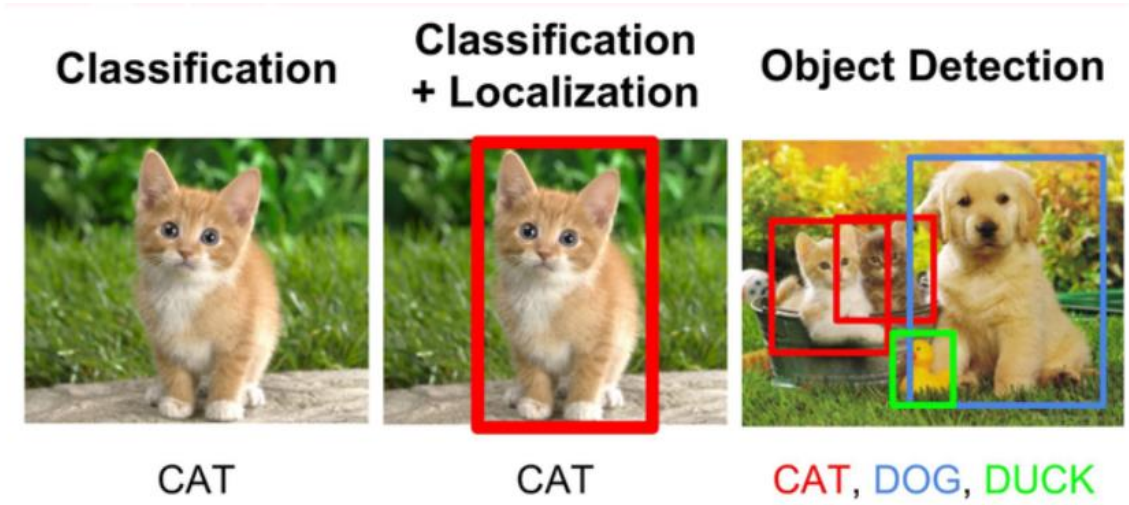

**A NEW DATA ANNOTATION TOOL FOR COMPUTER VISION APPLICATIONS****ABSTRACT**

Computer vision applications, one of the sub-fields of artificial intelligence and machine learning, are used successfully and effectively in many domains, especially in agriculture, food, health, industry, security, military and education. Computer vision applications also include object detection, object tracking, segmentation, etc. In this field, where the supervised learning strategy is generally adopted, objects need to be labeled and/or annotated in bounding box format on image or video file. For this, it is possible to find many paid and free labeling tools in the market. Each tool has certain strengths or weaknesses relative to each other, both in terms of user interface and productivity. Especially in the labeling phase of large data sets, it will be very favorable that the data annotation tool used is practical and simple, as well as having aspects that allow fast labeling. After the objects on the image are labeled with the bounding box, they are saved in PascalVOC, JSON or YOLO format so that object detection algorithms can utilize them. In this study, a tool that can be used directly from the Open Jazari Library, developed with the Java programming language, has an easy-to-use, simple interface and is at least 30% faster than its competitors in terms of data annotation performance is proposed. It is aimed to make the aforementioned tool to streamline the data labeling process, which is a long and tedious task, to some extent. It is predicted that the proposed new labeling software will be preferred by data scientists as it is open source, free and boosts labeling processes.

**Keywords:** Artificial intelligence, computer vision, deep learning, object detection, object annotation tools.

## 1. GİRİŞ

Günümüzde yapay zekâ, özelinde ise makine öğrenmesi ve son yıllarda oldukça popüler bir alt alanı olan bilgisayarlı görü ve derin öğrenme başarılı ve etkin bir şekilde sağlık, eğitim, güvenlik, endüstri, tarım, robotik vb. alanlarda uygulanmaktadır [1-11]. Derin öğrenme, Şekil-1’de de gösterildiği gibi herhangi bir görüntünün sınıflandırma, sınıflandırma+yerel sınırlarının belirlenmesi ve nesne tespiti işlemleri için kullanılmaktadır [12].

Şekil 1. Sınıflandırma, sınıflandırma+yerel sınırlandırma ve nesne tespitinin farkları [12]

Problemin türüne göre danışmanlı öğrenme yaklaşımı ile elde edilen görüntüler, sınıflandırma işlemi için kabaca gruplara ayrılırlar. Her bir grup bir sınıfı temsil eder. Sınıflandırma bilgisayarlı görü problemleri arasında en rahat olanıdır. Bunun nedeni sınıflandırmada bütün bir resmin hangi sınıfa ait olduğu tespit edilmeye çalışılır. İmgedeki nesnelerin nicelik olarak sayısının veya resim içerisindeki konumunun önemi yoktur. Diğer taraftan, nesnenin sayısının ve görüntü içerisindeki konumunun görece önemli olduğu problem türleri de mevcuttur. Örnek vermek gerekirse; otonom araçlar için geliştirilen bilgisayarlı görü kapsamındaki nesne tespit algoritmaları otonom sürüşü sağlayabilmek için kameradan elde ettikleri görüntülerde ne tür nesnelerin bulunduğunu ve yerlerini bilmeleri gerekir. Veya bilgisayarlı tomografi ile yakalanmış medikal görüntülerde çıplak gözle görülmeyecek kadar küçük bir ayrıntının dokunun neresinde olduğunu alan uzmanı doktora göstermek nesne tespiti algoritmalarının sorumluluğundadır.

Bilgisayarlı görü kapsamında ayrıca segmentasyon denilen bir alt alan daha vardır. Bu kısım her ne kadar nesne tespiti yaklaşımına benzerlik gösterse de arka planda çalıştırılan derin öğrenme algoritmaları farklılıklar gösterir [13]. Bu çalışmada segmentasyon konusuna girilmeden sadece nesne tespiti algoritmaları üzerinde araştırmalar yoğunlaştırılmıştır. Nesne tespitinin doğru çalışabilmesi için görüntülerin etiketleme aracı yardımıyla ön işlemden geçirilmesi gerekmektedir. Nesne tespiti için birçok görüntü etiketleme aracı geliştirilmiştir. Bu çalışmada piyasada mevcut en sık kullanılan etiketleme araçları fiyat-performans ve verimlilik açısından kıyaslanmış ve yerli açık kaynak olarak geliştirdiğimiz Cezeri Etiketleme Aracımız tanıtılmıştır. Genel anlamda etiketleme, literatürde veri etiketleme yani labeling kelimesinin karşılığıdır. Biz bu yazımızda etiketlemeyi veri etiketleme yerine görüntülerdeki nesnelere yerlerini etiketleme veya belirtme anlamında kullanacağız.

## 2. MATERYAL VE METOT

Nesne tespiti işi ile ilgilenen bir çalışma grubunun ilk yapması gereken işlem, eğitilecek model için uygun görüntü kümesini oluşturmaktır. Söz konusu veri kümesinin mümkün oldukça ilgilenilen nesnelere kapsayan, farklı varyasyonlar veya durumlar içermesi gerekir. Veri kümesindeki imgelerin sayıca çokluğu modelin öğrenimine katkı sunacaktır. Diğer taraftan [14, 15]'teki çalışmada farklı tipteki etiketleme kaynaklarının ücretlendirme, harcanan zaman, etiketleme kalitesi ve güvenlik eksenlerindeki etkileri Tablo-1'de listelenmektedir.

**Tablo 1.** Farklı kaynaklarca yapılan imge etiketleme işleminin zaman, maliyet, kalite ve güvenlik açısından değerlendirilmesi

Özellik	Dış kaynaklara yaptırma (outsourcing)	Kendi içinde (inhouse)	Kitle kaynaklı (Crowd Sourcing)
Zaman	Orta	Yüksek	Düşük
Maliyet	Orta	Pahalı	Ucuz
Kalite	Yüksek	Yüksek	Düşük
Güvenlik	Orta	Yüksek	Düşük

Tablo-1 incelendiğinde, dış kaynaklara yaptırılan (outsourcing) veri etiketleme işlemlerinin organizasyonlarca daha çok talep edildiği anlaşılmaktadır. Bu seçimde maliyet, zaman ve kalite kriterlerinin katkısı bulunmaktadır.

Tablo-2 piyasada en çok tercih edilen imge etiketleme araçlarını göstermektedir. Bu tabloda listelenen etiketleme araçlarından ücretli olanlar her ne kadar ücretsiz olanlara göre daha

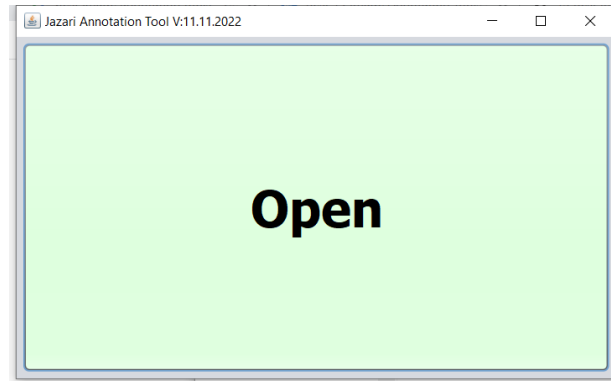

verimli hizmet sağlıyor olsalar da, işletmelere ekstra maliyet yükü getirdiğinden özellikle küçük işletmeler ücretsiz versiyonlara yönelmektedirler.

**Tablo 2.** En çok bilinen imge etiketleme araçları

İsim	Ücretlendirme	Zorluk	Kapsam
Eagle	Ücretli	Kolay	Geniş
V7	Ücretli	Kolay	Geniş
LabelBox	Ücretli	Kolay-Orta	Geniş
Scale AI	Ücretli	Kolay-Orta	Geniş
Super Annotate	Ücretli	Orta	Orta
Data Loop	Ücretli	Orta	Orta
Scalabel-AI	Ücretsiz	Yüksek	Orta
RectLabel	Ücretsiz	Yüksek	Dar
MakesenseAI	Ücretsiz	Yüksek	Dar
ImgLab	Ücretsiz	Yüksek	Dar
Cvat	Ücretsiz	Yüksek	Dar
Labelimg	Ücretsiz	Yüksek	Dar
Labelme	Ücretsiz	Yüksek	Dar

Bu çalışmada, arka uçta Siirt Üniversitesi Bilgisayar Mühendisliği El-Cezeri Siberetik ve Robotik Laboratuvarında geliştirdiğimiz Açık Cezeri Kütüphanesini [16, 17] kullanan, özellikle küçük işletmeler, öğrenciler ve araştırmacılar için faydalı olacağını düşündüğümüz JazariAnnotate isimli (kısa adıyla Jazo) açık kaynak ve ücretsiz bir görüntü etiketleme aracının tanıtımını yapacağız.

Jazo etiketleme aracı Java 8’de swing kütüphanesi kullanılarak geliştirilmiştir. Çalıştırılabilir sürümüne <http://ocl.cezerilab.com/jazo.zip> linkinden erişebilirsiniz. Jazo etiketleme aracı geliştirilirken kullanıcı dostu ve çok basit bir ara yüze sahip olması hedeflenmiştir. İndirme işlemi bittikten sonra zip dosyasını açıp “jazo.jar” dosyasına tıkladığınızda Şekil-2’deki gibi bir giriş arayüzü açılacaktır.

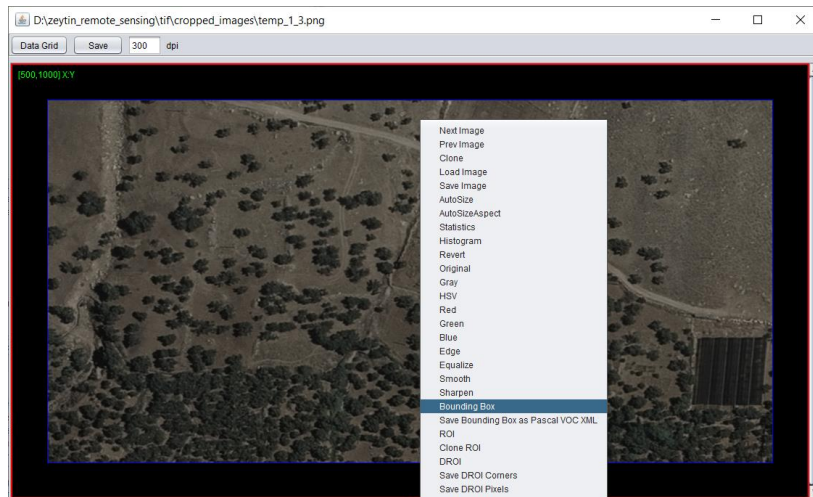

**Şekil 2.** Jazo etiketleme aracı başlangıç/giriş ara yüzü

Bu arayüzden “Open” yazılan buton tıklandığında resimleri etiketlemek istediğiniz klasöre konumlanmanızı sağlayacak Şekil-3’te gösterilen bir dosya seçme penceresi açılacaktır. Bu pencerede ilgili görüntü veri kümesini simgeleyen klasörün içindeki herhangi bir resim dosyasını açmanız gerekmektedir. Alternatif ve daha pratik bir yol olarak ta açmak istediğiniz resim dosyasını sürükleyerek “Open” yazan buton üzerine bırakabilirsiniz bu durumda da bir önceki gibi ilgili resim dosyası açılacaktır.

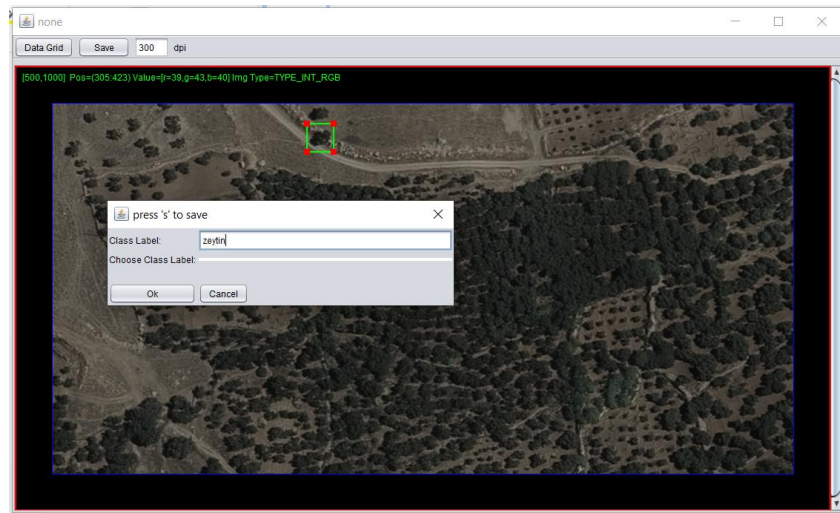

**Şekil 3.** Görüntü dosyası seçme penceresi

Jazo uygulaması png, jpg, bmp, tif resim formatlarını desteklemektedir. İlgilendiğiniz görüntü dosyası sürüklenip bırakıldıktan sonra Şekil-4’teki gibi nesne etiketleme arayüzü aktif olacaktır.

**Şekil 4.** Nesne etiketleme ara yüzü

Arayüz kullanıcıya resmin boyutlarını sol-üst köşede matris formatında sunmaktadır. Bununla birlikte mouse ile görüntü üzerinde gezildiği zaman koordinat bilgileri ve üzerindeki pikselin RGB değerleri de 8 bit olarak yazılmaktadır. Şekil-4'te uçak ile çekilmiş bir hava fotoğrafındaki ağaçların etiketlenmesi söz konusudur. Bunun için resim üzerindeki herhangi bir yerde mouse'a sağ tıklanınca açılan popup menü'den "Bounding Box" menüsü seçilir yani aktive edilir. Bir kez bu seçim yapıldıktan ve etiketlenen alanlar varsayılan olarak PascalVOC formatında kaydedildikten sonra gelen yeni imgeler için "Bounding Box" menüsünü seçme zorunluğu bulunmamaktadır. Aynı şekilde şayet ilgili klasör üzerinde ilk defa bounding box işlemi yapacaksanız hedef nesnenin çevresi dikkörtgensel olarak belirlendikten sonra ilgili nesne için sizden sınıf etiketinin girilmesi de istenir. Şekil-5, belirli bir yerin bounding box ile çizilmesi ve sınıf etiketi atanması işlemlerini göstermektedir.

**Şekil 5.** Belirli bir nesne için kapsayıcı bölge çizilmesi ve ilgili nesneye ait sınıf etiketinin verilmesi

"Class Label" yazan yere nesne sınıfı adını yazdıktan sonra "Ok" tuşuna basılır. Artık varsayılan olarak ilgili nesne ismi aktif olduğu için her işaretlenen bölgenin (bounding box) üzerinde sınıf etiketi yazılır. Farklı bir nesne etiketlenmek istendiğinde ise bounding box üzerine gelinip çift tıklanırsa yeni bir isim veya listedeki diğer sınıf etiketleri atanabilir. Silinmek istenen bounding box'lar mouse ile seçildikten sonra delete tuşuna basılarak silinebilir. Etiket değiştirilmek istenenler ise çift tıklanarak daha önceden var olan etiketlerden birine veya yeni bir etikete atanabilir. PascalVOC formatında kayıt yapmak için klavyeden "s" tuşuna basılır. Görüntü klasörü içerisindeki diğer görüntülere ulaşmak için ise yön tuşları kullanılır. Bu bağlamda bir sonraki görüntüye konumlanmak için sağ yön tuşu , bir önceki

resim için ise sol yön tuşu  kullanılır. Şekil-6 ve Şekil-7 sırasıyla birden fazla etiketlenmiş nesneyi ve ilgili görüntüyü kaydettiğimiz zaman üretilen PascalVOC formatındaki xml dosyasının içeriğini temsil etmektedir.

Şekil 6. Birden fazla nesnenin bir görüntü üzerinde etiketlenmesi

### 3. DENEYSEL ÇALIŞMALAR

Bu kısımda, ücretsiz olarak indirilebilen ve araştırmacıların en yoğun olarak kullandıkları ImgLab, LabelImg, RectLabel, Cvat ve LabelMe araçları ile geliştirdiğimiz Jazo uygulaması hız ve öğrenme eğrisi açısından bağımsız üç denek tarafından test edilmiştir. Deneklerin kendilerine verilen etiketleme işlerini ne kadar sürede bitirdikleri tutulmuş ve ortalamalar alınmıştır. Tablo-2, karşılaştırılan etiketleme araçlarının hızlarını, öğrenme zorluklarını Şekil-6 daki görüntü özelinde listelemektedir.

**Tablo 2.** Görüntü etiketleme araçlarının hız, öğrenme zorluğu ve verimlilik açısından karşılaştırılması

Etiketleme Aracı	Hız (sn)	Öğrenme Zorluğu veya Arayüz kolaylığı [ 1 en kolay ... 5 en zor]
ImgLab [18]	870 sn	4
LabelImg [19]	865 sn	3
RectLabel [20]	910 sn	3
Cvat [21]	900 sn	3
LabelMe [22]	950 sn	4
Jazo [17]	<b>610 sn</b>	<b>1</b>

Tablo-2 incelendiğinde geliştirdiğimiz Jazo uygulamasının diğer ücretsiz yazılımlara göre daha kolay öğrenme eğrisinin olduğu ve bunun sonucunda daha kısa sürede etiketleme işlemlerini bitirdiği gözlemlenmiştir. Etiketlenen örnek imge Şekil-8’de gösterilmektedir.

**Şekil 8.** Jazo etiketleme uygulaması ile etiketlenmiş örnek resim

#### **4. SONUÇ VE DEĞERLENDİRME**

Bu çalışmada Siirt Üniversitesi CezeriLab ekibi olarak 2019 yılından beridir katıldığımız Teknofest Robotaksi otonom araç kategorisinde geliştirdiğimiz otonom araç projemizdeki nesne tespiti yapabilen sürüş algoritmasında kullanılmak üzere Java ve Açık Cezeri Kütüphanesi temelli bir nesne etiketleme aracının tanıtımı yapılmıştır. Geliştirdiğimiz aracın piyasada bulunan ücretsiz uygulamalarla benzerliği bulunmakla birlikte özellikle arayüzünün sade, basit, anlaşılır ve kullanıcı dostu olmasından dolayı araştırmacılar tarafından kullanılabilme potansiyelinin olduğu gözlemlenmiştir. Gelecekte Jazo uygulamasının doğrudan video verisi ile de kullanılabilmesi için çalışmalar yürütülecektir.

#### **TEŞEKKÜR**

Bu çalışma, Siirt Üniversitesi Bilimsel Araştırma Projeleri (SIUBAP) tarafından 2022-SIUMÜH-015 numaralı proje olan “(Cezeri Campus Car) Otonom Araç Yazılımı Geliştirme Projesi” kapsamında desteklenmiştir. Bu çalışmada emeği geçen CezeriLab ekibine teşekkür ederiz.

**ÖZET**

Cilt kanseri, her yıl tüm dünyada yaklaşık 2 ile 3 milyon arasında yeni teşhis konulan vaka ile halk sağlığı sorunları arasında en ciddi ve ölümcül olanlardan biridir. Genellikle, bu hastalık cilt hücrelerinin anormal büyümesinden meydana gelmekte ve vücut güneş ışığına maruz kaldığında gelişmektedir. Bu hastalığın erken teşhisi, hastaların hayatta kalma oranını önemli ölçüde arttırmaktadır. Bu nedenle, cilt lezyonu tipinin önceden tespit edilmesi ve tedaviye geçilmesi önem arz etmektedir; aksi takdirde, yani hastalığın geç teşhis edilmesi durumunda diğer organlara da yayılmasına neden olabilmektedir. Uzman dermatologlar tarafından bile erken aşamada cilt görüntülerinden tümörleri ayırt etmek zordur. Son zamanlarda cilt lezyonlarını sınıflandırmak için yapay zekâ tabanlı birçok yaklaşım önerilmiştir; bu yaklaşımlar sınırlı sınıflandırma doğruluğundan mustarıptir. Günümüzde derin öğrenme tabanlı yaklaşımlar görüntü sınıflandırma alanında önemli başarılar sağlamak ve birçok sağlık alanındaki problemde karar destek mekanizması olarak kullanılmaktadır. Bu çalışmada derin öğrenme teknikleri ile yedi farklı cilt lezyon tipini (Melanocytic Nevi, Melanoma, Benign Keratosis, Basal Cell Carcinoma, Actinic Keratoses, Vascular Lesions, Dermatofibroma) tahmin etmek ve sınıflandırmak için deneysel çalışmalar gerçekleştirilmiştir. Bu kapsamda, derin öğrenme alanında güncel ve birbiri ile rekabet halinde olan Evrişimsel Sinir Ağları, MLP-mixer ve Vision Transformer modellerinin performansı incelenmiştir. Nicel metrikler kullanılarak bu derin sinir ağlarının performansları değerlendirilmiştir. Gözlemler ve sonuçlar, 10000 etiketli görüntüden oluşan MNIST:HAM10000 veri seti kullanılarak gerçekleştirilen deneylere dayanmaktadır.

**Anahtar kelimeler:** Cilt kanseri, derin öğrenme, evrişimsel sinir ağları, MLP-Mixer, vision transformer

**SKIN LESION CLASSIFICATION USING DEEP LEARNING METHODS: CNN,  
MLP-MIXER and VIT****ABSTRACT**

Skin cancer is one of the most serious and deadly public health problems, with approximately 2 to 3 million newly diagnosed cases worldwide each year. In general, this disease consists of abnormal growth of skin cells and spreads when the body is exposed to sunlight. Early diagnosis of this disease significantly increases the survival rate of patients. For this reason, it is important to detect the type of skin lesion beforehand and proceed to treatment; otherwise, if the disease is diagnosed late, it may spread to other organs. Early diagnosis of this disease from skin images is difficult even by expert dermatologists. Recently, many artificial intelligence-based approaches have been proposed to classify skin lesions; these approaches suffer from limited classification accuracy. Nowadays, deep learning-based approaches provide significant success in the field of image classification and are used as a decision support mechanism in many health problems. In this study, we performed experimental studies to predict and classify seven different skin lesion types i.e. Melanocytic Nevi, Melanoma, Benign Keratosis, Basal Cell Carcinoma, Actinic Keratoses, Vascular Lesions, Dermatofibroma, using deep learning techniques. In this context, we examined the performance of the the-state-of-the-arts deep learning methods i.e. Convolutional Neural Networks, MLP-mixer and Vision Transformer, which are in competition with each other. We evaluated the performances of the deep neural networks using quantitative metrics. Observations and results are based on experiments using the MNIST: HAM10000 dataset consisting of 10000 labeled images.

**Keywords:** Skin cancer, deep learning, convolutional neural networks, MLP-Mixer, vision transformer

## 1. GİRİŞ

Günümüzde radyasyon kaynaklarının artması, çevresel değişiklikler, virüsler, yeme ve içme tarzları nedeniyle kanser hastalarının sayısı her geçen gün artmaktadır (Alam vd., 2019). Cilt kanseri, dünya çapında yayılmakta olan en yaygın ve tehlikeli kanser türlerinden biridir (Tavakolpour v., 2017). Bu ve diğer kanser türlerinin erken teşhisi, iyileşme için önemli bir faktördür. Fakat çeşitli doku yaralanmaları nedeniyle cilt kanseri tespiti oldukça zor ve zaman alıcı bir işlemdir; bu nedenle, deride oluşan koyu renkli lekelere tanı koymak için dermoskopi tekniğinden yararlanılmaktadır. Dermoskopi farklı güçteki ışık ve büyütme sistemlerini kullanarak deri bütünlüğünü bozmadan deri dokusunu tüm katmanları ile değerlendirmeyi sağlayan bir tanı tekniğidir. Bu teknik, cilt kanseri tespitinde yardımsız gözlemlere göre daha başarılıdır. Ancak, tespit doğruluğu dermatolog 'un deneyimine bağlıdır (Bafounta vd., 2001). Dünya çapındaki uzman dermatolog'ların sayısı günümüzün sağlık hizmetleriyle ilgilenmek için yeterli değildir (Alam vd., 2022). Bu sebepten dolayı, uzman bilgisini makine öğrenmesi tabanlı modellere kazandırmak (karar destek mekanizması) için çalışmalar yapılmaktadır (Ataş ve Dogan, 2014; Ataş vd., 2016; Yetis vd., 2021).

Makine öğrenmesi teknikleri kullanılarak, tıbbi görüntülerden farklı kanser türlerinin tespiti üzerine birçok çalışma yapılmıştır (Ali vd., 2019; Tschandl vd., 2019; Eltrass ve Salama, 2020). Bu çalışmalarda, manuel olarak görüntülerden özellikler çıkarılmakta ve bir sınıflandırma algoritması ile performansı incelenmektedir; bu algoritmaların başarısı, kanserli bölgeleri karakterize etmek için çıkarılan özelliklerin seçimine bağlıdır. Yakın zamanda, makine öğrenmesinin bir alt dalı olan derin öğrenme tekniklerinin gelişmesiyle, görüntülerden otomatik sınıflandırma yapılabilmektedir (Ozdemir vd., 2021; Ataş vd., 2022). Bu kapsamda, ILSVRC (Russakovsky vd., 2015) görüntü sınıflandırma yarışmasında yüksek başarımlar sağlayan Convolutional Neural Network (CNN) tabanlı derin öğrenme modelleri (AlexNet (Krizhevsky vd., 2017), Inception (Szegedy vd., 2015), ResNet (He vd., 2015), DenseNet (Zhu ve Newsam, 2017), EfficientNet (Koonce 2021), VGG (Simonyan ve Zisserman, 2014) vb.) sağlık alanında sıklıkla kullanılmaya başlanmıştır.

CNN tabanlı yöntemler, model eğitimi için çok büyük sayıda görüntüye ihtiyaç duymaktadır. Sağlık alanındaki birçok problemde ise yapısında çok fazla parametre barındıran bu modelleri eğitmek için gerekli sayıda görüntü elde etmek zor olabilmektedir. Bu nedenle, veri eksikliğini, hesaplama ve bellek gereksinimlerini azaltmak için öğrenme aktarma (transfer learning) (Pan ve Yang, 2009) ve veri arttırma (Shorten ve Khoshgoftaar, 2019) tekniklerinden

yararlanılmaktadır. Öğrenme aktarma tekniğinde, CNN modellerini sıfırdan eğitmek yerine, farklı bir veri seti kullanılarak eğitilen bir CNN modelin ağırlık değerleri kullanılmakta ve yeni veri seti kullanılarak ince ayar (fine-tuning) yapılmaktadır. Veri artırma tekniğinde ise eğitim aşamasında aynı görüntünün farklı varyasyonları (döndürme, kaydırma, kırpma vb.) da modele girdi olarak sunulmaktadır. Cilt kanseri tespiti için önceden eğitilmiş CNN modelleri kullanılarak birçok çalışma yapılmış ve kabul edilebilir başarılar sunulmuştur (Jinnai vd., 2020; Salamaa vd., 2021; Hameed vd., 2021; Jaisakthi ve Devikirubha, 2021; Haggenmüller vd., 2021; Salma ve Eltrass, 2022).

Bu çalışmada, son zamanlarda derin öğrenme alanında CNN tabanlı yöntemlere alternatif olarak sunulan modellerin yedi farklı cilt lezyon tipini (Melanocitic Nevi, Melanoma, Benign Keratosis, Basal Cell Carcinoma, Actinic Keratoses, Vascular Lesions, Dermatofibroma) tespit etmek ve sınıflandırmak için performansı karşılaştırılmıştır. Bu kapsamda, CNN yöntemlerinden ResNet50 modeli ile MLP-Mixer ve Vision transformer (ViT) yöntemleri deneysel olarak karşılaştırılmıştır.

## **2. MATERYAL VE METOT**

Bu kısımda, çalışma kapsamında kullanılan veri seti, derin öğrenme modelleri ve eğitim detayları verilmiştir.

### **1. Veri Seti:**

Bu çalışmada, cilt lezyonların tespitinde sıklıkla kullanılan, halka açık MNIST HAM1000 (Tschandl vd., 2018) veri seti kullanılmıştır. Veri seti farklı modaliteler altında, farklı popülasyonlardan elde edilen toplamda 10015 görüntüden oluşmaktadır. Şekil 1'de veri setindeki her bir lezyon tipi için görüntü sayısı dağılımları verilmiştir.

**Şekil 1.** Veri setindeki her bir sınıf için görüntü sayıları dağılımı

Veri setindeki görüntüler rastgele %80 eğitim (8912) ve %20 test seti (1103) olmak üzere iki kısma ayrılmıştır. Görüntülerin çözünürlükleri 450x600x3'dir; derin öğrenme yöntemleri, genel olarak 224x224x3 girdiler ile beslendiğinden yeniden boyutlandırma işlemi gerçekleştirilmiştir. Şekil 2'de veri setinden alınan bazı görüntüler verilmiştir.

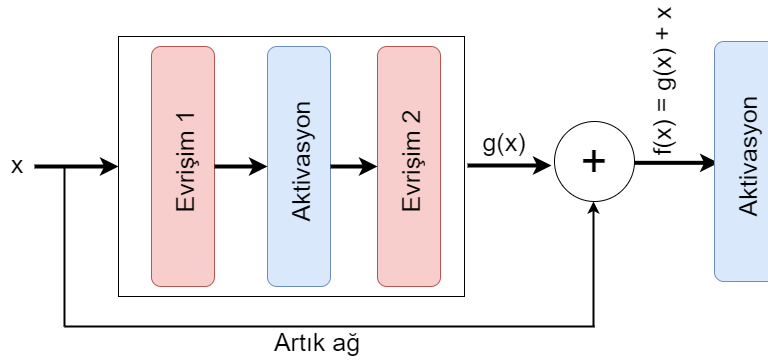

**Şekil 2.** Veri setinden alınan örnek görüntüler

## **2. Derin öğrenme modelleri:**

Bu kısımda derin öğrenme alanında birbiri ile rekabet halinde olan 3 farklı yaklaşım hakkında kısa tanımlamalar verilmiştir.

**ResNet50 [He vd., 2015]:** He ve diğerleri tarafından önerilen bu mimari ILSVRC 2015 yarışmasında top-5 hata oranı %3,57 ile en yüksek performansı elde etmiştir. CNN modellerin tanıtılması ile birlikte araştırmacılar gittikçe daha derin modeller oluşturmaya başlamıştır. Ancak, bu beraberinde gradyan azalması (vanishing gradient) olarak adlandırılan bir problemi ortaya çıkarmıştır. ResNet mimarisi ile tanıtılan artık ağlar (residual network) derin ağları eğitme problemini hafifletmektedir. Bu mimaride bazı katmanlar atlanarak istenen katmanlar arasında doğrudan bağlantılar oluşturulmaktadır. Şekil 3’de görüldüğü gibi “x” girdisi bir bloğa girdi olarak verilmenin yanında doğrudan bir kısa devre oluşturularak blok çıkışı ile birleştirilmektedir.

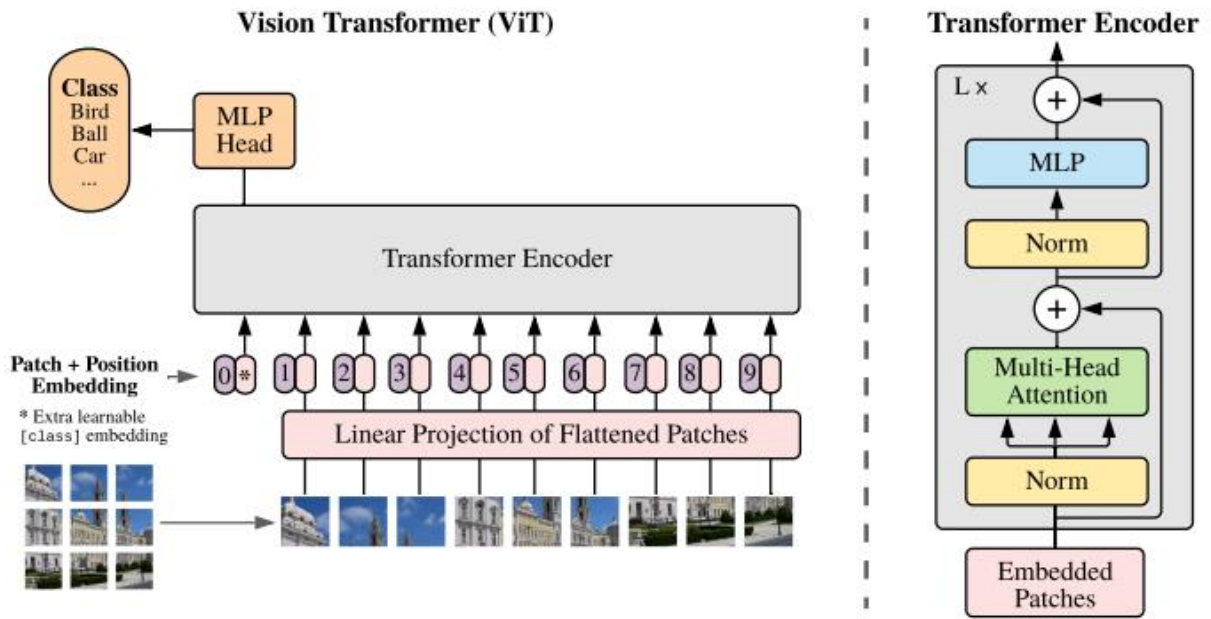

Şekil 3. ResNet mimarisinde artık ağ yapısı

**MLP-Mixer [Tolstikhin vd., 2021]:** Tolstikhin ve diğerleri tarafından geliştirilen bu mimari, yapısında evrişim ve öz dikkat mekanizmaları barındırmayan, teknik olarak basit bir yapıdan oluşmaktadır. MLP-mixer mimarisi, uzamsal konumlar ve özellik kanalları arasında tekrar tekrar kullanılan MLP katmanlarından oluşmaktadır. Kanallar parçalara bölündüğünden genel olarak model parametre sayısı düşük olmaktadır. Bu da IoT gibi cihazlarda kullanılmasına olanak sağlamaktadır. Şekil 4’te MLP-mixer mimarisi verilmiştir.

Şekil 4. MLP-Mixer mimarisi [Tolstikhin vd., 2021]

**ViT [Dosovitskiy vd., 2020]:** Dosovitskiy ve diğerleri tarafından, doğal dil işleme görevlerinde standart hale gelen transformer mimarisi bilgisayarla görme alanına uyarlanmıştır. ViT görüntünün parçaları üzerinde transformer benzeri bir mimari kullanan bir görüntü sınıflandırma modelidir. Bu mimaride; (1) görüntüler ilk olarak sabit boyutlu parçalara bölünmekte, (2) her bir parça doğrusal olarak yerleştirilmekte (embedding), (3) konum yerleştirmeleri eklenmekte ve (4) elde edilen vektör dizisi standart bir transformer kodlayıcıya girdi olarak verilmektedir. Şekil 5'te ViT mimarisi verilmiştir.

Şekil 5. ViT mimarisi [Dosovitskiy vd., 2020]

**Eğitim Detayları:** Modelleri adil olarak karşılaştırmak için temel mimarileri referans alınmıştır. Modeller sıfırdan eğitilmiştir; diğer bir deyişle, öğrenme aktarma uygulanmamıştır. Veri seti %80 eğitim ve %20 test olarak ayrılmış ve veri arttırma tekniği uygulanmamıştır. Her bir derin öğrenme modeli 20 epok (epoch) boyunca eğitilmiştir. Optimizasyon algoritması olarak Adam [Kingma ve Ba, 2014] algoritması kullanılmıştır; öğrenme oranı  $1e-3$  olarak verilmiştir.

### 3. DENEYSSEL ÇALIŞMALAR

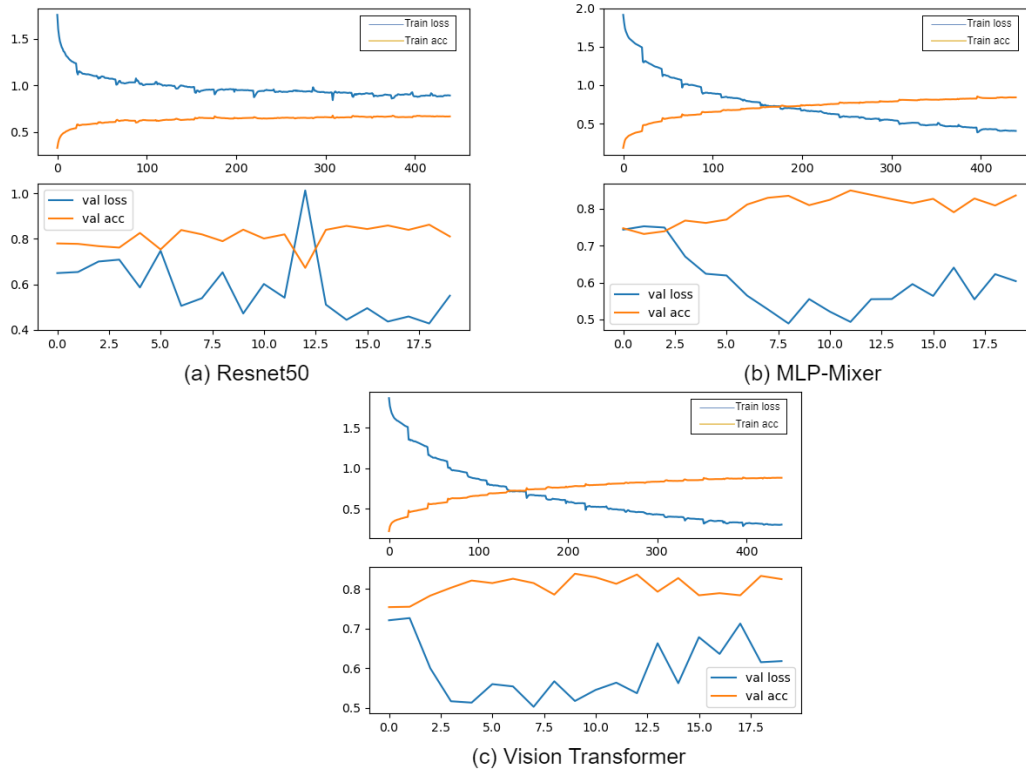

Bu kısımda, güncel derin öğrenme yöntemlerinin cilt kanseri tespiti performansı deneysel olarak karşılaştırılmıştır. Tablo 1'de bu modellerin eğitim doğruluğu, test doğruluğu ve

parametre sayıları verilmiştir. Tablo incelendiğinde, CNN tabanlı modelin en yakın performans gösteren MLP-mixer modelinden %1.26 daha fazla başarı gösterdiği görülmektedir. Parametre sayısı olarak bakıldığında ise ViT mimarisinin diğer modellere göre çok az parametre içerdiği gözlenmektedir.

**Tablo 2.** Derin öğrenme modellerinin cilt kanseri tespitinde performanslarının karşılaştırılması

	Eğitim doğruluğu (%)	Test doğruluğu (%)	Parametre sayısı
ResNet50 (He vd., 2015)	89.21	<b>86.22</b>	23.522.375
MLP-Mixer (Tolstikhin vd., 2021)	87.45	84.96	15.756.039
ViT (Dosovitskiy vd., 2020)	86.92	83.87	<b>4.574.456</b>

Şekil 6’da ResNet50, MLP-Mixer ve ViT modellerinin eğitimi boyunca elde edilen doğruluk ve validasyon grafikleri verilmiştir. Grafiklerde (üstte) eğitim fonksiyonu (altta) validasyon fonksiyonları verilmiştir. Dikkat edilirse, tüm modellerde eğitim boyunca kayıp değerinin azaldığı ve dolayısıyla doğruluk oranının arttığı görülmektedir.

**Şekil 6.** Her bir modelin eğitim ve validasyon doğruluk ve kayıp fonksiyonları

#### **4. SONUÇ VE DEĞERLENDİRME**

Cilt kanseri, geç teşhis edilmesi durumunda en ölümcül hastalıklardan biridir. Bu çalışmada, güncel derin öğrenme modellerinin cilt kanserini tespit etme performansı irdelenmiştir. Yapılan deneysel çalışmalarda, CNN tabanlı ResNet50 modelinin diğer güncel derin öğrenme modellerine (MLP-Mixer ve ViT) göre daha iyi performans sağladığı gözlenmiştir. MLP-Mixer ve ViT modelleri, CNN modellerine göre daha az parametre içermektedir; bu, modellerin IoT cihazlarda kullanılmasına olanak sağlayabilir. Çalışmanın devamında bu modellerin performansını arttırmaya yönelik çalışmalar yapılacaktır. Ayrıca veri seti incelendiğinde, sınıf başına düşen görüntü sayısının dengeli olmadığı ve modellerin performansını sınırladığı gözlenmiştir; veri arttırma teknikleri ile sınıflardaki görüntü sayısı dengelenerek modellerin performansları arttırılmaya çalışılacaktır.

**ÖZET**

Havadan çekilmiş görüntüler, günümüzde uzaktan algılama kapsamında özellikle tarım, güvenlik, askeri, şehir ve afet yönetimi başta olmak üzere birçok alanda başarılı ve etkin bir şekilde kullanılmaktadır. Söz konusu imgeler uydu teknolojisi kullanılarak ya da uçağa bağlı görüntü yakalama sistemleri aracılığıyla elde edilir. 30 cm uzamsal çözünürlük ile uçaktan alınan renkli hava fotoğrafları, genellikle 1 metre ve üzeri uzamsal çözünürlüğe sahip uydu görüntülerine göre daha çok bilgi barındırdığı için çalışmamızda uçaktan çekilmiş renkli hava görüntüleri tercih edilmiştir. Bununla birlikte, yapay zekâ alanındaki gelişmeler sonucunda tahminleme yeteneği artan bilgisayarlı görü ve özelinde nesne tespiti algoritmaları uzaktan algılamada etkin bir şekilde kullanılmaktadır. Bu çalışmada, Mardin ili Derik ilçesinde zeytin ağacı popülasyonunun nispeten yüksek olduğu bölgelerden alınan toplam 3 adet yüksek çözünürlüklü tiff formatındaki imge, açık cezeri kütüphanesi yardımıyla ön işlemden geçirildikten sonra yine aynı yazılımla zeytin ağaçları ve imgede bulunan diğer nesnelere etiketlenerek nesne tespit algoritmasının eğitimi için veri seti oluşturulmuştur. Nesne tespit modeli ile tahmin edilen zeytin ağaçlarının sayısı ile saha uzmanının görüntü üzerinde tespit ettiği zeytin ağaçlarının sayıları karşılaştırılmıştır. Ulaşılan %90 ve üzeri tahminleme oranı ile geliştirdiğimiz java ve python tabanlı nesne tespit ve sayımı algoritmasının özellikle coğrafi bilgi sistemleri ve uzaktan algılama alanlarında çalışmalar yürüten araştırmacılar için bir yardımcı kaynak olacağı öngörülmektedir.

**Anahtar kelimeler:** Uzaktan algılama, yapay zekâ, bilgisayarlı görü, derin öğrenme, nesne tespiti.

**ESTIMATING THE NUMBER OF GEOGRAPHICALLY MARKED OLIVE TREE  
FROM SATELLITE IMAGES WITH DEEP LEARNING METHODS****ABSTRACT**

Today, aerial images are used successfully and effectively in many fields, especially in agriculture, security, military, city and disaster management, within the scope of remote sensing. These images are acquired using satellite technology or by means of image capture systems attached to the aircraft. Since aerial photographs captured from the aircraft with a spatial resolution of 30 cm usually contain more information than satellite images with a spatial resolution of 1 meter or more, colored aerial images taken from the aircraft were preferred in this study. In addition to these, computer vision, whose predictive ability has increased as a result of developments in the field of artificial intelligence, and in particular, object detection algorithms are used effectively in remote sensing. In this study, a total of 3 high-resolution tiff images taken from the regions where the olive tree population density is relatively high in Derik district of Mardin province were pre-processed via the open cezeri library. Then, the olive trees and other objects in the image were annotated and the data set for the training of the object detection algorithm was established. The number of olive trees estimated by the object detection model and the number of olive trees detected by the field expert were compared. It is predicted that the java and python-based object detection and counting algorithm, which we have developed with an estimation rate of 90% or more, will be a favorable resource for researchers working in the fields of geographic information systems and remote sensing.

**Keywords:** Remote sensing, artificial intelligence, computer vision, deep learning, object detection.

## 1. GİRİŞ

Teknolojinin gelişimi ile birlikte hava ve uydu kaynaklı veri toplama yöntemleri doğru bilgi ihtiyacı ile birlikte hız ve maliyet kazanma tarafında büyük avantajlar sağlamaktadır. Havadan çekilmiş görüntüler günümüzde yapay zekâ bileşeni olan bilgisayarlı görü tarafından makinelerin, görüntü içeriğini görmesini ve anlamasını sağlamak için insan görme sistemini taklit etmeye çalışırlar. Bilgisayarlı görü yöntemleri, nesnelere algılamada ve lokalizasyonunda ilgili alanda uğraşan saha uzmanlarına stratejik bilgi sağlarlar. Bu bilgiler içerisinde nesnenin bağlı olduğu sınıf bilgisi, nesnenin imge içerisindeki konumu ve nesne sayısı sayılabilir. Makine öğrenmesi, bilgisayarlı görü ve derin öğrenme yöntemleri, özellikle hassas tarım [1, 2], gıda güvenliği [3, 4] , eğitim [5], uzaktan algılama [6-8], sağlık [9,10], biyometri [11] vb. alanlarda başarılı bir şekilde uygulanmaktadır. Nesne algılama ve sınıflandırma gibi bilgisayarlı görme uygulamaları, en son teknoloji donanımla birleştiğinde, insanlığa ve üretime büyük miktarda ve kayda değer oranda katkı sunar.

Şekil-1’de gösterildiği gibi herhangi bir meyve ağacındaki portakal görüntülerinin tanımlanması nesne tespit algoritmaları ile mümkün olmaktadır.

Şekil 1. Tanımlamada nesne tespitinin kullanımı [12]

Bu çalışmamızda, Google Colab üzerinden çalıştırdığımız son teknolojik ürün (state of the art) olan Yolo v7 nesne tespit algoritmasını kullanarak zeytin ağaçlarının algılanmaları ve toplam sayıları tahmin edilmeye çalışılmıştır. Çalışmamızda kullandığımız yüksek çözünürlüklü RGB hava imgeleri Mardin İl Tarım Orman Müdürlüğünden temin edilmiştir.

## 2. MATERYAL VE METOT

Bu çalışmada Mardin ilinin Derik ilçesinde geniş bir alanı kaplayarak yetiştirilen coğrafi işaretli zeytin ağaçları imgeleri kullanılmıştır. Yüksek çözünürlüklü (15.000x10.000) tif formatında ve renkli (RGB) imgeler arasında nesne tespiti eğitimi ve testinde kullanacağımız görüntüler filtrelenmiştir. Seçilen imgeler yüksek çözünürlüklü olduğundan etiketleme ve eğitim süreçlerinde yavaşlamaya neden olabilir. Bu yüzden ön işlem olarak Siirt Üniversitesi Bilgisayar Mühendisliği El-Cezeri Siberetik ve Robotik Laboratuvarında geliştirilen Open Jazari Library (OJL) kütüphanesi [13, 14] yardımıyla orjinal 15.000x10.000 imge alanı  $I_{M[20,15]}$  imge alanlarına bölütlenmiştir. Bu durumda, her bir tif imgesinden 300 adet 1000x500 çözünürlüğünde kesilmiş resimler elde edilmiştir.

Bilgisayarlı görü problemlerinde etiketleme en fazla zaman alan, dikkat, titizlik ve iş gücü gerektiren bir işlem olduğundan kullanılacak etiketleme yazılımının; kullanıcı dostu, hızlı ve en az hata yapılmasına olanak sağlayan bir araç olması son derece önemlidir. Nesnelere etiketleme işlemi için yine OJL’de bulunan imge etiketleme aracı kullanılmıştır. Şekil-2 imge üzerindeki zeytin ağaçların bulunduğu bölgelerin PascalVOC xml formatındaki kapsayıcı kutu (bounding box) ile işaretlenmesini göstermektedir.

**Şekil 2.** OJL etiketleme aracı ile etiketlenen coğrafi işaretli Derik zeytin ağaçları.

Şekil-2’den de anlaşılacağı üzere, sadece coğrafi işaretli Derik zeytin ağaçları etiketlenmiştir. Dışında kalan nizami ölçülerde dikilen ve alan olarak küçük olarak nitelendirebildiğimiz yeşil bölgeler üzüm bitkisine ait olduğu için üzerinde herhangi bir etiketlendirme işlemi gerçekleştirilmemiştir. Bunun nedeni, nesne tespit algoritmamızın eğitimi sürecinde sadece bir

nesneye odaklanmasını ve tespit başarısına olumlu katkı sunmasını sağlamaktır. Veri kümesindeki imgelerin %80'i eğitim geriye kalan %20'si ise test için kullanılmıştır.

Günümüzde nesne tespit alanında kullanılan birçok algoritma vardır. Bu algoritalardan biri olan YOLO (You Only Look Once) algoritması oldukça başarılı sonuçlar üretmektedir. Bu nedenle yapılan çalışmada Yolo-V7 algoritması tercih edilmiştir [15]. Algoritmanın 7 farklı versiyonundan tespit doğruluğu ve hız olarak en iyi sonuç üreten Versiyon-7 algoritmasında karar kılınmıştır. OJL yardımıyla üretilen etiket bilgileri varsayılan olarak PascalVoc xml formatında kaydedilir. Yolo-V7 json formatına çevrimi için Şekil-3'teki Java kodu kullanılmıştır.

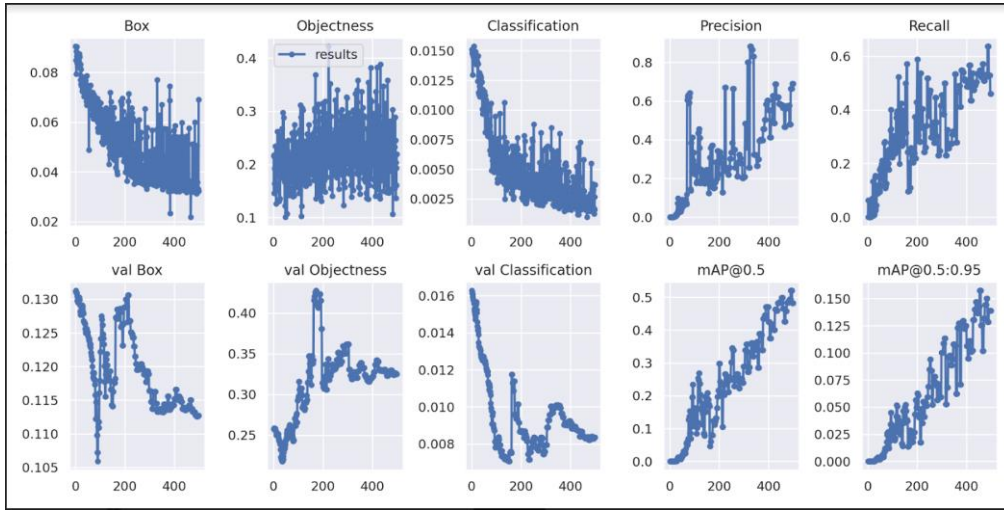

```
public static void convertPascalVoc2YoloFormat(String mainFolderPath, String labels_map_file) {
    File[] files = FactoryUtils.getFileListInFolder(mainFolderPath);
    int x1, x2, y1, y2, w, h, n, class_index;
    float px1, px2, py1, py2;
    String[] refList = FactoryUtils.readFile(mainFolderPath + "/" + labels_map_file).split("\n");
    Map<String, Integer> map = new HashMap();
    for (String str : refList) {
        String s = str.split(" ")[1];
        int i = Integer.parseInt(str.split(" ")[0]);
        map.put(s, i);
    }
    String globalRet = "";
    for (File f : files) {
        if (f.isFile() && FactoryUtils.getFileExtension(f).equals("xml")) {
            BoundingBoxPascalVOC bbp = deserializePascalVocXML(f.getAbsolutePath());
            w = bbp.size.width;
            h = bbp.size.height;
            String ret = "";

            for (PascalVocObject pv : bbp.lstObjects) {
                x1 = pv.bndbox.xmin;
                y1 = pv.bndbox.ymin;
                x2 = pv.bndbox.xmax;
                y2 = pv.bndbox.ymax;
                px1 = (x1 + x2) / 2.0f / w;
                py1 = (y1 + y2) / 2.0f / h;
                px2 = (x2 - x1) * 1.0f / w;
                py2 = (y2 - y1) * 1.0f / h;
                class_index = map.get(pv.bndbox.name);
                ret += class_index + " " + px1 + " " + py1 + " " + px2 + " " + py2 + "\n";
            }
            globalRet += ret;
            FactoryUtils.writeToFile(mainFolderPath + "/" + FactoryUtils.getFileName(bbp.fileName) + ".txt", ret);
        }
    }
    FactoryUtils.writeToFile(mainFolderPath + "/" + "yolov7.txt", globalRet);
}
```

**Şekil 3.** PascalVOC xml formatındaki nesne etiket bilgilerinin Yolo json formatına çevrimini sağlayan Java kodu.

### 3. DENEYSEL ÇALIŞMALAR

Çalışmada geliştirme ortamı olarak Google Colab (Google Collaboratory) [16] tercih edilmiş olup, yapay zekâ ve derin öğrenme projeleri üzerinde çalışanlar için etkileşimli, tamamen bulut tabanlı, kullanımı kolay ve ortak çalışmaya dayalı bir yazılım platformudur. Ücretsiz olan ve kurulum gerektirmeyen Google Colab, 2017 senesinde Google firması tarafından piyasaya sürülmüştür. MsCOCO nesne tespit veriseti ile eğitilmiş hazır YoloV7 modelinin ağırlıkları transfer edildikten sonra kendi verisetimiz üzerinden 500 epok süresince bir eğitime tabi tutularak ağırlıklar optimize edilmiştir. Google Colab bulut hizmeti sınırlı kaynak tahsisi yaptığı ve eğitimde kullandığımız resim boyutunun yüksek olmasından kaynaklı, eğitimdeki batch\_size değeri 4 ile sınırlandırılmıştır. Eğitim yaklaşık 3 saat sürmüştür. Şekil-4 coğrafi şarteli Derik zeytin ağaçları veri setinin YoloV7 modeli ile eğitiminde elde edilen sonuçları temsil etmektedir. Şekil-4 incelendiğinde, özellikle mAP (mean average precision), Box, Precision, Recall ve Classification değerlerindeki iyileşmelerin ilerleyen epok sayısına göre arttığı anlaşılmaktadır.

Şekil 4. Eğitim sürecindeki YoloV7 modelinin zeytin ağaçlarını tespit metrikleri.

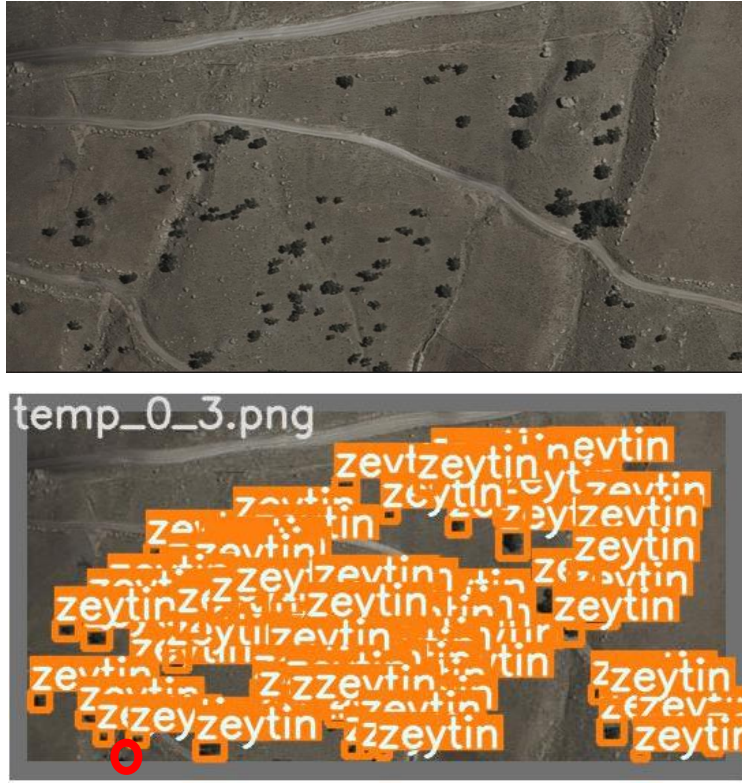

500 epok süresince en iyi skorlar checkpoint'ler yardımıyla Google drive' a kaydedilmiştir. Ardından en başarılı model seçilerek test işlemi başlatılmıştır. Yapılan kapsamlı test denemelerinde Şekil-5, ve Şekil-6'de de görüleceği üzere YoloV7 nesne tespit modelinin %90 ve üzeri nesne tespit başarısı ile zeytin ağaçlarını algıladığını ve sayısını hesaplayabildiği gözlemlenmiştir.

**Şekil 5.** Eğitilmiş YoloV7 modelinin test başarısı. Üstte orjinal resim altta nesne tespiti yapılan resim.

Şekil-5'te gösterilen görüntüde manuel olarak yaklaşık 30 adet zeytin ağacı sayılmaktadır. YoloV7 modelinin yaklaşık 27 adet sayım yaptığı gözlemlenmiştir. Tespit edilemeyen üç adet zeytin ağacı kırmızı çemberlerle gösterilmiştir.

**Şekil 6.** Eğitilmiş YoloV7 modelinin test başarısı. Üstte orjinal resim altta nesne tespiti yapılan resim.

Benzer şekilde, Şekil-6 daki üstteki test imgesinde, yaklaşık 80 civarında zeytin ağacı sayılmaktadır. Bu örnekte 1 adet zeytin ağacı sayılamamıştır. Coğrafi işaretli Derik zeytin ağaçları için geliştirdiğimiz YoloV7 nesne tespit modelimizin test görüntülerinden yola çıkarak ortalama %90 başarı ile zeytin ağaçlarını tespit ettiği gözlemlenmiştir.

#### **4. SONUÇ VE DEĞERLENDİRME**

Bu çalışmada Mardin ili Derik ilçesine ait coğrafi işaretli zeytin ağaçlarının tespitine dair YoloV7 tabanlı nesne tespit modeli eğitilmiştir. Derik zeytin ağaçları endemik bir tür olup çalışmamızın bu ağaçların korunması ile birlikte sonradan yapılacak çalışmalar için bir envanter ve alt yapı oluşturması hedeflenmiştir. Çalışmamızda nesne tespit modeli geliştirirken görüntülerin hazırlanması ve etiketlenmesi işlemlerinde kullandığımız OJL imge etiketleme aracının kolay kullanımı ve verimliliği de ayrıca test edilmiştir. Bu bağlamda bilgisayarlı görü ve nesne tespiti alanlarında çalışmalar yapan araştırmacıların söz konusu ürünü kullanmaları önerilmektedir. Gelecekte yapacağımız çalışmalarda zeytin ağacının dışındaki bitki türleri ve nesnelere (ev, taşıt, üzüm, ceviz vb) araştırmamıza dahil edilerek nesne tespiti modeline etkileri

detaylı olarak incelenecek ve diğer nesne tespit algoritmaları (SSD, Fast RCNN, R-FCN vb) ile performans karşılaştırması (benchmark) yapılacaktır.

### **TEŞEKKÜR**

Bu çalışma, Siirt Üniversitesi Bilimsel Araştırma Projeleri (SIUBAP) tarafından 2022-SIUMÜH-015 numaralı proje olan “(Cezeri Campus Car) Otonom Araç Yazılımı Geliştirme Projesi” ve SIU-BAP, SIÜ-FEB-21 , "İHA İmgelerinden Bilgisayar Görüsü Kullanılarak Ağaç Sayısı Kestirimi" kapsamında desteklenmiştir. Bu çalışmada büyük katkıları olan Mardin İl Tarım ve Orman Müdürüğüne, Ziraat Yüksek Mühendisi Serkan KILIÇASLAN'a ve CezeriLab ekibine teşekkür ederiz.

**ABSTRACT**

The selective catalytic reduction (SCR) system is an exhaust emission control system used to reduce nitrogen oxide ( $\text{NO}_x$ ) emissions in diesel engines with the help of catalysts and reductants. In this study, copper (II) chloride ( $\text{CuCl}_2$ ), titanium dioxide ( $\text{TiO}_2$ ), and calcium hydroxide ( $\text{Ca}(\text{OH})_2$ ) nanoparticles were used to produce powder catalysts. While copper was used as an active metal particle, titanium dioxide was preferred as a wash coat material. Calcium is known as a critical poison that causes the deactivation of the SCR catalyst. The purpose of this study is effects of calcium (Ca) addition and calcination temperature on thermogravimetric analysis (TGA) of copper-based catalyst. TGA analysis of the catalyst samples were conducted by heating at a rate of  $20\text{ }^\circ\text{C}/\text{min}$  from  $25\text{ }^\circ\text{C}$  to  $1100\text{ }^\circ\text{C}$  temperature at nitrogen ambient, before and after calcination process. In view of thermogravimetric analysis, the weight loss of samples was determined. The analysis results show that the addition of Ca nanoparticles to the catalyst raises the weight loss approximately two times.

**Keywords:** Thermogravimetric analysis, Selective catalytic reduction, Catalyst, Nanoparticles

## 1. INTRODUCTION

Nitrous oxide ( $\text{NO}_x$ ) emissions are an emission resulting from the combustion of fuel in diesel engines. These emissions are among the disadvantages of diesel vehicles as they are not an environmentally friendly product due to their harmful properties. Diesel engines can get rid of this disadvantage, thanks to selective catalytic reduction (SCR) technology, which is an effective and efficient system. The SCR system has a structure consisting of catalyst and reductant. By using ammonia ( $\text{NH}_3$ ) which is the most familiar reductant that takes an active role in this structure, it transforms  $\text{NO}_x$  emissions into  $\text{H}_2\text{O}$  and  $\text{N}_2$  with the help of a catalyst and renders them harmless.  $\text{V}_2\text{O}_5\text{-WO}_3/\text{TiO}_2$  catalyst is commercially used in this system. However, fly-ash emitted from combustion comprises various poisonous substances, such as  $\text{SO}_2$ , alkali metals and alkaline-earth metals. They are in tendency to reduce gradually the effectiveness of  $\text{NO}_x$  removal and restrict the operating life-time of the SCR catalyst (Li et al., 2017; Nicosia, Czekaj, and Kröcher, 2008). It is generally accepted that lubricating oil and its additives, engine corrosion and wear, metals mainly cause fly ash in diesel fuel (Tornehed and Olofsson, 2011; Wang et al., 2019; Sappok and Wong, 2007). Among these sources, lubricating oil is considered the primary source and makes up the majority of the ash (Bagi, Bowker, and Andrew, 2016; Van Kooten et al., 2000). The chemical composition of ash stemmed from lubricating oil principally consists of Mg, Ca, S, and P (Liati et al., 2012; Nemoto et al., 2004). The calcium forms deposits in the combustion systems and thus, it is known as a fly ash that causes the deactivation of the SCR catalyst (Xiang Li et al., 2017; Shu-ming Liu et al., 2017, Albert et al., 2019). Many researchers have conducted studies by using thermogravimetric analysis (TGA) analysis method to investigate the thermal stability and decomposition, weight loss of the catalyst produced with different nanoparticles (Du et al., 2021; X. Liu et al., 2020; Putluru et al., 2015; Shi et al., 2021). Pang et al. synthesized a series of Ce doping Copper/zeolite and Copper/zeolite catalysts utilizing impregnation of wetness process. They performed the TGA to define the passivate factors composed on face of the sulfated Copper cerium-2/zeolite and Copper/zeolite catalysts. The weight losses of the both sulfated catalysts were observed over three temperature regions. They thought that above  $500\text{ }^\circ\text{C}$ , which is the final temperature region, may be the result of the separation of Copper (II)sulfate composed on the face of catalyst. In addition, they reported that for the sulfated CuCe-2/ZSM-5 catalyst, the loss of weight in the final temperature region were surplus lesser than that of the sulfated Copper/Zeolite catalyst, due to forming of more  $\text{CuSO}_4$  on the face of Copper/Zeolite catalyst.

As a result of TGA, they asserted that in the presence of SO<sub>2</sub>, the formation of Copper(II)sulfate on the face of Ce doping Cu/ZSM-5 catalysts could be hindered (Pang et al., 2014). Thermogravimetric analysis (TGA) comes to the fore in determining thermal reaction characterization with its precision in temperature control and mass measurement, and ease of use. TGA analysis helps to determine weight losses over a wide temperature range in an O<sub>2</sub> or N<sub>2</sub> atmosphere and also to observe both the pyrolysis and combustion profiles of the analyzed material. Its greatest advantages include reduced sample sizes and relative speed. With the result of thermogravimetric analysis, a data is obtained about how the weight of a sample changes with temperature. TGA analysis results allow for use in the analysis of reaction kinetics and in proposing reaction mechanisms (Fang et al., 2019; Shen et al, 2021; Toniolo et al., 2008; Xiang et al., 2018). Zhang et al. (Zhang et al., 2020) investigated the thermal characteristics of the materials by applying TGA analysis to Cu-BTC (benzene-1,3,5-tricarboxylate) and Ce-Cu-BTC materials. At temperatures above 300 °C, weight losses were found to be approximately 41% for Cu-BTC and 28% for Ce-Cu-BTC. They noted that when the temperature exceeded 400 °C, the organic materials were completely thermally separated in three stages. In the thermal gravimetric analysis study examining the thermal behavior of NiMn-MOF (Metal-organic frameworks)-74 particulate matter (Shi et al., 2021), it was determined that there was mass loss in four regions in the samples in the temperature range of 50 to 600 °C in the TGA graphs. It was observed that the increase of Mn content in the samples provided a higher decomposition temperature. Rami et al. (Rami et al., 2020) investigated the thermal characteristics of these materials by forming nanoparticles with Fe<sub>2</sub>O<sub>3</sub>, CuO, ZnO and Co<sub>2</sub>O<sub>3</sub> materials. Thermal analysis results revealed that Fe<sub>2</sub>O<sub>3</sub> lost weight between 127 °C and 227 °C, while other materials decomposed at higher temperatures. In their study using Fe<sub>2</sub>O<sub>3</sub> material, Liao et al. (Liao et al., 2001) found that a high rate of weight loss was experienced in particulate material between 50 °C and 200 °C.

In this study, Ca-Cu/TiO<sub>2</sub> and Cu/TiO<sub>2</sub> catalysts were used. The effect of Ca poisoned Cu/TiO<sub>2</sub> catalyst on its thermal stability and decomposition temperatures was studied through TGA analysis for situations of before and after calcination process.

## **2. MATERIAL AND METHODS**

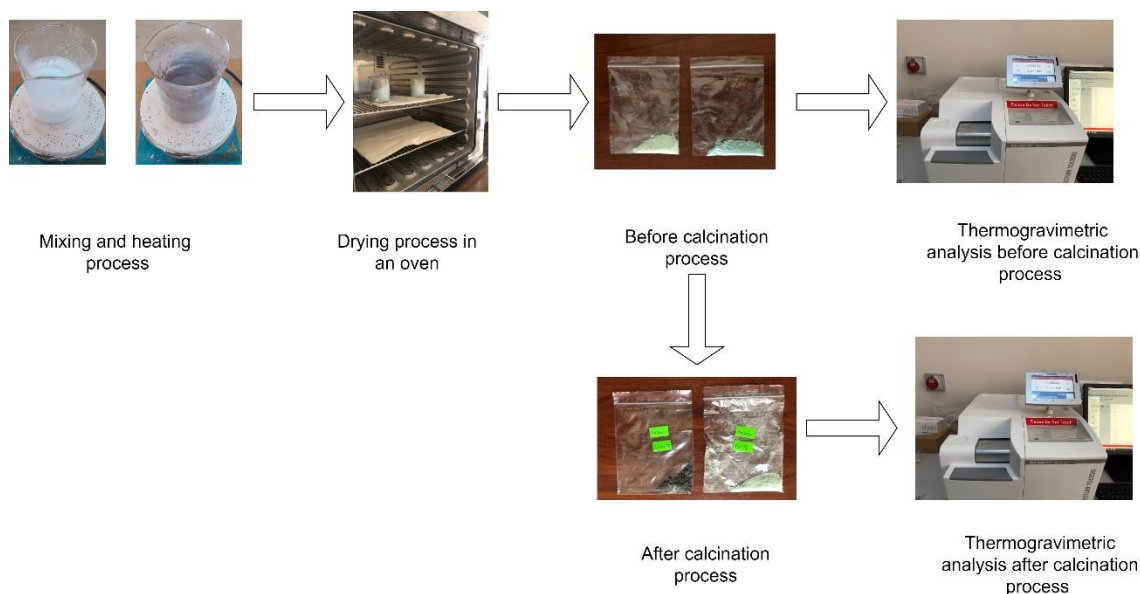

Among of nanoparticles used in catalyst production includes copper (II) chloride (CuCl<sub>2</sub>), titanium dioxide (TiO<sub>2</sub>) and calcium hydroxide (Ca (OH)<sub>2</sub>). It was also used in the amounts

given in the Table 1. The necessary amounts of materials were mixed in 150 mL distilled water by heating with a magnetic stirrer to prepare the solution. Excess water of the solution was evaporated during mixing. Then, a mud-like slurry was formed in the beaker. Last, it was dried in an oven at 130 °C for 12 h (Figure 1).

**Table 1.** Amounts of material in catalyst preparation

Catalysts	Materials		
	CuCl <sub>2</sub>	Ca (OH) <sub>2</sub>	TiO <sub>2</sub>
Cu/TiO <sub>2</sub>	0.01 mol	-	0.1 mol
Ca-Cu/TiO <sub>2</sub>	0.01 mol	0.01 mol	0.1 mol

After these procedures, TGA analysis was performed for both samples. TGA analysis conditions of the samples were carried out heating from 25 °C to 1100 °C at a rate of 20 °C/min in nitrogen ambient. According to the results of TGA analysis, catalyst samples were calcined at 400 °C for 2 hours. And then TGA analyzes were performed again under the same conditions.

**Figure 1.** Preparing and analysis of the catalyst samples

### 3. RESULTS AND DISCUSSION

TGA analysis results of Cu/TiO<sub>2</sub> and Ca-Cu/TiO<sub>2</sub> specimen before calcination are indicated in Figure 2. Initial weight drop was detected in both samples at approximately 110 °C. While the Ca-Cu/TiO<sub>2</sub> sample exhibited a thermally stable behavior up to a temperature of about 600 °C, a deterioration was noticed in the Cu/TiO<sub>2</sub> sample at a temperature of around 440 °C. After 600

°C, the Cu/TiO<sub>2</sub> specimen indicated weight loss at 610 °C and 960°C temperatures, while the Ca-Cu/TiO<sub>2</sub> specimen indicated a weight loss of around 700 °C and 830 °C.

**Figure 2.** Before the calcination process TGA graph of Cu/TiO<sub>2</sub> and Ca-Cu/TiO<sub>2</sub> specimens

Table 2 indicates the initial and final weights and decomposition temperatures of the samples before the calcination process. While the weight loss was 11.55% in Cu/TiO<sub>2</sub> samples, this loss rate was 23.46% in Ca-Cu/TiO<sub>2</sub> samples. The addition of Ca to Cu/TiO<sub>2</sub> samples increased the weight loss approximately 2 times. However, the final decomposition temperature reached 962 °C without the addition of Ca, and the amount of sample remaining after combustion is higher.

**Table 2.** Initial weight, final weight and onset temperatures of samples before calcination process

Samples	Initial weight(mg)	Final weight(mg)	Onset temperatures(°C)
Cu/TiO <sub>2</sub>	12.12	10.72	110/430/615/962
Ca-Cu/TiO <sub>2</sub>	15.26	11.68	105/152/304/698/829

The TGA graph of the samples after the calcination process is shown in figure 3. As before the calcination process, a weight decrease is observed due to the removal of H<sub>2</sub>O in the samples between 100-150 °C temperatures. Weight reduction was detected in Cu/TiO<sub>2</sub> samples up to approximately 850 °C. In the Ca-added Cu/TiO<sub>2</sub> samples, on the other hand, thermal stability

was achieved up to about 700 °C, and a weight decrease was detected in the sample near 690 °C and 850 °C. It is seen that thermal stabilization is achieved after 850 °C in both samples. When compared with the temperature data in figure 2 before calcination, the point that it was seen that there was no weight loss in Cu/TiO<sub>2</sub> samples and where the thermal stabilized temperature started was determined at 860 °C before 960 °C. In Ca-Cu/TiO<sub>2</sub> samples, nevertheless, it was determined that the temperature at which thermal stabilization started increased by 25 °C from 830 °C to 855 °C after the calcination process.

**Figure 3.** After the calcination process TGA graph of Cu/TiO<sub>2</sub> and Ca-Cu/TiO<sub>2</sub> specimens

The initial and final weights and decomposition temperatures of the samples after the calcination process are given in Table 3. While there was a 7.42% weight reduction in Cu/TiO<sub>2</sub> samples, a 25.82% weight loss was detected in Ca-Cu/TiO<sub>2</sub> samples. The addition of Ca after the calcination process increased the weight loss approximately 3.48 times. Parallel to the change in thermal stabilization temperatures, while the weight loss rate in Cu/TiO<sub>2</sub> samples decreased, the weight loss amount increased in Ca-Cu/TiO<sub>2</sub> samples. After the calcination process, the maximum decomposition temperatures of both samples were almost the same.

**Table 3.** Initial weight, final weight and onset temperatures of samples after calcination process

Samples	Initial weight(mg)	Final weight(mg)	Onset temperatures(°C)
Cu/TiO <sub>2</sub>	16.58	15.35	135/259/439/632/853
Ca-Cu/TiO <sub>2</sub>	15.45	11.46	110/158/691/852

#### 4.CONCLUSION

In this study, the thermal performance of copper-based catalysts used in exhaust emission systems was investigated. The effect of the calcination process on this thermal performance comparison is also given in the study results. In the thermal tests of Cu/TiO<sub>2</sub> and Ca-Cu/TiO<sub>2</sub> samples up to 1100 °C, it was determined that the addition of Ca increased the weight loss both before and after the calcination process. While the calcination process has a negative effect by decreasing the final thermal stability temperature in the Cu/TiO<sub>2</sub> sample, it has a positive effect on this sample by increasing the final thermal stability temperature in the Ca-Cu/TiO<sub>2</sub> sample.

**ÖZET**

Halk arasında sirik veya sirmo (*Allium vineale* L.) olarak adlandırılan bu bitki Türkiye’de Istranca Bölgesi, Çatalca-Kocaeli Bölgesi, Yukarı Sakarya Bölgesi Yukarı Kızılırmak Bölgesi, Yukarı Fırat Bölgesi, Yukarı Murat-Van Bölgesi ve Hakkari Bölgesi’nde doğal olarak bulunmaktadır. Bu bitki, peynire hoş bir tat ve koku verdiği için dolayı bölge halkı tarafından yaygın bir şekilde kullanılmaktadır. Bunun yanında, *Allium* cinsi doğal bir besin maddesi olması nedeniyle birçok topluluk tarafından da tüketilmektedir. Türkiye’de *Allium* cinsine ait 233 doğal takson bulunmaktadır. Bu çalışmada elde edilen metanol ekstraktının 100 mg mL<sup>-1</sup> olacak şekilde ayarlanan çözeltisinin kuru madde miktarı, renk özellikleri, *B. cereus*, *B. subtilis*, *S. aureus*, *E. faecalis*, *E. coli* ve *S. Typhimurium* gibi patojen bakterilere karşı antimikrobiyal etkileri incelenmiştir. Bunun yanında Eritromisin 15 µg (Oxoid, E15), Streptomisin 10 µg (Oxoid, S10), Penisilin 10 µg (Oxoid, P10), Amoksisilin/Klavulanik asit 30 µg (2:1; Oxoid, AMC30) ve Cephalexin 30 µg (Oxoid, CL30) gibi ticari antibiyotiklerin bakterilere karşı etkinliği incelenmiştir.

**Anahtar kelimeler:** *Allium Vineale* L., antimikrobiyal, kroma, antibiyotik

**DETERMINATION OF ANTIMICROBIAL EFFECTS OF *ALLIUM VINEALE* L.  
GROWING IN SIIRT ERUH REGION****ABSTRACT**

This plant, which is popularly called sirik or sirmo (*Allium vineale* L.), is found naturally in the Istranca Section, Çatalca Kocaeli Section, Upper Sakarya Section, Upper Kızılırmak Section, Upper Fırat Section, Upper Murat Van Section and Hakkâri Section in Turkey. This plant is widely used by the people of the region as it gives a pleasant taste and a pleasant smell to the cheese. Besides, Allium genus is a natural food and is consumed as food by many communities. There are 233 natural taxa belonging to the genus Allium in Turkey. The amount of dry matter and color properties of the methanol extract obtained in this study, adjusted to be 100 mg mL<sup>-1</sup>, showed resistance to pathogenic bacteria such as *B. cereus*, *B. subtilis*, *S. aureus*, *E. faecalis*, *E. coli* and *S. Typhimurium* antimicrobial effects were studied. In addition, The effectiveness of commercial antibiotics such as Erythromycin 15 µg (Oxoid, E15), Streptomycin 10 µg (Oxoid, S10), Penicillin 10 µg (Oxoid, P10), Amoxicillin/Clavulanic acid 30 µg (2:1; Oxoid, AMC30) and Cephalexin 30 µg (Oxoid), CL30) against bacteria was investigated.

## 1. GİRİŞ

Allium L. (Soğan) cinsinin dünya genelinde yaklaşık olarak 850 taksonu bulunmaktadır (Keusgen vd., 2011). Yapılmış olan en son cins içi sınıflandırmaya göre bu cinsin içerdiği taksonlar tüm dünyada 15 alt cinse ayrılmakta ve bu alt cinslerden sekiz tanesine ait türler Türkiye’de doğal yayılış göstermektedir (Friesen vd. 2006). Allium cinsi doğal bir besin olarak birçok topluluk tarafından tüketilmektedir. *A. vineale*, Türkiye’de yüzyıllardır otlu peynir üretiminde kullanılan önemli bir taksondur. Peynirle karıştırıldığında hoş bir tat ve koku (Şelem et al. 2020) verdiği için vatandaşlar tarafından tüketilmi oldukça fazladır (Durmaz et al. 2006; Tegin et al. 2019)

Allium türleri, baharat, kan şekerini düzenleyici, bağırsak sorunlarını giderici, ağrı kesici, yara iyileştirici, akne tedavisi gibi çok çeşitli alanlarda kullanılmasına karşın doğu bölgelerinde otlu peynir yapımında, salamura şeklinde ve çeşitli yemeklere katılarak tüketilmektedir (Şelem et al. 2020).

*Allium vineale*’nin hekzan, etanol ve metanol ekstraktlarının *Listeria monocytogenes* serotiplerine karşı yüksek antimikrobiyal aktivite gösterdiği saptanmıştır (Sagun et al. 2006).

Organik çözücü ekstraktları (metanolik ve etanolik ekstraktlar vb.) ile yapılan çalışmalarda, *A. vineale*’nin antibakteriyel aktivitesinin oldukça yüksek olması, bu bitkinin peynir ve çeşitli gıda ürünlerine katılmasının doğal antibakteriyel etki sağlayacağı belirtilmiştir. Otlu peynire katılan *A. vineale*’nin diğer türlerle karşılaştırıldığında etkinsin çok daha yüksek olduğu belirtilmiş ve bunun yanında *Proteus mirabilis*’e karşı etkili olduğu belirtilmiştir (Tarakci and Temiz 2009; Şelem et al. 2020).

*A. vineale*’nin metanol ekstraktının UHPLC-ESI-MS/MS’de yapılan fenolik bileşik analizinde ekstralarında 14,79 ve 29,90 mg g<sup>-1</sup> ile en fazla bileşik, sırasıyla quinik ve malik asit bulunurken; bunların yanında klorojenik asit, Protocatechuic asit, Tannik, tr-caffeic asit, Vanillin, p-Coumaric asit, rutin, hesperedin, Quercetin, Kaempferol, Luteolin, Apigenin ve Rhamnetin de tespit edilmiştir. rakonitik asit, tanik asit, vanilin, luteolin, ramnetin, kumarin, gallik asit, rosmarinik asit, 4-OH benzoik asit, salisilik asit ve kuersetin gibi bileşikler tespit edilmiştir (Tegin et al. 2019).

Yapılan bu çalışmada, bölgede sıklıkla tüketilen bu bitkinin antibakteriyel özelliklerinin ticari antibiyotiklerle karşılaştırılması amaçlanmıştır. Üretici ve tüketicilerin bu bitki hakkında farkındalık düzeylerinin artırılması, ekonomik yönden dikkate alınmasının gerekliliği hedeflenmiştir.

## **2. MATERYAL VE YÖNTEM**

Çözeltilerin kuru madde miktarının belirlenmesinde Cemeroğlu (2013)'nin önerdiği metoda göre (Hanna, HI96801, Romanya) dijital refraktometre, renk değerleri de Hunt ve Pointer (2011) tarafından önerilen metoda göre taşınabilir renk tayin cihazı (Pen Color Art USB, 1L-Artoksi MSM, İstanbul, Türkiye) ile ölçülmüştür.

Standart bakteri suşlarının standart antibiyotiklere duyarlılığının belirlenmesinde; Temiz (2010) tarafından önerilen disk diffüzyon yöntemine göre, *B. cereus* ATCC 10876, *B. subtilis* ATCC 6633, *S. aureus* ATCC 29213, *E. faecalis* ATCC 29242, *P. aeruginosa* ATCC 8027, *E. coli* ATCC 25922 ve *Salmonella Typhimurium* ATCC 14028 bakteri suşları ve Eritromisin 15µg (Oxoid, E15), Streptomisin 10 µg (Oxoid, S10), Penisilin 10 µg (Oxoid, P10), Amoksisilin/Klavulanik asit 30 µg (2:1; Oxoid, AMC30) ve Cephalexin 30 µg (Oxoid, CL30) standart antibiyotikler kullanılmıştır.

İlk önce, bakteri suşları Tryptic Soy Agar (TSA, Merck) ortamında (37 °C'de 18-24 saat) yeniden aktive edildi. Saf kültürler, fizyolojik solüsyon içeren test tüplerinde 0,5 McFarland standardına göre yoğunlukları ayarlandı. Önceden hazırlanmış 4-6 mm kalınlıkta Mueller Hinton agar besiyeri içeren petrilere her bakteri suşu ayrı ayrı inoküle edildi. Bakteri suş solusyonunun emilmesi için petri kapları yaklaşık 15-20 dakika süreyle bekletildi. Ardından standart antibiyotikler (Eritromisin 15 µg (Oxoid, E15), Streptomisin 10 µg (Oxoid, S10), Penisilin 10 µg (Oxoid, P10), Amoksisilin/Klavulanik asit 30 µg (2:1; Oxoid, AMC30) ve Cephalexin 30 µg (Oxoid, CL30)) disk difüzyon yöntemine göre minimum 2 cm mesafe ile ortam üzerine yerleştirildi. Bu işlemden sonra petri kapları 37 °C'de 18-24 saat aerobik koşullarda inkübe edilmiş ve inkübasyon sonunda oluşan şeffaf zon çapları dijital kumpas ile ölçülerek değerlendirilmiştir (Temiz, 2010).

*A. vineale*'nin metanol ekstraktının antibakteriyel etkilerinin belirlenmesinde delik agar diffüzyon yöntemi kullanılmıştır. Bu yöntemde; her bakteri suşu Mueller-Hinton besiyerine inoküle edildi ve bakteri solüsyonu besiyerinde emildikten sonra besiyeri üzerinde her bir oyuk 0,5 cm çapında ve her oyuk arasında en az 2 cm olacak şekilde kuyular açılmıştır. Hazırlanan *A. vineale*'nin metanol ekstraktından 30 µL kuyucuklara aktarıldı ve yaklaşık 20 dakika boyunca besiyerinde absorbe edildi. Kontrol (C) olarak da bakteri içermeyen serum fizyolojik sudan 30 µL kuyucuklara aktarıldı. Petri kapları daha sonra aerobik koşullar altında 37 °C'de 18-24 saat inkübe edildi. İnkübasyon sonunda oluşan şeffaf zon çapları dijital kumpas ile

ölçülerek değerlendirildi (Ponce et al. 2003). Zon çapına bağlı olarak antimikrobiyal etkinin değerlendirilmesi Tablo 1'e göre yapılmıştır.

**Tablo 1.** Zon çapına göre antimikrobiyal etki şiddetleri (Ponce et al. 2003)

Zon çapı (mm)	Antimikrobiyal etkisi	Sonuç
Çapı<8.00	Etkisiz	-
9.00<Çapı<14.00	Düşük etkili	+
15.00<Çapı<19.00	Etkili	++
Çapı>20.00	Aşırı etkili	+++

Yapılan bu çalışmada, test edilen parametreler (kuru madde miktarı, renk (*L*, *a*, *b*) verileri, bakterilerin ticari antibiyotiklere etkinlikleri ve *A. vineale*'nin antibakteriyel özellikleri 3 kez tekrarlanarak, renk değerlerinden de kroma ve hu açısı formülize edilerek değerlendirilmiştir.

### 3. BULGULAR ve Tartışma

*A. vineale*'nin antibakteriyel özellikleri üzerine yapılan bu çalışmada; bitkinin metanoldeki ekstraktının kuru madde değerleri (Briks) değerleri  $7,63 \pm 0,12$  belirlenmiştir. Bu değer artışına bağlı olarak, içermiş olduğu yağ, protein gibi organik bileşikler de yüksek düzeyde içerdiğini ayrıca antibakteriyel ajanların da çeşit ve miktar yönünden zengin olduğunu akla getirmektedir

*A. vineale* metanoldeki ekstraktının renk özellikleri Tablo 2'de, patojen bakterilere karşı etkinliği Tablo 3 ve Şekil 2'de, ticari antibiyotiklerin bakterilere karşı etkinliği de Şekil 3-4 ve Tablo 4'te sunulmuştur.

Kuru madde miktarının belirlenmesi gıdalarda besleyici değer artmasının yanında içerdiği antimikrobiyal maddelerin seviyesiyle de ilgilidir. Yapılan bir çalışmada belirlenen çözünen madde miktarı ortalama değeri %38,08 olarak bulunmuştur (Kutlu et al. 2018).

Renk gıdalar için önemli tercih nedenlerinden biridir. Bu bitkinin gıdalarda, katkı maddesi olarak kullanılması tat-aroma ve kokusu dışında rengi üzerine de etkili olduğu, renk yoğunluğunun fazla oluşu da kurumadde miktarına paralel olarak antibakteriyel etkide önemli rol oynayabileceğini düşündürmektedir. Tablo 2'den de anlaşılacağı üzere; ekstraktın koyu, yeşil reng ve sarı renge hakim olduğu, renk yoğunluğu kromanın ise bunu desteklediği söylenebilir.

**Tablo 2.** *A. vineale* ekstraktının renk analizinin belirlenmesi

Örnek					Hu açısı (arctan(b/a))	
	<i>L</i>	<i>a</i>	<i>b</i>	Kroma	Radyal	Derece
<i>A. vineale</i>	5,7	-0,06	0,35	0,06	-1,40	-80,18

\* renk değerlerinden kroma= $(a^2+b^2)^{1/2}$  formülüyle, hu açısı değeri  $h=\arctan(b/a)$  eşitliğiyle hesaplanmıştır. *L*: koyuluk/açıklık(0-100);

*a*: (-)yeşillik/(+)kırmızılık; *b*: (-)mavilik/ (+)sarı olarak bilinmektedir.

Yapılan bu çalışmada, Tablo 3 incelendiğinde *A. vineale* ekstraktının gıda kaynaklı patojen bakterilerden sadece *B. cereus*'a karşı düşük etki gösterdiği diğer bakterilere karşı antimikrobiyal etki göstermediği anlaşılmaktadır.

**Tablo 3.** *A. vineale* ekstraktının patojen bakterilere karşı antimikrobiyal etkisi

Bakteriler	<i>A. vineale</i>			Ortalama	Standart sapma
<i>B. cereus</i>	8	8	9	8,33	0,58
<i>B. subtilis</i>	-	-	-		
<i>S. aureus</i>	-	-	-		
<i>E. faecalis</i>	-	-	-		
<i>P. aeruginosa</i>	-	-	-		
<i>E. coli</i>	-	-	-		
<i>S. Typhimurium</i>	-	-	-		

\*. Ölçümler 3 tekrarlı olarak gerçekleştirilmiştir.

**Şekil 1.** *A. vineale* L. bitkisinin metanoldeki ekstraktının çalışmada incelenen bakterilere karşı antibakteriyel etkileri (Mueller Hinton besiyerinde)

Köse ve Ocak (2018) yaptıkları çalışmada bazı önemli gıda patojenlerine karşı salamura sirmonun metanoldeki ekstraktlarının kısmen de olsa taze sirmonun metanoldeki ekstraktlarına göre antibakteriyel etkisinin fazla olduğunu, *E. faecalis* ile *S. Typhimurium*'a

karşı antibakteriyel etki göstermediğini diğer bakterilere karşı da bakteri türüne göre düşük ve etkili olduklarının belirlemişlerdir (Köse and Ocak 2018).

Fırat (2015) *A. vineale* bitkisi çiçeklerinin antibakteriyel madde olarak peynirlere katıldığı bildirilmiştir (Fırat, 2015). Yapılan bu çalışmada, *E. faecalis* ile *S. Typhimurium*'a karşı saptanan antibakteriyel etki Köse ve Ocak (2018)'in bulgularıyla benzerlik göstermekle beraber diğer bakterilere karşı belirledikleri antimikrobiyal etkiden düşük bulunmuştur. Bunun önemli nedenleri kullanılan materyalin farklı şekilde işlenmiş olması, kullanılan bakteri suşlarının farklı olması, bitkinin elde edildiği iklim ve coğrafyanın etkisi ile açıklanabilir.

Şekil 2. *A. vineale* ekstraktının patojen bakterilere karşı antimikrobiyal etkisi

Tablo 4. Ticari antibiyotiklerin bakterilere karşı etkinliği

Bakteriler	E15	AMC30	P10	CL30	S10
<i>B. cereus</i>	27,33±0.58	-	-	-	20,33±0.58
<i>B. subtilis</i>	30,67±0.78	9,00±0.00	6,00±0.00	14,33±0.58	20,67±0.58
<i>S. aureus</i>	-	-	-	-	22,33±0.58
<i>E. faecalis</i>	23,67±0.58	-	-	-	21,67±0.58
<i>P. aeruginosa</i>	18,33±0.58	-	7,00±0.00	22,33±0.58	19,00±0.00
<i>E. coli</i>	25,00±2.65	8,00±0.00	-	-	19,33±0.58
<i>S. Typhimurium</i>	-	18,33±0.58	-	20,33±0.58	17,33±0.58

\*Eritromisin 15µg (Oxoid, E15), Streptomisin 10 µg (Oxoid, S10), Penisilin 10 µg (Oxoid, P10), Amoksisilin/Klavulanik asit 30 µg (2:1; Oxoid, AMC 30) ve Cephalexin 30 µg (Oxoid, CL 30)

**Şekil 3.** Analizde kullanılan ticari antibiyotiklerin bakterilere karşı etkileri  
(1:E15;2: AMC30; 3: P10;4: CL30;5: S10)

Ponce ve ark (2003)'e göre değerlendirildiğinde *B. cereus* için AMC30, P10 ve CL30'a göre *A. vineale* bitkisi ekstraktının daha yüksek antibakteriyel etki gösterdiği, düşük etkili olarak (+) da değerlendirilebileceği anlaşılmıştır. Diğer bakterilere karşı bir kısım antibiyotiklere göre de antibakteriyel etkisi yüksek bulunmuştur.

Tablo 4 incelendiğinde, bu çalışmada ticari antibiyotiklerin bakteri türlerine göre değişik düzeylerde antibakteriyel etkilerinin olduğu belirlenmiştir. Köse ve Ocak (2018) tarafından yapılan çalışmada Ampisiline karşı antimikrobiyal zon çaplarının *P. aeruginosa* ile benzer olduğu, *B. cereus* (10.5mm)'un bizim çalışmamızdaki değerden yüksek(8.33mm) olduğu anlaşılmaktadır. Araştırmacıların diğer bakterilerde belirledikleri antimikrobiyal etkinlik bu çalışmaya göre yüksek bulunmuştur. Bu durum, aynı bakteri kullanılsa bile suş farklılığından kaynaklanabildiği ve kullanılan yöntemle göre farklılıklar olabileceğini düşündürmektedir.

**Şekil 4.** Ticari antibiyotiklerin bakterilere karşı etkinliği

Şekil 4'ten de anlaşılacağı üzere yapılan bu çalışmada antimikrobiyal aktivitede, kullanılan antibiyotik türlerinin ve bakteri suş farklılığının önemli olduğu söylenebilir.

#### **4, SONUÇ VE DEĞERLENDİRME**

*A. vineale* bitkisinin yetiştiği bölgelerde önemli ekonomik değerinin olması ve besleyici fonksiyonel özellikleri yanında antimikrobiyal, antioksidan özelliklere sahip oluşu ve birçok sağlık problemlerini engellediği bilinmektedir. Siirt ilinde bu çalışmanın ilk defa yapılmış olması önemli bir referans özelliği taşıyacaktır. Antibakteriyel etkisinden dolayı, bu özelliklerinin geliştirilmesi suretiyle özellikle peynir üretiminde bu bitkilerin kullanımı artırılarak birçok hastalığın önlenilebileceği düşünülmektedir. İlde bu bitki ile bilimsel çalışmaların artırılmasının, daha önemli ekstraktlar ile zenginleştirilmesinin, bu ürünlerden katma değeri yüksek yeni ürünler üretilmesinin gerekliliği sonucuna varılmıştır.

**ÖZET**

*Allium kharputense* Freyn & Sint. bitkisi, Türkiye'nin Batı Karadeniz Bölümü, Yukarı Kızılırmak Bölümü, Yukarı Fırat Bölümü, Yukarı Murat-Van Bölümü, Orta Fırat Bölümü, Dicle Bölümü ve Irak ile İran'da doğal olarak yayılış gösteren bir türdür. Bu bitkinin geleneksel tıpta kullanımı ile birlikte antimikrobiyal ve mutajenik özellikleri de bulunmaktadır. Bitkiye ait toprak üstü kısımlar, yöre halkı tarafından gıda amaçlı (özellikle bulgur pilavına, böreğe, çorbaya katılır veya yumurta ile kavrulur) tüketilmektedir. Bu çalışmada, *Allium kharputense*'nin metanol ekstraktından elde edilen 100 mg mL<sup>-1</sup> olan ekstraktın kuru madde miktarı, renk özellikleri bazı patojen bakterilere (*B. cereus*, *B. subtilis*, *S. aureus*, *E. faecalis*, *E. coli* ve *S. Typhimurium*) karşı antimikrobiyal etkileri araştırılmıştır. Bununla birlikte, Eritromisin, Streptomisin, Penisilin, Amoksisilin/Klavulanik asit ve Cephaleksin ticari antibiyotiklerinin de bu bakterilere karşı etkinliği incelenmiştir. Kuru madde miktarı % 9,07±0,25, renk *L* 5,46±, renk *a* -0,37±0,12, renk *b* -0,36±0,12, kroma değeri 0,13 ve h° açısı 44,22 derece olarak belirlenmiştir. *Allium kharputense*'nin *B. cereus*, *B. subtilis*, *E. faecalis*, *E. coli* ve *S. Typhimurium* bakterilere karşı etkinliği bulunurken, *S. aureus* üzerinde etkinlik göstermemiştir. En fazla etkinliği *E. coli* üzerinde göstermiştir.

**Anahtar kelimeler:** *Allium kharputense*, Antibakteriyel aktivite, Kroma, Kuru madde miktarı

**DETERMINATION OF DRY MATERIAL, COLOR, ANTIMICROBIAL EFFECTS  
OF *ALLIUM KHARPUTENSE* FREYN ET SINT. EXTRACT GROWN IN SIİRT  
ERUH REGION****ABSTRACT**

Known as a non-endemic herbaceous plant, *Allium kharputense* Freyn Et Sint is found in eastern Turkey (Siirt, Şırnak, Tunceli, Muş, Bitlis, Hakkâri, Van provinces), Iraq and Iran, at an altitude of 900-2000 m, grassy slopes, calcareous grows naturally in fields and slopes. Along with the use of this plant in traditional medicine, it also has antimicrobial and mutagenic properties. Aerial parts of the plant are consumed by the local people for food purposes (especially added to bulgur pilaf, pastry, soup or fried with eggs). In this study, the dry matter content, color characteristics, and pathogens such as *B. cereus*, *B. subtilis*, *S. aureus*, *E. faecalis*, *E. coli* and *S. Typhimurium* of the 100 mg mL<sup>-1</sup> extract obtained from the methanol extract of *Allium kharputense* were investigated. antimicrobial effects against bacteria were investigated. However, the efficacy of commercial antibiotics Erythromycin, Streptomycin, Penicillin, Amoxicillin/Clavulanic acid and Cephalexin against bacteria were also investigated. Dry matter content 9.07±0.25 %, color L 5.46±, color a -0.37±0.12, color b -0.36±0.12, chroma value 0.13 and h° angle was determined as 44.22 degrees. While *Allium kharputense* had activity against *B.cerreus*, *B. subtilis*, *E.faecalis*, *E. coli* and *S. Typhimurium* bacteria, it did not show activity on *S. aureus*. It showed the most activity on *E. coli*.

**Keywords:** *Allium kharputense*, chroma, dry matter content

## 1. GİRİŞ

Ülkemizde 196 *Allium* türü bulunmakta ve bunlardan 60'a yakını endemiktir (Şelem et al. 2020). *Allium kharputense* Türkiye'nin doğusu (Firat 2015; Arslan et al. 2017; Mesut et al. 2021), Irak ve İran'da (Eftekharinasab et al. 2012), çok yıllık, otsu, 900- 2000 m rakımda, çimenlik yamaçlar, kalkerli tarlalar ve yamaçlarda doğal olarak büyüyen endemik olmayan bir türdür (Şelem et al. 2020).

Siirt ve çevre illerde *A. kharputense*'nin yöresel (Kürtçe) ismi Soryaz'dır. *Allium*'a ait türler yüzyıllardır ekonomik, beslenme ve geleneksel tıbbi faydaları nedeniyle dünya çapında kullanılmaktadır (Block 1985; Yabalak and Gizir 2017).

Birçok araştırmacı, *Allium* türlerini kemopreventif ve antitümör aktivite (Reuter 1995), antibakteriyel ve antimikrobiyal (Fritsch and Keusgen 2006), antifungal (Corea et al. 2003), antikoagülan, antihipertansif ve antikanser (Kimbaris et al. 2006) aktivite dahil olmak üzere farmakolojik ve terapötik etkileri açısından araştırmıştır. Ayrıca *A. kharputense*'den elde edilen metanolik ekstraktın mutajenik ve antimikrobiyal etkisi tespit edilmiştir (Erdogan et al. 2015; Yabalak and Gizir 2017).

*Allium kharputense*, ilkbahar aylarında toprak üstü kısımları toplanır ve özellikle bulgur pilavında, çorba çeşitlerinde kullanılır. İlkbaharda toplanan kısımları kışın kullanmak için kurutulur veya salamurası yapılır. Mevsiminde çarşıda taze satılır. İnsanlar soğanlarını söküp bahçelerine diker ve yapraklarını sebze olarak kullanırlar. Yerel adı "Soryaz" olan bu bitkinin çiçeklenme zamanı Mayıs-Haziran aylarıdır. Dağılımı Tunceli, Muş, Bitlis, Hakkari, Van bölgesi olarak bildirilmektedir (Firat, 2015).

*Allium kharputense* (*A. kharputense*), toplam polifenol içeriğini, antioksidan aktiviteyi, kimyasal bileşimi ve mineral ve iz element bileşimi yapılmıştır. Toplam polifenolik içerik Folin-Ciocalteu yöntemi kullanılarak 257 mg GA 100 g<sup>-1</sup> kuru örnek, antioksidan aktivite analizi için DPPH testi kullanılarak Gallik asit ve Trolox'un IC50 değerleri sırasıyla 0,02642 mg mL<sup>-1</sup> ve 0,225 mg mL<sup>-1</sup> ve *A. kharputense*'nin IC50 değeri 2,186 mg mL<sup>-1</sup> olarak bulunmuştur. *A. kharputense*'nin metanolik ekstraktlarında 28 bileşik tespit edilmiş ve mikrodalga parçalama prosedürü kullanılarak ICP-MS ile 20 mineral ve iz element belirlenmiştir (Yabalak and Gizir 2017).

Yapılan bu çalışmada, bölgede sıklıkla tüketilen bu bitkinin antibakteriyel özelliklerini belirlemek ve bazı ticari antibiyotiklerle karşılaştırılması amaçlanmıştır.

## **2. MATERYAL VE YÖNTEM**

Çözeltilerin kuru madde miktarı (Briks), Cemeroğlu (2013)'nun önerdiği metoda göre (Hanna, HI96801, Romanya) dijital refraktometrede, renk değerleri de Hunt ve Pointer (2011) tarafından önerilen metoda göre taşınabilir renk tayin cihazı (Pen Color Art USB, 1L-Artoksi MSM, İstanbul, Türkiye)'nda belirlenmiştir.

Standart bakteri suşlarının standart antibiyotiklere duyarlılığının belirlenmesinde; *B. cereus* ATCC 10876, *B. subtilis* ATCC 6633, *S. aureus* ATCC 29213, *E. faecalis* ATCC 29242, *P. aeruginosa* ATCC 8027, *E. coli* ATCC 25922 ve *Salmonella Typhimurium* ATCC 14028 bakteri suşları ve Eritromisin 15µg (Oxoid, E15), Streptomisin 10 µg (Oxoid, S10), Penisilin 10 µg (Oxoid, P10), Amoksisilin/Klavulanik asit 30 µg (2:1; Oxoid, AMC30) ve Cephalexin 30 µg (Oxoid, CL30) standart antibiyotikler materyal olarak kullanılmıştır. Antibakteriyel aktivite Temiz (2010) tarafından önerilen disk diffüzyon yöntemine göre gerçekleştirilmiştir.

İlk önce, bakteri suşları Tryptic Soy Agar (TSA, Merck) ortamında (37 °C'de 18-24 saat) yeniden aktive edildi. Saf kültürler, fizyolojik solüsyon içeren test tüplerinde 0,5 McFarland standardına göre yoğunlukları ayarlandı. Önceden hazırlanmış 4-6 mm kalınlıkta Mueller Hinton agar besiyeri içeren petrilere her bakteri suşu ayrı ayrı inoküle edildi. Bakteri suş solüsyonunun emilmesi için petri kapları yaklaşık 15-20 dakika süreyle bekletildi. Ardından standart antibiyotikler (E15, S10, P10, AMC30 ve CL30) disk difüzyon yöntemine göre minimum 2 cm mesafe ile ortam üzerine yerleştirildi. Bu işlemden sonra petri kapları 37 °C'de 18-24 saat aerobik koşullarda inkübe edilmiş ve inkübasyon sonunda oluşan şeffaf zon çapları dijital kumpas ile ölçülerek değerlendirilmiştir (Temiz, 2010).

*Allium kharputense*'nin metanol ekstraktının antibakteriyel etkilerinin belirlenmesinde delik agar diffüzyon yöntemi kullanılmıştır. Bu yöntemde; disk diffüzyon yönteminden farklı olarak besiyeri üzerinde antibiyotiklerin yerleştirileceği noktalara 0,5 cm çapında küçük kuyucuklar açılmıştır. Hazırlanan *Allium kharputense*'nin metanol ekstraktından 30 µL kuyucuklara aktarıldı ve yaklaşık 20 dakika boyunca besiyerinde emilmesi sağlandı. Kontrol (C) olarak da bakteri içermeyen serum fizyolojik sudan 30 µL kuyucuklara aktarıldı. Petri kapları daha sonra aerobik koşullarda 37 °C'de 18-24 saat boyunca inkübe edildi. İnkübasyon sonunda oluşan şeffaf zon çapları dijital kumpas ile ölçülerek değerlendirildi. Ponce ve ark. (2003) tarafından yapılan çalışmada, zon çapına göre antimikrobiyal etki şiddetleri ölçülmüştür. Zon çapı <8,00 mm ise antimikrobiyal etki "etkisiz" olmakta, zon çapı 9.00 ile 14.00 mm arasında

antimikrobiyal etki "düşük etkili", zon çapı 15,00 ile 19,00 mm arasında antimikrobiyal etki "etkili" olmakta ve zon çapı >20.00 mm ise antimikrobiyal etki "aşırı etkili" olmaktadır.

Yapılan bu çalışmada, test edilen parametreler kuru madde miktarı, renk (*L*, *a*, *b*) değerleri, bakterilerin ticari antibiyotiklere etkinlikleri ve *A. kharputense*'nin antibakteriyel özellikleri 3 kez tekrarlanarak, renk değerlerinden de kroma ve  $h^\circ$  açısı bulunmuştur.

### **3. BULGULAR VE TARTIŞMA**

*A. kharputense*'nin antibakteriyel özelliklerinin belirlenmesi için bitkinin metanoldeki ekstraktının kuru madde değerleri (Briks) değerleri  $9,07 \pm 0,25$  belirlenmiştir. Bu değer artışına bağlı olarak, içermiş olduğu yağ, protein gibi organik bileşikler de yüksek düzeyde içerdiğini ayrıca antibakteriyel ajanların da çeşit ve miktar yönünden zengin olduğunu akla getirmektedir. Nitekim Şelem ve arkadaşları (2020), otlu peynir yapımında kullanılan *Allium* türlerinin antimikrobiyal, antioksidan, antifungal, antibakteriyel, antikanserojen ve antienflamatuar özelliklere sahip olduğunu bildirmişlerdir. Tegin ve arkadaşları (2019) da yapmış oldukları bir çalışmada aynı familyaya ait *A. vineale*'nin toplam fenolik içeriğini ve DPPH radikalinin sırasıyla 12.00  $\mu\text{g/mL}$  ve %58.60 olarak belirlemişlerdir.

*A. kharputense*'nin metanoldeki ekstraktının renk özellikleri Tablo 1'de, patojen bakterilere karşı etkinliği Tablo 2 ve Şekil 2'de, ticari antibiyotiklerin bakterilere karşı etkinliği de Şekil 3-4 ve Tablo 3'te sunulmuştur.

Bir gıdanın suda çözünen madde miktarı (Briks), suyun dışında kalan ve suda çözünen bileşiklerin olduğunu ifade eder. Bu değer yüksek oluşu gıdanın besleyici özelliğinin iyi olduğu kadar suda çözünen antimikrobiyal maddelerin de fazla olduğunu göstermektedir. Yapılan bir çalışmada belirlenen çözünen madde miktarı ortalama değeri %38,08 olarak bulunmuştur (Kutlu et al. 2018).

Renk gıdalar için önemli tercih nedenlerinden biridir. Bu bitkinin gıdalarda, katkı maddesi olarak kullanılması tat-aroma ve kokusu dışında rengi üzerine de etkili olduğu, renk yoğunluğunun fazla oluşu da kurumadde miktarına paralel olarak antibakteriyel etkide önemli rol oynayabileceğini düşündürmektedir. Tablo 1'den de anlaşılacağı üzere; ekstraktın koyu, yeşil ve sarı renge hakim olduğu, renk yoğunluğu kromanın ise bunu desteklediği söylenebilir.

**Tablo 1.** *A. vineale* ekstraktının renk analizinin belirlenmesi

Örnek					h açısı (arctan(b/a))	
	L	a	b	Kroma	Radyal	Derece
<i>A. kharputense</i>	5,46	-0,37	-0,36	0,13	0,77	44,22

\* renk değerlerinden kroma= $(a^2+b^2)^{1/2}$  formülüyle, hu açısı değeri  $h=\arctan(b/a)$  eşitliğiyle hesaplanmıştır. L: koyuluk/açıklık(0-100); a: (-)yeşillik/(+)kırmızılık; b: (-)mavilik/ (+)sarı olarak bilinmektedir.

Yapılan bu çalışmada, Tablo 2 incelendiğinde *A. kharputense*'nin ekstraktının gıda kaynaklı patojen bakterilerden sadece *S. aureus*'a karşı hiç etki göstermediği, *E. faecalis*'e karşı etkisiz olduğu ancak diğer bakterilere karşı "düşük etkili" olduğu anlaşılmıştır.

**Tablo 2.** *A. kharputense* ekstraktının patojen bakterilere karşı antimikrobiyal etkisi

Bakteriler	<i>A. kharputense</i>			Ortalama	Standart sapma
<i>B. cereus</i>	10	11	11	10,67	0,58
<i>B. subtilis</i>	10	10	9	9,67	0,58
<i>S. aureus</i>	-	-	-	-	-
<i>E. faecalis</i>	7	7	7	7,00	0,00
<i>P. aeruginosa</i>	9	9	8	8,67	0,58
<i>E. coli</i>	11	11	12	11,33	0,58
<i>S. Typhimurium</i>	9	9	8	8,67	0,58

\*. Ölçümler 3 tekrarlı olarak gerçekleştirilmiştir.

**Şekil 1.** *A. kharputense* bitkisinin metanoldeki ekstraktının çalışmada incelenen bakterilere karşı antibakteriyel etkileri

Köse ve Ocak (2018) yaptıkları çalışmada bazı önemli gıda patojenlerine karşı salamura sirmonun metanoldeki ekstraktlarının kısmen de olsa taze sirmonun metanoldeki ekstraktlarına göre antibakteriyel etkisinin fazla olduğunu, *E. faecalis* ile *S. Typhimurium*'a karşı

antibakteriyel etki göstermediğini diğer bakterilere karşı da bakteri türüne göre düşük ve etkili olduklarının belirlemişlerdir (Köse and Ocak 2018).

Fırat (2015) *A. vineale* bitkisi çiçeklerinin antibakteriyel madde olarak peynirlere katıldığı bildirilmiştir (Fırat, 2015). Yapılan bu çalışmada, *E. faecalis* ile *S. Typhimurium*'a karşı saptanan antibakteriyel etki Köse ve Ocak (2018)'in bulgularıyla benzerlik göstermekle beraber diğer bakterilere karşı belirledikleri antimikrobiyal etkiden düşük bulunmuştur. Bunun önemli nedenleri kullanılan materyalin farklı şekilde işlenmiş olması, kullanılan bakteri suşlarının farklı olması, bitkinin elde edildiği iklim ve coğrafyanın etkisi ile açıklanabilir.

**Şekil 2.** *A. kharputense* ekstraktının patojen bakterilere karşı antimikrobiyal etkisi

**Tablo 3.** Ticari antibiyotiklerin bakterilere karşı etkinliği

Bakteriler	E15	AMC30	P10	CL30	S10
<i>B. cereus</i>	27,33±0.58	-	-	-	20,33±0.58
<i>B. subtilis</i>	30,67±0.78	9,00±0.00	6,00±0.00	14,33±0.58	20,67±0.58
<i>S. aureus</i>	-	-	-	-	22,33±0.58
<i>E. faecalis</i>	23,67±0.58	-	-	-	21,67±0.58
<i>P. aeruginosa</i>	18,33±0.58	-	7,00±0.00	22,33±0.58	19,00±0.00
<i>E. coli</i>	25,00±2.65	8,00±0.00	-	-	19,33±0.58
<i>S. Typhimurium</i>	-	18,33±0.58	-	20,33±0.58	17,33±0.58

\*Eritromisin 15µg (Oxoid, E15), Streptomisin 10 µg (Oxoid, S10), Penisilin 10 µg (Oxoid, P10), Amoksisilin/Klavulanik asit 30 µg (2:1; Oxoid, AMC 30) ve Cephalexin 30 µg (Oxoid, CL 30)

Şekil 3. Analizde kullanılan ticari antibiyotiklerin bakterilere karşı etkileri  
(1:E15;2: AMC30; 3: P10;4: CL30;5: S10)

Ponce ve ark (2003)'e göre değerlendirildiğinde *A. kharputense* bitkisinin *B. cereus*'a karşı için AMC30, P10 ve CL30'a göre daha etkili (+), *B. subtilis* P10'dan daha etkili (+) ve AMC30 ile benzer (+), *S. aureus* için S10 hariç diğer antibiyotiklerle benzer (-), *E. faecalis* için AMC30, P10 ve CL30 ile benzer (-), *P. aeruginosa* için AMC30 ve P10'dan daha etkili (+), *E. coli* için AMC30, P10 ve CL30'dan daha etkili (+) ve son olarak *Salmonella Typhimurium* için de E15 ve P10'dan daha etkili (+) olduğu saptanmıştır.

Şekil 4 incelendiğinde, bu çalışmada ticari antibiyotiklerin bakteri türlerine göre değişik düzeylerde antibakteriyel etkilerinin olduğu belirlenmiştir. Köse ve Ocak (2018) tarafından yapılan çalışmada Ampisiline karşı antimikrobiyal zon çaplarının *P. aeruginosa* ile benzer olduğu, *B. cereus* (10.5mm)'un bizim çalışmamızdaki değerden yüksek(8.33mm) olduğu anlaşılmaktadır. Araştırmacıların diğer bakterilerde belirledikleri antimikrobiyal etkinlik bu çalışmaya göre yüksek bulunmuştur. Bu durum, aynı bakteri kullanılsa bile suş farklılığından kaynaklanabildiği ve kullanılan yöntemle göre farklılıklar olabileceğini düşündürmektedir.

Başka bir çalışmada *A. kharputense*'in önemli gıda patojenlerinden *B. subtilis*'e karşı daha etkili ancak *E. coli*, *E. faecalis*, *Salmonella Typhimurium* ve *S. aureus*'a etkisinin daha az olduğu belirlenmiştir (Erdoğan ve ark. 2015). Yapılan bu çalışmayla araştırmacıların bulguları, yaptığımız çalışmada en dirençli olanların sırasıyla *S. aureus*, *E. faecalis*, *Salmonella Typhimurium*, *P. aeruginosa* iken en duyarlı olanların ise sırasıyla *E. coli*, *B. cereus* ve *B. subtilis* olduğu görülmüştür (Şekil 2, Şekil 3.)

Yeniçeri ve Hallaç (2021) sumak konsantresi düzeyinin artmasına bağlı olarak inceledikleri patojenler üzerine etkilerinin arttığını, *S. aureus* için iki kat seyreltilen sumak konsantresinin 23.20mm zon çapı göstermesine karşın 64 kat seyreltide ise zon çapının 9.80 mm'ye gerilediğini belirlemişlerdir.

Hallaç ve ark (2022) nar kabuğu tozu konsantrasyonunun bakteriler üzerinde önemli ( $p<0.01$ ) etkilerinin olduğunu, *S. aureus* üzerine %10 ve % 20 NKT'nun antimikrobiyal etkisi ile E15, P10, AMC30 ve CL30 ile “aşırı etkili” olmasıyla, % 5 ve % 2.5 NKT ise S10 ile “etkili” olmasıyla benzerlik gösterdiğini belirlemişlerdir. Ayrıca, *E. coli* için %20 NKT ile AMC30 ve S10'nun “etkili” şiddette oluşları benzerlik gösterirken, *B. cereus*'ta % 20 NKT ile E15 ve S10'nun “aşırı etkili” olması benzerlik gösterdiğini, diğer konsantrasyonlardaki ( % 2.5, 5, ve 10 NKT) uygulamalarının ise diğer antibiyotiklere nazaran daha etkili olduğunu ortaya koymuşlardır. MİK değerlerinin *Staphylococcus aureus*, *Escherichia coli* ve *Bacillus cereus* için sırasıyla 1/64, 1/8 ve 1/128 mg/mL olarak saptandığını bildirmişlerdir. Bahsedilen bakteriler üzerine en etkili konsantrasyonunun % 20 olduğunu, bu tozun *Bacillus cereus* ve *Escherichia coli* üzerine penicillinden, *Bacillus cereus* üzerine ise amoxycillin/clavulanic asit'ten daha etkili olduğunu ortaya koymuşlardır.

İzol ve ark. (2021) *A. kharputense*'in kök kısımlarının yaprak kısımlarına göre bakterilere karşı daha etkili olduğunu, kök kısımlarının *E. coli*, *P. aeruginosa* ve *S. aureus*'a sırasıyla 600, 600 ve 300 µg/mL; yaprak kısımlarının ise 300, 300 ve 150 µg/mL düzeyinde MİK değerlerinin olduğunu belirtmişlerdir.

Şekil 4. Ticari antibiyotiklerin bakterilere karşı etkinliği

Şekil 4'ten de anlaşılacağı üzere yapılan bu çalışmada antimikrobiyal aktivitede, kullanılan antibiyotik türlerinin ve bakteri suş farklılığının önemli olduğu söylenebilir.

#### **4. SONUÇ VE DEĞERLENDİRME**

*A. kharputense* bitkisinin yetiştiği bölgelerde önemli ekonomik değerinin olması ve besleyici fonksiyonel özellikleri yanında antimikrobiyal, antioksidan özelliklere sahip oluşu ve birçok sağlık problemlerini engellediği bilinmektedir. Siirt ilinde bu çalışmanın ilk defa yapılmış olması önemli bir referans özelliği taşıyacaktır. Yapılan bu çalışmada *A. kharputense* bir kısım antibiyotiklere göre üstünlük sağladığı belirlenmiştir. Antibakteriyel etkisinden dolayı, bu özelliklerinin geliştirilmesi suretiyle özellikle peynir üretiminde bu bitkilerin kullanımı artırılarak birçok hastalığın önlenebileceği düşünülmektedir. İlde bu bitki ile bilimsel çalışmaların artırılmasının, daha önemli ekstraktlar ile zenginleştirilmesinin, bu ürünlerden katma değeri yüksek yeni ürünler üretilmesinin gerekliliği sonucuna varılmıştır.

## **HALLOYSİT NANOTÜPÜN POLİSTİREN NANOKOMPOZİTLERİN MEKANİK ÖZELLİKLERİ ÜZERİNE ETKİSİ**

**Dr. Öğr. Gör. Nihayet KOÇYİĞİT (Orcid ID:0000-0002-3472-1127)**  
Batman Üniversitesi, TBMYO, Kimya ve Kimyasal İşleme Teknolojisi, Batman

### **ÖZET**

Bu çalışmanın amacı, halloysit nanotüp (HNT) kilinin polistiren (PS) nanokompozitlerin çekme ve eğme mekanik özellikleri üzerine etkisini hakkında bilgi vermektir. Bu yüzden ilk olarak polar ve hidrofilik yapıdaki HNT kilinin apolar ve hidrofobik yapıdaki polimer matris ile kimyasal yapılarının benzemesini sağlamak için stiren–maleik-anhidrit (SMA) kopolimeri ile HNT'ye yüzey modifikasyonu uygulanmıştır. Böylece, HNT kili, organokile (SMA-HNT) dönüştürül müştür. Daha sonra ağırlıkça farklı %'de oranlarında SMA-HNT, stiren monomerine eklenerek ekstrüzyon, enjeksiyon ve polimerizasyon yöntemleri ile polimer nanokompozitler üretilmiştir. Daha sonra bu köpüklere ASTM D638 standardına göre çekme testi, ASTM D790 standardına göre üç nokta eğme testi uygulanmıştır. Test sonuçlarına göre polimer nanokompozitlerin çekme mukavemeti belirli %'de oranlarında artarken %'de oranı arttıkça aglomerasyonun da artması nedeni ile belirli bir orandan sonra azalma başlamış ve daha yüksek oranlarda kopma gözlenmiştir. Eğilme mukavemeti ise PS matrise ilave edilen %SMA-HNT oranı arttıkça sertlik de arttığı için azalmıştır. Çekme ve eğme mekanik test sonuçlarına dayanarak SMA-HNT takviyeli kompozit köpüklerin üretiminde SMA-HNT oranının yüksek (>%10) tutmamanın daha uygun olacağına karar verilmiştir. Aynı zamanda, SMA-HNT'lerin polimer matris içinde homojen olarak dağıldığı, ancak ilave edilen SMA-HNT oranı arttıkça matris içinde aglomerasyonun arttığı görülmüştür.

**Anahtar Kelimeler:** Polistiren, Nanokompozit, HNT, Çekme testi, Eğme testi

## **EFFECT OF HALLOYSITE NANOTUBE ON MECHANICAL PROPERTIES OF POLYSTYRENE NANOCOMPOSITES**

### **ABSTRACT**

The aim of this study is to give information about the effect of halloysite nanotube (HNT) clay on the tensile and bending mechanical properties of polystyrene nanocomposites. Therefore, firstly, surface modification was applied to HNT with styrene-maleic-anhydride (SMA) copolymer in order to make the polar and hydrophilic HNT clay resemble its chemical structure with the apolar and hydrophobic polymer matrix. Thus, HNT clay was converted to organoclay (SMA-HNT). Then, polymer nanocomposites were produced by adding SMA-HNT at different wt% ratios to styrene monomer by extrusion, injection and polymerization methods. FTIR analysis was first applied to the obtained nanocomposites and it was observed that the surface morphology of the polymer matrix changed. At the same time, it was observed that SMA-HNTs were homogeneously dispersed in the polymer matrix, but agglomeration increased in the matrix as the added SMA-HNT ratio increased. Then, tensile test according to ASTM D638 standard and three point bending test according to ASTM D790 standard were applied to these foams. According to the test results, while the tensile strength of the polymer nanocomposites increased at certain %, as the % ratio increased, agglomeration began to decrease after a certain rate and higher rupture rates were observed. Flexural strength decreased as the percentage of SMA-HNT added to the PS matrix increased as the hardness increased. Based on the SEM analysis and tensile bending mechanical test results, it was decided that it would be more appropriate not to keep the SMA-HNT ratio high (>10%) in the production of SMA-HNT reinforced composite foams.

**Keywords:** Polystyrene, Nanocomposite, HNT, Tensile test, Flexural test

## **GİRİŞ**

Bugün hem dünyada hem de ülkemizde enerji tüketimi nüfus artışına paralel olarak hızla artmaktadır. Bu sebeple mevcut enerji kaynakları hızla tükenmekte bu da yeni enerji kaynakları arayışına neden olmaktadır. Bu nedenle enerji kaybının önüne geçmek için 1970'lerde binalarda ısı izolasyonuna başlanmış, 1990'larda hız kazanmış ve günümüzde kentsel dönüşüm nedeni ile hızla devam etmektedir (Koçyiğit, 2022).

Günümüzde, ısı izolasyonu için cam yünü, taş yünü, EPS, XPS, poliüretan köpük, cam köpüğü, polietilen köpük gibi polimer köpükler yalıtım malzemesi olarak kullanılmaktadır. Bunlardan EPS, hem ekonomik olması hem de üstün özelliklere sahip olması nedeni ile hem dünyada hem ülkemizde en çok tercih edilen ısı yalıtım malzemesidir. Fakat EPS yanıcıdır ve bu da EPS'nin kullanım alanını sınırlandırmaktadır (Jeon ve Baek, 2010). Bu durumun önüne geçmek için EPS'nin yanmazlık özelliğinin geliştirilmesi için çok sayıda çalışma yapılmıştır. Bu çalışmalardan biri de EPS'nin içine inorganik nanopartikül ilave edilerek yanmazlık özelliği kazandırmaktır. Bu yüzden geçen on yılda polimerlere, talk, kalsiyum karbonat, karbon siyahı, perlit, grafit, karbon nanotüp gibi bazı organik inorganik dolgu maddeleri takviye edilerek, polimer köpüklerin termal kararlılık, yanmazlık ve mekanik özellik gibi özelliklerin iyileşmesi sağlanmıştır (Wang ve Xiao, 2009).

Polimer köpüklerin özelliklerini geliştirmek için tercih edilen inorganik takviye malzemelerinden biri de kildir. Sepiyolit, montmorillenit, bentonit, kaolinit ve halloysit nanotüp (HNT) en çok tercih edilen kil grubudur (Mauroy vd., 2015). Bunlardan özellikle HNT, kimyasal yapısının karbon nanotüpe benzemesi nedeni ile bilim dünyasının dikkatini çekmiştir. Halloysit, doğada bol miktarda bulunan kaolinit tipi bir alüminosilikat ( $Al_2Si_2O_5(OH)_4 \cdot nH_2O$ ) kildir. Nano ölçekli boyutta, yani 50-100 nm çapında, içi boş çok katmanlı boru şeklinde bir yapıya sahip olması bakımından benzersizdir. Dış yüzeyde 1:1 silika tabakası ve iç duvarda alümina bulunması halloysit nanotüpleri geometrik olarak çok duvarlı karbon nanotüplere benzer kılar. HNT'nin dış yüzeyi siloksan bağlarıyla (Si-O-Si) oluşan tetrahedral silikat tabakasından, iç yüzeyi ise alüminol (Al-OH) gruplarından oluşan oktahedral alümina tabakasından meydana gelir. HNT'nin nanotüp kenarlarında bulunan silanol (Si-OH) ve alüminol grupları, yüzeye kazandırdıkları polarlık sayesinde nanokilin polar polimerik matrislerde etkili bir şekilde dağılmasına olanak sağlar. Sahip olduğu hidroksil grupları sayesinde yüzey modifikasyonuna oldukça müsait olan HNT, hem polar hem de apolar polimerik matrislerde karışabilirliğinin iyileştirilmesinin yanında yüzeyin farklı özellikteki

moleküllerle fonksiyonlandırılması amacıyla yüzey modifikasyon arařtırmalarına konu olmuřtur. Montmorillonit gibi diđer katmanlı silikatların aksine, halloysit polimer zincirlerinin araya girmesiyle pul pul dökülemez ve bu nedenle morfolojisi polimer matrislerinde bozulmadan kalır (Arat, 2018; Koçyiđit, 2022).

Polimer matrise ilave edilen takviye malzemesinin bir polimerin mekanik özellikleri üzerindeki güçlendirme etkileri partiküllerin boyutu, řekli ve en-boy oranı, polimer matrisindeki dađılım derecesi ve takviye partikülleri ile polimer matris arasındaki ara yüzey etkileřimi gibi bir dizi faktöre bađlıdır. Son zamanların popüler takviye malzemelerinden biri olan HNT dođada hidrofilitir ve bu nedenle genellikle onları hidrofobik polimerle uyumlu hale getirmek için yüzey modifikasyonu gerektirir. Bu da polimer matrisinde kil parçacıklarının topaklařmasını önler. Aksi takdirde PS matris içinde topaklanma olur ve polimer köpüđün geliřmesi beklenen özelliklerinde gerileme olur. Bunun önüne geçmek için, kil yüzeyi genellikle organik iřlem yoluyla deđiřtirilir. Bu sayede polimerlerle daha etkili bir řekilde etkileřime girmesi ve böylece mekanik özelliklerin, termal kararlılık, yanmazlık özelliđi ve diđer özelliklerin geliřmesi sađlanır. Bu geliřmiř özellikler, otomotiv endüstrisinden biyomedikal cihazlara kadar geniř bir ürün yelpazesinin üretilmesini sađlar (Arat, 2018;Khan vd., 2009; Shamsi vd., 2010; Lin vd., 2011).

Bu güne kadar yapılan çalıřmalarda; Daitx ve arkadaşları (2015), APTES ile yüzey modifikasyonu uygulanmıř HNT nanokili poli(hidroksibütirat-ko-hidroksivalerat) (PHBV) matrisle karıřtırarak eriyik karıřtırma yöntemiyle APTES-HNT/PHBV nanokompozitler hazırlamıřlardır. Modifiye ve saf HNT iđereren PHBV nanokompozitlerin mekanik ve termal özellikleri incelendiđinde, saf HNT iđereren nanokompozitlerin mekanik özellikleri ve termal dayanımlarında saf PHBV'ye göre artıř gözlenirken; APTES ile modifiye edilmiř HNT iđereren nanokompozitlerin mekanik özellikleri ve termal dayanımlarında azalma görölmüřtür. Bu durum, modifiye HNT yüzeyinde bulunan amino gruplarının, PHBV zincirindeki karbonil gruplarıyla etkileřmesi durumundan kaynaklandıđına karar verilmiřtir (Daitx vd., 2015). Qiao ve arkadaşları (2017), HNT yüzeyini APTES ve oleik asit ile modifiye etmiř ve bu modifiye nanokili UHMWPE ile karıřtırarak eriyik karıřtırma yöntemiyle UHMWPE/HNT nanokompozitler hazırlamıřlardır. Modifikasyonun etkisiyle PE matriste homojen dađılım gösteren modifiye HNT, aynı zamanda nanokompozitlerin mekanik özelliklerini ve termal dayanımlarını da arttırmıřtır (Qiao vd., 2017). Pasbakhsh ve çalıřma arkadaşları (2010), HNT yüzeyini MPS ile modifiye etmiř ve HNT'nin etilen-propilen-dien-monomer (EPDM)'ye ilave

ederek MPS-HNT/EPDM nanokompozitleri üretmişlerdir. Mikroskobik analiz sonuçları MPS-HNT'nin EPDM matriste daha homojen bir dağılım gösterdiği; MPS-HNT ve saf HNT içeren EPDM nanokompozitlerin mekanik test sonuçları ise MPS-HNT içeren nanokompozitlerin çekme dayanımları ve çekme modüllerinde saf HNT içeren nanokompozitlere göre artış olduğu gözlemlenmiştir (Pاسبakhsh vd., 2010).

## 2. MEKANİK ÖZELLİKLER ÜZERİNE ETKİSİ

Literatürde yapılan çalışmalarda modifiye edilmiş HNT'nin PS nanokompozitlerin mekanik özellikleri üzerine etkisini belirlemek için HNT/PS nanokompozite uygulanan mekanik test sonuçları saf EPS köpüğün mekanik test sonuçları ile karşılaştırılmıştır. Örneğin; arkadaşları yapılan bir çalışmada HNT'yi sodyum dodesil sülfat (SDS) ile modifiye etmişler ve ağırlıkça %5 ve %10 oranlarında stirene ekleyerek emülsiyon polimerizasyonu ile PS nanokompozitler elde etmişlerdir. Bu nanokompozitlere mekanik test uygulamışlardır.

PS/%5HNT ve PS/%10HNT ve saf PS'nin nanokompozitlerinin çentikli izod darbe mukavemeti sırasıyla  $59,1 \pm 4,8$  ve  $35,0 \pm 6,9$  J/m,  $19,5 \pm 3,6$  J/m olup saf PS'den daha yüksek çıkmıştır (Şekil 1). Bu sonuçlar ağırlıkça %5 HNT'lerin eklenmesi PS'nin darbe mukavemetini %300 arttırırken, HNT'lerin yüklenmesindeki ilave bir artış PS/HNT nanokompozitlerinin darbe mukavemetini önemli ölçüde azalttığını göstermiştir. Saf PS ve PS/HNT nanokompozitlerinin depolama modülü, PS nanokompozitlerinin sertliği, HNT'lerin eklenmesiyle 25 °C'de yaklaşık %30 artmıştır (Lin vd., 2011).

Şekil 1. Saf PS ve PS/HNT nanokompozitlerinin çentikli İzod darbe dayanımı (Lin vd., 2011)

Polimer nanokompozit kaplamalar sertlik, tokluk açısından mükemmel mekanik özellikler ve sürtünme ve aşınma açısından olağanüstü tribiyolojik özellikler gösterdikleri için önemli araştırma ilgisini çekmiştir. Bu yüzden son yirmi yılda camı fiziksel hasardan, çevresel bozulmadan korumak ve ayrıca işlevselliğini veya mekanik ve termal özelliklerini geliştirmek amacıyla camın alt tabakalar için çeşitli yüzey kaplamaları geliştirilmiştir. Bunlardan biri de HNT takviyeli polimer kaplamalardır. Kaplamada kullanılacak HNT/PS ve HNT/PMMA polimer nanokompozitlerin sentezi, ağırlıkça %5 HNT, PS ve PMMA polimerlerine takviye edilerek eriyik harmanlama yöntemi ile yapılmıştır.

HNT takviyeli polimer nanokompozitlerle kaplama öncesi ve sonrası camın mekanik davranışının değerlendirilerek, kaplamanın, yüzeyin mekanik kararlılığı üzerindeki etkisi anlaşılmasına çalışılmıştır. Bu nedenle, elde edilen HNT takviyeli nanokompozit kaplamaların mekanik davranışını incelemek için çekme testi yapılmıştır. Şekil 2’de, HNT’lerin eklenmesinin PS ve PMMA nanokompozitlerinin gerilme mukavemeti üzerindeki etkisi görülmektedir. HNT’lerin polimere eklenmesi, her iki durumda da nanokompozitin gerilme mukavemetini artırmıştır. Bu davranış, nanokompozitlerde etkili stres transfer ajanları olarak hareket eden HNT’nin geniş en boy oranına bağlanabilir. Bu, polimer matrisinde plastik deformasyona neden olur ve sonuç olarak gerilme mukavemetini artırır. Kaplamaların çekme mukavemeti ve çizilme direnci gibi mekanik davranışları da saf muadillerine kıyasla nanokompozitler için daha yüksek bulunmuştur (Buruga ve Kalathi, 2018).

**Şekil 2.** HNT-PS ve HNT-PMMA nanokompozitlerinin çekme mukavemeti ve bunlara karşılık gelen saf polimer değerleri (Buruga ve Kalathi, 2018).

#### **4. SONUÇ**

Modifiye HNT ilavesi ile üretilen PS/HNT nanokompozitler saf PS'ye göre geliştirilmiş mekanik özelliklere sahiptir. Bu durum modifiye HNT'nin polimer matris içinde daha homojen dağılması ve dolayısıyla modifiye HNT ile polimer matrisin tabakaları arasında sinerjik etkinin artmasından kaynaklanmaktadır.

Modifiye HNT takviyeli polimer nanokompozitlerin özelliklerinin gelişmesi için kullanılan modifikasyon malzemesi kullanılan polimerin türüne göre değişir. O yüzden HNT modifiye edileceği zaman kullanılacak polimerin türüne uygun madifikasyon kimyasalına karar verilmelidir.

Modifiye HNT ilave edilmiş PS nanokompozitlerinin mekanik özellikleri gelişirken bunun yanı sıra termal kararlılık, yanmazlık ve izolasyon kabiliyeti de artar. Çünkü HNT aynı zamanda alev geciktirici özelliğe de sahiptir.

Modifiye HNT takviyeli PS nanokompozit ile ilgili çalışmalar sınırlı sayıdadır. Modifiye HNT'nin PS üzerindeki etkisini araştırmak için daha fazla çalışma yapılması tavsiye edilir.

Atatürk Üniversitesi Kazım Karabekir Eğitim Fakültesi, Eğitim Bilimleri Bölümü

### ÖZET

Çocuk istismarı, tüm bireylerin ruh sağlığını bozan toplumsal bir problemdir. Çocuk istismarı olgusu vakalarının artış eğiliminde olduğu yapılan araştırmalara da yansımaktadır. Çocukların istismara karşı korunması açısından yapılan araştırmaların eğiliminin ve önerilerinin bilinmesine ihtiyaç duyulmaktadır. Bu doğrultuda araştırmada çocuk istismarı ile ilgili yerel alan yazındaki çalışmaların eğilimlerini ortaya koyabilmesi amaçlanmıştır. Araştırmanın temel problemi “Çocuk istismarı ile ilgili yerel alan yazındaki çalışmaların eğilimlerini nasıldır?” şeklindedir. Araştırma nitel araştırma yaklaşımlarından doküman incelemesi desenine dayanmaktadır. Araştırmanın veri kaynakları ölçüt örnekleme yöntemiyle 45 lisansüstü tez ve makaleden oluşmaktadır. Araştırmada araştırmanın künye bilgisi formu ile veriler toplanmıştır. Araştırmada verileri analiz etmek amacıyla tematik analiz yöntemi kullanılmıştır. Yapılan analizler sonucunda çocuk hakları, risk faktörleri ve koruyucu faktörler ile yordanan ve yordayıcı değişkenler temalarına ulaşılmıştır. Çocuk hakları temasına bağlı olarak sosyal yaşantılar ve öznel yaşantılar alt temaları bulunmuştur. Risk faktörleri ve koruyucu faktörler temasına bağlı olarak negatif ilişkili değişkenler ve pozitif ilişkili değişkenler alt temalarına ulaşılmıştır. Yordanan ve yordayıcı değişkenler temasına bağlı olarak etkilenen değişkenler ve etkileyen değişkenler alt temalarının olduğu görülmüştür. Araştırma sonuçları, çocukları istismardan korumada öz-yeterlilik ve psikolojik sağlamlık gibi koruyucu faktörlerin önemsenmesi gerektiğini göstermektedir. Araştırma sonuçlarına bağlı olarak araştırmacı ve uygulayıcılara yönelik önerilerde bulunulmuştur.

**Anahtar kelimeler:** Çocuk istismarı, doküman incelemesi, koruyucu faktörler.

<sup>1</sup> Bu çalışma danışmanlığını Prof. Dr. Mücahit Dilekmen’in yaptığı Yahya Aktu’nun doktora tezinden üretilmiştir.

**THE TENDENCY OF LOCAL STUDIES ON CHILD ABUSE AWARENESS****ABSTRACT**

Child abuse is a social problem that impairs the mental health of all individuals. It is also reflected in the studies that the cases of child abuse tend to increase. There is a need to know the trends and recommendations of the research conducted in terms of protecting children against abuse. In this direction, it is aimed to reveal the trends of studies in the local literature on child abuse. The main problem of the research is “How are the trends of the studies in the local literature on child abuse?” is in the form. The research is based on the document analysis pattern, one of the qualitative research approaches. The data sources of the research consist of 45 postgraduate theses and articles by criterion sampling method. In the research, data were collected with the imprint information form of the research. In the research, thematic analysis method was used to analyze the data. As a result of the analyzes, the themes of children's rights, risk factors and protective factors, and predicted and predictive variables were reached. Depending on the theme of children's rights, sub-themes of social and subjective experiences were found. Depending on the theme of risk factors and protective factors, sub-themes of negatively correlated variables and positively correlated variables were reached. Depending on the theme of predicted and predictive variables, it was observed that there were sub-themes of affected variables and influencing variables. Research results have shown that protective factors such as self-efficacy and psychological resilience should be considered in protecting children from abuse. Depending on the results of the research, suggestions were made for researchers and practitioners.

**Keywords:** Child abuse, document analysis, protective factors

## **1. GİRİŞ**

Çocuk istismarı, yaşça büyük bir bireyin, toplumun veya ülkenin farkında olarak veya farkında olmayarak çocuğun bedensel, duygusal ve sosyal gelişimini engelleyen veya durduran her türlü eylemdir (WHO, 2016). Çocuk istismarı genel olarak dört sınıfta ele alınmaktadır. Bunlardan ilki olan fiziksel istismarda çocuğun fiziksel olarak zarar görmesini içeren bedensel gelişiminin engellenmesi söz konusudur. İkincil sınıf olan duygusal istismarda çocuğa yeterli ilgiyi bilerek göstermeyerek ve kendi duyguları için çocuğu sömürerek çocuğun duygusal gelişimini engellenmesi ifade edilmektedir. Üçüncü istismar tipi olan cinsel istismarda başka birinin cinsel hazları için çocuğun kullanılmasıdır. Son tür pasif çocuk istismarı olarak da bilinen ihmalidir. İhmalde ise, çocuğun gelişimi için fiziksel, duygusal, cinsel, tıbbi ve eğitimsel açıdan yeterli bir şekilde ilgi gösterilmemesini, bakımının yerine getirilmemesini içermektedir (UNICEF, 2016; WHO, 2016).

Çocuk istismarı, çoğu insan için konuşulması zor olan konuların başında gelmektedir. Toplumun ve ailenin ruh sağlığı için çocuk istismarının ve temel kavramlarının somut olarak ortaya konulmasına ihtiyaç duyulmaktadır. Özellikle ailenin ne tür durumların istismar olduğunu bilmeleri, çocuklarını istismardan koruma ve çocuk istismarını önleme açısından önemlidir. Alanyazında çocuk istismarıyla ilgili pek çok araştırma (Polat, 2019) yapılmasına karşın çocuk istismarının temel kavramlarının aile ve toplum tarafından anlaşılabilmesi için açıklanmasının ve somutlaştırılmasının yeterli olmadığı söylenebilir. Bu doğrultuda bu çalışmanın çocuk istismarının temel kavramlarını somutlaştırma görevini yerine getirdiği için değerli olduğu belirtilebilir. Sözü edilen gerekçelere ek olarak bu çalışmanın lisans ve lisansüstü eğitimi sırasında öğrencilerin çocuk istismarı kavramlarını öğrenmelerine ve pekiştirebilmelerine katkı sunacağı öngörülmektedir. Bu gerekçelerden hareketle araştırmada çocuk istismarı farkındalığı ile ilgili yürütülmüş olan yerel çalışmaların incelenmesi amaçlanmıştır.

## **2. YÖNTEM**

### **Araştırma Metodu**

Bu çalışmada psikoeğitim uygulamasında kullanılacak çocuk istismarı farkındalık programının içeriğini oluşturmada doküman analizi çalışması yapılmıştır (Yıldırım & Şimşek, 2016). Yıldırım ve Şimşek'in (2016) önerilerinden hareketle çocuk istismarı farkındalığı ile ilgili

kavramları ortaya koymak için dokümanın orijinaliği, inandırıcılığı ve temsil edilebilirliği ölçütleri sağlandıktan sonra analiz aşamasına geçilmiştir.

### **Veri Kaynakları**

Bu açıdan 2016-2020 yılları arasında YÖK Tez Merkezi, Google Akademik ve Ulakbim TR Dizin tarama sayfalarında bir takım anahtar kavramlar ile taramalar yapılmıştır. Aramalar sonucunda ulaşılan akademik çalışmalar aşağıda verilen dâhil edilme ve hariç tutma kriterleri göz önüne alınarak sınırlandırılmıştır. Bu sınırlandırmanın dışında olan araştırmalar çalışmaya dâhil edilmemiştir. Dâhil edilme ve hariç tutma kriterleri göz önüne alınarak ilgili veri tabanlarında yapılan araştırmaların seçim ve değerlendirme süreçlerini içeren aşamalar sonucunda 727 araştırma içerisinde kriterleri taşıyan 45 çalışma araştırmaya dâhil edilmiştir. Bu bağlamda dâhil edilme ve hariç tutma kriterleri doğrultusunda YÖK Tez Merkezi veri tabanından erişime açık olan 22 lisansüstü tez ile 23 araştırma makalesinin doküman incelemesi yapılmıştır.

### **Verilerin Toplanması**

Çalışmada doküman incelemesi kapsamında incelenen tez ve makalelerin verileri toplanmıştır. Doküman analizine alınan tez ve makalelere ilişkin künye bilgileri kod, çalışma adı, araştırma türü, çalışma grubu ve veri kaynakları, anahtar kavramlar ve genel bulgular başlıkları bulunmaktadır.

### **Veri Analizi**

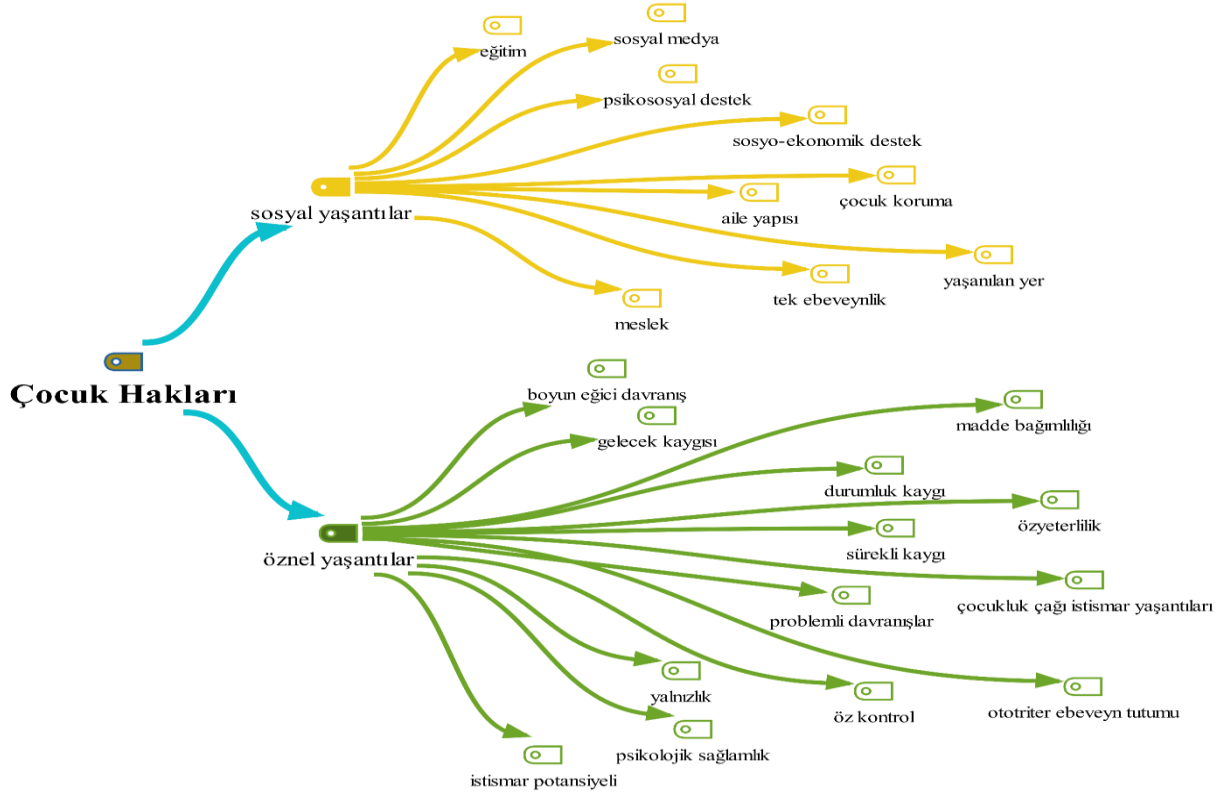

Çalışmada tematik analiz yöntemi kullanılmıştır. Tematik analiz, tümevarımsal ve/veya tümdengelsel kodlama söz konusu olup belirli temalara ulaşma amaç edinir (Braun & Clarke, 2019). Tematik analiz, veri setini en küçük boyutlarda düzenlemeyi, derinlemesine betimlemeyi sağlayan ve verilerdeki örüntüleri ortaya çıkaran bir nitel veri analiz yöntemidir (Braun & Clarke, 2019; Creswell, 2017). Araştırmada öncelikle ham verilerle aşına olunmuştur. Sonrasında ilk kodlar oluşturulmuş ve temalar aranmıştır. Daha sonra temalar gözden geçirilip tanımlama ve isimlendirme çalışması yapılmıştır. Son aşamada ise rapor hazırlanmıştır (Braun & Clarke, 2019).

## **3.BULGULAR**

Çalışmada ebeveynlere yönelik çocuk istismarı farkındalığı programını geliştirmek amacıyla son beş yıl içerisinde yerel alanyazında yayınlanmış çalışmaların doküman incelemesi çalışması yapılmıştır. Veri seti araştırma sorusu doğrultusunda ortaya çıkan temalara göre sunulmuştur.

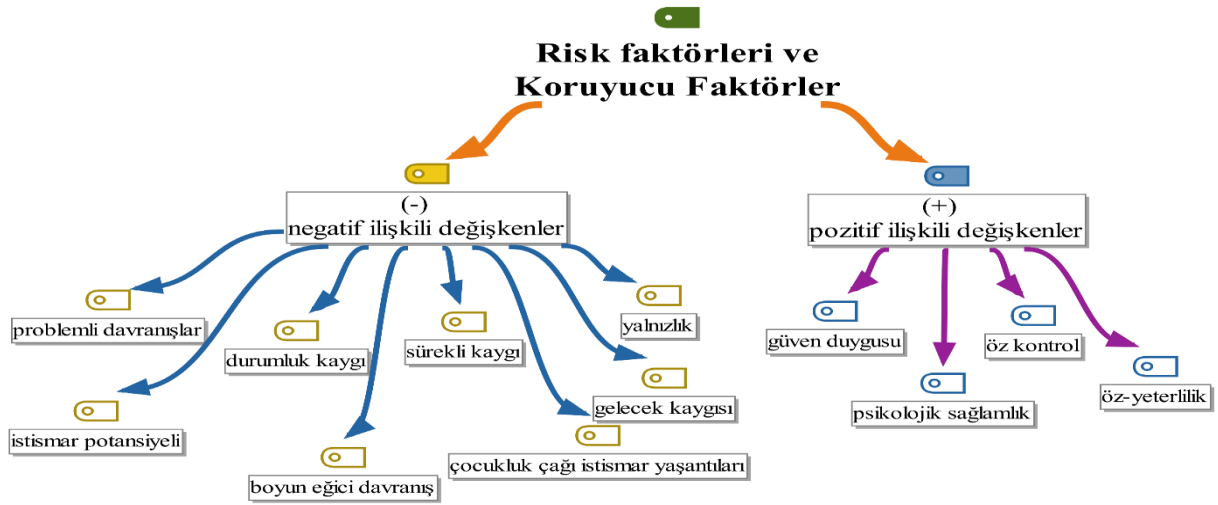

**Araştırma Sorusu :** “Çocuk istismarı ile ilgili yerel alan yazındaki çalışmaların eğilimlerini nasıldır?

Bu kapsamda 45 çalışma ile yapılan doküman analizi sonuçları çocuk hakları (çocuk istismarı farkındalığı ile ilgili ele alınan değişkenler), çocuk istismarının risk faktörleri ve koruyucu faktörler (çocuk istismarı ile negatif ve pozitif olan değişkenler), çocuk istismarı farkındalığını etkileyen ve farkındalığından etkilenen değişkenler olmak üzere üç tema altında açıklanmıştır. Çocuk hakları temasına ilişkin kodlar Şekil 1’de verilmiştir.

Şekil 1. Çocuk Hakları Temasına İlişkin Hiyerarşik Kod Alt Kod Modeli

Çocuk istismarının risk faktörleri ve koruyucu faktörler (çocuk istismarı ile pozitif ve negatif olan değişkenler) teması ilişkin kodlar Şekil 2’de sunulmuştur.

**Şekil 2.** Çocuk İstismarı Risk Faktörleri ve Koruyucu Faktörler Temasına İlişkin Hiyerarşik Kod Alt Kod Modeli

Veri setindeki diğer değişkenler ile birlikte ele alınmak üzere ilgili değişkenler çocuk istismarı farkındalığının yordayıcı etkisi olan değişkenler ve çocuk istismarı farkındalığını yordayıcı etkisi olan değişkenler temasına ilişkin hiyerarşik kod alt kod modeli Şekil 3'te verilmiştir.

**Şekil 3.** Çocuk İstismarı Farkındalığının Yordayıcı Etkisi Olan Değişkenler ve Çocuk İstismarı Farkındalığını Yordayıcı Etkisi Olan Değişkenler Temasına İlişkin Hiyerarşik Kod Alt Kod Modeli

#### 4.SONUÇ ve ÖNERİLER

Çocuk istismarı odaklı yürütülen yerel araştırmalarda çocuk haklarının öznel ve sosyal yaşantılar ile ilişkilendirildiği sonucuna varılmaktadır. Çocuk istismarı odaklı yürütülen yerel araştırmalarda çocuk istismarı farkındalığı ile ilgili risk faktörlerinin (negatif ilişkili değişkenler) problem davranışlar, yalnızlık, boyun eğici davranış, durumluk kaygı, sürekli kaygı, gelecek kaygısı, istismar potansiyeli ve çocukluk çağı istismar yaşantıları olduğu tespit edilmiştir. Çocuk istismarı farkındalığı ile ilgili ve koruyucu faktörler (pozitif ilişkili değişkenler) ise psikolojik sağlamlık, öz-yeterlilik, güven duygusu ve öz kontrol olduğu saptanmıştır. Çocuk istismarı farkındalığı ile ilgili yapılmış araştırmalarda problemlı davranış,

boyun eğici davranış ve yalnızlık değişkenlerinin çocuk istismarı farkındalığını etkilediği (yordayıcı) sonucuna ulaşılmıştır. Çocuk istismarı farkındalığı tarafından yordanan değişkenlerin ise psikolojik sağlık, öz-yeterlik ve öz kontrol olduğu anlaşılmaktadır.

Bu çalışma doküman incelemesine dayalı betimsel bir araştırmadır. İlerleyen çalışmalarda araştırmacıların çocuk istismarı olgusunu daha iyi açıklayabilmeleri amacıyla durum çalışması gibi nitel ve anket gibi nicel desenleri birlikte kullanmalarında yarar bulunabilir. Çocuk istismarının risk faktörlerinin azaltılması ve koruyucu faktörlerinin artırılması istismarın önleminde yarar sağlayabilir. Çocuk istismarı farkındalığını yordayan ve çocuk istismarı farkındalığının yordayıcı olduğu yapısal eşitlik modellemesi odaklı araştırmalar yürütülebilir.

**ÖZET**

Bu çalışmada ebeveynlerin çocuk istismarı farkındalıklarını arttırmaya yönelik Bilişsel Davranışçı Terapi (BDT) odaklı psikoeğitim programının geliştirilmesi ve karma araştırma yöntemiyle test edilmesi amaçlanmıştır. Araştırma gömülü karma desene dayanmaktadır. Araştırmanın nicel boyutu eşleştirilmiş yarı deneysel desen; nitel boyutu ise olgu bilim desen ekseninde yürütülmüştür. Katılımcılar çok düzeyli iç içe örnekleme yöntemiyle seçilmiştir. Araştırmanın nicel boyutunda on ebeveyn ile yedi haftalık BDT odaklı psikoeğitim programı uygulanmıştır. Nitel boyutunda ise deney grubundaki beş ebeveyn ile görüşme gerçekleştirilmiştir. Nicel veriler çocuk istismarı farkındalık ölçeği, çocuk ihmali farkındalık ölçeği ve çocuk istismarına ilişkin bilişler ölçeği (Ebeveyn formu) aracılığıyla; nitel veriler ise yarı-yapılandırılmış görüşme formlarıyla toplanmıştır. Araştırma verileri ardışık veri analizi yöntemiyle çözümlenmiştir. Nicel veriler tek faktörlü kovaryans analizi, nitel veriler tematik analiz yöntemleriyle analiz edilmiştir. Nitel ve nicel sonuçlar, harmanlama ve çapraz durum karşılaştırması yöntemleriyle bütünleştirilmiştir. Araştırma sonuçları, BDT odaklı programın ebeveynlerin çocuk istismarı farkındalıklarını arttırmada etkili bir yaklaşım olduğunu göstermiştir. Sonuçlar, BDT odaklı programın ebeveynlerin aile içi iletişimlerine katkı sağladığını ve çocuk istismarıyla ilgili farkındalıklarının arttığını ortaya koymuştur. Nitel bulguların nicel bulgularla örtüştüğü sonucuna varılmıştır.

**Anahtar kelimeler:** Çocuk istismarı farkındalığı, bilişsel davranışçı terapi, ebeveyn eğitimi, gömülü karma desen

**THE EFFECT OF COGNITIVE BEHAVIORAL THERAPY-FOCUSED PROGRAM  
ON PARENTS' AWARENESS OF CHILD ABUSE: A MIXED METHOD STUDY****ABSTRACT**

In this study, it was aimed to develop a Cognitive Behavioral Therapy (CBT) focused psychoeducation program to increase parents' awareness of child abuse and to test it with a mixed research method. The research is based on the embedded mixed pattern. Quantitative dimension of the study was matched quasi-experimental design; the qualitative dimension was carried out in the axis of phenomenology design. Participants were selected by multilevel nested sampling method. In the quantitative dimension of the study, a 7-week CBT-focused psychoeducation program was applied with 10 parents. In the qualitative dimension, interviews were conducted with 5 parents in the experimental group. Quantitative data through child abuse awareness scale, child neglect awareness scale and child abuse cognitions scale (Parent form); qualitative data were collected with semi-structured interview forms. Research data were analyzed by sequential data analysis method. Quantitative data were analyzed by single factor covariance analysis and qualitative data were analyzed by thematic analysis methods. Qualitative and quantitative results are integrated with blending and cross-case comparison methods. The results of the research showed that the CBT-focused program is an effective approach to increase parents' awareness of child abuse. The results revealed that the CBT-focused program contributed to parents' intra-family communication and increased their awareness of child abuse. It was concluded that the qualitative findings overlapped with the quantitative findings.

**Keywords:** Child abuse awareness, cognitive behavioral therapy, parent education, embedded mixed pattern

## 1.GİRİŞ

Çocuk istismarı, çocukların bilişsel, duyuşsal, fiziksel ve sosyal gelişimlerine zarar veren bir toplum ruh sağlığı sorunudur. Çocuk istismarı vakası olan bir yerde çocuğun ve ailesinin yaşamında onarılması güç yaralar olabilmektedir (İnsan Hakları Derneği [İHD], 2008; Sarıbaş, 2013). Çocuk istismarı birçok ülkede gizlenen veya gizli kalan bir problemdir. Bu sorun gelişmiş ülkelerde daha çok raporlara yansımalarının yanı sıra diğer ülkelerdeki araştırmalar da gün geçtikçe artmaktadır (Alzoubi et al., 2018). Türkiye gibi gelişmekte olan ülkelerde çocuk istismarının önlenmesine ve istismarla başa çıkılmasına gereken önem verilememektedir (Çeçen, 2007). Dünyada meydana gelen sosyo-ekonomik değişimler sonucunda çocuk istismarı olaylarında da büyük artışlar yaşanmaktadır. Alanyazında çocuk istismarının yaygınlığıyla ilgili farklı oranlar olduğu görülmektedir. Araştırmacıların farklı kriterler kullanması, verilerin alındığı örneklemelerin ve bölgesel özelliklerin farklı olması, veri toplama araçlarının değişkenliği gibi faktörlerden dolayı sağlıklı verilere ulaşmak mümkün olmamaktadır (Polat, 2017, 2019).

Türkiye’de çocuk istismarı ile ilgili tedavi çalışmalarının sayısının oldukça sınırlı olduğu görülmektedir (Bahadır Yılmaz, 2013; Bakır & Kapucu, 2017; Sarı et al., 2016). Ayrıca ailelere ve risk gruplarına yönelik müdahale ve önleme çalışmalarının görece az olması dikkat çekicidir. Türkiye’de ebeveynler için çocuk istismarı farkındalıklarını arttırmaya yönelik BDT odaklı psikoeğitim uygulamasına rastlanmamıştır (Çokamay Yılmaz, 2018). Ebeveynlerin ve çocukların yaşamlarını travmatik hale getirebilen çocuk istismarına yönelik önleyici çalışmalarda kullanılacak sistematik bir müdahale programına ihtiyaç olduğunu göstermektedir (Wen et al., 2017). Bu noktadan hareketle çalışmada Türk ebeveyn örneğinde çocuk istismarı farkındalıklarını arttırmaya yönelik BDT odaklı psikoeğitim programı geliştirilmiş ve karma araştırma yöntemiyle etkililiği test edilmiştir.

## 2.YÖNTEM

### Araştırma Deseni

Bu çalışmada gömülü (iç içe) müdahale karma deseni kullanılmıştır (Christensen et al., 2015; Cohen et al., 2007; Creswell, 2014; Creswell & Plano Clark, 2015). Çalışmanın nicel deseninde deneysel çalışması yürütülmüş olup ardından nitel deseninde görüşmeler gerçekleştirilmiştir.

### Çalışma Grubu

Çalışmada *çok aşamalı iç içe karma yöntem örnekleme* ile belirlenmiştir (Baki & Gökçek, 2012; Johnson & Christensen, 2014; Tashakkori & Teddlie, 2010). Bu çalışmanın hedef evrenini Siirt il merkezinde çocuk istismarı ile ilgili farkındalık düzeyi düşük olan ilköğretim öğrencilerinin ebeveynleri oluşturmaktadır. Hedef evrenden çalışma gruplarını belirlemek için aşamalı bir yol haritası izlenmiştir. Alan uzmanları, ebeveynler ve dokümanlardan elde edilen verilerin bütünleştirilmesi sonucunda 7 haftalık BDT odaklı psikoeğitim programı geliştirilmiştir. Psikoeğitim uygulaması çalışmasında küme örnekleme ve ölçüt örnekleme ile 20 ebeveyn, psikoeğitim uygulamasının değerlendirilmesi çalışmasında ölçüt örnekleme ile 5 ebeveyn sürece dâhil edilmiştir.

### **Veri Toplama Araçları**

**Çocuk istismarı ve ihmali farkındalık ölçekleri:** Celiloğlu (2018) tarafından çocuk istismarına ve ihmaline yönelik farkındalık düzeylerini ölçmek amacıyla geliştirilmiştir. İstismar ölçeği 23 madde ve üç alt boyuttan oluşmaktadır. İhmal ölçeği ise 38 madde ve 4 alt boyuttan oluşmaktadır. Ölçeğin model uyumunun iyi düzeyde olduğu tespit edilmiştir.

**Çocuk istismarına ilişkin bilişler ölçeği (Ebeveyn formu):** Ölçek, Aktu ve Dilekmen (2021) tarafından ebeveynlerin çocuk istismarına ilişkin bilişsel hatalarını ölçmek üzere geliştirilmiştir. Doğrulayıcı faktör analizi sonucunda üç faktörlü yapıya ait model uyumunun yeterli düzeyde olduğu bulunmuştur.

**Yarı yapılandırılmış görüşme formu:** Çalışmada araştırmacılar tarafından geliştirilen form, müdahale programından sonra programı değerlendirmek amacıyla uygulanmıştır. Bu formda BDT odaklı psikoeğitim programının içerik, zaman, deneyim, etkinlik vb. konulardaki değerlendirmeleri ve algulamaları ölçmeye çalışan sorular bulunmaktadır. Formlar geliştirilirken uzman ve akran görüşleri alınarak gerekli düzeltmeler yapılmıştır. Bu kapsamda yapılan görüşmelerin süresi 15-40 dakika arasında değişmektedir.

### **Veri Analizi**

Bu çalışma karma yöntem desenlerinden gömülü müdahale deseniyle kurgulandığı için elde edilen veriler *ardışık veri analizi* yöntemiyle çözümlenmiştir (Creamer, 2020; Creswell & Plano Clark, 2015; Johnson & Christensen, 2014). .bu doğrultuda çalışmanın hipotezi için nicel veri analizi olarak tek faktörlü kovaryans analizi yapılmıştır (Çokluk et al., 2018; Seçer, 2015). Görüşme verilerini analiz etmek için tematik veri analizi yöntemi kullanılmıştır (Braun & Clarke, 2019; Creswell & Plano Clark, 2015). Araştırmada tematik veri analizi, Maxqda 2020 paket programı kullanılarak gerçekleştirilmiştir. Tematik veri analizini gerçekleştirmek için

Braun ve Clarke'ın (2019) önerileri doğrultusunda altı aşamalı bir analiz yolu izlenmiştir. Karma verileri analiz etmek için harmanlama ve çapraz durum karşılaştırması yöntemleri kullanılmıştır. Bu yöntemlerin sonucunda ise meta-çıkarımlara ulaşılmıştır (Creamer, 2018/2020, s. 124).

### **Araştırmanın Geçerliliği ve Güvenirliği**

Araştırmanın karma boyutunda sıralı geçerlik, politik geçerlik, iç-dış, dönüşüm geçerliği ve eş ölçülebilir karma geçerlik çalışmaları yürütülmüştür (Creswell & Plano Clark, 2015; Johnson & Christensen, 2014).

## **3.BULGULAR**

### **Nicel Bulgular**

Deney ve kontrol gruplarının çocuk ihmali farkındalığı, çocuk istismarı farkındalığı ve çocuk istismarına ilişkin bilişler ölçeklerine ilişkin tek faktörlü kovaryans analizi sonuçları incelenmiştir. Buna göre ön test puanları kontrol altına alındığında BDT odaklı psikoeğitim programına katılan ebeveynler ile katılmayan ebeveynlerin çocuk ihmali farkındalığı son test puanlarında [ $F(1, 19) = 15.759, p = 0.001, \eta^2 = 0.481$ ] ve çocuk istismarı farkındalığı son test puanlarında [ $F(1, 19) = 4.866, p = 0.041, \eta^2 = 0.2239$ ] istatistiksel olarak anlamlı düzeyde bir farklılık olduğu ifade edilebilir. Ön test puanları kontrol altına alındığında BDT odaklı psikoeğitim programına katılan ebeveynler ile katılmayan ebeveynlerin çocuk istismarına ilişkin bilişleri son test puanlarında anlamlı bir farklılık olduğu anlaşılabilir [ $F(1, 19) = 6.832, p = 0.018, \eta^2 = 0.287$ ]. Gruplar arasındaki bu farklılığın kaynağını belirlemek üzere yapılan Bonferroni testi sonuçları deney grubu lehine olduğunu göstermiştir ( $p = 0.000$ ). Elde edilen bu bulgular bağlamında, deney grubunda uygulanan çocuk istismarı farkındalık psikoeğitim programının ebeveynlerin çocuk ihmali ve istismarı farkındalığı puanlarını arttırmada ve çocuk istismarına ilişkin bilişleri puanlarını azaltmada etkili olduğu söylenebilir.

### **Nitel Bulgular**

Araştırmanın deneysel süreci sonrasında fenomenoloji çalışması ile ebeveynlerin süreçteki deneyimlerinin nasıl şekillendiği açıklanmaya çalışılmıştır. Bunun sonucunda ulaşılan bulgular üç tema ve beş kategori altında toplanmıştır. Tema ve kategorilere ilişkin görüş bildiren katılımcılar Tablo 2'de sunulmuştur.

**Tablo 1.** Katılımcıların Temalara İlişkin Görüşleri

Tema	Kategori	Katılımcılar
Aile içi iletişim	İletişim hatalarını düzeltme	<p>“Bu eğitim iyi oldu benim için. Önyargularım yıkıldı resmen... Bu eğitim bu konuda yardımcı oldu diyebilirim. Kızımın olan iletişim iyiydi ama onu şimdi çok baskı altında tuttuğumu fark ettim. Bazen onun kendi ayakları üzerinde durması için serbest bırakmayı öğrendim.” (E5)</p> <p>“...Çocuğum 12 yaşında. Bizde bir kısır döngü vardı. Sürekli onu uyarıp öğüt veriyordum. O da yanlışlarını benden saklıyordu... Artık evde çocuğum konuşunca ben de lafa dalıp öğüt vermiyorum. Sabırla dinliyorum.” (E3)</p>
	Empati Kurma	<p>“Çocuklara davranırken daha hassas olmaya çalışıyorum. Onlarla vakit geçirmeye, onları dinlemeye bazen oyun oynamaya çalışıyorum. Duygularımızı fark ettik bu süreçte.” (E1)</p> <p>“Çocuklarının hataları olduğunda sizin yaptığınız gibi empati kuruyorum. Daha sakin kalıyorum. Ve onlar da beni daha çok takmış oluyorlar.” (E4)</p>
Bilişsel farkındalık	İstismar Farkındalığı	<p>“...İstismar denilince ilk aklıma gelen cinseldi. Diğerlerini hatırlamıyordum, bilmiyordum açıkçası. İstismar çeşitlerini öğrenmiş oldum.” (E1)</p> <p>“İstismar çeşitlerine farklı bakmaya başladım... Duygusal istismarı ve mahremiyet eğitimini yeni öğrendim. Bunları yaşamıma yansıtmaya çalışıyorum.” (E5)</p>
Düşünceleri işlevsel hale getirme	Düşünce hatalarını fark etme	<p>“Ben felaketleştirmeyi çok kullanıyordum. Kızım fırına tek başına gitmek istediğinde çok korkuyordum. Ben de onunla gidiyordum. Fırın hemen evimizin ilerisinde. Olmaz diye bağırdığım oluyordu. Aklımda hep onun başına bir şey gelecek diye bir düşünce vardı. Tabi bir şey yapamıyordum. Kızıma yaşam alanı vermiyordum...” (E5)</p> <p>“Ya olursa? Hep kızımın başına bir şey gelecek diye onu korumaya çalışıyordum. Aman düşmesin, başına bir şey gelmesin diyordum...” (E2)</p>
	Düşünce hatalarıyla başa çıkma	<p>“...Fark ettim ki bu onun bireyselleşmesine ve kendi başına karar vermesine engel oluyormuş. Şimdi öğrendim ki onun kendi başına bir şeylere girişmeye çalışması normal bir durum. Bu yüzden biraz daha az korumacıyım. Elbette başına istemediğim şeyler gelebilir, ama başına önleyeceğim diye onu sürekli sınırlandırmam da iyi değil.” (E2)</p>

Nicel ve nitel sonuç bütünleştirildiğinde ulaşılan karma sonuçlar veya meta-çıkarımlar şu şekilde ifade edilmiştir:

- Ebeveynlerin çocuk ihmali ve istismarı farkındalıklarını arttırmasını test etmeye ilişkin yapılan ön test-son test analizleri ve psikoeğitim uygulamasının değerlendirilmesine ilişkin yapılan görüşmelerden elde edilen bulgular doğrultusunda, BDT odaklı psikoeğitim uygulamasının ebeveynlerin çocuk ihmali ve istismarı farkındalıklarını arttırmada etkili bir yaklaşım olduğu söylenebilir.

- *Ebeveynlerin çocuk istismarına ilişkin bilişsel hatalarını azaltılmasını test etmeye ilişkin yapılan ön test-son test analizleri ve psikoeğitim uygulamasının değerlendirilmesine ilişkin yapılan görüşmelerden elde edilen bulgular doğrultusunda, BDT odaklı psikoeğitim uygulamasının ebeveynlerin çocuk istismarına ilişkin bilişsel hataları azaltmada etkili bir yaklaşım olduğu söylenebilir.*

#### **4.SONUÇ VE ÖNERİLER**

Bu araştırma Türk ebeveyn örnekleminde çocuk istismarı farkındalığını arttırmaya yönelik BDT odaklı psikoeğitim programı geliştirmeyi ve karma araştırma yöntemiyle etkililiği test etmeyi amaçlamıştır. Nicel bulgular genel olarak değerlendirildiğinde, BDT odaklı psikoeğitim programının ebeveynlerin çocuk ihmali farkındalıklarının arttırılmasında, çocuk istismarı farkındalıklarının arttırılmasında ve çocuk istismarına ilişkin bilişsel hatalarının azaltılmasında etkili bir yaklaşım olduğu ifade edilebilir. Nitel bulgular genel olarak değerlendirildiğinde; çocuk istismarı farkındalığı programının ebeveynlerin aile içi iletişimlerine önemli katkılarının olduğu ve istismar farkındalığıyla ilgili bilişsel farkındalıklarının arttığı sonucuna ulaşılmaktadır. Ebeveynlerin eğitim sonrasında çocuk istismarına farkındalığına ilişkin hatalı düşüncelerini işlevsel bir şekilde değiştirdikleri ve yapıcı düşünceler geliştirdikleri görülmüştür. Karma bulgular genel olarak değerlendirildiğinde, nitel bulguların nicel sonuçları desteklediği ve yeterince açıkladığı görülmüştür. BDT odaklı psikoeğitim uygulamasının ebeveynlerin çocuk istismarına farkındalıklarını arttırmada etkili bir yaklaşım olduğu karma araştırma yöntemiyle ortaya konulmuştur.

Bu karma yönelimli çalışmanın güçlü yönlerinin yanı sıra bazı sınırlılıkları da bulunmaktadır. Araştırmanın verilerinin bir ildeki iki farklı mahallede ikamet eden ebeveynlerden elde edilmiş olması bir sınırlılıktır. İleride farklı örneklem gruplarıyla eş zamanlı olarak veriler toplanabilirse daha genellenebilir sonuçlar elde edilebilir. Bu araştırmaya sadece ebeveynler dâhil edilmesi bir diğer sınırlılık olarak değerlendirilebilir. Çocukların da müdahale programının bir parçası haline getirilmesi veri üçgenlemesi ve genellenebilirlik açısından iyi bir değerlendirme fırsatı verebilir. Çalışmanın bir başka sınırlılığı ise, Türk ebeveyn örnekleminin olmasıdır. Farklı ülkelerde bu programının uygulanmasıyla kültürel/kültürlerarası psikoloji ve programının etkililiğinin genellenebilirliği açısından alanyazına katkı sunabilir.

## **YAŞAR KEMAL'İN ROMANLARINDA MASAL**

**Prof. Dr. Hüseyin YAŞAR**  
Siirt Üniversitesi

### **ÖZET**

Yaşar Kemal, halk kültürü ve folklordan etkilenmiş, halk kültürüne ait unsurları eserlerinde sık sık kullanmıştır. Halk kültürünün unsurlarını modern romanın imkânları ile aktararak evrenselleştirmek istemiştir. Bu bağlamda destanları, masal, efsane ve halk hikâyeleri romanların olay örgüsüne içkinleştirerek günümüze taşımıştır. Söz konusu unsurları yeniden yorumlayarak yerel ile evrenseli ve kadim ile modern bir araya getirmiştir. Böylece insanlığın ortak kültür kodlarına ve kolektif bilince varmak istemiştir. Yaşar Kemal, kurmaca eserlerinde destansı ve masalımsı atmosferi hakim kılarak mistik ve gizemli bir şekle sokmuştur. Okuyucuyu masal atmosferine sokarak onu kurgu ile gerçek hayat arasındaki ince çizgide bırakmaktadır. Bu üslup onun kurmaca eserlerinin ana iskeletini oluşturmaktadır. Sözlü edebiyatın hikâyelerini, söylencelerini günümüze taşıyarak buradaki kahramanları destanlaştırmış, masal dilini günümüz Türkçenin içine yerleştirerek dilin zenginleşmesini sağlamıştır. *Bir Ada Hikâye* dörtlemesinin ikinci kitabı olan *Karınca'nın Su İçtiği* bu anlamda önem arz etmektedir. Çalışmada, *Karınca'nın Su İçtiği* romanı baz alınarak Yaşar Kemal'in masaldan yararlanma biçimi ele alınmıştır.

**Anahtar Kelimeler:** Yaşar Kemal, *Bir Ada Hikâyesi*, *Karınca'nın Su İçtiği*, Folklor, Masal.

**TALE IN YAŞAR KEMAL'S NOVELS****ABSTRACT**

Yaşar Kemal was influenced by folk culture and folklore, he frequently used elements of folk culture in his works. He wanted to universalize the elements of folk culture by transferring them with the possibilities of the modern novel. In this context, epics, fairy tales, legends and folk tales have been brought to the present day by incorporating them into the plot of the novels. By reinterpreting these elements, he brought together the local and the universal, the old and the modern. Thus, he wanted to reach the common cultural codes of humanity and collective consciousness. Yaşar Kemal has made the epic and fairy-tale atmosphere dominant in his fictional works and put it into a mystical and mysterious form. It puts the reader in the atmosphere of a fairy tale, leaving him on the fine line between fiction and real life. This style forms the main skeleton of his fictional works. He brought the stories and myths of oral literature to the present day, making the heroes here epic, and enriching the language by placing the fairy tale language into today's Turkish. *Karınca'nın Su İçtiği*, which is the second book of an *Bir Ada Hikâye* quartet, is important in this sense. In the study, Yaşar Kemal's use of the fairy tale is discussed based on the novel *Karınca'nın Su İçtiği*.

**Keywords:** Yaşar Kemal, *Bir Ada Hikayesi*, *Karınca'nın Su İçtiği*, Folklore, Fairy Tale.

## GİRİŞ

Halk kültüründeki anlatı serüveni mitoloji, destan, masal, efsane ve halk hikâyesi gibi aşamaları geçirmiştir. Bu çerçevede, masal, Halk Edebiyatının önemli üçüncü anlatı türüdür. “19. yüzyılın sonlarında Avrupa’da ortaya çıkan folklor, ilgiyle karşılanmış, ülkemizde Tanzimat’la birlikte halka dönüş hareketiyle, halk ve millet kavramları benimsenip yayılmıştır. Düşünürlerimiz, edebiyatımızın asıl kaynağının halk olduğu görüşünü savunarak, halk dili ve halk kültürüne” (Topçu, 2008: 28) ilgi duymuşlardır. Bu ilginin sonucu olarak, halk kültürüne iki farklı yöneliş olmuştur. Birincisi Şinasi ile başlayıp Ziya Gökalp ile zirveye ulaşan yöneliştir. Bu ideolojik temelli olup Türk kültürünün temellerini Orta Asya’ya dayandığı düşüncesinin sonucudur. Şinasi’nin arzuladığı halk kültürü, Orta Asya’ya işaret etmese de seküler temeldedir ve burada Ziya Gökalp ile düşünceleri kesişmektedir. İkincisi ise ideolojik kaygıdan uzak halk kültürünü romanın imkânlarıyla yaşatmaya yöneliktir. İkinci kategoride yer alanlar, Akdeniz, Ege, Anadolu ve Mezopotamya merkezli anlatılara yönelmişlerdir. Bu bağlamda, yukarıda adı geçen anlatı türleri, çağdaş romanı da etkilemiştir.

Türk Edebiyatında, Cumhuriyet sonrası dönemin romancısı olan Yaşar Kemal’i, ikinci kategoride değerlendirmek gerekir. Masalları ideolojik temelde kullanmaz. Romanlarında genişçe yer verdiği halk unsurları, Akdeniz, Ege, Anadolu ve Mezopotamya halk kültürleri kaynaklıdır. Yaşar Kemal, bu dört medeniyete ait halk edebiyatı unsurlarıyla büyümüştür. Beslendiği Akdeniz, Anadolu ve Mezopotamya kültürüne ait unsurlar, masallar dinsel kaynaklı olsa da İslamiyet öncesidir: “Benim yazdıklarım gelenekler, Müslümanlığa sığınmış eski mitler olacak.” (Bosquet, 1993: 91). Yaşar Kemal, bu ifadeyi, “romanlarınızda neden namaz kılan insan yok” şeklinde soruyu yanıtlarken kullanır.

Halk kültürünün en etkin bir şekilde var olduğu bir ailede ve çevrede doğup büyüdüğünden mitoloji, destan, masal, efsane ve halk hikâyelerini sıklıkla kullanmıştır. Hayal gücü zengin olan romancı küçüklüğünden beri hayal gücünü zenginleştiren masallarla büyüdüğünü ifade eder: “Çok da masal dinlerdim, dinlerken hep kendimden geçerek.... Ben de yaşlı kadınlardan öğrendiğim masalları köyün çocuklarına bire bin katarak, yeniden yaratarak anlatırdım. Her yetenekli masalcının, bilinen masalı hep yeniden yarattığını, üstelik de gücüne her anlayışta yeniden yarattığını çok sonraları öğrendim.” (Bosquet, 1993: 89). Çalışmada Yaşar Kemal’in romanlarını kurgularken masal kültüründen beslendiği vurgulanmaktadır. Masal beslenme yazarda iki şekilde tezahür etmektedir. Birincisi masal dili diğeri de kahramanın ağzından veya anlatıcı tarafından masalın aktarılmasıdır. Bu bakımdan okuyucu kendini düş ile gerçek arasında

bir dünyada hissetmektedir. Eserlerinde masal dilini kullanmasında, dinlediği masalların dışında, köyünde konuşulan zengin Türkmencenin etkisi olduğu muhakkaktır. Bu bağlamda bir konuşmasında kullandığı şu ifadeler bu tespitimizi doğrulamaktadır: “Benim doğduğum köy bir Türkmen köyüydü. Belki de Türkçenin en zengin konuşulduğu yeri benim bölgem. Her kadın bir şairdi. Ağıt yakmasını bilmeyen bir kadın ya deliydi, ya da aptal. Başka türlü düşünülemezdi.” (Bosquet, 1993: 45). Fransız edebiyatçı Alain Bosquet’ye verdiği röportajda buna ek olarak masal ve destan bağlamında Çukurova’nın zengin bir kaynak olduğunu söylemektedir.

### **Dünyayı Değiştirmeye Muktedir: Büyülü Masal Dili**

Yaşar Kemal, destan ve masal anlatıcılarının çok olduğu bir ailede ve çevrede yetişmiştir. Çocukluğu, düş ile gerçek arasında ince çizgede geçen Yaşar Kemal, yeni dünyaların ve umutların yaratıcısıdır. Bunu da romanlarına yerleştirdiği, masallarla yapar. Masallar ona düşünüyü kurduğu dünyayı kurgulama fırsatını verir. Zira dil, ona sonsuz bir güç ve büyü ortam yaratmıştır: “Dilin gücünü, onun gücünün sonsuz olduğunu denemelerimle o yaşlarımda bile kavramıştım. Dilin büyüüne, sonsuz gücüne öylesine inandırmıştım ki kendimi, şimdi bile bütün insanlığı dilin kurtaracağına inanıyorum” (Bosquet, 1993: 91). Bu bakımdan dil onun için sonsuz bir güç ve büyük bir evrendir. Bilhassa bu dil masal dili olunca bir başka önem arz etmektedir. Dile olağanüstü vasıflar yükleyen, Yaşar Kemal, gelişmiş bir dil sayesinde, evrenin yenileneceğini, gelişip güzelleşeceğini aktarır.

Yaşar Kemal, belli ki dünyayı yenileyecek ve güzelleştirecek dilin ‘masal dil’inin olacağına kani olmuştur. Bu bakımdan, dil sayesinde masal atmosferini kurgularken aslında gerçekte yaşamak istediği dünyayı yansıtmaktadır. Bunu da okuyucuyu büyü bir atmosfere sokarak yapar.

Yaşar Kemal’in romanlarında masal dili iki şekilde bulunmaktadır. Birincisi paragraflarda kullanılan fiiller ve sıfatlarda açıkça görülmektedir. Fiil ve sıfatlara mecazi, anlamlar, somut nesnelere, coğrafi unsurlara insani vasıflar ustaca yükleyerek yapmaktadır. Akıcı ve sade dil anlayışı okuyucuyu büyülemektedir. Mezopotamya’nın uçsuz bucaksız ovalarından Karınca Adasına gelen Dengbej Uso’nun kavalını çalması ile oluşan atmosfer, bu ifadeleri doğrulamaktadır:

“Göge baktı, gök ışıklıydı. Yıldızlar durmadan arka arkaya akıyordu. Döndü geldi yerine oturdu. Kavalını aldı, uzunca sıvazladı, dudaklarına götürdü. Kavalın inceden duyulur duyulmaz sesler geldi. İnce uzun sesler, biteviye böyle sürdü. Ses öteki seslere hiç

benzemiyordu. Şaşkınlık, acı, dehşet, korku yüreklere işliyordu. Sonra ses birden kanatlandı, öfkeye kesti, hırçınlaştı. Dinleyenler bir hoş oldular. Ardından da indi, yağmur çiseliyor, ılık bir yel esiyordu, gökler uzaklardaydı başını almış gidiyordu. Çöl uçsuz bucaksızdı, ceren sürüleri Abdülaziz dağlarından kırmızı sel olmuşlar çöle akıyorlardı.” (Yaşar Kemal, 2022: 327-328).

Söylem analizinde, ‘sesin diğer seslere benzememesi’, “sesin kanatlanması”, “sesin öfkelenmesi, hırçınlaşması, cerenlerin çöle akması” gibi söz grupları, gerçek üstü masal atmosferini yakalamak için kullanılmıştır.

*Karınca'nın Su İçtiği* romanının bir başka kahramanı Baytar Cemil'dir. Sarıkamış Savaşından sağ kurtulan Baytar Cemil'in doğduğu şehir olan Van'a at üstünde dönünce aktarılan sahnenin dili, yukarıda ifade edilen dili çağrıştırmaktadır. Dili sayesinde Baytar Cemil büyülü ve masalımsı bir an yaşamaktadır:

“Kıpkırmızı top gülleleri yolunu kesmiş, hışılıyarak, karanlıkta kırmızı, yeşil, mavi, turuncu, uzun çizgiler çizerek geçiyordu. Top sesleri kesilince de karanlığın üstünde asılı kalıyorlardı. Baytar dalıyor, başı heybenin üstüne düşüyor, top gürültüleri karşı dağı sallıyor. Baytar birden ayağa fırlıyor, karanlığın üstünde savrulan renk çizgileri karanlık gölün üstüne sağlıyor, Süphan dağı geliyor, kurşun geçirmez bir karanlık duvarı oluşturuyor, üstüne abanıyor, soluk aldırıyor. Derin bir uykuya dalıyor. Ortalıkta çıt yok. Baytar Cemil büzüldükçe büzülüyor. Dizleri karnında, çenesi dizine dayalı bir topak oluyor. Bir şehir yanıyor, taa kalenin burçlarına kadar yalımlar uzuyor, uçları kopup gölün üstüne uçuyor, mavi, turuncu, yeşil dökülüyor. Buradan, som kırmızı bir ışık çizgisi karanlığı yararak, yalp yalp uçarak gidiyor. Süphan dağına saplanıyor. Baytar, daha büyük bir gürültü, bir patlamayla uyanıyor, karşısındaki ateş almış, tepeden tırnağa yalıma kesmiş yer yer kırmızı çizgileri koparak uçan turunculamış dağa bakıyor.” (Yaşar Kemal, 2022: 143).

İkinci yöntem ise karşılıklı konuşmalarda ortaya çıkan, mani ve tekerlemelerde var olan üslubu çağrıştırmaktadır. *Karınca'nın Su İçtiği* romanında masal dilinde rastlanabilen, tekerlemeleri çağrıştıran tekrarlar vardır. Bilginin kalıcı ve hafızada iyice yerleşmesi için başvuru tekrarlar, Yaşar Kemal de sık sık kullanılan bir tekniktir. Adaya yeni gelen Baytar'ın evindeki eşyalar yerleştirilince şöyle bir konuşma geçer:

“Sonra oda oda dolaşp yerleştirdiklerini seyrettiler, beğendiler.

“Güzel dedi Lena, “her şey yerli yerince”

“Güzel dedi Baytar.

“Güzel” dedi Poyraz.

Orada bulunan herkes, güzel” dedi.

Nişancı Veli ile evlenmek için takip edip köyüne gittiği kızın babası ile konuşma sahneleri kısa cümleli diyaloglardan oluşur. Tekrar ve cümlelerin kısa oluşu masal dilini çağrıştırmaktadır:

"Sen ne iş görürsün."

"Balıkçıyım."

"O balıkçılık da askerlik gibiymiş, betermiş, denize giden dönmüyormuş."

"Azıcık tevatür bu. Denize çıkanlardan binde biri denizde kalır."

"Balıklara yem olur."

"Balıklara yem olur."

"Kızımı nerde gördün?"

"Pazar yerinde gördüm..."

(...)

"Demek nişancılığı bırakacaksın?"

"Bırakırım."

"Demek gelip bu kayalıkların ortasında oturacaksın?"

"Oturacağım."

"Burada deniz yok."

"Yok biliyorum."

"Burada toprak da, tarla da yok."

"Siz nasıl yaşıyorsunuz..."

"Razı mısın?"

"Razıyım."

"Keçi çobanı olacaksın."

"Olurum. Keçileri çok severim."

"Peki kız ne diyecek buna?"

"İşte onu bilemem. Dün bir bugün iki. Allah yüzümü kara çıkarmasın."

"Kızla konuştun mu?"

"Nasıl konuşalım, dün bir bugün iki."

"Çağırıp sorayım mı?"

"Sen bilirsin" (Yaşar Kemal, 2022: 116-117).

*Karınca'nın Su İçtiği* romanında bir Bey'in kızına tutulan Çoban Uso için kızı istemek için Bey'in sarayına giden ricacılar ile Bey arasındaki konuşma da, masal dilini, masallardaki kısa ve tekerlemeye dönüşen sözün tekrarı şeklindeki diyaloglara benzemektedir:

"Ricacılar, öfkeyle gürpedek ayağa kalkıp kapıya yöneldiler. Çoban, boynu bükük dikildiği yerde öyle dimdik kalakaldı.

Beydir, kalkanların öfkesinden ürktü:

"Durun, ağalar, hatunlar, size bir teklifim var."

"Nedir o?" sordu dengbej.

"Nedir o?" sordu Şeyh.

"Nedir o?" sordu demirci.

"Nedir, nedir, nedir o?" diye sordu oradakilerin hepsi.

"Demek bu çoban böyle bir kavalcı!"

"Böyle bir kavalcı."

"Şimdi beni dinleyin. Onun güttüğü sürü büyük bir koyun sürüsüdür."

"Büyük," dediler. (Yaşar Kemal, 2022: 329).

### **Roman İçinde Masal**

Yaşar Kemal, romanlarında halk biliminin unsurlarından masaldan çokça beslenmiştir. *Bir Ada Hikâyesi* dörtlemesinin dört romanında da masal modern bir anlatımla mevcuttur. Bilhassa *Karınca'nın Su İçtiği* romanı bu anlamda zengindir. Romanın geçtiği, Karınca Adası Rumların mübadele sonucu henüz terk ettiği bir adadır. Rum ve Türk kültürünün bir başka ifadeyle Hristiyanlık ve Müslümanlığın keşiştiği ideal bir mekândır. Bu bakımdan adaya yeni gelenlerin ile eski sakinlerinin masal ve efsaneleri bir arada anlatılır. Romanda yer alan ve adayı terk etmeyen Lena Ana ile Melek Hatun'un anlatılarıyla dağ masalımsı ve büyülü bir atmosfere bürünür. Lena Ana, mübadele sonucu apar topar Yunanistan'a götürülen ancak adanın hasretinden dayanamayıp geri dönen yaşlı bir kadındır. Melek Hatun da adanın karşı kıyısında bulunan kasabada yaşayan, tekneçilik yapan oğlu ile adaya taşınan bir kadındır.

Olay örgüsünde aktarılan ilk masal, adanın karşısında bulunan Rumların İda dağı, Türklerin ise Kaz Dağı dediği dağa ait masaldır. Romancı, ilk önce Lena'nın İda Dağı'na dair bildiği anlatıya yer verir: "Melek Hatunun kocası savaşta toz oldu. Babası anası, familyası o dağdadır daha. Türkler ona diyorlar Kazdağı, sarı bir kız orada kaz güdermiş. Biz diyoruz ona İda. Eskiden Meryem Ana yaşarmış orada. Sen hiç duydun mu "binbir pınarlı İda"yı?"

"Duydum," dedi Hüsmen. "Maşallah, maşallah, Yunanistanda İdayı duymayan hiç, hiçbir kişi olur mu...". Meryem Ananın yurdu orasıdır. Oğlunu orada doğurmuş. Oğlu oradan göğe çekilmiş gitmiş." (Yaşar Kemal, 1993: 47). Adayı terk etmeyip adada kalan ikinci Rum ise Vasili'dir. Vasili de İda Dağının hikayesini bilir. Ona göre İda Dağı, Tanrıların oturduğu bir dağdır. Bu bilgileri ilk defa duyan Melek Hatun, Meryem Ana'nın, çevrede hikayesi anlatılan Sarı Kız olacağını düşünerek Kaz Dağı dediği İda Dağı'na dair "Sarı Kız" masalını anlatır:

"Sen hiç Kazdağını gördün mü kardeş? O dağda bir kız varmış. Öyle güzel, öyle güzelmiş ki dünya alem ona aşık olurmuş. Hiçbirisine kız yüz vermemiş. Saçları ipek, gözleri ceylan, boyu fidanmış, ona kara çalmışlar, kardeşleri onu öldürecek olmuşlar. Babası kızını almış bir gece Kazdağma götürmüş, dağın tepesine bırakmış, ölümünü gözüm görmesin, diye oraya atmış. Kız ölmemiş. Ona geyikler süt, turnalar, kazlar yumurta, keklikler et vermiş. Dağda kurdun kuşun, akar suyun, esen yelin, biten çiçeğin ermiş olduğu olmuş. Elmalar, armutlar, kirazlar, cevizler, bütün ağaçlar meyvelerini, arılar ak petekli ballarını ona sunarlarmış."

"Sarı Kızı kurtların kuşların, çangal boynuzlu geyiklerin, ayıların arasında görenler, eyvah, biz ne yaptık da dünya güzeli bir ermişe kara çaldık, eyvah eyvah, demişler. Bizim bu dünyada da yerimiz yok, öbür dünyada da..." (Yaşar Kemal, 1993: 47-48). Anlatıcı, İda Dağındaki masal ile adeta Melek hatun'un hayatı arasında bir bağlantı kurar ve okuyucunun zihninde "sarı kız"ın Melek Hatun olabileceği izlenimini uyandırır. Melek Hatun'un sürekli "Ben o dağlardan olurum. Oraya binbir parmlı, bin çiçekli bin çeşit kuşlu Kazdağı derler." tekrarlama bu kanıtlamaktadır. Anlatıcı bu şekilde Melek hatun'a masalımsı ve destansı bir kişilik kazandırmak istemektedir.

## **SONUÇ**

Masal, insanoğlunun doğa karşısında yaşadığı korkuları sevinçleri ve umutların dile dökülmüş halidir. Yüzyıllardan beri oluşan sözlü kültürün en önemli türü olan masal, modern çağda roman aracılığıyla okuyucuya aktarılmaktadır. Epik romanın en büyük ustası olan Yaşar Kemal, romanlarında Ege, Akdeniz, Mezopotamya halk kültürünü destansı bir üslupla yaşatmaktadır. Yaşar Kemal'de masal iki şekilde ortaya çıkmaktadır. Birincisi anlatıcının yarattığı atmosferdir. Gerçek alemde yaratılan 'masalımsı' atmosfer ile okuyucu büyüdü bir dünya yaşamaktadır. Kullanılan fiiller, sıfatlar ile tabiat varlıklarına doğaüstü özellikler yakıştırılarak modern anlatıda gerçek üstü bir ortam yaratılmaktadır. Bu gerçek üstü ortam yazarın, yücelttiği, bir takım ulvi anlamlar yüklediği durumlarda meydana gelmektedir. Yazarın, mitolojik bir

üstünlük ve ulviyet atf ettiği Mezopotamya coğrafyası ve onunla özdeşleşen dengbêjlik kültürünü söz konusu olduğunda tılsımın, gizemin bol olduğu masalımsı bir anlatıma başvurmaktadır. İncelenen romanda, kahraman zor durumda olduğu zamanda da masalımsı üslubla yazmaktadır. Yaşar Kemal’de masal dil aracılığıyla da tezahür etmektedir. Kısa cümleler diyaloglar halinde beliren tekrarlar masal dilini çağrıştırmaktadır. Yazarın röportajları, deneme yazıları incelendiğinde, bir edebi tür olan masal ile içli dışlı bir ailede yaşadığı, söylenen destan ve masalların küçük dimağında yer edindiği açıkça ortaya çıkmaktadır. Çocukluğunda, gazeteciliği ve gezileri sırasında öğrendiği halk kültürünü ve masalları yeniden yorumlayarak romanın içine serpiştirmiştir.

## **YAŞAR KEMAL'İN ROMANLARINDA İNSANLIK İDEALİ**

**Prof. Dr. Hüseyin YAŞAR**  
Siirt Üniversitesi

### **ÖZET**

Yazar ve toplum ilişkisi, her dönemde tartışılan ve güncelliğini koruyan bir olgudur. Topluma kayıtsız kalmayan edebiyatçılar, kendi toplumlarının ve insanlığın karşı karşıya oldukları sorunları irdelemeye çalışmışlardır. Eserlerinde, mevcut sorunlardan sıyrılmış muhayyilelerinde yaşanabilir bir insanlığı ve toplumu kurgularlar. Yaşar Kemal, Bir *Ada Hikayesi* adlı seri romanlarında alternatif yeni bir toplumun ve ideal insanlığın çerçevesini çizer. Bu çerçevenin merkezinde, insan vardır. Bu insan tipolojisi, her türlü bağınazlıktan sıyrılmıştır. Anlaşmazlığa, eşitsizliğe ve savaşa sebebiyet veren dinsel, ideolojik ve etnik tutuculuğa son verme arzusundadır. Kimliklere ait değerler çatışmacı olmaktan ziyade birleştirici unsurlar olarak sunulmuş insanlık potasında eritilmiştir. Söz konusu nehir romanlarda Kemal, yeni bir mekanda Anadolu'nun farklı yerlerinden, farklı din, mezhep ve etnik kimlikteki insanları bir arada getirir. Yeni bir toplum ve insanlık ideali kurgulanırken temelinde sevgi, hoşgörü ve karşılıksız paylaşmak vardır. Savaşların sürükleyip bir adada bir araya getirdiği bu insanlar, savaşı ve çatışmasız bir toplumun ve insanlığın idealini gerçekleştirme çabasındadırlar. Bu araştırmada, *Karınca'nın Su İçtiği* romanında adaya gelmek zorunda kalan farklı şahsiyetlerin oluşturduğu insanlık modeli incelenmiştir.

**Anahtar Kelimeler:** Yaşar Kemal, Bir Ada Hikâyesi, *Karınca'nın Su İçtiği*, İdeal İnsanlık.

**THE IDEAL HUMANITY IN YAŞAR KEMAL'S NOVELS****ABSTRACT**

The relationship between the author and society is a phenomenon that has been discussed and kept up to date in every period. Literary writers, who were not indifferent to society, tried to examine the problems faced by their own society and humanity. In their works, they construct a livable humanity and society in their imaginations stripped of existing problems. Yaşar Kemal draws the framework of an alternative new society and ideal humanity in his serial novels called *Bir Ada Hikayesi*. At the center of this framework is the human being. This human typology has been stripped of any bigotry. It desires to put an end to religious, ideological and ethnic conservatism that causes conflict, inequality and wars. Values belonging to identities, while being confrontational, were presented as unifying elements and melted in the pot of humanity. In these river novels, Kemal brings together people of different religions, sects and ethnic identities from different parts of Anatolia in a new place. While the ideal of a new society and humanity is being constructed, it is based on love, tolerance and free sharing. These people, dragged by wars and brought together on an island, are trying to realize the ideal of a war and conflict-free society and humanity. In this research, the model of humanity created by different personalities who had to come to the island in the novel *Karınca'nın Su İçtiği* was examined.

**Keywords:** Yaşar Kemal, *Bir Ada Hikayesi*, *Karınca'nın Su İçtiği*, Ideal Humanity.

## GİRİŞ

### Kurmaca Bir İnsanlık Hayali

Hümanizm, Fransızca “humain” sözcüğünden gelmektedir. Humain insan demektir. Dolayısıyla Hümanizm, insanı merkeze alan bir felsefe ve dünya görüşüdür. İnsanı merkeze alarak antik Yunan ve Roma dönemlerine özlem duymaktadır: “Tanrı inancını ve doğüstünü reddeden bir çeşit insanperestlik düşüncesi veya bir başka deyişle insanlık dinidir. Kültürel ve entelektüel bir hareket olarak referansını daha çok eski Yunan ve Roma’ya veren hümanizm düşüncesi, bu dönemlerin sanat ve edebiyatlarını yeniden keşfetmeyi amaçlamış ve bu çizgiyi takip etmiştir” (Maraş, 2005: 1). Kelimenin ilk kullanımının M.Ö. 80’li yıllarda Çiçero tarafından “Humanitas” şeklinde ifade edilmesine kadar götürülen Çağdaş bir düşünce olarak da, Hümanizm, Avrupa’da Rönesans ile yaygınlık kazandığı bilinmektedir.

Hümanizm, Türk Edebiyatındaki ilk izleri Yunus Emre ve Mevlana’nın şiirlerinde aranılır. Yunus Emre’nin hümanist anlayışı, insan sevgisini, kalp kırmamayı, insanlar ile iyi geçinmeyi öncelemektedir. İbadetlerin muteberliği dahi alçak gönüllü olmaya, hoşgörülü olmaya ve insan olmaya bağlanmıştır:

Bir kez gönül yıktın ise/Bu kıldığın namaz değil

Yetmiş iki millet dahi/Elin yüzün yumaz değil

Kanı erenler geldi geçti/Bunlar yurdu kaldı göçtü

Bu anlamda, günümüz edebiyat araştırmacıları Yunus Emre’nin şiirlerine hümanizm anlamında çok mana yüklemektedirler. Bilhassa Talat Sait Halman, Yunus Emre’yi Türk hümanizmasını oluşturan kişi olarak niteler: “Eski Yunan’dan ve Roma’dan, Doğu dinlerinden, eski, Türklerin insancı düşüncesinden, İslamiyet’in öz değerlerinden, içinde yaşadığı bölgedeki sufilerden aldığı hümanist kavramları birleştirerek bir Türk hümanizması yaratmış” (Akt. Maraş, 2005: 34) demektedir. Maraş, Talat Sait Halman’ın Yunus Emre’nin hümanistliği meselesini abarttığını, onun üzerinden dinleri birleştirerek yeni bir Tanrı anlayışı ortaya koymaya çalıştığını iddia etmektedir.

Yunus Emre ile aynı dönemlerde yaşamış Mevlana Celaleddin-i Rumi de şiirlerinde insana büyük değer vermektedir. Çağdaş yorumcular, ‘insana değer verme’ üzerinden Mevlana’yı önemli bir hümanist olarak değerlendirirler. Tıpkı Yunus Emre gibi Mevlana da insanlığa hoşgörü, erdem, iyilik, karşılıksız yardım, menfaatsiz kardeşliğe ve sevgiye çağrıda bulunmaktadır.

Aşağıdaki mısralarda, Mevlana, insanı dünyanın temeli sayar:

Sen cihanın hazinesisin, cihan ise yarım arpaya değmez.

Sen cihanın temelisin, cihan senin yüzünden taptazedir.

Diyelim ki, âlemi meşale ve ışık kaplamış,

Çakmaksız ve taşsız olduktan sonra o, iğreti bir rüzgârdan başka nedir?

Yazıoğlu, Mevlana'nın birkaç beytinden hareketle “Mevlânâ insanı fizikî âlemle metafizik âlem arasına yerleştirmekte ve insanda her iki yönün bulunduğunu belirtmektedir. İnsanın fizikî âlemle ilgili yönü, onun maddî yönüdür. İnsanın gerçek yönü, özü veya insanlık cephesi ise, onun manevî yönünü oluşturmakta ve onu metafizik âlemle ilişki kurmaya sevk etmektedir.” (Yazıoğlu, 2017: 4) ifadesinde bulunmaktadır.

Yunus Emre ve Mevlana'da dini, yerel ve Doğu kaynaklı olan Hümanist anlayış, Tanzimat ile beraber çehre değiştirir. Tıpkı diğer bütün anlayışlar gibi hümanizm de batı tandanslı olmaya başlamıştır. Batı düşüncesi, felsefesi ve edebiyatı ile tanışma fırsatı bulan Osmanlı aydın ve edebiyatçıları, hümanist anlayışın kökeni Batı'da aramaya başlarlar. Bunlardan biri de İbrahim Şinasi'dir. (1826-1871). Şinasi, Sultan Abdülmecit döneminde Avrupa'ya Maliye alanında eğitim almak için gönderilen bir gençtir. Sadrazam Mustafa Reşit Paşa, tarafından istidadı keşf edilen hep onun tarafından himaye edilen Şinasi, Paris'e üç defa gitmiş ve toplam sekiz sene kalmıştır. Burada “Société asiatique” ve “Société orientale” gibi şarkiyatçı derneklere gidip gelmiştir. Bu derneklerde ve Paris'in farklı yerlerinde bir çok ünlü Fransız düşünür ve edebiyatçı ile tanışma fırsatını yakalamıştır. Maliye alanından ziyade edebiyat ile ilgilenerek Fransız şairlerden ve düşünürlerden çok etkilenmiştir. Şinasi, bilhassa tanıştığı düşünürlerin hümanist anlayışlarının derin tesirinde kalmıştır. Bu tesir, ona şu çarpıcı ifadeyi yazdırtmıştır:

“Milletim nev'-i beşerdir, vatanım rûy-i zemin.”

*Müntehabât-ı Eş'ar* da söylediği bu ifade onun hümanist düşüncesinin bir sonucudur. Şinasi, kuvvetle muhtemeldir ki bu ifadeyi kullanırken Victor Hugo'dan (1802-1885) etkilenmiştir. Zira Hugo'nun *Les Burgraves* adlı tarihi dram tiyatrosunun önsözünde buna benzer bir cümle yer almaktadır:

“Avoir pour patrie le monde et pour nation l'humanité” (Hugo, 1843: 25) “Vatan için dünya, millet için insanlık” yeter şeklinde çevrilebilecek bu ifade, adı geçen kitabın önsözünün son cümlesidir. İbareyi, evvela Şinasi kullanmıştır. Şinasi'den sonra Tevfik Fikret, bir cümle ekleyerek yeniden yazmıştır. “Halûk'un Âmentüsü” şiirinde yeni neslin prototipi olan oğlu

Haluk'un amentüsünü yazarken bu ifadeye yer vermiştir:

“Toprak vatanım, nev’-i beşer milletim... İnsan

İnsân olur ancak bunu iz’anla inandım”

Fikret, muhtemelen Şinasi'nin Hugo'dan aldığı ibareyi kendine göre formüle ederek, geliştirmiş ve 'insan' vurgusunu öne çıkarmıştır. Yahya Kemal ve Yakup Kadri'de “*Bahr-i Sefid Havza-i Medeniyeti*”, sonra “*Mavi Anadoluculuk*” gibi akımlarla tezahür eden hümanist anlayış Cumhuriyet dönemi romancılarından Yaşar Kemal'de de geniş bir yelpazede işlenmektedir. Yaşar Kemal, zorunlu göç ve savaşlara karşı hümanist anlayışı öne sürmekte ve yaşanabilir bir dünyayı bu çerçevede temellendirmektedir. Aslında yaşar Kemal'in birlikte yaşama temelinde gelişen hümanizmasının temellerini çocukluğuna ve köyündeki insanların insani tutumlarında aramak gerekir. Belli ki yazar her türlü bağınazlıktan uzak bir çevrede büyümüştür. Bunu bir röportajında şöyle dile getirmektedir: “Doğduğum bu Türkmen köyünde bizi Kürt diye hiç ayrı saymıyorlardı. Biz de kendimizi onlardan hiç ayırmıyorduk. Bütün köylüyle akraba gibiydik. Daha da köylümle benim yakın akrabalığım sürüyor. Şunu da ekleyeyim de bir yanlışlık olmasın, Türkiye haritasına bakılırsa görülür ki, benim doğduğum güneyle babamın geldiği doğu, yani Van Gölü kıyıları birbirlerine yüzlerce kilometre uzaklıkta.” (Bosquet, 1993: 46).

### **Yaşar Kemal'de İnsanlık**

*Bir Ada Hikayesi* bu esas üzerine kurgulanmıştır. Dörtlemenin ikinci kitabı olan *Karınca'nın Su İçtiği* romanı Yaşar Kemal'in insanlık idealini açıkça ortaya konulmaktadır. Romanda gerçek mekân Karınca Adasıdır. Asıl adı Mirmingi Adası olan Karınca Adası, yerli Rumların mübadele sonucu zorunlu olarak gitmesiyle, kısa süreliğine ıssız bir mekân hâlini alır. Adanın boşalmasıyla adaya yakın kıyı kasabasındaki resmi makamlarca adaya insanlar gönderilir. Böylece adanın insan profilinde kökten bir değişim yaşanır. Değişim, Yaşar Kemal'in romanlarında sıklıkla karşılaşılan bir olgudur. Ramazan Çiftlikçi, söz konusu yazarı kastederek: “Onun en önemli bir farklılığı da değişmeyi anlatmasıdır. Yazarın ben değişmenin romancısıyım” (Çiftlikçi, 1997: 39) ifadesi dikkat çekicidir. Tarımdaki makineleşmenin yol açtığı değişim, toplumun sınıfsal yapısının değişimi gibi değişimler zamanın ve şartların doğurduğu değişimlerdir. Ancak bu romanda karşılaşılan değişim, savaşın sebebiyet verdiği ve siyasal erkin tepeden inme politikaları sonucu gerçekleşen değişimdir. Yaşanan siyasal ve sosyal değişim dörtlemenin ikinci romanı *Karınca'nın Su İçtiği* eserinde açıkça yansıtılmıştır.

Romanda Yaşar Kemal, mitolojik bir insanlık ideali söz konusudur. Yazar, roman anlatısını mitolojik ve masalsi imgelerle zenginleştirmiştir. Bu bakımdan ada kısa sürede bir “rapsodi” halini almaktadır. Kısa sürede adaya mübadele ve savaşın yerlerinden, ailelerinden kopardığı insanların sığınağı olur. Gelişi güzel insanların aktarıldığı bu adaya gelen herkesin “insanlık” anlayışı benzeşmektedir. Bu insanlığın temelinde “hümanist” felsefe ve dünya görüşü mevcuttur. Adaya gelmek zorunda kalan farklı şahsiyetlerin oluşturduğu birliktelik “örnek bir dünya” olarak sunulmuştur.

Romanda adaya gelen kişiler arttıkça olay örgüsü derinleşir. Bu bağlamda romanın kurgusu kişilere bağlı olarak gelişir ve genişler. Dünya cenneti olarak sunulan adaya gelen her yeni kişi romanda oluşturulmak istenen ‘ütopik dünyanın’ bir parçası olur. Anlatıcı, bu dünyaya katılan yeni kişinin yaşadıklarını okuyucuya bütün ayrıntılarıyla aktarır. Bunu da “bütüncül geriye dönüş” tekniğini kullanarak yapar. Destansı anlatımın hâkim olduğu olay örgüsünde, bütün kahramanların adaya geldikten belli bir süre geçtikten sonra geçmiş hayatları aktarılır. Yazar, muhtemelen kahramanını daha ‘gerçekçi kılmak’ için ve ona bütüncül bir kimlik kazandırmak için bu yola başvurur. Uzun bir süreç içerisinde kahramanın geçmişini tanıtan anlatıcı, böylece hem romana hem de kahramana derinlik ve çok boyutluluk kazandırmak ister. Bu teknik sayesinde, sonuçtan nedene gidilerek, geçmiş bütün ayrıntılarıyla aktarılır.

Olay örgüsünde yer alan her kişi travmatik vakalar yaşamıştır. Bu durum sürekli gündemde tutulmuştur. Devlet tarafından Osmanlı topraklarının her tarafından insanlar, adaya gönderilmektedir. Gönderilme işlemi Karınca Adası’na yakın adı zikredilmeyen kıyı kasabesindeki devlet görevlileri, mal müdür, nüfus müdürü ve kaymakam tarafından yapılmaktadır. Bu görevlilerin tavırları, klasik devlet memuru biçiminde yansıtılmıştır. Adaya mübadele sonucu Yunanistan’dan gönderilenler olduğu gibi savaş cephelerinde yerini yurdunu, ailesini kaybetmiş insanlar akın akın gelmektedir. Yurtsuzlara yurt hâline gelen Karınca Adası, kısa sürede farklı insan tipleriyle dolarak bir “rapsodi” hâlini alır. Rapsodi, farklı ezgilerin bir araya getirilmesiyle oluşan müzik parçasıdır. Farklı etnik yapıdan, mesleklerden, düşüncelerden insanların toplandığı ada, bu yönüyle Babil Kulesi’ni andırmaktadır.

### **Acıların Birleştirici Gücü: Savaşsız İnsanlık Özlemi**

Karınca Adası, insanlığın yeni umudu olur. Bu ütopik mekana yerleşmeyi kabul edenlerin ortak noktası, savaşın ve yoksulluğun onları buraya sürüklemiş olmasıdır. Bu bilinçte olan bu insanlar insani değerleri özümsemişlerdir. Acıların ortak olması, onları birbirine kenetlemiştir: “Oradaki her insan büyük acılardan geliyordu. Kimi yoksulluktan, açlıklardan, kimi savaşlardan, kimi

kan seli içinden, kimi ovalarca serilmiş yatan ölümlerin üstünden geçerek, kimi asker ölüsü kokularından burunlarının direği kırılarak, kokulara dayanamayarak ölenleri görerek, yaşayarak, kokulardan bayılarak, ölümlerden ölüm beğenlerden buraya gelmişlerdi.” (Yaşar Kemal: 486). Yaşar Kemal’in ütöpik mekân ve dünya özlemine yansıtan romanda, yıkıcı savaşlardan sonra sevgi ve insanlık temelinde yeni bir dünyanın kurulması fikri olay örgüsünün tamamına yedirilmiştir. Savaşın dışlandığı olay örgüsü boyunca yer yer insanlık vurgusu yapılmıştır. Bunlardan birkaç ifade aşağıya aktarılmıştır:

“Başkalarının acısını, acıyı çeken bilir, bu üç savaş belimizi kırdı. Bu üç savaştan sonra yer yerinden oynadı. Bu üç savaş insanlığımızı elimizden aldı. Gene de içimizde azıcık insanlık kalmış ki...’ diyor” (Yaşar Kemal: 37).

“‘Hepimizin,’ dedi Hüsmen. ‘Bu savaş bize neler etti, bizi insanlığımızdan çıkarttı. İnsanlığımızı, onurumuzu, neyimiz varsa hepsini elimizden... Yüreğimizi de kopararak aldı götürdü. Yürek koymadı insanlıkta.’” (Yaşar Kemal: 37).

İnsanlık, Yaşar Kemal için bir mihenk taşıdır. O, yaşanan olumlu ve olumsuz tutumları insanlık terazisinde tartar. Temel ölçü, hümanizmadır. Hayalini kurduğu ütopya, ancak hümanizm yani insanlık terazisinde gerçekleşebilir. “Olumlu özelliklere sahip, yaşanılabilir hayali mekânlar anlamında kullanılan ütopya, bireyin ruhsal kaçış ülkesidir.” (Yaşar Kemal: 285). Romanda evrensel insanlık değerleri, her türlü tutucu etnik ve dinsel inanışların üstünde tutulmuştur. Bu çerçevede, anlatıcı “dinden çıktı”, “milletinden çıktı”, “ırkını terk etti” sözcükleri yerine “insanlıktan çıktı”, “insanlığımızdan çıkardı” sözü leitmotif olarak tekrarlar.

Yukarıda da zikredildiği gibi romanın kurgusu, kişilerin adaya gelmesiyle genişler. Adaya gelenler, olay örgüsünün sağlam ve inandırıcı bir zeminde gelişmesini sağlamıştır. Yeni gelen kişiler, yeni kurulan topluluğa yaşadıklarıyla, kültürel geçmişiyle, becerileriyle bir değer katmaktadır. Kişiler sıradan kişilerdir. Bu üslup üzerinden yazar, yaşanabilir bir dünyayı önelemektedir. Aslında yazar, muhayyilesindeki dünyayı bu ada ve adaya gelen kişiler üzerinden kurgulamaktadır. Bu bakımdan söz konusu roman kişilerini tahlil etmek eserin anlaşılmasına yardımcı olacaktır. Serinin ilk romanı olan *Fırat Suyu Kan Akıyor Baksana*’da adada Lena, Vasili, Poyraz Musa, Baytar Cemil, Kadri ve annesi yer alır. *Karınca'nın Su İçtiği* romanında bunlara birçok kişi eklenir. Mübadele ile gelen Hüsmen ile eşi Sabiha ve altı kızı, Giritli Musa Kazım ile iki kızı, dışında savaşın kırıp geçtiği Anadolu’nun farklı yerlerinden gelen Nişancı Veli ile isimleri zikredilmeyen üç torunu, Dengbej Uso ile karısı Hacı, Şeyhmus ile kilim ustası eşi Şerife Hatun, emekli olmuş öğretmenlik yapmak için adaya gelen biri topal

ve kulaksız, diğeri çolak zabit iki doktor, Doktor Salman Sami ve Doktor Halit Rıfat Bey'dir. Her birinin olay örgüsünde yer alması yaşamsal değerdedir. Bu bakımdan dörtlemenin en önemli romanı bu eserdir. Dörtlemenin zirve eseri ve dönüm noktasıdır. Romanın sonuna doğru Karadeniz aksanlı iki kadın ve iki çocuğun gelmesiyle olay örgüsü sona erer.

Yaşar Kemal'in bu romandaki insanları, sıradan ve doğal insanlardır. Ancak okuyucuya bazen bunlar olağan üstü kişiler olarak yansıtılabilir. Yaşar Kemal, bir röportajında bu saptamayı yapmaktadır: "Benim yazdığım insanların hiçbiri olağanüstü kişilerden değildir. Hepsi doğal insanlardı. Benim yazdıklarım size olağan üstü geliyorsa suç bende değil" (Bosquet, 1993: 89). Yazarın coşkulu ruhu, düş dolu bir dünyayı yaratmayı sağlamıştır. *Karınca'nın Su İçtiği*'nde bu insanların adadaki ortak yaşamları aktarılır. Farklı kimlik, dil, din ve inanışların sığınağı hâline gelen Karınca Adası, yazarın hayalindeki 'ütöpic mekân'ın tasarımıdır. Adada kalmaya karar verenlerin iki vazgeçilmez ortak değeri vardır: Birinci insanlık ikincisi de adadaki iş bölümüdür. Adada, hiç kimse etnik, ideolojik ve dinsel eğilimlerini öne çıkarmak. Farklılıklar zenginlik olarak tasarlanmış ve birleştirici bir güç olarak gündemde tutulmuştur. Bu nedenle Nişancı Veli'nin balıkçılıktaki "nişancılığı", dengbej Uso'nun dengbejliği insanlığa katkı sunacak birleşirci bir güç olarak ele alınmıştır. Yeni kurulacak hayat bu iki düzlemde gelişir.

**ÖZET**

Kanto, İtalyanca “canto” sözcüğünden dilimize geçmiştir ve şarkı söyleme sanatı anlamına gelmektedir. Kanto kültürü, 1800'lü yılların sonundan itibaren İstanbul'da, Tuluat tiyatrolarında, oyundan önce izleyicinin dikkatini canlı tutmak ve çeşitlilik sağlamak amacıyla genelde kadın sanatçıların şarkı söyleyip dans ederek yaptığı gösteri ve bu gösteri esnasında söylenen şarkılar şeklinde ortaya çıkmıştır. Bu gösterilerde söylenen şarkılar klasik Türk edebiyatı geleneğinin kırkambarı olarak anılan mecmûalarda derlenerek bir araya getirilmiştir. Güfte mecmûaları kapsamında değerlendirebileceğimiz; ilgisine şarkı makam, usul, bestekâr gibi pek çok malzeme sunan bu eserler genellikle kanto ya da şarkı mecmûası olarak adlandırılmışlardır. Çalışmamıza konu olan eser de bir Kanto Mecmûası'dır. Hasan Tahsin tarafından derlenmiş *Neş'e-i Dil Yeni Şarkı ve Kanto Mecmûası* adlı eserin basım tarihi 1323/1905'tir. Derleniş hususiyetleri bakımından şiir mecmûaları ile benzer birtakım özelliklere sahip bu eserler ihtiva ettikleri kanto, şarkı, gazel ve kıtalarla klasik Türk şiiri ve Türk mûsikîsinin şekil, söyleyiş ve duyuş bakımından da iç içe olduğunu göstermesi bakımından önemlidirler. Bu çalışma ile amacımız *Neş'e-i Dil Yeni Şarkı ve Kanto Mecmûası* adlı eseri bilim alemine tanıtmak; Türk edebiyatının ve Türk mûsikîsinin disiplinler arası çalışmalara dair ortak veriler sunduğunu ortaya koymaktır.

**Anahtar kelimeler:** Kanto mecmûası, klasik Türk şiiri, şarkı, mecmûa, Hasan Tahsin.

**A PART OF THE MECMUA TRADITION: CANTO MECMUAS AND HASAN  
TAHSİN'S NEŞ'E-İ DİL-YENİ ŞARKI VE KANTO MECMUASI**

**ABSTRACT**

Kanto has been translated into our language from the Italian word “canto” and means the art of singing. Kanto culture emerged in Tuluat theaters in Istanbul from the end of the 1800s, in order to keep the audience's attention alive and to provide diversity before the play. It has emerged in the form of the performances of female artists by singing and dancing and the songs they sang during this show. The songs sung in these shows were compiled and brought together in mecmuas known as the kırkambar of the classical Turkish literature tradition. We can evaluate within the scope of lyrics mecmuas; These works, which offer many materials such as songs, maqam, tempo, composer, etc., are generally called canto or song mecmuas. The work that is the subject of our study is also a Kanto Mecmua. The publication date of Neş'e-i Dil Yeni Şarkı ve Kanto Mecmûası, compiled by Hasan Tahsin, is 1323/1905. These works, which have some features similar to poetry mecmuas in terms of compilation characteristics, are important in terms of showing that classical Turkish poetry and Turkish music are intertwined in terms of form, utterance and sound with the cantos, songs, ghazals and stanzas they contain. Our aim with this study is to introduce Neş'e-i Dil Yeni Şarkı ve Kanto Mecmûası to the scientific world; It is to reveal that Turkish literature and Turkish music offer common data on interdisciplinary studies.

**Keywords:** Canto mecmuas, classical Turkish poetry, song, mecmua, Hasan Tahsin.

## **GİRİŞ**

Mecmûanın kelime anlamı sözlüklerde “Toplanılıp biriktirilmiş ve tanzim ve tertip edilmiş şeylerin hepsi (Sami, 2005)”, “Seçilmiş yazılardan meydana getirilen yazma kitap, dergi (Devellioğlu, 2010)” olarak geçmektedir.

Klasik Türk Edebiyatı dairesi içerisinde ilk örneklerini 15. yüzyıldan itibaren görmeye başladığımız mecmûaların tarihi, esasında Hz. Peygamber dönemine kadar dayanmaktadır. İslâmî kültürde hadis yazımının başlamasıyla, aktarılan ve kayıt altına alınmak istenen bilgiler mecmûalarda bir araya getirilmiştir. Arap edebiyatında, Cahiliye devrine ait kasidelerin toplandığı, seçme şiirlerin bir araya getirildiği eserler yine mecmûalardır ve bunlar seçme şiir mecmûalarının<sup>3</sup> en eski tarihlieleri olarak bilinmektedirler. Arap edebiyatındaki ilk örneklerinden sonra mecmûa geleneği, Fars ve Türk edebiyatlarında da kendine has özelliklerle oluşmuş ve Türk edebiyatında varlığını 19. yüzyıla kadar devam ettirmiştir.

İçerdikleri metinler bağlamında edebiyat tarihine kaynaklık eden mecmûalar her ne kadar sıklıkla edebiyat alanı içerisinde ele alınıyor olsalar da sadece edebiyat alanını ilgilendirmezler. Kütüphane kataloglarında kayıtlı tarih, sosyoloji, ziraat, tıp, ecza, müzik gibi farklı alanlara ait içerikteki mecmûalar bunun ispatıdır.

Bu çalışmanın konusu olan eser de bir kanto mecmûasıdır. Kanto, İtalyanca “canto” sözcüğünden dilimize geçmiştir ve şarkı söyleme sanatı anlamına gelmektedir. Kanto kültürü, 1800’lü yılların sonundan itibaren İstanbul’da, Tuluat tiyatrolarında, oyundan önce izleyicinin dikkatini canlı tutmak ve çeşitlilik sağlamak amacıyla genelde kadın sanatçıların şarkı söyleyip dans ederek yaptığı gösteri ve bu gösteri esnasında söylenen şarkılar şeklinde ortaya çıkmıştır. Bu gösterilerde söylenen şarkılar klasik Türk edebiyatı geleneğinin kırkambarı olarak anılan mecmûalarda derlenerek bir araya getirilmiştir. “Güfte mecmûaları geleneğinin devamı olan şarkı ve kanto mecmûaları, Osmanlı edebiyat ve mûsikîsine dair şarkı, türkü, kanto, marş, gazel, kıta gibi birçok unsuru ihtiva etmektedir. Bir yanıyla geleneğe bağlanan bu eserler, diğer yanıyla imparatorluktan devlete geçiş dönemine ait yeniliklerin izlerini de taşımaktadır (Koç Keskin&Yoloğlu, 2018: 28).”

Kanto, menşei itibariyle batılıdır. Fakat Osmanlı toplumlarında bu tarz, halk öğeleri ile harmanlanarak sahnelenmiş ve bu haliyle de muhatap bulmuş, varlık göstermiştir. Örneğin *Neş’e-i Dil*’de bir “Çiftetelli Kantosu” yer almaktadır. Hiçyılmaz’ın, *İstabil Geceleri ve Kantolar* adlı çalışmasındaki şu ifadesi vurgulamaya çalıştığımız şeyi destekler niteliktedir:

<sup>3</sup> Örneğin; Mufaddal ed-Dabbî, el-Mufaddaliyyât.

“Bizim çiftetelli dediğimiz kırık oyun tarzı ile karıştırılarak, kanto adı ile bir tip sahne dansı halinde Tuluat tiyatrolarımıza da geçmiştir.” (Hiçyılmaz, 1999:8). Yine Ziya Gökalp *Türkçülüğün Esasları* adlı kitabının “Ulusal Müzik” başlıklı bölümünde ulusal müziğimizin doğu, batı ve halk müziği olmak üzere üç müzikle karşı karşıya olduğunu vurgulamış ve akabinde görüşünü şu cümlelerle ifade etmiştir: “Ulusal müziğimiz, ülkemizdeki halk müziğiyle batı müziğinin kaynaşmasından doğacaktır. Halk müziğimiz, bize birçok ezgi vermiştir. Bunları toplar ve batı müziği yöntemlerine göre armonize edersek hem ulusal hem de Avrupalı bir müziğe kavuşuruz” (Gökalp, 2006: 192). Kantonun 1800’lü yılların sonunda Osmanlı toplumuna girişini, kabul görmesini, varlığını beğeni ile devam ettirebilmesini anlamlandırmamız için bu görüşler oldukça önemlidir.

Kültürümüzde kanto ile alakalı en detaylı çalışmalar And<sup>4</sup>, Belge<sup>5</sup> ve Hiçyılmaz<sup>6</sup> tarafından yapılmıştır. Bu çalışmanın amacı kantoların mûsikî ve tiyatral özelliklerinden söz etmekten ziyade kanto mecmûalarının derleniş şekillerinin geleneğin uzantısı olduklarını ortaya koymaktır.

Bir şarkı ve kanto mecmûası olan *Neş’e-i Dil*, güfte mecmûaları kapsamında geleneğin çağa uydurulmuş bir formu olarak değerlendirilebilir. Türk mûsikî tarihi için önemli olan bu eserler adlandırılma, düzenlenme ve ihtiyaca cevap verme bakımından klasik dönem mecmûalarının pek çok özelliklerini yansıtmaktadırlar: Şarkı, kanto, gazel, kıta, besteci, makam, usul gibi pek çok unsurun bir araya getirildiği derleme eserler olmaları; Şiir mecmûalarında kullanılan “eyzan, bu dahı” gibi bazı tabirlerin ortaklığı (bestecisi verilmiş bir şarkıdan hemen sonra “eyzan” tabiri ile nakaratların, “bu dahı” tabiri ile de aynı besteciye ait farklı makam ve usullerde şarkıların yazılması); ilgisine, devrin sevilen, en çok dinlenen, en meşhur örneklerini sunmaları; belki sadece derleyicisinin şahsi zevklerini barındırıyor olmaları bu eserleri mecmûa geleneğinin devamı olarak saymamız için yeterli sebeplerdir.

### **HASAN TAHSİN ve NEŞ’E-İ DİL-YENİ ŞARKI VE KANTO MECMÛASI**

Eserin derleyicisi Hasan Tahsin hakkında bildiklerimiz sınırlıdır. Günümüze ulaşan eserleri dışında hakkında pek fazla bilgi bulunmamaktadır. Gülçin Yahya Kaçar, Hasan Tahsin’in *Gülzâr-ı Mûsikî* adlı bir eseri üzerine yaptığı çalışmasında bizlere, mürettibin devlet memuriyetlerinin yanı sıra Türk Mûsikîsi ile yakından ilgilendiğini ve bu yönde bazı hizmet ve

<sup>6</sup> Hiçyılmaz, E. (1999). *İstanbul Geceleri ve Kantolar*. İstanbul: Sabah Kitapları.

çalışmalarının olduğunu aktarmıştır (Yahya Kaçar, 2017: XI). Çalışmamıza konu olan *Neş'e-i Dil*'in mukaddimesinin sonunda yer alan “*Maârif Nezâret-i Celîlesi Evrak Kalemi Mümeyyiz-i Sânisî Hasan Tahsin*” notundan onun Eğitim Bakanlığında, evrak kalemi ikinci kâtibi olduğunu anlıyoruz.

*Neş'e-i Dil*-Yeni Şarkı ve Kanto Mecmûası adlı eserin basım tarihi 1323/1905'tir. Eserin cilt kapağında matbaa olarak Kütüphâne-i Cihân yazıyorken cüz başlangıç sayfalarında Saryan matbaası yazmaktadır. 160 sayfa ve 10 bölümden oluşan mecmûanın ilk üç bölümü cüz, diğer bölümleri ise forma olarak adlandırılmıştır. Derleniş hususiyetleri pek çok mecmûa gibi kendine has olan eserin belki de örnekleri arasındaki en önemli özelliklerinden biri kısa da olsa bir mukaddimesinin bulunmasıdır. Hasan Tahsin, eserin mukaddimesine Sultan Abdülhamîd Hân'ın saltanatının devamı için dua ederek başlamış ve *Neş'e-i Dil*'den önce neşrettiği şarkı mecmûalarının muhterem okurlarından gördüğü rağbete karşılık bir teşekkür babında bu eserin neşrine cüret edebildiğini aktarmıştır:

*“Cenâb-ı Hak velî ni'met-i bî-minnetimiz padişâh-ı maârif-perver ve şehensâh-ı mâdelet-güster efendimiz hazretlerini ilâ âhirü'z-zamân evreng-i hilâfat ü saltanatlarında ebed mekîn buyursun âmîn.*

*Bundan akdem neşr itdigim Safâ-yı Dil, Güldeste-i Mûsikî, Gülzâr-ı Mûsikî, nâm şarkı mecmûalarının kârîûn-i kirâmdan gördüğü rağbete müteşekkiren “Neş'e-i Dil” nâmı altında işbu mecmûanın da neşrine cüret kılınmıştır. Esâtize-i kirâmın en güzîde ve rağbet-i âmmeye mazhâr olmuş âsâr-ı bergüzîdelerini câmi' olduğu hasebiyle bunun da hüsn-i kabûl göreceğine ümitvârim.”* (Hasan Tahsin, 1323: 2)

Eserin mukaddimesinden hemen sonra “*Medhiye-i Hazret-i Hilâfet-Penâhî*” başlığı ile bestecisi Mustafa Nûrî Efendi, usulü Marş ve makamı Neveser olan bir dörtlük yer almaktadır. Aruzun “Fâilâtün Fâilâtün Fâilâtün Fâilün” kalıbıyla yazılan marş klasik dönem şairlerinin kasidelerindeki methiyelerden farksızdır:

*Medhiye-i Hazret-i Hilâfet-penâhî*

*Pâdişâh-ı Âlî Osmân Hazret-i Abdülhamîd*

*Devlete viridi vücûd âkidesin ömr-i cedîd*

*Lutf-ı şahânenden oldu mülk ü millet müstefîd*

*Eyleriz sâyende her gün îd-ber-bâlâ-yı îd* (Hasan Tahsin, 1323: 3)

Yukarıdaki dörtlükte yer alan “*îd-ber-bâlâ-yı îd*” klasik şiirde sık kullanılan bir tamlamadır. *Neş’e-i Dil*’in kısacık methiyesinde kendine yer bulan tamlama, 18. yüzyıl şairi Haşmet’in bir kasidesinde ve 19. yüzyıl şairi Yûsuf Râif Bey’in Saîd Paşa’nın bir gazelini tahmininde de benzer kullanımlarla geçmektedir:

*İltifatınla idersem ‘îd-ber-bâlâ-yı ‘îd*

*Neşve-i lutfunla def eyleyse dil derd-i seri.* Haşmet K.11/39 (Aslan, 1995: 207)

*Gönlümi her dil-rübâ almak ba ‘îd-ender-ba ‘îd*

*Vuslatıyla Râ ‘îf eyleyler ‘îd-ber-bâlâ-yı ‘îd*

*Zâtına virmiş necâbet Hazret-i Rabb-i Mecîd*

*Lutf ile almış Nebî pendin o âfet ey Sa ‘îd*

*Yohsa ben her bî-vefâyı kendime yâr eylemem* Râif T.23/5 (Sarıççek, 2014?: 255)

Mecmûalar içerik bakımından çok çeşitlidirler. “Çeşitli hastalıkların tedavisi için reçeteler, toplumsal olayları düzenleyen kural ve kanunları içeren fetvalar, devrin ileri gelenleri arasındaki siyasi/toplumsal içerikli mektuplar, güfteler gibi tüm farklı içerikler mecmûa metinlerinde yer alabilir (Batğı, 2019: 7)”. Tüm bu derlemeler, şair, müzisyen, din adamı, hekim, tarihçi gibi farklı meslek kollarından entelektüel kimseler tarafından bazen estetik bir kaygıyla bazense bir amaca hizmet etmek maksadıyla oluşturulmuştur.

Mecmûalar, tıpkı içerikleri gibi derleniş özellikleri bakımından da değişiklik arz ederler. Belirli düzenleme biçimlerine sahip mecmular olduğu gibi, dağınık-gelişigüzel düzenlenmiş olanları da hayli fazladır. Hasan Tahsin *Neş’e-i Dil*’i, derlediği diğer eserlerinde olduğu gibi (*Güldeste-i Mûsikî, Gülzâr-ı Mûsikî, Hadîka-i Mûsikî, Safa-yı Dil yâhud Yeni Şarkı ve Kanto Mecmûası*) cüz/forma adı verilen her bir bölümde, şarkı veya kantodan hemen önce usul-makam-besteci bilgisi vererek düzenlenmiştir. Bestecisi bilinmeyen/belli olmayan kantolar “kanto” başlığı altında verilmiştir. Eserde Acem, Çoban, Köçek, Piyano, Çiftetelli, Tâife, Düetto, Hovardo olmak üzere farklı kantolar yer almaktadır. Bölümlerde yer alan besteci ve şarkı/kanto sayıları değişkenlik göstermektedir, standart bir sayı yoktur. Mecmûada beste sayısı fazla olan besteciler şunlardır: Abdülkâdir Bey, Ahmed Râsim Bey, Ali Salâhî Bey, Edhem Efendi, Çulhayan Kirkor Efendi, Karnik Garmiryân Efendi, Mustafa Nûrî Efendi, Piyanist Ahmed Bey, Üdî Hafız Mehmed Efendi. Eserde Lâ-edri olarak üç ve tek kadın besteci Hikmet Hanım’dan da bir şarkı yer almaktadır. Hikmet Hanım’ın Hüseyinî makamında ve Sofyan usulündeki şarkısı şöyledir:

*Ağlıyorum derdin ile rûz u şeb*

*Bilmez misin hâlimi ey gonçe-leb*

*Âhımla feryâdına sensin sebep*

*Nakarat*

*Merhamet et bana âmân merhamet*

*Eyle beni vaslın ile bahtiyâr*

*Sensiz olur mu bu dil gam-güsâr*

*Eyliyorum merhametin intizâr* (Hasan Tahsin, 1323: 149)

*Neş'e-i Dil'* de gazel ve kıtalar yer almaktadır. Mecmûada yer alan aşağıdaki gazelin kime ait olduğu bilinmemektedir, mahlas bilgisi bulunmamaktadır. Fakat gazelde klasik şiirin yankıları sezilmektedir. 19. yüzyıla gelindiğinde değişen sevgili tipi pek çok şairin şiirlerinde kendine yer bulmuştur. Dördüncü beyitte aşığın arzusunu anlayan, gönül okşayan sevgili, güzel bakışları ile aşığa hoş cevaplar vermiştir:

*Fâilâtün Fâilâtün Fâilâtün Fâilün*

*Cilve-peydâdır cemâl-i yâr her sözden yine*

*İhtirâz eyler gönül ol kadd-i dil-cûdan yine*

*Nûr-ı dîdem zülf-i müşgînin olunca mevc-hîz*

*Tab'im istignâ ider ezhâr-ı hoşbûdan yine*

*Korkarım cemiyet-i eskâre virmez ihtimâl*

*Bir perîşânlık nümâyan oldu gîsûdan yine*

*İştîyâkım anlamış zannım o şûh-ı dil-nüvâz*

*Hoş cevâb aldım güzel gözlerle ebrûdan yine*

*Reng reng eyler tecelli veçhe dildârım edîb*

*Yüz çevirdim sünbül ü gül-zâr u şeb-bûdan yine* (Hasan Tahsin, 1323: 21-22)

Aşağıdaki kıtada ise merhamet etmeyen sevgili ve gözyaşını dahi silmeye gücü kalmamış aşığın vurgusu yapılmaktadır:

*Feilâtün Feilâtün Feilâtün Feilün*

*Ne zaman rahm idecek hâlîme bilmem o melek*

*Beni mahv eyleyecek kadrîmi sonra bilecek*

*Öyle bir hâle getirmiş ki beni kahr-ı felek*

*Kudretim kalmadı billâh dîde-i eşkim silecek*<sup>7</sup> (Hasan Tahsin, 1323: 10)

Eserde yer alan bir gazelin “Cûdî” mahlası ile 19. yüzyıl şairlerden Merzifonlu İbrahim Cûdî’ye ait olduğu tespit edilmiştir. Hasan Tahsin’in bu gazeli eserine seçme sebebi üzerine yorum yapabilmek için şairin Divan’ı incelenmiştir. Cûdî Divanı’nda güfte, şarkı, ilahi formunda şiirlerin olması onun mûsikî ile ilgilendiğini gösterir niteliktedir. Klasik şiir geleneğini sürdüren Cûdî’nin devrinde okunan, şiirleri sevilen bir şair olması kuvvetle muhtemeldir. Esere yer alan aşağıdaki gazel kullanılan terkipler, Arapça-Farsça kelimelerin çokluğu bakımından tam bir klasik dönem gazeli gibidir:

*Fâilâtün Fâilâtün Fâilâtün Fâilün*

*Gûr-ı tab’a düşdüm envârım güzâr itmez bana*

*Bahtı seyr et yâr-ı cânım yâr-ı gâr itmez bana*

*Tab-ı târîkimden olmaz nûr-ı cânım müncelî*

*Hey ne muzlim şeb ki yâ Rabb inficâr itmez bana*

*Cûy-bâr olsam revân olsam ayagın öpmege*

*Serv-i nâzım sâyesin zîb-i kenâr itmez bana*

*Kâtib-i kâtîm degildir yoksa eşk-i gam-nüvîs*

*Bir muhâsib derdimi öyle şümâr itmez bana*

*Bilmese cânân cemâlinden ebed kesmem nigâh*

*Pây-i rahşî böyle teheyüç gubâr itmez bana*

*Ey semend-i yâr gül sînemde cevlân eylesen*

*Hâk-sârım gök yere inse hasâr itmez bana*

<sup>7</sup> Mısrada vezin aksamaktadır.

*Cûdiya cânânımın hayrân-ı istiğnasıyım*

*Arş u ferş olsam da itmez itibâr itmez bana* (Hasan Tahsin, 1323: 16)

Eserde yer alan Kantoların eserdeki diğer şarkı ve formların beşte biri kadar olduğu söylenebilir. Aşağıda yer alan örnek bizlere adeta 15. yüzyıldan bir gazelin çağrışımını yapmaktadır:

*Hasretinle nazlı cânân kalb-i mahzun inliyor*

*Gözlerimden kanlı yaşlar durmayup âh çağlıyor*

*Hâlîme âgâh olanlar hep benimle ağlıyor*

*Gel yetiş imdadıma âh merhamet feryâdına*

*Terahhüm kıl bu âşık kurbânına*<sup>8</sup> (Hasan Tahsin, 1323: 36-37)

*Neş'e-i Dil*'de yer alan şarkı, kanto ve diğer tüm formları konu bakımından kategorize etmek oldukça güçtür. Genel olarak aşık-sevgili eksenli konuların çokluğundan, Osmanlı toplumunun eğlence anlayışına hitap eden unsurların varlığından söz etmek yanlış olmayacaktır.

## **SONUÇ VE DEĞERLENDİRME**

Bu çalışma ile vurgulamak istenen temel konu; varlığını çeşitli alanlarda 20. yüzyıla kadar sürdüren mecmûa geleneğinin ve ortaya çıkan eser neşirlerinin Türk kültür tarihine yaptığı katkılardır. Bu katkılar sadece edebiyat alanı için değil tarih, felsefe, müzik ve daha pek çok alan için belge niteliğindedir. Bu çalışmaya konu olan *Neş'e-i Dil* içerik bakımından çoğunlukla şarkı ve kantoları ihtiva etmektedir ve tüm bunlarda klasik şiirin üslup ve imajları kendini göstermektedir. Derleniş sebebi, düzeni, içeriği gibi pek çok husus bu eseri klasik geleneğin devamı olarak görmemiz gerektiğini ortaya koymaktadır.

Şiir ve mûsikîyi ayrı düşünmek mümkün değildir. Klasik şiirin terkipleri, anlam ve imajlar dünyası, sevgili ve aşık rolleri Türk mûsikîsinin güftesi olmuştur. Edebiyat ve mûsikî birbirini besleyerek ilerlemiştir. TRT nota arşivlerinde henüz Latinize edilmemiş eserlerin varlığı, kütüphane kataloglarında yer alan ve neşredilmemiş pek çok şarkı ve kanto mecmûası Türkoloji alanının bu eserlerle de ilgilenmesi gerektiğini; üniversite ve konservatuarların Çalgı ve Ses Eğitimi, Müzikoloji bölümlerinde Osmanlı Türkçesi ve Güfte İncelemeleri derslerinin zaruretinin hâsıl olduğunu göstermektedir.

<sup>8</sup> Makam-Usul-Besteci bilgisi bulunmamaktadır.

**ÖZET**

Bu inceleme kapsamında tarafımızca sentezlenmiş farklı tiyadiazol taç eter türevlerinin metal kompleksleşme özellikleri fiziksel organik kimya penceresinden değerlendirilmiştir. Bu amaçla 2,5-dimerkapto-1,3,4-tiyadiazol bileşiğinden sentezlenen Z1-Z4 taç eterlerin ve 2-amino-5-merkapt-1,3,4-tiyadiazol bileşiğinden sentezlenen M1-M4 taç eterlerinin metal kompleksleşme özellikleri karşılaştırılmıştır. Tiyadiazol halkası üzerine bağlı atomların bir ya da birkaçının değişmesi ile kompleksleşme özelliklerinin değişimi incelenmiştir.

**Anahtar kelimeler:** Fiziksel Organik Kimya, tiyadiazol taç eter, metal kompleksleşmesi.

**INVESTIGATION OF THE COMPLEXATION BEHAVIOR OF SOME  
THIADIAZOL CROWN ETHERS**

**ABSTRACT**

In this study, the metal complexation properties of different thiadiazole crown ether derivatives synthesized by us were evaluated from the perspective of physical organic chemistry. For this purpose, metal complexing properties of Z1-Z4 crown ethers synthesized from 2,5-dimercapto-1,3,4-thiadiazole and M1-M4 crown ethers synthesized from 2-amino-5-mercapto-1,3,4-thiadiazole were compared. The change of complexation properties with the change of one or more of the atoms attached to the thiadiazole ring was investigated.

**Keywords:** Physical Organic Chemistry, thiadiazole crown ether, metal complexation.

## 1. Giriş

Taç eterler, etilen köprülerinin, kükürt ve azot gibi donör atomlar yardımıyla bağlanmasıyla elde edilen halkalı yapılardır. Ayrıca etilen köprülerinin aromatik bileşikler, alkil grupları ve heteroatomlu bileşikler ile yer değiştirmesi ile farklı özellikte taç eterler sentezlenmektedir. Taç eterlerin oldukça popüler olmasındaki başlıca sebep ise metallerle oluşturdukları güçlü kompleksleşmelerdir. Taç eterin içerdiği gruplara ya da atomlara bağlı olarak farklı karakterdeki metal iyonlarıyla kompleksleşmeler oluşturması sağlanmaktadır (Abdurrahmanoglu et al., 2005; Çiçek & Onbaşıoğlu, 2016; Çiçek et al., 2011; Pedersen, 1978). 1967 yılında ilk olarak Pedersen tarafından sunulan taç eter bileşikleri iki ya da daha fazla etilen glikol zincirlerinin oluşturduğu halkalı yapılardır (Pedersen, 1967, 1972, 1978, 1991). Bu bileşikler içerdikleri hidrojen ve karbon atomlarının oluşturduğu hidrofobik apolar bir dış kavite ile heteroatomların (oksijen, kükürt, azot) oluşturduğu polar hidrofilik bir iç kaviteye sahiptirler (Çalışır et al., 2019; Çiçek, Çakir, et al., 2012; Çiçek & Çalışır, 2016; Erk et al., 1999; Tu et al., 2007). Literatürde yer alan çalışmalarda taç eterlerin pozitif yüklü metal katyonlarıyla doğrudan ve bu katyonların counter anyonlarıyla da dolaylı yoldan kompleksleşmektedir (Çakir et al., 1998, 2004; Çalışır et al., 2019; Çiçek, Çakir, et al., 2012). Pedersen' e göre oksijen ve benzen içeren taç eterler alkali ve toprak alkali metal katyonlarına yüksek ilgi göstermektedir (Pedersen, 1967). Bununla beraber, taç eter halkasının doğrudan katılan veya yan kollardan katılan kükürt, azot, elementleri ile tiyofen, pirol, tiyadizaol, triazol, disülfid, amit, ester, tiyoester, vb. grupları metal iyonlarına olan seçiciliklerini etkilemektedir (Calisir et al., 2017; Cicek et al., 2016; Baki Çiçek et al., 2011). Taç eter üzerindeki azot atomu sayısı arttıkça geçiş metallerine olan ilgi attığı tespit edilmiştir (Canbolat et al., 2022; Çiçek, 2002). Ayrıca halka üzerindeki kükürt donör atomlarının sayısının artması bu ilgiyi cıva, kadmiyum, bakır, demir gibi ağır metallere ve değerli metaller olan altın, gümüş, platine kaydırmaktadır (Çiçek, Ergun, et al., 2012; Çiçek et al., 2011; Sapmaz, 2019). Bununla beraber, sentezlenecek taç eter bileşiği heteroatomların, yan kolların farklı kombinasyonlarla dizilmesi ile metal iyonlarına olan seçicilik de değiştirilebilmektedir (Albayrak, 2020; Canbolat et al., 2022; Çiçek & Onbaşıoğlu, 2016).

Bu inceleme kapsamında Çiçek araştırma grubu tarafından sentezlenmiş oksa, tiyo, aza, benzo taç eter türevlerinin değişik yöntemler kullanılarak fiziksel organik kimya açısından metal kompleksleşme özellikleri incelenmiştir. Bu sonuçların fiziksel organik kimyada açmış olduğu pencereler bilim insanlarına ilham kaynağı olacaktır.

## 2. ARAŞTIRMA VE BULGULAR

### Yöntem

Z1 ((1,4,10,13)-tetratiya[4.4](2,5)-1,3,4-tiyadiazolo-fan), Z2 ((4,16)-diokso-(1,7,13,19)-tetratiya[7.7](2,5)-1,3,4-tiyadiazolofan), Z3 ((4,7, 19,22)-tetraokso-(1,10,16,25)-tetratiya[10.10](2,5)-1,3,4-tiyadiazolofan), Z4 ((4,7, 10,22,25,28)-hekzaokso-(1,13,19,31)-tetratiya[13.13](2,5)-1,3,4-tiyadiazolofan) tiyadiazol taç eterleri ile M1 (5,13-dioksa-10,16-ditiya-2,8-diaza-1,9(2,5)-ditiadiazolasikloheksadekapan), M2 (5,8,16,19-tetraokso-13,22-dithia-2,11-diaza-1,12(2,5)-dithia-diazolacyclodocosaphane), M3 (5,8,11,19,22,25-hekzaoksa-16,28-ditiya-2,14-diaza-1,15(2,5)-ditiadiazolasiklootakosa-fan) ve M4 (24,210,7-trioksa-4,10-ditiya-21,27-diaza-1,3(2,5)-ditiyadiazola-2(1,7)-siklododekanasiklodekapan) taç eterlerinin  $\text{Na}^+$ ,  $\text{K}^+$ ,  $\text{Mg}^{2+}$ ,  $\text{Ca}^{2+}$ ,  $\text{Zn}^{2+}$ ,  $\text{Fe}^{2+}$ ,  $\text{Co}^{2+}$ ,  $\text{Ag}^+$ ,  $\text{Fe}^{3+}$ ,  $\text{Cr}^{3+}$ ,  $\text{Cd}^{2+}$ ,  $\text{Pb}^{2+}$ ,  $\text{Ni}^{2+}$ ,  $\text{Cu}^{2+}$ ,  $\text{Mn}^{2+}$  iyonlarıyla kompleksleşmeleri karşılaştırılmıştır (Canbolat et al., 2022; Çiçek & Onbaşıoğlu, 2016).

Gerçekleştirilen kompleksleşmeler Şekil 1 ve Şekil 2’de şematize edilmiştir.

Şekil 1. Z1-Z4 tiyadiazol taç eterlerin metal kompleksleşmeleri (Çiçek & Onbaşıoğlu, 2016).

Şekil 2. M1-M4 tiyadiazol eterlerin metal kompleksleşmeleri(Canbolat et al., 2022)

### Bulgular

Bu çalışmalarda elde edilen bulgular aşağıda özetlenmiştir.

**Tablo 1.** Taç eterlerin metal kompleksleşme oranlarının kıyaslanması

Taç Eter	Kompleksleşme oranı, K <sub>e</sub>
M1	Ca <sup>2+</sup> > Na <sup>+</sup> > Ag <sup>+</sup> = Co <sup>2+</sup> > Mg <sup>2+</sup> > K <sup>+</sup> > Fe <sup>2+</sup> > Zn <sup>2+</sup>
M2	Co <sup>2+</sup> > Ag <sup>+</sup> > Ca <sup>2+</sup> > Na <sup>+</sup> > K <sup>+</sup> > Zn <sup>2+</sup> > Fe <sup>2+</sup> > Mg <sup>2+</sup>
M3	Fe <sup>2+</sup> > Co <sup>2+</sup> = Na <sup>+</sup> > Mg <sup>2+</sup> > Ag <sup>+</sup> > Zn <sup>2+</sup> > K <sup>+</sup> > Ca <sup>2+</sup>
M4	Ca <sup>2+</sup> > Co <sup>2+</sup> > Fe <sup>2+</sup> > Na <sup>+</sup> > Mg <sup>2+</sup> > Ag <sup>+</sup> > Zn <sup>2+</sup> > K <sup>+</sup>
Z1	Pb <sup>2+</sup> > Cu <sup>2+</sup> > Cd <sup>2+</sup> > Ag <sup>+</sup> > Mn <sup>2+</sup> > Cr <sup>3+</sup> > Zn <sup>2+</sup> > Ni <sup>2+</sup> > K <sup>+</sup> > Na <sup>+</sup> > Ca <sup>2+</sup> > Co <sup>2+</sup> > Mg <sup>2+</sup> > Fe <sup>3+</sup>
Z2	Pb <sup>2+</sup> > Cu <sup>2+</sup> > Cd <sup>2+</sup> > Ag <sup>+</sup> > Fe <sup>3+</sup> > Mg <sup>2+</sup> > Cr <sup>3+</sup> > Ni <sup>2+</sup> > Ca <sup>2+</sup> > Zn <sup>2+</sup> > K <sup>+</sup> > Na <sup>+</sup> > Co <sup>2+</sup> > Mn <sup>2+</sup>
Z3	Pb <sup>2+</sup> > Cu <sup>2+</sup> > Cd <sup>2+</sup> > Fe <sup>3+</sup> > Ag <sup>+</sup> > K <sup>+</sup> > Ca <sup>2+</sup> > Mg <sup>2+</sup> > Ni <sup>2+</sup> > Cr <sup>3+</sup> > Co <sup>2+</sup> > Na <sup>+</sup> > Mn <sup>2+</sup> > Zn <sup>2+</sup>
Z4	Pb <sup>2+</sup> > Cu <sup>2+</sup> > Cd <sup>2+</sup> > Ag <sup>+</sup> > Fe <sup>3+</sup> > K <sup>+</sup> > Ca <sup>2+</sup> > Mg <sup>2+</sup> > Cr <sup>3+</sup> > Ni <sup>2+</sup> > Na <sup>+</sup> > Co <sup>2+</sup> > Zn <sup>2+</sup> > Mn <sup>2+</sup>

### 3. SONUÇ

Bu inceleme kapsamında tarafımızca sentezlenmiş, Z1-Z4 ve M1-M4 taç eterler serilerinin Na<sup>+</sup>, K<sup>+</sup>, Mg<sup>2+</sup>, Ca<sup>2+</sup>, Zn<sup>2+</sup>, Fe<sup>2+</sup>, Co<sup>2+</sup>, Ag<sup>+</sup>, Fe<sup>3+</sup>, Cr<sup>3+</sup>, Cd<sup>2+</sup>, Pb<sup>2+</sup>, Ni<sup>2+</sup>, Cu<sup>2+</sup>, Mn<sup>2+</sup> iyonlarıyla kompleksleşmeleri karşılaştırılmıştır (Canbolat et al., 2022; Çiçek & Onbaşıoğlu, 2016). Taç eterler içerdikleri atomlar sebebiyle hidrofobik bir dış iskelete ve hidrofilik bir iç kaviteye sahiptirler. Bu hidrofilik iç kavite oksijen, azot, kükürt gibi elementlerden kaynaklanmaktadır. Bu incelemede değerlendirme alınan Z1-Z4 ve M1-M4 tiyadiazol taç eter bileşikler sadece tek bir heteroatom farklılık göstermektedir (Şekil 3). Bu sebeple farklı hidrofilik iç kaviteye sahiptirler. Bu iç kavitelere uygun olan metal iyonları daha yüksek kompleksleşme yapmaktadır.

**Şekil 3.** Z2 ve M1 tiyadiazol taç eterleri

Tablo 1’de yer alan sonuçlara göre hem M1 hem de M4 taç eterlerin aynı kimyasal bileşenlerle, ancak farklı kondenzasyon prosedürleriyle (M1; 2:2 ve M4 2:3) sentezlenerek  $Ca^{2+}$ ,  $Co^{2+}$ ,  $Fe^{2+}$  ve  $Na^+$  tuzları ile kompleksler oluşturması, sentezde halka boşluğunun önemini göstermektedir. Çift köprülü bir yapıya sahip olmayan M1 de benzer şekilde  $Ag^+$ ,  $Zn^{2+}$  ve  $K^+$  tuzları ile kompleksleşme yapmıştır. Bunun sebebi halka boşluğunun iyonların daha net hareket etmesine izin vermesi ve içerdiği –NH- grubu metal iyonlarını daha etkin bir şekilde bağlamasıdır. Halka boşluğundaki glikol gruplarının artması, kompleksleşmenin geçiş metallerine doğru kaymasına yol açmıştır (Tablo 1). Glikol gruplarının eklenmesiyle halka üzerindeki donör oksijen atomlarının miktarını artmaktadır, bu da kobalt (II) ve demir (II) iyonlarının yüksek kompleksleşme oranlarıyla bağlamasını sağlamaktadır.

Z1-Z4 bileşiklerinin her biri  $Pb^{2+}$ ,  $Cu^{2+}$ ,  $Cd^{2+}$ ,  $Ag^+$  iyonlarıyla yüksek kompleksleşmelere sahiptir (Tablo 1). Bu iyonlardan  $Pb^{2+}$ ,  $Cu^{2+}$  iyonları Tablo 2’ye göre orta-sert Lewis asitleri iken  $Cd^{2+}$ ,  $Ag^+$  iyonları yumuşak Lewis asitleridir. Z1-Z4 bileşikleri tiyadiazol halkası üzerinde sabit 2’şer adet kükürt ve azot atomları içermektedir. Z1-Z4 taç eterlerinde değişen ise iç kaviteye etki eden oksijen donör atom sayısıdır. Z1-Z4 taç eterlerinde, sertliğin, artan oksijen sayısının molekülün iç kavitesine bağlı olarak değişmesine rağmen tiyadiazol halkası içerdiği kükürt donör atomları sebebiyle oldukça yumuşak karakter sergilemiştir. Bu sebeple  $Pb^{2+}$ ,  $Cu^{2+}$ ,  $Cd^{2+}$ ,  $Ag^+$  iyonlarıyla yüksek oranda kompleksleşme göstermiştir.

**Tablo 2.** Lewis asitleri ile seçilen metal iyonlarının yarıçapları

	<b>Lewis Asitleri</b> (Leach, 1999; Vignerresse, 2009)	<b>Metal İyonu Yarıçapı (pm)</b> (Colton et al., 1995)
<b>Sert Lewis Asitleri</b>	$Cr^{3+}$ $Mg^{2+}$ $Fe^{2+}$ $Fe^{3+}$ $Mn^{2+}$ $Ca^{2+}$ $Na^+$ $K^+$	$Cr^{3+}$ (61.5 pm) $Mg^{2+}$ (72 pm) $Fe^{2+}$ (76 pm) $Fe^{3+}$ (78 pm) $Mn^{2+}$ (83 pm) $Ca^{2+}$ (100 pm) $Na^+$ (102 pm) $K^+$ (138 pm)
<b>Orta-Sert (Ara/Sınır) Lewis Asitleri</b>	$Ni^{2+}$ $Cu^{2+}$ $Zn^{2+}$ $Co^{2+}$ $Fe^{2+}$ $Pb^{2+}$	$Ni^{2+}$ (69 pm) $Cu^{2+}$ (73 pm) $Zn^{2+}$ (74 pm) $Co^{2+}$ (74.5 pm) $Fe^{2+}$ (76 pm) $Pb^{2+}$ (119 pm)
<b>Yumuşak Lewis Asitleri</b>	$Cd^{2+}$ $Ag^+$	$Cd^{2+}$ (95 pm) $Ag^+$ (115 pm)

Tablo 2’de verilen metal yarıçapları ve Lewis asitlerinin sınıflandırması göz önüne alınarak sonuçlar yeniden değerlendirilmiştir. M1-M4 bileşikleri sert karakterde atomlar olan azot ve oksijen atonlarını ve bir adet yumuşak Lewis bazı olan kükürt atomunu içermektedir. Bununla beraber Z1-Z4 bileşikleri ise yumuşak karakterde Lewis bazları olan kükürt atomlarıyla, sert karakterdeki oksijen atomlarını içermektedir. Bunun sonucu olarak M1-M4 bileşikleri daha sert Lewis asitleri olan  $\text{Ca}^{2+}$ ,  $\text{Co}^{2+}$ ,  $\text{Fe}^{2+}$ ,  $\text{Na}^+$  iyonlarına ilgi gösterirken, Z1-Z4 taç eterleri  $\text{Pb}^{2+}$ ,  $\text{Cu}^{2+}$ ,  $\text{Cd}^{2+}$ ,  $\text{Ag}^+$  gibi daha yumuşak Lewis asitleri olan iyonlara ilgi göstermiştir.

**ÖZET**

N-sübstitüe amino asit esterleriyle enzimatik çalışmalarda substrat olarak ve peptit sentezinde sık sık karşılaşılmaktadır. N-süsbtitüe poliglisinler, canlılar için öneme sahip sentetik polimerlerdir. N-sübstitüe amino asit esterlerinin farmasötik ajanlar olarak en önemli avantajları arasında sentez kolaylığı ve ekonomik oluşu, iskeletin oldukça modifiye edilebilmesi ve yan zincir üzerinden sübtitüe olabilme imkanıdır. Bu sebeple oligomerlerin eldesi ve ilaç tasarımına yönelik uygulamalarda kullanılmaktadır. Aynı zamanda, peptoidlerin biyolojik sistemlerde oldukça aktif oldukları ve proteolitik bozunmaya karşı dirençli oldukları tespit edilmiştir. Bu oligomerik moleküllerin başlıca avantajları arasında, modüler yapılarının bir sonucu olarak neredeyse sınırsız çeşitlilik, sentezlenebilme ve dizilenebilme kolaylıkları ve doğal biyolojik uygunlukları yer almaktadır. Bu çalışma kapsamında N-(4,6-dimetil-2-pirimidinil) glisin ester bileşiği sentezlenerek karakterize edilmiştir. Ayrıca bazı teorik (hesapsal) özellikleri incelenmiştir. Bu amaçla, HyperChem programı kullanılarak sentezlenen bileşiğin bağ uzunlukları, elektrostatik potansiyelleri, toplam yük yoğunluğu ve yük dağılımı, bazı enerji parametreleri, HOMO, LUMO ve LUMO-HOMO boşluğu ( $\Delta E$ ) hesaplanmıştır.

**Anahtar kelimeler:** N-sübstitüe glisin ester, karakterizasyon, sentez, Hyperchem, hesapsal kimya.

YL)AMINO)ACETATE**

**ABSTRACT**

N-substituted amino acid esters are frequently encountered as substrates in enzymatic studies and peptide synthesis. N-substituted polyglycines are synthetic polymers that are important for living things. Among the most critical advantages of N-substituted amino acid esters as pharmaceutical agents are ease of synthesis and economy, the possibility of highly modifying the skeleton, and substitution via the side chain. For this reason, it is used in applications for the production of oligomers and drug design. At the same time, peptoids are highly active in biological systems and resistant to proteolytic degradation. The main advantages of these oligomeric molecules include almost unlimited diversity, ease of synthesis and sequencing, and natural physical compatibility due to their modular structure. Within the scope of this study, N-(4,6-dimethyl-2-pyrimidinyl) glycine ester compound was synthesized and characterized. In addition, some theoretical (computational) properties are examined. For this purpose, bond lengths, electrostatic potentials, total charge density, charge distribution, and some energy parameters, HOMO, LUMO, and LUMO-HOMO gap ( $\Delta E$ ) of the compound synthesized using the HyperChem program were calculated.

**Keywords:** N-substituted glycine ester, characterization, synthesis, Hyperchem, computational theoretical chemistry.

## 1. GİRİŞ

Kimya biliminin temel dallarından olan teorik kimya, bilgisayar sistemlerinin gelişmesiyle organik kimya ve ilaç kimyası başta olmak üzere birçok bilim alanında kullanılmaktadır. Teorik kimya ile hedeflenen bileşiklerin modellenmesi, deneysel olarak gerçekleştirme olasılığının belirlenmesi ve elde edilen sonuçların canlı yaşamını olumsuz etkilemeyecek şekilde değerlendirilmesinde ön çalışma olarak kullanılmasının başlıca sebepleridir (1).

Pirimidin ve aminopirimidin türevleri, doğada bileşen olarak buldukları için biyolojik olarak önemli bileşiklerdir. Bazı aminopirimidin türevleri antifolat ilaçlar olarak kullanılmaktadır (2,3). Daha önceki çalışmalarda, aminopirimidin türevleri (4), aminopirimidin karboksilatları (5) ve ko-kristal yapıları (6) bildirilmiştir. 2-amino-4,6-dimetil pirimidin bileşiği biyoaktif bir bileşiktir (7). 2-amino-4,6-dimetil pirimidinin farklı aromatik ve alifatik dikarboksilik asitler ile reaksiyonu sonucu elde edilen bileşikler, floresans spektroskopisinde içerdikleri kromofor gruplar sebebiyle mavi emisyon göstermiştir (8). 2-aminopirimidin molekülleri N-HN hidrojen bağları ile N-H<sub>2</sub>O aracılığıyla bağlanan benzoik asit molekülleri içeren bileşikler karakterize edilmiştir (9). p-ksilen-bis(tiyooasetik) asit ve 2-amino-4,6-dimetilpirimidin bileşiklerinin ko-kristalleri sentezlenerek tek kristal X-ışını kırınımı, kızılötesi spektroskopi ve termal analiz yöntemleri ile karakterize edilmiştir (10). Au(III), Pt (II) ve Pt (IV) metallerinin 2-amino-4,6-dimetil pirimidin ile reaksiyonları K.D. Dimitra tarafından rapor edilmiştir (11,12). 2-amino-4,6-dimetil pirimidin bileşiğinin bazı hesapsal özellikleri HyperChem ile hesaplanmıştır (13). Etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiği ticari olarak temin edilebilen bir bileşik olup bu çalışma kapsamında ise 1,3-dipolar siklokatılma reaksiyonuyla MWCNT bileşiklerinin siklokatılma ürünlerinin sentezinde öncü bileşikler olarak sentezlenmiştir.

Bu çalışma kapsamında, 2-amino-4,6-dimetil pirimidin ve etil bromoasetat moleküllerinden sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin karakterizasyonu FT-IR, <sup>1</sup>H-NMR ve <sup>13</sup>C-NMR teknikleri ile gerçekleştirilmiştir. HyperChem ile sentezlenen bileşiğin bazı teorik parametreleri belirlenmiştir. Bileşiğin reaktivitesi ve nükleofilliği karşılaştırılmıştır.

## 2. MATERYAL VE METOT

### *Etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin sentezi*

1.798 g (14.6 mmol) 2-amino-4,6-dimetilpirimidin ve potasyum karbonat (0.71 g, 5.14 mmol) 50 mL iki boyunlu reaksiyon balonuna alındı. Üzerine 20 mL susuz diklorometan (DCM) eklendi. Buz banyosuna alınarak 0°C'ye ulaşması için beklendi. 10 ml susuz DCM içerisinde

çözünmüş 1.62 mL (14.6 mmol) etilbromoasetat basınç kontrollü damlatma hunisine alındı. Reaksiyon balonuna üstten bağlanarak damla damla 45 dakikalık bir sürede 0°C’de ilave edildi. Ekleme işlemi tamamlandığında 10 dakika daha beklendi. Sonra reaksiyon karışımı buz banyosundan ayrılarak sıcaklığının oda sıcaklığına ulaşması sağlandı. 24 saat oda sıcaklığında karıştırıldı. Reaksiyon ince tabaka kromatografisi (TLC) ile kontrol edilerek (TLC görüntüleme için iyot ile yakma yöntemi kullanıldı) sonlandırıldı. 3 kere 10 ml doymuş tuzlu su çözeltisi ile (3x10 ml) ekstrakte edildi. Organik faz ayrılarak kalsiyum klorür ile kurutuldu. İçerdiği DCM çözücüsü döner evaporatörde uzaklaştırıldı. FT-IR ile ürün kontrol edildi. (TLC çözücü sistemi: %50/50 etil asetat/hegzan, R<sub>f</sub>, Amino: 0.42 ve R<sub>f</sub>, Ürün:0.48 Verim: 2.78 g, %91.15).

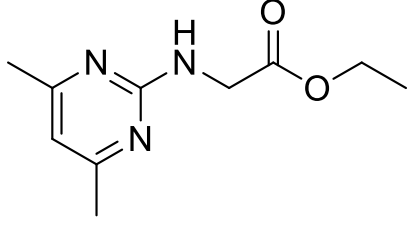

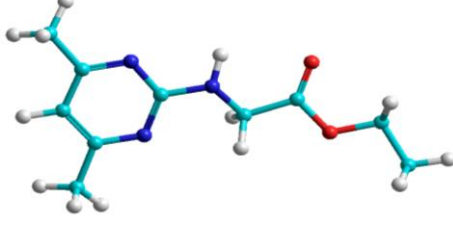

### ***Hesapsal Çalışmalar***

Sentezlenen bileşiğin bazı teorik verileri HyperChem Professional 8.0.1 yazılımı ile hesaplanmıştır. Hesaplamalar Intel (R) Core (TM) i3 CPU M380 @ 2.53 GHz işletim sistemi içeren bilgisayarda gerçekleştirilmiştir. Bileşiklerin açık yapıları çizildikten sonra geometrik optimizasyonu, sırasıyla moleküler mekanik (MM+) tekniği ve yarı-deneysel (semi-empirical, PM3) tekniği kullanılarak gerçekleştirilmiştir. Bileşiğin en düşük enerjili konformasyonu belirlenmiştir. Geometri optimizasyonları Polak-Ribiere algoritması kullanılarak vakum ve sonlanma koşulu olan RMS gradient 0.01 kcal Å<sup>-1</sup> mol<sup>-1</sup> veya 1000 maksimum döngü üzerinden gerçekleştirilmiştir (14).

### **3. BULGULAR VE TARTIŞMA**

Tablo 1’de sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin açık yapısı ChemBioDraw Ultra 12.0 programıyla, 3D gösterimleri ise HyperChem programıyla çizilmiştir.

**Tablo 2.** Sentezlenen bileşiğin açık yapısı ve 3D gösterimi

Açık yapısı	3D gösterimi
	

2-amino-4,6-dimetil pirimidin ve etil bromoasetat bileşiklerinin bazik ortamda, diklorometan içerisinde, düşük sıcaklıkta ve  $S_N2$  mekanizması üzerinden reaksiyonu ile hedeflenen bileşik elde edilmiştir. Sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin karakterizasyonu FTIR,  $^1H$ NMR ve  $^{13}C$ NMR teknikleri ile gerçekleştirilmiştir.

**Şekil 1:** Sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin proton NMR spektrumu

Sentezlenen bileşiğin proton NMR spektrumu (Şekil 1) incelendiğinde 1.30 ile 4.23 ppm arasında alifatik proton kimyasal kaymaları ve 6.59 ppm'de aromatik –C-H kimyasal kayması gözlenmiştir.

Şekil 2. Sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin karbon NMR spektrumu

Sentezlenen bileşiğin karbon NMR spektrumu (Şekil 2) incelendiğinde 14.17-62.59 ppm arasında alifatik karbon kimyasal kaymaları gözlenmiştir. Bununla beraber aromatik karbonların kimyasal kaymaları 110.95-167.52 ppm arasında, karbonil kimyasal kayması da 169.75 ppm’de gözlenmiştir.

Şekil 3. Sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin FT-IR spektrumu

Sentezlenen bileşiğin FT-IR spektrumu (Şekil 3) incelendiğinde, 2-amino-4,6-dimetil pirimidin bileşiğine ait -NH<sub>2</sub> asimetrik ve simetrik gerilmeleri 3393 ve 3309 cm<sup>-1</sup>’de gözlenmektedir.

Sentezlenen bileşiğin FT-IR spektrumu incelendiğinde  $3415\text{ cm}^{-1}$ 'de  $-\text{NH}$  (sekonder amin) gerilmesi gözlenmektedir. Ayrıca etil bromoasetat bileşiğinin FT-IR spektrumunda  $1733\text{ cm}^{-1}$ 'de gözlenen karbonil gerilmesinin, sentezlenen bileşiğin spektrumunda  $1790\text{ cm}^{-1}$ 'ye kaydığı gözlenmiştir.

Sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin HyperChem programıyla moleküler mekanik yöntemleriyle geometrik optimizasyonu sonucu elde edilen veriler Tablo 2'de verilmiştir.

**Tablo 3.** Sentezlenen bileşiğin geometrik optimizasyon (moleküler mekanik) verileri

Enerji (kcal/mol)	Gradient
50.956695	32.148039

Moleküler mekanik yöntemleri, sistemin elektronlarını hesaplama esnasında göz ardı etmektedir. Bu durum nükleofilik bileşikler içeren moleküllerde hata oluşturduğundan nükleofilik bağ oluşumu ve bağ kırılmaları moleküler mekanik yöntemleriyle açıklanamamaktadır (15). Bu sebeple yarı-deneysel (semi-empirical) yöntemler kullanılmaktadır. Yarı-deneysel yöntemde PM3 fonksiyonları kullanılarak hidrojen bağı benzeri moleküller arası etkileşimler de hesaplanmaktadır (16). PM3 kullanılarak Tablo 3'de verilen sistemin toplam enerjisi, bağlanma enerjisi, izole atomik enerjisi, elektronik enerjisi, çekirdek-çekirdek etkileşimi, konfigürasyon etkileşimi (CI), oluşum ısısı, referans konfigürasyon gradienti ve simetrisi (Sym.) belirlenmiştir. Sentezlenen bileşikte net yük sıfır olup CI enerji hesaplanmasında 19 konfigürasyon üzerinde bir etkileşim tespit edilmemiştir. Sentezlenen bileşik düzlemsel olduğundan C1 simetriye sahiptir.

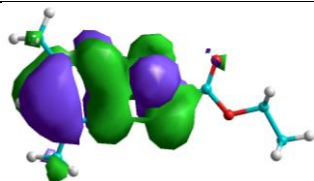

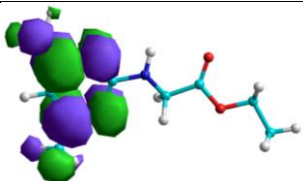

HOMO ve LUMO) enerji düzeyleri olası elektronik geçişler hakkında bilgi vermektedir. Ayrıca HOMO ve LUMO bileşiğin elektrophilik veya nükleofilik özelliği hakkında bilgi elde edilebilir. Kimyasal reaktivite için ise LUMO-HOMO aralığı ( $\Delta E$ ) oldukça önemlidir. Yüksek  $\Delta E$  değeri, düşük reaktivite anlamına gelmektedir. Tablo 4'de HOMO-LUMO orbitalleri ve  $\Delta E$  değerleri verilmiştir. Burada yeşil renk pozitif değer ve mor renk negatif değeri göstermektedir (17–19).

**Tablo 4.** Sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiğinin geometrik optimizasyonunda (yarı-deneysel) elde edilen veriler

Parametre	Sonuç

Simetri	C1

Tablo 4 incelendiğinde sentezlenen bileşiğın LUMO-HOMO boşluğu ( $\Delta E$ ) 8.79 eV olarak hesaplanmıştır. Tablo 4'de yer alan HOMO ve LUMO gösterimleri incelendiğinde yüksek negatif yük sebebiyle bileşiğın daha çok nükleofil olarak ataklara yatkın olduğu söylenebilir.

**Tablo 5.** Sentezlenen bileşiğın HOMO / LUMO Orbitaleri ile HOMO, LUMO,  $\Delta E$  değerleri

HOMO, eV	LUMO, eV	$\Delta E$ , (LUMO-HOMO aralığı), eV
-9.05	-0.26	8.79
		

Bağ uzunluklarının artması bileşiğın reaktivitesini azaltmaktadır (13). Sentezlenen bileşikte en yüksek bağ uzunluğunun  $C(sp^3)$ - $C(sp^2)$  arasında olduğu ve en kısa bağ uzunluğunun ise yüksek enerjili N-H bağına ait olduğu belirlenmiştir (Şekil 4-a).

Bileşik üzerinde pozitif ve negatif yüklerin toplandığı bölgelerin belirlenmesi ile bileşiğın nükleofilik atak yönü ve elektrofilik grupları belirlenebilir (13). Sentezlenen bileşikte negatif yüklerin aromatik halka üzerindeki azot atomları üzerinde toplandığı, pozitif yüklerin aromatik halka üzerindeki karbon atomlarına bağlı hidrojen atomu üzerinde toplandığı tespit edilmiştir (Şekil 4-b).

**Şekil 4.** Sentezlenen bileşiğin (a) elektrostatik potansiyeli (b) bağ uzunlukları

#### 4. SONUÇLAR

Bu çalışma kapsamında etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiği, 2-amino-4,6-dimetil pirimidin ve etil bromoasetat bileşiklerinden sentezlenmiştir. Sentezlenen etil 2-((4,6-dimetil-2-pirimidinil)amino)asetat bileşiği, FT-IR, <sup>1</sup>H-NMR ve <sup>13</sup>C-NMR teknikleri ile başarılı bir şekilde karakterize edilmiştir. Bileşiğin en düşük enerjili konformasyonu, HyperChem programı kullanılarak MM+ ve PM3 yöntemleriyle belirlenmiştir. Ayrıca HOMO ve LUMO moleküler orbital seviyeleri hesaplanmıştır. Sentezlenen bileşiğin bağ uzunlukları ve elektrostatik potansiyeli hesaplanmıştır. Negatif yükün azot atomları üzerinde toplandığı gözlenmiştir.

### **ÖZET**

Günümüzde giderek artan bir farkındalıkla çevremizi, doğamızı akabinde de yeryüzünde yaşayan tüm canlıları korumamız gerektiği bilinci oluşmuştur. Bu nedenle toplumun her kesiminden insan sorumlulukları gereği kendi üzerine düşeni yerine getirerek ekosisteme yardımcı olmaktadır. Bilim insanları birçok şeye çare bulmayı böylece topluma hizmet etmeyi amaç haline getirmişlerdir. Öncelikle artan nüfusa bağlı olarak ortaya çıkan kıtlığa çare bulmak için gıdaların raf ömrünü uzatmayı hedeflemişlerdir. Bu amaçla uzun bir kullanım potansiyeli olan plastik ambalajlar geliştirilmiştir. Ancak bu ambalajların doğa üzerinde oluşturdukları olumsuz etki göz önüne alındığında bilim insanları yenilebilir ambalajlar/filmler üzerinde çalışmaya başlamışlardır. Söz konusu filmlerin geliştirilmesiyle hem raf ömrünün uzatılması hem de doğa dostu ürünler geliştirilmesi istenilmiştir. Ancak karşımıza çok sayıda yenilebilir filmle ilgili çalışma çıkmıştır. Dolayısıyla hangi filmin daha iyi olduğu, farklı çalışmalara ihtiyaç olup olmadığı soruları ortaya çıkmıştır. Yaptığımız bu çalışma ile literatürde bitki ekstraktı ve yağlar ile yapılan yenilebilir filmlerin yer aldığı çalışmalar bir araya getirilerek karşılaştırılmaya çalışılmıştır. Sonuç olarak yenilebilir filmlerin hayatımıza tahmin ettiğimizden de daha önce girdiği anlaşılmaktadır. Dahası filmlerin sentezi, ürün kaplama yöntemi ve film oluşumunda kullanılacak ham maddenin seçiminde, belirleyici en önemli faktörün uygulama ürünü olduğunu söyleyebiliriz.

**Anahtar kelimeler:** Ambalaj, bitki ekstraktı, yağ, yenilebilir film,

**USE OF PLANT EXTRACT AND OILS IN EDIBLE FILMS****ABSTRACT**

With an ever-increasing awareness today, we have become conscious of the need to protect our environment, our nature, and then all living things on earth. For this reason, people from all parts of the society help the ecosystem by fulfilling their responsibilities as required. Scientists have made it their goal to find solutions to many things and thus serve the society. First of all, they aimed to extend the shelf life of foods in order to find a solution to the famine caused by the increasing population. For this purpose, plastic packages with a long usage potential have been developed. However, considering the negative effects of these packaging on nature, scientists have started to work on edible packaging/films. However, we have come across many studies on edible films. For this reason, questions such as which movie is better and whether there is a need for different studies arose. With this study, we tried to compare the studies in the literature that include edible films made with plant extracts and oils. As a result, it is understood that edible films entered our lives earlier than we expected. Moreover, we can say that the most important factor determining the synthesis of the films, the product coating method and the selection of the raw material to be used in the film formation is the application product.

**Keywords:** Packaging, plant extract, oil, edible film

## 1. GİRİŞ

İnsan beslenmesinde sağlıklı gıda üretimi ve tüketimi büyük önem taşımaktadır. Ancak gıda maddeleri, üretilmelerinin ardından hemen tüketilemediklerinden dolayı, gıdanın kalite ve güvenliğinin sağlanması, özelliklerinin korunması açısından; raf ömrü süresince korunabilmeleri amacıyla ambalajlanmaları gerekmektedir (Delikanlı ve Özcan, 2014). Bu nedenle cam, metal, kâğıt, plastik gibi malzemelerden yapılan çeşitli ambalajlar kullanılmaktadır (Çelik ve Tümer, 2016). Cam, metal ve tahtaya göre plastiklerin daha ucuz ve kolay elde edilebilir olmasından dolayı 20. yüzyıldan itibaren birçok alanda (tıp, eğitim, ev gereçleri, sanayi) kullanılmaktadır. Ancak plastiklerin kanserojenik etkilerinin olmasının yanında sıklıkla kullanılan naylon poşetlerin sıcaklıkla tepkimeleri sonucu zehirli özellikleri de oluşabilmektedir (Kayan ve Küçük, 2020).

Yenilebilir karbon kaynaklarından veya biyolojik kökenli polimerlerden elde edilen biyoplastikler ise; uygun koşullar altında tekrar CO<sub>2</sub>, su ve biyokütleyle indirgenebilmektedir (Çelik ve Tümer, 2016). Kolay bozunmalarının yanısıra toksik olmaması, geri dönüşümünün kolay, yenilebilir ve ekolojik olması da biyoplastikleri geleneksel plastiklerden üstün kılmaktadır (Özdemir ve Erkmen, 2013). Biyolojik olarak parçalanamayan plastik ambalajların neden olduğu ekolojik problemlerden dolayı protein (hayvan ve bitki bazlı), yağ ve polisakkarit gibi yenilebilir, biyolojik kaynaklı gıda ambalaj malzemelerine olan ilgi de giderek artmaktadır (Shahbazi, 2018). Özellikle çevre kirliliğine yönelik kaygılar nedeniyle yenilebilir film ve/veya biyolojik ambalajlar hakkında birçok çalışma gerçekleştirilmektedir (Moradi ve ark. 2012). Her ne kadar yeni bir teknik gibi görünse de yenilebilir filmlerin kullanımı çok eskiye dayanmaktadır. Çin’de 12. ve 13. yüzyıllarda turunçgillerin mum ile kaplanması gerçekleştirildiği bilinmekle birlikte, gıda sanayinde kaşar peynirinin mumla kaplanması, çikolatanın veya elmanın şekerle kaplanması ya da sosisin yenilebilir kollojen kılıfla kaplanması şeklinde çeşitli uygulamalar da ilkleri temsil etmektedir (Hardenberg, 1967; Kaya ve ark., 1998; Polat 2007; Dursun ve Erkan 2009; Çağrı-Mehmetoğlu 2010; Sarıoğlu 2005).

Günümüzde yenilebilir film ve kaplamalarının uygulanmasında birçok farklı teknikten yararlanılmaktadır. Bunlar; daldırma, dökme, püskürtme, fırça ile boyama ve ekstrüzyon yöntemleridir. Daldırma yönteminde gıdaların film çözeltisine daldırılması ile kaplanması gerçekleşirken, dökme yönteminde uygun bir yüzeye dökülerek kurutulmuş film ile gıdanın kaplanması gerçekleştirilmektedir. Hazırlanan film solüsyonunun kurutulmadan fırça yardımıyla direkt ürünün üzerine sürülerek kaplanması ise boyama yöntemi olarak ifade

edilmektedir. Bununla birlikte ince, homojen bir film oluşumu tercih edildiğinde ya da kaplanmış bir gıda yüzeyinin ikinci bir film tabakası ile kaplanması istenildiği durumda püskürtme yöntemi tercih edilmektedir. Çözücü ilavesine ve kurutma işlemine ihtiyaç duymayan ekstrüzyon yöntemi ise nişasta bazlı filmlerin yapımında kullanılmaktadır (Yıldız Oğuzhan ve Yangılar, 2016; Tural ve ark. 2017).

Yenilebilir film ve kaplamaların yapımında kullanılan hammaddeler güvenilir (GRAS), kontrollü ürün solunumuna izin veren, tekstürü koruyan, gıda katkı maddelerinin etkisi üzerinde olumsuz bir etki yaratmayan hatta etkisini destekleyen ve mikrobiyal bozulmayı kısıtlayan özellikte olmalıdır (Delikanlı ve Özcan, 2014).

Yenilebilir film ve kaplamaların üretiminde tek başına veya kombinasyon halinde kullanılan bitkisel ve hayvansal kaynaklı birçok polisakkarit, lipit ve proteinlere ilaveten çözücü, plastikleştirici, emülsüfyer, antoksidan ve antimikrobiyal maddelerden de yararlanılmaktadır (Tural ve ark. 2017). Bu nedenle yenilebilir filmler ve kaplamaların özelliği, üretimi esnasında kullanılan materyale göre değişkenlik göstermektedir (Ertugay ve Tomar, 2004). Özellikle filmin; kaplanabilme özelliği, suda çözünürlüğü, hidrofilik-hidrofobik oluşu ve duyuşal özellikleri kaplama malzemesi seçiminde göz önünde bulundurulmaktadır (Yüksel ve ark. 2020). Genellikle polisakkaritlerle oksijen ve diğer gazların geçişi kontrol edilirken, lipitlerle su transferi azaltılmakta, proteinlerle ise filmlere mekaniksel dayanıklılık kazandırılmaktadır (Tural ve ark. 2017). Hidrofilik özellik taşıyan polisakkarit (nişasta, kitin, kitosan, selüloz, gamlar, pektinler) veya protein (mısır zeini, buğday gluteni, kolajen, jelatin, soya proteini, peynir altı suyu proteini) yapılı yenilebilir film ve kaplamaların nem bariyerleri düşük, gaz bariyerleri yüksekken, hidrofobik özellik gösteren lipit yapılı (balmumu, çeşitli hayvansal ve bitkisel yağlar, serbest yağ asitleri, lesitin, çeşitli ağaç reçineleri) yenilebilir film ve kaplamaların nem bariyerleri yüksek gaz bariyerleri ise düşüktür (Debeaufort ve ark., 1998; Candan ve Bağdatlı, 2018; Yüksel ve ark., 2020). Yapılan çeşitli çalışmalarla da farklı kaplama materyallerinden yararlanılarak; çilek, yenedünya, elma, armut, mandalina, nektarin, nar tanesi, yeşil kahve çekirdeği , peynir, kaşar peyniri, sucuk, sosis, salam, pastırma, kıyma, pırzola (domuz), gökkuşuğı alabalığı, karides, kulfı (pasta) (Polat; 2007; Öztürk, 2009; Kalkan, 2014; Işık Çiçek, 2011; Shin ve ark., 2012; Özmert Ergin, 2015; Özdemir ve Gökmen, 2019; Yaman, 2013; Yuan ve ark., 2016; Hassanzadeh ve ark. 2018; Ferreira ve ark., 2018; Zhang ve ark. 2018; Kozlu, 2020; Thi Tran ve ark. 2021; Mahajan ve ark. 2021) gibi birçok farklı gıdanın kaplanması sağlanmıştır.

Çalışmamız kapsamında ise bitki ekstraktı ve yağların yenilebilir filmlerde kullanımına yönelik kaynak oluşturmak üzere gerçekleştirilen çeşitli çalışmalar derlenmiştir (Tablo 1). Bu çalışmalarda kullanılan ham maddeler ve bu hammaddelerin kullanılmasıyla elde edilen filmlerde gerçekleştirilen analizler ile birlikte; filmlerin uygulama alanı ve/veya üründe yapılan analizler ayrıntılı olarak belirtilmiştir. Bu doğrultuda yapılacak olan diğer çalışmalarda; yararlanılacak olan materyal, yöntem ve tekniğin seçimi hususunda araştırmacılara; kaynak sağlayacağı düşünülmektedir.

## **2. YENİLEBİLİR FİLM YAPIMINDA BİTKİ EKSTRELERİNİN KULLANILDIĞI ÇALIŞMALAR**

Hammadde olarak dikenli akasya çekirdek ekstresinin kullanıldığı çalışmada ilk olarak hazırlanan ekstrede toplam fenolik madde analizi ve DPPH radikal giderme aktivitesi yapıldığı görülmektedir. Söz konusu ekstraktın tercih edilme nedeni antioksidan özelliği olduğu için özellikle bu kısım vurgulanmak istenmiş olabilir. Hazırlanan film formülasyonunda ise polimer olarak galaktomannan (%0,5-1,5) kullanılmıştır. Ayrıca hazırlanan filmin içeriğinde %0,5 oranında gliserol ve dikenli akasya çekirdek ekstresinin sırasıyla %0, 0,5, ve 1 oranlarında ilave edilerek optimizasyon çalışmalarının gerçekleştirildiği ifade edilmiştir. Optimizasyon çalışmaları kapsamında film kalınlığı, su buharı geçirgenliği, renk analizi ve SEM analizleri yapıldığı belirtilmiştir. Ancak söz konusu çalışmada sadece karakterizasyon çalışmaları yapıldığı görülmektedir. Herhangi bir gıda maddesine uygulama yapılmamıştır (Cerqueira ve ark. 2010).

Greyfüt çekirdek özü ve kırmızı yosun ekstresinin bir arada kullanıldığı sorbitol bazlı yenilebilir filmde film kalınlığı, film gerilme direnci ve uzaması, su buharı geçirgenliği, nem içeriği, antimikrobiyal ve antioksidan çalışmaların ardından duyu analizler (renk, koku, sarılma ve sıklık) gerçekleştirilmiştir. Özellikle antimikrobiyal çalışmanın sonuçları filminin peynir ve pastırmanın raf ömrünü uzatmak için yararlı bir sarma malzemesi olduğunu göstermektedir (Shin ve ark. 2012).

Diğer bir çalışmada ise ayva çekirdeği müsilağı, kitosan ve guar gam kullanılarak farklı içeriklerde ve kombinasyonlarda üç adet film formülasyonu kullanılmıştır. Birinci formülasyonda %1'lik kitosan, %0,5 (v/v) gliserol, ikinci formülasyonda %1'lik (w/v) guar gam+%35 (w/w) gliserol, üçüncü formülasyonda ise 1'lik (w/v) ayva çekirdeği müsilağı, %1'lik (w/v) kitosan ve %1'lik (w/v) guar gam kullanılmıştır. Filmlerin kalınlıkları, nem, suda

çözünürlük, yoğunluk, su buharı geçirgenliği, renk, opaklık, tekstür, DSC, FTIR ve SEM analizleri yapılmıştır. Başarılı bir şekilde üretildiği belirtilen filmlerin karakterizasyon sonuçlarına göre yenilebilir film üretiminde kullanılabileceği belirtilmiştir (Erdoğan, 2020).

Antep fıstığının (*Pistacia terebinthus*) farklı bölgelerinden (tohumu, yaprağı, gövdesi) elde edilen ekstraların HPLC ile fenolik bileşik analizi yapıldıktan sonra ekstralar ile hazırlanan kitosan bazlı filmlerde FT-IR, SEM, mekanik özellikler, TGA, DSC, UV-Vis, Temas açısı ölçümleri, filmin sudaki çözünürlüğü, biyolojik parçalanabilirliği, biyobozunma, antioksidan (DPPH), antimikrobiyal ve anti-quorum analizler yapılmıştır (Kaya ve ark. 2018a). Kitosan-meyve ekstralı filmin, diğer filmlere kıyasla daha yüksek antioksidan, antimikrobiyal aktivite gösterdiği belirtilmiştir. Antep fıstığının tohumu, yaprağı, gövdesinden yenilebilir film yapılmasının faydalı olacağı sonucuna varılmıştır (Kaya ve ark. 2018a).

Karamuk meyvesi (*Berberis crataegina* DC) ve çekirdek yağ ekstraktı ile kitosan bazlı filmler oluşturularak elde edilen filmlerde FT-IR, SEM, mekanik özellikler, DSC, UV-Vis, Temas açısı ölçümleri, filmin sudaki çözünürlüğü, yağ asidi kompozisyonu analizi, antioksidan (DPPH, Fenolik madde), antimikrobiyal ve anti-quorum analizler yapılmıştır (Kaya ve ark. 2018b). Kitosan-meyve ekstralı filmin, diğer filmlere kıyasla daha yüksek termal kararlılık, antioksidan, antimikrobiyal ve anti-quorum aktivite gösterdiği belirtilmiştir. Karamuk meyvesi (*Berberis crataegina* DC) ve çekirdek yağ ekstraktı filmin dayanıklılığını arttırırken, geçirgenliği azaltmıştır. Yazarlar karamuk meyvesi (*Berberis crataegina* DC) ekstralı filmin yüksek termal kararlılık, antioksidan ve antimikrobiyal özellik göstermesi nedeniyle karamuk meyvesinin yenilebilir filmlerde kullanılabileceği ifade etmişlerdir (Kaya ve ark. 2018b).

Kekik ekstraktı, Psyllium-tohum müsülaj ve gliserol bazlı filmler oluşturularak elde edilen filmlerde FT-IR, SEM, mekanik özellikler, renk, nem içeriği, Temas açısı ölçümleri, filmin sudaki çözünürlüğü, su buharı geçirgenliği, film kalınlığı ve antimikrobiyal analizler yapılmıştır (Hajivand ve ark. 2020). Bu analizler neticesinde kekik özütü ve gliserol içeriğine bağlı olarak filmlerin kalınlığı, uzayabilirliği ve sudaki çözünürlüğünde iyileşme olduğu ifade edilmiştir. *Staphylococcus aureus* ve *Escherichia coli*'ye karşıda antimikrobiyal etki sergilediği belirtilmiştir. Daha sonra çileğe uygulayıp çürümesini analiz ederek raf ömrünü uzattığı yazarlar tarafından tespit edilmiştir (Hajivand ve ark. 2020).

Karvakrol ve üzüm çekirdeğinin bir arada kitosan bazlı filmlere uygulandığı çalışmada elde edilen filmlerde film kalınlığı, suda çözünürlük, nem içeriği, renk, su buharı geçirgenliği, FT-IR, oksijen ve karbondioksit geçirgenliği, X ışını difraksiyonu, mekanik ve yapısal özelliklerin

belirlenmesi ve SEM analizleri yapılarak karakterize edilmiştir (Rubilar ve ark. 2013). Yapılan çalışmada hidrofilik (GSE) ve hidrofobik (karvakrol) bileşiklerin oranlarının filmin karakteristik özelliklerini etkilediği sonucuna varıldığı belirtilmiştir (Rubilar ve ark. 2013).

Ejderha gözü bitki ekstraktı ve BHT ile jelatin bazlı filmlerin yapıldığı çalışmada, filmlerin kalınlığı, mekaniksel özellikleri, rengi, şeffaflığı, su buharı geçirgenliği, elektrofoetik (SDS-PAGE) özellikleri, FT-IR, SEM, DSC ve lipid oksidasyonu analizleri yapılmıştır (Vichasilp ve ark. 2014). Çalışma neticesinde ejderha gözü bitki ekstraktı veya BHT ile birleştirilen jelatin filmlerin mekanik özelliklerinin, kontrol jelatin filminin özelliklerine benzer olduğu belirtilmiştir. Aynı zamanda lipid oksidasyonundaki analiz sonuçlarına göre ejderha gözü bitki ekstraktının antioksidan özelliğine ilave olarak film özelliklerinde kabul edilebilir değişiklikler sağlması nedeniyle yenilebilir film teknolojisinde kullanılabileceği belirtilmektedir (Vichasilp ve ark. 2014).

Sumak (*Rhus microphylla*) bitki ekstraktının siyah çiya musilajına ilave edilerek oluşturulan yenilebilir filmlerde yüzey gerilimi, zeta potansiyeli, film kalınlığı, su buharı geçirgenliği, nem içeriği, suda çözünürlüğü, optik özellikleri, mekanik özellikleri ve reolojik davranışları incelenerek analiz edilmiştir (Charles-Rodríguez ve ark. 2020). Çalışma neticesinde sumağın yenilebilir film yapımında kullanılabileceği sonucuna varılmıştır (Charles-Rodríguez ve ark. 2020).

Demirhindi çekirdek ekstraktında polifenol, falvanoid içeriğine ve antioksidan (DPPH ve ABTS) özelliklerine bakıldıktan sonra peynir altı suyu protein izolatı, doğal patates nişastası ve gliserol ile kombine bir şekilde yenilebilir bir film oluşturulmuştur. Daha sonra elde edilen filmlerde mekanik özellikler (uzama yüzdesi, kopmadan önceki çekme mukavemeti, Young modülü), yüzey tepkisi ile film optimizasyonu metodolojisi, yenilebilir film detaylandırma ve depolama esnasında film karakterizasyonu ve stabilitesi analizleri yapılmıştır (López-Hernández ve ark. 2018). Demir hindi ekstraktının yenilbilir filmlere eklenmesinin filmlerin antioksidan özelliklerini arttırmakla birlikte, filmin mekanik özelliklerini de geliştirdiği ifade edilmiştir. Ayrıca filmin ışığa karşı duyarlılığını da azalttığı ifade edilmiştir (López-Hernández ve ark. 2018).

Aljinik asit sodyum tuzu, sürfaktanlar, lipidler ve ekstraktlara dayalı altı farklı yenilebilir film hazırlanarak karakterize edilmiştir. Ekstrakt olarak üzüm çekirdek ekstresi ve yeşil çay ekstresi kullanılmıştır. Elde edilen filmlerde; film mekanik özellikleri, SEM, FT-IR, renk, su buharı

geçirgenliği, antioksidan ve anti viral özellikler analiz edilmiştir. Kullanılan bu ekstraların antioksidan özelliği ve antiviral özelliği arttırdığı ifade edilmektedir (Fabra ve ark. 2018).

İki farklı yöntem ile ışık ekstresi ilaveli yenilebilir on iki adet filmin üretimi ve karakterizasyonun yapıldığı çalışmada film kalınlığı, su buharı geçirgenliği, çekme dayanımı ve uzama katsayısı, filmin renk özellikleri, antioksidan aktivite (FRAP, DPPH ve ABTS), FT-IR, SEM, termal gravimetrik analiz (TGA), biyobozunurluk, suda çözünürlük, absorbans, transmittans değeri ve antimikrobiyal aktivite analizleri yapılmıştır. Her iki yöntemle elde edilen filmlerin sarı-yeşil tona sahip olduğu, ışık ile film iskeletlerinin herhangi bir kimyasal etkileşime girmediği, dahası ışık ilavesinin antioksidan özelliğini arttırdığı belirtilmiştir. Ancak film örneklerinde antimikrobiyal etki tespit edilememiştir (Pekdoğan, 2021).

### **3. YENİLEBİLİR FİLM YAPIMINDA BİTKİ YAĞ EKSTRELERİNİN KULLANILDIĞI ÇALIŞMALAR**

Peynir altı suyu proteini izolat ortamına üç farklı oranda (%0,05, %0,10 ve %0,15) ayçiçek yağı dağıtılarak emülsiyon tekniği ile biyokompozit filmler oluşturulmuştur. Oluşturulan yenilebilir filmlerde kalınlık, nem içeriği, sudaki çözünürlük, nem absorpsiyon kinetiği, şişme indeksi, temas açısı, renk analizi, termal özellikler, partikül boyut dağılım analizi, su buharı ve oksijen geçirgenliği, tekstür analizi ve atomik direnç mikroskopisi analizleri yapılmıştır (Erdem Gökkaya ve ark. 2019). Düşük konsantrasyondaki ayçiçeği yağı ilavesinin filmlerin su buharı ve oksijen bariyeri özellikleri üzerinde olumlu bir etkiye sahip olduğu, filmlerin bariyer ve optik karakterlerinde herhangi bir olumsuz değişiklik yapmadığı, filmlerin hidrofobik özelliğini arttırdığı belirlenmiştir (Erdem Gökkaya ve ark. 2019).

Çay tohumu yağında pH ve vizkozite analizleri yapıldıktan sonra kitosan, tween 80 ve gliserol içeren karışıma %0,5'lik bir oranda ilave edilmiştir. Akabinde elde edilen filmlerde SEM, nem içeriği, film kalınlığı, su buharı geçirgenliği, antifungal özelliklerini tespit etmeye yönelik analizler yapılmıştır. Ayrıca bu çalışmada elde edilen filmler Japon armuduna kaplanarak gıda üzerindeki etkilerini ve raf ömrünü tespit etmeye yönelik olarak nem, brix, pH, renk, sertlik, duyu analizler, meyve çürümesi ve solunum miktarı tespit edilmiştir (Thi Tran ve ark, 2021). Bu yenilebilir kaplamalar, depolama sırasında armutların fizikokimyasal kalitesinde önemli bir değişiklik sağlamazken, pH, ve renk gibi bazı biyokimyasal özelliklerde hafif farklılıklara yol açmıştır. Çay tohumu yağının ilavesi ve konsantrasyona bağlı olarak filmlerdeki antifungal özelliği artırmıştır. Ve Japon armudunun raf ömründe önemli bir etkiye sahip olduğu

belirtilmiştir. Ancak yazarlar tarafından maliyeti düşürmek ve kullanımı artırmak için optimum konsantrasyonun belirlenmesi gerektiği ifade edilmiştir (ThiTran ve ark, 2021).

Çiya çekirdek yağından arındırılmış, kuru çiya müsilağı kullanılarak oluşturulan filmlerde nem içeriği, suda çözünürlük, su buharı geçirgenliği, renk, opaklık, ışık geçirgenliği, kalınlık ve mekanik dayanıklılık analizleri yapılmıştır (Muñoz-Tebar ve ark. 2021). Genel olarak, yağı alınmış undan yapılan filmlerin bütün tohumlardan yapılan filmlere göre daha elastik, daha iyi görünür ışık bariyeri, suda daha az çözünür, daha kalın ve daha az kırmızımsı olduğu belirtilmektedir (Muñoz-Tebar ve ark. 2021). Bu çalışmada elde edilen sonuçlar, tohum yağı ekstraksiyonundan elde edilen yağı alınmış unun, yenilebilir kaplamalar ve filmler geliştirmek için yararlı bir yan ürün ve gıdaların korunmasında uygun bir seçenek olabileceğini, böylece döngüsel ekonomiyi teşvik ettiğini ve atık miktarını azalttığını göstermiştir (Muñoz-Tebar ve ark. 2021).

Uçucu yağların biyopolimer bazlı ambalaj malzemelerine doğrudan dahil edilmesinin, çözünmezlik ve aktivite kaybı gibi çeşitli zorluklarla yol açabileceğini düşünen yazarlar, ilk olarak *Zataria multiflora* esansiyel yağının biyoaktivitesini, önce bir nanoemülsiyon yapıp, ardından fesleğen tohumu gamı bazlı film ağı içinde immobilize ederek film üretmeyi amaçlamışlardır. Bunun için birinci aşamada fesleğen tohumu gamında FT-IR analizi yapılmışlardır. İkinci aşamada *Zataria multiflora* esansiyel yağının GC-FID ile yağ analizi, damlacık boyu ve antimikrobiyal özellikleri tespit edilmiştir. Üçüncü aşamada özellikleri tespit edilen fesleğen tohumu gamı ve *Zataria multiflora* esansiyel yağı değişik oranlarda kombine edilerek yenilebilir filmler oluşturulmuştur. Son aşamada ise elde edilen filmlerde film kalınlığı, sudaki çözünürlük, mekanik özellikler, antimikrobiyal özellikleri, film bakteriyel kinetiği, filmin depolama sırasındaki *Zataria multiflora* stabiletisine bakılmıştır (Gahruie ve ark. 2017). Yazarları uçucu yağların biyopolimer bazlı filmlere yenilikçi bir şekilde dahil edilmesi, uçucu bileşenlerin salınmasını geciktirerek gıda ürünlerinin raf ömrünü uzatmada etkilere sahip olabileceğini düşünmektedir (Gahruie ve ark. 2017).

Değişik konsantrasyonlarda hodan çekirdek yağı, darı nişastası, sorbitol ve tween 80'nin kombine edilerek geliştirildiği yenilebilir filmlerde nem miktarı, filmlerin kopma uzama, gerilme kuvveti, suda çözünürlük, su buharı geçirgenliği, renk, antioksidan aktivite (FRAP, ABTS), SEM ve DSC analizleri yapılmıştır (Cao ve ark. 2017). Hodan çekirdek yağının filme dahil edilmesi, gerilme kuvvetini azaltırken, kopma uzama kuvvetini çıkarmıştır. Su buharı geçirgenliği, suda çözünürlük, nem içeriği artan hodan çekirdek yağı konsantrasyonu ile

azalırken, antioksidan aktivite artmıştır. Ayrıca hoda çekirdek yağlı filmler iyi bir ışık bariyeri özelliği göstermiştir (Cao ve ark. 2017).

Kekik esansiyel yağı (%1-6) içeren fesleğen tohumu sakızı ile yenilebilir filmler üretilerek antibakteriyel, antioksidan aktivite (DPPH, ABTS, FRAP), film kalınlığı, nem içeriği, şeffaflık, şişme indeksi, temas açısı ve su buharı geçirgenliği analizleri yapılmıştır. Özellikle belirtmelidir ki çalışmaya başlamadan önce kekik yağı GC-MS ile analiz edilerek yağ analizi yapılmıştır. Kekik yağına bağlı olarak film kalınlığı değişmediği, su buharı geçirgenliğinin azaldığı, nem içeriği, temas açısı, şeffaflık ve şişme indeksinin arttığı ifade edilmiştir. Filmlerin önemli bir antibakteriyel ve antioksidan özellik gösterdiği belirtilmiştir (Hashemi ve Khaneghah, 2017).

Ayva çekirdek müsilağı ve kekik esansiyel yağı ile oluşturulan yenilebilir filmlerde, film kalınlığı, nem içeriği, renk, suda çözünürlük, su buharı geçirgenliği, oksijen geçirgenliği, germe-çekme özellikleri, SEM, DSC, toplam fenolik madde analizi, antioksidan ve antimikrobiyal aktivite analizleri yapılmıştır. Kekik yağı içeren filmlerin önemli bir antimikrobiyal ve antioksidan aktivite gösterdiği belirtilmiştir. Camsı geçiş sıcaklığında bir azalma gözlemlenirken, oksijen ve su buharı geçirgenliğini etkilememiştir. Filmlerin uzama yüzdesi artarken, çekme mukavemeti önemli ölçüde azalmıştır (Jouki ve ark. 2014).

Kuşburnu çekirdek yağı, kitosan/tween 80/montmorillonite nanokil kompozitlerinin karışımı ile kombine edilerek biyokompozit filmler üretilmiştir. Oluşturulan filmlerin damlacık boyutu ölçümü, zeta potansiyeli analizi, FT-IR, SEM, mekanik ve bariyer testleri, gaz geçirgenlik testleri ve dinamik nem emme, antimikrobiyal ve antioksidan özellikler analiz edilmiştir. Kuşburnu tohumu yağının kitosan filmlerdeki varlığı, geliştirilmiş mekanik, gaz, su buharı bariyer özellikleri ile esnek filmlerin oluşumuna yol açmıştır. Ayrıca kuşburnu yağı filmlere artan bir antioksidan ve antibakteriyel özellik kazandırmıştır (Butnaru ve ark. 2019).

Başka bir çalışmada, nar çekirdeği yağı içeren peynir altı suyu proteini izolatu, κ-karagenan ve her ikisinin karışımı geliştirilerek biyokompozit film üretilmiştir. Daha sonra FT-IR, SEM, su buharı geçirgenliği, çözünürlük, mekanik, optik özellikler, salım testleri ve antimikrobiyal aktivite analizleri ile karakterize edilmiştir. Nar çekirdek yağı içeren film numuneleri daha yüksek uzama kapasitesi ve daha düşük su buharı geçirgenliği, çözünürlük ve şeffaflık değerleri göstermiştir. Nar çekirdek yağı içeren filmlerin anti-mikrobiyal aktivite sergilediği ifade edilmiştir (Sogut ve ark. 2019).

Hidroksipropil metilselüloz ve üzüm çekirdeği yağından yeni biyobazlı çok bileşenli yenilebilir filmler geliştirilmiştir. Su buharı geçirgenliği, nem analizi, renk, mekaniksel penetrasyon testi, ve antioksidan analizler yapılmıştır. Üzüm çekirdeği yağı ilavesiyle iyileştirilmiş su buharı geçirgenliği ve azaltılmış nem emilimi ile ifade edilen filmlerin hidrofobikliğinin arttığı belirtilmiştir. Filmlerin renk ve penetrasyon özellikleri de incelenmiştir. Saf selüloz film neredeyse renksizdir, ancak üzüm çekirdeği yağından soluk yeşilimsi sarı renk alarak daha koyu hale geldiği ifade edilmektedir. Filmlerin kırılma kuvvetinin üzüm çekirdeği yağı konsantrasyonundan bağımsız olduğu ancak filmler daha elastik bir yapı kazandığı belirtilmektedir. Son olarak, elde edilen filmlerin güçlü antioksidan aktivite gösterdiği bu nedenle gıda aktif ambalaj olarak kullanılabileceği yazarlar tarafından düşünülmektedir (Marudova ve ark. 2021).

Nişasta-kitosan harman filmlerine limon esansiyel yağı ve greyfurt çekirdeği ekstraktı ilavesinin fonksiyonel özellikleri ve ilgili yapısal değişiklikleri; filmlerin etkili esansiyel yağ içeriği, optik özellikleri, sudaki çözünürlüğü, çekme özellikleri, bariyer özellikleri, TGA, DSC, SEM, FT-IR, antibakteriyel ve antioksidan özellikler analiz edilerek belirlenmiştir. Limon esansiyel yağının eklenmesi ile filmlerde sarımsı bir renk oluştuğu, greyfurt çekirdeği ekstraktının film matriksine iyi bir şekilde dahil olduğu, limon esansiyel yağının ise polimer karışımı içinde dağıldığı ifade edilmiştir. Ekstrelerinin ilavesinin oksijen ve su buharı bariyeri özellikleri üzerinde bir değişikliğe yol açmadığı, ancak daha sert ve dayanıklı bir özellik kazandığı ifade edilmiştir. Antimikrobiyal etkinin gözlenmediği antioksidan aktivitenin ise troloxdan daha düşük olduğu belirtilmiştir (Bof ve ark. 2016).

Antioksidan kitosan bazlı yenilebilir filmler, tek başına ve kombinasyon halinde *Zataria multiflora* Boiss esansiyel yağı ve üzüm çekirdeği ekstresi ile birleştirilmiş olarak geliştirilmiştir. Filmlerin fiziko-mekanik, kalınlık, su buharı geçirgenliği, ıslanabilirlik, şişme indeksi, renk, toplam fenol ve antioksidan özellikleri incelenmiştir. İncelenen birçok parametrenin kombinasyon ve konsantrasyona bağlı olduğu belirtilirken, üzüm çekirdeği ekstresi ve *Zataria multiflora* Boiss esansiyel yağı'nın kitosan filme dahil edilmesinin, yüzeyin ıslanabilirliğini, toplam fenol ve antioksidan aktiviteyi artırdığı ve rengi koyulaştırdığı ifade edilmektedir (Moradi ve ark. 2012).

İncir çekirdeği yağı, erik çekirdeği yağı, kayısı çekirdeği yağı farklı koşullarda uygulandığında kitosan polimerinin antimikrobiyal kapasitesinin sinerjistik olarak artırılıp artırılamayacağını test etmek için yapılan çalışmada antimikrobiyal, antiviral, MD simülasyonu analiz edilmiştir.

Kullanılan yağlar içerisinde incir yağının etkili olduğu ve bozulmayı önemli ölçüde engellediği belirtilmiştir (Baykara ve ark. 2021).

Kitosan-nanomontmorillonite ve karboksimetil selülozın antioksidan, antimikrobiyal ve bazı fizikokimyasal özelliklerini geliştirmek için *Ziziphora clinopodioides* esansiyel yağı ve metanolik incir (*Ficus carica*) ekstraktının kombinasyon halinde kullanılmıştır. Çalışmanın ilk kısmında *Ziziphora clinopodioides* esansiyel yağının GC-MS ile analizi yapılmıştır. Bu analiz neticesinde ana bileşiklerin sırasıyla karvakrol (%65.22) ve timoldü (%19.51) olduğu ifade edilmiştir. *Ziziphora clinopodioides* esansiyel yağı ve incir (*Ficus carica*) ekstraktınınlı filmler ayrı ayrı ve kombine halinde hazırlanan filmlerin su emme özelliğini, çekme mukavemetini, kopma uzamasını, delinme kuvvetini ve delinme deformasyonunu azaltmıştır. Antioksidan ve antimikrobiyal aktivite kombinasyon ve konsantrasyona bağlı olarak değişmektedir. Ekstreler filmleri ışık intoleransına karşı daha dayanıklı hale getirmiştir (Shahbazi, 2018).

#### **4. SONUÇ**

Bitki ve yağ ekstraktlarının film oluşumlarında kullanılması filmin antioksidan, antimikrobiyal, antiviral, antifungal, antikanser yani biyolojik aktivitelerini arttırdığını söyleyebiliriz. Ancak oluşan filmlerin hangisinin daha iyi olduğunu kesin olarak söylemek mümkün değildir. Kullanıldığı gıdaya göre etki ve koruyuculuğu değişmektedir. Genel olarak incelediğimiz çalışmalarda daha çok karakterizasyon çalışmalarına yer verildiğini görmekteyiz. Elde edilen filmlerin gıda maddesi üzerine uygulama yapılmasının faydalı olduğunu düşünmekteyiz.

## **ÖZET**

Gıdaların muhafazasında veya üretiminde sirke ile tuzun koruyucu etkisi çok eski zamanlardan beri bilinmektedir. Sirke iki aşamalı fermente bir ürün olmakla birlikte, ilk aşamada mayalar şekerleri anaerob koşullarda etil alkole, ikinci aşamada ise aerob koşullarda etil alkolün asetik asit bakterileri tarafından asetik aside dönüştürülmesiyle elde edilmektedir. Tuz ise gıdalara tad verme veya raf ömrünün uzatılması amacıyla kullanılmakta, doğada tuzlu yüzey suları, kaya tuzları ve yeraltındaki tuz kaynaklarından temin edilmektedir. Yapılan bu çalışma, tuz ve meyve sirkeleri arasında en çok tüketilenlerden biri olan elma sirkesinin farklı kombinasyonlarındaki çözeltilerinin önemli gıda patojenlerine (*S. aureus* ve *E. coli* O157:H7) karşı antibakteriyel etkisinin belirlenmesi amacıyla yapılmıştır. Bu çalışmada sirke ve tuz kombinasyonlarının bakterilere karşı antibakteriyel etkisi, pH, briks, renk (*L*, *a*, *b*) değerleri ve ticari antibiyotiklerin bakterilere karşı etkisi incelenmiştir. Sonuç olarak bu çalışmada sirkenin tuza göre daha yüksek antibakteriyel etki gösterdiği, kullanılan ticari antibiyotiklerin çoğuna göre daha yüksek düzeyde etkili olduğu anlaşılmıştır. Böylece bu ürünlerin kullanımına yönelik tüketici tercihlerinde etkili olabileceği düşünülmektedir.

**Anahtar kelimeler:** Antibakteriyel, elma sirkesi, tuz.

**INVESTIGATION of THE ANTIBACTERIAL EFFECT of DIFFERENT COMBINATIONS of VINEGAR and SALT AGAINST *S. aureus* and *E. coli* O157:H7****ABSTRACT**

The protective effect of vinegar and salt in food preservation or production has been known since ancient times. Although vinegar is a two-stage fermented product, yeasts convert sugars to ethyl alcohol under anaerobic conditions in the first stage, and in the second stage, by converting ethyl alcohol to acetic acid under aerobic conditions by acetic acid bacteria. Salt, on the other hand, is used to add flavor to foods or to extend their shelf life, and is obtained from salty surface waters, rock salts and underground salt sources in nature. This study was carried out to determine the antibacterial effect of apple cider vinegar, which is one of the most consumed salt and fruit vinegars, in different combinations of solutions against important food pathogens (*S. aureus* and *E. coli* O157:H7). In this study, the antibacterial effect of vinegar and salt combinations against bacteria, pH, brix, color (*L, a, b*) values and the effect of commercial antibiotics against bacteria were investigated. As a result, in this study, it was understood that vinegar showed a higher antibacterial effect than salt and was more effective than most of the commercial antibiotics used. Thus, it is thought that it may be effective in consumer preferences for the use of these products.

**Key words:** Antibacterial, apple cider vinegar, salt.

## **GİRİŞ**

Dünya genelinde en çok tüketilen ve ticareti yapılan yumuşak çekirdekli meyvelerden biri olan elma ülkemizin neredeyse her bölgesinde yetiştirilmekte olan besleyici niteliği yüksek olan bir meyvedir (Tangüler vd., 2021). Dünya genelinde üretim alanı ve miktarı (4.833.841 ha/83.139.326 ton) bakımından değerlendirildiğinde; yaprağını döken meyve türleri içerisinde ilk sırada bulunan elmanın (Mertoğlu ve Evrenosoğlu, 2019), en yüksek üretim miktarı Çin, Amerika Birleşik Devletleri (ABD) ve ülkemizde gerçekleştirilmektedir (Sülük vd., 2018; Tangüler vd., 2021). Yaygın bir kullanım alanına sahip olan elma meyve olarak taze tüketilmesinin yanında reçel, marmelat, meyve suyu, çay ve sirke gibi ürünlere işlenerek de sofralarımızı zenginleştirmektedir (Sülük vd., 2018). Ancak ham ve ekşi elma türleri sirke üretimi için uygun bulunmamakta, şeker oranı yüksek olan kış elmaları önerilmektedir (Öztürk vd. 2009).

Bununla birlikte Fransızca Vin aigre “Ekşi şarap” kelimesinden türetilen sirke antimikrobiyal, antioksidan, antikarsinojenik özellik taşıyan; alkol ve asit fermantasyonları sonucu elde edilen bir üründür (Öztürk vd. 2009; Konuş vd. 2020). Bu nedenle fermantasyon esnasında ilk aşamada anaerobik koşullarda mayalar, fermente olabilir şekerleri etil alkole dönüştürmekte, ikinci aşamada ise aerobik koşullarda sirke bakterileri (Acetobacter ve Gluconobacter) etil alkolü asetik asite (sirke asidi) yani sirkeye dönüştürmektedir ve bu dönüşüm sonucu elde edilen sirkenin, standartlar (Tük Gıda Kodeksi ve ABD) gereği en az %4 oranında asetik asit içermesi gerekmektedir (Altunbağ ve Zencir, 2018). Üretiminde hammadde olarak birçok madde kullanılmakla birlikte (meyve, malt, tahıl, bal, peynir altı suyu vb.) meyve sirkesi üretiminde başta üzüm ve elmadan yararlanılmaktadır (Ünal ve Canbaş, 2008; Yücel Şengül ve Kılıç, 2019). Keşfi çok eskiye dayanan sirkenin kullanımı Hipokrat’a kadar gitmektedir. Lezzet vermesinin yanı sıra gıda koruyucu özelliği ve tıbbi amaçlarla da sirkeden çok eskiden beri faydalandığı bilinmektedir (Öztürk vd. 2009). Ancak bu denli faydalı etkilere sahip olan sirkenin, Türk yemeklerinde kullanımının yapılan bazı araştırmalarla birlikte tahmin edilen kadar yaygın olmadığı görülmektedir (Altunbağ ve Zencir, 2018).

Önemli bir kimya sanayi hammaddesi olan tuz ise gıdaya lezzet vermesinin yanı sıra gıda güvenliği açısından patojen ve bozulma yapan mikroorganizmalara karşı koruyucu olarak yararlandığımız önemli bir besin maddesidir (Alp vd., 1995; Akgün vd., 2018). Tuz kullanımı ile istenilmeyen tatlar (acı, metalik, kimyasal) maskelenebilirken, istenilen bazı tatların (tatlılık gibi) yoğunluğu da arttırılabilmektedir (Akgün vd., 2018). Taşıdığı bu özellikler nedeniyle tuz

ve sirke kombinasyonlarından marinat üretiminde de yararlanılmaktadır (Çetinkaya, 2017). Tuz materyale sertlik verirken, sirke yumuşaklık vermektedir. Ancak her ne kadar sirke/tuz kombinasyonunun konserve edici etkisi olsa da esas koruyucu etki asitten kaynaklanmaktadır (Varlık vd. 1993). Asetik asitin bu koruyucu etkisi ise ortamın pH ve sıcaklığına, iyonlaşma sabiti ( $K_a$ ) derecesine, hedef mikroorganizmanın türüne ve kullanılan diğer antimikrobiyal maddelere bağlı olarak değişebilmektedir (Ayhan ve Bilici, 2015). Erzurum'da piyasadan temin edilen salata malzemelerinden biri olan havuç, hıyar ve marulun *Escherichia coli* ve *Staphylococcus aureus* ile kontamine edildikten sonra %3 sirke çözeltisinde belirli süre (0, 5, 15 ve 30 dakika) tutulması sonucu her mikroorganizma sayısında bir miktar düşüş tespit edilmiş ve %3 gibi düşük konsantrasyonda sirkenin salata dezenfeksiyonunda kullanılabileceği kanısına varılmıştır (Elhan, 2014). Başka bir çalışmada sirkenin *Escherichia coli* O157:H7 dahil birçok gıda kaynaklı patojenlere karşı antibakteriyel özelliğinin olduğunu ve sirkede bulunan asetik asidin %0.1 oranında tüm mikroorganizmaların gelişimini engellediğini bildirmişlerdir (Entani vd., 1998).

Üretici ve tüketicileri bilinçlendirmeye yönelik olarak gerçekleştirilen bu çalışmada ise farklı konsantrasyonlardaki elma sirkesi ve tuz kombinasyonlarından hazırlanan çözeltilerin fizikokimyasal (pH, briks, renk) özellikleri ile önemli gıda patojenlerine (*S. aureus* ATCC 29213 ve *E. coli* O157:H7 ATCC 43888) karşı antibakteriyel etkisi belirlenmeye çalışılmıştır.

## **MATERYAL VE METOD**

Bu çalışmada iki farklı markaya ait ticari elma sirkeleri kullanılmıştır. Çalışma kapsamında öncelikle farklı konsantrasyonlarda (%0, 25, 50, 100) sirke ve tuz (%0, 2.5, 5, 10) çözeltileri hazırlanmıştır. Daha sonra hazırlanan bu çözeltiler sırasıyla birbiri ile kombine edilerek toplamda 16 farklı kombinasyon halindeki solüsyonların analizleri gerçekleştirilmiştir.

**pH değerinin belirlenmesi:** Cemeroğlu (2013) tarafından önerilen metoda göre pH metre (Mettler Toledo, S220 Seven Compact™, Çin) kullanılarak ölçümler gerçekleştirilmiştir.

**Briks Analizi:** Rekraktometre (Hanna® HI 96801, Romanya) kullanılarak Cemeroğlu (2013) tarafından önerilen metoda göre yapılmıştır.

**Renk Analizi:** Örnekler için Renk değerlerinin belirlenmesi: Pen Color Art 1 L model, Artoksi MSM, İstanbul, Turkey markalı cihaz kullanılmıştır. Her örnek için üç tekrarlı ölçümlerle ortalamalar alınarak ( $L$  (koyuluk/açıklık),  $a$  (+kırmızılık/-yeşillik),  $b$  (+sarıklık/-mavilik)) değerlendirilmiştir (Hunter ve Pointer, 2011).

**Standart bakteri suşlarının standart antibiyotiklere karşı duyarlılığı:** Bu kapsamda test edilen bakteri suşları (*S. aureus* ATCC 29213, *E. coli* O157:H7 ATCC 43888) Giresun Üniversitesi'nden temin edilmiştir. Bakterilerin antibiyotiklere karşı direncini belirlemede disk diffüzyon yöntemi kullanılmıştır (Temiz, 2010). Buna göre; öncelikle bakteri suşları Tryptic Soy Agar (TSA, Merck) besiyerinde tekrar aktif hale getirilerek, içinde serum fizyolojik tuzlu su bulunan deney tüplerinde yoğunluğu 0.5 McFarland standardına göre ayarlanmıştır. Mueller-Hinton (Mueller-Hinton Agar, Merck) besiyerine steril eküvyon çubukları ile yayma yöntemi kullanılarak her bir bakteri suşu inoküle edilmiş, sonrasında standart antibiyotikler (Streptomycin 10 µg (Oxoid, S10), Penicilin 10 µg (Oxoid, P10), Amoxycillin/Clavulanic asit 30 µg (2:1; Oxoid, AMC 30) ve Cephalexin 30 µg (Oxoid, CL 30) disk diffüzyon yöntemine göre steril pens ile aralarındaki mesafe en az 2 cm olacak şekilde besiyeri üzerine yerleştirilmiştir. Bu işlemde sonra petri ters çevrilerek 37 °C'de 18-24 saat aerob koşullarda inkübasyona bırakılmıştır. İnkübasyon sonunda oluşan şeffaf zon çapları dijital kumpasla ölçülerek değerlendirilmiştir.

**Sirke ve tuz kombinasyonlarının antibakteriyel etkisinin belirlenmesi:** Sirke ve tuzun farklı kombinasyonlarının antibakteriyel etkinin belirlenmesinde delik agar diffüzyon yöntemi kullanılmıştır (Temiz, 2010). Bu yöntemde; Mueller-Hinton besiyerine her bakteri suşu ayrı ayrı inoküle edilmiş, bakteri solusyonunun besiyerine emilmesinden sonra, besiyeri üzerine 0.5 cm çaplarında her bir kuyucuk arasında en az 2 cm olacak şekilde kuyucuklar açılmıştır. Önceden hazırlanan kombinasyonların herbirinden ayrı ayrı 20µL olacak şekilde kuyucuklara aktarılmış, yaklaşık 20 dakika boyunca besiyerine emilmesi sağlanmıştır. Sonra petri ters çevrilerek 37 °C'de 18-24 saat aerob koşullarda inkübasyona bırakılmıştır. İnkübasyon sonunda oluşan şeffaf zon çapları dijital kumpasla ölçülerek değerlendirme yapılmıştır. Tablo 1'de ise zon çapına bağlı olarak antimikrobiyal şiddetin yorumlanması için kullanılan değerler gösterilmiştir.

**Minimum inhibisyon konsantrasyon (MİK) Değerinin belirlenmesi:** Temiz (2010)'un önerdiği yöntem modifiye edilerek gerçekleştirilmiştir. Sirke (%100) ile tuzun (%10) çözeltilerinin birlikte iki kat seyreltileri hazırlanmış, ardından bu çözeltilere her bakteri suşu ayrı ayrı inoküle edilerek 37°C'de 18-24 saat inkübe edilmiştir. Sonra bakteri içeren bu tüplerden bir öze dolusu kültür alınıp, *S. aureus* için Baird Parker agara, *E. coli* için Eosin Methylene Blue (EMB) Agara tek koloni düşürme tekniğiyle çizimler yapılmıştır. Daha sonra petri ters çevrilerek tekrar 37 °C'de 18-24 saat inkübe edilmiştir. İnkübasyon sonunda üreme

gösteren tipik koloniler pozitif (+), üreme olmayan kısımlar ise negatif (-) olarak değerlendirilmiştir.

**Tablo 1.** Zon çapına bağlı olarak antimikrobiyal etki şiddetleri (Ponce vd. 2003 )

Zon çapı (mm)	Antimikrobiyal şiddet	Tespit
Çap<8.00	Etkisiz	-
9.00<Çap<14.00	Düşük etkili	+
15.00<Çap<19.00	Etkili	++
Çap>20.00	Aşırı etkili	+++

**İstatistiksel analiz:** Çalışmada elde edilen bulguların değerlendirilmesinde SPSS 22.0 istatistik paket programı kullanılmış, ölçümlerin ortalaması alınarak varyans analizine tabi tutulmuş, önemlilik seviyesinin belirlenmesinde de korelasyon analizi uygulanmıştır.

## BULGULAR VE TARTIŞMA

Yapılan bu çalışmada tuz ve sirke kombinasyonlarından elde edilen çözeltilerinin fizikokimyasal özellikleri Tablo 2'de sunulmuştur.

**Tablo 2:** Tuz ve sirke kombinasyonlarının fizikokimyasal özellikleri

Gıdaların pH değerleri; gıdanın asidik bazik oluşu, işlem süreçleri, depolaması ve kalitesi hakkında bilgilendiren ve mikroorganizmaların gelişimleri üzerine etkili olan iç faktörlerden biridir (Temiz, 2015). Çalışmada kullanılan elma sirkesinin pH değeri  $2.47 \pm 0.03$  olarak tespit edilmiştir. Belirlenen pH değerinin Hill vd (2005), Budak (2010), Ozturk vd. (2015), Bayram vd. (2018), Bozdemir vd. (2021), Kahraman vd. (2022)'nin gerçekleştirmiş olduğu çalışmalarda elma sirkesinde tespit etmiş olduğu pH değerlerinden daha düşük olduğu görülmüştür. Sirkenin saf suyla seyreltilmesiyle birlikte pH değerinin yükseldiği görülmüştür. Bununla birlikte tuzlu su ilavesiyle birlikte pH'nın bir miktar azaldığı belirlenmiştir. Yapar ve Atay (2005), farklı oranlarda tuz (%0-1-2) ve fosfat çözeltilerinin Turna balığının bazı emülsiyon özelliklerine olan etkisini incelediği çalışmada tuzun pH değerleri azaltıcı etki gösterdiğini ancak bu etkinin istatistiki açıdan önemli olmadığını belirtmiştir. Yine Yıldız Turp ve Atalı (2021) tuz ilavesinin, etin su aktivitesi ve pH değerini düşürdüğünü ve mikrobiyel açıdan koruma sağladığını söylemiştir. Akgün vd. (2018) ise her tuzun kendine özgü bir pH değerine sahip olduğunu ve saf suyun pH değerinin NaCl eklenmeye başladıkça arttığının belirtildiğine değinmiştir. Lu vd. (2013) sirke ilavesinin salamuranın pH değerini düşürdüğünü belirtmiştir. Chancellor ve Elsharafi (2016) farklı konsantrasyonlarda sodyum klorür içeren salamuranın pH değerlerini incelediğinde %1 konsantrasyonda pH 6.2 iken %2 ve %5 konsantrasyonda 5.8, %10 da 5.9, %12.5 ta 6.6 %15 te 6.4 %17.5-%20 de 6.6 olarak belirlemiştir. Bahsedilen çalışmalar değerlendirildiğinde, sirkelerde belirlenen farklı pH değerlerinin, kullanılan sirke materyaline ve sirkeye uygulanan işlemlere bağlı olarak değiştiği düşünülmektedir. İstatistiksel olarak değerlendirildiğinde ise pH üzerinde kuru madde, renk değerleri ( $L$ ,  $a$ ,  $b$ ), sirke tuz kombinasyon oranlarının etkili olduğu görülmüştür ( $p < 0.01$ ).

Gıdalarda kuru madde denilince suyun dışında kalan tüm organik ve inorganik maddeler ifade edilmektedir. Suda çözünen kuru madde miktarı ise briks olarak ifade edilmektedir (Cemeroğlu, 2013). Çalışmada kullanılan sirkenin briks değeri ise  $2.2 \pm 0.14$  olarak belirlenmiştir. Çalışmamızda tespit ettiğimiz bu değer Ozturk vd. (2015)'nin geleneksel elma sirkelerinde (1.02-12.90) tespit ettiği briks değeri aralığındayken, Budak (2010)'ın, yüzey kültür ve derin kültür yöntemi ile üretilen elma sirkesi (%5.5-6) çeşitlerinde tespit ettiği suda çözünür kuru madde değerlerinden daha düşük olduğu görülmüştür. Bu farklılıkların ortaya çıkması sirke materyalinin ve değişik üretim tekniklerinin etkili olabileceğini düşündürmektedir. İstatistiki olarak briks değerinin, sirke-tuz konsantrasyonu ve renk ( $a$  ve  $b$ ) değerleri arasında önemli bir korelasyon gösterdiği anlaşılmıştır ( $p < 0.05$ ).

Renk, gıdaların tüketiciler tarafından tercih edilmesinde, genel olarak gıdanın kalitesi hakkında bilgi vermesi yönüyle önemli parametrelerden biridir. Yapılan bu çalışmada kullanılan sirkelerin  $L$ ,  $a$  ve  $b$  değerleri sırasıyla  $19.11 \pm 0.99$ ;  $-1.04 \pm 0.47$ ;  $4.04 \pm 1.95$  olarak belirlenmiştir. Yapılan başka bir çalışmada ise piyasadan temin edilen elma sirkelerinin  $L$ ,  $a$ ,  $b$  değerinin sırasıyla  $9.16-14.31$ ;  $0.50-9.28$ ;  $15.71-24.02$  arasında değişim gösterdiği gözlenmiştir (Bayram vd. 2018). Başka bir çalışmada ise geleneksel el yapımı elma sirkelerinde  $L$ ,  $a$ ,  $b$  değerleri sırasıyla  $4.48-20.15$ ;  $0.09-6.66$ ;  $3.71-11.98$  arasında değişim gösterirken, ticari elma sirkesinde  $12.03$ ;  $0.32$ ;  $4.91$  olarak belirlenmiştir (Ozturk vd. 2015). Renk değerlerinde görülen bu farklılıkların analiz edilen sirkelerin üretim teknikleri veya markalarıyla ilişkili olabileceği düşünülmektedir. Çalışmamızda kullanılan kombinasyonlar değerlendirildiğinde ise renk değerlerinin konsantrasyonlara bağlı olarak değiştiği;  $L$ ,  $a$  ve  $b$  değerlerinin ise sırasıyla  $24.05-30.43$ ,  $-2.52-0.50$  ve  $-1.01-8.64$  olduğu tespit edilmiştir. Yapılan istatistiki değerlendirmeler sonucunda  $L$  değerinin kuru madde, pH, renk ( $a$  ve  $b$ ) değerlerine bağlı olarak önemli değişiklik gösterdiği görülmüştür ( $p < 0.01$ ). Ayrıca  $a$  değerlerinde artışa bağlı olarak  $b$  değerlerinde azalma olduğu görülmüştür ( $p < 0.01$ ).

Sirke ve tuz kombinasyonlarının *E. coli* O157:H7 ve *S. aureus* bakterilerine karşı antibakteriyel etkileri (Şekil 1) ve etki şiddetleri Tablo 3'te belirtilmiştir. Mikrobiyolojik açıdan incelendiğinde sadece farklı tuz konsantrasyonlarının kullanılmasının *E. coli* O157-H7 ve *S. aureus*'a karşı inhibisyon etki oluşturmadığı ancak sirke konsantrasyonunda artışa paralel olarak inhibisyon etkinin giderek yükseldiği görülmüştür. Ancak %50 ve üzerinde sirke kullanılan örneklere eklenen tuzun, %5 düzeyinde ilavesi durumunda *S. aureus*'a karşı inhibisyon etkiyi arttırdığı belirlenmiştir. Genel itibariyle tüm örneklerde konsantrasyon artışına bağlı olarak antimikrobiyal etkide artış gözlenmiştir. Benzer şekilde Yeniçeri ve Hallaç (2021) sumak konsantresi düzeyinin artışına bağlı olarak, çeşitli patojenler üzerinde inhibisyon etkinin arttığını ve iki kat seyreltilen sumak konsantresinin *S. aureus*'a karşı inhibisyon etkisinin (23.20 mm) 64 kat seyreltilene (9.80 mm) göre daha yüksek olduğunu gözlemlemiştir. Yine Kelebek vd. (2017) *S. aureus* ATCC 29213'e karşı elma sirkesinin inhibisyon zon çapını 9.00-13.33 mm olarak belirlerken, Budak vd. (2022) *S. aureus* ATCC 25923'e karşı herhangi bir etki göstermediğini tespit etmişlerdir. Yapılan başka bir çalışmada ise bazı geleneksel el yapımı elma sirkelerinin *S. aureus* ve *E. coli* O157:H7 üzerinde inhibisyon etkisi yokken, bazı geleneksel elma sirkelerinin ve ticari sirkelerin *S. aureus*'a (geleneksel olanın 7.64-20.12 mm, ticari sirke 9.34 mm) ve *E. coli* O157:H7'e karşı (geleneksel olanın 10.40-15.16 mm, ticari

olanın ise 8.42 mm) inhibisyon etkisi olduğu görülmüştür (Ozturk vd. 2015). Çalışmalarda gözlemlenen bu farklılıkların sirke üretim tekniği, sirkenin antioksidan, fenolik ve organik asit içeriği, sirkeye uygulanan muameleler gibi birçok sebepten kaynaklanabileceği düşünülmektedir.

**Tablo 3:** Sirke ve tuz kombinasyonlarının *E. coli* ve *S. aureus* bakterilerine karşı antibakteriyel etkisi ve şiddetleri

Tuz/Sirke	<i>E. coli</i> O157:H7	<i>S. aureus</i>	<i>E. coli</i> O157:H7	<i>S. aureus</i>
0/0	-	-	-	-

10/50	21.33±0.57	18.33±0.57	+++	++
10/100	31.66±0.57	30.00±1.00	+++	+++

**Şekil 1:** Bazı tuz ve sirke kombinasyonlarının bakterilere karşı antibakteriyel etkileri (delik agar diffüzyon yöntemi)

Gıda kaynaklı patojenlerden olan *E. coli* O157:H7 ve *S. aureus* bakterilerinin standart antibiyotiklere karşı duyarlılığı Tablo 4’te belirtilmiştir (Şekil 2). *S. aureus* ATCC 29213

suşunun çalışmada kullanılan S10, P10, AMC30 ve CL30 antibiyotiklerine karşı sırasıyla 18.66, 26.00, 27.33 ve 28.00 mm zon oluştururken, *E. coli* O157:H7 ATCC 43888 suşunun aynı antibiyotiklere karşı sırasıyla 28.33, 0, 26.33, 7.66 mm zon oluşturduğu görülmüştür. Hallaç vd. (2022) ise yaptıkları çalışmada aynı antibiyotiklere (S10, P10, AMC30 ve CL30) karşı *S. aureus* ATCC 29213 suşunun sırasıyla 16.33, 33.83, 31.50 ve 26.83 mm, *E. coli* O157:H7 ATCC 43888 suşunun ise 19, 0, 18 ve 20.33 mm zon oluşturduğunu belirlemişlerdir.

Sirke/tuz kombinasyonları antibakteriyel etki şiddetleri yönünden incelendiğinde; *E. coli* O157:H7 üzerine S10 ile 0-50 oranında tuz-sirke kombinasyonunun ve yine *S. aureus* üzerine S10 ile tuz-sirke kombinasyonlarının (0-10, 5-50, 10-50) benzer etki (++) gösterdiği anlaşılmaktadır. *E. coli* O157:H7 üzerine sirkenin ilave edildiği tüm konsantrasyonlarının P10 ve CL30'dan daha etkili olduğu gözlenmiştir.

**Tablo 4:** Gıda patojenlerinin standart antibiyotiklere karşı dirençliliği/duyarlılığı (mm)

Bakteri türü	Ticari antibiyotikler			
	S10	P10	AMC30	CL30
<i>S. aureus</i> ATCC 29213	18.66±0.57	26.00±1.00	27.33±0.57	28.00±0.00
<i>E. coli</i> O157:H7 ATCC 43888	28.33±0.57	0	26.33±0.57	7.66±0.57

**Şekil 2.** Ticari antibiyotiklerin bakterilere karşı etkinliği (disk diffüzyon yöntemi)

Minimum inhibisyon konsantrasyon (MİK) değeri, üreme olmayan en düşük antimikrobiyal madde konsantrasyonu olarak kabul edilmektedir (Temiz, 2010). Yapılan bu çalışmada tespit edilen MİK değerleri Tablo 5’te sunulmuştur. MİK değerleri yönünden sadece sirkenin *E. coli* O157:H7 için 1/128, *S. aureus* için 1/512 olması nedeniyle *S. aureus*'a karşı daha etkili olduğu belirlenmiştir. Diğer taraftan sirke (%100) ve tuz (%10) kombinasyonunda *E. coli* O157:H7 için 1/128, *S. aureus* için ise 1/16 seviyesinde MİK değerleri saptanmıştır. Böylece *S. aureus*'a nazaran *E. coli*'ye karşı daha fazla etki gösterdiği belirlenmiştir. Yapılan başka bir çalışmada elma sirkesinin önemli patojen mikroorganizmalardan olan hem *S. aureus* ATCC 43300 hem de *E. coli* O157:H7 ATCC 35150’ye karşı MİK değeri %12.5, MBK değeri ise %25 olarak belirlenmiş ve sirkenin sahip olduğu antibakteriyel aktivitesinin, toplam fenolik ve organik asit içerikleri ile ilişkili olduğu ifade edilmiştir (Kahraman vd. 2022). Yine Baldas ve Altuner (2018) elma sirkesinin *S. aureus*’a karşı MİK değerini 25 µg/mL olarak belirlemişlerdir. MİK değerlerinin kullanılan bakteri türüne, sirkenin kalitesine ve kullanılan metoda göre değişiklik gösterebileceği düşünülmektedir.

**Tablo 5:** Sirke ve tuz kombinasyonlarının patojen bakterilere karşı MİK değerleri

Minimal İnhibisyon Konsantrasyon (MİK) Değerleri										
Çözeltiler	½	1/4	1/8	1/16	1/32	1/64	1/128	1/256	1/512	Bakteriler
Sirke	-	-	-	-	-	-	+	+	+	<i>E. coli</i> O157:H7
	-	-	-	-	-	-	-	-	+	<i>S. aureus</i>
Sirke+Tuz	-	-	-	-	-	-	+	+	+	<i>E. coli</i> O157:H7
	-	-	-	+	+	+	+	+	+	<i>S. aureus</i>

## SONUÇ ve ÖNERİLER

Bu çalışma sonucunda pH ‘nın sirke kullanım seviyesi arttıkça düştüğü, kurumadde miktarının da tuz kullanım seviyesi arttıkça yükseldiği gözlenmiştir. Genel olarak renk değerleri yönünden değerlendirildiğinde sirke miktarı arttıkça parlaklığın (*L*) azaldığı, tuz miktarının artışında ise parlaklığın arttığı; sirkenin ve tuzun kullanım seviyesi arttıkça *a* değerinde bir azalma meydana geldiği; *b* değerinin ise sirke miktarı arttıkça yükselme, tuz miktarı arttıkça azalmanın olduğu gözlemlenmiştir. Yapılan bu çalışmada antimikrobiyal özellikleri yönünden sirkenin tuza göre daha etkili olduğu ancak birlikte kullanılmaları durumunda tuzun kısmi olarak antimikrobiyal etki gösterdiği anlaşılmıştır. Sirkenin bakteri türüne farklı seviyelerde etki ettiği, MİK değerleri

yönünden incelendiğinde sirke kullanılması durumunda *S. aureus*'a karşı *E. coli* O157:H7'den daha etkili olduğu belirlenmiştir. Diğer taraftan sirke (%100) ve tuz (%10) kombinasyonunun kullanılması durumunda *E. coli* O157:H7' ye karşı *S. aureus*'tan daha fazla etkili olduğu saptanmıştır. Sonuçta gıda güvenliği açısından değerlendirildiğinde bu patojenlere karşı en az %5 tuz ve %50 sirke kombinasyonunun kullanılması durumunda etkili olduğu görülmüştür. Tüketicilerin temizlik-dezenfeksiyonda, gıda muhafazası ve gıda üretiminde (turşu, mayonez gibi) bu değerleri gözönünde bulundurmaları gerekliliği ortaya konulmuştur. Böylece sirke veya sirke-tuz kombinasyonunun sentetik antibiyotiklere ve çeşitli kimyasal dezenfektanlara alternatif olabileceği belirlenmiştir.

**ÖZET**

Safevi Devleti Şah İsmail tarafından 1501 tarihinde Tebriz de kurulmuştu. Devlet Şii Mezhebini benimsemişti. Şah İsmail Şii mezhebini İran’a ve ardından diğer civar bölgelere yaymayı hedeflemişti. Anadolu da baş gösteren Şii tehlikesi ve Şah Kulu isyanın bastırılmasından sonra Yavuz Sultan Selim Safevi Devleti üzerine sefere çıktı. Şah İsmail ile Osmanlı Hükümdarı Yavuz Sultan Selim arasında 1514 yılında Çaldıran Savaşı yapıldı. Anadolu, Safevi tehlikesinden kurtuldu. Ancak Osmanlı Devleti ile Safevi Devleti arasında 250 yıl sürecek uzun soluklu bir mücadele yaşanmaya başlandı. Bu mücadele bilhassa 18. yüzyılın 2. çeyreğinde yoğunluk kazandı. Safevi Devleti doğuda Afganlı Mir Mahmud’un saldırısına, kuzeyde ise Rusların istilasına maruz kaldı. Osmanlılar bölgenin Rus istilasına uğramaması için İran’ın batı topraklarına ve Kafkasya’ya yönelik 1723 tarihinde başarılı seferler düzenledi ve önemli şehirler alındı. Bu şehirler içerisinde tarihi İpek yolu üzerinde bulunan Gence’ de vardı. Bölge zapt edildikten sonra çeşitli sınıflara mensup askeri birlikler kaydırıldı. Bu çalışmada; Osmanlı arşiv kayıtları incelenerek bölgeye intikal ettirilen Osmanlı askeri sınıfları ve bu sınıfların ifa ettikleri görevler irdelenmiştir. Gence de bulunan askeri sınıfların nefer sayısı, yevmiye ve mevacicileri ortaya konulmuştur. Konunun daha iyi anlaşılması maksadıyla bazı askeri birliklerin sayısı ve elde ettikleri gelirler tablolar halinde gösterilmiştir.

**Anahtar kelimeler:** Gence, Safevi, Osmanlı Devlet, Askeri Sınıf

**OTTOMAN MILITARY CLASSES IN THE REGION AFTER THE CONQUEST OF  
GANJA (1723- 1730)****ABSTRACT**

The Safavid Empire was founded by Shah Ismail in 1501 in Tabriz. The state had adopted the Shiite Sect. Shah Ismail aimed to spread the Shiite sect to Iran and then to other surrounding regions. After the Shiite threat emerged in Anatolia and the suppression of the Shah Kulu rebellion, Yavuz Sultan Selim went on a campaign against the Safavid State. The Battle of Çaldıran was fought between Shah İsmail and the Ottoman ruler Yavuz Sultan Selim in 1514. Anatolia was saved from the Safavid danger. However, a long-term struggle began to take place between the Ottoman Empire and the Safavid Empire, which would last for 250 years. This struggle intensified especially in the second quarter of the 18th century. The Safavid Empire was attacked by the Afghan Mir Mahmud in the east and by the Russians in the north. The Ottomans organized successful expeditions to the western lands of Iran and the Caucasus in 1723 to prevent the region from being invaded by the Russians, and important cities were taken. Among these cities, there was also Ganja on the historical Silk Road. After the region was captured, military units belonging to various classes were shifted. In this study; By examining the Ottoman archive records, the Ottoman military classes transferred to the region and the tasks performed by these classes were examined. The number of soldiers, wages and wages of the military classes in Ganja are revealed. In order to better understand the subject, the number of some military units and their earnings are shown in tables.

**Keywords:** Ganja, Safavid, Ottoman State, Military Class

## GİRİŞ

Gence; küçük Kafkasya dağ gurubunun kuzey doğu eteğinde, Kura Irmağı'nın sağ kollarından Genceçay'ın her iki sahilinde bulunmakta olup deniz seviyesinden 445 m. yüksekliğe sahiptir. Bakü ile Batum arasındaki işlek demir yolu üzerinde bulunan şehir günümüzde nüfus bakımından Bakü'den sonra Azerbaycan'ın en kalabalık şehridir. Kuzeyinde Kura Irmağı kollarının suladığı verimli ovalar yer almışken, güneyinde ise zengin yaylaları olan sığ ormanlarla kaplı dağlık bir bölgedir. Şehir adını nereden geldiği ve ne zaman kurulduğu ile ilgili değişik görüşler bulunmaktadır. Bir görüşe göre şehrin adının İslamiyet'ten önceki Maraga civarında bulunan bugünkü Taht-ı Süleyman denilen yerde Süryani ve Ermeni kaynaklarında Ganzaka, İranlıların Gazna ve Arapların Carza dedikleri hükümet merkezinden aldığı tahmin edilmektedir.<sup>9</sup> Gence isminin Azerbaycan Türkçesinde açık geniş yer anlamına gelen “gen yer” anlamına bağlanılabildiği gibi Pehlevi dilinde hazine, mahsul deposu anlamına geldiği yönünde görüşlerde bulunmaktadır.<sup>10</sup>

Hız. Ömer döneminde İslam orduları İran ve Kafkasya üzerinde hızlı fetihler gerçekleştirmişti. Osman b. Affan zamanında Muğire b. Şu'be Sakafi tarafından 642-643 yıllarında Azerbaycan'ın çeşitli şehir ve kasabaları ele geçirilerek bölgeye Araplar yerleştirildi.<sup>11</sup> Kafkasya üzerinde Hazarlar ile Emevi orduları arasında sürekli mücadeleler yaşandı. Bu mücadele Abbasiler döneminde de devam etmiştir.<sup>12</sup> Oğuz Türkmenlerinin bölgeye ilk taarruzları Çağrı Bey döneminde gerçekleşmiştir. Çağrı Bey, 1018 yılında Anadolu'ya akınlar gerçekleştirmiş Van Gölü havzasında önemli başarılar elde ettikten sonra Azerbaycan'a yönelmiştir.<sup>13</sup> Bizans İmparatoru Konstantin Oğuz akınlarına karşı 1045 tarihinde Gürcü Laparit komutasında bir orduyu Selçuklular üzerine göndermişti. Tuğrul Bey ise Gürcü, Ermeni ve Rumlardan oluşan Bizans ordusuna karşı amcasının oğlu Kutalmış'ı görevlendirdi ve 1045 güzünde Gence de yapılan savaşı Selçuklu ordusu kazandı.<sup>14</sup> Ruslar 993-994 yıllarında Hazar Denizi ve Kura Irmağı yoluyla Gence'ye gelerek bölgeyi yağma ve tahrip bulundular. Arran bölgesinin merkezi haline gelen Gence de Türk asıllı Sacoğulları ve ardından Selçukluların müttefiki olan Şeddadoğullarının hâkimiyeti başladı. Sultan Alpaslan 1071 Malazgirt zaferinden kısa bir süre önce Gürcistan'ı fethetmiş ve dönüşte Gence'ye uğramıştı. Sultan

<sup>14</sup> Turan, s. 119, 121.

Melik Şah Gence'yi oğlu Mehmed'e tımar olarak vermişti. Ardından komutanlarından Sav Tegin'i Gence'ye göndererek Oğuz Türklerinin bölgeye yerleştirdi. Bölgenin bir Türkmen şehri haline gelmesi sağlandı.<sup>15</sup> 1139 yılında Gence 'de büyük bir deprem meydana gelmişti. Bu durumdan faydalanan Gürcü Kralı I. Dimitrius, depremden yıkılmış Gence 'ye baskın yaparak şehri yağmalamıştır.<sup>16</sup> Bölge 1212-1223 yılları arasında Gürcistan'da hüküm süren Tamar'ın oğlu ve ardından gelen halefi II. Giorgi Laşa'nın hâkimiyetine girdi.<sup>17</sup> Ardından Moğollar orduları Kafkasya'ya doğru ilerleyerek Gence'yi istila ettiler.<sup>18</sup> Gence, Moğollardan sonra İlhanlı ve Timur hâkimiyeti altına girdi.<sup>19</sup> XIV. yüzyılın ortalarında Gence ve Karabağ'a Celayirliler hâkim oldu. XV. yüzyılın başlarında Karakoyunluların eline geçti. Timur'un oğlu Şah Ruh Azerbaycan ve Karabağ'a 1420-21 yılları arasında iki sefer düzenledi. 1461- 1501 yılları arasında Akkoyunlu Devletinin hâkimiyet kurduğu dönemde muhtemelen Kaçar emirinin idaresi altında kaldı. Ardından Safevi Devletinin 13 vilayetinden biri haline geldi.<sup>20</sup> Safevi hükümdarı II. Şah İsmail'in yüksek dozda kullandığı afyonun etkisiyle hayatını kaybetmiş devlet adamları 1578 yılında Mehmed Hüdabende'yi hükümdar ilan edildi. Hüdabende'nin aciz yönetimi tahtan uzaklaşmasına sebep oldu ve yerine Hamza Mirza geçti. İran da karışıklık gittikçe artmaya başladı. Bunu durumu değerlendiren Osmanlı Devleti Sokullu Mehmed Paşa'nın muhalefetine rağmen İran'a savaş ilan etti. Böylece 12 yıl sürecek Osmanlı-İran savaşları başlamış oldu. Lala Mustafa Paşa 1578 yılında Gürcistan topraklarına girdi. Ferhad Paşa Tebriz'i kurtardıktan sonra 3 gün süren muharebeden sonra Gence ve Karabağ'a girmeye muvaffak oldu.<sup>21</sup> Gence Hakimi Ziyad oğlu Mehmed Osmanlı kuvvetlerinin Gence'ye doğru ilerlediğini öğrenince tüm köy ve nahiyelerde bulunan halkı göçürmüş bölgede kimseyi bırakmamıştı. Osmanlı kuvvetleri terkedilmiş şehre girdi. Selaniki şehirde iki köprü'nün bulunduğunu, bağ ve bahçeleriyle oldukça güzel bir şehir olduğunu 40 gün süren bir tamirattan sonra kale burçlarının tamir ve hendeklerinin kazıldığını gerekli istihkâmların gerçekleştirildiğini ifade etmektedir.<sup>22</sup> Safevi Devletinin başına Şah Abbas geçti. Doğuda Özbeklerle batıda Osmanlılara karşı başarılı olamayınca barış talebinde bulundu. 12 yıl süren

savaşın sonucunda Safevi Devleti ile Osmanlılar arasında Ferhat Paşa antlaşması imzalandı. Bu antlaşmaya göre Tebriz, Gence, Karabağ, Şirvan, Gürcistan, Nihâvend ve Lûristan bölgeleri Osmanlı Devleti'nde kaldı.<sup>23</sup> Ancak Şah Abbas Osmanlı Devletinin batı da Avusturya ile yapılan savaşları ve Anadolu da çıkan Celali isyanlarıyla meşgul olmasından istifade ederek 1606-1607 yıllarında Azerbaycan, Gence ve Şamahı'yı ele geçirmeye muvaffak oldu.<sup>24</sup>

İran ile 1639 yılında yapılan Kasr-ı Şirin Antlaşmasından sonra uzun bir süre Osmanlı- Safevi ilişkileri sükûnet dönemine girdi. Bu barış dönemi 1722 yılında bozuldu. Safevi Devletinin başında Şah Hüseyin bulunuyordu. Onun devleti idare etmede gösterdiği zafiyet Safevi Devletini zor durumu bıraktı. Doğuda Afganlı Mir Mahmud isyan ederek İsfahan'ı kuşattı. Erzurum Valisi Silahdar İbrahim Paşa İran'ın içinde bulunduğu karışıklığı İstanbul'a bildirmişti.<sup>25</sup> Rus Çarı Petro İran'ın içinde bulunduğu iç karışıklıktan istifade etmeyi düşünmüş Şirvan ve Bakü'yü istila etmeyi hedeflemiştir. Ayrıca Kafkasya'da Kabartay ve Lezgiler üzerinde hâkimiyet kurmayı istiyordu.<sup>26</sup> Erzurum Valisi İbrahim Paşa Erzurum'da gerekli hazırlıkları tamamladıktan sonra 17 Aralık 1722 tarihinde Kars'a doğru harekete geçmiş ve 11 gün süren yolculuğun ardından Kars'a varılmıştır. Osmanlı orduları 146 gün Kars'ta kaldıktan sonra 23 Mayıs 1723 tarihinde Tiflis'e doğru harekete geçmiştir. 28 gün süren yolculuğun ardından 19 Haziran 1723 tarihinde Tiflis'e varılmıştır. Tiflis'te 100 gün kalan Osmanlı orduları Gence' ye doğru hareket etmiş ve 28 Eylül 1723 tarihinde Gence' ye ulaşmışlardır.<sup>27</sup> 24 Haziran 1724 tarihinde Ruslarla yapılan antlaşmada Gence, Berda, Karabağ ve Nahcivan Osmanlı Devletinde kaldı.<sup>28</sup> Erzurum Valisi Vezir Hacı Mustafa Paşa Revan'dan hareket ederek Arapçayır'a geldi. Burada ordu için gerekli zahire ve mühimmatı temin ettikten sonra Lori Kalesi'ne ulaştı 4 Ağustos 725 tarihinde kale ele geçirildi. Ardından Gence Kalesi de 5 Eylül 1725 yılında iki gün süren kuşatmadan sonra fethedildi.<sup>29</sup>

Osmanlı Devleti 5 Eylül 1725 tarihinde Gence'nin fethi üzerine Dergâh-ı Âli yeniçerilerin bölgeye intikalini sağladı. Bölgenin Safevi ordularına karşı tahkimatı hedeflendi. Osmanlı arşiv kaynaklarında bilhassa mevacib defterlerinde bu askeri sınıfların mevcudu, elde ettikleri

yevmiye ve zabitleri ile ilgili bilgiler göze çarpmaktadır. Bu bilgilerin ışığında kalede görevli askeri personellerin durumu ortaya konulmaya çalışılacaktır.

### **1.Gence de Bulunan Dergâh-ı Âli Yeniçeriler**

Osmanlı Devleti'nin fethettiği bölgelerdeki Hıristiyan çocukları devşirerek asker elde etmesi yeniçeri ocağının esasını teşkil etmiş ve bu sistem ilk defa Osmanlı Devleti'nde görülmüştür.<sup>30</sup> 1362 tarihindeki Pencik Kanunu'na göre esir edilenlerin beşte biri ordu ve saray hizmetine alınmıştır. Başlangıçta bir akçe yevmiye ile Gelibolu ve Çardak arasında süvari askerlerinin nakliyesi için hizmet veren gemilerde görevlendirilmişlerdir. Sayıları artınca da askeri hizmetlerde kullanılmışlardır.<sup>31</sup> Osmanlı Devleti'nin askeri yapısı iki ana temelden oluşmuştur. Bunlardan birincisi; devletten sürekli maaş alan kapıkulu askerleri, diğeri ise eyalet askerlerinden müteşekkildi. Devletin sınırlarının genişlemesi ve harp teknolojisinde meydana gelen değişimlere paralel olarak bu iki ana yapıya değişik dönemlerde yeni yeni askeri birlikler eklenmiştir. Kapıkulu askerleri yaya ve süvari olmak üzere iki bölüme ayrılmıştı. Yaya kısmı; Acemi Ocağı, Yeniçeri Ocağı, Cebeci Ocağı, Topçu Ocağı, Top Arabacıları Ocağı ve birer bölük halinde Lağımçı ve Humbaracılarından oluşmuştu. Süvari kısmı ise; Sipahi, Silahdar, Sağ Ulûfeciler, Sol Ulûfeciler, Sağ ve Sol Gariplerden oluşmuştu.<sup>32</sup>

Yeniçeri askerleri teşkilatının kurulduğu ilk yıllarda iki bin kişilik bir askeri mevcudu bulunmaktaydı. Ancak sonraki dönemlerde sayısı gittikçe arttı. I. Bayezid döneminde 10.000 olan sayı II. Murad döneminde 5 bine düştü. Fatih Sultan Mehmed döneminde yapılan alımlarla yeniçeri askeri sayısı 12 bine ve Kanuni Sultan Süleyman döneminde 14 bine yükselmiştir. Bu sayı 16. yüzyılın sonunda 40 bini aşmıştı.<sup>33</sup>

Yeniçeri Ocağı; Cemaat, Sekban ve Ağa bölüklerinden oluşmakta idi. Yeniçeri Ocağı kurulduğu ilk dönemlerde 1.000 kadar yeniçeri alınmış ve her 100 askerin başına bir yayabaşı atanmıştır. Yeniçeri yaya bölükleri sonradan Cemaat adını alarak sayısı 10'dan 101'e kadar çıkarılmıştır. Sekbanlar 34 ortadan, ağa bölükleri ise 50 kişilik mevcutla 61 bölükten oluşmaktaydı. Böylece Yeniçeri Ocağı'nın Cemaat, Sekban ve Ağa bölüklerinin toplam orta ve bölük sayısı 196' ya ulaşmıştı.<sup>34</sup>

<sup>30</sup> Mücteba İlgürel, "Yeniçeriler", *İA*, C. XIII, Milli Eğitim Basım- Evi, İstanbul, 1986, s. 385.

<sup>33</sup> İlgürel, "Yeniçeriler", s. 385.

<sup>34</sup> Kemal Beydilli, "Yeniçeri", *TDV İslam Ansiklopedisi*, C. 43, Diyanet Vakfı Yayınları, İstanbul, 2013, s. 457.

Mevacib defterlerinde kalelerde mevcut bulunan cemaat ortaları, Sekban ve ağa bölükleri ile yamak ve diğer askeri sınıflar kaydından sonra bu sınıfların mevcudu, yevmiyeleri ve ölüm, azil gibi nedenlerle askerlikle ilişkisi kesilenler ve nihayetinde tüm askeri personelin alçakları ücretler 88,5 ile çarpılarak Masar, Recec, Reşen ve Lezez dönemlerine ait ulûfeleri ortaya konulmuştur. Bu bilgiler mevacib defterlerinin son sayfasında belirtilmiştir. Kayıt işleminin kimin tarafından ve hangi tarihte yapıldığı kaydı da düşülmüştür.<sup>35</sup>

### 1.1. Cemaat Ortaları

Yeniçeri ocağı kurulduğunda öncelikle cemaat ortaları (yaya başı) kurulmuş, sekban ortaları ve ağa bölükleri daha sonradan yeniçeri ocağına katılmıştır. Yeniçeri Ocağı'nın kurulduğu ilk dönemlerde her 100 nefere bir yaya başı komutan tayin edilmiştir. Bundan sonraki dönemlerde ise yeniçeri mevcudu ve orta adedi artmış ve cemaat ortalarının sayısı yüz bire kadar yükselmiştir.<sup>36</sup> Cemaat ortaları da tıpkı ağa bölükleri gibi zabitlerinin sahip oldukları statüye göre belirli bir hiyerarşi içinde yer almaktaydı. Derecesine göre en küçük cemaat ortasından en büyüğüne doğru bir hiyerarşi yapıldığında Yaya Baş, Deveciler, Baş Deveci, Hasekiler, Baş Haseki, Turnacı, Seksoncu, Zağarcı ve Sekbanbaşları olduğunu görülmektedir.<sup>37</sup>

Gence Kalesi'nde görev yapan cemaat ortalarının bulunduğunu çeşitli arşiv vesikalarından özellikle de mevacib defterlerinden anlaşılmaktadır. Bu vesikalardan çeşitli cemaat ortalarının numarası, cemaat ağası, nefer sayısı, yevmiyesi, Masar, Recec, Reşen Lezez dönemleri ile bir yıllık ödenen toplam maaşlarıyla ilgili detaylı bilgileri tespit etmek mümkündür.<sup>38</sup>

1.1.1. Deveciler Ortası (Cemaât-ı Şütürban) Yeniçeri Ocağı kurulduğunda ocak geleneğine göre 1.000 nefer alınmış ve her 100 neferi bir orta teşkil edecek şekilde 10 ortadan yani bölükten meydana gelmişti. Sonraki tarihlerde ortanın sayısı gelen neferlerle birlikte artmıştı ve 101'e ulaşmıştı. Birinci cemaat ortasından beşinci cemaat ortasına kadar olan yaya ortalarına Cemaât-ı Şütürban yani deveciler ortası denilmiştir. Numarası hiç değişmeyen bu ilk 5 ortanın dışında 1623 tarihli ulûfe defterlerinde ilk 5 cemaatin dışında 8, 29, 33, 39, 40, 46, 55, 57 ve 95'inci

<sup>35</sup> Uğur Demlikoğlu, *Gürcistan Kaleleri: Savaş, Sefer ve Kale organizasyonu (Tiflis Gori, Tob-Karaağaç, Akçakale 1723-1735)*, Gece Akademi, 2019, Ankara, s. 69. Ulûfeli askerlerin mevacibleri üç ayda bir olmak üzere senede dört dönemde ödeniyordu. Hicri ayların üç isminin baş harfleri alınarak 4 dönem belirlenmiştir. Hicri aylardan Muharrem, Safer, Rebiü'l-evvel aylarının ilk harfleri olan M, S, R harflerinin birleşmesinden Masar dönemi oluşurken, Rebiü'l-ahir, Cemaziye'l-evvel, Cemaziye'l-ahir aylarının ilk üç harfinin alınmasıyla Recec dönemi oluşmuştur. Receb, Şaban aylarının ilk harfiyle Ramazan ayının N harfinin birleşmesinden Reşen Dönemi, Şevval ayının son harfiyle Zilkade ve Zilhicce aylarının ilk harflerinin birleşmesinden Lezez dönemi oluşmuştur. Masar ulûfesi Muharrem ayında, Recec ulûfesi Cemaziye'l-evvel ayında, Reşen ve Lezez Dönemine ait olan ulûfelerin ikisi de Şaban ayı içinde verilmekteydi. Son iki maaşın birleştirilerek bir arada verilmesine kisteyn mevâcibi denilmekteydi. Bkz: Uzunçarşılı, *Kapukulu Ocakları*, C. I, s. 411, 412.

<sup>36</sup> Uzunçarşılı, *Kapukulu Ocakları*, C. I, s. 156.

<sup>37</sup> Uzunçarşılı, *Kapukulu Ocakları* C. I, s. 173

<sup>38</sup> Bkz: BOA, *MAD. d. 6123*, s. 522-560; BOA, *MAD.d. 17016*, s. 1-29; BOA, *MAD.d. 6575*, s. 354-392.

cemaat ortalarının da deveci ortası olduğu anlaşılmaktadır. 1663-1664 yılındaki ulûfe defterinde ise 6, 8, 26, 29, 33, 39, 42, 43, 45, 46, 47, 48, 57, 75, 78, 86, 87, 91, 95, 98. ortaların deveciler yani Cemaat-ı Şütürban ortası olduğu görülmektedir.<sup>39</sup> Deveci ortası kumandanlığına yaya başlıktan geçilmekteydi. Baş deveci terfi ettiğinde Heseki ağa veya Acemi Ocağı'nın Rumeli ağası olurdu. Yeniçeri Ocağı'nın zabitlerinden olan başçavuş azledildiğinde ise deveci ortası kumandanlığına getirilirdi. Deveciler ortası muharebe esnasında siper kazmak, sefere giderken ve seferden döndüğünde Yeniçeri Ağasının ağırlıklarını taşımak gibi görevleri bulunmaktaydı. Deveciler ortası diğer yaya ortalarına göre oldukça hürmet edilen bir askeri sınıftı. Zabitleri sorguclarına balıkçıl tüy takarlardı ve divan elbiseleri kethüda beyinkine benzerdi.<sup>40</sup> İncelediğimiz döneme ait Gence Kalesi'nde muhtelif numaralar belirtilen deveciler ortasına tesadüf edilmiştir. Gence'nin fethine müteakip kalede görev yaptıkları mevacic defterlerinden anlaşılmaktadır. Bu defterlerde 25, 39, 42, 46 ve 75. cemaat ortalarının bulunduğu görülmektedir. Aşağıdaki tabloda deveciler ortasının bulunduğu cemaat ortası, nefer sayısı ve neferlerin elde ettikleri yevmiye ve mukarrer mevacicleri gösterilmiştir.

**Tablo 1:** Gence de Bulunan Deveci Ortaları (Cemaat-i Şütürban)<sup>41</sup>

Tarih	Cemaat Ortası	Nefer Sayısı	Yevmiyesi (akçe)	Mukarrer (akçe)
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	25. Cemaat Ortası	361	2.652	234.702
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	39. Cemaat Ortası	222	1.602	141.777
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	42. Cemaat Ortası	183	1.310	115.935
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	75. Cemaat Ortası	281	2.023	179.035,5
5 Mart- 1 Haziran 1726 (H. 1138 Reşen)	25. Cemaat Ortası	260	1.950	172.575
5 Mart- 1 Haziran 1726 (H. 1138 Reşen)	39. Cemaat Ortası	162	1.176	104.076
5 Mart- 1 Haziran 1726 (H. 1138 Reşen)	46.Cemaat Ortası	144	1.041	92.128,5
5 Mart- 1 Haziran 1726 (H. 1138 Reşen)	75. Cemaat Ortası	159	1.171	103.633,5
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	39. Cemaat Ortası	146	1.075	95.137,5
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	46. Cemaat Ortası	120	869	76.906,5
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	75. Cemaat Ortası	137	1.014	89.739

<sup>39</sup> Mehmet Zeki Pakalın, *Osmanlı Tarih Deyimleri ve terimleri Sözlüğü*, C.III, Milli Eğitim Basım Evi, İstanbul, 1972, s. 362.

<sup>40</sup> Uzunçarşılı, *Kapıkulu Ocakları*, C. I, s. 213.

<sup>41</sup> BOA, *MAD.d. 6123*, s. 522-536; BOA, *MAD.d. 17016*, s. 1- 12; BOA, *MAD.d. 6575*, s. 354-363.

Yukarıdaki tabloda nefer sayısı bakımından en kalabalık deveçiler ortasının 25. Cemaat ortası olduğu görülmektedir. Bu ortanın nefer sayısı 9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihleri arasında 361 olduğu görülmektedir. Bu cemaat ortasında bulunan neferler 2.651 akçe yevmiye tasarrufunda bulunmaktaydı. En az neferin bulunduğu cemaat ortası ise 22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen) tarihleri arasında Gence de bulunan 46. cemaat ortasının olduğu görülmektedir. Gence'nin fethinden sonra kalede bulunan deveçiler ortalarına mensup nefer sayısında artışlar gözlenmektedir. Nitekim 9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihleri arasında deveçiler ortasına mensup toplamda 1.057 nefer bulunmaktaydı. Fakat daha sonraki dönemde düşüşler gözlenmektedir. 5 Mart- 1 Haziran 1726 (H. 1138 Reşen) tarihlerinde 725'e, 22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen) tarihinde 403'e düştüğü görülmektedir.<sup>42</sup> Gence de kurulan Osmanlı hâkimiyeti ve Safevi tehlikesinin bertaraf edilmesi nefer sayında azalmalara sebep olmuştur.

#### 1.1.2. Zağarcılar

Yeniçeri cemaat ortalarından 64. ortaya zağarcılar ortası denilmektedir. Bu ortanın efradı yaya ve süvari birliklerinden oluşmaktaydı. Fakat süvari birlikleri yayalara nispetle daha azdı. Süvarilerin yevmiyeleri yayalardan daha yüksektir. Bu ortanın en büyük kumandanı zağarcıbaşıdır ve rütbesi Yeniçeri Ocağı'nda kethüdadan sonra gelmektedir.<sup>43</sup>

Sultana ait av köpeklerini muhafaza ederlerdi. Bu ortada bulunan 34 zabıt ellerinde bulunan köpeklerle sultanın avlandığı sırada kendisine refakat ederlerdi. Sultanın yanında bulunmaları nedeniyle itibarlı bir ortaydı. Zağarcıbaşı terfi ettiğinde Yeniçeri Ocağı kâtibi rütbesine yükselirdi.<sup>44</sup> Muharebede yararlılık gösterenler yüksek mevkilere terfi ederdi. Revan ve Tebriz'in fethinde Yeniçeri Ağası vekili olarak hizmet eden Zağarcıbaşı muhasara esnasında gösterdiği başarıdan dolayı 1726 yılında Rumeli beylerbeyi payesi ile İnebahtı sancağına atandı.<sup>45</sup>

Gence'nin fethinin ardından kalede 64. ortaya mensup zağarcılarda bulunmaktaydı. 9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihlerinde bu ortaya mensup 629 nefer bulunmaktaydı. Bu neferlerin toplam yevmiyesi 4.579 akçedir. Masar dönemine ait mevaciclerinin 405.241,5 akçe olduğu görülmektedir. 5 Mart- 1 Haziran 1726 (H. 1138 Reşen) tarihleri arasında 64. zağarcı ortasının nefer sayısı 506'ya elde ettikleri toplam yevmiye 3.809 akçeye düşmüştür. 22 Şubat-

<sup>42</sup>BOA, MAD.d. 6123, s. 522-536; BOA, MAD.d. 17016, s. 1- 12; BOA, MAD.d. 6575, s. 354-363.

<sup>45</sup> Uzunçarşılı, *Kapukulu Ocakları*, C. I, s. 201.

21 Mayıs 1727 (H. 1139 Reşen) tarihinde zağarcı ortasındaki nefer sayında düşüşün devam ettiği görülmektedir. Bahsi geçen tarihte 445 nefer bulunmaktaydı. Elde ettikleri toplam yevmiye 3353 akçe olmuştur. Zağarcılar ortasının en büyük zabiti olan Zağarcıbaşının yevmiyesi ise 26 akçe olduğu görülmektedir.<sup>46</sup> Zağarcıların bulunduğu 64. Ortanın dışında Zağarcıbaşı Mustafa Ağa'nın hizmetinde bulunanların belirtildiği ayrı bir cemaat daha bulunmaktaydı. Bu cemaatte 40 nefer mevcuttu ve neferlerin elde ettikleri toplam yevmiye ise 280 akçeydi.<sup>47</sup>

#### 1.1.3. Mütekaitler

Mütekait kelimesi memuriyet ve hizmetten çekilip hizmet süresine göre maaş alan kimseler için kullanılan bir tabirdir.<sup>48</sup> Gence de bulunan cemaat ortalarından mütekaitlerin de görev aldığı görülmektedir. *An cemmati mütekaidin* şeklinde mevacib defterinde kayıtlı bulunan bu askeri sınıfın 5 Mart- 1 Haziran 1726 (H. 1138 Reşen) tarihlerinde 276 neferle görev aldığı görülmektedir. Neferlere toplamda 7.718 akçe yevmiye takdir edilmiştir. Bu meblağın diğer askeri zümrelerle mukayese edildiğinde oldukça yüksek olduğu anlaşılmaktadır. Mütekaitlerin yevmiyelerindeki bu artışın daha önceden harp görmüş tecrübeli olmaları sebebiyle verildiği düşünülmektedir. Emekliye ayrılan yeniçeriler muhtemelen İran savaşlarının başlamasından sonra kalelerde istihdam edilmeye başlamışlardır.<sup>49</sup>

#### 1.1.4. Tüfenkçiler

Cemaat ortalarına mensup olan fakat belirli bir numarası bulunmayan bu ortadır. En büyük zabiti de ser tüfenkçi olarak bilinmektedir. 1623- 1624 yılına ait ulûfe defterinde 92'inci 1663- 1664 yılına ait ulûfe defterinde ise 43'üncü ortası bu cemaatin kumandanının ismi verilmiştir. Osmanlı ordusunda tüfeğin yaygın bir şekilde kullanılması üzerine 16. yüzyılın ortalarında tüfenkçiler ortası kurulmuştur.<sup>50</sup> Gence Kalesi'nde 9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihlerinde bulunan bu orta "an cemaat-i tüfenkçiyân hazreti Serasker Mustafa Paşa" şeklinde kayıtlıdır. Gence de bulunan Serasker Mustafa Paşa'nın emrinde 40 nefer tüfenkçi bulunmaktaydı. Tüfenkçilerin toplam yevmiyesi 280 akçeydi.<sup>51</sup>

<sup>49</sup> BOA, MAD.d. 17016, s.31-34.

<sup>50</sup> Uzunçarşılı, *Kapukulu Ocakları*, C. I, s. 230,231.

<sup>51</sup> BOA, MAD.d. 6123, s. 553.

#### 1.1.5. Yamaklar

Gence Kalesi'nde görev yapan diğer bir cemaat ortası ise yamaklar olmuştur. Yamak kelimesi yardımcı, çırak, çıraktan sonra gelen işçi anlamına gelmektedir. Osmanlı askeri teşkilatında askeri sınıfların yardımcısı olarak ifade edilmekteydiler. Yamaklar ilk Osmanlı askeri teşkilatını oluşturan yaya ve müsellemlerin yardımcı, ihtiyat gücü iken sonraları yeniçeri ordusunda asker adayı, savaşlara katılan gönüllüler olarak istihdam edilmişlerdir.<sup>52</sup>

Yeniçeri Ocağı ile Yeniçeri Ocağı'nda bulunan topçu, humbaracı gibi askeri birliklerde bulunanlara, kalelerde müstahfiz suretinde görev alan askerlere verilen isimdir.<sup>53</sup> Yamaklar 17. yüzyıldan sonra Osmanlı ordusunun piyade sınıfında istihdam edilmeye başlamıştır. Yeniçerilerin eski nizamı kalmayınca asker ihtiyacı taşradaki sivillerden temin edilmeye çalışılmış ve bir bakıma yeni bir askeri sınıf ortaya çıkmıştır. Osmanlı- Safevi savaşlarının sürdüğü 1630'lu yıllarda yeniçerilere olan talep dolayısıyla yeniçeriler arasında yamak tahriri gerçekleştirilmiştir. Bu durum 18.yüzyıldan sonra hız kazanmış yerel güçlerden farklı olarak sivillerden de yamak alınmaya devam etmiştir. Yamaklar, Yeniçeri Ocağı'na katılmaya aday olan guruplar haline gelmiş ve özellikle de sınır kalelerinde de istihdam edilmeye başlanmıştır.<sup>54</sup> Gence Kalesi'nde bulunan askeri sınıflar içerisinde yamaklarda mevcut olmuştur. Aşağıdaki tabloda Gence de bulunan yamakların sayısı ve yevmiyeleri verilmiştir.

<sup>53</sup> Pakalın, *Osmanlı Tarih Deyimleri ve Terimleri Sözlüğü*, C.III, s.604.

<sup>54</sup> Emecen, "Yamak", s. 310.

**Tablo 2.** Gence de Bulunan Yamaklar<sup>55</sup>

Tarih	Cemaat Ortası	Nefer Sayısı	Yevmiyesi (akçe)	Mukarrer (akçe)
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	Yamakan Katib	104	744	65.844
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	Yamakan Ağa	244	1.711	151.423,5
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	Yamakan-ı Gence	1.760	12.327	1.090.939,5
5 Mart- 1 Haziran 1726 (H. 1138 Reşen	Yamakan Katib	100	716	63.366
5 Mart- 1 Haziran 1726 (H. 1138 Reşen	Yamakan Ağa	100	700	61.950
5 Mart- 1 Haziran 1726 (H. 1138 Reşen	Yamakan-ı Gence	350	2.450	216.825
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	Yamakan Katib	90	646	57.171
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	Ordu Yamakları	85	596	52.746
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	Yamakan-ı Mütেকaidin	1.107	17.678	1.564.503
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	Yamak Ağa	767	4.141	366.478,5

Yukarıdaki tabloda yamak cemaatinin yamakan-ı katib, yamakan-ı ağa, yamakan-ı Gence, yamakan-ı mütেকaidin ve yamakan-ı ordu şeklinde farklı isimlerle zikredildiği görülmektedir. Bu yamaklar içerisinde en kalabalık gurubu 9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihlerinde Gence yamaklarının olduğu görülmektedir. Bahsi geçen Gence yamaklarının mevcudu 1.760'dir. Bu neferlerin elde ettiği yevmiye toplamda 12.327 akçedir. Diğer bir kalabalık yamak grubu ise emekliye ayrılmış yamak mütেকaitleridir. Yamak mütেকaitlerinin mevcudu 1.107'dir. Elde ettiği yevmiye 17.678 akçedir. Sayıca Gence yamaklarından az olmalarına rağmen elde ettikleri yevmiye itibariyle daha fazla olduğu görülmektedir.<sup>56</sup> Emekliye ayrılmış yamakların kalede istihdam edildiği görülmektedir. Tecrübeli olmaları ve daha kıdemli olmaları nedeniyle yevmiyelerinin bu denli artış gösterdiği tahmin edilmektedir.

#### 1.1.6. Serdengeçti Bayraktarları

Düşman içine dalmak ya da kuşatma altındaki bir kaleye ölümünü göze alarak giren fedailer için kullanılan bir tabirdir. Bu askerlere dalkılıç denilmesinin sebebi ise kınlarından sıyrılmış kılıçlarıyla böylesine tehlikeli işlere giriştikleri içindir. Dalkılıçlar, düşmana sağdan, soldan ya da arkadan saldırır, kaleye karanlıkta merdiven kurarak aniden baskınlar düzenler, önlerine

<sup>55</sup> BOA, MAD.d. 6123, s. 536, 555; BOA, MAD. d. 17016, s. 12, 13, 14, 29, 30; BOA, MAD.d. 6575, s. 379-389.

<sup>56</sup> BOA, MAD.d. 6123, s. 536, 555; BOA, MAD. d. 17016, s. 12, 13, 14, 29, 30; BOA, MAD.d. 6575, s. 379-389.

çıkanları kılıçtan geçirir ve görevleri bitmeden asla dönmezlerdi. Bu zorlu görevlerden kurtulan serdengeçtilere üçer beşer akçe terakki verilirdi.<sup>57</sup>

Gence Kalesi'nde görev yapan serdengeçtilerin iki ayrı cemaat halinde teşkil edildiği görülmektedir. Bunlardan ilki emeklilerden yani mütekaide ayrılmış serdengeçtilerdir. Diğerleri ise serdengeçti ağasının emri altında toplanmış olan serdengeçti bayraktarlarıdır. 9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihleri arasında Gence de bulunan mütekait serdengeçtilerin 194 neferle kalede vazifeli olduğu görülmektedir. Elde ettikleri yevmiye ise 5.274 akçedir. Serdengeçti Ağasının maiyetinde bulunan nefer sayısı da 315'dir ve neferlere verilen toplam yevmiyenin de 8.656 akçe olduğu belgeden anlaşılmaktadır.<sup>58</sup> 27 Aralık 1728 tarihinde Gence Kalesi'ne 22 bayraktan oluşan 1.657 Serdengeçti neferi görevlendirilmişti. Bu neferlerin toplam yevmiyesi 10.520 akçedir.<sup>59</sup>

#### 1.1.7. Terakkilûyân-ı Sipahi

Kapıkulu Süvari Ocağı, Rumeli Beylerbeyi Timurtaş Paşa'nın tavsiyesi üzerine I. Murad döneminde ilk defa kurulmuştur. İlk kurulan süvari birliği silahdar, ikincisi ise sipahi olmuştur. Ardından sağ ulûfeciler ile sol ulûfeciler, sağ garipler ile sol garipler bölüklerinin 15. Yüzyılın ortalarında kurulmasıyla Kapıkulu süvari bölümü toplam altı bölükten meydana gelmiştir. Kapıkulu süvarileri tıpkı yeniçeri askerlerinde olduğu gibi padişaha bağlı, atlı kuvvetli birlikler olup, derece ve itibar bakımından yeniçerilerden daha üstündüler.<sup>60</sup>

Fatih Sultan Mehmed döneminde kurulan sipahi bölümü savaşta merkezin sağında saltanat sancağının altında ve bazen de padişahın arkasında bulunurdu. Ordu sefere gittiğinde ordunun önünden giderek yolların kontrolünü sağlardı. Sipahi bölümü 20, 30 kişilik 300 bölükten oluşurdu. Her bölümün başında bulunan sipahi zabıtine "bölükbaşı", bütün bölümün başındakine de "sipahi ağası" denilmekte idi.<sup>61</sup> Gence Kalesi'nde 13 Haziran- 6 Aralık 1725 (H. Lezez 1137- Masar 1138) tarihleri arasında 499 nefer terakkilûyan-ı sipahi sınıfına mensup askeri birliğin kalede bulunması gerekmekteydi. Fakat bu askerlerden 199'u mahlûl, 10 neferi çalık<sup>62</sup>, 8 neferi yoklamada bulunmadığı ve 1 neferin de kaçak olması sebebiyle 281 nefer kalede bulunmaktaydı. 281 nefere 8.748 akçe yevmiye takdir edilmiştir. 13 Haziran- 6 Aralık 1725

<sup>62</sup> Çalık: Yeniçeri Ocağı'ndan kaydı silinmiş olanlar için kullanılan bir tabirdir. İsmail Parlatur, *Osmanlı Türkçesi Sözlüğü*, Ankara, 2006, s. 274.

tarihleri arasında kalede görev yapan sipahilere (H. Lezez 1137, Masar 1138) 702.839 akçe ödeme yapılmıştır.<sup>63</sup>

## 1.2. Sekban Bölükleri

Yeniçeri Ocağı'nın 196 ortasından 34 ortasını sekban bölükleri oluşturmuştur.<sup>64</sup> Sekban ya da diğer adıyla Seymen bölükleri 14. Yüzyılın ortalarında I. Murad döneminde kurulmuş ve Yıldırım Bayezid zamanında geliştirilmiştir. Sekbanlar 1451 yılına kadar müstakil bir ocak halinde bulunmuş, ancak Fatih Sultan Mehmed'in Karamanoğlu İbrahim Bey üzerine sefere çıkarken Sekban Ocağı'nın göstermiş olduğu itaatsizlikler, sefer bahşişi istemeleri gibi nedenlerle yaklaşık 6- 7 bin Sekban Ocağı'nı Yeniçeri Ocağı'na katmıştır. Fatih av hizmetinde bulunmaları için de yaklaşık 500 sekbanı da yanında bulundurmıştır. Yeniçeri ağalarının da sekbanbaşılardan olması kanun haline getirilmiştir. Dolayısıyla 1451 yılından itibaren sekbanlarla yeniçeriler birleştirilmiş ve yeniçeri ortalarından 65. ortayı oluşturmuşlardır ancak sekbanların mevcut sayılarındaki kalabalıktan dolayı Süvari sekbanlarının dışında 34. bölüğe ayrılmışlardır. Böylece, Yeniçeri cemaat ortalarından 65. Cemaat Ortası'nı oluşturan sekban ortaları iki kısımdan meydana gelmiştir. Birinci kısım süvari, ikinci kısım ise 34 bölükten oluşan piyade birlikleri idi. Sekban bölüklerinden 18. bölüğe kâtib-i sekban, kethüdanın olduğu bölüğe ise kethüdây- 1 sekbanan denilmiştir. Sekban bölükleri içerisinde yer alan 33. bölüğe Avcı, komutanına ise serşikârî denilmiştir. Avcı bölüğü sekban bölükleri içerisinde en itibarlı bölük olmuş, devlet adamlarının ve ocak ağalarının çocukları bu bölükte yer almıştır.<sup>65</sup> Gence Kalesi'nde bulunan sekban bölükleri aşağıdaki tabloda gösterilmiştir.

**Tablo 3.** Gence de Bulunan Sekban Bölükleri<sup>66</sup>

Tarih	Sekban Bölükleri	Nefer Sayısı	Yevmiye	Mukarrer (Akçe)
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	26. Sekban Bölüğü	144	1.030	91.155
9 Eylül- 6 Aralık 1725 (H. 1138 Masar)	32. Sekban Bölüğü	173	1.223	108.235,5
5 Mart- 1 Haziran 1726 (H. 1138 Reşen)	26. Sekban Bölüğü	114	826	73.101
5 Mart- 1 Haziran 1726 (H. 1138 Reşen)	32. Sekban Bölüğü	104	735	65.047,5
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	26. Sekban Bölüğü	104	750	66.375
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	32. Sekban Bölüğü	102	726	64.251

<sup>63</sup> BOA, C.AS. 25901.

<sup>64</sup> Pakalın, *Osmanlı Tarih Deyimleri ve Terimleri Sözlüğü*, C. III, s. 148.

<sup>65</sup> Uzunçarşılı, *Kapukulu Ocakları*, C. I, s. 162- 164.

<sup>66</sup> BOA, MAD. d. 6123, s. 545-549; BOA, MAD.d. 17016, s. 24,25; BOA, MAD.d. 6575, s. 372-376.

9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihleri arasında Gence Kalesi'nde bulunan en kalabalık bölüğün 32. Sekban bölüğü olduğu görülmektedir. 32. sekban bölümünde bulunan nefer sayısı 173'dür. Fakat bu sekban bölümündeki nefer sayısının 22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen) tarihleri arasında 102'ye düştüğü görülmektedir. Bu düşüşte neferlerin ölüm, azil ya da başka bir sekban bölümüne geçiş yaptığı tahmin edilebilir.

### **1.3. Ağa Bölükleri**

Fatih Sultan Mehmed sekban bölüklerinin disiplinsizce davranmaları üzerine önceleri müstakil olan bu ocağı cemaat ortalarına katarak nüfuzunu kırmıştır. II. Bayezid döneminde Yeniçerilerin itaatsizliklerinin baş göstermesi ve sekban bölüklerinin disiplinsizce davranışlarından dolayı ağa bölükleri adında devşirmelerden oluşan 61 bölük meydana getirilmiştir. Kanuni döneminde de itibarları gittikçe artmıştır. Böylece yeniçeriler yaya veya cemaat ortalarından, sekban ve ağa bölükleri olmak üzere üç kısımdan meydana gelmiş oldu. Ağa bölüklerinin her birisine 50 nefer alınmış ve bölüklerine komutan olarak bölükbaşı, birer odabaşı, vekilharç, bayrakdar, müteferrika, aşçı tayin edilmiştir. 61 bölümün 1 ile 41. bölümüne kadar olanlar yeni odalarda tahsis edilmiş, 41'den 61'e kadarı da eski odalarda yer almıştır. Ağa Bölüklerinin en büyük zabitlerini aşağıdan yukarıya doğru bir hiyerarşi yaptığımızda bunların; baş bölükbaşı, kethüda yeri, muhızırbaşı, başçavuş, kethüda bey, kul kethüdası şeklinde bir hiyerarşi içinde yer almışlardır. Ağa bölükleri oluşuncaya kadar Yeniçeri Ocağı Kethüdası'nın ve başçavuşun belirli bir odası bulunmamakta idi. Ağa bölükleri oluştuktan sonra 1. Ağa bölümü yeniçeri kethüda odası olmuştur. 5. Ağa Bölümü'ne ise ser çavuş (başçavuş) denilen ocak komutanına oda olmuştur. Başçavuş, kethüda beyinden sonra Yeniçeri Ocağı'nın en nüfuzlu ağasıdır. Başçavuş ağa kapısında durarak davası ya da herhangi bir işi olanları kethüda beyine bildirirdi. Muhızır ağanın bölük numarası ise zaman zaman değişmiştir. Kethüda yeri ise bazen 7 ve 33 ve bazen de 31 ile 50. odada yer almıştır. 54. Bölük ise sermuâllim-i talimhâne denilen ocak talimci başının odası olmuştur. Gence de bulunan ağa bölükleri aşağıdaki tabloda gösterilmiştir.

**Tablo 4.** Gence de Bulunan Ağa Bölükleri<sup>67</sup>

Tarih	Ağa Bölükleri	Nefer Sayısı	Yevmiyesi (akçe)	Mukarrer (akçe)

22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	5. Bölük Yusuf Çavuş	5	35	3.097,5
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	5. Bölük Ahmed Çavuş	5	35	3.097,5
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	5. Bölük Mustafa Çavuş	5	35	3.097,5
22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen)	5. Bölük Süleyman Çavuş	5	35	3.097,5

Yukarıdaki tabloda 9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihleri arasında 3., 10. ve 21. bölüğün bulunduğu görülmektedir. Bu bölükler içinde 21. Bölüğün sayıca daha fazla olduğu görülmektedir. 21. Bölükte 395 nefer bulunmaktadır. 10. bölükte ise 261 nefer mevcuttu. Bölük ağalarına başçavuşun komuta ettiği ve 5. bölüğün kumandanı olduğu görülmektedir. 5. bölük kendi içinde alt bölüklere ayrılmış ve her bölükte 5 neferin bulunduğu görülmektedir. Bu bölüklere komuta edenlerin isimlerinin yanında memleketleri de yazılmıştır. 9 Eylül- 6 Aralık 1725 (H. 1138 Masar) tarihleri arasında Gence de ağa bölüklerinde istihdam edilen nefer sayısı toplamda 1.068'dir. 22 Şubat- 21 Mayıs 1727 (H. 1139 Reşen) tarihleri arasında ise ağa bölüklerde bulunan nefer sayısı 571'e düşmüştür.

## SONUÇ

Gence sahip olduğu jeopolitik konumu itibariyle tarihi ipek yolu üzerinde Bakü ile Batum arasında işlek bir yol güzergâhının kavşak noktasında bulunmaktadır. Bu özelliğinden dolayı bölge tarihi süreçte siyasi, ekonomik ve askeri anlamda egemen güçlerin sürekli hâkimiyet mücadelesine sahne olmuştur. Safevi Devletinde ortaya çıkan iç karışıklıklar ve Afganlı Mir Mahmud'un İsfahan'ı ele geçirmesi ve Rusların Kafkasya da ilerlemesi üzerine Osmanlı orduları Kafkasya, İran'ın batı ve güney topraklarında ilerledi ve önemli şehirleri zapt etti. Bu

şehirler arasında Gence de bulunmaktaydı. Gence'nin fethine müteakip pek çok askeri birlik kaydırılmıştı. Bu askeri birliklerin cemaat ortaları, sekban ve ağa bölüklerinden müteşekkil olduğu görülmektedir. Cemaat ortaları içerisinde 64. orta olan zağarcılar ortası ile muhtelif numaralara sahip deveçiler ortasının kalede vazifeli oldukları arşiv kayıtlarından anlaşılmaktadır. Zağarcılar ortası Osmanlı ordusu içinde oldukça itibarlı bir sınıftı. Zağarcıbaşının günlük yevmiyesi ise diğer zabıtlere göre oldukça yüksekti. Deveçiler ortası ordunun ağırlıklarını taşıma, siper kazmak gibi görevleri ifa etmekteydi. Gence Vali Mustafa Paşa'nın maiyetinde tüfenkçi birlikleri de bulunmaktaydı. Bu tüfenkçi ortası 40 neferden oluşmakta ve 280 yevmiye tasarruf etmekteydi. Emekliye ayrılmış mütekait sınıfına mensup olanlar da Gence Kalesi'nde istihdam edilmiştir. Elde ettikleri yevmiyeler ise deveçiler ortası ve tüfenkçilere göre oldukça yüksekti. Yamak cemaati içinde bulunan mütekaitler ile Gence yamaklarının gelirleri ise diğer ağa ve kâtibin bulunduğu yamaklara göre oldukça yüksek olduğu görülmektedir. Sekban bölüğünde bulunan nefer sayısının ise cemaat ortalarına ve ağa bölüklerine nispeten daha az olduğu anlaşılmaktadır.

## **GÜVEN VE GÜVENİ KÖTÜYE KULLANMA SUÇU**

**Doç. Dr. Mehmet TAN (Orcid ID: 0000-0003-0398-9961)**  
Siirt Üniversitesi, Fen Edebiyat Fakültesi, Sosyoloji Bölümü

### **ÖZET**

Sosyal ilişkilerin kurulması ve sürdürülmesinde güven önemli bir dayanak olmaktadır. Sağlıklı bir toplumun olması toplum içindeki güven duygusunun güçlü olmasına bağlıdır. Güven duygusunun ise suç ile yakın bir ilişkisi vardır. Güvenin kaybolduğu toplumlarda suç oranları yüksek olmaktadır. Bu bağlamda güvenin tahkim edilmesi, suçun azalmasında önemli bir faktör olduğu anlaşılmaktadır. Ayrıca suçluya yönelik uygulanacak yaptırımlar da adalet ve emniyet kurumlarına olan güvenin artmasına katkı sağlamaktadır. Güven, toplumsal hayat içerisinde olumlu işlevlere sahiptir. Bu işlevler sayesinde toplum bütüncü bir yapıya dönüşmekte ve toplumsal dayanışma sağlanmaktadır. Toplumsal hayat içerisinde güvenin inşasında bazı kişiler ve kurumlar referans olabilmekte, bu noktada söz konusu unsurların istismarı üzerinden mağduriyetler oluşabilmektedir. Bazı suçların temelinde, mağdurların söz konusu unsurlara bağlılıklarının istismar edildiği anlaşılmaktadır. Örneğin, din, aile, devlet, önemli şahsiyetler, milli ve manevi değerler kullanılmak suretiyle ayrı bir suç işlenmektedir. Suçluların bu unsurlara herhangi bir bağlılığı olmamasına rağmen, mağdurların duygularını istismar ettikleri ve söz konusu unsurları kullandıkları görülmektedir. Araştırmamız, literatür taramasından elde edilen verilere dayanmaktadır. Çalışmada, “güven” ve “güveni kötüye kullanma suçu” kavramsal ve kuramsal temelde ele alınmaktadır. Burada güveni kötüye kullanma suçu üzerinden güven ve suç ilişkisi üzerine durulmaktadır. Kurulan veya varolan güvenin istismarı sonucunda güveni kötüye kullanma suçu oluşmaktadır. Buradan hareketle güvenin kötüye kullanılması suçunun kanundaki tanım ve tasnifi irdelenmektedir. Ayrıca güveni kötüye kullanma, güven duygusunu zayıflatma ile ilgili alınması gereken önlemler hakkında öneriler sunulmakta ve güvenin oluşmasında istismar edilen unsurlar da tasnif edilmektedir.

**Anahtar Kelimeler:** Güven, Sosyal Güven, Güven İstismarı, Güveni Kötüye Kullanma Suçu

## **TRUST AND THE CRIME OF ABUSE OF TRUST**

### **ABSTRACT**

Trust is an important basis for establishing and maintaining social relations. The existence of a healthy society depends on the strong sense of trust in the society. Confidence has a close relationship with crime. In societies where trust is lost, crime rates are high. In this context, it is understood that strengthening trust is an important factor in reducing crime. In addition, the sanctions to be applied against the criminal also contribute to the increase of trust in the justice and security institutions. Trust has positive functions in social life. Thanks to these functions, the society turns into a holistic structure and social solidarity is ensured. Some individuals and institutions can be a reference in the construction of trust in social life, and at this point, grievances may occur through the abuse of these elements. At the base of some crimes, it is understood that the victims' commitment to these elements is abused. For example, a separate crime is committed by using religion, family, state, important personalities, national and moral values. Although the criminals do not have any attachment to these elements, it is seen that they abuse the feelings of the victims and use the mentioned elements. Our research is based on data obtained from literature review. In the study, "trust" and "crime of abuse of trust" are discussed on a conceptual and theoretical basis. Here, the relationship between trust and crime is emphasized through the crime of abuse of trust. As a result of the abuse of the established or existing trust, the crime of abuse of trust occurs. From this point of view, the definition and classification of the crime of abuse of trust in the law is examined. In addition, suggestions are made about the measures to be taken regarding abuse of trust and weakening the feeling of trust, and the elements that are abused in the formation of trust are also classified.

**Keywords:** Trust, Social Trust, Abuse of Trust, Crime of Abuse of Trust

## **GİRİŞ**

İnsanların birbirine güvendiği toplumsal hayat istenilir bir durumdur. Toplumsal hayat içerisinde güvenin azalması, güvenin kötüye kullanma ile yakın bir ilişkisi vardır. Dünya değerler anketinde insanların çoğuna güvenme durumu gittikçe olumsuz yönde değişime uğramaktadır. Artık insanların güven alanın yaşadıkları olumsuz tecrübe ve deneyimler kişilerarası ilişkilerde güvenin azalmasına neden olmaktadır.

Güveni kötüye kullanma suçu temelde güvenin istismarına dayanmaktadır. Aslında güven ilişkileri üstündür ve değerlidir. Ancak bazı suçlular dahi önce güven oluşturarak insanların güvenini kazanmakta ve daha sonra kişilerin sermayesini ve birikimini kendi zilyetine geçirmektedir. Ponzi oyunu, piramit satış, dolandırıcılık, saadet zinciri, titan gibi isimlerle ile işlenen dolandırıcılık suçlarının temelinde yine güven oluşturup istismar etmek vardır.

Çalışma güven ve suç ilişkisi irdelenmekte ve kavramsal bir analiz ile güven ihmalinin ve istismarının suça dönüşmesini ele almaktadır. Bu bağlamda güveni kötüye kullanma suçu açıklanmaktadır.

## **Güven ve Sosyal Güven**

Sosyal hayat içerisinde insanlar arasında ilişkileri oluşması ve sürdürülmesinde güven oldukça önemli bir işlev üstlenmektedir. Güven toplumsal birlikteliğinde esas olmakla birlikte güven olmadığı toplumsal çöküntüye de neden olabilmektedir. Tecim (2011), güvenin, sosyal sermayenin bir ögesi olarak görüldüğünü ve ağ ögesiyle sosyal sermaye daha anlaşılır hale geldiğini ifade etmektedir.

Sosyal sermaye, esasında toplumsal ilişkilerin gücüne dayanmaktadır. Bu çerçevedeki değerlendirmelere bakıldığında, insan ilişkilerini en geniş anlamıyla toplumsal gelişmenin ve dinamizmin kaynağı sosyal sermaye olarak görülmektedir. Başka bir ifade ile sosyal sermaye, topluma ya da topluluğa ortak bir benlik inşa eden, birey ve toplum/topluluk arasındaki bağı güçlendiren esaslı unsurun adıdır. (Aydemir ve Tecim, s. 2012: 45). Toplumsal hayatın varlığı, güvenin tesis edilmesi ile yakın bir ilişki içerisinde.

İnsanların amaç ve hedeflerine ulaşma noktasında sosyal ilişkiler önemli yer tutar. Sosyal ilişkiler toplumsal hayat için gerekli olmanın yanında hayatı kolaylaştırmada rol oynamaktadır. Sosyal hayat içerisinde gerçekleşen ilişkiler birer sosyal sermayeye dönüşürken, aynı zamanda gönüllü birliktelikler, sosyal ağlar, normlar ve güvenilirlik birer sosyal sermaye biçimi olarak karşımıza çıkmaktadır (Aydemir, 2011: s. 62). Sosyal sermaye insan birlikteliklerini temsil

etmekte ve bu temsiliyet içerisinde iletişim, etkileşim ve güven önemli unsurları oluşturmaktadır.

Sosyalleşme, insanların birbirileri ile ilişkilerinde norm ve kurallara bağlı kalırken gelişmektedir. Daha doğru bir ifade ile bireyler birbirilerinden norm ve kurallara uyması beklemektedir. Ayrıca sosyal sistem içerisinde norm ve kural dışı davranışların sergilenmesi için söz konusu davranışları gerçekleştirenlerin müeyyidelerle cezalandırılacağına yönelik kanaat oluştuğunda insanlar, daha çok güven duyma eğilimindedir. Bu ilişkisel davranış yüksek seviyede sosyal güveni sağlar (Aytaç, Çarkoğlu ve Ertan, s. 2017: 4). Sosyal güven, insanların nerede, ne zaman ve nasıl davranması konusunda ipucu vermektedir. İnsanların belli durumlarda nasıl davranışlar sergileyeceğinin bilinmesi sosyal güvenin varlığına işaret etmektedir.

Güven duygusu ile sosyal ilişkileri arasında doğrusal bir ilişki söz konusudur. Güven azaldıkça sosyal ilişkilerde bir gerileme ortaya çıkmaktadır. Fukuyama'nın sosyal sermayeyi güven üzerinden değerlendirmekte ve sosyal sermayeyi "bir toplumda ya da bir toplumun belli bölümlerinde güvenin hüküm sürmesinden doğan kapasite" olarak açıklamaktadır. Sosyal sermaye sadece benzer sosyal kesimlerin birbirine güvenmesi anlamını taşımamaktadır. Sosyal sermaye aynı zamanda yabancılara yönelik de bir güven duygusunun gerekliliğini ortaya koymaktadır (İlhan ve Fırat, 2019: 365).

İnsanlar, davranışlarını ortaya koyarken güven temelinde hareket edebilmektedir. Başka kişilerin sonraki söz, eylem ve pratiklerini göz önünde bulundurmamak suretiyle beklentiler içine girilebilmektedir. İnsan davranışlarının bazı temel nitelikleri güveni önemli hale getirmektedir. Aslında insanlar arasında kurulan ilişkiler başkasına güven temelinde ilerlediğini söylemek mümkündür. Çünkü onların davranacağını kestirmekteyiz ve bu kestirim güveni oluşturmaktadır (Turner, 2020: 391).

Sosyal ilişkilerin erozyona uğraması ve dejenere olması, ilişkilerin gerilemesine ya da bozulmasına neden olmaktadır. Bu durum, ilişkide güven yerine şüphe ve kuşkunun ağırlık kazanması ile ilintilidir. Bireyler, ilişkilere başlamak için aralarında güveni sağlaması gerekmektedir. Güvenin sağlanamaması ya da gerilemesi halinde sosyal ilişki bu durumdan olumsuz etkilenmesi kaçınılmazdır (Tan, 2021).

Sosyal ilişkilerinde güven bazen olumsuz kullanılmaktadır. Güven istismarı olarak karşımıza çıkan bu durum insanlar arasındaki güvenin azalmasına neden olmaktadır. Güven istismarı,

nihayetinde bir suça dönüşmektedir. Güvenin suça dönüşmesi güveni kötüye kullanma suçunun oluşmasına neden olmaktadır.

### **Güveni Kötüye Kullanma Suçu**

Güvenin kötüye kullanılması suça dönüşmektedir. Güveni kötüye kullanma suçu, 5237 sayılı Türk Ceza Kanununun ilgili maddelerinde açıklanmaktadır:

*“Başkasına ait olup da, muhafaza etmek veya belirli bir şekilde kullanmak üzere zilyedliği kendisine devredilmiş olan mal üzerinde, kendisinin veya başkasının yararına olarak, zilyedliğin devri amacı dışında tasarrufta bulunan veya bu devir olgusunu inkar eden kişi, şikayet üzerine, altı aydan iki yıla kadar hapis ve adli para cezası ile cezalandırılır.*

*Suçun, meslek ve sanat, ticaret veya hizmet ilişkisinin ya da hangi nedenden doğmuş olursa olsun, başkasının mallarını idare etmek yetkisinin gereği olarak tevdi ve teslim edilmiş eşya hakkında işlenmesi halinde, bir yıldan yedi yıla kadar hapis ve üçbin güne kadar adli para cezasına hükmolunur”.*

İlgili kanunun güveni kötüye kullanma suçu tanım ve açıklamasına bakıldığında maddi zarar üzerinden açıklandığı ve bu durum esas alınarak cezai yaptırımlar uygulandığı anlaşılmaktadır. Güvenin oluşumu kolay olmadığı gibi belli bir süre ve emek sonucunda oluşmaktadır. Bu sebeple güven istismarının ciddi yaptırımlar ile karşılık bulması gerektiği düşünülmektedir. Bu bağlamda söz konusu suçun mahiyeti ve kapsamı gözden geçirilerek ve yaptırımların daha işlevsel hale getirilerek güvenin tahkim edilmesi ile mümkün olabilir.

Güveni kötüye kullanma suçu ticaret, aile ve sosyal çevre ilişkilerinde karşılaşılmaktadır. Ticarete, kişiye ve nesneye duyulan güvenin boşa çıkması sonucu şikayetler oluşabilmektedir. Aile ilişkileri, güvene dayalı olması tabiidir. Burada malın birisine devredilmesi ve sonradan teslim edilmemesi ya da malın kullanımı konusunda hakların sahibine teslim edilmemesi sonucunda aile bireyleri arasında güveni kötüye kullanma suçu oluşabilmektedir. Bir diğer husus ise sosyal çevre ile kurulan güvenin istismar edilmesi sonucunda maddi zararlar oluşmakta ve kişilerarası ilişkilerin zarar görmesine neden olabilmektedir. Bu çerçevede sosyal sermayenin önemli bir unsuru olan güvenin, sosyal çevre içerisinde istismar edilmesi sosyal sermayenin zarar görmesine neden olmaktadır. Sosyal sermaye bağlarının güçlü ve sağlam olması sosyal güvenin tahkim edilmesi ile yakın bir ilişki içerisindedir. Hewitt ve Shulman' ın (2019: 278) ifadeleriyle sosyal düzen, insanların güveni ihlal edip zorunlulukları yerine getirmemesiyle tehdit altındadır. Biz istemsiz olarak koordine sosyal eylemlere girmek, sosyal

düzeni sağlamak ve devam ettirmek için başkalarıyla güven ilişkileri temelinde bağlı kalmaktayız.

## **SONUÇ**

Güven, toplumsal hayat içerisinde belirleyici bir unsur olarak karşımıza çıkmaktadır. İnsanların birbirine şüphe duymadan bağlanma duygusuna ve beklendi davranışların ortaya çıkması bağlamında güven kişilerarası ilişkilerin oluşması ve sürdürülmesinde etkin bir işleve sahiptir. Ancak güven, suçlular tarafından olumsuz yönde kullanarak insanların mağdur olmasına neden olmaktadır. Bu durum güven istismarı olarak açıklamak mümkündür. Güven istismarı, maddi zararı çıkarması sebebiyle güveni kötüye kullanma suçu ortaya çıkmaktadır. Ancak güveni kötüye kullanma sadece maddi boyut ile açıklamak yetersiz kalacağı düşüncesi önemlidir. Güvenin kötüye kullanma sonucunda toplumsal hayat içerisinde güven duygusu zarar görmekte ve insanların birbirine güveni azalmaktadır. Bu durum sosyal hayatı olumsuz etkilediği gibi bireylerde kimseye güvenmeme duygusunu ortaya çıkarmaktadır.

## **ÖĞRETMEN ADAYLARININ EĞİTİMDE WEB 2.0 TEKNOLOJİLERİ KULLANIM PERFORMANSLARININ ARTIRILMASINA YÖNELİK BEKLENTİLERİNİN BELİRLENMESİ**

**Dr. Öğr. Üyesi Barış MERCİMEK (Orcid ID: 0000-0002-0368-4693)**  
Siirt Üniversitesi Eğitim Fakültesi Eğitim Bilimleri Bölümü

### **ÖZET**

Öğretim ve öğrenme ortamlarında planlı ve disiplinli web teknolojilerinin kullanım sıklığı artmaktadır. Bunun yanında mevcut teknolojileri istendik seviyede kullanamayan, öğretimsel amaçları destekleyecek kapsamda bu teknolojilerden yararlanmayan öğreticiler de bulunmaktadır. Bu bağlamda öğreticilerin öğrenme ortamlarında web 2.0 teknolojilerinden yararlanması için asgari yeterlik ve motivasyon kaynaklarının belirlenmesi değerli görülmektedir. Bu araştırma konusu web 2.0 araçlarını mutlak yararlı ve zorunlu görüldüğü gerekçesiyle değil; kullanım durumlarının ortaya çıkmasını sağlayacak beklentilerin belirlenmesi üzerine ortaya çıkmıştır. Bu araştırmanın amacı öğretmen adaylarının web 2.0 teknolojileri kullanım performanslarının artırılmasına yönelik beklentilerinin belirlenmesidir. Nitel araştırma ile desenlenen bu çalışmada yarı yapılandırılmış görüşme formu veri toplama aracı olarak kullanılmıştır. Katılımcıların farklı web 2.0 teknolojilerine yönelik görüşleri istekli, ılımlı, mesafeli olarak belirlenmiştir. Kullanım performanslarının artırılmasına yönelik beklentileri ise teknoloji kabul kullanım, tekno-stress, teknik altyapı, uygulamalı kullanım deneyimi kategorilerinde izlenmiştir. Bu doğrultuda öğretmen adayları bilişim teknolojileri, öğretim teknolojileri gibi derslerde aldıkları teorik bilginin gerçek bir sınıf ortamında uygulanmasının önemine işaret etmiştir. Teknoloji kullanım deneyimlerinin sosyo ekonomik düzeyle ilişkilendirilerek düşük ve orta seviyede olanların teknoloji kabul ve kullanım seviyelerinde de düşüş görülmektedir. Okullarda gerçekleştirilen etkileşimli tahta uygulamalarının artmasıyla birlikte bilgisayar laboratuvarlarının azalması veya kapatılması ile teknik altyapı yeterliği konusunda endişeler beraberinde gelmektedir. Öğretmen adaylarının son olarak web 2.0 teknolojileri hakkında bilgi sahibi oldukları alanlarda ve uygulamalarda dahi kullanım yetersizlikleri ve düşük motivasyon durumları dikkat çekmiştir. Bu kapsamda web 2.0 teknoloji uygulamalarının öğretici ve öğrenen rollerinde uygulanarak deneyimin artırılması gerekliliğinin altı çizilmiştir. Sonuç olarak öğretmen adayları teorik bilginin gerçek yaşamla ilişkilendirilmesinde gerçek sınıf etkinlikleriyle desteklenmesi gerektiğini ve kullanım sırasında yaşanacak problemlerde teknik desteğin sağlanılmasının önemi açığa çıkmıştır.

**Anahtar Sözcükler:** Web 2.0, Öğretim, Teknolojik Yeterlik, Motivasyon

**DETERMINING THE EXPECTATIONS OF TEACHER CANDIDATES FOR  
INCREASING THE PERFORMANCE OF USING WEB 2.0 TECHNOLOGIES IN  
EDUCATION****ABSTRACT**

The frequency of use of planned and disciplined web technologies in teaching and learning environments is increasing. In addition, there are also instructors who cannot use existing technologies at the desired level and do not benefit from these technologies to support educational purposes. In this context, it is considered valuable to determine the minimum proficiency and motivation resources for instructors to benefit from web 2.0 technologies in learning environments. The subject of this research is not on the grounds that web 2.0 tools are considered absolutely useful and necessary; It emerged on the determination of the expectations that will lead to the emergence of use cases. The aim of this research is to determine the expectations of pre-service teachers to increase their performance in using web 2.0 technologies. In this research, which was designed with qualitative research, semi-structured interview form was used as a data collection tool. The opinions of the participants on different web 2.0 technologies were determined as willing, moderate and distant. Expectations for increasing usage performances were followed in the categories of technology acceptance, use, techno-stress, technical infrastructure and hands-on usage experience. In this respect, pre-service teachers pointed out the importance of applying the theoretical knowledge they received in courses such as information technologies and instructional technologies in a real classroom environment. By associating technology use experiences with socio-economic level, there is a decrease in the technology acceptance and use levels of those at low and medium levels. With the increase in interactive whiteboard applications in schools, the decrease or closure of computer laboratories and concerns about technical infrastructure adequacy. The inadequacies and low motivation of teacher candidates, even in the fields and applications where they have knowledge about web 2.0 technologies, attracted attention. In this context, the necessity of increasing the experience by applying web 2.0 technology applications in the roles of instructor and learner has been underlined. As a result, it was revealed that pre-service teachers should be supported with real classroom activities in associating theoretical knowledge with real life and the importance of providing technical support for problems that may arise during use.

**Keywords:** Web 2.0, Training, Technological Competence, Motivation

## 1. GİRİŞ

Öğretim teknolojileri zamanla öğrenme ortamlarının sıklıkla tercih edilen bir parçası olmuştur. Dijital teknolojilerin öğretim amaçlı kullanım hızı ikinci dünya savaşından bu yana ivmelenmektedir. Bu durumun temel gerekçesi öğretim teknolojilerinin öğrenme süreçlerine olan katkısıdır. Bu katkılar şu şekilde özet bir listede sunulabilir;

- Bireysel farklılıklara önem verilmesi (Arslan ve Bilgin, 2020)
- Kalıcı ve transfer edilebilir öğrenme çıktıları sunması (Uygun ve Kılıçkara, 2019)
- Farklı öğrenme stillerine uygun içerikler sunulabilmesi (Shemshack, 2021)
- Öğrenmede mekân ve zaman sınırlılığını esnetebilmesi (Fidalgo vd., 2020)
- Tekrar kullanılabilirlik (Dumford ve Miller, 2018)
- Kolay erişilebilirlik (Crompton ve Sykora, 2021)
- Uygulaması güç ve maliyetli uygulamaların simülasyon olarak hazırlanmasına aracılık etmesi (Barth vd., 2022; So vd., 2019)
- Öğrenen ilgi ve motivasyonunu kazanabilmesi (Saban ve Çelik, 2018)

Başlıca bu gerekçeler olmak üzere öğretim teknolojisi araçları öğrenmenin gerçekleşmesi sürecinde önemli bir araçtır. Bu teknolojiler zaman zaman öğrenmenin tek aracı olabilmektedir. Nitekim öğretmenin fiziki veya sanal olarak bulunmadığı ortamlarda da öğrenme gerçekleşebilmektedir. Bu durum iyi bir öğretim tasarımının öğrenme aracına entegrasyonu ile mümkün olabilmektedir (Yücel, Acun, Tarman, & Mete, 2010).

Öğrenen tarafında öğrenme sürecinin anlamlandırılması için temel bir takım ölçütlerin yerine getirilmesi kritik öneme sahiptir. Dikkat çekme ve ilgiyi sürdürebilme için öğrenme ortamının arayüzü, işlevselliği, etkililiği ve öğrenen şeması ile benzeşimi değerli görülmektedir (Saban ve Çelik, 2018). Öğrenen kendisi için basit, somut ve tanıdık bir ortamda harici bilişsel yüklenmeden muaf olmaktadır. Böylelikle öğrenme odağı öğrenene aktarılabilir. Bunun yanında öğrenen dijital teknolojilerle zengin bir çevrede bulunmasa dahi öğrenme ortamının olanakları ile yeterli dijital deneyime erişebilmekte ve sonraki öğrenme ortamlarında yaşayacağı yabancılik hissini en aza indirgeyebilmektedir. Bu araştırmada eğitsel dijital teknolojileri araçları arasında yer alan web 2.0 araçlarının öğretmen adayları tarafından kullanım durumlarının belirlenmesi ve kullanım performanslarının iyileştirilmesi için beklentilerinin analizi hedeflenmektedir. Bu durum analizi ile geleceğin öğretmenlerinin kendi sınıflarında etkili, işlevsel ve kalıcı öğrenmelere hizmet edebilecek web teknolojilerine yaklaşımlarının iyileştirilmesi için öneriler hazırlanması mümkün olabilecektir.

## 2. ARAŞTIRMA VE BULGULAR

Bu araştırmada nitel araştırma desenlerinden durum araştırmasından yararlanılmıştır. Durum araştırması ile alanı belirli bir konunun derinlemesine incelenmesi hedeflenmektedir (Creswell vd., 2007; Merriam, 2002). Araştırmanın çalışma grubunu 2021-2022 öğretim yılında Siirt Üniversitesi Eğitim Fakültesinde öğrenim görmekte olan 12 öğretmen adayı oluşturmaktadır. Çalışma grubunun belirlenmesinde amaçlı örneklem yöntemleri arasında yer alan tipik durum örnekleme kullanılmıştır. Patton (2014) tipik durum örnekleme farklılık içeren durumların ortalama ve benzeşik yapısının temsilinde önem taşıdığı ifade etmektedir. Çalışma grubu belirlenirken öğretmen adaylarının öğretim teknolojileri dersini almış olma koşulu aranmıştır. Böylelikle araştırma odağına hizmet edebilecek asgari bilgi ve beceri seviyesi katılımcılarda gözetilmiştir. Araştırmaya katılan öğretmen adaylarına ait bölüm ve sınıf düzeyi verileri tablo 1’de özetlenmiştir.

Bölüm	Sınıf düzeyi	Katılımcı sayısı
Fen Bilgisi Öğretmenliği	3	1
İlköğretim Matematik Öğretmenliği	4	4
Rehberlik ve Psikolojik Danışmanlık	4	2
Sınıf Öğretmenliği	3	4
Sosyal Bilgiler Öğretmenliği	4	1

**Tablo 1.** Çalışma grubuna ait bölüm ve sınıf seviyeleri verileri

Araştırmada veri toplama aracı olarak yarı yapılandırılmış görüşme formunda yararlanılmıştır. Görüşme formunda alanyazın taraması yapılmış sonrasında web 2.0 araçlarının işlevleri gözetilerek sorular hazırlanmıştır. Verilerin analizinde içerik analizinden yararlanılmıştır. Katılımcıların web 2.0 teknolojilerini meslek yaşantılarında kullanım durumlarına yönelik motivasyonel durumları istekli, ılımlı ve mesafeli temalarında izlenmiştir. Bu durum tablo 2’de özetlenmiştir.

**Tablo 2.** Öğretmen adaylarının web 2.0 teknolojilerini kullanma motivasyonlarına yönelik görüşleri

ISTEKLI	ILIMLI	MESAFELI
Niyet+Motivasyon	Kararsız/Farkında/ Değişken Bilgi Düzeyi	Direnç/Gerekçe/Kilif

Tablo 2’den anlaşılacağı üzere katılımcılar farklı kullanım motivasyonu seviyelerinde yer almaktadır. Bir katılımcının “*Şimdiki öğrenciler her şeyi biliyor hocam. Okulun imkanı olursa*

*onları teşvik etmek için bende öğrendiklerimi kullanırım.*” ifadesi kullanım niyetinin oluşunu ve deneyimin kullanma motivasyonunu tetiklediğine yönelik işaretçisi olmaktadır. Bu durum Usta ve Korkmaz (2010) çalışmaları ile tutarlılık göstermektedir. İlgili çalışmada öğretmen adaylarının teknoloji algı ve motivasyonlarının olumlu olduğu izlenmiştir. Farklı bir katılımcının *“Ben öğrenmeye çalışıyorum. Öğreniyorum da. Ama sanki biri buradan ders anlatacak veya uygulama yapacak, ben kullanıcı olacaktım gibi hep”* görüşü ise kullanımın etkisine yönelik mutlak bir görüşün olmadığı ancak öğrenme konusunda ılımlı bir etkinin varlığına inanç olarak nitelenebilir. Bununla birlikte bir katılımcının *“Öğretmen olunca bizim alanda çok kullanılmıyor hocam, kullanmadan da öğretebilirim.”* ifadesi, eğitsel web teknolojilerinin kullanımına yönelik güçlü bir gerekçe olmayışının ve kullanım konusunda dirençli bir yaklaşımın göstergesi niteliğindedir.

Meslek yaşantılarından etkili web 2.0 araçlarının kullanım performanslarının artırılmasına yönelik beklentileri noktasında ise katılımcılar belirli noktaların altını çizmiştir. Teknoloji kabul kullanım seviyelerinin iyileştirilmesi için etkinliklerin hazırlanması ve uygulanması, tekno-stress yükünün azaltılması, teknik altyapının yeterli ve sürekli etkin olması, uygulamalı kullanım olanaklarının sağlanması vurgulanan beklentiler arasında yer almıştır. Bir katılımcının *“Hocam ben bilgisayarımı açmamla stres altına girmem bir oluyor. Ben zaten kullanmaya yeni başladım bu nedenle açıkçası biraz isteksizim”* ifadesi teknolojik araçlara yönelik genellenmiş bir stres yükünün göstergesi olmuştur. Bir başka katılımcı *“Okulda biri sürekli hocam bu bu işe yarıyor, böyle kullanılıyor diye anlatacak, yanlış yapınca da hemen yardımcı olacak ki ben rahat edeyim”* görüşüyle sürekli bir uygulama desteğinin önemini ifade etmiştir. Bunun yanında etkileşimli tahtanın açılmaması, arıza yapması uygulamanın istenilen biçimde hizmet etmemesi durumunda yardımcı olacak teknik bir destek birimi katılımcı beklentileri arasında yerini almıştır.

### **3. SONUÇ**

Bu çalışmada öğretmen adaylarının web 2.0 teknolojilerini kullanım performanslarının artırılmasına yönelik beklenti ve önerileri derlenmiştir. Bu doğrultuda öğretmen adayları meslek yaşantılarında bu teknolojileri etkin, sürekli ve istekli kullanabilmek için bir dizi öneriler sunmuştur. Okulların teknolojik altyapısının güncel ve etkin olması bu beklentiler arasında yer almaktadır. Öğretmen adayları kullanım performanslarının artması için fiziki bir engelle karşılaşmak istemediklerini, sürekli bir teknik desteğinin de bulunması gerektiğini

belirtmektedir. Eğitsel uygulamaların kullanımında ise bilmedikleri uygulamaların hizmetiçi uygulamalı eğitimlerle öğretilmesi gerekliliğini ifade etmektedirler. Uygulamaların öğretici, yönetici ve öğrenci gibi tüm rollerinin kazandırılmasını değerli görmektedirler. Bu bağlamda meslek yaşantılarında öğretmene sürekli ve güçlü bir teknik altyapı desteğinin sunulması, web 2.0 araçlarının tanıtılması, kullanım durumlarının farklı rollerde (uygulayıcı-katılımcı) öğretilmesi ve deneyimletilmesi önem taşımaktadır. Tatlı ve Akbulut (2017) araştırmalarında öğretmen adaylarının lisans hayatından itibaren teknoloji tabanlı etkinlikler konusunda eğitim almalarını önemsemişlerdir. Benzer biçimde Kurtoğlu ve Seferoğlu (2013) çalışmalarında öğretmenlerin ham bir teknoloji bilgisinin ötesinde entegrasyon becerilerine sahip olması gerekliliğinin de altını çizmişlerdir. Öğretmen adaylarının güncel web araçlarında kendi alanlarına özgü tüm yeniliklerden haberdar edilmeleri de kritik öneme sahiptir. Böylelikle güncel uygulamaları ve gelişmeleri tanımaları, benimsemeleri ve kullanmaları mümkün olabilecektir. İlgili kurum ve kuruluşların, öğretmenlerin etkisi kanıtlanmış web araçlarını kullanım durumlarının takibini yapabilecek komisyon ve komitelerin kurulmasında sürece dahil olması, bu sürecin takibi açısından değerli görülmektedir.

## **ORTA ÇAĞ RASATHANELERİNDE KULLANILAN SEKSTANT ALETİ**

**Doç. Dr. Seyfettin KAYA (Orcid ID: 0000-0003-2181-5973)**  
Siirt Üniversitesi, Fen-Edebiyat Fakültesi, Tarih Bölümü, Orta çağ ABD

### **ÖZET**

Orta çağ İslam dünyasında rasathaneler ilk kez Abbasiler döneminde (750-1258) halife Me'mûn zamanında (813-833) kurulmuştur. X. yüzyıldan önce kurulan rasathaneler teknik bakımdan ve kapasite açısından yeterli değildi. Teknik açıdan yeterli olmayan bu rasathanelerde gözlem aletleriyle hassas ölçümler yapılamıyordu. Ancak X. yüzyıldan sonra inşa edilen rasathanelerde gelişmiş gözlem aletleri kullanılmaya başlanmıştır. Bu aletlerden en önemlisi ise genellikle rasathanelerin içine ve zeminine inşa edilen *sekstant* adıyla bilinen *es-südsü'l-fahrî* aletiydi. Rasathanenin tavanına açılan bir delikten içeri giren güneş ışınlarının günlük ve yıllık hareketleri bu alet ile ölçülmüştür. Bu aletin gelişim süreci aynı zamanda dakik ve hassas ölçümlerin ortaya çıkması süreciyle paralellik göstermektedir. Özellikle Rey (Fahrüddeve) Gözlemevi'nde inşa edilen sekstant rasat aletleri bakımından kıymete değerdir. İlhanlılar döneminde (1256-1335) Merâğa Gözlemevi'nin içine bu aletten büyük bir tane inşa edilmiştir. Rasathanenin tabanından tavanına kadar uzayan bu alet ile çok önemli verilere ulaşılmıştır. Uluğ Bey (1447-1449) tarafından inşa edilen ve günümüze kadar ulaşan Semerkant Rasathanesi'nde ise aynı aletin inşa edildiğine şahit olunmuştur. Bu çalışmada Orta çağ İslam dünyasında kurulan rasathanelerde inşa edilen sekstant aletinin kullanım ve gelişim süreci anlatılmaktadır.

**Anahtar kelimeler:** Sekstant, Rasathaneler, İlhanlılar, Astronomi, es-Südsü'l-Fahrî

## **SEXTANTE INSTRUMENT, WHICH IT WAS USED IN MEDIEVAL OBSERVATORIES**

### **ABSTRACT**

In the medieval Islamic world, observatories were first established during the Abbasid period (750-1258) during the reign of Caliph Me'mûn (813-833). The observatories established before the 10th century were not sufficient in terms of technical and capacity. Precise measurements could not be made with observation instruments in these observatories, which were not technically sufficient. However, advanced observation instruments began to be used in observatories built after the 10th century. The most important of these tools was the es-südsü'l-fahri, known as the sextant, which was usually built inside and on the ground of observatories. The daily and annual movements of the sun rays penetrating through a hole in the ceiling of the observatory were measured with this instrument. The development process of this instrument also parallels the emergence of precise and precise measurements. Especially the sextant built in the Rey (Fahrüddeve) Observatory are important in terms of observation instruments. During the Ilkhanate period (1256-1335), a large one of this instrument was built inside the Merağa Observatory. With this instrument, which extended from the floor of the observatory to the ceiling, very important data were obtained. In the Samarkand Observatory, which was built by Uluğ Bey (1447-1449) and survived until today, it was witnessed that the same instrument was built. In this study, the use and development process of the sextant instrument built, in the observatories established in the medieval Islamic world is explained.

**Key words:** Sextant, Observatories, Ilkhanate, Astronomy, es-Südsü'l-Fahri

## **GİRİŞ**

İlk çağ uygarlıklarında rasathanelerin varlığına dair kesin bir bulguya veya belgeye rastlandığını belirtmek pek olası görünmemektedir. Bu çağda gözlem faaliyetlerinin yürütüldüğü mekânlar ve rasat aletlerine rastlanmaktadır. Ancak bu mekânlar gözlem faaliyetlerinin yürütülmesi için inşa edilen alanlar değildi, daha ziyade dini ve ekonomik etkinliklerin sürdürülmesi için inşa edilen mekânlar olmuştur. Bir bakıma rasat faaliyetlerinin yürütüldüğü alanların varlığı bir amaç olarak değil, başka bir etkinliğin bir sonucu olarak ortaya çıkmıştır.

Orta çağ İslam dünyasında IX. yıldan itibaren rasathaneler inşa edilmeye başlanmıştır. Bir İslam kurumu olan rasathaneler, ilk defa Abbasi halifesi Me'mun döneminde (813-833) kurulmuştur. Ancak Abbasiler döneminde (750-1258) kurulan bu rasathanelerde inşa edilen gözlem aletleri nitelikleri açısından zayıf ve nicelikleri açısından ise azdı. İlk rasathanelerdeki gözlem aletleri ile dakik-hassas ölçümler yapılamıyor ve elde edilen sonuçlar tatmin edici gözüküyordu. Bu sorun rasat faaliyetleri sonucunda ortaya çıkan hata payını arttırıyordu.

X. yüzyıldan itibaren rasat faaliyetlerinde ortaya çıkan hata payları azaltılmak istenmiş ve bu amaçla gözlemevlerindeki rasat aletlerinde birtakım değişiklikler yapılmıştır. Önceki yüzyılda inşa edilen küçük rasat aletleri büyütülmüş, sayıca az olan rasat aletleri çeşitlendirilmiş ve gözlem aletlerinin sayısı arttırılmıştır. Bu suretle rasat aletlerinin nitelikleri ve nicelikleri önemli ölçüde ıslah edilmiştir. Rasat aletlerinin ıslah edilmesi olumlu sonuçlar vermiş ve hassas-dakik değerler elde edilmeye başlanmıştır.

X. yüzyılda inşa edilen rasathanelerde rasat aletleri önceki yüzyıldan farklı olarak taşınabilir aletlerin yanında, gözlemevinin temeline inşa edilen kalıcı ve taşınamayan rasat aletleri ile donatılmıştır. Büyük ebatlarda inşa edilen bu rasat aletleri rasathanelerin ana omurgasını oluşturmuştur. Bu aletlerden en önemlisi gözlemevinin içine inşa edilen, genellikle rasathanenin tabanından tavanına kadar uzanan çukur şeklindeki seksant (es-Südüsü'l-fahrî) aleti olmuştur.

Seksant'ın (es-Südüsü'l-fahrî) X. Yüzyıldan önce inşa edilen rasathanelerde kullanılıp kullanılmadığı kesin bir şekilde bilinmemektedir. Ancak X. yüzyıldan sonra inşa edilen rasathanelerde önemli bir yer tuttuğu kesindir. Bu aletin gelişim serüveni uzun bir zaman almıştır. XV. yüzyıla kadar seksant'ın (es-Südüsü'l-fahrî) gelişme gösterdiği ve ebatının giderek büyütüldüğü görülmüştür.

Bu çalışmada Orta çağ İslam dünyasında rasat aletleri içinde kullanılan ve en büyük rasat aleti olan seksant'ın (es-Südüsü'l-fahrî) gelişim süreci ele alınmıştır.

### **Rey Gözlemevi'nde Kullanılan Seksant (es-Südüsü'l-fahrî)**

Bir rasat alet olan sekstant'ın (es-Südüsü'l-fahrî) ilk kez nerede icat edildiğini veya ilk kez hangi gözlemevinde kullanıldığını kesin bir biçimde ifade etmek zordur. Ancak bu alete Rey Rasathanesi'nde rastlandığını belirtmek gerekir. Bu durum sekstant (es-Südüsü'l-fahrî) aletinin ilk kez Rey'de keşfedildiği olasılığını ortaya çıkarsa da bu iddiayı kesin bir şekilde dile getirmek pek doğru görünmemektedir. Güneş'in yüksekliğini -hareketini- ölçmek için Rey Gözlemevi'nde kullanılan seksanttan önce bu aletin görevini ifa eden herhangi bir alet var mı? Yoksa yok mu? Sorusu ister istemez akıllara gelmektedir. Yıldızların yüksekliğini veya gök cisimlerinin konumlarını belirlemek amacıyla kullanılan benzer aletlere bir İslam kurumu olan rasathanelerde rastlanmaktadır. Ancak bunların bir sekstant olmadığını da açık bir şekilde belirtmek doğru bir yaklaşım olmalıdır. Bu yönüyle sekstant aletinin ilk kullanıldığı yerlerden birinin Rey Rasathanesi olduğu savı gerçeğe yakın görünmektedir<sup>68</sup>.

Rey Gözlemevi'nde yapılan çalışmalar sırasında Batlamyus ve Hint kaynakları incelenmiştir. Bu inceleme sırasında döneminin en meşhur astronomu ve matematikçisi olarak bilinen el-Hucendî tarafından ekliptik eğimi değerinin zaman içinde küçüldüğü iddiası ileri sürülmüştür. Bu iddianın doğruluğunu ispatlamak için günümüzde Tahran'ın güneyinde olduğu tahmin edilen Rey'de Şii-Büveyhi hükümdarı Fahrüddeve'nin (976-997) desteği ile bir gözlemevi inşa edilmiştir. Gündönümlerinde (21 Haziran- 21 Aralık) Güneş'in yüksekliğini rasat etmek için dairenin  $\frac{1}{6}$ 'den ibaret olan bir yay şeklinde sekstant adı verilen bir gözlem aleti inşa edilmiştir. Bu alete Şii-Büveyhi hükümdarı Fahrüddeve'ye nispetle es-Südüsü'l-fahrî (Fahredden Sekstantı) adı verilmiştir<sup>69</sup>.

Gözlem faaliyetlerini da yakından takip eden Fahrüddeve, Rey kentinin meridyenin girişini rasat etmekte kullanılması için "*Hikâyetü'l-âleti'l-müsemmât bi's-südsi'l-Fahrî*" adıyla da bilinen sekstantın yapılmasını emretmiştir<sup>70</sup>. Bu vesileyle Rey Rasathanesi'nde kullanılması ve

<sup>68</sup> Sekstant (es-Südüsü'l-fahrî) aletinin kullanımı hakkında bilgi almak için bkz. Seyfettin Kaya, *Ortaçağ İslam Dünyası'nda Rasathaneler*, Libra Kitapevi, İstanbul 2020, s. 89-90.

<sup>69</sup> Fuat Sezgin, *İslam'da Bilim ve Teknik*, c. II, İstanbul Büyükşehir Belediyesi Kültür A.Ş. Yayınları, İstanbul 2008, s. 25.

<sup>70</sup> Abdülkerim Özyayın, "Fahrüddeve", *DİA*, c. XII, TDV Yayınları, İstanbul 1995, s. 99.

gözlem faaliyetleri yürütülmesi için sekstant (es-Südüsü'l-fahrî) aleti imal edildi. Bu konuya değinen Birunî şu bilgileri vermektedir.

*“Fahrüddevlâ'nin isteği üzerine el-Hucendî, Rey şehri yakınlarında Tabarak Dağı'nda birbirine paralel iki duvar inşa etti. Duvarların arası 7 arşın idi ve bunların arasına tak (yarım daire) yaptı ve tepesine delik açtı. O deliğin kutru bir karış idi. O deliğin merkezinde, iki duvar beyninde nısf-ı nehâr hattı üzerindeki kutru seksen zirâ' olan südüs daireyi merkez kıldı. Ve onu tahtalarla döşeyerek muhtelif renklere boyadı. Ve devr-i cüz'lerinin her birini 369 müsâvî kısma taksim etti. O kısımlardan her biri 10 sâniye idi. Güneş ziyâsı mezkûr delikten nısf-ı nehâr hattı üzerine düşerdi. Ebû Mahmûd, yere düşen ziyâ mikdârında bir tanbur yaptı. O tanburun mütekâtî' iki kutru zâhir idi. Tanburun muhitini ziyân muhiti üzerine vaz' ederek, onun merkezi vasıtasıyla, Güneş ile semtürre's beynindeki mikdârı öğreniyordu.”<sup>71</sup>*

Bu alet hakkında bilim tarihinin önde gelen tetkikçileri önemli yorumlar yapmışlardır. Bu tetkikçilerden bir Fuat Sezgin'dir. Fuat Sezgin Rey Gözlemevi'nde kullanılan sekstant (es-Südüsü'l-fahrî) hakkında şu bilgileri vermektedir;

*“Bizim sekstantımız meridyen eparalel ve birbirlerinden boyunca 7 zira (3,5 m.) aralıkla kurulan iki dikey duvardan oluşmaktadır. Yerden 20 zira (10 m.) yükseklikteki tavanda bir kubbe ve bu kubbenin ortasında, içerisinde 1/ 6 ziralık (1/ 12 m.) çapında bir delik bulunmaktadır. Bu delik üzerine duvarlara paralel demir bir çubuk sabitlenmiş ve bu çubuk üzerine, bir ucunda iki halka olan tabanı kare şeklinde yirmi metre kadar uzunlukta bir demir çubuk asılır. Bu çubuğun ucuna bir demir halka sabitlenir. Bununla (duvara paralel aşağı yukarı hareket ettirmek suretiyle), bir dairenin altıda birinden ibaret bir yay tanımlanır. Bu yay, açıklığın altında dikey olarak 10 metre derinlikte başlamakta ve yer seviyesine kadar ulaşmalıdır. Bu yay özenle pürüzsüz hale getirilir ve tahtalarla kaplanır. Derecelere ve her derece 360 bölüme, yani dakikalara ve her birisi de onar saniyeye bölümlenir. Güneş'in şeklini sekstant yayı üzerinde tam ayarlayabilmek için, iki çapının birbirini 90 derece ile kestiğini gösteren çizgileri taşıyan (madeni) bir disk sağlanır. Bunun çapı (ki sekstant yayının genişliğine eşittir) kubbenin deliğinden 20 metre aşağıya gelen Güneş'in görünüş çapı büyüklüğünde olacak kadar hesaplanır.”<sup>72</sup>*

<sup>71</sup> Birunî, *Tahdîdü Nihâyâtî'l-Emâkin*, Tercüme: Kivâmeddin Burslan, Transliterasyonu Hazırlayan: Melek Dosay Gökdoğan-Tuba Uymaz, TTK, Ankara 2013, s. 54-55.

<sup>72</sup> Sezgin, *İslam'da Bilim ve Teknik*, s. 25.

*Sekstant'ın (es-Südü'sü'l-fahrî)<sup>73</sup>*

Rey'de kullanılan sekstant (es-Südü'sü'l-fahrî) hakkında bilgi veren bir diğer tetkikçi Aydın Sayılı'dır. Aydın Sayılı, Fuat Sezgin'in verdiği bilgilere paralel olarak şunları ifade etmiştir; *“es-südü'sü'l-Fahrî” aleti iki duvar arasına yerleştirilen ahşap bir yaydan inşa edilmişti ve bu ahşap yüzeye bakır levhalar yerleştirilmişti. Bu tür ayrıntılar, XIII. ve sonraki yüzyılların gözlemvleri için yapılan araçlar için de bulunurdu. Aletin kemerli tavanının üstündeki deliğin çapı yaklaşık 2 cm idi. Bu alet Şam'da (muhtemelen Kasîyûn Gözlemevi'nde) kullanılan kadrana oldukça benzer bir yayın üzerinde kayan hareketli bir parçaya sahipti.*<sup>74</sup>

Netice itibarıyla önceki rasat aletlerinden farklı olarak Rey Rasathanesi'nde sekstant (es-Südü'sü'l-fahrî) kullanılmış ve rasathanenin zeminine kalıcı bir şekilde inşa edilen bu alet ile gözlem faaliyetleri yürütülmüştür.

<sup>73</sup> Sevim Tekeli, “Al-Khujandi” *Dictionary of Scientific Biography*, Vol. VII, Charles Coulston Gillispie: Editor, Newyork-1981, s. 353.

<sup>74</sup> Aydın Sayılı, *The Observatory in Islam*, TTK, Ankara 1960, s. 119.

### **Serefüddeve Gözlemevi'nde Kullanılan Sekstant**

Rey Rasathanesi'nden sonra sekstant aletinin kullanıldığı yerlerden ikincisi Serefüddeve Gözlemevi olmuştur. Serefüddeve Gözlemevi'nde kullanılan birkaç rasat aletinden biri de sekstant aletiydi. Bu sekstant sayesinde Haziran 988 yılında ilk rasat faaliyetleri yapılmıştır. Bu alet Bağdat'ta bulunan rasathane binasına yapısal olarak inşa edilmişti<sup>75</sup>. Tarihi kaynaklar bu konuda önemli bilgiler vermektedir. Bu konuya değinen Birünî, dönemin ünlü astronomu olan el-Kûhî'nin öncülüğünde Şii-Büveyhi hanedanlığının merkezi olan Bağdat'ta bir gözlemevi inşa edildiğini ve bu rasathanenin tavanında bir delik olduğunu, Güneş ışınlarının tavanda bulunan bu delikten içeri süzüldüğünü ve bu vaziyetin ortaya çıkması sonucunda Güneş'in hareketinin izlendiğini ifade etmiştir<sup>76</sup>. Bu konuda bilgi veren bir diğer kişi Gıyâsüddîn Cemşîd bin Mes'ûd el-Kâşî olmuştur. El-Kâşî, Şii-Büveyhi hükümdarı Adûdüddeve için on gez çapında bir halka inşa edildiğinden bahsetmektedir<sup>77</sup>. Ancak bir rasat aleti olan bu halka hakkında fazlaca detay vermekten kaçınmıştır.

### **Merâga Gözlemevi'nde Kullanılan Sekstant**

Sekstant aletinin kullanıldığı yerlerden üçüncüsü Merâga Gözlemevi olmuştur. Merâga Gözlemevi'nde sekstant aletinin kullanıldığına dair önemli veriler bulunmaktadır. Bu konuda hem tarihi kaynaklarda hem de tetkik eserlerde önemli bilgilere rastlanmaktadır. Nitekim Gıyâsüddîn Cemşîd bin Mes'ûd el-Kâşî Merâga Gözlemevi'nde kullanılan sekstant hakkında önemli bilgiler vermektedir. El-Kâşî, Merâga Rasathanesi'nde yarıçapı 6 gez olan bir alet kullanıldığını, bu aletin "*hendesi minber*" olarak inşa edildiğini ve imal edilen bu aletin *süds-i fahrî* adı ile bilindiğini dile getirmiştir<sup>78</sup>. Bilim tarihinin ünlü tetkikçilerinden Aydın Sayılı ise gözlemevinin merkezinde yani tam da ortasında Rey Gözlemevi'ndekine benzer bir şekilde es-südsü'l-Fahrî aletine benzer bir rasat aleti imal edildiğini ifade etmiştir<sup>79</sup>.

<sup>75</sup> Kaya, *a.g.e.*, s. 76-77.

<sup>76</sup> Birünî, *Tahdîdü Nihâyâti'l-Emâkin*, s. 53-54.

<sup>79</sup> Sayılı, *The Observatory in Islam*, s. 198-199.

*Merâğa Gözlemevi'nde yer alan es-süds-i fahrî<sup>80</sup>*

### **Semerkant Gözlemevi'nde Kullanılan Sekstant**

Orta çağ İslam dünyasında sekstant aletinin kullanıldığı dördüncü ve son rasathane Semerkant Rasathanesi olmuştur. Bu gözlemevinin bulunduğu bölgede yapılan incelemelerde Giyâsüddin Cemşîd bin Mes'ûd el-Kâşî yönetiminde inşa edildiği tahmin edilen devasa bir *es-süds-i fahrî* sekstantı bulunmuştur<sup>81</sup>. Rasathanenin zeminine inşa edilmiş veya zemine gömülü bir şekilde imal edilmiş görkemli bir taş kadrân buranın en önemli gözlem aletiydi. Çeyrek daire şeklinde inşa edilen bu kadrana gök cisimlerinin görüntüleri veya ışığı bir kamera gibi yansıtılarak rasat çalışmalarının yapıldığı tahmin edilmektedir<sup>82</sup>. 60 derecelik bir paralel (meridyen) yayı biçiminde inşa edilmiştir. Mermerle kaplı iki paralel duvardan meydana gelen *es-süds fahrî*

<sup>80</sup> Sezgin, *İslam'da Bilim ve Teknik*, s. 32.

<sup>81</sup> E. S. Kennedy, "A Letter of Jamshid al-Kâshî to His Father: Scientific Research and Personalities at a Fifteenth Century Court", *Orientalia*, Nova Series, Vol. 29, No. 2 (1960), s. 209.

<sup>82</sup> Geert Somsen and Jeroen Werner, "How to Succeed in Art and Science: The Observatory Observed", *Contemporary Culture*, Editors: Judith Thissen, Robert Zwijnenberg, Kitty Zijlmans, Amsterdam University Press, Amsterdam 2013, s. 215, 218.

sekstantı 51 cm genişliğindeydi. Bu alet ile Güneş, Ay ve gezegenlerin hareketleri rasat edilmeye çalışılmıştır. Ayrıca bu rasat aletiyle ekliptik eğimi, senenin uzunluğunu, ekinoks ve Güneş'in hareketlerinden etkilenen diğer gök cisimleri rasat edilmiştir<sup>83</sup>. Modern rasathanelerin bile aletlerini gölgede bırakacak kadar görkemli olan Semerkant Rasathanesi'nin kadranı oldukça etkileyici görünmektedir<sup>84</sup>.

*Semerkant Gözlemevi'nin içine oyulmuş el-Fahri sekstant aleti<sup>85</sup>*

## SONUÇ

Orta çağ İslam dünyasında kullanılan sekstant (es-Südüsü'l-fahrî) aletinin X. yüzyıldan önce kullanılmadığını ve bu aletin X. yüzyıldan sonra işlev hale gelmeye başladığını eldeki mevcut bilgilere göre söylemek gerekir. Ancak bu aletin kesin bir şekilde kim tarafından veya hangi rasathanede kullanıldığını söylemek zordur. Buna rağmen Rey Rasathanesi'nde kullanılmaya başlanan bu aletin Fahrüddeve'ye nispetle *es-Südüsü'l-fahrî* adını aldığını söylemek mümkündür.

Sekstant aletinin gelişim sürecinde Rey Rasathanesi'nde kullanılan rasat aletiyle Semerkant Rasathanesi'nde kullanılan alet arasında önemli farklar bulunmaktadır. X. yüzyılda imal edilen

<sup>84</sup> Sayılı, *The Observatory in Islam*, s. 271.

<sup>85</sup> Necmi Dayday & Vural Altın, *Gök Biliminde Türk-İslâm Bilginleri*, Erkam Matbaası, İstanbul 2010, s. 167.

sekstant aleti genellikle iki duvar arasında inşa edilen çeyrek daire şeklinde ve zemine yapılan kazılar sonucunda elde edilmiştir. Ancak XV. yüzyılın ortalarına kadar gelişim gösteren sekstant aleti zemine kazılan çukurdan çıkıp zeminin üzerine taş veya mermer yapılara oyulmak suretiyle inşa edilen yapılara dönüşmüştür.

Sekstant aletinin yapımında ortaya çıkan ikinci değişiklik ise bu aletin rasathane inşasının dışından içine alınması olmuştur. Rey Rasathanesi belki de sekstant aleti şeklinde inşa edilmişti. Ancak Merâğa ve Semerkant rasathaneleri sekstant aletlerini içine alan ve bu aletin dışında başka aletlerin de kullanıldığı yapılar topluluğuna dönüşmüştür.

Sekstant aletinin gelişimindeki bir diğer değişiklik ise bu aletin zamanla daha büyük yapılar hale gelmesi olmuştur. Bu açıdan Semerkant Rasathanesi'nde kullanılan sekstant Orta çağ rasathaneleri içinde kullanılan en büyük sekstant olarak ifade edilebilir.

Netice itibarıyla Orta çağ İslam dünyasında önemli bir medeniyet ve uygarlık kurumu olan rasathanelerde sekstant aleti kullanılmış ve bu çağın sonralarına kadar yapı, imal ve işlevsellik anlamında gelişme göstermiştir.

## **GÖSTERGEBİLİMSEL BİR REKLAM ANALİZİ: “DOMESTOS”**

**Doç. Dr. Melike SOMUNCU**

Siirt Üniversitesi, Fen-Edebiyat Fakültesi, Türk Dili ve Edebiyatı bölümü, Siirt,  
Türkiye

### **ÖZET**

Göstergeler, insanlar ile doğal yaşam arasında ilgi ve iletişimi sağlayan, konumlandırmayı sağlamaştıran unsurlardır. Bu unsurların en fazla ifade alanı bulunduğu, taşıyıcılar ve aktarıcılarla dikkat algısını en üst düzeye geldiği yer, hiç şüphesizdir ki reklam metinleridir. Reklamlar içerisinde yer alan kodlar sesletim esnasında bireylerin ne olduğu veya ne olmaları gerektiğine dair ipuçları vererek esas iletinin anlamlandırılması sağlanmaktadır. Ayrıca reklamcı iletinin konusu olan ürün ve hizmet ile ilgili tüketicide veya izleyici kitlesi ile bağ kurmayı hedeflemektedir. Böylece reklamı yapılan hizmette veya üründe hedef kitleyi belirli bir düşünceye yönlterek dikkat çekmek, bilgi vermek belirli bir görüşün benimsenmesini ve satın alınmayı sağlamak esastır. Reklam metinlerinde yer alan sembollerin her ürün için ayrı ayrı tasarlandığı ve bu tasarlanan her sembolün zihinde çağrışım yoluyla ne anlama geldiği kodlarla sunulmaktadır. Bu kodlar mitler ile anlam zeminine oturtulmaktadır. Bu çalışmada içerik açısından çok sayıda kültürel ve yaşama dair kod bulunduran *Domestos* çamaşır suyu markasının pandemi öncesinde ve pandemi sonrasında yayınlamış olduğu birer reklamı göstergebilim yöntemi ile analiz edilmiştir. Analiz esnasında görsel materyaller aracılığıyla kodların düz ve yan anlam boyutları ele alınmış ve reklam metinlerinde yer alan mitlerden de yararlanarak reklam metinleri değerlendirilmiştir. Elde edilen bulgular ile reklamların kültürümüze ve yaşantımıza olan etkileri, bu etkilerin anlam dünyaları tespit edilmiştir. Esas noktası aynı olan bu reklam metinlerinin anlatım dili ve yöntemindeki farklılıklar, mitsel kodlarla sunulmuştur. Ayrıca ikili karşıtlık sistemi kullanılarak pandemi öncesi ve pandemi sonrası göstergesel farklılıklar gözler önüne serilmiştir.

**Anahtar Kelimeler:** Göstergebilim, Reklam, Mit, Domestos.

**SEMIOTIC ANALYSIS OF AN ADVERTISEMENT: “DOMESTOS”****ABSTRACT**

Indicators are elements that provide interest and communication between people and natural life, and reinforce positioning. There is no doubt that advertising texts are the place where these elements find the most expression and where the perception of attention is maximized with carriers and transmitters. The codes in the advertisements are aimed at the main message by giving clues about what individuals are or what they should be. In addition, the advertiser aims to establish a connection with the consumer or the audience regarding the product and service that is the subject of the message. Thus, it is essential to attract attention by directing a certain thought in the advertised service or product, to provide information, to ensure the adoption of a certain view and to ensure purchase. The symbols in the advertisement texts are designed separately for each product and the meaning of each designed symbol through association in the mind is presented with codes. In this study, some advertisements published by the Domestos bleach brand, which contains many cultural and life codes in terms of advertisement content, before and after the pandemic were analyzed within the framework of semiotics. During the analysis, literal and connotative dimensions of the codes were also evaluated by using visual materials. With the findings obtained, the effects of advertisements on our culture and our lives have been determined. The differences in the expression language and method of these advertisements, which have the same main point, and mythical codes are presented. In addition, pre-pandemic and post-pandemic indicative differences were revealed using the binary opposition system.

**Keywords:** Semiotics, Advertising, Myth, Domestos.

## **GİRİŞ**

Göstergebilim (semiologie) terimi ilk olarak göstergeleri inceleyen bilim dalı veya göstergelerin bilimsel incelemesi olarak tanımlanmaktadır. Günümüzdeki etkinlik alanı genişleyen göstergelerin, kendisini oluşturan *gösterge* ve *bilim* sözcüklerinin anlamsal toplamından fazla ve değişik bir boyut kazanmıştır (Rıfat, 1996: 9). İnsanlar, yaşamını sürdürmek, toplumsal anlaşmayı sağlamak için yarattıkları ve aynı zamanda kullandıkları doğal diller, jestler, trafik işaretleri, bazı meslek gruplarında yer alan flamalar, reklam afişleri, moda, mimarlık düzenlemelerinin hepsi birer dizge olup bu dizgeler belirli kurallar ile birer anlamlı bütün oluşturmaktadır. Anlamlı bütünlerin hepsi birer gösterge olduğu için yazınsal yapıdaki bir kahramanın davranışı, moda dergilerinde görülen bir etek, kazak vb. tüm birimlerle bağlantısı olan her şey gösterge olarak ele alınabilir (Rıfat, 1996: 10). Nitekim gösterge, kendisinden başka bir şeye gönderme yapan, duyular ile kavranabilen, varlığı tüketici veya kullanıcılar tarafından algıya ihtiyaç duyan bir unsurdur (Fiske, 2003: 63).

Dilbilimde, gösterilenin öz niteliğinin gerçeklik derecesi çokça tartışılmıştır. Tartışmalarda gösterilenin bir nesne değil de nesnenin zihinsel tasarımı olduğu vurgulanmıştır. Saussure, gösterilenin zihinsel özniteliğini, kavram terimini kullanarak *öküz* sözcüğünün gösterileni, hayvanın kendisi değil de onun zihinsel imgesi olduğunu savunmuştur. Gösterilen, göstergenin iki bağlantılı ögelerinden biridir. Göstereni karşıt yapan tek fark gösterenin bir aracı niteliği taşımış olmasıdır (Barthes, 2005: 44). Gösterge, bir başka şeyin yerini alabilmesini sağlayan özellikler taşıdığından kendi dışında bir nesne, olgu, varlık belirten ögedir ve bu öge algılanabilir düzeydedir (Vardar, 2001: 72).

Göstergelerde anlamlandırma düzeyi çok önemlidir. Bu düzey, gösterenin göstereni ve gösterileni arasındaki ilişkiyi ve gösterenin dışsal gerçeklikteki göndergesiyle ilişkisini betimlemektedir. Barthes bu düzeyi düz anlam olarak nitelendirir. Gösterenin ortak duyusal veya açık anlamına yapılan gönderme çeşididir. Bir sokak manzarasının fotoğrafı belirli bir sokağı işaret eder, *sokak* sözcüğü binalar arasında uzanan bir şehir yolunu anlatmaktadır. Renkli bir film kullanılabilir, yumuşak bir odak ayarı yapılabilir veya tam tersi şeklinde düzenlenebilir. Bu iki ayrı resmin düz anlamsal anlamı aynı olsa da farklılık yaratan yan anlamları olacaktır (Fiske, 2003: 115). Barthes'e göre yan anlamdaki en önemli husus ilk düzeydeki gösterendir. İlk düzey göstereni yan anlamın göstergesidir. Fotoğrafçılıkta düz anlam, fotoğraf makinasındaki nesnenin film üzerinde mekanik bir yeniden üretimi iken yan anlam bu sürecin insani boyutudur. Çerçevenin içine neyin dâhil edileceğinin, odağın, ışığın, kamera açısının,

filmin kalitesinin ve benzerlerinin seçimi yan anlamı işaret etmektedir. Düz anlam neyin fotoğraflandığı iken yan anlam ise nasıl fotoğraflandığıdır (Fiske, 2003: 117).

İletişimde belirli kişi ve gruplarda, belli bir bilgi, tutum ve düşünce değişikliği yaratmaya yönelik sözel ve görsel ileti alışverişine dayalı bir süreç vardır (Küçükdoğan, 2005: 11). İletişim sürecinin en önemli ögesi iletidir. Bu iletide alıcı veya hedef kitle en önemli unsurdur. İletişim sürecinde bu yüzden alıcı veya reklamda hedef kitlenin iyi belirlenmesi gerekir (Küçükdoğan, 2005: 12). Tüketicinin algılamasını kolaylaştıran, dikkatini çeken, alımlama aşamasında etkin biçimde işlev gören ileteler düzenlenir. Bu düzenleme için de reklamlardan çokça yararlanır. Reklam iletişimde ileti hazırlanması sürecinde hem hedef kitle üzerine bilgi edinilmesi hem de iletinin hedef kitlenin ilgisini çekebilecek, satın almayı kolaylaştıracak, yaratıcı, özgün ve etkin göstergeler ile düzenlenmesi gerekir (Küçükdoğan, 2005: 19).

Teknolojinin gelişmesi ile beraber tüketim artmıştır. Bu tüketim medya araçları ve yoğun reklam faaliyetleri ile gerçekleştirilmektedir. Reklam sadece bir kitle iletişim, ikna edici iletişim değil, bir ürün ya da hizmet için düşünce iletişim kanalı ve gösterimi olmanın ötesine geçmiştir (Işıktaş, 2018: 56).

Williamson'a göre reklamın insan yaşamında önemli bir yeri vardır. Eleştirel görüşle beraber reklamın yıkıcı etkisi göz ardı edilmemesi gereken bir durum söz konusudur. Çünkü eleştirel görüşte tüketici davranışının, tüketici zihniyetine ve tüketici toplumuna göre şekillenmesine sebep olmaktadır. Öyle ki reklam hayatın her noktasında yoğun olarak yer almaktadır. Medya araçlarında sınırsız şekilde bulunan reklam, özerk bir var oluş biçimi ile çok geniş çaplı etkileme gücüne sahip bir üstyapı oluşturmaktadır (Williamson, 2001: 11). Reklamlar, üretilmiş olduğu kültürün izini taşıırken mitsel doğmalara da seslenerek hedef kitlesini daha hızlı ve doğru biçimde ikna eder. Böylece var olan inanışlar, dünya görüşleri ve algılama şekilleri ile kodlanır. Her ürün için ayrı ayrı tasarlanmış olan sembolik anlamlar vardır. Bu anlamlar ihtiyaçlar, istekler ve değerler ile harmanlanır (Odabaşı, 2017: 87; Wernick, 1996: 57). Hedef kitlenin tutum değiştirme ve karar verme sürecini etkileyen ölçütlerin başında iletiye katılım gelir. Birey eğer satın alma sürecinde ürünle ilgili bilgiye ulaşabiliyor ve etkin biçimde ürünü izleyebiliyor, diğer markalar ile karşılaştırmaya gidiyor ve ürünü kullanarak en iyi sonucu elde etmek istiyorsa reklamı yapılan ürün veya hizmete dâhil olup benimseme sürecine girer (Göksel, 1997: 105).

Reklam metninde, reklam iletisinin çözümü aşamasında göstergebilimden her noktada yararlanılabilir. Çünkü insanlar ürüne reklam dili aracılığıyla anlam verir ve bu ürünün basit

kullanımı zihin deneyimine dönüşür. Reklam iletisinin çözümünde anlatımın ve anlamın üretiliş serüveni, koşulları ve sürecinde göstergebilim bir yöntem olarak devreye girer (Barthes, 2014: 166).

### **Mit Kavramı ve Reklam**

Mitler, kültürel unsurlarla harmanlanmış, insanın ölümü, cinsiyeti, toplumsal örgütlenişi için olması gereken tüm kuralların bir varlık durumuna gelmesini sağlamaktadır. Mitler, sadece masal veya efsane ile sınırlı değildir. Bu kavramda yaşayan *mit değişimi* ortaya çıkarak insan davranışı ile bağlantılı, toplumun her kademesini içinde barındıran ve yaşama anlam / değer katan bir olgu yer almaktadır (Eliade, 2001: 9-16). Kültürler ile şekillenen mitler, dil / inanç / sanat gibi kültürel değerlerle sürekli etkileşim içerisinde olduğu için reklamlar ile mitler sürekli bir ilişki içerisinde. Çünkü reklamlar toplumların kültürel unsurlarını ve değerlerini yansıtır bu yüzden reklamların mitlerle birlikte anılması kaçınılmaz olur (Dağtaş, 2003: 90-91). Mitleri bilmek nesnelere kökenindeki sırrı bilmek olduğu için reklamlar aracılığıyla mitlerin kökenine inilir ve mitin reklamı yapılan ürün ile reklam metnindeki esas ileti veya anlam dünyası anlaşılmasına çalışılır. Simgesel anlatımlar ile reklam metinlerindeki ürünlerin tanımları sağlanır. Böylece ürünün tüketici tarafından satın alınması sağlanır. Yaratılan simgesel anlatımlar ve anlamlar gösterge değeri taşır (Cengiz, 2005: 17). Mitler sayesinde ürünün değer ve bilgi noktası kolay aktarılır ve anlaşılır. Mitlerin göstergebilimsel yöntemle incelenmesi için reklamlardaki mitlerin çözümünde gösteren, gösterge ve gösterilenden yararlanır. Mit, semiyotik sistemin ikinci düzeni olup, ilk sistemde yer alan gösterge (sign), ikinci sistemin yani mitin göstereni (signifier) hâline dönüşmektedir. Bu noktada yan anlam gizli anlatım iken, düz anlam dilsel anlatımdır. Reklam metinleri çözümlenirken de mitlerde yer alan yan ve düz anlam düzlemi kullanılır (Barthes, 2014: 123). Reklam bir gösterge sistemidir, bu gösterge sistemi de mitlerin anlamlandırma sistemi tarafından yönlendirilir (Barthes, 2014: 124). Reklamlardaki mitsel kullanım sayesinde toplum ideolojileri ve değer yargıları anlamlandırılır.

### **Pandemi Döneminin Reklamlara Etkisi**

Covid 19, Çin'in Wuhan Eyaletinde Aralık ayının sonunda başlayıp doğrudan solunum yolu ile insandan insana bulaşarak Wuhan başta olmak üzere tüm dünyaya yayıldığı gözlemlenmiştir. Bu hastalık son yılların en önemli küresel salgını olup gün geçtikçe vaka sayılarının artması ile oldukça dikkat çekmiş ve tüm dünya pandemi çemberine girmiştir. Halkın sağlığını korumak amacıyla devletin almış olduğu bazı tedbirler ile salgının yayılım hızı yavaşlansa da ekonomi piyasası krizden oldukça etkilenmiş ve tüm pazarlama ürünleri neredeyse salgın merkezli

üretime geçmiştir. Özellikle markalar bu küresel salgında yaptıkları iletişim çalışmalarını ile tüketicinin dikkatini güven noktasında güçlendirme eğilimine yönelmiştir. Markalar güven eğilimini reklamlar aracılığıyla sağlama yolunu daha çok tercih ettikleri için reklam, bir ürünü veya hizmeti, tüketicinin faydasına sunarak ikna-istek-tutum- ilgi dörtlemesinde tüketicinin dikkatini markaya çekip yazılı, görsel ve işitsel bir çalışma sürdürmektedir.

Tüm reklamların ortak bir amacı vardır. Tüketicinin fiziksel, psikolojik, duygusal hatta toplumsal gereksinimlerine seslenen ürün üzerinden ilgi uyandırarak tüketicinin isteklerine etki edip tüketiciye yön vermektir (Elden; Bakır: 2010). Reklamda en önemli husus reklamın çekiciliği olduğu için ürün özelliğine yapılan vurguda rasyonel çekicilik, tüketicilerin duygularına yapılan vurguda duygusal çekicilik kullanılmaktadır (Drewniany; Jewler 2008 akt: Eşiyok, 2017). Duygusal çekicilikte sevgi, şefkat, korku gibi olumlu veya olumsuz duygu / düşünceleri gündeme alarak tüketicinin zihninde algı oluşturulurken, rasyonel çekicilikte tüketicilerin zihnine hitap vardır ve ürünün veya hizmetin hangi sebeple daha iyi olduğu ile ilgili argümanlar sunulmaktadır (Cılızoğlu, Dondurucu ve Çetinkaya, 2020: 282-283).

Pandemi sürecinde tüm sektörlerin Covid-19 ve varyantlarından etkilenmesi gibi medya ve reklam sektörü de aynı ölçüde etkilenmiştir. Reklam veren markalarda kısıtlamaya gidildiği görülmektedir. Bunun en önemli nedeni salgın sürecinin yavaşlaması veya bitmesi için evde geçirilen zamanın oldukça fazla olmasından kaynaklanmaktadır. Bu süreçte pandemi etkisi ile birçok marka logosunda değişiklik yapmış ve farkındalık oluşturmak istemiştir: McDonald's logosunda yer alan *M* harfini ikiye ayırıp *hep beraber olmak için bir süre ayrı* iletisini sunmuş (Marketing Birds, 2020), *Dominos*'un temassız teslimat ile halkın ve çalışanın sağlığını güvence altına alması, *Turkcell*, *Vodafone* ve *Türk Telekom*'un uzaktan eğitime destek sağlaması, *Arçelik*'in sağlık çalışanlarının yanında olduğunu hissettirmek amacıyla 170 adet hastaneye beyaz eşya ve küçük ev aleti bağışlayacağını duyurması tüketicinin yanında bulunduğu iletisini taşımıştır (Pazarlamasyon Prime, 2020). Reklamlarla beraber verilmek istenen iletiler daha kolay ve hızlıdır. Pandemi sürecinde toplumsal ve bireysel farkındalık sağlanması için görsel ve işitsel yönü çok ağır olan reklamlar önemli birer araç olmuştur.

#### **Çalışmanın Amacı ve Sınırlılıkları**

Pandemi sürecinde insanların evde daha çok zaman geçirmesi sağlanmaya çalışılmıştır. Ama dışarı ile bağlantının tam anlamıyla kopmaması sebebiyle hijyen unsuru çok önemli bir hâl almıştır. Sağlık bakanlığı tarafından da salgın seyrinin olumlu yönde ilerlemesi için hijyene çokça önem verilmesi gerektiğinin sürekli vurgulanması temizlik, hijyen konusunun

reklamlarda zirvede kalmasını sağlamıştır. Reklamlar, toplum bilincinin oluşmasında bir iletişim aracıdır bu yüzden toplumların hafızasında semboller / imgeler aracılığıyla farkındalık oluşturmada önemli bir yerdedir. Bu çalışmada pandemi sürecinde hijyen aracılığıyla insanları derinden etkilemeye çalışan temizlik markası olan *Domestos*'un pandemi öncesi ve pandemi esnasındaki birer reklamı ele alınacaktır. Böylece bu temizlik markasının tüketicinin dikkatini çekmek için nasıl iletiler taşıdığı, bu iletiler için nasıl bir dil kullandığı, hem duygusal hem de rasyonel çekicilik için nasıl bir yol izlediği incelenecek ve gösteren / gösterilen / düz anlam / yan anlam değerlendirmesi yapılarak sosyolojik, psikolojik ve dilsel bir çerçeve çizilecektir. Reklamların analizi sadece göstergebilimsel analizle sınırlandırılmıştır. Kültürel kodların çözümlenmesi için reklamların sunumlarından yararlanılmıştır.

### **Çalışmada Kullanılan Yöntem**

Pandemi sürecinden önce ve pandemi sürecinde yayınlamış olan *Domestos*'un reklamları Youtube kanalından elde edilerek göstergebilim analizi yöntemi ile çözümlenmiştir. Göstergebilim analizi yapabilmek için anlam taşıyan göstergelerin kültürel norm veya normlar içerisindeki temel dizgeyi bilmek ve bu bağlamda göstergelerin anlam boyutunun yorumlanması gerekir (Culler, 1985: 98). Ele alınan reklamlar göstergebilim analizi ile çözümlenirken Barthes'in mitsel çözümleme yöntemi de bu reklamlara uygulanmıştır. Ayrıca ikili karşıtlık (binary opposition) yöntemi de kullanılarak kavramların yer aldıkları dizgelerdeki içeriklerinde karşıtlıkları tespit edilmiştir. Bu yöntemle metinde gizlenmiş olan ve anlamı oluşturan gizli karşıtlıklar modeli aranmıştır. Çünkü ikili ya da kutupsal karşıtlıklar anlam ve ilişki kurmaya dayalı olup dildeki anlamın üretimindeki en önemli ilişkidir (Berger, 1993: 26).

### **BULGULAR VE YORUM**

#### **Pandemi Öncesinde Çekilen Domestos “Mikroplar Ağlarmış Şarkısı” [Mikropların Yeni Şarkısı Çıktı], Reklamı 1**

Reklam önce beyaz bir tuvalet görseli ile belirip sonra mikrop şeklini almış yeşil yaratıklar ve kahverengi kirli bir görsele geçişle devam etmektedir. Yeşil renginde mikrop elinde kimi zaman gitarla ciddiyetsiz, itici ve ilginç bir tavırla şu şarkıyı söylemektedir:

Bir yerim olsun isterdim, beyazdan uzak

Bir evim olsun isterdim, her yanı sarı

Onu pisletmek isterdim, leş gibi etmek

Hastalıktan bütün evi, kırıp geçirmek

Ben pislik, pislik isterdim  
Nerden bilirdim?  
Mikroplar ağlarmış!  
Bembeyaz dert oldu derzler  
Nerden bilirdim?  
Mikroplar ağlarmış?

**Reklam 1. Görsel 1**

Reklamın hemen başında olan bu görsel doğrudan lavaboda kullanılan deterjanın etkin alanını temsil etmektedir. Tüketici “evet, domestos burada kullanılır, çünkü temizliğe daima ihtiyacı olan bir yer” şeklinde düşünür ve esas iletide burada saklıdır: Temizlik ve hijyen lavabolarda çok elzemdir. Büyük harflerle yazılı olan TUVALETTE SIRADAN BİR GÜN... ifadesi tüketicinin ilgisini çekmek için önemli bir kodlama biçimidir. Gözle görülmeyen bazı mikropları içerisinde barındıran bu tuvalet görselinden hemen sonra sırada Görsel 2 vardır.

**Reklam 1. Görsel 2**

Görsel 1’den hemen sonra esasen reklam boyunca birden çok görsel bulunur. Ama çalışma boyunca tüm görselleri sunmak mümkün değildir. Reklamın başından sonuna kadar hep aynı tarz, yeşil / sarı renkte sevimsiz, ciddiyetsiz varlıklar mikrop olarak adlandırılmakta ve tüketici bu anlamlandırmayı işitsel olarak da onaylamaktadır. Görsel 2 oldukça karmaşık, kirli, düzensiz bir ortamdır. Buradaki esas ileti şudur: Domestos ile temizlenmeyen tuvaletin esasen dış yüzeyinde gözle görülmeyen mikroplar vardır.

**Reklam 3. Görsel 3**

Reklam metninin en sonunda domestos tuvalette kullanılır, bu kullanım sonucunda gözle görülmeyen tüm mikroplar zarar görür ve ağlar. Bu ağlama bir yok oluştur. Dış rengi beyaz olan domestos beyaz tuvaletle paralel anlam taşır. Domestos’un doğrudan kendisi, varlığı, kullanımı elinde gitar olup eğlenen, şarkı söyleyen, mutlu olan mikropları ağlatır. Son görselde yer alan mikroplar ağlarmış yazısının *i* ve *o* harfinde yer alan göz işareti mikropların gözlerini *a*, *r*, *m*, *p*, *ş* harflerinde yer alan biçimsizlik mikropların sevimsiz hallerini, bu yazının etrafında yer alan damlalar da mikropların gözyaşlarını temsil etmektedir. Domestos beyazlığı ile söz grubundaki netlik ise domestos’un net, kararlı, hijyende ileri düzeyde olduğunu temsil eden kodlardır.

### **Reklam 1’in Söylensel Analizi**

**Gösterenler:** Tam bir dakika süren reklamda görsel ve işitsel unsurlardan yararlanılmıştır. Önce beyaz bir tuvalet görüntüsü, daha sonra ortaya çıkan mikroplar ve sonra yine beyaz bir tuvalet görüntüsü ve en sonunda reklam ürünü olan domestos görülmektedir. Görseldeki mikropların elinde gitar vardır ve bunlar kirli bir bataklıkta, mutlu yaşamaktadırlar. Uzaktan dev bir domestos görüntüsü belirir. Domestos, mikropların üzerine dökülür ve banyo fayansı görünür. Fayansın üzerindeki lekeler geçer. Domestos vurucu bir sesle beyaz zeminin üzerinde durur. *Tuvalette sıradan bir gün* sloganıyla başlayan reklam ayrı ayrı ve vurucu bir müzik

tonuyla önce *domestos*, sonra *beyazlığı* ile daha sonra *mikroplar ağlarmış* sözcük grubu ortaya çıkar.

**Gönderge Sistemleri:** Domestos ve mikroplar, hijyen ve kir.

**Mitler:** Temiz miti.

**Çözümleme Sonucu:** Reklam, görsel metin, yazılı metin ve slogandan oluşmaktadır. Reklamda “temiz bir banyo / tuvalet için domestos kullanmanız gerekiyor” mesajı verilmektedir. Reklamın görsel kısmında temiz bir lavabonun ancak domestos ile mümkün olabileceği olağanüstü varlık gibi gösterilen, konuşan, şarkı söyleyen, duyguları olan mikroplar aracılığıyla sunulmuştur. Yaşantımızın her alanında mikroplar vardır. Bu mikroplar canlı birer organizmadır. Görsel metinde dikkat çekici olması açısından itici, sevimsiz ama ilginç gösterilen bu mikroplar ile esas ileti olan hijyen unsuru domestos’un karşılaşmasından doğan duyu durumu reklamın rasyonel çekicilik boyutundan duygusal çekicilik boyutuna geçmesini sağlamıştır. Mikroplar her ne kadar sevimsiz olsalar da domestos onları ağlatarak reklama bir sempatiklik de katmıştır. Reklamda domestos da tıpkı bir canlı gibi mikropların pis mekânında belirir ve onların üzerlerine dökülür. Reklamdaki ayrıntıda herhangi bir bireyin yüzünün görünmemesi dikkat çekicidir. Domestos’un dökülmesi anında bu işlemi yapan bireyin görünmemesi bireyi kimliksizleştirmektedir. Buradaki amaç reklamı izleyen bireylerin bu kimliksiz kişi ile kendisini özdeşleştirmesidir. Böylelikle, sadece reklamdaki kişi değil izleyiciler de bu ürünü kullanırlarsa başarılı olabileceği anlamını çıkartmak mümkündür. Temizlik mitinin uzantısında hijyen başarısının esasen domestos’a has olduğu, ancak domestos ile mikroplardan kurtulup hijyenin sağlanabileceği, domestos’un gücü sayesinde mikroplar dışında herkesin mutlu olabileceği anlamının bu reklamla üretildiği söylenebilir.

### **Pandemi Esnasında Çekilen Domestos “Domestos Virüslerle Son Damlasına Kadar Savaşır!” Reklamı 2**

Reklamın hemen başında beliren domestos ürününün tanıtıldığı sürede tok ve vurucu bir sese sahip olan aktarıcı şunları söyler:

Domestos’u bu kadar güçlü yapan nedir? Sürekli gelişen mikroplara karşı son damlasına kadar savaşması, son damlasına kadar ailenizi koruması, son damlasına kadar yanınızda savaşması. Domestos son damlasına kadar savaşır, yoğun kıvamlı formülüyle virüs ve bakterileri öldürür, maksimum hijyen sağlar. Evde de okulda da Domestos DURDURULAMAZ.

**Reklam 2. Görsel 1**

Reklamın hemen başında ortaya çıkan bu görselde domestos'un çerçevesinin olması ama iinin yani kendisinin vurucu bir sesle ortaya çıkıp tekrar kaybolduėu grlmektedir. Vurucu ve dikkat ekici bu ses ile byk harflerle ortaya ıkan *domestos'u bu kadar gçl yapan nedir?* sorusu doėrudan izleyiciye yneltilen aynı zamanda cevabı reklamın devamında olan bir slogandır. Siyah ve beyaz rengin kullanımı tezatdan doėan ekiciliėi st dzeye getirirken rnn erevesinin maviliėi ile hemen ardından ortaya ıkan grseldeki laboratuvarın rengi aynıdır. Buradaki ileti rnn retildiėi ortama iřaret ile tketicinin gvenini kazanma duygusu ile harmanlanmıřtır.

**Reklam 2. Görsel 2**

Bu grselde laboratuvar ortamında retilen domestosun kendisi ile bu rn zerinde inceleme ve arařtırma yapan bilim insanları bulunmaktadır. Mavi, loř ortam ile hijyen ve gven rnde vcut bulmaktadır. Reklamdaki rnn hedef kitlenin ihtiyaları doėrultusunda teknoloji-ustalık-bilim leminde retildiėi grlmektedir. Pandemi esnasında ekilmiř olan bu reklam tıpkı Covid-19 ařılarının retildiėi bilimsel bir ortam gibi hijyenin de ok nemli olduėu ve bu nemin domestos ile saėlandığı iletisi iin meknın laboratuvar olması dikkat ekicidir.

**Reklam 2. Görsel 3**

Reklamın üçüncü görselinde hedef kitle için güven arz eden bilim insanının deneyi sunulmuştur. Reklam boyunca *son damlasına kadar* ifadesinin vücut bulmuş hâli bilim insanının damlaların gerisinde fotoğraflanmış olması ile sunulmuştur. Reklamın rasyonel söylemi görsel olarak da hedef kitleye arz edilerek dikkatlerin tek bir noktada toplanmasını sağlamıştır. Teknolojiden de yararlanarak üretilen bu ürün, emin ellerden çıkmış hijyenik bir ürün olarak güven arz ettiği iletisi reklamın diğer görsellerinde de devam etmektedir.

**Reklam 2. Görsel 4**

*Son damlasına kadar* hijyen sağlayan bu ürün, artık üretilmiş ve ilk görseldeki gibi içi boş bir çerçeveden çıkarak vücut bulmuştur. Reklamın tüm görselleri çalışmada sunulmadığı için bu görselden sonra gelenler de birbirine bağlı devam eden bir zincir gibidir. Ürünü üreten bilim insanı kendi elleri ile ürünü anne ve babaya teslim eder. Ev ortamında (mutfak-lavabo) kullanılan ürünün kullanılma sırası okuldur. Okulda temizlik işleri ile uğraşan çalışana *baba* ürünü verir ve çalışan ürünü alırken elinde temizlik eldiveni yoktur ama lavaboda bu ürünü kullanırken elinde eldiven ile ürünü lavaboda kullanır. Temizlik yapılan bölgenin arka

görselinde buranın bir okul olduğu hem işitsel hem de görsel çok kısa belli-belirsiz bir akış ile sunulmuştur. Anne-baba-okul çalışanı-öğrenciler mutludur.

**Reklam 2.** Görsel 5

Reklamın son görselinde yer alan *durdurulamaz* sloganı vurucudur. Hedef kitle için esas iletiyi taşıyan sözcüklerden biridir. Pandemi esnasında çeşitli mutasyona uğrayan Covid-19 bile domestosu durduramaz, her türlü virüs, bakteriyi domestos yenebilir iletisi yine arka fon güven teşkil eden mavi renk ile sunulmuş, üretilen yeşil renkli ürün dikkat çekici bir hâl almış ve büyük harflerle yazılı olan slogan hedef kitleyi etkileyici bir ses ile ortaya çıkmıştır.

### **Reklam 2'nin Söylensel Analizi**

**Gösterenler:** Reklam metni on beş saniye sürmüştür. Başlangıçta belli-belirsiz vurucu bir ses ve yanında slogan ile ortaya çıkan ürün, daha sonra laboratuvar ortamında üretilmiştir. Ürün, bilim insanları tarafından incelenmiş, test edilmiş ve insanlara sunulmuştur. Ev ve okul ortamında kullanılan ürünün reklam metninin sonunda yine virüsleri öldürdüğü vurgulanarak reklam metni sona ermiştir. Mavi rengin laboratuvarı işaret etmesi, yoğun kıvamının görülmesi için ağır çekimde ürünün gerekli yerlere dökülmesi, ev ve okul ortamlarında ürünün kullanılması ve sloganların büyük harflerle yazılmış olması reklam metnindeki gösteren unsurlarıdır.

**Gönderge Sistemleri:** İleri teknoloji, üst düzey hijyen, güven, virüslere karşı savaş.

**Mitler:** Teknoloji, hijyen, virüs mitleri.

**Çözümleme Sonucu:** Modern yaşamın bir getirisi olan reklamlar daima mutlu, başarılı, sorunlardan uzak hayali bir dünya sunar (Batı, 2005: 181). Nitekim bu yaşamın sonucu olarak başarı miti merkez kabul edilir ve odak noktası olur (Fiske, 2003: 118). Ele alınan pandemi esnasında çekilmiş olan bu reklam metninde yer alan tüm insanlar güler yüzlü, hayatlarından

memnun ve güven içerisindedir. Domestos, güvenli ve mutlu bilim adamları tarafından test edilip üretilmiş, bunu kullanan anne-baba-okul çalışanları mutlu, memnun ve virüsten kendilerini koruyan pozisyonudur. Reklamda yer alan yazılı metinlerin hepsi büyük harflerle ve vurucu bir ses tonuyla sunulurken ev ve iş yaşantısında rahatlıkla kullanılabilen ürünü kullanacak olan hedef kitleye güven aşılanmıştır. Reklam tüketicie doğrudan pandemi veya Covid-19 salgını hakkında bilgiyi barındırmamaktadır. Barthes'in bu durumu basit olarak bir *eğretileme* adını vermesi, yani 'anlam aktarımı' olgusu olarak örneklendirmesi ürünün üretildiği zamana bir açıklama getirilmemesi ile ilgilidir (Batı, 2005: 183). Doğrudan pandemi denmese de önceki reklamlarda yer alan mikrop olgusu yerini virüs ve bakteriye bırakıp, bilim insanları, laboratuvar, ev ve okul ortamı yaşanan salgına bir işaretir. İleri teknoloji ve görseldeki satılması için reklamı yapılan ürün teknoloji ve hijyen miti olarak vurgulanmaktadır. Reklam bu bağlamda, bu ürünün tüketimiyle çevrenin her türlü şeyden korunduğunu izlenimi yaratmıştır. Çünkü egemen düşünce tüketici yani tüm insanlar bir virüs veya virüslerle mücadele etmektedir. Bu ürün bu mücadelede önemli bir silahtır. Değişen toplum gereksinimleri ve dinamikleri ile de kendini her daim yenilemektedir.

### **Pandemi Öncesi ve Pandemi Esnasında Reklamı Yapılmış Ürünün İkili Karşıtlık (Binary Opposition) Kodları:**

<b>Reklam 1</b>	<b>Reklam 2</b>
Mikrop	Virüs ve bakteri
Mikropların yaşamı / ölümü (görsel)	Virüs ve bakterilerin yaşamı / ölümü (dilsel)
Temiz / kirli tuvalet (ürünün kullanım alanı)	Temiz / kirli lavabo, tuvalet, mutfak (ürünün kullanım alanı)
Yaratık şeklinde mikroplar	Gerçek insanlar (bilim adamı, anne-baba, okul çalışanı, kısmen okuldaki çocuklar)
Beyaz renk / sarı renk (ortam)	Beyaz renk /mavi renk (ortam)
Şarkılı version	Vurgulu, düz, soru, ünlem cümlesi
Beyaz renkli domestos	Yeşil renkli domestos
Şarkı söyleyen mutlu mikroplar / ağlayan mikroplar	Ürünü inceleyen, kullanan daima mutlu insanlar
Mekân olarak sadece tuvalet ve mikropların bilinmeyen / hayal ürünü dünyası	Mekân olarak laboratuvar, ev, okul
Esas tema: Mikroplar ağlarmış!	Esas tema: Son Damla / Durdurulamaz!
Gitarla şarkı söyleyen, gayriciddi yaratıklar	Laboratuvarda bilimsel inceleme yapan ciddi bilim insanı
Metinde yer alan sözcükler: ev, derz, hastalık, leş, pislik	Metinde yer alan sözcükler: sürekli değişen mikroplar, korumak, savaşmak, güçlü, ev, okul, hijyen

## SONUÇ

Göstergebilim yöntemi ile domestos temizlik ürünü markası hedef kitle üzerindeki etkileri incelenmiş olan bu çalışmada, pandemi döneminde Covid-19 salgınının toplum üzerinde yarattığı belirsiz gelecek kaygısı ve bu kaygıyla gelen önlem mekanizmaları reklamlar aracılığıyla farklı bir kombinasyonda çözümlenmiştir. Çözümleme sonucunda şunlar tespit edilmiştir:

1. Tüm dünyayı etkisi altına alan Covid-19 ve varyantları küresel bir sağlık sorunu hâline geldiği için salgının etkisinin azalması açısından çeşitli önlemler alınmıştır. Bu süreçte Sağlık Bakanlığı tarafından da *maske, mesafe, hijyen* kuralı sık sık dile getirilmiştir ve reklam ürünleri de bu yönde dikkatleri çekmeye çalışmıştır. İncelenen ürün, bir temizlik markası olarak maske / mesafe / hijyen üçlemesinin önemli ayağı olan *hijyende* odaklanmıştır.

2. Pandemi öncesinde reklamı yapılan temizlik markası domestos doğrudan ve sadece mikroplar üzerinde yoğunlaşırken, pandemi esnasında yapılan ürün reklamının salgını etkileyen her noktaya değindiği görülmektedir. Covid-19 aşısı süreci, zorunlu ev hayatı, kısıtlı eğitim süreci ve bu çemberin zirvesinde oturan *hijyen* savunma mekanizması ürünün reklam sunumunda hem rasyonel hem de duygusal reklam çekiciliği ile sunulmuştur. Amaç hedef kitle ile duygusal bağ kurarak reklam çekiciliğini artırıp rasyonel yani mantık çerçevesine oturtulmuş bir düzenek ile satın almayı kolaylaştırmaktır.

3. Her iki reklamda da dikkat çekicilik toplumun veya hedef kitlenin ihtiyaçları doğrultusunda yoğrulduğu tespit edilmektedir. Pandemi öncesi reklamda da, pandemi esnasındaki çekilen reklamda da hedef kitlenin hijyene olan ihtiyacının altı çizilmiştir. Birinde sempatik bir sunum varken diğesinde ciddi ve koşullara göre şekillenmiş bir sunum yer almaktadır.

4. Duygusal ve rasyonel çekicilikte bilgi verme, korunma temaları ile geliştirilmiş bir strateji söz konusudur. Reklamlarda yer alan görüntüler, müzikler, sloganların tümünün amacı tüketiciyle doğru iletişim kurup tüketiciden pozitif bir geri dönüş alabilmektir. Pandemi dönemindeki marka çalışmalarıyla topluma hijyen sağlama, güven aşılama aynı zamanda birlik ve beraberlik ile sorunların üstesinden gelme iletileri yer almıştır.

Yalova Üniversitesi, İnsan ve Toplum Bilimleri Fakültesi, Sosyal Hizmet Bölümü

### **ÖZET**

Yoksulluk evrensel bir sosyal sorunken literatürde birden fazla yoksulluk türü tanımlaması yapılmıştır. Günümüzde mutlak yoksulluk tanımlamasının dışında yeni yoksulluk türlerinin tanımlamalarıyla karşılaşmak mümkündür. Bu çalışmada yoksulluğun değişen yüzü olan çalışan yoksullar üzerinde durulmuştur. Birçok ülkenin henüz çalışan yoksul tanımlamasını yasal olarak yapmadığı bilinmektedir. Dünya’da ve Türkiye’de çalışan yoksullara yönelik gerçekleştirilen sosyal politikalara değinilmiştir. Türkiye özelinde çalışan yoksullara yönelik sunulan gelir artıcı politikalar (asgari ücret, vergi indirimleri ve sosyal transferler/yardımlar) incelenmiştir. Çalışan yoksul olan bireylere yönelik vergi indirimlerinin ve sosyal yardımların geliştirilmesi; bu bireylerin çalıştıkları halde yoksulluk içinde bulunmalarını önleyici politika uygulamalarıdır. Türkiye’de sosyal güvenceli çalışan yoksullara yönelik sağlanan sosyal yardımların sayısı yeterli değildir. Bu minvalde Türkiye’deki sosyal yardımlara dair mevcut sosyal politikaların gözden geçirilerek yeniden tasarlanması gerekmektedir.

**Anahtar Kelimeler:** Yoksulluk, Çalışan Yoksul, Sosyal Yardım.

**EVALUATION OF SOCIAL ASSISTANCE PROVIDED TO WORKING POORS IN  
TURKEY****ABSTRACT**

While poverty is a universal social problem, more than one type of poverty has been defined in the literature. Today, it is possible to encounter definitions of new types of poverty apart from the definition of absolute poverty. In this study, the working poor, who are the changing face of poverty, are emphasized. It is known that many countries have not yet defined the working poor legally. Social policies for the working poor in the world and in Turkey are mentioned. Income increasing policies (minimum wage, tax reductions and social transfers/assistances) for the working poor in Turkey have been examined. Developing tax breaks and social benefits for individuals who are working poor; These are policy practices that prevent individuals from being in poverty even though they are working. The number of social assistance provided for the poor working with social security is not sufficient in Turkey. In this context, the existing social policies regarding social assistance in Turkey should be reviewed and redesigned.

**Keywords:** Poverty, Working Poor, Social Assistance.

## **1. GİRİŞ**

Yoksulluk kavramı; geçmişten günümüze gelen, global anlamda halen çözüm ve önleme stratejileri oluşturulmaya çalışılan sosyal sorunlardan bir tanesidir. Yoksulluğun bireyi etkileyen problem olarak ortaya çıkışı eski olmasına rağmen sosyal sorun olarak tanımlanması sanayi toplumuna dayandırılabilir. Toplumsal yaşamda bireyi güçsüzlüğe iten, toplumsal katılımı önleyici bir bariyer olan yoksulluk; başlarda hayırseverlik ve aile, akrabalık bağları ile turnike edilmiş fakat sanayi devrimi ile beraber değişen aile kurumunun işlevselliğinin sendelemesiyle toplulukları aşan, toplumu etkileyen ve devlet odaklı bir sosyal soruna evrilmiştir. Sanayi devrimi sürecinde köylerden şehirlere doğru yaşanan göç dalgaları; çok daha sonraları “*sosyal parazitler, tehlikeli sınıf, lümpenproleter, lanetli sınıf, kenardakiler, sınıf-altı kesim*” (Keyder ve Buğra, 2003: 20) gibi dışlayıcı bir terminolojinin ürünü olarak kimsesiz çocuk, engelli, çocuk işçiliği, kronik hastalıklar ve bakıma ihtiyaçlık hali, gelir adaletsizliği vb. problemleri ortaya çıkarmıştır. Bahse konu olan toplumun dezavantajlı kesimleri yoksulluk şemsiyesi altında toplayabileceğimiz aksiyonlardan bir kaçıdır. Devletlerin ve küresel boyutta tanınan ekonomi ve insani organizasyonların (DB, BM, ILO vb.) yoksulluk yaklaşımları; çoğu zaman sayılar üzerinden maddi verilerle ölçülebilen, göstergelere tabi tutulan yaklaşımlardır. Küreselleşme bahse konu yaklaşımların temel düzeyde yetersiz kaldığı, yeni tanımlamalara muhtaç yoksulluk kavramını karşımıza çıkarıvermiştir. Bundandır ki yıllarca mutlak yoksulluk olarak tanımlanan yoksulluk kavram ailesine insani yoksulluk, göreceli yoksulluk, kent yoksulluğu, nöbetleşe yoksulluk vb. tanımlamalar eklene gelmiştir. Bu çalışmada nasıldır ki çalışma ve yoksulluk gibi birbirine zıt kelimelerden “çalışan yoksulluğu” türetildiğine değinilmiş ve mücadele boyutu olarak sosyal transferler, yani sosyal yardım uygulamalarına bakılmıştır. Türkiye özelinde çalışan yoksullara sunulan sosyal transferlere atıfta bulunulmuştur.

## **2. YOKSULLUK KAVRAMI**

Yoksulluk kavramı evrensel bir sosyal sorun olarak varlık göstermiştir. Literatürde yoksulluk kavramının tanımına yönelik birden fazla tanımlama yapılmıştır. Bu tanımlamalar arasında yaygın olarak kullanılan tanım mutlak yoksulluk tanımıdır. Fakat daha evvel bahsedildiği üzere yoksulluk kavramı, içine hapsedilen mutlak yoksulluk kabuğuna sığamamış ve yeni tanımlamalar geliştirilerek karşımıza çıkagelmiştir. Yoksulluk üzerine yapılan mutlak, göreceli ve insani yoksulluk tanımlamalarına bakılması, kavramı zihnimize somutlaştıracaktır.

Dünya Bankası (1990) tarafından, “*asgari yaşam standardına erişememe durumu*” yoksulluk olarak ifade edilmektedir. Diğer bir söyleyişle bir doların altında günlük kazanç sağlayan bireyler mutlak yoksul şeklinde ifade edilmiştir (World Bank, 2000). Bahse konu olan günlük 1 dolarlık gelir düzeyi, ülkelerin gelişmişlik durumuna göre değişebilmektedir. Az gelişmiş devletlerde birey başına günlük 1 dolar kabul edilmekteyken Latin Amerika ülkeleri ve Karayipler’de günlük 2 dolar, Doğu Avrupa ülkeleri (Türkiye’nin de içinde yer aldığı) için günlük 4 dolar, sanayileşmiş ülkelerde günlük 14,40 dolar mutlak yoksulluk kıstası olarak belirlenmiştir (DPT, 2001).

Bir bireyin günlük hayat aktivitelerini yerine getirmesi için ihtiyacı olan 2480 k/cal (mutlak yoksulluk ölçütü) kıstasını temin etmesinin yanı sıra bireyin temel ihtiyaçları olan sağlık, eğitim ve barınma benzeri sosyal ve kültürel isteklerinin gerektirdiği ek kazanç gereksinimin de mutlak yoksulluk sınırına eklenmesi ile görelî yoksulluk ortaya çıkmaktadır (DPT, 2001, s. 104). Başka bir tanımlamada vurgu yapılan husus ise; görelî yoksulluğun diğeri ile karşılaştırmaya dayanmasıdır. Bu karşılaştırma bireysel, grup ve ülke bağlamında yapılabilmektedir. Medya araçlarının gelişmesi ve yaygınlaşmasıyla da evrensel olabilmektedir. Görelî yoksulluk, bireyin ya da hane üyelerinin, tabi olduğu grubun ya da hayat alanının dâhilindeki bireyin/grubun ve ya habitatın başka grup ve zümrelerle karşılaştırılması ile meydana gelir (Akder, 2006).

UNDP, Adam Smith’in yoksulluk üzerine görüşleri temel alınarak geliştirilen insani yoksulluk tanımlaması geliştirmiştir. “İnsani yoksulluk”, bireylerin yaşanılabilir bir hayat sürdürebilmesi adına gerekli seçenek ve fırsatlardan mahrum kalma durumu olarak tanımlanmıştır. Bu tanımlama yoksulluğun sadece ekonomik göstergeler üzerinden tanımlanmasına karşı görüşlerden beslenmektedir (DPT, 2001). Yoksulluğu temel ekonomik göstergeler dışında tanımlayan insani yoksulluk; insan onuruna yakışmayan önlenebilir hastalıklara yakalanmak, kısa yaşam süresi, ana-çocuk sağlığının yetersizliği, yetersiz beslenme, okur-yazarlık ve benzeri temel insani imkânlardan mahrum kalma durumudur. Bahse konu olan içme suyu, iletişim, eğitim, sağlık hizmetlerine ulaşılamaması, temel insan yeteneklerini sürdürebilecek yoksulluğun insani boyutudur (DPT, 2007).

### **3. ÇALIŞAN YOKSULLUĞU**

Birbirine karşıt olması beklenen bu iki kelimenin bir araya gelişinin akılda soru işaretleri oluşturması normal bir durumdur. Herkes için hem ödev hem de hak olan çalışma hakkı, nasıl olur da bireyi yoksulluğa itebilir (Kaboğlu, 1999, s. 288)? Küreselleşme ve sermaye ilişkileri bu

kavramları birleştiren temel etkidir. Gelir dağılımının dengesiz dağılımı, bireyleri çalıştıkları halde yoksulluğa sürükleyebilmektedir. Çalışan yoksulluğunun ilk görünüşleri, kapitalizmin 19. yüzyılda yoksulluğun çalışan bir kesim olan işçi sınıfında etki etmesi ile ortaya çıkmış ve dönemin klasik iktisatçıları tarafından analiz edilmeye başlanmıştır. Dönemin klasik ekonomistleri, çalışan yoksulluğunu demografi (Malthus), eğitim yetersizliği (Mill), ekonomik büyüme ve sosyal adaletsizlik (Adam Smith) gibi faktörlerle ilişkilendirirken Marx, kapitalist pazarın devamlılığında mihenk taşı olarak ifade etmiştir (Rauhutt vd., 2005). Günümüzde bireyler çalıştıkları halde temel insani ihtiyaçlarını karşılamakta sıkıntılar yaşayabilmektedir. Bu bakımdan çalışan yoksulluğu, çalışanların tüketilebilir net kazançları bakımından yoksul olarak tanımlanmasıdır (Eurofound, 2013). Eurostat'a (2021) göre yılın yarısından fazla süre çalıştıkları halde ulusal hane medyan gelir seviyesinin %60'ının altında gelir seviyesine sahip olan çalışanlar, yoksulluk riski altındadır.

Kapar (2010) çalışan yoksulluğunun artışıdaki sebepleri makro ve mikro ölçeklerde değerlendirdiğinde ekonomik işleyiş ve yapısının uygun yapıda olamayışı, işletmelerin çalışanlara insana yakışır istihdam sahaları oluşturulamaması, çalışanların hayat ve çalışma şartlarını geliştirme gayesi taşınmaması, hane halkında çalışanların azlığı ve işsizlerin fazlalığı olarak ifade etmektedir. Çalışan yoksulluğu sadece bireyi etkileyen bir sorun değildir. Birey ile beraber çevresini, özellikle ailesini de etkileyen bir sosyal sorundur. ILO (2011) yoksullukla mücadele eden bir ailede çalışan tüm aile üyelerini çalışan yoksul sınıflamasına dâhil etmektedir. ILO çalışan yoksul bireyleri tanımlarken yoksul bir hanede hayatına devam eden çalışan aile üyelerinin tümü, yoksul bir hanede hayatına devam eden tam zamanlı çalışanların tümü, en az bir aile üyesinin çalışma hayatına devam ettiği yoksul bir hanede hayatına devam eden tüm aile üyeleri, asgari bir tam zamanlı çalışanın yaşadığı yoksul bir hanede hayatına devam eden bütün bireyler çalışan yoksul şeklinde sınıflandırılmıştır (Strengmann-Kuhn, 2002).

Çalışan yoksul tanımlamalarına ülkesel açıdan bakıldığında; evvelki senede asgari 27 hafta aktif olarak iş gücüne katılan, yani çalışma hayatında bulunan veya meslek arayan ve ekonomik kazancı, ilgili kurumlarca belirlenen yoksulluk sınırından düşük olan bireylerin ABD Çalışma İstatistikleri Bürosu (BLS) tarafından çalışan yoksul sınıflamasına dâhil edildiği görülmektedir. Avrupa'da çalışan yoksul sınıflamasına öncülük eden Fransız İstatistik ve Ekonomi Enstitüsü (INSEE) ise BLS örneğinde olduğu gibi çalışma hayatına dâhil olma hususunda çaba gösterme yaklaşımını temel almakta, fakat aynı yıl içinde en az bir ay çalışmış olma kıstasını uzun süredir

istihdam sisteminin dışında olanları bu tanıma dâhil etmemek için çalışan yoksulluğu sınıfına eklemektedir (Eurofound, 2010). Yoksulluğun sadece az gelişmiş ülkelerin bir sosyal sorunu olmaması gibi çalışan yoksulluğu da az gelişmiş ülkelere özgü bir toplumsal sorun değildir. Konuyla ilgili Gündoğan (2007, s. 18), günümüzde çalışan yoksulluğunun dünyada yalnız az gelişmiş ülkelerde beliren bir sosyal sorun olmadığını belirtmiştir. Bu açıdan çalışan yoksulluğunun geniş bir yelpazede ele alınması elzem olan bir sosyal sorun olduğunu ifade etmiştir. 2001 yılı itibarıyla Amerika Birleşik Devletleri'nde nüfusun %11,7'si- bir başka ifadeyle 32,9 milyon kişi, ilgili kurumlarca belirlenen yoksulluk ölçütünden daha düşük gelirle hayatlarına devam ettiği, bu yoksulluk sınırının altında olan yoksullardan tahmini 6,8 milyon bireyin, 27 hafta ya da daha çok çalışma hayatında bulunan bireylerden oluştuğu bilinmektedir. Yine bir başka sanayileşmiş hayat alanlarından biri olan Avrupa'da da durum çok da iyi değildir. 1999 yılından beri Avrupa sınırları içinde aktif iş gücüne katılım sağlayan bireylerden yaklaşık 7,8 milyonu yani %6'sı, bilakis yoksulluğa maruz kalmaktadır (Gündoğan, 2007).

Türkiye özelinde nicel verilere dayanarak çalışan yoksulluğu profiline bakmak gerekirse Gündoğan (2007, ss. 70-83) TÜİK'in çalışması çerçevesinde; işsizlerin (%27,37), kendi hesabına çalışanların (%30,48), yevmiyeli çalışanların (%37,52) ve ücretsiz aile işçilerinin (%38,73) yoksulluk düzeyi yüksek gruplar olduğunu belirtmiştir. Ücretsiz aile işçilerinin kentsel alanlarda oldukça yüksek (%27,94) olduğunu ifade etmiştir. Türkiye'de gündelik şeklinde ödeme alarak çalışanların %37,52'sinin yoksul olduğunu belirtmiştir. Yevmiyeli çalışanların çoğunluğunun kırsal alanlarda tarımsal, kentlerde ise inşaat ve bayındırlık faaliyetlerde toplanmalarının ve eğitim seviyelerinin düşük olmasının, bu kesimin yoksulluğa maruz kalmalarının temel nedeni olarak görüldüğünü ifade etmiştir. TÜİK verileri kapsamında Türkiye'de çalışan yoksulluğu profilini; yoksullukla sıklıkla karşılaşılan inşaat ve tarım sektöründe çalışanlar, ücretsiz aile işçileri, yevmiyeli kendi hesabına çalışanlar, kadın çalışanlar, nitelik ve eğitim düzeyi düşük çalışanlar, yabancı kaçak çalışanlar, geniş ailelerde yaşayanlar, çalışan sayısının düşük olduğu işletmelerde çalışanlar, sosyal güvencesi bulunmayan kayıt dışı sektörde çalışanlar oluşturmaktadır (Gündoğan, 2007, s. 99). Öte yandan, Türkiye'de net asgari ücretli çalışanlar, TÜİK'in belirlediği "yoksulluk ücreti" (bir işçinin aylık geçim ücretinin altında) seviyesinde kalmaktadır (Erdoğan ve Kutlu, 2014, s. 96). Bu hesaplama göre emekli aylığı asgari ücretin düzeyinde olan emekliler de "yoksulluk ücreti" düzeyinde kalmaktadır. Yukarıda yer verilen yoksul profillerinin yanında Türkiye'de asgari ücretli çalışanlar ve emekliler de çalışan yoksulluğu profiline girmektedir.

#### **4. ÇALIŞAN YOKSULLARA YÖNELİK GELİŞTİRİLEN SOSYAL POLİTİKALAR**

Çalışan yoksulluğunu önlemeye yönelik geliştirilen sosyal politikaları ayırt etmek çoğu zaman pek mümkün değildir. Bu durumun temelinde yatan nedenlerden biri hâlihazırda çoğu ülkenin çalışan yoksulluğunu tanımıyor oluşu bulunmaktadır. Bir başka neden ise sosyal transfer uygulamalarının çoğu ülkede salt iş gücü piyasasının dışında kalmış, çalışmayan kişilere odaklanmasıdır. Buna sebep olan düşünce ise çalışan bireylerin yoksulluğa maruz kalmaması için yeterli ekonomik kazanca sahip olduklarına dair fikriyattır. Türkiye’de de bu fikriyat hâkimdir (Eurofound, 2010, s. 14). Birçok AB ülkesinde geliştirilen sosyal politikalarda çalışan yoksulluğuna özel bir politika bulunmamaktadır (Eurofound, 2013, s. 24).

Çalışan yoksulluğuna yönelik geliştirilen sosyal politikalar; gelir arttırıcı politikalar (asgari ücret, vergi indirimleri ve sosyal transferler/yardımlar), iş gücü piyasası politikaları ve ekonomik büyüme politikaları şeklinde başlıklandırılabilir (Erdoğan ve Kutlu, 2014). Bu çalışmada gelir arttırıcı politika araçlarından sosyal transferler/yardımlara değinilmiştir.

##### **4.1. Asgari Ücret**

Asgari ücret uygulaması, çalışan yoksulluğunu azaltmaya dönük temel bir politika önlemi şeklinde karşımıza çıkmaktadır (Eurofound, 2010, ss. 15-18; Marx ve Verbist, 2008, s. 274). Türkiye’de ve birçok Avrupa Birliği ülkesinde, çalışan bireylere temel düzeyde ücret sağlanarak çalışan yoksulluğunu minimize etmek için kullanılan asgari ücret politikası; sektörel ve hükümet düzeyinde sosyal diyalog yoluyla toplu sözleşme vasıtasıyla tespit edilmektedir (Eurofound, 2013, ss. 15-17).

##### **4.2. Vergi İndirimleri**

Çalışan yoksulluğunu kontrol altında tutmak veya engellemek için gelir arttırıcı politikalarda vergi indirimleri de önem arz etmektedir (Erdoğan ve Kutlu, 2014, s. 85). İngiltere’deki kamu tarafından belirlenen kıstasları taşıyan ailelere yönelik Aile İndirimi (Family Credit), Çocuk Vergi İndirimi (Child Tax Credit), Çalışan Vergi İndirimi (Working Tax Credit), Aile Gelir Katkısı (Family Income Supplement) ve Çalışan Ailelere Vergi İndirimi (Working Families Tax Credit) (Duncan, 2003, ss. 9-17; Crettaz, 2011, ss. 57-59); Amerika’daki Gelir Vergisi İndirimi (Earned-Income Tax Credit) (Marx ve Verbist, 2008, ss. 281-283; Pearson ve Scarpetta, 2000, s. 14); Fransa’daki düşük gelirlilere yönelik sosyal güvence ödemelerindeki indirim uygulamaları (Pearson ve Scarpetta, 2000, s. 14) ve Yeni Zelanda, Kanada ve İrlanda, Finlandiya, Hollanda, Belçika gibi AB ülkelerinde düşük gelirli çalışanlara yönelik vergi

indirimleri (Crettaz, 2011, s. 51; Pena-Casas ve Latta, 2004, s. 80) gibi uygulamalar, gelir artırıcı politikalarda vergi indirimlerine örnek olarak verilebilir.

#### 4.3. Sosyal Transferler/Yardımlar

Asgari ücret uygulaması gibi çalışan yoksulluğunu önlemeye dair bir başka politika uygulaması sosyal yardımlardır (Marx ve Verbist, 2008, ss. 285-286). Hastalık, engelli, konut, yaşlılık, aile yardımları, asgari gelir desteği programları ve işsizlik ödemeleri bahse konu sosyal yardımlardan birçoğuna örnek olarak verilebilir (Lohmann, 2009, s. 492). Bu örneklerin yanında düşük gelirli aileleri desteklemek için yapılan çocuk yararları, çocuk bakımı destek-sübvansiyonları ve annelik yardımları da bu sosyal transferlere örneklerdir (Jaumotte, 2003).

### 5. TÜRKİYE'DE UYGULANAN SOSYAL YARDIMLAR

Türkiye özelinde sosyal yardımlar Aile, Çalışma ve Sosyal Hizmetler Bakanlığı'na (AÇSHB) bağlı Sosyal Yardımlar Genel Müdürlüğü (SYGM), belediyeler, sivil toplum kuruluşları, vakıflar, dernekler tarafından yapılmaktadır. Bu çalışmada ise Sosyal Yardımlar Genel Müdürlüğü tarafından sağlanan sosyal yardımlar üzerinde durulmuştur. Sosyal Yardımlar Genel Müdürlüğü tarafından sağlanan yardımlar; Aile, Barınma-Gıda, Engelli-Yaşlı, Eğitim ve Sağlık yardımları olarak kategorilere ayrılmıştır. Aile Yardımları kapsamında; asker çocuğu, eşi vefat etmiş kadınlara yönelik düzenli nakit, doğum, öksüz ve yetim, çoklu doğum, asker ailelerine yönelik düzenli nakit, işe başlatma, afet-acil durum, terör zararı, vefat ve şehit yakını-gazilere yönelik, işe yönlendirme yardımları yapılmaktadır. Barınma-Gıda yardımları kapsamında; barınma, gıda, aşevleri, yakacak, sosyal uyum, doğalgaz tüketim desteği ve elektrik tüketim desteği yardımları yapılmaktadır. Engelli-Yaşlı yardımları kapsamında; engelli yakını aylığı, engelli ihtiyaç, engelli ve yaşlı bakım projeleri, yaşlı aylığı ve engelli aylığı yardımları yapılmaktadır. Eğitim Yardımları kapsamında; yurt yapımı, yabancılara yönelik şartlı eğitim, ana okulu-ana sınıfı, eğitim materyali, şartlı eğitim, muhtelif eğitim, yükseköğrenim öğrencilerine yönelik ve öğrenci barınma-taşıma-yemek yardımları yapılmaktadır. Sağlık Yardımları kapsamında; kronik hastalık, şartlı sağlık (sağlık ve gebelik), kronik hastalara elektrik tüketim desteği, Genel Sağlık Sigortası (GSS) ödemeleri, silikozis hastalarına yapılan ödemeler, katılım payı ödemeleri, kronik hastalara birikmiş elektrik borcu desteği ve kesintisiz güç kaynağı desteği yardımları yapılmaktadır (SYGM).

Türkiye'deki sosyal yardımların birçoğunu; sosyal güvencesi olmayanlara, çalışmayan ya da çalışamayanlara, fakir ve muhtaç durumda bulunanlara, güçsüz veya kimsesiz birey ve hanelere

sağlanan sosyal yardımlar oluşturmaktadır. Söz konusu gruplar nüfusun en yoksul %6'lık dilimini oluşturmaktadır. Tabii ki bu dezavantajlı birey ve grupların devlet tarafından desteklenmesi gerekmektedir. Fakat sosyal hizmetin bir aracı olan sosyal yardımların kapsayıcılığı unutulmamalıdır. Bahse konu olan nüfusun en yoksul % 6'lık kesimi dışında yoksul vatandaşlara da yönelik sosyal yardımların varlığı mümkündür. T.C. Başbakanlık Aile ve Sosyal Araştırmalar Genel Müdürlüğü'nün (2010) sosyal transfer alıcılarının katılımıyla yapmış olduğu çalışma nüfusun en yoksul % 6'lık kesimi dışında kalan çalışan yoksullara yer vermiştir. Araştırma sonuçlarında; hamallık, merdiven yıkama, temizlikçilik, mevsimlik işçilik, seyyar satıcılık, toplayıcılık, bulaşıkçılık gibi çoğunlukla kayıt dışı sektörde yer alan çalışan yoksulların sosyal yardımlardan faydalandığı tespit edilmiştir.

Sosyal Yardımlar Genel Müdürlüğü tarafından sunulan sosyal yardım uygulamalarında; sosyal güvencesi bulunmama, kayıtlı bir aylık veya gelir hakkından yararlanmama, nafaka bağlanması mümkün olmama veya henüz nafaka almaya hak kazanmama gibi ihtiyaç sahibini sosyal yardıma ulaşmasını zorlaştıracak kıstaslar bulunmaktadır (SYGM). Söz konusu kıstaslar; Türkiye'de sosyal güvenceli olarak istihdamın içinde bulunan çalışan yoksul asgari ücretli bireyler ve hane halklarına yönelik sosyal yardımların varlığını sınırlı tutmaktadır. Sosyal güvencesiz ve güvenceli çalışan yoksullara yönelik sağlanan yardımlara ayrı ayrı değinmekte yarar bulunmaktadır. Sosyal güvencesiz çalışan yoksullara yönelik sağlanan yardımlara; aile, barınma-gıda, engelli-yaşlı, sağlık, eğitim yardımları özelinde ele alınması gerekmektedir. Aile yardımlarından asker çocuğu, doğum, asker ailelerine yönelik düzenli nakit, çoklu doğum, işe yönlendirme yardımları; sosyal güvencesi olmayan çalışan yoksullara yönelik yapılan yardımlardır. Doğum, çoklu doğum, işe başlama yardımları; sosyal güvencesi olan çalışan yoksullara yönelik sağlanan yardımlardır. Barınma-gıda yardımlarından gıda, yakacak, doğal gaz tüketim desteği, elektrik tüketim desteği yardımları sosyal güvencesi olmayan çalışan yoksullara yönelik yapılan yardımlardır. Gıda, yakacak yardımları; sosyal güvencesi olan çalışan yoksullara yönelik sağlanan yardımlardır. Sağlık yardımlarından katılım payı ödemeleri, şartlı sağlık (sağlık ve gebelik), Genel Sağlık Sigortası prim ödemeleri desteği yardımları; sosyal güvencesi olmayan çalışan yoksullara yönelik yapılan yardımlardır. Sosyal güvencesi olmayan çalışan yoksul hane üyelerinden herhangi birinde tüberküloz, silikozis hastalığı bulunması ya da elektrik tüketimine bağlı cihazlara gereksinim duyan kronik rahatsızlığı bulunması durumunda; söz konusu kronik hastalığı bulunan aile üyesine birtakım sosyal yardımlar sağlanmaktadır. Sosyal yardımlar çalışan yoksul olan haneye bir nebze de olsa

ekonomik anlamda olumlu etkileri olmaktadır. Sosyal güvencesi olmayan çalışan yoksul hane üyesine sağlanan diğer sağlık yardımları; kronik hastalara birikmiş elektrik borcu ve kesintisiz güç kaynağı desteği, kronik hastalık, kronik hastalara elektrik tüketim desteği, silikozis hastalarına yapılan ödemeler yardımlarıdır. Sağlık yardımlarından sadece evde bakım aylığı yardımı; sosyal güvencesi olan çalışan yoksul hanelerin üyelerinden birinin ağır engelli olması durumunda yararlandıkları yardımdır. Eğitim yardımlarından muhtelif eğitim, ana okulu-ana sınıfı, şartlı eğitim, öğrenci barınma-taşıma-yemek desteği, eğitim materyali, yükseköğrenim öğrencilerine yönelik yardımları; sosyal güvencesi olmayan çalışan yoksul bireylere yapılan yardımlardır. Muhtelif eğitim, öğrenci barınma-taşıma-yemek desteği, eğitim materyali, yükseköğrenim öğrencilerine yönelik yardımlar; sosyal güvenceli çalışan yoksullara yönelik sağlanan yardımlardır (SYGM). Çalışan yoksullara yönelik sağlanan sosyal yardımların çoğu; sosyal güvencesi olmayan, enformel sektörde çalışan yoksullara yöneliktir. Bu çalışan yoksullar, sosyal güvence kaydı bulunmadıkları için mutlak yoksul gruplarından biri olarak görünmektedir. Mutlak yoksulluk ile mücadele programlarının yanı sıra yoksullukla mücadele politikaları kapsamında çalışan yoksulluğu, kent yoksulluğu, insani yoksulluk vb. yoksulluk türlerine yönelik politikalar gerçekleştirilmelidir.

## **6. SONUÇ**

Yoksullukla mücadele politikalarının temel düzeyde mutlak yoksulluk kıstas alınarak hazırlanması; toplumsal alanda yer alan diğer yoksul kesimlerin sosyal dayanışma ve yardımlaşma ağlarına entegre olmasının önünde büyük bir engel teşkil etmektedir. Küreselleşme ve beraberindeki sermaye yönetim akımları; iş hayatında ücretlerin düşürülmesine, mevcut aile yapılarının değişime uğraması ve devletlerce sağlanan sosyal transferlerin kısıtlanmasının etkisiyle çalışan bireylerde sosyal destek sistemlerinin işlevselliğini yitirmesine sebep olmaktadır. Gelir getirici bir işte çalışmalarına rağmen çalışan kesimin yoksulluk tuzağına sıklıkla düşmesi de küreselleşme ve sermaye yönetim zihniyetleriyle ilişkilidir. Çalışan yoksulluğu birçok ülke tarafından tanımlanmasına rağmen bu kesim; formel ve enformel sosyal yardım ve hizmetlerden yararlanmada engellemelerle karşılaşmaktadırlar.

Türkiye özelinde sosyal güvenlik girişi bulunan bireylere yönelik sağlanan sosyal yardımlar kısıtlı düzeydedir. Söz konusu kısıtlılık durumu sosyal güvenceli çalışan yoksulların kamu tarafından sağlanan sosyal transferlere erişimini engellemekte ve sosyal yardımlaşma-

dayanışma sistemlerine ulaşmalarını güç hale dönüştürmektedir (Kesgin, 2011, s. 72). Bu yüzden Kesgin'in (2011, s. 73) de ifade ettiği üzere sosyal yardımlara dair mevzuatlarda çalışan yoksulları da kapsayacak düzenlemelere ihtiyaç bulunmaktadır. Yoksulluğun artık çok boyutlu ve karmaşık bir görünüme sahip olduğu unutulmamalıdır. Aksi takdirde düşük gelirli çalışanların mağduriyetleri gözden kaçırılmaktadır (Kesgin, 2011).

Çalışan yoksulluğu sorununu aile-akrabalık bağları ve sivil oluşumlarının inisiyatifine bırakılması; bu bireylerin devlet algılarını olumsuz etkileyebildiği gibi kendilerine yardımcı olan sivil oluşumlara minnettarlık duygusu beslemelerine ve aidiyet geliştirmelerine zemin hazırlayabilir. Türkiye'de sivil oluşumlarca sunulan sosyal hizmetlerin denetim mekanizmalarının yeterli olamayışı, formel ve enformel sektörler tarafından sağlanan sosyal yardımların entegre bir sisteme tabi bulunamaması bireylerce geliştirilen aidiyet ve kimlik duygularını suiistimale açık bırakmaktadır. Formel ve enformel sektörler tarafından sağlanan sosyal yardım ve hizmetlerin entegre bir sisteme dâhil edilmesi gerekmektedir. Denge-denetim mekanizmalarının oluşturulması ve yoksullukla mücadelede sadece mutlak yoksullukla değil özelde çalışan yoksulluğunun genelde tüm yoksulluk çeşitlerine yönelik sosyal politika ve yardım uygulamalarının geliştirilmesi gerekmektedir.

### **ÖZET**

Ülkemiz 1950’li yıllardan itibaren hızlı bir değişim süreci içine girmiştir. Bu hızlı değişim ile birlikte ülke içinde bölgelerarası ekonomik gelişmişlik farkları ortaya çıkmıştır. Nüfusun ülke içindeki plansız hareketi, özellikle ekonomik olarak gelişmiş bölgelere doğru olan göç olgusu önemli bazı sorunları da beraberinde getirmiştir. Nüfusun belirli alanlarda toplanması ve yoğunlaşması ile plansız ve çarpık kentleşme, çevre sorunları ve hayat standartlarında düşme eğilimi gibi etkenler belirmiştir. Bu durumun olumsuz etkilerini ortadan kaldırmak için Türkiye’de 1960’lı yıllardan itibaren planlı kalkınma hamleleriyle beraber kentlerin planlı bir şekilde büyümesi ve gelişme göstermesi hedeflenmiştir. Bu amaca yönelik olarak ülkemizde organize sanayi bölgelerinin ilk örnekleri bu dönemde uygulamaya konulmuş ve sayıları yıldan yıla artış göstermiştir. Organize sanayi bölgeleri kentlerin gelişimi ve değişimi üzerinde oldukça önemli bir etkiye sahiptir. Bu çalışmada Siirt ilinde yer alan Organize Sanayi Bölgesi’nin, kentsel gelişime olan etkisi incelenmiştir. Kentin yatay gelişiminde, sosyo-ekonomik ve demografik yapısında ne düzeyde etkide bulunduğu bu çalışmanın temel amacını oluşturmaktadır. Siirt Organize Sanayi Bölgesi 2007 yılında faaliyete geçmiştir. Siirt OSB 70 hektar arazi üzerine ve Şirvan yolunun 8. kilometresine kurulmuş olup modern sanayi faaliyetlerinin gelişmesinde önemli bir yere sahiptir. Siirt Organize Sanayi Bölgesi’nin 2007 yılından itibaren kentte mekânsal olarak yaptığı değişiklikler tespit edilmeye çalışılmıştır. Sonuç olarak Siirt Organize Sanayi Bölgesi’nin planlı ve düzenli bir kent yapısı oluşturması ve ekonomik dengesizlikleri ortadan kaldırması açısından önemli bir yere sahip olduğu anlaşılmıştır.

**Anahtar kelimeler:** Organize Sanayi Bölgesi, Kentleşme, Sanayileşme, Siirt

**THE EFFECT OF ORGANIZED INDUSTRIAL ZONES ON URBAN  
DEVELOPMENT: THE EXAMPLE OF SIİRT****ABSTRACT**

Our country has been in a process of rapid change since the 1950s. With this rapid change, interregional economic development differences have emerged within the country. The unplanned movement of the population within the country, especially the migration to the economically developed regions, has brought along some important problems. Factors such as the aggregation and density of the population in certain areas, unplanned and distorted urbanization, environmental problems and decrease in living standards have emerged. In order to eliminate the negative effects of this situation, it has been aimed that cities will grow and develop in a planned way with the planned development moves since the 1960s in Turkey. For this purpose, the first examples of organized industrial zones in our country were put into practice in this period and their numbers increased from year to year. Organized industrial zones have a very important effect on the development and change of cities. In this study, the effect of the Organized Industrial Zone in Siirt on urban development was examined. The main purpose of this study is to what extent it affects the horizontal development of the city, its socio-economic and demographic structure. Siirt Organized Industrial Zone started its activities in 2007. Siirt OIZ was established on 70 hectares of land and on the 8th kilometer of the Şirvan road and has an important place in the development of modern industrial activities. The spatial changes that Siirt Organized Industrial Zone has made in the city since 2007 have been tried to be determined. As a result, it has been understood that Siirt Organized Industrial Zone has an important place in terms of creating a planned and orderly city structure and eliminating economic imbalances.

**Keywords:** Organized industrial Zone, Urbanization, Industrialization, Siirt

## 1. GİRİŞ

Organize Sanayi Bölgeleri, bir ülkenin gelişip kalkınmasında, sermaye birikiminin elde edilmesinde ve şehirleşme dinamiğinin belirlenmesinde en önemli faktörlerden birisidir (Dumansızoğlu ve Döker, 2017: 89). OSB'ler, ağır sanayi ve entegre tesisler dışında kalan, çeşitli sektörel üretimleri uyumlu ve birbiriyle tamamlayıcı bir nitelikte olan küçük-orta sanayi ölçek ve boyutundaki imalat ünitelerinin, kapsamlı bir biçimde sınırları tayin edilmiş bir alanda, yerleşimi, altyapısı, gerekli sosyal ve teknik hizmetleri ve ortak yapıları ile organize edilmiş bölgeleridir (Bayülken, 2017: 1). Bu bölgeler, yerleşimin ortak amaca uygun olduğu, altyapının gereksinmelerin tamamının karşılandığı, bina ve tesis açık alanları ile tesisatlarının belirli kriterlere göre standartlaştığı sahalardır. Daha çok sanayinin ülke geneline yayılması, geri kalmış bölgelerin refah seviyesinin yükseltilmesi ve şehirlerin düzenli bir şekilde gelişmesinin sağlanması için oluşturulan bu sanayi alanları, yatırımcıların sanayi faaliyetleri için en uygun arsalarla ulaşmalarını sağlamaktadır (Koç ve Bulmuş, 2014: 181). Planlı sanayi bölgesi örneklerinden biri olan Organize Sanayi Bölgeleri yatırımcılara hazır alt yapı sunma, bölgeler arasında dengeli sanayi dağılımını sağlama ve girişimciye neyi, nerede, nasıl üreteceği fikrini verme gibi özellikleriyle endüstrileşme sürecinde ülkelerin vazgeçilmez politikaları haline gelmiştir.

Dünyada planlı sanayi faaliyetleri ve organize sanayi bölgelerinin kuruluşu 19 yüzyılın ikinci yarısında Amerika Birleşik Devletleri ve İngiltere gibi sanayinin ilk ortaya çıktığı bölgelere dayanmaktadır. Türkiye'de ise planlı sanayi faaliyetleri ancak 1950'li yıllardan sonra ortaya çıkmaya başlamış, bu döneme kadar sanayi faaliyetleri ülke genelinde gelişigüzel ve mekânsal planlamadan bağımsız gelişmiştir. Kent içinde gelişigüzel kurulan sanayi kuruluşları, 1960'lı yılların başında gündeme gelen ve sonrasında uygulamaya konulan Organize Sanayi Bölgelerine doğru kayma eğilimi göstermişlerdir (Mutluer, 2003: 20). Günümüzde planlı sanayi faaliyetleri ve modern kentleşme süreçlerine bağlı olarak OSB'lerin sayısında büyük bir artış yaşanmıştır.

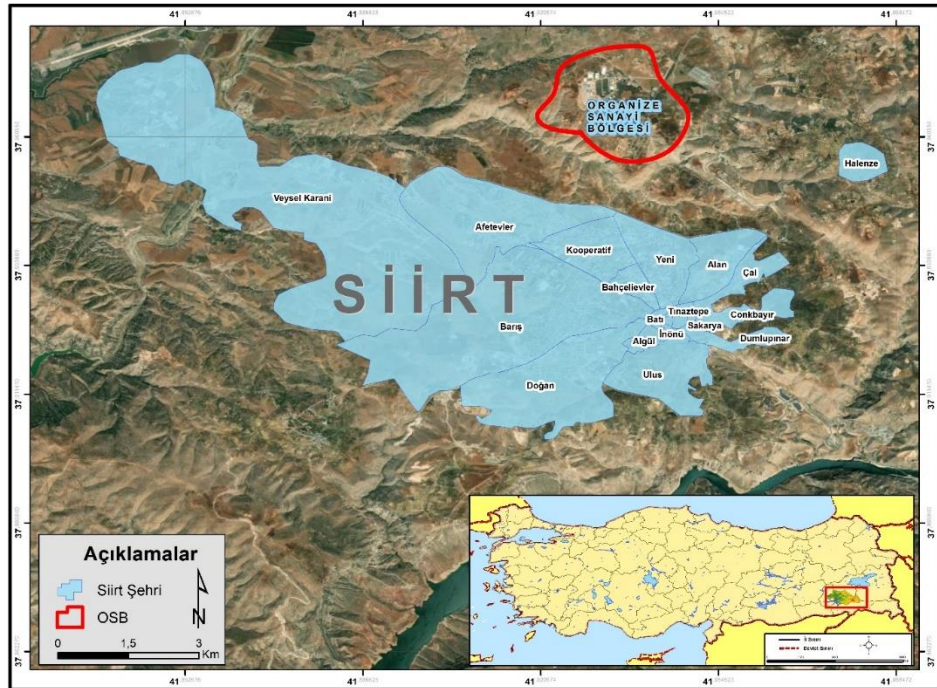

Türkiye gibi henüz sanayileşmesini tamamlayamamış ülkelerde sanayinin belli bölgelerde toplanması, bölgelerarası sosyal ve ekonomik dengesizlikleri gelişmiş ülkelere göre daha da artırmaktadır. Sanayileşmenin yoğunlaştığı alanların nüfusu diğer bölgelerden gelen göçlerle artmakta, yetersiz konut stoku ve plansız bir kent dokusu ortaya çıkmaktadır. Bununla birlikte zamanla mekânsal büyümeye bağlı olarak sanayi tesisleri kent merkezinde kalmakta, tarım alanları yok olmakta ve çeşitli çevre sorunları görülmektedir. Dolayısıyla hem göç alan

yerlerdeki bu sıkıntıları en aza indirmek hem de göç veren sahalardaki nüfusu bulunduğu yerde istihdam edebilecek yatırımlar yapmak için organize sanayi bölgeleri büyük bir işlev görmektedir (Karadeniz ve Yılmaz, 2021: 1820). Organize sanayi bölgeleri, bölgeler arası dengesizlikleri azaltmak, sosyo-ekonomik farklılıkları ortadan kaldırmak için oldukça önemli bölgelerdir. Bu sahalarda yerleştirilecek sanayiler, bir yandan mevcut sanayileşmiş bölgelerin gereğinden fazla büyümesine engel olacak, diğer yandan da ekonomik kaynakların kendilerine yönelmesini sağlayarak bölgeler arasındaki dağılımı etkileyeceklerdir (Hozikligil, 2007: 1).

Bu çalışmada bölgesel gelişmişlik açısından dezavantajlı bir konumda bulunan, Güneydoğu Anadolu Bölgesi'nde yer alan Siirt ili Organize Sanayi Bölgesi ele alınmıştır. Siirt Organize Sanayi Bölgesi'nin Siirt kentine, mekânsal gelişime ve yörenin kalkınmasına etkisi bu çalışmada ele alınmıştır.

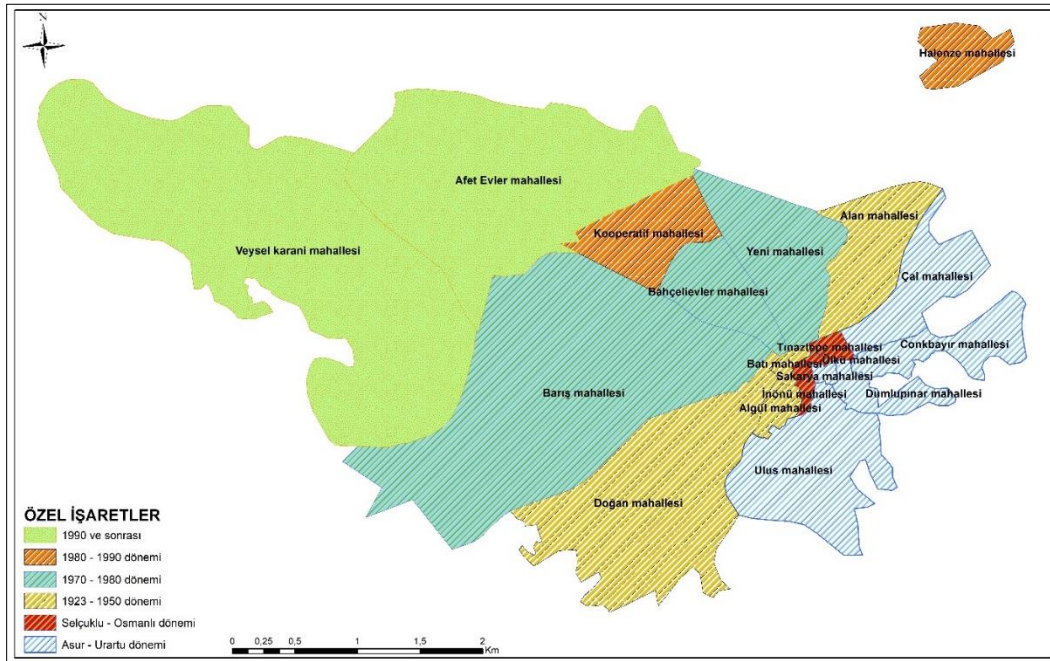

## 2. ÇALIŞMA SAHASININ KONUMU

Siirt ili, Güneydoğu Anadolu Bölgesi'nin Dicle Bölümü sınırları içerisinde yer almakta olup doğuda Şırnak ve Van, kuzeyde Batman ve Bitlis, batıda Batman ve güneyde Şırnak ve Mardin illeri ile çevrilidir. Siirt ili idari olarak, Kurtalan, Erüh, Pervari, Tillo, Şirvan, Baykan ve Merkez ilçe olmak üzere toplamda 7 ilçeden oluşmaktadır. Siirt Organize Sanayi Bölgesi'nin bulunduğu Siirt kenti, Siirt ilinin idari merkezi konumundadır.

Şekil 1. Çalışma sahası Lokasyon Haritası

Siirt kentinin yakın geçmişteki mekânsal gelişim sürecine bakıldığında kent, Cumhuriyetin ilk yıllarında yaklaşık 15000 nüfuslu ve kırsal karakteri çok baskın olan küçük bir Anadolu kenti görünümündeydi. Siirt'te bu dönemde modern kentleşme izleri ise hemen hemen hiç görülmemekteydi. Kent, bu görünümünü 1950'li yıllara kadar pek fazla değişmeden korumuştur. Bu yıllardan itibaren ise tüm ülkede olduğu gibi Siirt kentinde de kentleşme süreci hızlanmaya, kent nüfusu artmaya ve fonksiyonları gelişmeye başlamıştır. Siirt kenti 2000'li yıllara kadar mekânsal olarak büyümeye devam etmiştir. Bu dönemde Siirt, nüfus artışı ve alansal büyüme yaşayarak batısındaki plato yüzeyine doğru iyice yayılmıştır (Alkan, 2021: 22-25). Günümüzde Siirt kenti, 160.000 civarında nüfusu ve gelişme eğiliminde olan ekonomik fonksiyonlarıyla bulunduğu bölge için önemli bir yerleşmedir. Kent, ilk kurulduğu tepelik sahadan hızla uzaklaşarak önce batısındaki platoya bugün ise bu plato sahasını da aşarak Batman-Diyarbakır karayolu etrafında gelişim göstermektedir. Bahçelievler, Yeni, Sakarya, Karakol, Kooperatif, Ülkü, Tınaztepe, Alan, Doğan, Algül, Batı, Dumlupınar, İnönü, Çal, Conkbayır, Alan, Barış, Afetevler, Veysel Karani ve Halenze olmak üzere 20 mahalleden oluşan Siirt kenti, mekânsal ve demografik olarak büyümeye devam etmektedir (Alkan, 2018: 109-121).

**Şekil 2.** Siirt Kenti Yatay Gelişim Haritası (Alkan, 2018'den alınmıştır.)

### 3. BULGULAR

Siirt kentinde sanayi faaliyetlerinin büyük kısmını küçük ve orta ölçekli atölye tipi sanayi oluşturmaktadır. Modern sanayi faaliyetlerinin kente etkisi son zamanlarda artmakla beraber halen istenilen düzeyde değildir. Siirt kentinde modern sanayi faaliyetlerinin gelişmesinde Organize Sanayi Bölgesi'nin önemli katkısı bulunmaktadır.

Siirt Organize Sanayi Bölgesi Şirvan yolunun 8. kilometresinde yer almaktadır. 1995 yılında 700 dönümlük (70 hektar) arazi üzerinde kuruluş çalışmaları başlamış, 2007 yılında tamamlanmıştır. Toplamda 45 sanayi parseli bulunmakta olup, bu parsellerin tamamı yatırımcıya tahsis edilmiştir. Organize Sanayi Bölgesi'nde tekstil, inşaat, eğitim, maden ve teknoloji alanlarında 28 yatırımcı bulunmakta ve üretimleri devam etmektedir. Siirt Organize Sanayi Bölgesi'nde geçici işçi statüsündeki çalışanlar ile birlikte toplamda 1500 kişi istihdam edilmektedir. İnşaat aşamasında olan ve inşaat sürecinin tamamlanması ile beraber 8 yatırımcının daha üretime geçmesiyle bölgede 3500 kişinin istihdamı planlanmaktadır.

Siirt Organize Sanayi Bölgesi'nde en gelişmiş ve teknolojik özelliklere sahip tesis Türkiye-Katar ortaklığıyla yapılmış olan Lineer Çinko İzabe tesisidir. Türkiye'nin hali hazırda tek Çinko Metal Külçe Üretim Tesisi olan Lineer Çinko İzabe Tesisi; Türk-Katar ortaklığı ile yapılmış olup, ilk fazda yıllık 30 bin ton toplamda ise 90 bin ton külçe çinko üretimi yapmak üzere 100 dönüm arazi üzerinde inşa edilmiştir. Hakkâri ve Siirt' te 1900 doğrudan, 1100 dolaylı olmak üzere toplamda 3000 kişiye istihdam sağlayacak projenin toplam yatırım büyüklüğü 102 milyon dolar tutarındadır. Tam kapasitede tesis yıllık 216 milyon dolarlık ithalatın önüne geçecektir ve bu değer Türkiye'nin yıllık çinko ithalatının %38'ini oluşturmaktadır.

**Tablo 1.** Siirt Organize Sanayi Bölgesi'nde Faaliyet Gösteren Tesisler

Yatırımcı	Üretim Konusu	İstihdam/Kişi	Kurulu Alan/m <sup>2</sup>
Lineer Çinko İzabe Tesisi	Çinko Metal Külçe	320	100.000
Fıstık İşleme Tesisi	Fıstık	80	35.000
Lamino Tekstil Fabrikası	Bez Çanta, Maske	160	25.000
Çivi ve Tel Örgü Fabrikası	Tel Örgü, Çivi	30	10.000
Yes Yalıtım Fabrikası	Dış Cephe Kaplama, Kalekim	30	9.907
Botan Kalekim Fabrikası	Kalekim ve Alçı	60	9.051
Şavli Demir Tel Örgü Fabrikası	Tel Örgü	30	4.610
Aydoğdu Alüminyum Fabrikası	Alüminyum Paslanmaz Çelik	40	6.699
Özdoğu Yapı Prefabrik Fabrikası	Prefabrik Yapı Elemanları (Kolon vb.)	60	15.000

Siirt Organize Sanayi Bölgesi'nde yer alan bir diğer önemli tesis Siirt Fıstık İşleme Tesisi'dir. Avrupa Birliği ve Türkiye Cumhuriyeti Mali İşbirliği çerçevesinde finanse edilen ve Sanayi ve Teknoloji Bakanlığı tarafından yürütülen "Rekabetçi Sektörler Programı" kapsamında faaliyete geçirilmiş bir tesistir. Tesiste sürekli olarak 50 mevsimlik ve ihtiyaç halinde 80'e kadar çıkabilen personel sayısı ile hizmet verilmektedir. Tesis aynı zamanda akredite olması için işlemlerin başlatıldığı ve kuruyemiş ile ilgili birçok önemli analizin yapıldığı bir laboratuvarı da bünyesinde bulundurmaktadır. Tesis, en son ihracatını 5 ton ile Almanya'ya gerçekleştirmiştir.

Sahada yer alan bir diğer önemli tesis, Lamino Tekstil Fabrikası'dır. KOSGEB desteği ile kurulan fabrikada yaklaşık olarak 10 ülkeye ihracat yapılmaktadır. 25.000 m<sup>2</sup> arazi üzerine kurulmuş olan ve 160'a yakın kişiye istihdam sağlayan fabrikamızda bez çanta ve son zamanlarda dünya genelinde görülen Covid-19 virüsünden dolayı pandemi sürecinde Maske üretilmeye başlanılmıştır. Halen aktif olarak çalışmaya devam etmektedir.

Siirt Organize Sanayi Bölgesi'nde belirtilen tesisler dışında faaliyet gösteren tesisler şu şekildedir: Çivi ve Tel Örgü Fabrikası, 10.000 m<sup>2</sup> arazi üzerine kurulu fabrikada 30 kişiye istihdam sağlanmaktadır. Tel Örgü ve Çivi üretimi yapılmaktadır. Halen aktif olarak çalışmaya devam etmektedir. Yes Yalıtım Fabrikası, 9.907 m<sup>2</sup> arazi üzerine kurulu fabrikada 30 kişiye istihdam sağlanmaktadır. Dış cephe kaplama ve kalekim üretimi yapılmaktadır. Halen aktif olarak çalışmaya devam etmektedir. Botan Kalekim Fabrikası, 9.051 m<sup>2</sup> arazi üzerine kurulu fabrikada 60 kişiye istihdam sağlanmaktadır. Kalekim ve alçı üretimi yapılmaktadır. Halen aktif olarak çalışmaya devam etmektedir. Şavli Demir Tel Örgü Fabrikası, 4.610 m<sup>2</sup> arazi üzerine kurulu fabrikada 30 kişiye istihdam sağlanmaktadır. Tel Örgü üretimi yapılmaktadır. Halen aktif olarak çalışmaya devam etmektedir. Aydoğdu Alüminyum Fabrikası, 6.699 m<sup>2</sup> arazi üzerine kurulu fabrikada 40 kişiye istihdam sağlanmaktadır. Alüminyum paslanmaz çelik üretimi yapılmaktadır. Halen aktif olarak çalışmaya devam etmektedir. Özdoğu Yapı Prefabrik Fabrikası, 15.000 m<sup>2</sup> arazi üzerine kurulu fabrikada 60 kişiye istihdam sağlanmaktadır. Prefabrik yapı elemanları (kolon vb.) üretimi yapılmaktadır. Halen aktif olarak çalışmaya devam etmektedir.

**Tablo 2.** Siirt Organize Sanayi Bölgesi'nde Arsa Tahsis Sürecinde Bulunan Firmalar (2017)

Yatırımcı	Üretim Konusu	İstihdam/Kişi	Talep Edilen Arsa/m <sup>2</sup>
Fıstık İşleme Tesisi	Fıstık	80	35.000
Lamino Tekstil Fabrikası	Bez Çanta, Maske	160	25.000
Estaş Mermer	Mermer	50	20.000
Güney Alüminyum	Alüminyum Profil	100	16.000
İş Yapı Malzeme	Çelik Kons	100	16.00
Demmond Oto Yedek Parça	Amortisör Balata	150	16.000
Projeksiyon Mühendislik	Çelik Hasır	50	16.000

Öte yandan Siirt Organize Sanayi Bölgesi'nde arsa tahsis süreci devam eden 6 tesis bulunmaktadır. 2017 yılında başvuru yapan Lamino Tekstil Fabrikası, Estaş Mermer, Güney Alüminyum, İş Yapı Malzeme, Demmond Oto Yedek Parça ve Projeksiyon Mühendislik gibi firmaların arsa tahsis süreci devam etmektedir. Siirt Organize Sanayi Bölgesi'nde proje süreci devam eden 5 firma bulunmaktadır. Bunlar; Matriko Tekstil Fabrikası, Bandaroğlu PVC Üretim Tesisi, Alkumru USB Üretim Tesisi, Çermik PVC Isı Cam Üretim Tesisi ve Ninova Tekstil Fabrikası'dır.

Siirt Organize Sanayi Bölgesi'nin Siirt kentinin mekânsal gelişimi üzerine etkisi incelendiğinde, dikkat çekici bazı hususların olduğu anlaşılmaktadır. Buna göre kuruluş yeri açısından Siirt Organize Sanayi Bölgesi, Siirt kentinin kuzeyinde ve Şirvan ilçe yolunun 8. kilometresinde konumlanmıştır. Bu konum Siirt kentini dünyaya bağlayan ve en önemli karayolu ağı konumunda olan Siirt-Batman-Diyarbakır karayolu ağına oldukça sapa kalmaktadır. Bunun yanı sıra Organize Sanayi Bölgesi ile Siirt kenti arasında dar ve derin bir vadi yer almakta olup, bu da kent ile Organize Sanayi Bölgesi arasında hizmetlerin yürütülmesinde engellere yol açmaktadır. Belirtilen bu dezavantajların etkisiyle Siirt Organize Sanayi Bölgesi kuruluşundan bugüne iyi bir büyüme ivmesi kazanamamıştır. Siirt Organize Sanayi Bölgesi'nin kuruluş yeri ile ilgili dezavantajlara rağmen son yıllarda kamu idaresi tarafından yapılan hamleler ve yatırım teşvikleri ile birlikte hızlı bir büyüme trendine girmiş ve bölgede üretim ve istihdam üzerinde önemli etkiler yapmaya başlamıştır. Organize Sanayi Bölgesi'nden Siirt kentine ve diğer karayolu ağlarına doğru yapılan çevre yolları ve yeni bağlantı yolları sayesinde ulaşımdaki sorunlar büyük oranda çözülmüştür. Bununla birlikte bölgede sanayi yatırımlarına devletin yatırım teşviki, istihdam ve kredi desteği, arsa tahsisi gibi büyük destekler sağlaması sonucunda sanayi yatırımlarında son yıllarda büyük artışlar

yaşanmıştır. Nitekim Lineer Çinko İzabe, Fıstık İşleme gibi büyük tesis ve yatırımların Siirt Organize Sanayi Bölgesi bünyesinde yer alması, Siirt şehri için büyük bir istihdam ve ekonomik katma değer oluşturmuştur. Bütün bu olumlu gelişmelerin etkisiyle Siirt Organize Sanayi Bölgesi hem Siirt kentinin mekânsal gelişim yönünü etkilemekte hem de istihdam ve üretim üzerinde belirleyici olmaya başlamıştır.

#### **4. SONUÇ**

Siirt OSB, kentleşmeyi yönlendirmek, çevre sorunlarını önlemek, planlı bir sanayileşme olayını gerçekleştirmek ve bölgelerarası gelişmişlik farkını azaltmaya yönelik olarak faaliyete geçmiştir. Organize Sanayi Bölgesi Siirt kentinin demografik, ekonomik ve mekânsal gelişimini etkilemiştir. Modern sanayi faaliyetlerinin kentte kurulması ve kentin planlı bir şekilde büyümesi için OSB'nin varlığı oldukça önem taşımaktadır. Mevcut durumda iki tane çok önemli modern sanayi tesisine sahip olan Siirt OSB, gelecek için önemli yatırım faaliyetlerine ev sahipliği yapma potansiyeline sahiptir. OSB ile kentin daha planlı bir yapıya kavuşması, istihdam olanaklarını arttırması ve kentin gelişmişlik düzeyinin iyileşmesi öngörülmektedir. Bu bağlamda son yıllarda modern kentleşme açısından atılan adımlar ve hız kazanan modern sanayi faaliyetleri ile birlikte yörede önemli sosyo-ekonomik değişimler yaşanması beklenmektedir.

**ÖZET**

Turbalar, bataklık ortamlarda ve yetersiz oksijen şartlarında bitki kalıntılarının birikmesiyle oluşan genç, düşük kalorili ve killi bir kömür çeşididir. Turbalar başta yakacak olmak üzere, bitkisel üretim, ısı yalıtımı, ormancılık, peyzaj, tıp ve tekstil gibi farklı alanlarda kullanılmaktadır. Turbalar jeolojik geçmişin açıklanmasında kullanılan önemli doğal kayıt belgeleridir. Özellikle paleo-iklim ve paleo-vegetasyon araştırmaları için önemli bilgiler içerirler. Turbalıklar ayrıca, önemli karbon yutak alanlarıdır ve küresel iklim değişikliğinin kontrol altında tutulmasında önem taşırlar. Bu çalışma, Türkiye'nin önemli turba işletim alanlarından Gölbaşı Havzası turbalıklarının alansal ve zamansal değişimini incelemek amacıyla hazırlanmıştır. Havza, Güneydoğu Anadolu Bölgesi'nin Orta Fırat Bölümü'nde ve Adıyaman ilinin Gölbaşı ilçesi sınırları içinde yer alır. Çalışma büyük kısmıyla saha çalışmalarına dayalı olarak hazırlanmıştır. Ayrıca, uzaktan algılama yöntemlerinden ve istatistiksel yöntemlerden de yararlanılmıştır. Turba alanlarının zamansal değişimini belirlemek için 1984, 2000 ve 2020 tarihli Landsat uydu görüntülerinden, GoogleEarth görüntülerinden ve güncel drone çekimlerinden yararlanılmıştır. Yapılan analizler neticesinde havzadaki turbalıkların 1984 yılında 1349,05 ha olduğu, 2020 yılında ise 888,19 ha'ya gerilediği belirlenmiştir. Buna göre, Gölbaşı Havzası turbalıklarının son 36 yıldaki alansal daralması 460,86 ha olmuştur. 1984 yılından 2020 yılına değişim oranı ise % 34,16'dır. Alansal azalma özellikle Gölbaşı Gölü ile Azaplı Gölü arasındaki turba çıkarma alanlarında, Azaplı Gölü'nün kuzeydoğusunda ve İneklı Gölü'nün kuzeyinde belirgindir. Turbalıkların daralmasında tarımsal amaçlı kurutma ve turba madenciliğinin belirleyici olduğu anlaşılmıştır. Şu anda, çalışma alanında devam eden turba kazısı turbalıkların bozulmasına ve karbon ayak izinin büyümesine yol açmaktadır. Ancak sulak alanın 2.079 ha'lık bir bölümünün tabiat parkı ilan edilerek koruma altına alınması olumlu ancak yetersiz bir gelişme olarak değerlendirilmiştir.

**Anahtar kelimeler:** Turba, uzaktan algılama, zamansal değişim, alansal değişim, Gölbaşı Havzası, Adıyaman.

**SPATIAL AND TEMPORAL (1984 - 2020) CHANGE OF PEATHENS IN THE  
GÖLBAŞI BASIN, ADIYAMAN/ TURKEY****ABSTRACT**

Peats are a young, low-calorie and clayey type of coal formed by the accumulation of dead plant material in swampy and anaerobic environments. Peats are used in different fields such as fuel, plant production, thermal insulation, forestry, landscape, medicine and textiles. Peats are important natural record documents used to explain the geological history. They involve important information especially for paleo-climate and paleo-vegetation research. Peatlands are also crucial carbon sinks and are in keeping global climate change under control. This study was prepared to examine the spatial and temporal change of the Gölbaşı Basin peatlands, one of the peat mining areas of Turkey. The basin is located in the Middle Euphrates Section of the Southeastern Anatolia Region and within the borders of Gölbaşı district of Adıyaman province. The study is mostly based on field studies. In addition, remote sensing methods and statistical methods were also used. Landsat satellite images dated 1984, 2000 and 2020, Google Earth images and recent drone footage were used to determine the temporal changing of peatlands. As a result of the analyzes, it was determined that the peatlands in the basin were 1349.05 ha in 1984 and decreased to 888,19 ha in 2020. Accordingly, the areal shrinkage of the Gölbaşı Basin peatlands in the last 36 years has been 460,86 ha. The rate of change from 1984 to 2020 is 34,16%. The spatial decrease is especially evident in the peat excavation areas between Gölbaşı Lake and Azaplı Lake, in the northeast of Azaplı Lake and in the north of İnekli Lake. It has been understood that agricultural drying and peat mining are determinants in the decrease of peatlands. Currently, ongoing peat excavation in the study area leads to degradation of peatlands and growth of carbon footprint. However, declaring an area of 2,079 ha in the wetland as a Nature Park and taking it under protection was considered as a positive but insufficient development.

**Key words:** Peat, remote sensing, temporal change, spatial change, Gölbaşı Basin, Adıyaman.

## **GİRİŞ**

Turbalar, bataklık ortamlarda ve yetersiz oksijen şartlarında bitki kalıntılarının birikmesiyle oluşan genç, düşük kalorili ve killi bir kömür çeşididir (Kahraman ve Güçlü, 2001; Kırmacı, 2017; Kowalczyk-Juško vd., 2016). Turbalar başta enerji üretimi olmak üzere, bitkisel üretim, ısı yalıtımı, ormancılık, peyzaj, ilaç sanayi ve tekstil gibi farklı alanlarda kullanılmaktadır (Joosten ve Clarke, 2002; Kowalczyk-Juško vd., 2016). Turbalıklar jeolojik geçmişin açıklanmasında kullanılan önemli doğal kayıt belgeleri arasında yer alırlar. Özellikle paleo-iklim ve paleo-vegetasyon araştırmaları için önemli bilgiler içerirler. Turbalıklar ayrıca, önemli karbon yutak alanlarıdır ve küresel iklim değişikliğinin kontrol altında tutulması açısından önem taşırlar (Tarnocai, 2006; Tırıl, 2006).

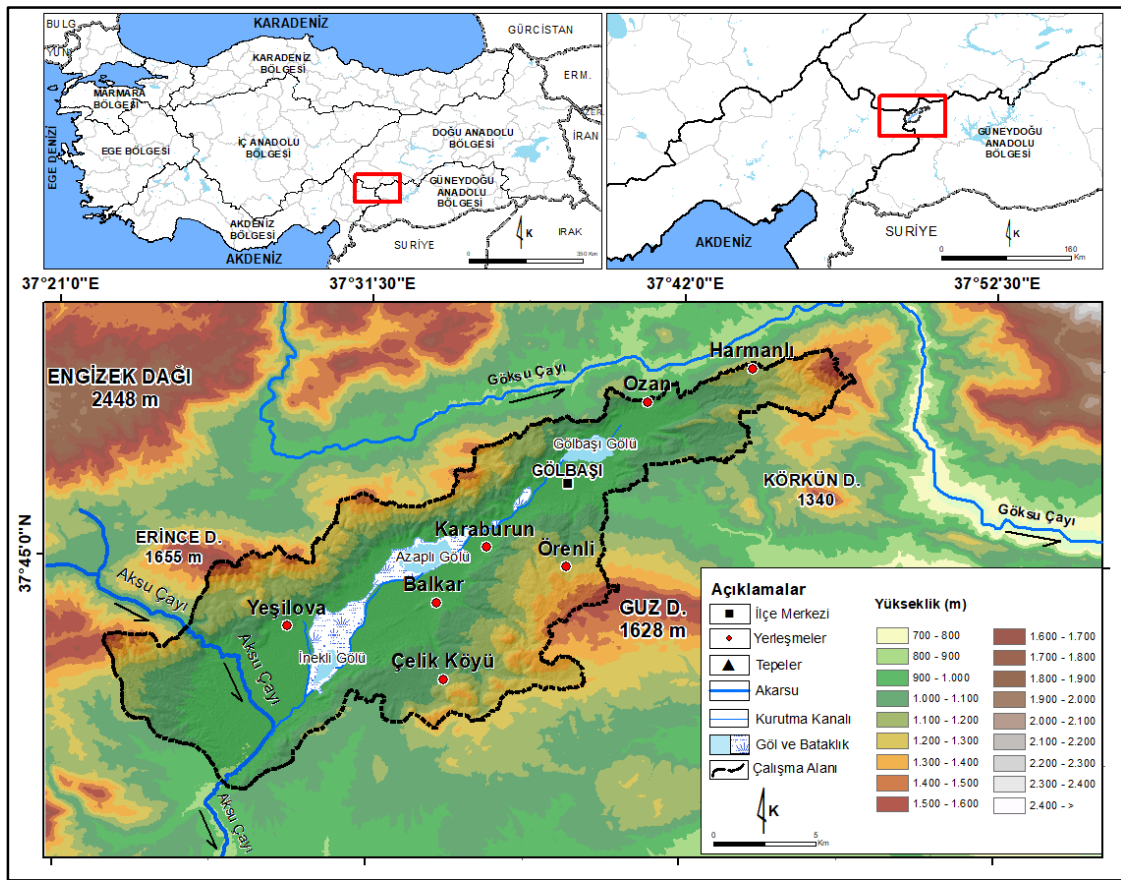

Dünya karalar yüzeyinin yaklaşık %3'ü turbalıklarla kaplıdır (Maltby and Proctor, 1996; Vitt and Short, 2020). Yerel olarak farklılıklar olsa da turba birikimi genellikle 0.5 – 1 mm/yıl arasında değişmektedir (Parish vd., 2008; Çolak ve Günay, 2011). Turbalıklar genellikle Holosen'de oluşmuştur ve çoğunlukla yukarı enlemlerde yayılış gösterirler. Ancak Ekvatorial kuşakta da geniş turbalıklara rastlanır. Bu bağlamda, Rusya, Kanada, ABD ve Endonezya gibi ülkeler geniş turbalıklarıyla öne çıkarlar (Joosten ve Clarke, 2002; Xu vd., 2018). Buna karşılık Türkiye'nin de bulunduğu Orta Kuşakta turba alanları nispeten sınırlıdır.

Turbalıklar bataklık kurutma çalışmaları, tarımsal amaçlı kullanımlar ve turba çıkarımı başta olmak üzere, çeşitli nedenlerle giderek daralmaktadır. Türkiye'nin önemli turba işletim alanlarından biri olan Gölbaşı Havzası da benzer sorunlarla karşı karşıyadır. Turbalıklar ekonomik, ekolojik, biyolojik, hidrolojik ve benzeri özellikleri ile birçok araştırmaya konu olmuştur (Montanarella vd., 2006; Tarnocai, 2006; Parry vd., 2014; Kowalczyk-Juško vd., 2016; Paleckiene vd., 2021; Loisel ve Gallego – Sala, 2022). Benzer şekilde Türkiye'de de turbalarla ilgili önemli çalışmalar yapılmıştır (Kahraman ve Güçlü, 2001; Dengiz vd., 2009; Evrendilek vd. 2011; Hoş – Çebi ve Korkmaz, 2015; Çolak ve Günay, 2011). Buna karşılık, bu çalışmanın konusunu oluşturan Gölbaşı Havzası turbalıklarıyla ilgili literatür son derece sınırlıdır (van Zeist vd., 1970; Gürbüz vd., 2007).

Bu çalışma, Gölbaşı Havzası turbalıklarının 1984 – 2020 yılları arasındaki alansal ve zamansal değişimini sayısal olarak ortaya koyan ilk çalışmadır. Yapılan analizler neticesinde Gölbaşı Havzası turbalıklarının 1984 yılında 1349,05 ha olduğu, 2020 yılında 888,19 ha'a gerilediği ve bu dönemde alansal daralmanın % 34,16'ya ulaştığı belirlenmiştir. Bu verilerin havza yönetim

planının hazırlanmasında dikkate alınması, turbalıklardan sürdürülebilir yararlanma açısından büyük önem taşımaktadır.

Gölbaşı Havzası, Güneydoğu Anadolu Bölgesi'nin Orta Fırat Bölümü'nde ve büyük kısmıyla Adıyaman ilinin Gölbaşı ilçesi sınırları içinde yer alır (Şekil 1). Havzada bir ilçe merkezi ve 12 köy yerleşmesi bulunmaktadır. Havza tabanının bir bölümü (2.079,79 ha) 28.05.2008 tarihinde "Gölbaşı Gölleri Tabiat Parkı" adı ile tabiat parkı ilan edilmiştir. Bu durum, Gölbaşı turbalıklarının korunması ve yönetimi açısından önemli bir adım oluşturmuştur.

Şekil 1. Çalışma sahasının lokasyon haritası

## MALZEME VE YÖNTEM

Çalışma büyük kısmıyla saha çalışmalarına dayalı olarak hazırlanmıştır. Ayrıca, uzaktan algılama yöntemlerinden de yararlanılmıştır. Çalışma sahasının iklim verileri Meteoroloji Genel Müdürlüğü'nden temin edilmiştir. Turba çıkarımı ve nüfusla ilgili verilere TÜİK ve kurumsal internet sitelerinden ulaşılmıştır.

Turbalıkların zamansal ve mekânsal değişimi URL - 1 sitesinden temin edilen ağustos aylarına ait 1984 tarihli Landsat 5 TM (Thematic Mapper), 2000 tarihli Landsat 7 ETM ve 2020 tarihli Landsat 8 uydu görüntülerinden yararlanılarak incelenmiştir. Uzaktan Algılama analizlerinde ağustos ayının seçilmesi, yaz kuraklığı nedeniyle göl sularının nispeten çekilmiş olması, sulak alan dışındaki otsu türlerin kuruması ve kıyaslamaların daha güvenilir bir şekilde yapılmasını temin amacına dönüktür. Uydu görüntüleri atmosferik düzeltmeleri, görüntü zenginleştirmeleri ve bant kombinasyonları gerçekleştirilerek sınıflandırılmıştır. Çalışmada ayrıca, Google Earth görüntülerinden ve güncel drone çekimlerinden de faydalanılmıştır. Çalışma sahasının uydu görüntülerinin analiz edilmesinde ve tüm haritalarının oluşturulmasında ArcGIS 10.3.1 yazılımı kullanılmıştır.

## **BULGULAR**

### **Gölbaşı Havzası'nın Coğrafi Arka Planı**

Gölbaşı Havzası'nda Gölbaşı, Azaplı ve İnekli (Çelik) gölleri ve turbalıkları yer almaktadır. Havza tabanının yükseltisi 874 – 900 m arasında değişmektedir. Göllerin suları havzaya düşen yağışlardan, kaynak sularından ve bunlarla beslenen akarsulardan sağlanmaktadır. Ayrıca, ihtiyaç durumunda, havzanın kuzeydoğu ucundan açılan bir tünelle Göksu Çayı'ndan su takviyesi yapılmaktadır. Çalışma sahasının uzun yıllık sıcaklık ortalaması 14,9 °C ve uzun yıllık yağış ortalaması ise 735 mm'dir. En fazla yağış kış mevsiminde, en az yağış ise yaz mevsiminde düşer. Çalışma sahasında özellikle kış ve ilkbahar mevsimlerinde yağışlar artmakta ve taban suyu seviyesi yükselmektedir. Havza tabanında yer alan göllerin kenarlarındaki sığ bataklık alanlarda turba oluşumu devam etmektedir. Ancak, yaz kuraklığı nedeniyle göl sularının çekilmesi, turbalıkların kısmen kurumasına ve turba oluşumunun sınırlanmasına sebep olmaktadır. Havzadaki turbalıkların başlıca bitkilerini ise *Phragmites australis* (Kamış), *Typha latifolia*, *Juncus inflexus* (Sazak), *Nymphaea alba* (Nilüfer) ve *Carex sp.* (Ayakotu) gibi türler oluşturmaktadır.

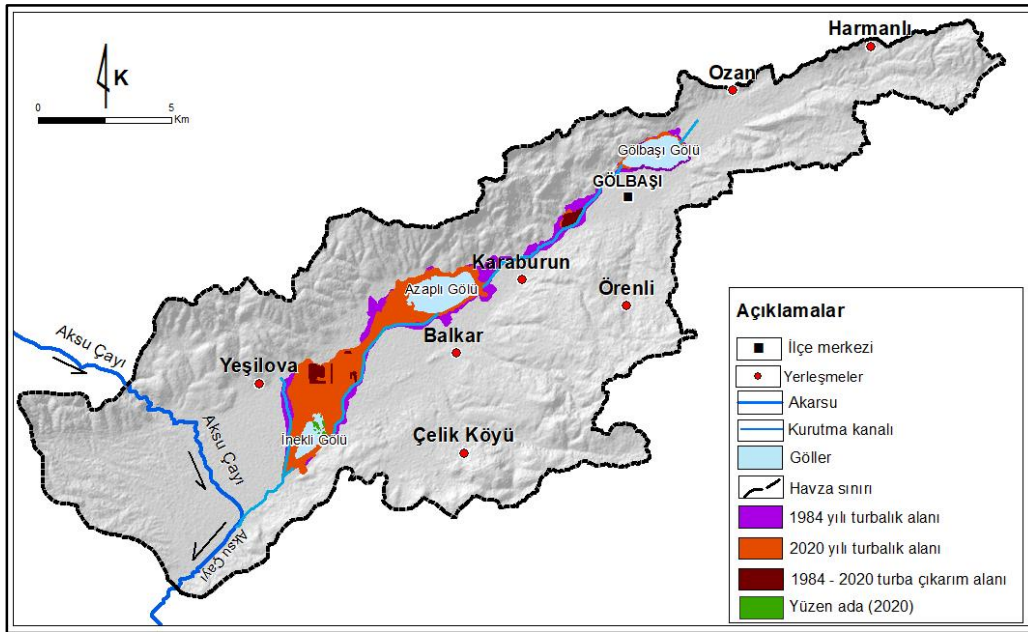

### **Gölbaşı Havzası Turbalarının Alansal - Zamansal Değişimi**

Turbalıkların zamana bağlı alansal değişimlerinin nedenleri arasında drenaj kanallarının açılması, havza dışından su takviyesi ve turba çıkarımı gibi beşerî etkiler öne çıkmaktadır. Havzada 1990 yılından sonra DSİ tarafından, göller arasında iletimi sağlamak ve bataklık alanların kurutulması amacıyla drenaj kanalları açılmıştır (DSİ, 2015). Ayrıca 2005 - 2018

yılları arasında Gaziantep'e içme suyu temin etmek amacıyla Göksu Çayı'ndan su takviyesi yapılmıştır.

Yapılan analizler neticesinde 1984 yılında Gölbaşı Havzası'ndaki turbalıkların 1349,05 ha alan kapladığı, 2000 yılında 1169,25 ha'a, 2020 yılında ise 888,19 ha'a gerilediği belirlenmiştir. Dolayısıyla, Gölbaşı Havzası turbalıklarının son 36 yıldaki alansal daralması 460,86 ha olmuştur. Alansal daralma özellikle Gölbaşı Gölü ile Azaplı Gölü arası, Azaplı Gölü'nün kuzeydoğusu ve İnekli Gölü'nün kuzeyinde meydana gelmiştir (Şekil 2). Alansal daralmanın % 13'ü turba madenciliğiyle, % 86,9'u ise kurutma yoluyla meydana gelmiştir. Öte yandan, turba çıkarımı nedeniyle bataklıklarda muhafaza edilen jeolojik kayıtlar yok olmakta; kurutulan alanlar ise tarım alanı olarak kullanılmaktadır. Ancak, turba çıkarılan alanlarda göl aynası genişlemesi su kuşlarının yüzerek avlandığı habitat alanının genişlemesine sebep olmuştur.

Şekil 2. Gölbaşı Havzası turbalıklarının alansal değişimleri (1984- 2020).

## SONUÇLAR VE TARTIŞMA

Bu çalışma, Gölbaşı Havzası turbalıklarının 1984 – 2020 yılları arasındaki alansal ve zamansal değişimini sayısal olarak ortaya koyan ilk çalışmadır. Yapılan analizler neticesinde Gölbaşı Havzası turbalıklarının 1984 yılında 1349,05 ha olduğu, 2020 yılında 888,19 ha'a gerilediği ve bu dönemde alansal daralmanın % 34,16'ya ulaştığı belirlenmiştir. Bu verilerin havza yönetim planının hazırlanmasında dikkate alınması, turbalıklardan sürdürülebilir yararlanma açısından büyük önem taşımaktadır.

Gölbaşı Havzası turbalıkları tarımsal amaçlı kurutma ve turba çıkarımı gibi sebeplerle daralmaya devam etmektedir. Turbalıkların alansal daralması ise, CO<sub>2</sub> yutak alanlarının azalmasına ve atmosferde sera gazı artışına sebep olmaktadır (Tarnocai, 2006; Tırıl, 2006; Parish vd., 2008). Bu da küresel iklim değişimini ve buna bağlı ekosistem değişikliklerini beraberinde getirmektedir.

Türkiye turba varlığı bakımından zengin değildir ve turba üretimi nispeten sınırlıdır. Bu nedenle ihtiyacın önemli bir kısmı Letonya ve Estonya gibi ülkelerden ithal edilmekte ve ancak bazen de gerekli hallerde ihracat yapılmaktadır (TÜİK, 2022a, b). Mevcut şartlarda, Türkiye’de turba çıkarımının bir süre daha devam edeceği öngörülebilmektedir. Burada önemli olan her havzanın kendine özgü bir ekosisteminin olduğunun ve sistemin çökmesi durumunda geri kazanımların kolay olmayacağına farkında olunmasıdır. Bu nedenle göl sedimanlarının ve turbalıkların makul bir bölümünün mutlak koruma altına alınması, ekosistemlerin geleceği ve bilimsel araştırmaların yapılabilmesi açısından büyük önem taşımaktadır.

Gölbaşı Havzası sulak alanlarının korunması amacıyla havza tabanının 2.079,79 ha’lık bir bölümü tabiat parkı ilan edilmiştir. Ayrıca turba çıkarımı izne bağlanmış ve alansal kısıtlama getirilmiştir (URL - 2). Bütün bu önlemler ekosistemin geleceği açısından olumlu adımlar olarak değerlendirilmiştir. Ancak, alınan önlemlerin arzulanan hedefe ulaşabilmesi için, yerel halkın konu hakkında bilgilendirilmesi ve koruma – kullanma bilinci içinde sisteme dâhil edilmesi gerekmektedir.

**DERİN TRANSFER ÖĞRENME YÖNTEMLERİYLE BİTKİ YAPRAKLARINDAN  
HASTALIK TESPİTİ**

**Dr. Öğr. Üyesi Mahmut KAYA (Orcid ID: 0000-0002-7846-1769)**

Siirt Üniversitesi, Mühendislik Fakültesi, Bilgisayar Mühendisliği

**ÖZET**

Dünyada artan tüketim ve nüfus yoğunluğu dolayısıyla tarımsal kaynaklara olan ihtiyaç artmaktadır. Bitkilerden maksimum verimi elde etmek oldukça önemlidir. Bitki hastalıkları bitkinin gelişim sürecini olumsuz etkilemektedir. Hastalık bitkiden elde edilecek hasat miktarını ve verimi de olumsuz etkilemektedir. Bu sebeple bitki hastalığının erken tespiti ve tedavisi oldukça önemlidir. Bitki türlerine ait yapraklardaki hastalıkların otomatik olarak teşhisi ve tanısı için yapay zeka yaklaşımları önemli fırsatlar sunmaktadır. Son zamanlarda derin öğrenme yapay zeka yöntemleri içerisinde başarısını kanıtlamıştır. Derin öğrenme yöntemlerinden evrişimli sinir ağları özellikle görüntü verilerini sınıflandırmada etkileyici bir performans sunmaktadır. Evrişimli sinir ağları modellerinden oluşan ve büyük veri kümelerinde başarısını kanıtlamış olan derin transfer öğrenme yaklaşımları sınıflandırma performansı üzerinde oldukça başarılıdır. Bu çalışmada farklı bitki türlerine ait yapraklar üzerinde bitki hastalık tespiti yapılmıştır. Yapılan deneyler sonucunda oldukça başarılı sonuçlar elde edilmiştir.

**Anahtar Kelimeler:** Bitki hastalığı, Sınıflandırma, Derin Öğrenme, Transfer öğrenme

**DISEASE DETECTION FROM PLANT LEAVES USING DEEP TRANSFER  
LEARNING METHODS****ABSTRACT**

Due to the increasing consumption and population density in the world, the need for agricultural resources is increasing. It is very important to obtain maximum yield from plants. Plant diseases adversely affect the development process of the plant. The disease also negatively affects the amount of harvest and yield to be obtained from the plant. For this reason, early detection and treatment of plant disease is very important. Artificial intelligence approaches offer important opportunities for the automatic diagnosis and diagnosis of diseases in the leaves of plant species. Recently, deep learning has proven its success in artificial intelligence methods. Convolutional neural networks, one of the deep learning methods, offer impressive performance especially in classifying image data. Deep transfer learning approaches, which consist of convolutional neural network models and have proven their success in large data sets, are very successful on classification performance. In this study, plant disease detection was carried out on the leaves of different plant species. As a result of the experiments, very successful results were obtained.

**Keywords:** plant disease, classification, Deep Learning, transfer learning

## 1. GİRİŞ

Son yıllarda nüfus artışı, iklimsel değişiklikler ve çeşitli sorunlardan dolayı gıda arzı oldukça büyük bir öneme kavuşmuştur. Kaynakların sınırlı olmasıyla beraber, mevcut kaynakların etkin bir şekilde kullanılabilmesi gıda ihtiyaçlarına cevap verebilme anlamında sürdürülebilir tarımın önemini arttırmıştır [1]. Mevcut koşullar altında bunu sürdürebilmenin yolu tarımda insan odaklı bir üretim sürecinden makine odaklı bir üretim sürecine odaklanılmasıdır.

4. sanayi devriminin etkisiyle endüstriyel çözümler her alanda etkisini hissettirmektedir. Teknolojik ilerlemelerle beraber gıda ihtiyaçlarını karşılamak için Tarım 4.0 süreci de yeni bir dönemin kapısını aralamıştır. Tarım 4.0 süreci ile gıda arzında verimi ve kaliteyi arttırmak için nesnelerin interneti ve yapay zeka yöntemlerinden yararlanılmaktadır [2]. Teknolojik çözümler ile bitki gelişimini etkileyen hastalıkların tespiti mümkün olabilmektedir.

Tarımda bitki hastalığına dayalı olası sorunların çözümü için hastalığın erken teşhisi oldukça önemlidir [3]. Günümüzde teknolojik gelişmelere rağmen tarımda insana dayalı üretim oldukça yüksektir. Ancak özellikle büyük tarım sahalarında insan müdahalesi oldukça yavaş kalabilmektedir. Bu sebeple tarımsal verim ve kaliteyi arttırmak için bitki hastalıklarının teşhisinde nesnelerin interneti ve yapay zekaya dayalı çözümlerin kullanılması elzemdir. Bitki hastalığı gıda güvenliği için önemli bir risk taşımaktadır. Bu riskle beraber bitki zararlıları, haşereler yabancı otlar bitki gelişimini olumsuz olarak etkilemektedir. Bu sebeple bitki hastalıklarının erken tespiti ve zamanında müdahale edilmesi hastalığın ilerlemesini durdurmak için oldukça önemlidir.

Literatürde bitki hastalıklarını tespit etmek için derin öğrenmeye dayalı çözümler çok popüler bir yaklaşım olmuştur. Patil ve Manohar [4], domates bitkisinin yapraklarındaki hastalığı bölütleme için geliştirilmiş radyal tabanlı işlev sinir ağına dayalı yeni bir yöntem önermişlerdir. Önerilen yöntem veri ön işleme, öznetelik çıkartma ve bölütleme olarak üç evreden oluşmaktadır. Yöntemde Kaggle sitesinden alınan domates yaprak hastalık veri kümesi üzerinde oldukça başarılı sonuçlar elde edilmiştir. Roy ve Bhaduri [5], elma bitkisindeki hastalığı tespit etmek için geliştirilmiş bir YOLOv4 algoritmasına dayalı gerçek zamanlı nesne algılama çerçevesi önermişlerdir. Önerilen yöntem elma bitkisi veri kümesi üzerinde orijinal YOLOv4 modeline göre %9 daha yüksek sınıflandırma doğruluğu elde etmiştir.

Pandian ve ark. [6], 14 yaprak görüntüsünden hastalık tespiti yapmak için 14 katmanlı bir derin evrişimli sinir ağı modeli kullanmışlardır. Modelin başarısını arttırmak için NST, DCGAN ve BIM yöntemleri ile veri artırma stratejisi uygulanmıştır. 132.750 eğitim örneği ve 8850 test

örneğin bulunduğu veri kümesi üzerinde %99.96'lık bir sınıflandırma doğruluğu elde edilmiştir. Abbas ve ark. [7], domates yapraklarından bitki hastalığını tespit etmek için derin öğrenme tabanlı yeni bir yaklaşım önermişlerdir. Önerilen yaklaşımda veri arttırmak için koşullu üretken çekişmeli ağlar ile sentetik görüntüler oluşturulmuştur. Veri arttırımı sonrası DenseNet121 sınıflandırma modeli kullanılarak PlantVillage veri kümesi üzerinde %98'e varan bir sınıflandırma performansı elde edilmiştir.

Mohanty ve ark. [8], 14 ürün türü ve 26 hastalık türü bulunan veri kümesi üzerinde hastalık tespit etmek için yeni bir derin öğrenme modeli önermişlerdir. 54.306 görüntü ve 38 farklı kategorinin olduğu veri kümesi üzerinde %99,35 oranında başarı elde edilmiştir. Ma ve ark. [9] salatalık hastalıklarını tespit etmek amacıyla tüylü küf, antraknoz, külleme ve hedef yaprak lekelerinden oluşan örneklerin bulunduğu bir veri kümesi üzerinde derin öğrenme tabanlı bir sınıflandırma modeli kullanmışlardır. 14.208 semptom görüntüsü içeren artırılmış veri kümesi üzerinde %93,4 sınıflandırma doğruluğu yazarlar tarafından elde edilmiştir.

## **2. MATERYAL VE YÖNTEM**

Bu bölümde öznitelik çıkartmada kullanılan sinir ağı modeli ile sınıflandırma algoritmaları ele alınmaktadır. Ayrıca önerilen yaklaşımı değerlendirmek için kullanılan veri kümesi hakkında bazı bilgiler sunulmuştur.

### **2.1. Evrişimli Sinir Ağları**

Evrişimli sinir ağları (ESA) makine öğrenmesinin bir alt alanı olup; görüntü verileri için piksel verilerini işlemede oldukça başarılı sonuçlar elde etmektedir. Bu ağ türü görüntü verileri dışında ses ve sinyal verilerine de uygulanabilmektedir. 2012 yılında ImageNet yarışmasında Alex Krizhevsky tarafından önerilen ESA modelinin yarışmayı kazanmasıyla derin öğrenme ve ESA popüler makine öğrenmesi yaklaşımlarından olmuştur [10]. ESA modeli, görüntü verileri için matriksel çarpımların olduğu lineer cebire ait çok sayıda matematiksel işlem içermektedir.

Evrişimli sinir ağları, evrişim, havuzlama ve tam bağlı katmandan oluşmaktadır. Bu katmanlar dışında aktivasyon fonksiyonları ve seyreltme gibi işlemler de ağın performansı üzerinde etkilidir. Evrişim katmanından havuzlama katmanına kadar sinir ağının karmaşıklığı artmaktadır. Evrişim katmanında matematiksel işlemlerin birçoğu gerçekleşmektedir. Bu katmanda rasgele değerlerden oluşan bir filtre ile görüntü verisi üzerinde bir çerçeve ile gezilerek matriksel çarpımlar gerçekleştirilir. Bu şekilde görüntünün daha iyi bir temsili yakalanmaya çalışılır. Havuzlama katmanında çeşitli yaklaşımlarla (ortalama havuzlama ve

maksimum havuzlama gibi) özniteliklerin boyutu azaltılır ve matematiksel karmaşıklık azaltılmış olur. Bu katmanda bazı bilgiler kaybolmasına karşın daha etkin bir bilginin ortaya çıkarılması hedeflenmektedir. Son olarak tam bağlı katmanda ise her bir düğüm bir önceki katmanda elde edilen özniteliklerle tam bağlı olmaktadır. Sınıflandırma öncesi elde edilen anlamlı öznitelikler bu bölümde elde edilmektedir.

### **2.1. Transfer Öğrenme**

Transfer öğrenme, daha önceden çok sayıda veri ve kategori içeren büyük bir veri kümesinde önceden eğitilmiş olan ağ modelini kullanan bir derin öğrenme yaklaşımıdır [11]. Önceden başarısını kanıtlamış olan bir ağ modeli, sıfırdan oluşturulacak olan bir ağ modeline göre daha etkin sonuçlar elde etmemizi sağlayabilir. Bu model ile veri tahminini gerçekleştirmek için ince ayarları yapmak çok daha kolay ve hızlı olabilmektedir. Daha önceden başarısını kanıtlamış olan sinir ağı modellerinden biri olan VGG19 ağ modeli [12], Simonyan ve Zisserman tarafından 2014 yılında önerilmiştir. VGG19, büyük ölçekli görüntü sınıflandırmaları için 19 katmana kadar olan bir sinir ağı modelidir. Katmanların derinliği, sinir ağının sınıflandırma performansını arttırmakta oldukça yararlıdır.

### **2.2. Sınıflandırma**

Sınıflandırma bir nesnenin hangi sınıfa ait olduğunu belirleme amacıyla kullanılmaktadır. Bu amaçla etiketli veriler üzerinden bir öğrenme işlemi gerçekleştirilerek veri kümesindeki nesnelere için bir tahmin yapılmaktadır. Bu çalışmada literatürde sıklıkla kullanılan k en yakın komşu, rasgele orman, doğrusal destek vektör makineleri ve doğrusal olmayan destek vektör makineleri karşılaştırma amacıyla kullanılmıştır.

#### **a) k En Yakın Komşu**

k en yakın komşu (kNN), örnekler arasındaki uzaklığa bakarak sınıflandırma işlemi gerçekleştirmektedir. Bu yaklaşımda, her bir örneğin diğer örneklerle olan uzaklığı niteliklere bakılarak incelenir. Başlangıçta verilen k değerine (k=1, 3, 5 vs.) göre, yoğunluk hangi küme ile kesişti ise veri o sınıfta olacak şekilde tahmin edilir. k değerine bağlı olarak sınıflandırma performansı değişkenlik gösterebilmektedir [13].

#### **b) Rasgele Orman**

Rasgele orman yönteminde, eğitim süreci boyunca çok sayıda karar ağacı oluşturularak sınıflandırma işlemi gerçekleştirilmektedir. Karar ağaçlarının özel bir durumudur. Hem sınıflandırma hem de regresyon problemleri için kullanılabilir. Bu çalışmada rasgele orman yöntemi sınıflandırma amacıyla kullanılmıştır. Çok sayıda ağaç yapısı oluşturularak her

bir ağaç yapısında örneğin hangi sınıfa ait olduğuna dair bir bilgi sunulur. Daha sonra bu bilgiler birleştirilerek en yoğun olan sınıfa göre örnek sınıflandırılmaktadır [14].

#### c) Doğrusal Destek Vektör Makineleri

Doğrusal destek vektör makineleri (Doğrusal DVM) ile farklı sınıflara ait örneklerin birbirinden en iyi şekilde ayrılabilmesi için hataları en aza indirebilecek doğrusal bir karar sınırı çizimi yapılmaktadır. Oluşturulan karar sınırı tüm sınıfların en yakın noktalarından maksimum marjine sahip bir sınır çizgisidir. Karar sınır çizgisi ile örnekler arasındaki mesafeyi maksimize eden en yakın noktalar destek vektörleri olarak isimlendirilmektedir. Eğitim sürecinde destek vektörlerini en iyi şekilde tespit etmek ve sınıflar arasındaki marjini maksimize etmek sınıflandırma performansını arttırmaktadır.

#### d) Çekirdek Destek Vektör Makineleri

Doğrusal destek vektör makineleri sınıfları birbirinden ayırmak için doğrusal bir karar çizgisi çekmektedir. Ancak gerçek dünya problemleri genellikle doğrusal olmayan bir yapıya sahiptir. Bu sebeple doğrusal olmayan bir karar çizgisi belirlemek daha tutarlı sonuçlar elde edilmesini sağlayabilmektedir. Temelde çekirdek DVM, doğrusal olarak ayrılamayan veri alt boyutlarını, daha yüksek boyutlarda doğrusal olarak ayrılabilen verilere yansıtarak daha iyi bir sınıflandırma temsili oluşturmaktadır.

### 2.3. Veri Kümesi

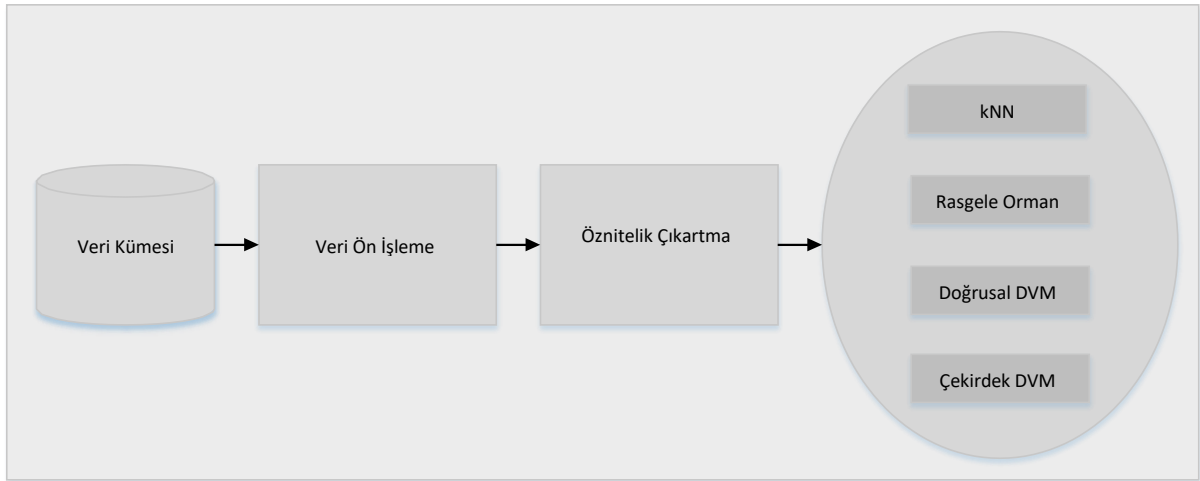

Bu çalışmada kullanılan veri kümesi 12 farklı bitki türüne ait hastalıklı ve sağlıklı verilerden oluşmaktadır [15]. Veri kümesinde 4503 görüntü (2278 sağlıklı; 2225 hastalıklı) bulunmaktadır. Bu çalışmada yöntemin başarısını test etmek için verilerin 1000 tanesi test örneği olarak rasgele seçilmiştir. Diğer görüntüler ise eğitim örnekleri olarak ayrılmıştır. Veri kümesinden örnek görüntüler Şekil 1’de verilmiştir.

**Şekil 1.** Veri kümesinden örnek görüntüler

## 2.1. Önerilen Yöntem

Bu çalışmada bitki yapraklarından hastalık tespitini gerçekleştirmek için derin transfer öğrenmeye dayalı bir yöntem önerilmiştir. Önerilen yöntem üç aşamadan oluşmaktadır. Önerilen yaklaşım, veri ön işleme, transfer öğrenme ile öznelik çıkartma ve sınıflandırma şeklindedir. Şekil 2’de önerilen yaklaşım görülmektedir. İlk aşamada ön işlem süreci yapılmıştır. Orijinal verinin boyutu çok büyük olduğundan dolayı veri boyutu düşürülmüştür. Bu amaçla veri kümesindeki görüntüler 6000\*4000 piksel büyüklüğünden 256\*256 piksel boyutlarına indirilmiştir. Ayrıca matematiksel işlem karmaşıklığı ve verinin daha iyi bir temsili olabilmesi için görüntü verileri üzerinde normalizasyon işlemi gerçekleştirilmiştir.

Şekil 2. Bitki Hastalığını Sınıflandırma

İkinci aşamada verinin daha iyi bir temsiline elde edilebilmesi amacıyla transfer öğrenme yaklaşımı kullanılmıştır. Bu amaçla literatürde de başarısını kanıtlamış olan VGG19 sinir ağı modeli kullanılmıştır. Bu sinir ağı modeli, ImageNet veri kümesi üzerinde başarılı bir şekilde eğitilmiştir. Daha önceden eğitilmiş olan sinir ağı modelinde farklı bir veri kümesinden elde edilen bilgilerin transferinin yapılabilmesi mümkün olmaktadır. Bu şekilde sinir ağı modelinin eğitilmiş ağırlıkları ince ayar yapılarak başka veri kümeleri üzerinde de kolaylıkla ve başarılı sonuçlar üretilerek kullanılabilir. Bu çalışmada veriler, ön işlem adımı sonrasında transfer öğrenme amacıyla kullanılan modellerden biri olan VGG19 sinir ağı modeline sunulmuştur.

Transfer öğrenme yaklaşımıyla öğrenme süreci hızlandırılmaktadır. Süreç hızlandırma ile birlikte daha az veriyle daha iyi performans elde etmemizi de yine transfer öğrenme modelleriyle sağlanabilmektedir. VGG19 büyük ölçekli görüntüleri sınıflandırmak için 19

katman derinliğine sahip bir sinir ağı modelidir. Çalışmada kullanılan veri kümesi üzerinde VGG19 sinir ağı modeli kullanılarak verilerin daha iyi bir temsiline yakalanması amaçlanmaktadır. Bu yaklaşım ile sınıflandırma öncesi yararlı özniteliklerin elde edilmesi sağlanmıştır.

Önerilen yaklaşımın son aşamasında verileri sınıflandırma için sınıflandırma algoritmalarından yararlanılmıştır. Bu amaçla literatürde de sıklıkla kullanılan k en yakın komşu, rasgele orman, doğrusal DVM ve çekirdek DVM yöntemleri sınıflandırma amacıyla kullanılmıştır.

## 2. DENEYSEL SONUÇLAR

Çalışmada kullanılan veri kümesini sınıflandırmak için öncelikle bir ön işlem gerçekleştirilmiştir. Daha sonra ön işlemde geçirilen veriler öznitelik çıkartma amacıyla VGG19 sinir ağı modeline sunulmuştur. Son aşamada ise yeni temsili özniteliklerin bulunduğu veriler sınıflandırma algoritmaları ile sınıflandırılmıştır. Veri kümesi toplam 4503 görüntüden oluşmaktadır. Bu çalışmada bu verilerin başarısını doğru bir şekilde analiz edebilmek için görüntülerin 1000 tanesi test örneği olarak belirlenmiştir. Geri kalan örnekler ise eğitim aşamasında kullanılmıştır. Bu şekilde deneyler sonrasında gerçekleştirilen sınıflandırma performansı, sınıflandırma algoritmalarına bağlı olarak Tablo 1’de verilmektedir. Tabloda görüldüğü üzere k en yakın komşu yöntemi ile en düşük sınıflandırma performansı elde edilmiştir. En iyi sınıflandırma performansı ise çekirdek DVM sınıflandırma algoritması ile elde edilmiştir. Makine öğrenmesinde sınıflandırma performansını gösteren bir diğer önemli ölçüt ise karışıklık matrisidir. Tablo 2’de en iyi sonuçların elde edildiği çekirdek DVM yöntemi için karışıklık matrisi sınıflandırma performansı sunulmuştur.

**Tablo 1.** Önerilen yöntemin sınıflandırma doğruluğu sonuçları

	kNN	Rasgele Orman	Doğrusal DVM	Çekirdek DVM
Önerilen Yöntem	%83.0	%87.0	%91,00	<b>%93,00</b>

**Tablo 2.** Çekirdek DVM yöntemi karışıklık matrisi sonuçları

	TAHMİN	
GERÇEK	511	23
	47	419

### 3. SONUÇ

Dünyadaki nüfus artışından dolayı gıda sorunlarının üstesinden gelebilmek için ürün verimi ve kalitesini arttırmak oldukça önemlidir. Bu amaçla insana dayalı bir üretim ve kontrol süreci yerine makineye dayalı çözümlerin kullanılması elzem hale gelmiştir. Bitki hastalıklarının erken tespiti ve yerinde müdahale olası sorunların çözümünü kolaylaştırmaktadır. Bu çalışmada bu tür sorunların üstesinden gelebilmek için bitki hastalığı veri kümesi üzerinde yapay zeka yöntemleriyle bir sınıflandırma işlemi gerçekleştirilmiştir. Bitki hastalıklarını tespit etmek için bitki yaprak verileri önce bir ön işlemden geçirilmiştir. Daha sonra transfer öğrenme yöntemlerinden VGG19 sinir ağı modeli öznetelik çıkartma amacıyla kullanılmıştır. Ayrıca farklı sınıflandırma algoritmalarıyla da sınıflandırma algoritmalarının performansı karşılaştırılmıştır. Sonuç olarak en iyi sınıflandırma performansı, çekirdek DVM yönteminde %93,00 sınıflandırma doğruluğu ile elde edilmiştir.

**ÖZET**

Osmanlı Devleti'nin 27. hükümdarı olan I. Abdülhamid, Lale Devri'nin padişahı III. Ahmed'in oğludur. Osmanlı Devleti'nin zor bir döneminde 21 Ocak 1774'te 49 yaşında iken hükümdar olmuştur. 15 yıllık hükümdarlık sürecinde daima Devlet'in iç ve dış meseleleriyle uğraşmıştır. Islahat hareketlerine önem vermiş, bilhassa ordunun ıslahı için yabancı hocalar getirtmiştir. İyi huylu ve merhametli bir padişah olarak bilinen ve ardında birçok mimari eser bırakan I. Abdülhamid, Özi Kalesi'nin Ruslar tarafından işgal edildiğini duyduğunda ani bir felç geçirerek 7 Nisan 1789'da vefat etmiştir. Bu bildirinin konusu I. Abdülhamid'in tahta çıkışı için kaside nazım şekliyle yazılmış ve şairi belli olmayan bir tarih manzumesidir. Doğum, ölüm, düğün, resmi göreve getirilme, inşa, savaş vb. önemli konularda yazılan ve şiirin bir bölümündeki harflerin rakamsal değerlerinin toplanmasıyla o olayın meydana geliş tarihinin ortaya çıktığı şiirlere "tarih manzumesi" denilmektedir. Tarih manzumeleri, ebced hesabı adı verilen rakamsal bir sistemle yazılır. Tarih düşürmenin birçok çeşidi bulunmaktadır. Bildiriye konu olan manzume İstanbul Millet Kütüphanesi Ali Emiri Koleksiyonu 34 AE Mnz 234 numaralı şiir mecmuasında bulunmaktadır. Manzume şekil ve anlam bakımından incelenmiş, tarih düşürme çeşidi hakkında bilgi verilmiş ve manzumenin şairi tespit edilmeye çalışılmıştır.

**Anahtar kelimeler:** Mecmua, Şiir Mecmuası, I. Abdülhamid, Kaside, Tarih Düşürme, İstanbul Millet Kütüphanesi, Ali Emiri Koleksiyonu.

**WITNESSES OF HISTORY: LITERARY TEXTS****Or A ISOSEPHIC POEM WRITTEN FOR ABDULHAMID I'S ACCESSION TO THE THRONE AND ITS POET IS UNKNOWN****ABSTRACT**

Abdulhamid I, the 27th ruler of the Ottoman Empire, is the son of Ahmed III, the sultan of the Tulip Era. In a difficult period of the Ottoman Empire, he became the ruler on January 21, 1774, when he was 49 years old. During his 15-year reign, he always dealt with the internal and external issues of the State. He gave importance to reform movements and brought foreign teachers especially for the improvement of the army. Abdülhamid I, who was known as a good-natured and compassionate sultan and left many architectural works behind, had a sudden stroke when he heard that the Özi Castle was occupied by the Russians, and died on April 7, 1789. The subject of this paper is a poem written in eulogy for Abdülhamid's ascension to the throne and whose poet is unknown. The poems written on important issues such as birth, death, weddings, official tasks, construction and war and collect the numerical values of the letters in a part of the poem are called "Isopsephic Poem". Isopsephic poems are written with a numerical system called abced calculation. Isopsephic Poem has multiple methods. The poem, which is the subject of the paper, is in the poetry magazine number 34 AE Mnz 234 in the Ali Emiri Collection of the Istanbul Millet Library. The poem was examined in terms of form and meaning, information was given about the type of isopsephic poem and the poet of the poem was tried to be determined.

**Keywords:** Magazine, Poetry Magazine, Abdulhamid I, Eulogy, Isopsephic Poem, Ali Emiri Collection, Istanbul National Library.

## GİRİŞ

Cülûs, Arapça kökenli olup “tahta çıkmak”, “oturmak” (Ayverdi, 2011: 203) anlamlarında kullanılan bir kelimedir. Terim anlamı olarak cülûs “hükümdarların ve özellikle Osmanlı şehzâdelerinin tahta geçmesi hakkında kullanılan bir tabir”dir (Özcan, 1993: 108). Osmanlı’da resmî bayram olan cülûs merasiminde, başta yabancı elçiler olmak üzere devlet erkânının tebrikleri ve armağanları kabul edilirdi. Fatih zamanından itibaren cülûz bahşişi vermek kanun haline gelmiş başta askerler olmak üzere birçok görevliye bahşiş dağıtılmıştır (Pakalın, 2004: 312; Tuğluk, 2010, 56). Cülûs, top atılarak tellallar aracılığıyla ülkenin her yerine duyurulur, halk ve asker duaya ve alkışa davet edilirdi (Akkuş, 2007, 51).

Kasideler genellikle övgü için yazılan manzumelerdir. Bu kasidelerde veya kasidelerin nesib kısmında tahta çıkan padişahın cülûsunu anlatan beyitler kaleme alınmışsa, bu şiir “cülûsiye” olarak adlandırılmıştır. Şairlerin tebrik ve temennilerini içeren bu manzumeleri yazmalarının ana nedeni cülûs bahşişi alabilmektir. Cülûsiyeler, sadece padişahın tahta çıktığı yıl için yazılmaz; yıldönümlerinde de kaleme alınan manzumeler mevcuttur. Cülûsiyeler; terakib-bend, tercî‘-bend, kıt‘a gibi nazım şekilleriyle de yazılabilir. Bunların yanı sıra Sultan II. Abdülhamid hakkında mensur cülûsiyelerin yazıldığına da tesadüf edilmektedir (Canım, 2012: 31).

Tarih veya tarih düşürme, ebced hesabına göre harflerin toplamı, bir hadisenin meydana geldiği zamanı gösteren cümle, mısra, beyit ya da bentlerle yapılan edebî sanattır. Genellikle istenilen tarih son mısradaki belirtilir. Ebced hesabının Orta Çağ’dan bu yana kullanıldığı bilinmekle beraber bir edebî sanat olarak tarih düşürmenin ilk defa ne zaman kullanılmaya başlandığına dair kesin bir bilgi yoktur. Bu hususta Tahirü’l-Mevlevî, Ahmet Cevdet Paşa’nın bu sanatın ilk defa H 791 yılında Hâfız-ı Şirâzî’nin vefatıyla kullanıldığını söylemesini eleştirmektedir. Mevlevî, Şeyh Sâdî için yazılan ve vefatı olan H 691 yılını işaret eden beytin ve Abdülkadir Geylanî için yazılan, H 470’de doğduğuna ve 91 yaşında H 561 yılında vefat ettiğine işaretle bulunan beyitlerin -eğer sonradan bulunmuş değilseler- Cevdet Paşa’nın sözünü şüpheli gösterdiğini söyler (1994: 146). Sivas’ın Timurlenk tarafından tahribi H 803 (خراب), İstanbul’un fethi H 857 (طبييت بلدت), Mısır’ın fethi H 923 (لعرب ممالك فاتح) vb. her ne kadar birer tarihi kelime/cümle olsalar da edebî anlamda ilk manzum tarihler XIV. yüzyıldan itibaren gelişmeye başlamış, XVIII. yüzyılda en verimli dönemine ulaşmış (Karabey, 2011: 80) ve XIX. yüzyılın başlarında Adanalı Surûrî ile doruk noktasına ulaşmıştır. Mevlevî, hiçbir şairin Surûrî’nin seviyesine ulaşamayacağını belirtir (1994: 147). Anadolu’da ilk manzum tarih mısramını ise Fatih devri âlimlerinden Hızır Bey’in söylediği rivayet edilir (Demirel, 2008: 380; Kalyon, 1998: 61-

62). Bu bildiride İstanbul Millet Kütüphanesi Ali Emiri Koleksiyonu 34 AE Mnz 234 numarada bulunan şiir mecmuasının 117a sayfasında yer alan kaside nazım şekliyle yazılmış, cülûsiye özelliği gösteren tarih manzumesi incelenecek, yeni harflere aktarımı yapılacak ve daha önce literatüre girmemiş olan bu şiir ilgililerin dikkatine arz edilecektir.

## 1. TARİH MANZUMESİNİN (CÜLÛSİYE) İNCELENMESİ

### 1.1. Şairi

Şiirin yer aldığı mecmuada şairin kimliğine dair herhangi bir bilgi bulunmamaktadır. Manzumede mahlas bulunmamakla birlikte son beyitte yer alan “İlhâm ile” kelimesinden hareketle mahlasın “İlhâmî” olduğu veya bu kelimeye çağrışım yapılmak istendiği düşünülebilir. Manzumenin yazıldığı dönemde III. Selîm’den başka “İlhâmî” mahlasını kullanan bir Divan şairi tespit edilememiştir.

İlhâm ile târîd için zihn [ü] úalem yazmışdı çün

Sulûân-ı dehr oldı bugün itdi cülÿs èAbdülóamid

I. Abdülhamid tahta çıktığında henüz 13 yaşında olan III. Selîm’in, tahta çıkış tarihinde veya cülusun ileriki bir yıl dönümünde böyle bir manzume kaleme alması ihtimaller dâhilindedir. Özel bir eğitimle yetiştirilen III. Selîm şair, bestekâr ve yenilikçi bir kişiliğe sahiptir. Bu tahminin dışında manzumenin şairine dair herhangi bir bilgi bulunmamaktadır.<sup>86</sup>

<sup>86</sup> Şiirin bulunduğu mecmuadaki bir sonraki manzume II. Selîm’e aittir. Dolayısıyla şair padişahların şiirleri arka arkaya sıralanmış olabileceği düşünülerek “İlhâm ile” kelimesinin “İlhâmî” mahlasını çağrıştırdığı tahmin edilmektedir. III. Selîm 1761 yılında doğmuştur. I. Abdülhamid tahta çıktığında 13 yaşındadır. Mahlasın İlhâmî olma ihtimalinden hareketle aynı yüzyılda bu mahlası kullanmış olabilecek şairler araştırılmış fakat III. Selîm’den başka Divan şairi tespit edilememiştir. Buradan hareketle Kâşif Yılmaz’ın hazırladığı “İlhâmî Divanı” incelenmiş ve bu manzumeye tesadüf edilmemiştir.

## 1.2. Yazılış Tarihi

Manzumenin yazılış tarihine dair herhangi bir bilgi bulunmamaktadır fakat I. Abdülhamid'in tahta çıkış tarihi olan 8 Zilkade 1187 Cuma / 21 Ocak 1774 tarihinden sonra yakın bir zamanda yazıldığı düşünülebilir.

## 1.3. Nazım Şekli

Manzume kaside nazım şekliyle yazılmıştır. Klasik anlayıştaki kasidelerden farklı olarak sadece methiye ve dua bölümleri bulunmaktadır. Kaside aşağıdaki beyitle başlamaktadır:

Geldi zamÀn-ı maèdelet iúbÀl-i kevn ola mezid  
Gösterdi rÿy-ı mekremet dünyÀya eltÀf-ı Óamid

## 1.4. Beyit Sayısı

Kasideler 9 beyitten 100 beyte kadar aynı aruz kalıbıyla yazılan nazım şekilleridir (İpekten, 2005: 38). Çalışmamızın konusu olan kaside ise 11 beyitten meydana gelmiştir. İlk 7 beyit methiye, 8-10. beyitler dua, 11. beyit ise tarihin kaleme alındığı son tarih beytidir.

## 1.5. Vezin

Manzume, recez bahrinin sık kullanılan kalıplarından biri olan *Müstefèilün / Müstefèilün / Müstefèilün / Müstefèilün* vezniyle yazılmıştır. Şairin vezni başarılı uyguladığı; imale, zihaf, med gibi hususlar dışında vezin aksaklıklarının olmadığı görülür.

## 1.6. Kafiye ve Redif

Manzumede redif bulunmamaktadır. Kafiye ise mürdef kafiyedir ve “-îd” sesiyle sağlanmıştır.

## 1.7. Muhtevası

Kaside nazım şekliyle kaleme alınan manzume, içeriği bakımından bir cülûsiye özelliği göstermektedir. Son beyitte I. Abdülhamid'in<sup>87</sup> tahta çıkışına işaret eden tarihin bulunması yönüyle de bir tarih manzumesi özelliği kazanmıştır. Klasik kasidelerde bulunan giriş bölümleri atlanarak I. Abdülhamid'in övgüsüyle şiire başlanmıştır. 8, 9 ve 10. beyitlerde padişaha dua edilmiştir. 11. beytin ikinci mısrasında türüne göre “tam tarih”<sup>88</sup> düşürülerek Abdülhamid'in tahta çıkış tarihi olan hicri 1187 tarihi oluşturulmuştur:

<sup>87</sup> I. Abdülhamid, III. Ahmed'in oğludur. Büyük kardeşi III. Mustafa'nın vefatının ardından 8 Zilkade 1187 Cuma / 21 Ocak 1774 tarihinde tahta çıkmıştır. Saltanatı 1774-1789 yılları arasındadır. I. Abdülhamid, Özü Kalesi'nin Ruslar tarafından işgalini bildiren sadrazam kâimesini okurken aniden gelen bir felç sonucu 11 Recep 1203 / 7 Nisan 1789 tarihinde vefat etmiştir. Ayrıntılı bilgi için bk. Aktepe, 1988: 213-216.

<sup>88</sup> Tam tarih, mısradaki bütün harflerin rakamsal karşılığının toplanmasıyla ortaya çıkan bir tarih türüdür.

SulûÀn-1 dehr oldı bugün itdi cülÿs èAbdülóamîd

سلطان دهر اولدی بوکون استدی جلوس عبد ال حمد =1187/1774

## 2. Metin ve Günümüz Türkçesi

### TÀrîò-i BerÀy-ı SulûÀn èAbdü'l-óamîd ÓÀn

*Müstefèilün / Müstefèilün / Müstefèilün / Müstefèilün*

--- / --- / --- / ---

- 1 Geldi zamÀn-ı maèdelet iúbÀl-i kevn ola mezîd  
Gösterdi rÿy-ı mekremet dünyÀya eltÀf-ı Óamîd

*Adaletli kişinin zamanı geldi, (bundan sonra) varlıkların saadeti artar. Sultan Hamid'in lütufları dünyaya ihsanın ne olduğunu gösterdi.*

- 2 Baòt-ı cihÀn oldı küşÀd èÀlemlere geldi reşÀd  
áam gitdi diller oldı şÀd òulm ü sitem hep nÀ-bedid

*Cihanın bahtı açıldı, âlemlere doğruluk geldi, gam gitti gönüller şad oldu, zulüm ve sitem yok oldu.*

- 3 Bu òüsrev-i èÀli-tebÀr taòt üzre oldı ber-úarÀr  
Kim pÀyine derler neşÀd itdi bu dem çeşm-i ümid

*Yüce bir soydan gelen hükümdar tahtına oturdu. Bu zamanda gözler ümitle doldu (nitekim) onun ayağına "uğurlu (sevinçli)" derler.*

- 4 Nesl-i şehin-şÀh-ı cihÀñ ÓÀn-ı Aómed cennet-mekÀn  
ÓÀt-ı humÀyÿn-hemÀn devrÀne Óáu ide saèid

*(Onun) nesli cihanın sultanlarının sultanı olan, cennet mekân Sultan Ahmed Han'dan (gelmektedir). Hak, onun mübarek zatını dünyaya mübarek, kutlu, uğurlu eylesin.*

- 5 Çóudan çekerdi inüzÀr òayr-ı úudÿmına kibÀr  
Óamd ola Óáuú'a áad-hezÀr èid oldı ber-bÀlÀ-yı èid

*Seçkin insanlar (onun) hayırla (tahta) ayak basmasını uzun zamandır beklerdi. Hakk'a yüzbinlerce şükür olsun ki (onun gelmesiyle) bayram üstüne ne yüce bayram oldu.*

- 6 Hep munúaòırdı òÀs u èÀlem teşrife mÀ-lÀ-kelÀm  
Şimdi bulur devlet niòÀm bi-şübhe bÀrî-i sedid(?)

*Havas-avam herkes şüphesiz (I. Abdülhamid'in) gelmesini bekliyordu. Şimdi şüphe yok ki doğru yol üzere devlet nizamına kavuşur.*

- 7 Bu sÀeat-i feròunde-dem eyler cihÀnı muàtenem(?)  
Ser-şÀr-ı òevú olur ümem kim neşirler oldı cedid

*Bu mübarek zamanlar cihanı ganimetle dolmuş (gibi memnun eder). Nitekim yeni yapılan neşirler (açılışlar, yenilikler) insanları ağızlarına kadar neşeyle doldurmuştur.*

8 Cibril oúur Naâr Àyetin manâýr ide Óaú õÀtın  
DevrÀna õill-i reéfetin her dem ÒudÀ ide medid

*Cebrail yardım/galibiyet ayetini okur, Hak zatını muzaffer etsin. Allah, her zaman merhamet gölgesini dünyanın üzerinde uzatsın.*

9 Neslin ide Óaú ÀşıkÀr şehzÀdelerle kÀm-kÀr  
Olsun cihÀnda pÀyidÀr MevlÀ úıla èömrin mezid

*Hak (Abdülhamid'in neslini göz önünde tuta, (onu) şehzadeleriyle beraber mesut ede, Mevla ömrünü uzun ede, cihanda kalıcı ola.*

10 Tevfú-i Óaúú-ı yÀr-ile Òıør ôafer-i rehber ola  
MeydÀn-ı rezme óaşr ola aèdÀ-yı bed-òÀh-ı èanıd

*Hakk'ın yardımı ile Hızır, zaferlerine rehber ola. Kötülüğünden vazgeçmeyen düşman savaş meydanlarında karşısına çıka.*

11 İlhÀm ile tÀriò içün zihn [ü] úalem yazmışdı çün  
SulùÀn-ı dehr oldı bugün itdi cülýs èAbdülóamid

*Zihin ve kalem bu tarihi ilham ile yazdı. Çünkü Abdülhamid bugün tahta çıktı ve zamanın sultanı oldu.*

## **SONUÇ VE ÖNERİLER**

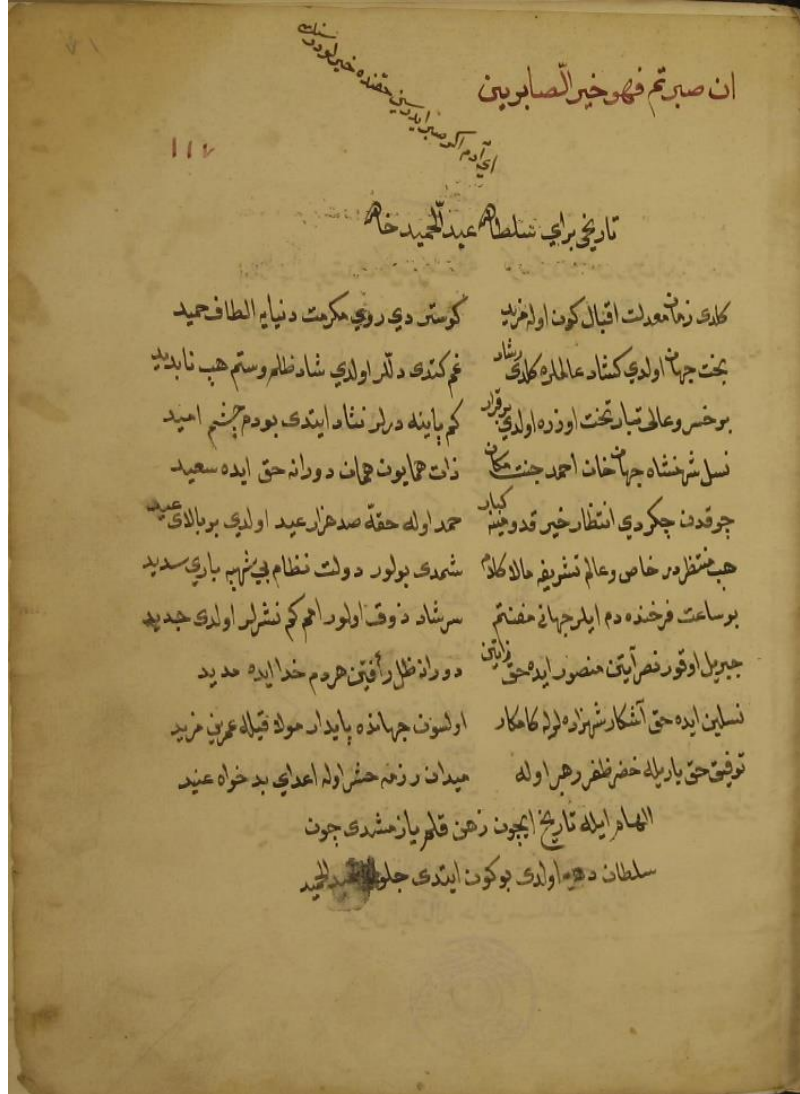

Edebiyat ve tarihin birbirine çok yakın iki bilim dalı olduğu, tarihe mal olmuş olayların edebî metinlere yansıdığı, edebî metinlerin tarihe ışık tutabileceği sonucu, bildirinin en önemli sonuçlarından birini oluşturmaktadır. Kasidenin tarih beytinde ortaya çıkan tarih ile I. Abdülhamid'in tahta çıktığı tarih örtüşmektedir. Bireysel şiir defterleri olarak nitelenebilen şiir mecmualarına alınan manzumelerin tarihe kaynaklık edebilecek derecede önemli olabileceği, I. Abdülhamid'in tahta çıkış tarihini gösteren manzume örneği üzerinden tekrar görülmüştür. Bu nedenle sadece şiir mecmuaları değil farklı özelliklerde yazılan mecmuaların da doğru bir şekilde tasnif edilmesinin önemi büyüktür.

Bu bildirinin sonuçlarından bir diğeri ise klasik Türk edebiyatı şairlerinin mazmun, aruz, kafiye, redif ve mananın dar kalıplarının yanı sıra her bir harfin rakamsal değerinin toplamının istenen sonucu verebildiği, dünya edebiyatlarında eşine nadir rastlanan özgün eserler verdiklerinin tekrar görülmesidir.

**EK: TARİH MANZUMESİNİN BULUNDUĞU MECMUA SAYFASI**

## **II. SELİM'İN BİLİNMEYEN BİR ŞİİRİ VE BÂKÎ'NİN NAZİRESİ**

**Doç. Dr. Talip ÇUKURLU (Orcid ID: 0000-0002-5164-6720)**  
Siirt Üniversitesi Fen-Edebiyat Fakültesi Türk Dili ve Edebiyatı Bölümü

### **ÖZET**

Sarı Selîm olarak da bilinen II. Selîm, Kanuni Sultan Süleyman ile Hürrem Sultan'ın ikinci oğludur. Âlimleri, şairleri, müzisyenleri koruyan, kendisi de zevk ve eğlenceye düşkün biri olarak bilinen II. Selîm, Osmanlı Devleti'nin divan sahibi şair padişahları arasında yer almaktadır. Selîm ve Selîmî mahlaslarıyla manzumeler kaleme alan II. Selîm'in divanının eksik ve tek nüshası İstanbul Millet Kütüphanesi Ali Emiri Koleksiyonu'nda bulunmaktadır. Şiir mecmuaları Türk edebiyatının önemli kaynaklarıdır. Son zamanlarda önemi daha da anlaşılan şiir mecmularında; şüara tezkirelerinde ismi geçmeyen şairlere rastlanmakta, divanı kaybolmuş şairlerin şiirlerine ulaşılmakta, şairlerin hayatları hakkında başka yerde karşılaşılmayan bilgilere rastlanmaktadır. İstanbul Millet Kütüphanesi Ali Emiri Koleksiyonu 34 AE Mnz 234 numaralı şiir mecmuasında yer alan bazı şiirler daha önce hiçbir eserde yer almayan metinlerdir. Bu bildirinin konusu, adı geçen mecmuada yer alan ve II. Selîm'in şiirleri üzerine yapılan çalışmalarda yer almayan bir gazeli ve 16. yüzyıl şairi Bâkî'nin bu gazele naziresinin incelenmesidir. Gazeller şekil ve anlam bakımından incelenmiş ve iki metin karşılaştırılmıştır.

**Anahtar kelimeler:** Mecmua, Şiir Mecmuası, Selîm, Selîmî, Baki, Gazel, Nazire, İstanbul Millet Kütüphanesi, Ali Emiri Koleksiyonu

**AN UNKNOWN POEM OF SELIM II AND BAKI'S NAZIRE****ABSTRACT**

Selim II, also known as Sarı Selim, was the second son of Suleiman the Magnificent and Hürrem Sultan. Sultan Selim, known as a person who protects scholars, poets and musicians and is fond of pleasure and entertainment, is among the sultans of the Ottoman Empire. Sultan Selim, who wrote verse with Selim and Selîmî pseudonyms, is located in the Istanbul National Library Ali Emiri Collection. Poetry magazines are important sources of Turkish literature. In the poetry magazines, which have been understood more recently, poets who are not mentioned in "şuara tezkire"s are found, the poems of the poets who have lost their divan are reached, there is information about the lives of poets that are not encountered elsewhere. Istanbul National Library Ali Emiri Collection 34 AE Mnz 234 poetry in the poetry magazine some of the poems that have not been included in any work before. The subject of this paper is a ghazal that is included in the aforementioned magazine and not included in the studies on Selim II's poems, and the examination of this ghazal nazire by 16th century poet Baki. The ghazals were examined in terms of form and meaning and the two texts were compared.

**Keywords:** Magazine, Poetry Magazine, Ali Emiri Collection, Selim, Selimi, Baki, Ghazal, Nazire, Istanbul National Library.

## 1. KLASİK TÜRK ŞİİRİNDE NAZİRE GELENEĞİ

Nazir; “benzer, karşılık, misil, şebih, akran” (A. Vefik Paşa, 2000: 769), “eş, misil, manend” (Naci, bty: 902) anlamlarına gelen bir kelimedir. Nazire ise “müسابaka yollu şiir karşılığı” (A. Vefik Paşa, 2000: 769), “bir şairin şiirine müşabih olmak üzere o vezin ve kafiyede söylenen manzume” (Naci, bty: 902) anlamlarında tanımlanan ve diğer birçok sözlükte benzer şekillerde tanımı yapılan edebî bir terimdir.<sup>89</sup> Kaynaklardaki ortak ifadeye göre bir terim olarak nazire “bir şairin şiirine özellikle vezin, kafiye, varsa redif, konu ve hayal birlikteliği/yakınlığı gibi hususlar dikkate alınmak suretiyle, genellikle başka bir şair tarafından benzerinin yazılması” olarak tanımlanmıştır (Kut, 2000: 171).

Bazı araştırmacılar nazire mecmualarında rastlanan ve bazı nazirelerin başında yer alan “fermâyed” ifadesinden hareketle mesneviler dışında herhangi bir nazım şekliyle yazılmış olan nazirelerin, zemin veya model şiire bir karşılık, yani bir “cevap” niteliğinde olduğunu düşünmenin mümkün olduğunu söylemektedir (Karavelioğlu, 2011: 26). Bir şiirin nazire olarak kabul edilebilmesi için öncelikle aynı aruz ölçüsü ile yazılması gerekmektedir. İkinci özellik kafiye ve –varsa- redifin aynı olmasıdır. Üçüncü özellik ise anlam ve hayal benzerliği bulunmasıdır. Kimi zaman nazire şiirler, zemin şiirde kullanılan kalıp sözlerin tekrar edildiği görülmektedir. Fakat bu sınırların dışına çıkan istisna nazireler de mevcuttur. Nazire şiirde, beyit veya bent sayısının aynı olması gerekmemektedir (Köksal, 2001: 7-18).

Şairlere nazire yazmaya yönlendiren birtakım saikler vardır. Zemin şiiri geçme arzusu ön plandadır. Üstat şairlere benzeme, meydan okumaya cevap verme, dostluğunu gösterme diğer saiklerdendir. Divan şiirinde nazire yazma geleneği ilk asırlardan başlayarak Divan şiirinin ömrünü tamamladığı 19. yüzyılın sonlarına kadar devam etmiştir.

## 2. II. SELİM VE BÂKÎ’NİN KARŞILAŞTIRILMASI

### 2.1. Hayatları ve Edebî Kişilikleri

<sup>89</sup> Nazire ve klasik Türk şiirinde nazire geleneği üzerine birçok çalışma yapılmıştır. Tekrara düşmemek ve bildiri sınırlarını aşmamak için ayrıntıya girilmeyecek olup araştırmacılar için burada bazı çalışmaların künye bilgileri sunulmuştur: Aktaş H. (2001). “Nazirecilik Geleneği ve Çağdaş Şiirimizin Ufukları”, Hece, 53-54-55, s.282-294; Karavelioğlu, M. A. (2011). “Şeyh Gâlib’in Gubârî’ye Naziresi”, Modern Türklük Araştırmaları Dergisi, 8/1, s.25-41; Köksal M. F. (2001). “Edirneli Nazmî Mecma’ü’n-Nezâ’ir (İnceleme-Tenkitli Metin)”, Hacettepe Üniversitesi Sosyal Bilimler Enstitüsü, (Basılmamış Doktora Tezi), Ankara; Köksal M. F. (2003). “Nazire Kavramı ve Klâsik Türk Şiirinde Nazire Yazıcılığı”, Dirîözler Armağanı Prof. Dr. Meserret Dirîöz ve Haydar Ali Dirîöz Hatıra Kitabı, s.215-290; Köksal M. F. (2006). *Sana Benzer Güzel Olmaz Divan Şiirinde Nazire*, Ankara; Mermer A. (2002). “XV. Yüzyılda Yazılmış Bilinmeyen Bir Nazire Mecmuası ve Aydınlı Visâli’nin Bilinmeyen Şiirleri”, Milli Folklor, 56, s. 75-94.

Bir padişah ile bir şairin hayatlarının birebir karşılaştırılması mümkün değildir fakat şairleri ve edebî kişiliklerini daha iyi anlayabilmek için önemli hayat merhalelerinin belirtilmesi uygun görülmektedir. Aşağıdaki tabloda II. Selîm ve Bâkî'nin ön plana çıkan yönleri maddeler halinde gösterilmiştir.

<b>II. Selîm (Sarı Selîm)</b>	<b>Bâkî</b>
<ul style="list-style-type: none"> <li>- Doğum tarihi 1524</li> <li>- Ölüm tarihi 1574</li> <li>- Kânûnî Sultan Süleyman'ın oğludur.</li> <li>- 1542'de 18 yaşında Konya sancakbeyi olmuştur.</li> <li>- 1544'de 20 yaşında Manisa sancakbeyi olmuştur.</li> <li>- 1562'de 38 yaşında Kütahya'ya gönderilmiştir.</li> <li>- 1566'da 42 yaşında padişah olmuştur.</li> <li>- Saltanatı sekiz yıl, iki ay, on dokuz gün sürmüş olup İstanbul'da vefat eden ilk Osmanlı padişahıdır.</li> <li>- Uysal hali ve mütevazı tavırlarıyla babasının gözüne girmiştir.</li> <li>- Su yolları, medreseler, camiler, han ve hamamlar yaptırmıştır. En önemli eseri, Mimar Sinan'a yaptırdığı Edirne'deki Selimiye Camii ve külliyesidir.</li> <li>- Osmanlı tarihinde ulemaya ilk defa cülus bahşişi dağıtan padişaktır.</li> <li>- II. Selîm, zevk ve eğlenceye düşkün bir padişah olarak bilinmektedir.</li> <li>- II. Selîm, âlimleri, şairleri, güzel sanatlarla uğraşanları koruyup kollamış, daha şehzadelğinde, başta Müverrih Âlî olmak üzere, Sâmî, Hâtemî, Firâkî, Ferdî, Niğârî gibi birçok âlim, şair, ressam ve musikişinası etrafına toplamıştır.</li> <li>- Şiirlerinde Selîmî ve Selîm mahlaslarını kullanmıştır.</li> </ul>	<ul style="list-style-type: none"> <li>- Doğum tarihi 1526</li> <li>- Ölüm tarihi 1600</li> <li>- Arkadaş Çevresi: Nev'î, Mecdî, Vâlihî, Hoca Saadeddin, Zâtî, Sâdikî...</li> <li>- Yaşadığı Dönemdeki Padişahlar: Kânûnî, II. Selîm, III. Murad, III. Mehmed</li> <li>- 1555'te Kanuni'ye sunduğu bir kaside ile tanınmaya başlamıştır.</li> <li>- Ahdî, Bâkî'nin gençlik yıllarında çok okuyarak kendini geliştirdiğini, bu nedenle kısa sürede büyük marifetlere sahip olduğunu belirtmiştir (Solmaz 2009: 68).</li> <li>- Bâkî'nin çok yetenekli bir şair olduğu, usta şair olan Zâtî'nin bile Bâkî'nin şiirini çaldığı, "Bâkî gibi şâir-i sâhirin şiirini uğurlamak ayıp değildir." diyerek şairi övdüğü dönemin kaynaklarında yer almaktadır (Eyduvan, 2009: 170).</li> <li>- Tarihçi Selanikî'nin Ferhad Ağa'dan naklen anlattığına göre Kânûnî, Bâkî gibi büyük bir kabiliyeti bulup ona mevki vermesini padişahlığının en zevkli birkaç hadisesinden biri olarak telakki etmiştir (İpşirli 1989: 858).</li> <li>- 1566'da hem babası hem Kânûnî vefat edince boşluğa düşmüş ve bir süre hamisiz kalmıştır.</li> <li>- Kânûnî'nin ölümü üzerine yazdığı ünlü mersiyesinin son iki bendinde yeni padişah Sultan Selîm'e ve devrin söz sahibi ve güçlü adamı Sadrazam Sokullu Mehmed Paşa'ya bağlılığını ifade etmiştir.</li> <li>- Sultan Selîm tahta oturunca Bâkî, padişaha bir cülûsiye sunmuştur (Açıkgöz 1982: 15).</li> </ul>

- II. Selim'in bilinen tek eseri *Divançe*'sidir. Eserin bilinen tek nüshası İstanbul Millet Kütüphanesi Ali Emiri Koleksiyonu'nda bulunan AE 34 Ae Arabi 4341/7 numaralı mecmuanın 109a-120b yaprakları arasında "Dîvân-ı Sultân Selîm Hân-ı Sâni" başlığı ile kayıtlıdır. Yeni harflerle yayımlanan eserde yirmi yedi gazel, bir tesdis, bir kıt'a ve on dört beyit bulunmaktadır. *Divançe*'de yer almayan bir gazeli ve bir beyti daha bulunmaktadır (Kesik 2012: 50, 72).

- II. Selim'in şiiri ve sanatı hakkında şua tezkirelerindeki görüşler Kesik, 2020'den naklen şu şekildedir: "Ahdî (Solmaz 2005: 96-98) ve Beyânî (Kutluk 1997: 14)'ye göre şiiri akıcı ve güzel olup herkes tarafından beğenilmektedir. Aşık Çelebi (Kılıç 2010: 238) ise Selîmî'yi yöneticilik ve şairlik kudreti bakımlarından şiir yazan diğer Osmanlı padişahlarından üstün görmektedir. Hasan Çelebi (Kutluk 1989: 108) ve Âlî (İsen 1994: 293) şiirlerinin kusursuz oluşundan bahsetmiştir." (Emecen 2009: 414-418; Kesik, 2020; Sakaoğlu 2000: 149-160; Turan 1998: 434-440).

- Sultan Selîm'e çeşitli vesilelerle şiirlerini sunmuş ve Kânûnî zamanında olduğu gibi Sultan Selîm'in gönderdiği gazellere nazireler söyleyip padişahın iki gazelini tahmis etmiştir.

- Sultan Selîm, şiir meclislerine davet mektubu gönderecek kadar, kır gezilerine davet edecek kadar Bâkî'yi sevmektedir.

- Bâkî'nin nüktedan, hoşsohbet, neşeli ve rint meşrep bir şair olduğu kaynaklarda nakledilmektedir.

- Çeşitli medreselerde müderrislik; Mekke, Medine, İstanbul kadılıkları, Anadolu ve Rumeli kazaskerliği gibi vazifelerde bulunur.

## 2.2. Gazellerin Karşılaştırılması

Bâkî'nin şiirini II. Selîm'e nazire olarak yazdığı açıkça görülmektedir. Nazire şiirde aranan ilk unsurun, zemin şiirin vezni ile aynı vezne sahip olması olduğunu daha önce belirtmiştik. Aşağıdaki gazelerde de böyle bir birliktelik söz konusudur. Her iki gazel de aruzun *Mef'ûlü / Fâ'ilâtün / Mef'ûlü / Fâ'ilâtün* kalıbıyla yazılmıştır. II. Selîm de Bâkî de aruzu ustalıklı kullanmışlardır.

Naziredeki ikinci husus nazım şekillerinin aynı olmasıdır ki her iki manzume de gazel nazım şekliyle kaleme alınmıştır. Nazire şiirlerin beyit/bent sayısının zemin şiirdeki beyit/bent sayısı ile aynı olup olmaması zorunluluğu bulunmadığına daha önce dikkat çekilmişti. Ele aldığımız manzumelerde de benzer bir durum söz konusudur. Sultan Selîm'in gazeli beş beyit iken Bâkî'nin gazeli yedi beyittir. Fakat mecmuada Bâkî'nin naziresinin sadece ilk beş beyti bulunmaktadır. Aşağıdaki tablonun dışında verilen son iki beyit Sabahattin Küçük neşrinden ilave edilmiştir. Burada şu hususu hatırlatmakta fayda vardır. II. Selîm'in mürettep divanı günümüzde mevcut değildir. Selîm'in bu şiiri çok bilinen bir manzume olmayıp sadece iki mecmuada tesadüf edilmiştir ve şiirler arasında küçük farklar bulunmaktadır. Bu nedenle derleme esnasında iki beytin eksik yazılmış olabileceği de akıldan çıkarılmamalıdır. Nitekim

Bâkî, II. Selîm'in her beytinin sonunda kullandığı kelimeyi kendi naziresinde de kullanmıştır. Bu kullanımlarda beyit sırasının gözetilmediği fakat eksik olduğu düşünülen beyitler ilgili yerine konulursa beyit sırasının gözetilerek bu kelimelerin kullanılmış olabileceği fark edilmiştir. Şöyle ki, söz gelimi Selîm'in gazelinin ikinci beytinin son kelimesi olan "nigâr-hâne", Bâkî'nin naziresinin üçüncü beytinin son kelimesidir. Zemin şiirin üçüncü beytinin son kelimesi olan "erguvâne", nazirenin dördüncü beytinin son kelimesidir... Fakat zemin şiirin ikinci beytinin derleme esnasında unutulduğu varsayılp beyitler birer sıra aşağıya kaydırılırsa, dize sonlarındaki kelimeler de birbirlerini karşılamış olacaklardır. Bu durumda zemin şiirin altıncı beytinin de eksik olduğunu söylemek mümkündür. Mamafih, zemin şiirdeki eksik olduğu varsayılan ikinci beytin son kelimesi "civâne"; altıncı beytin son kelimesi ise "Selîm Hâne" olmalıdır. Bu çıkarımlar elbette -şimdilik- birer varsayımdan ibarettir.

İki gazelde de redif bulunmamaktadır. Kafiyeleler ise -âne sesleriyle sağlanmış mürekkep kafiyedir. Her iki şiirde de kafiyeleleri içinde barındıran son kelimelerin aynı olduğuna yukarıda değinilmişti.

Selîm şiirine sevgiliye seslenerek ikinci tekil şahsı ön plana alarak başlamıştır ve şiir boyunca bu kullanım devam etmiştir. Bâkî ise dışarıdan bakan, gözlem yapan biri edasıyla tabiattaki değişimleri anlatmıştır. Bâkî'nin, Selîm'den daha üstün hayaller yakaladığını söylemek de mümkündür. Sözgelimi Selîm; aklının, fikrinin, gönlünün sürekli sevgiliyle ve ona kavuşmak için kurulan hayallerle dolu olduğunu, böylece bir nigâr-hâne/resim sergisi şeklini aldığını söylerken bu beytin naziresinde Bâkî, bülbüllerin nağmeli ötüşleri ve güllerin kıvrımlarıyla (Çin) bahar vaktinin sanki meşhur Çinli ressam Mani suretine girdiğini, gülistanın ise bu haliyle bir sergi (nigâr-hâne) şeklini aldığını söylemiştir. Beyitte en çok dikkat çeken husus tevriyeli kullanımlardır. Şairin, güllerin kıvrımları için kullandığı Çin ve ressam Mani'nin Nigaristan isimli eserini çağrıştırmak için kullandığı nigâr-hâne beytin anlam katmanlarını artıran hususiyete sahiptir.

Bâkî altıncı ve yedinci beyitte Sultan Selîm övgüsüne yer vermiştir. Selîm Han, gazelinin son beytinde yârine aşk derdini açmak istediğini fakat bunu beyanın mümkün olmadığını söylerken Bâkî, Sultan Selîm'in kerim zatının vasfını yazmakta aciz kaldığını, aklından geçen manaları yazmanın mümkün olmadığını dile getirerek başarılı naziresini övgü ile sonlandırmıştır.

## SONUÇ

Klasik Tŭrk ŕiiri geleneđi iĕinde yer alan nazire yazımı ŕairlerin yetiŕmelerini sađlayan bir okul hŭviyetini kazanmıŕtır. Gŭnŭmŭzde tespit edilebilen oldukĕa hacimli nazire mecmuaları, bu okulun ilk asırlardan son asırlara kadar kesintisiz nasıl devam ettiđini gĕstermektedir. Aynı zamanda nazire ŕiirler, ortak ŕiir zevkinin tespiti iĕin de ĕnem arz etmektedir. BĀkĭ'nin naziresinde zemin ŕiiri geĕme, ondan daha gŭzel ŕiir sĕyleme gayretinden ziyade zemin ŕiir

<sup>90</sup> Karŕılaŕtırma Prof. Dr. Beyhan Kesik tarafından hazırlanan *Selimi DivĀnĕesi*'nin 62. sayfasında bulunan gazel ile yapılmıŕtır. K kısaltması bu esere iŕaret etmektedir.

<sup>91</sup> Fikrŭm cemĀlŭnle: fikr-i cemĀlŭn ile K

<sup>92</sup> Bu beyit K nŭshasında ŕu ŕekildedir:  
Mey-laelŭn ile cĀnĀ hem-reng ũ hem-dem oldum  
ĀĀlib gelŭrse baĕĀe lĀyŭdur erĀuvĀna

sahibi Sultan Selîm'e bir iltifat amacıyla kaleme alındığı hissedilmektedir. Aruzun, kafiyenin ve hatta bazı kelimelerin aynı olmasına rağmen nazire şiirin, zemin şiirden çok farklı ve orijinal hayallere sahip olması, bir taklit veya intihal düşüncesini ortadan kaldırmaktadır. Bâkî'nin naziresi, zemin şiiri geçmiş, başarılı bir nazire kanaatini oluşturmaktadır.

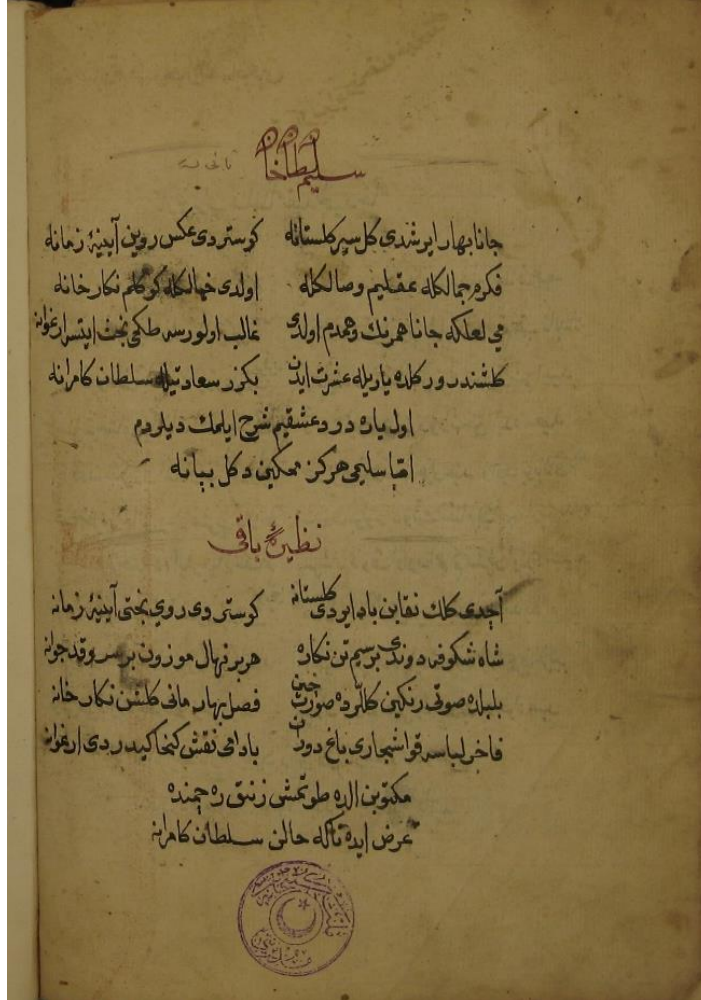

Sadece iki mecmuada bulunan II. Selîm'in bu gazelinden hareketle şiir mecmualarının önemi bir kez daha kendini göstermiştir. Ayrıca çalışmamızda da görüldüğü üzere mecmualarda nazire olarak yazılan şiirlerin de bulunması, şairlerin etkileşimlerini göstermeleri bakımından önemlidir. Bunların yanı sıra, gazelin baş tarafındaki "Selîm Taha" mahlasının yanına kurşun kalem kullanılarak sonradan eklenen "sânîdür" ifadesi, mecmuanın yazıldıktan sonra başka dikkatli bir göz tarafından incelendiğine işaret etmektedir.

**ABSTRACT**

Pistachio (*Pistacia vera*, L) is one of the important agricultural products in the countries where it is grown. It is a must-have product both as a snack and in the baklava industry, and an important economic return in the domestic and foreign markets.,There are many abiotic and biotic factors that limit pistachio production. These factors are fertilization, periodicity, drought, pests, weeds and diseases. In this review study, the effect of these factors will be explained by supporting the literature.

## **INTRODUCTION**

Pistachio (*Pistacia vera* L.) is a thin-shelled, oily, edible fruit and belongs to the family Anacardiaceae. It is mostly used in dessert making, pharmacy and various food industries. Pistachio has many positive effects on health; It is a protein and mineral store, and it is stated that the risk of heart attack and cancer decreases thanks to the calcium, phosphorus, B1, B2, C and E vitamins it contains. In addition, it is reported that it strengthens the mind, gives energy to relieve fatigue, is good for the respiratory and digestive system, and has an anti-inflammatory effect (Çınar ve Okay, 2013). The homeland of the pistachio tree is the Middle East and Central Asia. Most production in the world is made in the USA, Iran, China and Turkey (FAO, 2020). Although pistachio is grown in 56 provinces in Turkey, more than 90% of the production is in the Southeastern Anatolia Region. This region has pioneered the successful cultivation and spread of pistachios, as it is the gene center and the place where it was first cultivated, and due to its ecological characteristics (Yavuz ve ark. 2016). Pistachio yields are high in one year, while the yield decreases the next year depending on the periodicity. Despite this, production has been increasing over the years. When the average values (tons) of pistachio production are compared, the highest production is in the USA, Iran, Turkey, China, Syria and Greece, respectively (FAO, 2020).

There are several factors that limit pistachio production. These include losses caused by environmental-physiological factors, high temperature fluctuations, lack of fertilization, irrigation problem, variety selection, periodicity and disease-pests. One of the important factors limiting the production of pistachio is diseases and pests. The factors limiting production are explained in order below.

## **PHYSIOLOGICAL FACTORS**

Physiological problems observed in pistachio trees are divided into five groups.

### **a) Periodicity**

Periodicity seen in pistachio and many plant varieties is among the important problems encountered in cultivation and causes loss of income for the producer. After the high yield is obtained, the yield of the next year is low. The year that produces more crops is defined as the year of existence, and the year that produces little or no product is defined as the year of absence. In addition, periodicity is more severe in extremely cold winter months and hot climates (Kailis and Harris, 2000). There are many different reasons for this situation. The most important reason are internal and external factors. Internal factors are defined as hormones, carbohydrates,

mineral nutrients, and external factors are defined as temperature, water and available nutrients (Monselise and Goldschmidt, 1982). In some studies, it is suggested that some hormones carried by pistachio seeds prevent the growth and development of flower buds (Lavee, 2007). A large amount of flower buds are formed in pistachios every year. However, these flower buds are fall in the year of existence. Therefore, the periodicity seen in pistachios occurs as a result of the flower buds falling and not standing on the tree (Ak and Kaska, 1992; Spann et al., 2008). Nutrients show significant differences in content between years. In a study, it was observed that total annual macronutrients in leaves and fruits were high in the first spring of the year, and decreased during the seed development in the year of absence (Picchioni et al., 1997).

#### **b) Empty fruit formation**

What can be done to reduce the empty fruit formation rate; The plant should be supported with nutrients, cultural precautions should be taken adequately and watered regularly. On the other hand, the low number of male trees in the garden causes empty fruit formation. Due to the lack of fertilization in pistachios, the formation of empty fruit, temperature, precipitation, fog and wind also affect negatively. High temperatures are undesirable during the flowering period. Again, continuous precipitation during the flowering period negatively affects fertilization.

#### **c) Crack-free fruit formation**

Pistachio fruits should form cracks along their lateral axis. The factors affecting cracking are harvest time, irrigation and feeding the trees. In order to obtain high cracking rate in pistachio varieties; Trees should be watered regularly from mid-August to September and nutritional supplements should be made (Onay et al., 2012).

#### **d) Fertilization**

Another factor limiting production is the fertilization problem. In case of insufficient fertilization in pistachios, flower shedding and empty (pistachio) fruits occur, this situation directly affects the yield. There are a number of *reasons* for this. Reasons such as the low number of male trees, failure of male trees to bloom with females, grafting of males on weak rootstocks are effective (Sağlam and Aydoğan, 2005).

#### **e) Irrigation**

Some researchers state that low yield and periodicity in pistachio are also caused by water stress. They state that irrigation has a positive effect on yield by reducing water stress, leads to improvements in product quality, and therefore irrigation is necessary for average yield (Kamber et al., 1993). Some other researchers supported this opinion and reported that Siirt pistachio

yielded better under irrigated conditions than dry conditions, and therefore Siirt pistachio should be grown under irrigated conditions (Arpacı et al. 1995; Aydın and Saltuk, 2018). However, it is necessary to be careful when watering on heavy soils that hold water. Do not let the water touch the root zone and do not over water, otherwise drying caused by soil pathogens will occur (Aydın and Ünal, 2021).

## **2. PISTACHIO PESTS AND DISEASES**

### **2.1. Pistachio Pests**

Many pests of pistachio cause significant yield loss. The most important ones in the Southeastern Anatolia Region are *Agonoscena pistaciae* Burckhardt and Lauterer, *Kermania pistacella* Ams. and *Capnodis* spp., (Anonim,2008).

*Agonoscena pistacia*; Nymphs feed by sucking the plant sap and form a sweetish substance. According to the density of the pest, the leaves turn yellow and fall and the tree weakens. *Kermania pistacella*; Larvae emerge from the eggs laid by the adult on the shoot tip and feed towards the stem by forming a gallery from the shoot. The leaves and fruit buds on these branches are fall. The larvae that enter from the heads of the fruit clusters form a gallery where the fruit is attached to the stem, causing the fruit to remain small and empty fruit formation. *Capnodis* spp.; Adults of this insect gnaw on leaves, petioles and bark of fresh shoots. At the same time, they leave their eggs under the bud eye, causing damage and drying of the bud eye. The main damage is caused by the larvae. They feed on the root and open galleries and cause the trees to dry out in a short time.

### **2.2. Pistachio Diseases**

Another important factor limiting the production and yield of pistachio is diseases. Important diseases seen in istachio are as follows; *Alternaria* late blight (*Alternaria alternata* (Fr.) Keissl., *Alternaria* spp), *Septoria* leaf spot (*Septoria pistacina* Allescher., *Septoria pistaciarum* Caracc., *Septoria pistaciae* Desmaz., *Pseudocercospora pistacina* Crous,Quadv.&Sarpkaya), Panicle and shoot blight (*Botryosphaeria dothidea*, *Diplodia seriata*, *Lasiodiplodia* sp., *Neofusicoccum* sp., *Neoscytalidium* sp.), *Verticillium* wilt (*Verticillium dahliae* Kleb), *Fusarium* rot root and wilt (*Fusarium solani*, *Fusarium proliferatum*, *Fusarium oxysporum*, *Fusarium redolens*, *Fusarium* spp.), *Phytophthora* root-crown rot (*Phytophthora citricola* Sawada., *Phytophthora capsici* Leonian., *Phytophthora citrophthora* (R. E. Sm. and E. H. Sm.) Leonian., *Phytophthora cryptogea* Pethybr. and Laff., *Phytophthora nicotianae* Breda de Haan var. *parasitica* (Dastur)

G. M. Waterhouse., *P. palmivorum.*, *Phytophthora sp.*). *Rhizoctonia* kök çürüklüğü (*Rhizoctonia solani* kuhn.) (Teviotdale et al., 2001).

**Alternaria late blight;** Leaf symptoms appear in late summer and appear on the leaf as circular lesions 3-7 mm in diameter, dark brown and black. The lesions then enlarge and cover the entire leaf. Infections in the leaf cause leaf blight and premature defoliation. On the fruit, it causes 1-1.5 mm diameter black lesions (Michailides, 2005).

**Septoria leaf spot;** The typical symptom of the disease is black spots that appear mostly on the upper part of the leaf and partly on the fruit peels. These necrotic spots contain black pycnids. Later, these areas enlarge and cover a part of the leaf. At the end of the season, these areas become chlorotic and necrotic. As the photosynthetic area is reduced in severely diseased leaves and as a result of defoliation, the trees become weak and the fruit remains hollow. Thus, the amount and quality of the product decreases (Aydin, 2021).

**Panicle and shoot blight;** This disease causes economic losses in pistachio, mostly in humid and irrigated regions. It causes flower and shoot death as a result of blight. Symptoms usually appear as dark lesions on shoots, petioles, and leaves. Then it passes into clusters. In unfavorable conditions, it appears as needle-sized, black round spots on the fruit surface in midsummer (Michalides and Morgan, 2004).

**Verticillium wilt;** The disease causes rapid drying and death of one or more branches or the entire tree, usually in early summer. The first symptoms are yellowing of the leaves on the branches. Leaf shedding causes a gradual loss of vitality and reduced growth and yield. Pistachio trees can be attacked at any age and are more susceptible to disease in orchards where previously susceptible hosts such as tomatoes, cotton, melons or peppers were grown.

**Fusarium rot root and wilt;** *Fusarium* species cause drying out as a result of root rot and wilt in pistachios, especially in young trees (Nouri et al 2018; Aydın, 2019). These species are soil pathogens. They can also be carried by seeds. As a result of blockages in the transmission bundles and the toxins they secrete, they prevent water and nutrient uptake from the soil. and causes drying in the following periods.

**Phytophthora root-crown rot;** *Phytophthora* species, along with pistachio infect many hosts. It usually affects the underground parts of the plants and causes root and root rot in perennial plants,. Gum formation is seen in the trunk parts with the disease. In pistachio trees, dieback occurs from top to bottom depending on the severity of the disease that occurs in the root and root collar (Aydın and Bağış, 2019).

**Rhizoctonia root rot;** The fungus is a soil and seed-borne pathogen. The fungus can survive as a mycelium in plant tissues that decompose in the soil. Suitable conditions for disease development are cool and moist soils. Canker sores with red-brown spots occur on the stems and roots of infected plants caused by the fungus. It has been reported in Iran that *R. solani* AG4 causes wilt, root and root rot diseases in many pistachio saplings (Ashkan and Abusaidi, 1995; İlkhani et al., 2011). In another study conducted by Aydın and Ünal (2021), in Siirt province in the Southeastern Anatolia Region of Turkey, in the pathogenicity test, the most virulent isolate was Rs2 with 93.75% disease severity. It was determined that this isolate caused the seedlings to dry completely and *Rhizoctonia solani* AG-4 in the anastomosis group.

## **CONCLUSION**

There are many abiotic and biotic factors that limit the production of pistachios. Adverse environmental conditions during fertilization periods have a direct effect on yield. For example, climatic conditions such as excessive precipitation and temperature can negatively affect fertilization, as well as cause an increase in diseases and pests. The selection of varieties and rootstocks is important for a healthy and productive orchard. In modern pistachio cultivation, it is necessary to establish an orchard with male and female varieties suitable for the region. In addition, there should be a sufficient number of male trees at suitable planting intervals in the orchard. Another important issue is irrigation and fertilization. Irrigation should be done in a balanced way, not excessive. After the soil and leaf analyzes are made, the determined amount of nutrients should be applied to each tree properly. Pistachio has a large number of pathogens and pests. Diseases and pests caused by these must be diagnosed in a timely manner and precautions must be taken. Otherwise, epidemics occur from time to time.

**ÖZET**

Ilıman ve tropik bölgelerde iyi gelişim gösteren pamuk bitkisi ülkemizde önemli bir tarımsal potansiyele sahip önemli bir endüstri bitkisidir. Diğer kültür bitkilerinde de olduğu gibi hastalık ve zararlılardan etkilenmekte ve bunlara karşı zamanında gerekli önlemlerin alınmaması durumunda kalite, verim düşüklüğü yanı sıra bitkinin tamamen kurummasına neden olur. Pamukta ilk dönemlerde hastalığa neden olan en önemli faktörler arasında fide kök çürüklüğü hastalıkları gelmektedir. Bitkinin daha ileri dönemlerinde ise solgunluk hastalıkları da görülebilmektedir. Fide kök çürüklüklerine ve solgunluğa neden olan birçok patojen vardır. Bunlar; *Rhizoctoniasolani*, *Pythium*spp., *Fusarium* spp., *Thielaviopsisbasicola*, *Alternariaspp.*, *Aspergillus*spp., *Verticilliumdahliae*'dir. Bu patojenler bazen çıkış öncesi bitkiyi etkileyerek çıkışını engellemekte bazen de bitki fide dönemindeyken kök boğazında lezyonlara ve bitkinin devrilip ölümüne neden olurlar. Bu aşamalarda tarlada yer yer boşluklar oluştuğu için yeniden ekim yapmak gerekir. Sonuçta ekonomik açıdan da zarar oluşturmaktadır. Ayrıca bitkinin iletim demetlerini tıkatıp besin ve su alımını engellediğinden dolayı solgunluğa neden olurlar. Bu çalışmada pamuk tarımı yapılan alanlarda sorun olan patojenler, bu patojenlerin bitkiye verdiği zararlar ve mücadeleler literatür bilgilerine dayanarak verilmiştir.

**Anahtar Kelimeler:** Pamuk(*Gossypium*spp.), fide kök çürüklüğü etmenleri (*Fusarium*spp., *Rhizoctoniaspp.*, *Thielaviopsis basicola*, *Pythium*spp., *Verticillium*spp.), mücadelesi

**PATHOGENS CAUSED BY ROOT ROT AND WILT OF SEEDLINGS IN COTTON  
(*Gossypium* spp.)**

**ABSTARCT**

The cotton plant, which develops well in temperate and tropical regions, has an important agricultural potential in our country, but it is also an important industrial plant. As with other cultivated plants, it is affected by diseases and pests, and if necessary measures are not taken against them in a timely manner, it causes a decrease in quality and yield, as well as a complete drying of the plant. Seedling root rot diseases are among the most important factors causing disease in cotton in the early stages. In the latter stages of the plant, diseases can also be seen. There are many pathogens that cause seedling root rot and wilt. These; *Rhizoctonia solani*, *Pythium* spp., *Fusarium* spp., *Thielaviopsis basicola*, *Alternaria* spp., *Aspergillus* spp., *Verticillium* spp. These pathogens sometimes affect the plant before emergence and prevent its emergence, sometimes cause lesions in the root collar and death of the plant when the plant is in the seedling stage. At these stages, it is necessary to sow again as there are gaps in the field. As a result, it also causes economic damage. They also cause wilting because they block the vascular bundles of the plant and prevent nutrient and water intake. In this study, the pathogens that cause a problem in cotton farming areas, the damages of these pathogens to the plant and their struggle are given based on the literature.

**Keywords:** Cotton (*Gossypium* spp.), seedling root rot pathogens (*Fusarium* spp., *Rhizoctonia* spp., *Thielaviopsis basicola*, *Pythium* spp., *Verticillium* spp.), disease control

## GİRİŞ

Malvales takımına bağlı Malveceae familyasının *Gossypium* cinsine ait olan pamuk (*Gossypiumhirsutum* L.) bitkisi, çok değişik alanlarda kullanılan ve eski dönemlere dayanan lifi işlenen ilk endüstri bitkisidir (Anonim, 2006). Aynı zamanda yaygın ve zorunlu kullanım alanları ile insanlık için büyük ekonomik öneme sahip, üreticisi olan ülkeler için katma değer ve istihdam yaratan bir üründür (Majumdar et al.2020; Rehman et al.). Ilıman ve tropik bölgelerdeki 100'e yakın ülkede yaygın olarak yetiştirilen en önemli lif bitkilerinden biri olan pamuk için ideal hava sıcaklığı 21-37°C'dir. Toprağın yeterince süzek, kumlu killi ve organik madde açısından zengin olması önemlidir (Anonim, 2006). Hammadde olarak pamuk, işleme uygulamaları ile çırçır endüstrisi, liflerinin kullanımıyla tekstil endüstrisi, tohumunun kullanılmasıyla yağ ve yem endüstrisi, linterinin kullanılmasıyla da kâğıt endüstrisi gibi birçok endüstri tarafından kullanılan önemli bir endüstri bitkisidir. Petrol bazlı yakıtı alternatif olarak pamuk tohumundan elde edilen yağ ise biyodizel üretiminde hammadde olarak gün geçtikçe daha fazla kullanılmaktadır.

Pamuğun Dünya'da başlıca yetiştiği yerler ABD, Avustralya, Çin, Hindistan, Türkiye, bazı Afrika ülkeleri ve Orta Doğu'nun belli bölgeleridir (Datta, et al., 2020; Ozyigit ve Gozukirmizi, 2009; USDA, 2020a). Dünya pamuk ticareti göz önüne alındığında, 2020/21 itibarı ile Hindistan, ABD, Çin, Pakistan ve Brezilya gibi birkaç büyük üretici toplam dünya ihracatının yaklaşık yüzde 70'ini gerçekleştirmektedir. ICAC verilerine göre 2019/20 sezonunda Türkiye; dünyada pamuk ekim alanı bakımından 11. sırada, birim alandan elde edilen lif pamuk verimi yönünden 4. sırada, pamuk üretim miktarı yönünden 6. sırada, pamuk tüketimi yönünden 6. ve pamuk ithalatı yönünden de 5. sırada yer almaktadır (Anonim, 2020). Türkiye İstatistik Kurumu (TÜİK) verilerine göre Türkiye'de 2019/20 pamuk üretim sezonunda ekim alanları bir önceki yıla göre %8 oranında azalmış ve 478 bin ha olarak gerçekleşmiştir (TÜİK, 2019). Ekim alanları Güneydoğu Anadolu Bölgesi'nde 290 bin ha, Çukurova Bölgesi'nde 95 bin ha, Ege Bölgesi'nde 89 bin ha, Antalya'da ise 4 bin ha olarak verilmiştir. Türkiye'de 23 ilde pamuk üretimi yapılmakta ve yapılan üretimde ekim alanlarının %86'sını Şanlıurfa, Diyarbakır, Aydın, Hatay, Adana ve İzmir karşılamaktadır.

Pamuk, diğer kültür bitkilerinde olduğu gibi hastalıklara yakalanmaktadır. Hastalığa neden olan patojenlere karşı gerekli önlemler alınmadığı takdirde, bitkinin gelişmesi olumsuz ve bitki tamamen kuruyup ölebilir bu da verimi ciddi derecede düşürmektedir. Hastalıklar, konukçu bitki, patojen ve çevrenin bir etkileşimi sonucu ortaya çıkmaktadır. Şiddetli bir patojen, hassas

bir konukçu ve uygun çevre koşullarının olması durumunda, patojen yayılmaya ve hastalık belirtileri oluşturmaya başlamaktadır. Türkiye’de geniş ekim alanlarına sahip olan pamuk bitkisinde pek çok, fungal, bakteriyel ve viral hastalık türü bulunmaktadır. Bu hastalıklar;

#### Fungal Hastalıklar

- Pamuk Yaprak Leke Hastalıkları (*Alternariamacrospora*, *A.alternata*, *Mycospherellagossypina*)
- Pamuk Fide Kök Çürüklüğü Hastalıkları (*Fusarium* spp., *Pythium* spp., *Rhizoctoniasolani*, *Thielaviopsisbasicola*)
- Pamuk Verticillium Solgunluğu (*Verticilliumdahliae*)
- Siyah Kök Çürüklüğü (*Thielaviopsisbasicola*)
- Fusarium Solgunluğu (*Fusariumoxysporum*)
- Pamuk Antraknozu (*Glomerellagossypii*) (Anamorph: *Colletotrichumgossypii*)
- Pamukta Külleme Hastalığı (*Leveillulataurica*, *Oidiopsisgossypii*)
- Sclerotiorum Çürüklüğü (*Sclerotiumrolfsii*)
- Pamuk Cercospora Lekesi Hastalığı (*Mycospharellaareola*) (Anamorph: *Ramulariagossypii*)
- Pamuk Ascochita Yanıklığı Hastalığı (*Ascochytagossypii*)
- Kök Çürüklüğü (*Phymatotrichum omnivorum*)

#### Bakteriyel Hastalıklar

- Pamuk Bakteriyel Yanıklık Hastalığı (*Xanthomonascampestris* spv. *malvacearum*)

#### Viral Hastalıklar

- Pamuk Abutilon Mozaik Virüsü (AbutilonMosaicVirus)
- Pamuk Antosiyanin Virüsü (CottonAnthocyanosisVirus)
- Pamuk Yaprak Kıvrıcıklık Virüsü (CottonLeafCurlVirus)
- Pamuk Yaprak Benek Virüsü (CottonLeafMottleVirus)

Bu hastalıklar pamuk bitkisinde önemli derecede zarara neden olmaktadır. Bu hastalıkların en önemlilerinden biri de pamuk bitkisinde çıkış öncesi ve sonrası çökertene neden olan ‘fide kök çürüklüğü’ hastalığıdır (Şekil 1). Bu hastalık bitkide yıkıcı etki ve simptomlar meydana getirdiğinden dolayı ‘çökerten’ olarak da adlandırılır. Bu hastalığa toprak kökenli funguslar neden olmaktadır. Çoğu zaman bu funguslar tarafından enfekte edilmiş bitkiler çimlenip sağlıklı fide çıkışı olmasına rağmen birkaç gün içinde suda haşlanmış ve pörsümüş şekilde belirtiler gösterip kök boğazı bölgesinden devrilip ölürlür. (KirkpatrickandRothrock, 2001).

Fide kök çürüklüğü hastalığı etmenleri, *Rhizoctoniasolani*, *Pythium*spp.,*Fusarium*spp., *Thielaviopsisbasicola*, *Alternariaspp.*, *Aspergillus*spp. gibi patojenler pamuk üretiminde önemli ekonomik zarar yapmaktadır (Yılmaz, 2009).

Ülkemizde yapılan çalışmalar dikkate alındığında ise en yaygın ve en önemli fide kök çürüklüğü etmeninin *Rhizoctoniaspp.* olduğu diğer etmenlerin ise yer ve yıllara göre değişmekle beraber sırasıyla *Pythium*spp.,*Fusarium*spp., *Alternariaspp.*,*Colletotrichum*spp., *Thielaviopsisbasicola* olduğu bildirilmektedir (Karcılıoğlu, 1976; Saydam andQuereshi, 1979; Demir ve ark., 1999).

**Şekil 1.** Fide kök çürüklüğü hastalıklarının tarladaki görüntüsü

Pamukta hastalıklara neden olan bazı patojenler, zarar şekilleri ve mücadele yöntemleri aşağıda bazı literatür bilgileriyle birlikte verilmiştir.

### **1. *Rhizoctoniaspp.***

Tüm dünyada pamuk yetiştirilen alanlarda görülen en önemli kök çürüklük etmeni *Rhizoctoniaspp.*'dir(Koenning, 2004).İlk belirtiler yeni oluşmuş kökte görülür. Bitkiler toprak seviyesinde enfekte olur. Gövdeyi çepeçevre sararak çökük, kırmızımsı kahverengi lezyonlar oluşturur. Nemli koşullarda lezyonlar toprak seviyesinden bir kaç cm yukarıya kadar uzanabilir. Hafif enfeksiyonlarda bitki ölmeyebilir ve canlılığını sürdürebilir. Aşırı toprak neminin olduğu araziler, hastalığı teşvik eder.

**Şekil 2.**Pamuk fidelerinde *R. solani*'nin kök boğazında meydana getirdiği belirtiler

### **Mücadelesi**

Patojen toprak kökenli bir fungus olduğundan mücadelesi oldukça zordur. Bu zorluk hastalığa yol açan mikroorganizmanın özelliklerinden, yaşam şeklinden, toprak rizosferinde bulunan etmen dışındaki mikrobiyalpopülasyonların çeşitliğinden veya konukçuya ait özelliklerden ve toprağın fiziksel ve kimyasal özelliklerinden kaynaklanmaktadır (PageandCraddock 1965). Hastalığa karşı sağlıklı materyal kullanma, hastalıklı bitkilerin buldukları ortamdan uzaklaştırılması, uygun yetiştirme şartları gibi kültürel mücadele yöntemlerinin, bulaşık alanlarda, etkinliğinin sınırlı olduğu bilinmektedir. Bu nedenle solarizasyon gibi farklı mücadele yöntemlerinin etkisini ortaya koyan araştırmacılar yalnız başına bu mücadelenin etkin bir koruma sağlamayacağını, bu mücadele yöntemi ile birlikte, antagonist mikroorganizma veya kimyasal mücadele uygulaması gerektiğini belirtmişlerdir (Yücel 1989).Kimyasal mücadele olarak uygulanan tohum ilaçlamasında kullanılan Metalaxyl-M 25 g/L+Fludioxonil 10 g/L ve Carboxin 205,9 g/L+Thiram 205,9 g/L'nin 600 g/100 kg tohum dozu çökerten hastalığına neden olan fungusların yaygınlıklarına göre ümitvar sonuçlar elde edilmiştir. (Yılmaz ve Tosun 2019).

### **2.Pythium spp.**

Özellikle düşük sıcaklıklarda ve toprak neminin yüksek olduğu koşullarda tohum çürüklüğüne ve çıkış öncesi çökertene neden olur (Koening, 2004). Aynı zamanda etmen, fide gövdesini (hipokotil) toprak seviyesinden enfekte ederek çıkış sonrası çökertene de neden olabilir(Şekil 3). Hafif enfeksiyonda *Pythium* ile enfekteli bitkiler canlılığını sürdürebilir fakat yeterli gelişme gösteremez ve yapraklarda kloroz belirtileri gösterir.

**Şekil 3.** *Pythium* spp.'nin fidelerdeki zarar şekli

### **Mücadelesi:**

Drenajı kötü olan ve su birikintilerinin olduğu alanlar bu patojenlerin sebep olduğu hastalıklar için elverişlidir. Bu yüzden Oomycetes grubunun sebep olduğu hastalıkların olduğu alanlarda toprağın aşırı su tutması engellenmelidir. Bunun yanı sıra çeşit seçimi de oldukça önemlidir. Bu nedenle hastalığa karşı dayanıklı çeşitler kullanılmalıdır. Bu etmenler toprak patojenleri olduklarından dolayı kimyasal mücadeleleri zor ve uygulanan kimyasal mücadeleye karşı dayanıklılık oluşturma riskleri yüksektir.

### **3. *Thielaviopsis* spp.**

Düşük sıcaklık ve nemin yüksek olduğu koşullarda, killi ağır topraklarda çıkış sonrası çökertene neden olur (Koenning, 2004). Özellikle fide gövdesinin (hipokotil) toprak seviyesinin hemen altındaki kısmı hafifçe şişer, çürür ve siyah bir renk alır. Hastalığa siyah çürüklük ismi de verilmektedir. Fideler gelişerek bitkiler ileri devrede enfekte olduklarında kök boğazında şişkinlik ve siyahlaşma şeklinde ortaya çıkan “collar-rot” adı verilen kök çürüklüğü hastalığına neden olur (Şekil 4).

**Şekil 4.** *Thielaviopsis basicola*'nın fide ve bitki köklerindeki zararı

### **Mücadelesi**

Kimyasal mücadele olarak toprak ilaçlaması önerilmekte fakat patojene etki göstermemesi durumunda kültürel mücadele en uygun yöntemdir. Patojenin konukçusu olmayan bitkiler ile münavebe yapılmalı, fazla nem tutacak olan sık dikimden kaçınılmalı ve fazla asitli olmayan humusça zengin ve iyi drenajlı toprakların seçilmesine özen gösterilmelidir.

### **4. *Fusarium* spp.**

Patojen, toprak kaynaklı bir fungus olup bitkinin iletim demetlerinin tıkanmasına, bitkinin solmasına ve çoğunlukla bitkinin ölümüne neden olmaktadır. *Fusarium* solgunluğuna genellikle konukçuya spesifik olan *F. oxysporum* neden olmaktadır.

**Şekil 5.** *Fusarium* spp.'nin tarladaki genel görüntüsü ve iletim demetlerindeki zararı

### **Mücadelesi**

Pamukta *Fusarium* solgunluğu hastalık etmenini toprak kökenli olmasından ve birçok konukçusunun bulunmasından dolayı mücadelesi zordur. Her ne kadar münavebe, sulama, gübreleme, toprak işleme ve ekim yöntemi gibi faktörlerin hastalık şiddetini azaltabileceği önerilse de kesin ve pratik bir mücadele yöntemi sağlanamamıştır. Bu nedenle en etkin çözüm yöntemi dayanıklı çeşit kullanılması veya duyarlı çeşitlerde dayanıklılığın teşvik edilmesi şeklindedir.

### **5. *Verticilliumdahliae***

Etmen 21-27 °C ve %60-70 nemde iyi gelişmekte, Ph isteği 7-9 arasında olup patojen bitkinin kök ucundan giriş yapar, hem hücre içi hem de hücreler arası ilerleyerek ksileme ulaşır. Bitkinin ksileminde koloniler oluşturarak su ve besin maddeleri ile birlikte bitkinin gövdesine ve yapraklarına taşınmasına ve iletim demetinin tıkanmasına neden olur (Garberand Houston, 1966). Sonuçta pamuk bitkisinde solma, pörsüme ve bitki ölümü şeklinde zararmeydana gelir. Bitkideki solma belirtileri alt yapraklardan yukarıya doğru yayılıp yaprakların damar aralıkları uçtan içe doğru sararır, sonra kuruyup esmerleşir. Hastalık erken dönemde başlamışsa bitkinin boyu kısa kalır, koza sayısında azalmalar olur ve kozalar küçük kalır. İletim demeti kahverengi nekrozlar meydana gelir. Gövde enine kesildiğinde ise iletim demetleri kahverengi noktalar halinde görülür (Anonim, 2000). Bu hastalıktan dolayı pamuk bitkisinin lif kalitesi ve teknolojik özellikleri olumsuz etkilenir (SchnathorstandMathe, 1966).

**Şekil 6.** *Verticillium* spp.'nin bitkinin iletim demetinde ve yapraklardaki zararı

### **Mücadelesi**

*Verticilliumdahliae*, toprakta ve bitki artıkları üzerinde mikrosklerot, hif, misel ve konidi gibi yapılar oluşturup topraktaki varlığını 20 yıldan fazla sürdürebilir (Garber et al., 1996). Bu

nedenle hastalıkla mücadelede kimyasal mücadele, kültürel önlemler ve biyolojik mücadele gibi mücadele şekillerinin yanı sıra dayanıklı çeşitler üzerinde durulmuştur. Fungisit uygulamaları ekonomik olarak oldukça pahalı ve yeterince etkili olmamasından dolayı tercih edilmeyen bir yöntemdir. Bu yüzden geleneksel mücadele yöntemlerini destekleyici olarak alternatif mücadele yöntemlerin kullanılması son yıllarda araştırma konuları arasında yerini almıştır (Conway et al., 1983; Sezgin, 1985; Xiao et al., 1998). Bu hastalığın kontrolünde en etkili olabilecek yöntemlerden biri de dayanıklı çeşitlerin kullanımınıdır (El-Zik 1985, Gencer ve ark. 2001, Karademir ve ark. 2009).

## SONUÇ

Günümüzde tekstil ve tıbbi kullanımda girdi olarak kullanılan başlıca doğal lif, pamuk bitkisidir. Yenilenebilir bir doğal kaynak olan pamuk bu özellikleri ile doğal kaynaklar, sermaye ve iş gücü gibi ekonomik faaliyetlerin istihdamının sağlanmasıyla birlikte ekonomiye büyük bir katkı sağlayabilmektedir (Tokel, 2021). Fakat pamukta meydana gelen solgunluk ve çökerten hastalıkları pamuk ekimi yapılan alanlarda sık rastlanan olumsuz durumlardandır. Hastalığa neden olan fungal patojenler pamuk yetiştiriciliği yapılan alanlarda önemli derecede zarara neden olmaktadır. Çökertene ve solgunluğa neden olan bu hastalık etmenleri, önlem alınmadığı takdirde ve hastalığın epidemiyi yaptığı koşullarda üreticilerin çoğunlukla tarlayı kaldırıp yeniden ekim yapmak zorunda kalmasına ve hastalık şiddeti yeniden ekimi gerektirecek seviyede olmadığı zamanlarda ise fide eksikliğinden dolayı tarlada yer yer boş alanların kalmasına neden olmaktadır. Aşırı sulama, yağmurlu ve bulutlu havalar, yani genel olarak yüksek nem, çökerten hastalığının zararını artırmaktadır. Ancak çökerten etmenlerinden *Rhizoctonia* spp.'nin düşük toprak neminde de gelişebildiği bilinmektedir. Genel olarak bu toprak patojenleri ile mücadelede alınan kültürel önlemlerde çimlenme kapasitesi yüksek, sertifikalı tohumluk kullanmak, erken dönemde soğuk ve ıslak topraklarda ekim yapılması zorunlu ise drenajı iyi yapılmış tohum yataklarına ekim yapılmalıdır. Aynı zamanda derin ekim yapmaktan kaçınılmalı ve toprağı kuru tutarak hastalık etmenlerinin çoğalmasına engel olan özellikle hububat gibi bitkilerle ekim nöbeti uygulanmalı. Bunların yanı sıra uygulanacak olan kimyasal mücadele de ise tohum ilaçlaması yapıldıktan sonra ekim yapılması önerilmektedir.

**INSTRUMENTS OF NEW AUTHORITARIANISM: WEAKENING INSTITUTIONS  
AND DEPENDENT MEDIA**

**Dr. Hasan YENİÇIRAK (Orcid ID: 0000-0001-8769-6669)**

Siirt Üniversitesi, Fen-Edebiyat Fakültesi, Sosyoloji Bölümü

**ABSTRACT**

Nowadays, new types of authoritarianism are emerging. There are several factors in the emergence of new types of authoritarianism. In this study, I will try to explain what instruments are effective in the emergence of new forms of authoritarianism in the 21st century. Thus, I will try to present an analysis of how authoritarianism has become possible today. In this direction, I will draw attention two points. First, I will draw attention to the construction of dependent media. One of the most fundamental pillars of modern democracy has been the independent media. The media enables individuals to act rationally by providing the flow of information to the society, thus, it functions as both surveillance and control over the power. However, especially since the beginning of the 21st century, the independence of the media has begun to weaken significantly and to be replaced by the dependent media. Media control became an important instrument in the emergence of new versions of authoritarianism. Second, I will draw attention to the weakening of institutions. Nowadays, although many countries have formally independent institutions, their capacity to act as checks and balances is significantly limited. In countries with authoritarian tendencies, the sovereigns try to maintain their power with informal patterns by limiting the functions of democratic institutions. This effort takes a concrete form in cases such as partisanship in employment, buying or stealing votes in elections.

**Key Words:** New Authoritarianism, Dependent Media, Weakening Institution

## **YENİ OTORİTERİZMİN ENSTRÜMANLARI: ZAYIFLAYAN KURUMLAR VE BAĞIMLI MEDYA**

### **ÖZET**

Günümüzde otoriterizmin yeni türleri ortaya çıkmaktadır. Otoriterizmin yeni türlerinin ortaya çıkmasında birtakım faktörler söz konusudur. Bu çalışmada, 21.yy'da otoriterizmin yeni formlarının ortaya çıkmasında etkili olan enstrümanların ne olduğunu izah etmeye çalışacağım. Böylelikle otoriterizmin günümüzde nasıl mümkün hale geldiğinin bir analizini sunmaya çalışacağım. Bu doğrultuda, otoriterizmi günümüzde mümkün hale getiren mekanizmalardan en önemlileri olarak gördüğüm iki noktaya değineceğim. İlki, bağımlı medyanın inşasıdır. Modern demokrasinin en temel dayanaklarından biri bağımsız medya olmuştur. Medya topluma bilgi akışını sağlayarak bireylerin rasyonel bir şekilde hareket etmesine imkân verir, böylece iktidar üzerinde hem gözetleme hem de denetleme olarak bir işlev görür. Ancak özellikle 21.yy'ın başlangıcından itibaren medya bağımsızlığı önemli ölçüde zayıflamaya ve yerini bağımlı medyaya bırakmaya başladı. Medyanın kontrolü de otoriterizmin yeni versiyonlarının ortaya çıkmasında önemli bir enstrüman haline geldi. İkincisi, kurumların zayıflamasıdır. Günümüzde pek çok ülke formal olarak her ne kadar bağımsız kurumlara sahip olsa da bu kurumların kontrol ve denge mekanizması olarak hareket etme kapasitesi önemli ölçüde sınırlıdır. Otoriterizm eğilime sahip ülkelerde egemenler demokratik kurumların işlevlerini sınırlayarak, enformel kalıplarla iktidarını sürdürme çabasıdadır. Bu çaba da istihdamda yandaşlık, seçimlerde oy satın alma ya da çalma gibi durumlarda somut bir forma bürünmektedir.

**Anahtar Kelimeler:** Yeni Otoriterizm, Bağımlı Medya, Zayıflayan Kurumlar

## **INTRODUCTION**

In the first decade of the 21st century, a new tendency began to emerge that had become an almost global form: authoritarianism (Bieber, 2020). The old authoritarianism started to appear on the stage of history with its new forms. Re-emerging on the stage of history, this authoritarianism challenges democracy. This authoritarian challenge primarily seeks to keep democracy under control. Going a step further, as Diamond et al. (2016: 4) point out, the extent of authoritarian challenge is not only about keeping democracy under control, but also includes the process of authoritarianism becoming a dominant regime, overshadowing democracy in many countries.

The re-emergence of authoritarianism in the 21st century and its acceptance in many parts of the world can be explained by the structural change in the global economic and political system, as stated by Kouskas and Gökay (2019). The crisis of democracy in Europe and many other regions and the tendency towards authoritarianism as a direct result of this crisis are the result of structural changes in the global system.

When we look at the history of the modern world system, the world economy has always been in a hegemonic cycle. The center of the global economy in the modern world system, whose roots go back to the Italian City States in the 14th century (Arrighi, 2020) and whose beginning was the Netherlands in the 17th century, transferred to the England in the 19th century and to the United States in the 20th century (Wallerstein, 2012). Nowadays, we are in a new shift in the hegemonic structure of the world economy. In the modern world system, which is in a continuous cycle, the center of the global economy is shifting from the Americas to the East and Asia. As Kouskas and Gökay (2019: 17) states

In 2010, four of the top five economies in the world were still from the West (the USA, Japan, Germany, and France); from the Emerging World only China made the grade, coming to the second position. By 2050, four of the top five economies will come from the Emerging World (China, India, Brazil, and Russia) and only the USA will make the cut ranking second, and its economy will be half the size of China's.

Countries like China and Russia have authoritarian qualities. The rise of new actors which have authoritarian characteristics also provides legitimacy to the authoritarian tendencies of the sovereigns in many parts of the world. This rise of countries with a tendency towards authoritarianism such as China and Russia create an international support for their authoritarian regimes for the sovereigns in various countries. Especially when we consider this shift in the

world economy, this tendency of authoritarianism also begins to be embraced to a certain extent voluntarily.

In the re-emergence of authoritarianism, in addition to international external actors, there are also some factors. Now, I will try to explain what are the instruments that are effective in the emergence of new forms of authoritarianism in the 21st century. Thus, I will try to present an analysis of how authoritarianism has become possible today. In this direction, I will draw attention to two of the mechanisms that make authoritarianism possible today: dependent media and weakening institutions.

### **Dependent Media**

Many factors are effective in the re-emergence of authoritarianism. One of them is dependent media. To better understand the role played by dependent media in the re-emergence of authoritarianism, we first need to explain the importance of independent media in democratic regimes.

As Bieber (2020: 125) states, one of the main pillars of democracy is independent media. Independent media has three basic functions in democratic regimes. The media plays an important role in democratic regimes primarily thanks to its informing function. Thanks to this informing function, a free thought market is formed. It is thought that the free thought market will create a democracy culture based on free thought (Curran, 2014: 160-161). Thanks to the free thought market, the freedom to broadcasting emerges. The freedom of broadcasting also ensures that different perspectives take place in the public sphere, thus creating a wide network of information obtained from different and opposing sources (Curran, 2014: 161).

The second role of the media in democratic regimes is that it has a representative function. Media is a truly representative institution and an important partner of the management process (Curran, 2014: 150). According to Curran (2014: 151), in the market-based system, media owners must give what the people want if they want to keep their business, and this ensures that the media reflect the views and values of the people and act as their spokesperson.

The third and most important role of the media in democratic regimes is its power to keep the government under surveillance. As Curran (2014: 141) states, keeping the governments under surveillance is one of the most important dimensions of the democratic function of the media. The media perform an important public service in investigating and preventing the bad practices of public officials, so the media is seen as a counterbalance to the abuse of power over others (Curran, 2014: 141-142). The third function of the media causes the media to be seen as the

“fourth power”. As Erdogan (1999: 34) said, “with the concept of the fourth power, the media is given an independent quality that is the eyes and ears of the people in the democratic political system, represents the truth and the just, inspects the political power, and watches it.”<sup>93</sup>

Of course, this does not mean that the media is completely independent in democratic regimes. Even in the most democratically developed societies, the media are not completely independent. However, when compared to the authoritarian regimes that have started to re-emerge today, independent media are much more common in democratic regimes. In authoritarian regimes, the media is created in line with the official ideology of the political power and is under the control of the political power (Atabek, 2002: 233). Therefore, in authoritarian regimes, the media has lost its independence and has become dependent on political power.

Dependent media plays a very important role in the spread of new authoritarian regimes both at the national and international level. As Diamond et al. (2016: 4-5) said, media initiatives such as Russia's Russia Today (RT) and China's China Central Television (CCTV) are among the reasons for the authoritarian rise in the global level. Each of these has a global reach. For example, as of 2013, CCTV has established seventy international offices, twenty in Africa and a dozen in Latin America; and it has broadcasted in local languages (Cooley, 2015). Similarly, Russia expanded the reach of RT, broadcasting in 34 countries on five continents as of 2014, thus increasing its international media presence (Colley, 2015: 60). As of 2015, RT has reached 600 million people worldwide and has broadcasted in English, Arabic, German, and Spanish (Pomerantsev, 2015: 44-45). Thus, authoritarian countries such as Russia and China, by using their power in the media at the international level, led to the spread and acceptance of their authoritarian tendencies, and tried to lower the prestige of the West and the USA and thus to question the acceptability of democracy.

At the national level, the role of the media in the tendency towards authoritarianism is clearly seen in the words of Igor Yakovenko: "If Stalin was 80 percent violence and 20 percent propaganda, then Putin is 80 percent propaganda and 20 percent violence" (Pomerantsev, 2015: 40). Indeed, after Putin took the presidency in Russia, his first move towards authoritarianism was to control the media. The reconstructed media depended entirely on political power. For example, Surkov determined what the main news of the week should be at the meetings where

---

<sup>93</sup> To make what is meant by the concept of the fourth power more obvious, we need to briefly talk about what the first three powers are. In the 17th century monarchies, the first three powers were kings, aristocrats, and third estate. With the capitalist political system, three powers have transformed into legislative power, executive power and judicial power (Erdogan, 1999: 33-34).

he met with the heads of major news channels every Friday and explained which political figures would be allowed on television (Pomerantsev, 2015: 40-41). Thus, governments in authoritarian regimes absolutely benefit from the dependent media.

### **Weakening Institutions**

Another instrument that makes authoritarianism possible is weakening institutions. Nowadays, although many countries have formally independent institutions, their capacity to act as checks and balances is significantly limited. In countries with authoritarian tendencies, the sovereigns try to maintain their power with informal patterns by limiting the functions of democratic institutions. In states with a tendency towards authoritarianism, the rule of law governed by independent institutions has left its place to the party state governed by informal patterns.

This situation manifests itself primarily in the area of employment. The safest and most prestigious employment in authoritarian regimes is in the public sector (Bieber, 2020: 111). Given the importance of working in a state-controlled job, the area of employment becomes a very important weapon for those who control parties and the state. In authoritarian states, the main criterion in employment is not qualification but partisanship, so many state officials remain loyal to the sovereigns out of fear that any change in management will endanger their jobs (Bieber, 2020: 113). The dependence of many working for the public administration thus provides a safe depository of support for ruling parties that provide employment for their members or supporters (Bieber, 2020: 113).

Secondly, this situation takes concrete form in the cases such as buying or stealing votes in elections. Transparency of elections is a sine qua non of democratic regimes. In this sense, transparency is not a delicacy, it is an inevitable necessity. However, in authoritarian regimes, governments can ignore the will of the people to expand their power. They do this especially by manipulating the election processes.

Elections can be stolen in many ways. As Merloe (2015: 83-85) states, election processes are not a one-day event; rather, it includes many components that occur over a long period of time and include a set of rights and responsibilities: state-controlled media must remain neutral, use of state resources must be equal, parties and candidates must compete freely, voting process must be independent, vote counting process must be transparent. Violation of even one of these components of a democratic election is sufficient to steal an election.

What happens in the party state, where independent institutions are weakened, is a violation of some or even most of the above-mentioned components. In authoritarian regimes, the

impartiality of the media is not possible because the media is completely under the control of the government. Where the media is under the control of the government, an environment where parties and candidates can compete freely is not possible. At a time when the media is one of the most effective ways to reach the society, the fact that the opposition candidates have little or no means to express themselves is one of the important features of authoritarian regimes (Merloe, 2015)

## **CONCLUSION**

Certain time periods throughout history have been represented by certain events. The period of 1930-45 was the years of fascism; The period of 1950-70 was the years of welfare state; the period of 1975-2000 was the years of third wave of democracy was experienced. When it comes to the first twenty years of the 21st century, one of the names that can best describe today's world is the rise of authoritarianism. Especially since the 2010s, we have been witnessing the rise of authoritarianism on a global scale. There are many reasons for the resurgence of authoritarianism. In this study, we drew attention to only two points. Dependent media and weakening institutions. Weakening institutions play a crucial role in spreading of authoritarian tendencies. Where each institution fulfills its duty to the full, processes leading to a tendency towards authoritarianism are far less likely to arise. The weakening of institutions paves the way for an context that allows those in power to act as they please. Where institutions are weakened and the practices of those in power are not controlled by any institution, the tendency to authoritarianism inevitably arises. The dependent media, on the other hand, tries to legitimize this authoritarian tendency. Thus, both weakened institutions and dependent media play a crucial role in the re-emergence of authoritarianism.

**SIİRT KURTALAN KOÇPINAR KİLİNİN YAPISAL ANALİZİ VE KİL İLE  
KADMIYUM (II) İYONUNUN ADSORPSİYONUN İZOTERM ANALİZİ**

**Dr. Öğretim Üyesi Nilgün ONURSAL (Orcid ID: 0000 0002 2460 6475)**  
Department of Primary Education, Faculty of Teachers College, Siirt University, Siirt, Turkey

**ÖZET**

Bu çalışmada Siirt/Kurtalan ilçesi Koçpınar köyünden alınan kil adsorplayıcı olarak kullanılmıştır. Temel amaç olarak sulu çözeltilerden kadmiyumun adsorpsiyonla giderimi hedeflenmiştir. Kilin karakterizasyonu için ise, Taramalı Elektron Mikroskobu (FE- SEM), X-ışınları kırınımı (XRD), Enerji Dağılımlı X-ışınları spektroskopisi (EDX), X-ışınları Floresans Spektrometresi (XRF), Yüzey Alanı Ölçümü ( Brunauer, Emmet ve Teller -BET) ve Termogravimetrik Analizleri (TGA) yapılmıştır. Çalışma 318 K sıcaklığında, çalkalayıcı su banyosunda gerçekleştirilmiştir. Elde edilen veriler Freundlich, Langmuir, Temkin, Elovich, ve Dubinin-Radushkevich adsorpsiyon izotermine uygulanmıştır. Adsorpsiyon uyum derecesinin belirlenmesinde regresyon analizi olarak en küçük kareler yöntemi kullanılmıştır. Verilerin adsorpsiyon modellerine uyum derecesinin Freundlich <Dubinin- Raduschkevich <Langmuir <Temkin olduğu görülmüştür.

**Anahtar Kelimeler:** Adsorpsiyon, kil, izoterm, kadmiyum, termodinamik, Temkin izotermi

**SIİRT KURTALAN STRUCTURAL ANALYSIS OF KOÇPINAR CLAY AND  
ISOTHERM ANALYSIS OF CADMIUM (II) ION ADSORPTION BY THE CLAY**

**ABSTRACT**

In this study, clay taken from Koçpınar village of Siirt/Kurtalan district was used as an adsorbent. The main aim is to remove cadmium from aqueous solutions by adsorption. For the characterization of clay, Scanning Electron Microscopy (FE-SEM), X-ray diffraction (XRD), Energy Dispersive X-ray spectroscopy (EDX), X-ray Fluorescence Spectrometer (XRF), Surface Area Measurement (Brunauer, Emmet et al. Wires -BET) and Thermogravimetric Analysis (TGA) were performed. The study was carried out in a shaking water bath at 318 K. Data obtained from Freundlich, Langmuir, Temkin, applied to Elovich, and Dubinin-Radushkevich adsorption isotherms. Adsorption the least squares method as a regression analysis in determining the degree of fit was used. It was seen that the degree of fit of the data to the adsorption models was Freundlich < Dubinin- Raduschkevich < Langmuir < Temkin

**Keywords:** Adsorption, clay, isotherm, cadmium, thermodynamics, Temkin isotherm

## 1. GİRİŞ

Çevre ile etkileşim halinde olan insan, bu etkileşimden bazen zarar görebilmektedir. Çünkü doğayı bilinçli veya bilinçsiz bir şekilde kirletmektedir. Doğaya bırakılan bu katı, sıvı veya gaz atıkları toprağa, suya ve havaya karışarak doğayı kirleterek, canlılar üzerinde birçok olumsuzluğa neden olmaktadır [1].

Özellikle nüfusun hızla artması neticesinde fosil yakıtların aşırı kullanılması, yaşamsal standartların arttırılması gibi aktiviteler küresel ısınmayı tetikleyen olayların başında yer almaktadır. Küresel ısınmaya bağlı olarak gözlemlenen doğal afetler tüm canlıların yaşam koşullarını zorlaştırmaktadır. Küresel ısınmanın bu şekilde sürmesi durumunda 40-50 yıl sonra tarım arazisi kalmayabileceği gibi insanların yaşam alanları da kısıtlanacaktır [2].

Ancak doğanın kirletilmemesi büyük önem arz etmekle beraber, kirlenmiş olan çevrenin de etkin bir şekilde doğru yöntemlerle temizlenmesi ve gerekli önlemlerin alınması zorunlu hale gelmektedir. Çok eskiye dayanan ağır metal kullanımı, dünyada sanayinin ve teknolojinin gelişimi ile birlikte hızla artırmıştır [3]. Özellikle sulu ortamdaki kirleticiler dünya çapında kaygıya neden olmaktadır [4]. Bu yüzden içme suyu ile her türlü atık suyun bu kirleticilerden uzaklaştırılması çok elzem hale gelmiştir. Bu amaçla bilim insanları çeşitli araştırmalar yaparak pek çok yöntem geliştirmektedirler. Bu yöntemlerden en etkili olanlardan biride adsorpsiyon yöntemidir [5].

### 1.1. Adsorpsiyon:

Adsorpsiyon; bir fazdaki maddenin çıkartılıp bir başka fazdaki maddenin yüzeyinde biriktirilmesi olayı olarak tanımlanabilir. Yani atom ve moleküllerin, temas durumunda olan yüzeylerin çekim özelliğine bağlı olarak etkileşimi sonucunda birleşmesi işlemidir [6]. Bu nedenle Adsorpsiyon ile yüzey gerilimi arasında önemli bir ilişki vardır. Adsorpsiyon olayında maddenin hacmi değil yüzeyi önemli rol oynar. Çünkü moleküller arasındaki kuvvetlerin sınır yüzeyinde dengelenmemesi sonucunda meydana gelmektedir. Maddenin uzayda belirli yüzeylere sahip iki hali söz konusudur. Bunlar katı ve sıvı halleridir. Bu nedenle adsorpsiyonun gerçekleşmesi için yüzey temas alanları; sıvı-sıvı, katı-sıvı veya katı – gaz şeklinde yazılabilir. Bu yöntem kirleticileri uzaklaştırmak için kullanılan en yaygın yöntemlerden biridir [7]. Buradan yola çıkarak boşluklu ve tanecikli yüzeylerin adsorplama kapasitelerinin daha yüksek olduğu söylenebilir. Adsorpsiyon süreci, katının yüzeyi ile adsorplanan madde arasındaki denge kuruluncaya kadar devam etmektedir [8]. Bu süreç dört aşamalıdır. İlk önce sıvı olan maddenin içeriğinde bulunan madde, adsorban bölgesine doğru gider. İkinci aşamada adsorban,

sıvı film içerisindeki gözeneklere doğru gider. Üçüncü basamakta ise maddenin difüzyon süreci gerçekleşmekte, son olarak adsorpsiyon olayı gerçekleşerek süreç tamamlanmaktadır. Ayrıca adsorpsiyon işleminde, ortamda bulunan kirleticiler Van der Waals kuvvetlerinin etkisiyle adsorplayıcının yüzeyine tutunarak uzaklaştırılmasına ve adsorplayıcının devamlı kullanılmasına olanak sağlamaktadır.[9]. Adsorpsiyon olayı üç çeşittir [6]. Bunlar, fiziksel, kimyasal ve iyonik adsorpsiyonlardır. Örneğin gazın katı yüzeyindeki adsorpsiyonunu fiziksel veya kimyasal adsorpsiyon olarak sınıflandırmak mümkündür.

❖ **1.1.1. Fiziksel adsorpsiyon (fizisorpsiyon):**

Fiziksel adsorpsiyon atom veya moleküllerin zayıf bağlı olan, hidrojen veya Van der Waals bağı gibi kuvvetlerle bağlanması neticesinde oluşur. Adsorplanan bir molekülün adsorplayıcı ile etkileşime girmesi, adsorplanan molekülün yakınında bulunan adsorplayıcının atomları veya molekülleri ile ayrı ayrı etkileşmesinin toplamıdır şeklinde ifade edilmektedir [10]. Fiziksel adsorpsiyonda gözenek boyutu (hacmi) ve basınç ile sıcaklık önemli yer tutmaktadır [11].

❖ **1.1.2. Kimyasal adsorpsiyon (kemisorpsiyon):**

Kimyasal adsorpsiyonda adsorplanan ile adsorplayıcı arasında meydana gelen bağlar oldukça kuvvetlidir. Moleküller burada yüzeye valans kuvvetleri ile tutunmakta, fiziksel adsorpsiyonda ki Van der Waals kuvvetlerinden çok daha güçlü olan iyonik ve kovalent bağlarla bağlanmaktadır.

[8]. Kimyasal adsorpsiyon, kimyasal reaksiyonlarla gerçekleşmektedir. Bu nedenle bu adsorpsiyon çeşidi geri dönüşümsüz (tersinmez) olup, adsorplayıcı ile adsorplananın moleküllerinin kimyasal yapısını değiştirebilmektedir [12]. Şayet adsorpsiyonun enerjisi 40 kJ/mol den daha küçük ise; fiziksel daha büyük ise, kimyasal adsorpsiyon şeklinde ifade edilmektedir [13].

❖ **1.1.3. İyonik adsorpsiyon**

İyonik adsorpsiyon, elektrostatik çekim kuvvetlerinin etkisi nedeniyle, yüzeyde bulunan yüklü bölgelere iyonik özellikleri olan adsorplananın tutunması şeklinde ifade edilebilir. Burada en önemli unsur adsorplanan ile adsorplayıcının iyonik güçleri ve moleküllerin büyüklükleridir. Fiziksel adsorpsiyon, kimyasal adsorpsiyon ve iyonik adsorpsiyon arasında çok keskin sınırlar mevcut değildir. Bu üç adsorpsiyonun aynı anda ya da art arda görülmesi mümkün olabilir [14].

**1.2. Adsorpsiyon İzotermi:**

Adsorpsiyon izoterm çalışmalarının temel nedeni, adsorplayıcı ile adsorplanan arasındaki ilişkiyi ortaya koymaya çalışarak, adsorplayıcının adsorplama kapasitesini belirlemektir.

Bunun dışında, adsorpsiyon yüzey alanı, adsorpsiyonun enerjisi ve adsorpsiyon olayının ne şekilde gerçekleştiği hakkında bilgi edinmektir. Bu amaç doğrultusunda yapılan deneysel çalışmaların verileri ışığında birçok denklem türetilmiştir. Bunlarda en yaygın olanları, Langmuir, Freundlich, Temkin ve Dubinin-Radushkevich ve Bruanur-Emmet-Teller (BET) İzotermidir [8], [26].

#### ➤ **1.2.1. Langmuir İzoterm Modeli**

İlkönce katı-gaz faz adsorpsiyonunu tanımlamak amacıyla tasarlanan Langmuir adsorpsiyon modeli, çeşitli adsorplayıcıların adsorpsiyon kapasitesini belirlemek ve karşılaştırmak için de kullanılmaktadır. Açıkçası Langmuir izotermi, adsorpsiyon ve dinamik dengenin (desorpsiyon) göreceli oranlarını dengeleyerek yüzeyin kaplama miktarını açıklamaktadır. Burada adsorpsiyon, adsorplayıcının açık olan yüzeyinin fraksiyonu ile orantılı, ancak desorpsiyon kaplanmış olan adsorplayıcının yüzeyinin fraksiyonu ile orantılıdır. Langmuir denklemi aşağıdaki lineer formda yazılabilir [15-16].

$$\frac{C_e}{q_e} = \frac{1}{q_m K_e} + \frac{C_e}{q_m} \quad (1)$$

Burada  $q_e$  (mg/g), adsorplayıcının birim ağırlığı başına adsorplanan madde miktarını,  $C_e$  ise, (mg/L) litre başına adsorpsiyon işleminin bitiminde artı kalan madde miktarını ifade etmektedir.

#### ➤ **1.2.2. Freundlich İzoterm Modeli**

İkinci model olan Freundlich modeli, adsorbanın derişiminin artmasına bağlı olacak şekilde adsorpsiyonun da kapasitesi artmaktadır. Bu çalışmada  $\ln q_e$  'ye karşı,  $\ln C_e$  'nin grafiği çizilir.  $q_e$  ile  $C_e$  arasında logaritmik bir ilişki olduğunu söyleyen Freundlich'e göre;

$$\ln q_e = \ln K_F + \ln \frac{1}{n} C_e \quad (2)$$

Bu ifadede yer alan  $\ln q_e$  nin,  $\ln C_e$  ye karşı çizilen grafiğin eğrisi bir doğru olacaktır.

$1/n$  ifadesi heterojenite faktörünü temsil ederken,  $n$  doğrunun eğimini ifade etmektedir. Ayrıca  $K_F$  ifadesi ise ekstrapolasyonu tanımlamaktadır [6].

#### ➤ **1.2.3. Temkin İzoterm Modeli**

Temkin ile Pyzhev 1940 yılları civarında, adsorpsiyonun enerjisinde meydana gelen düşüşün Freundlich'in belirttiği izotermdeki gibi üstel olmadığını, doğrusal halde olup bağıntısının da aşağıdaki gibi olduğunu ifade etmiştir [12].

$$q_e = RT/b(\ln AC_e) \quad (3)$$

$$B = RT/b \quad (4)$$

Eşitlik 4'ün Eşitlik.3'e uygulanması ile eşitliğin doğrusal hali şöyle yazılabilir:

$$q_e = B \ln A + B \ln C_e \quad (5)$$

Burada verilenlerden b değeri, adsorpsiyon ısıyla ilgili sabit olup ( $J \cdot mol^{-1}$ ) ve  $B = RT/b$  şeklinde ifade edilmektedir Bunun dışında b, Temkin izoterm sabitini, A ise denge bağlanma sabitini temsil etmektedir ( $L \cdot g^{-1}$ ). T ise mutlak sıcaklıktır (K). R ideal gaz sabitini temsil etmektedir. ( $J \cdot mol^{-1} \cdot K^{-1}$ ). Ayrıca, B ve A değerleri ise sırasıyla  $q_e$  ye karşı  $\ln C_e$  nin çizilen lineer grafiğinin eğim ve kesim noktasından hesaplanmaktadır.

#### ➤ 1.2.4. D-R (Dubinin-Radushkevich) İzotermi

Dubinin- Radushkevich adsorpsiyon işlevinin fiziksel ya da kimyasal olduğunu tespit etmek için izotermelerini geliştirmişler. Bu nedenle adsorpsiyonun kimyasal veya fiziksel olup olmadığını bu izoterm ile tespit etmek mümkündür. Doğrusallaştırılan D-R izoterm modeli 5 nolu bağıntıdaki gibidir.

$$\ln q_e = \ln q_m - \beta \epsilon^2 \quad (6)$$

Burada,

$q_e$  : Adsorplayıcının birim kütleinde tutunan adsorplanan iyonunun derişimini ( $mol/g$ ),  $q_m$  : adsorpsiyon kapasitesinin en yüksek değerini ( $mol/g$ ) ve  $\beta$  ise, Ortalama adsorpsiyon serbest enerjisi ile ilişkili olan aktiflik katsayısını temsil etmektedir ( $mol^2/J^2$ ) Ayrıca  $\ln q_e$ ' nin  $\epsilon^2$  ' ye karşı grafiğe geçirilmesiyle ,Y doğru denklemi elde edilmiş olur.

### 1.3. Termodinamik Hesaplamalar

#### 1.3.1. Ağır Metaller

Ağır metaller tam olarak tanımlanamayan, metalik ve açık renk özelliğine sahip tüm elementlerin genel ismidir. Bunlar geçiş elementleri olarak, periyodik cetvelde geniş yer tutmaktadırlar. Fiziksel açıdan ağır metal kavramı,  $5 g/cm^3$ 'den daha büyük özgül ağırlığa sahip ve atom numarası 20 den büyük olan metaller olarak ifade edilmektedirler. Ancak biyolojik açıdan ağır metal terimi çevre üzerinde olumsuz etki yapan, çevreyi kirleten ve yüksek toksisiteye sahip olan kirleticilerdir [17]. Toksik olanlar canlıların bünyelerinde biyobirikime sebebiyet verdiklerinden dolayı, insanlara, hayvanlara ve çevreye çok ciddi zararlar verebilmektedirler. Demir-Çelik fabrikaları, madencilik, otomotiv sanayi, kaplama sanayi, metal işlemleri, boya, petrol ve gübre gibi endüstriyel alanlar çevreye oldukça yoğun ağır metal salınımı yaparak, insan, hayvan ve bitkiler üzerinde vahim sonuçlar oluşturmaktadırlar [18]. İçme sularına karışarak doğrudan insan ve hayvanlara geçebilmekte, ayrıca kanalizasyon suları, endüstriyel atıklar ve tarımsal faaliyetler ile bitkilere, tüketilen besinler aracılığı ile dolaylı

yoldan insan ve hayvan vücuduna nüfuz etmektedirler. Bu nedenle ağır metallerin hem içme sularından hem de atık sulardan giderilmesi hayati öneme sahiptir [14].

### **1.3.2. Kadmiyum**

Simgesi Cd olan kadmiyum, akü, pil, elektrik ve seramik sanayinde kullanılan gümüşü renge sahip toksik ağır metallerden biridir. Çinko bileşikleri ile beraber doğada kadmiyum sülfür şeklinde bulunur [19]. Genellikle kadmiyum, çinko üretimi esnasında ayrılır. Çinko sülfat cevherlerinden elde edilen bazı çinko konsantrelerinin içerisinde %14 civarında kadmiyum bulunmaktadır. Bu element ekosistemimizdeki en tehlikeli ağır metal kirleticileri arasında olup, tüm canlı organizmalar için toksik yapıdadır. Arıtma çamuru ile fosforlu gübrenin uzun süre ve aşırı kullanılması nedeniyle Dünyanın birçok bölgesinde tarım arazileri kadmiyum birikimine maruz bırakılmaktadır. Dolayısıyla Kadmiyum toprak-bitki sistemindeki yüksek oranından dolayı rahatça besin zincirine dahil olabilmektedir. Bu yolla insan, hayvan ve bitki sağlığı yönünden tehlike saçabilmektedir. Bitkilerin aldığı kadmiyum, bitkinin bünyesinde birikerek, fotosentez, klorofil sentezi, protein sentezi, karbonhidrat ve azot metabolizması ve enzim aktivasyonu gibi pek çok metabolik aktivitenin bozulmasına sebebiyet verebilmektedir. Ayrıca, bitki bünyesinde artan kadmiyum verimin ve kalitenin düşmesine, buna bağlı olarak ta önemli ölçüde ürün kaybına yol açmaktadır. Özellikle son yıllarda artan seracılıkta, aşırı gübre kullanılarak yetiştirilen tarım ürünleri mega kentlerdeki ve metropollerdeki insanların, kadmiyum toksisitesinden kaçınmaları neredeyse imkânsız hale gelmektedir. Bu ağır metal ve bileşenleri hem karaciğerde hem de böbreklerde birikerek hipertansiyon, kemik erimesi, anemi ve akciğer kanseri gibi önemli hastalıklara neden olabilmektedir [20].

### **1.3.3. Kil**

Genel olarak kil, muayyen bir kristal bünyesine sahip, tabîî, toprağımsı, ince taneli, muayyen miktarda su katıldığı zaman plastikliği artan bir malzemedir. Killer genellikle karmaşık bir yapıya ve mineral içeriğine sahiptirler. Döküm, seramik, gıda, sondaj, petrol, plastik, kâğıt, dolgu ve ilaç gibi birçok endüstri alanında kullanılmaktadır [21]. Killer, mineral yapıları ve kimyasal bileşik yönünden farklıdırlar bu nedenle hangi endüstri alanında kullanılacaksa o yönden en uygun olan tespit edilmesi ve ıslah edilmesi oldukça önemlidir [22]. Killer doğada bol miktarda bulunmakta ve genellikle mutfak gereçleri için çok eski medeniyetler tarafından kullanılan ham malzemelerdir [23]. İnsanoğlu eski zamanlardan bu yana, vücut sağlığı ve bazı hastalıkların tedavisi için killeri harici ya da dahili olarak kullanmaktadırlar. Günümüzde hala cilt tedavilerinde kullanılan kil, bilimsel açıdan da incelenmeye başlanmıştır.

Ancak bu konuda çok fazla bilimsel makale bulunmamaktadır [24]. Killer doğada yaygın şekilde ve bol miktarda bulunmaktadır. Adsorplayıcının doğada bol miktarda bulunması, kolay elde edilmesi ve uygun yüzey özellikleri taşıması gerekmektedir [25]. Killer bu özellikleri taşıdığı için, sayısız araştırmada [27-28]. adsorplayıcı olarak kullanılmaktadır.

## **2. MATERYAL VE METOT**

Bu çalışmada kullanılan kil Siirt ili Kurtalan ilçesi Koçpınar köyünden elde edilmiştir. Elde edilen orjinal kil 100 0C de 24 saat boyunca Memmert UN55 marka etüvde kurutulmuştur. Daha sonra desikatörde soğutulan kil, Yüzüncü Yıl Üniversitesi Bilim Uygulama ve Araştırma Merkezinde spektrumunun alınması için laboratuvara gönderildi. Nicolete is 10 FT-IR Spectrometre cihazında ATR ile 400-4000 cm-1dalga sayısında çekimi gerçekleştirilmiştir. Baysan marka olan çeneli kırıcıda kırma ve öğütme işlemi gerçekleştirilmiştir. Toz haline gelen numuneyi eleme işlemi, Protech marka analog ve frekans kontrollü elek sarsma cihazı ile ( -100+120), ( -120+140), (-140+170), (-170+200) ve (- 200) mesh" büyüklüğündeki eleklerle 5 ayrı tanecik boyutuna ayrılmıştır. Bunlardan (-120+140) mesh büyüklüğündeki kil çalışmada kullanılmıştır [6]. Bu sürecin yürütülmesi için sıcaklık, konsantrasyon, temas süresi, adsorbent dozajı incelenmiş olup, kinetik-İzoterm ve termodinamik hesaplamalara uyarlanmıştır [26]. Kilin karakterizasyonu için ise, FE- SEM (Alan Emisyonlu Taramalı Elektron Mikroskobu), XRD (X-Işını Difraktometresi), EDX, XRF, (X-Işınları Floresans Spektrometresi), BET (Yüzey Alanı Ölçüm Cihazı) ve TGA (Termogravimetrik Analiz) analizleri yapılmıştır.

## **3. BULGULAR VE TARTIŞMA**

### **3.1. FE-SEM EDX Analizi**

Şekil 1.(a)' da verilen FE-SEM görüntüsü incelendiğinde doğal kilin daha çok dağınık formolojide olduğu, Cd kil etkileşiminden sonra alınan görüntüde ise şekil 1. (b) de görüldüğü gibi parlamaların oluştuğu ve metalin tutulduğu anlaşılmaktadır.

Şekil 1. a) Doğal kilin

b) Cd ile işlem görmüş kilin SEM görüntüleri

Şekil 3. Doğal kilin Cd ile muamele edilen EDX diyagramı

Şekil 3'te deney sonrasında yapılan SEM-EDX analizi sonucunda 25-26 ve yaklaşık 10 keV civarında kadmiyum varlığı görülmektedir.

### 3.2. Kilin XRD Analizi

Kilin Cd (II) ile adsorpsiyonu sonrası yapılan XRD diyagramının 2θ açılarına göre; Şekil 4. te kilin ana bileşenleri olan kuvars (Q,SiO<sub>2</sub>), dolomit (Mg-CaCO<sub>3</sub>),kalsit (CaCO<sub>3</sub>) ve alüminosilikatların varlığının yanı sıra, adsorpsiyon sonrası kilde tutunan Cd varlığı(kırmızı ile gösterilen) görülmektedir.

Şekil 5. Doğal kilin XRD detay kil analizi

Detay kil analizine bakıldığında %35 oranıyla en fazla kalsit daha sonra sırası ile %17 kuvars, %12 muskovit, %9 illit, %8 vermikülit, %7 kaolinit, %6 oranında da hem montmorillonit hem de klorit içerdiği anlaşılmaktadır.

### 3.3. Kilin TGA Diyagramı

TGA analizi 130 °C civarında büyük bir kütle kaybı gerçekleştiğini, 150 °C civarında düşüş hızının yavaşladığını, 600 °C'den sonra ise durumun stabil hale geldiğini göstermektedir. Bu

durum, 600 °C sıcaklığından sonra uçucu bileşenlerinden ayrılan kütle, termal kararlılığa kavuştuğunun göstergesidir.

**Şekil 6.** Doğal kilin TGA analizi

### 3.4. Kilin XRF Analizi

Kilin XRF analizi aşağıdaki tablo 1 de verilmiştir.

**Tablo 1.** Karışık tipteki Siirt/koçpınar kilinin XRF değerleri

Numune Adı	A.Za %	Al <sub>2</sub> O <sub>3</sub> %	CaO %	Fe <sub>2</sub> O <sub>3</sub> %	K <sub>2</sub> O %	MgO %	MnO %	Na <sub>2</sub> O %	P <sub>2</sub> O <sub>6</sub> %	SiO <sub>2</sub> %	TiO <sub>2</sub> %
Siirt/koçpınar	21.80	11.5	22.3	5.4	1.8	2.5	0.1	0.4	0.1	32.9	0.6

Koçpınar kilinin XRF sonucuna göre elementlerin oksitlerinin % olarak bulunma miktarları büyükten küçüğe doğru aşağıdaki şekilde sıralanmıştır.

### B.E.T. Analizi

Adsorban olarak kullanılan Koçpınar kilinin spesifik yüzey alanı (B.E.T.=19.178 m<sup>2</sup>g<sup>-1</sup>) olarak ölçülmüştür. Yarıçaplı gözeneklerin toplam gözenek hacmi P/P<sub>0</sub>'de 0,1 µm'den az ölçülmüştür. Ortalama gözenek yarıçapı 4.334.10<sup>-3</sup> µm değerinde bulunmuştur.

## 4. DENEYSEL BULGULAR

### 4.1. İzoterm Çalışmaları

Bu çalışmada adsorpsiyon deneyi için Siirt bölgesinden elde edilen mixed tipli kil kullanılmıştır. Deneyde erlenmayerler içerisindeki 1'er g'lık killerin üzerine 25'er ml lik (50-360 mg/L)Cd (II) çözeltileri bırakılmıştır. Bu çalışma solüsyonları adsorpsiyonun denge testi için 298 K sıcaklığında 100 rpm hızda olan ısıtıcılı çalkalayıcıda 24 saat boyunca

çalkalanmıştır. Santrifüj edilen numuneler atomic absorpsiyon spektroskopisinde (A.A.S.) analiz edilmiştir. Yapılan ölçümler sonucunda 150 ppm optimum çalışma derişimi olarak tespit edildi. 318 K de doğal kil ile kadmiyum giderimi için izoterm çalışması yapılmıştır .Bu çalışmaya bağılı olarak elde edilen veriler, Langmuir, Temkin, Freundlich, ve Dubinin-Radushkevich (D-R) izotermlerine uygulanmıştır. Bunların grafikleri aşağıdaki şekilde oluşturulmuştur.

Şekil. 7. (a) Langmuir izoterm grafiğı

(b) Freundlich izoterm grafiğı

(a)

(b)

Şekil. 8. (a) Temkin izoterm grafiğı

(b) D-R izoterm grafiğı

**Tablo 2.** Adsorpsiyon İzoterm deneylerinden elde edilen parametreler

Langmuir İzotermi				Freundlich İzotermi			Temkin İzotermi			Dubinin-Radushkevich İzotermi		
T (K)	$K_L$ (L/mg)	$q_{max}$ (mg/g)	$R^2$	$K_F$	n	$R^2$	B	$K_{TM}$	$R^2$	$K_{DR}$ (L/mg)	E (kJ/mol)	$R^2$
318	0.150	74.627	0.944	11.235	1.637	0.897	17.811	1.290	0.9665	$5.10 \cdot 10^{-17}$	$1.10^5$	0.926

## 5. TARTIŞMA VE SONUÇ

Yapılmış olan deneysel çalışmada Cd (II) iyonlarının kullanılan doğal kilin adsorpsiyonu üzerindeki konsantrasyon sonucu değerlendirildiğinde daha çok Temkin ve Langmuir izoterm modellerine uyduğu anlaşılmıştır.  $R^2$  değerlerinin 0.96 ve 0.94 olduğu tespit edilmiştir. Langmuir, Freundlich, Dubinin- Radushkevich ve Temkin parametrelerini hesaplamak için bu modellere ait lineer grafikler oluşturulmuş ve bu grafiklerden korelasyon değerleri elde edilmiştir. Bu korelasyon katsayılarına göre uyum derecesi büyükten küçüğe göre yazılacak olursa,  $R_T^2 > R_L^2 > R_{D-R}^2 > R_F^2$  şeklinde olmaktadır.

Deneyde adsorplayıcı olarak kullanılan kilin özgül yüzey alanı B.E.T.=19.178  $m^2g^{-1}$  ve yarıçaplı gözeneklerin toplam gözenek hacmi  $P/P_0$ 'de 0,1  $\mu m$ 'den az olarak ölçülmüş olup, ortalama gözenek yarıçapının  $4.334.10^{-3}$   $\mu m$  değerinde olduğu saptanmıştır. Derişim arttıkça adsorplanan madde miktarının arttığı belirlenmiştir. Çevre ve sağlık açısından oldukça zararlı oldukları bilinen ağır metal atıklarının, sulu ortamlardan ve diğer maddelerden uzaklaştırılması açısından adsorpsiyon işlemi oldukça kullanışlı ve etkili bir yöntemdir. Uygun işlemlere ve uygun değer şartlarının oluşturulmasına bağlı olarak Cd (II)'nin adsorplayıcı olarak kullanılması önerilebilir.

## **THE JAPANESE FRUIT SANDWICH: AN EXAMPLE OF CREATIVITY IN CULTURE APPROPRIATION**

**Lecturer, PhD Irina-Ana DROBOT (Orcid ID: 0000-0002-2556-6233)**

Technical University of Civil Engineering Bucharest, Faculty of Engineering in Foreign Languages, Department of Foreign Languages and Communication, Bucharest, Romania

### **ABSTRACT**

The purpose of this paper is to understand Japanese fruit sandwiches as a process including cultural contact and interaction with Western culture. The history of this sandwich can be seen as a means of understanding a specific feature of the Japanese culture mindset, of adapting cultural products they take over from other cultures into something new and which we can later recognize as symbolic of Japanese culture. Japanese culture has appropriated other cultural products and practices from other cultures, such as they took over the practice of cherry blossom viewing from Korean and Chinese culture, the practice of archery from Chinese culture with its emphasis on ethics and virtue, as well as Zen Buddhist philosophy attached to it. Yet, Japan has made all these cultural appropriation products their own. With respect to the fruit sandwich, we can notice, from the perspective of Western culture, an example of using imagination and creativity, and making us see the sandwich from an entirely different perspective, which gets close to the defamiliarization visible in art, as theorized by Shklovsky. The creativity of Japanese culture consists in creating something completely distinct from the usual sandwich in Western culture. A different type of bread is used, milk bread, which is softer than the usual bread used in Western sandwiches. Fruit also hold a special status in Japan, being seen as luxury items, unlike in Western culture. Why are there expensive fruit parlors in Japan and why are fruit regarded as gift items? What are the conditions that led to this state of affairs and how are the conditions different from those of fruit in Western cultures? How does the visual attention specific to Japanese culture regarding food but not only food, as it is also visible in other arts, apply to fruit and fruit sandwiches?

**Keywords:** fruit parlors, defamiliarization, Westernization, creativity, visual attention.

## 1. INTRODUCTION

While the sandwich could be seen as a universal food across cultures, with the hamburger being a variety of the sandwich, we can find a special type of sandwich in Japanese culture. The Japanese fruit sandwich sounds more like a Western-culture cake, or a dessert food. From the home-made sandwich prepared by mothers for their children to take to school, to the sandwiches that people prepare at home to take them to eat on their jobs for lunch, to the sandwiches that can nowadays be bought in supermarkets, for instance the ready-made sandwiches you can get in the UK, prepared for working men, sandwiches are a very popular means to eat fast and nutritiously. Sandwiches can cover a variety of nutrients, depending on the filling you use, and all can be eaten fast and without any complications, since it does not require plates and cutlery. The nutrients range from the believed basic foods, such as bread, protein in cheese or salami, dairy if they contain butter, and various vitamins and minerals if they contain vegetables. Everything is packed, as well as fast and comfortable to eat during a lunch break at work or at school. According to a survey led by Moneypenny in May 2022 in the UK, 42% of the food eaten at work is a sandwich. Western culture innovations brought to the sandwich would include the crisp sandwich, which was created accidentally by Nigella Lawson, a poor Irish mother, for her children, and afterwards gained great popularity (Holland, 2022). Certain innovations link the sandwich not to usual main foods, but to dessert, such as varieties of sandwich in Western culture including sweet sandwiches, e.g. sandwich cookies, or ice cream sandwiches (Kovel, 2022). Yet, as will be seen from this paper, the Japanese sandwich takes everything further, showing a fresh perspective on what is considered common understanding of the sandwich in Western culture.

The sandwich is one of the foods present all over the world nowadays. It is considered “the most universal of all fast food”, and has the advantages of being “Portable, quick, satisfying, cheap and requiring neither plate nor cutlery”. Everyone, “school children and High Court Judges, [...] soldiers and pacifists, [...] busy call-centre workers and leisurely picknickers”, enjoys this “quickest way of making a meal” (Wilson, 2010, p 7). History claims that it was created in the eighteenth century by the fourth Earl of Sandwich (Wilson, 2010, p. 12).

Its beginnings lie in the Western culture. Japan had gone through periods of not allowing contact with Western culture, remaining isolated for trade and diplomacy, but starting with 1854 it went through a period of Westernization. According to the Ministry of Foreign Affairs Japan (2020), the Japanese have taken the sandwich over during the late 1800s, and developed it into

something that is now recognized as a specific Japanese food. Regarding the beginnings of the Japanese sandwich, it is believed that “Sandwiches grew in popularity in Japan when a western-style food store from Kanagawa Prefecture sold Japan’s first sandwich *Ekiben* at Ofuna Station in 1892. *Ekiben* means a *Bento* (box lunch) that is eaten when riding a train during a journey”. Bento boxes are specific to Japan, and sandwiches were thus adapted to Japanese food culture. Another belief is that “fruit sandwiches originated in a café in Kyoto or in a long-running fruit snack store in Japan, though there are other theories as well.” Therefore, nothing is known for certain regarding the process of adapting the Western sandwich and incorporating it into the Japanese culture mindset. However, this is not all. They did not simply borrow the Western sandwich as such, but changed it according to their culture, reaching a high degree of creativity, to the point where they made an almost different product. The Japanese took everything further, as they have created the fruit sandwich, which is different from the way Western sandwiches are prepared, known, and understood. The Japanese not only use fruit instead of the usual vegetables present in Western culture sandwiches. They also use whipped cream for some sandwiches, while for some others they used instead mascarpone cream or yoghurt. For some fruit sandwiches, they use “regular sliced bread”, while for others they use raisin bread or croissants. Fruit can also be used in different ways: sandwiches may contain whole fruit, or they may “have a diverse range of flavors with many different fruits included together.” These sandwiches can be eaten as dessert or as a light meal (Ministry of Foreign Affairs Japan, 2020). Everything is believed to have started from a misunderstanding from the part of the Japanese as to what sandwiches actually were when they encountered them via Western culture. Therefore, the Japanese imagined their own version of the sandwich based on what they understood it was and imagined it could be, which resulted into a different interpretation. In Figure 1 below, we can see the contrast between a usual, practical, Western sandwich and Japanese sandwiches, to the point where in Fig. 1.c. we can witness flower arrangements done from fruits.

**Fig.1.** Sandwiches in: a. Western culture (Source: <https://indianakitchen.com/recipe/bay-area-classic-ham-sandwich/>); b; c. Japanese culture. b. fruit pieces sandwich (Source: <https://www.justonecookbook.com/japanese-fruit-sandwich-fruit-sando/>); c. Sandwich art forms with flower shapes from fruits (Source: <https://asianinspirations.com.au/recipes/fruit-sando-japanese-fruit-sandwich/>).

We can clearly see above, first of all, in Fig.1.a. the busy, utilitarian, practical Western culture mindset and in Fig.1. b and c the attention paid to detail in Japanese culture. The Japanese sandwiches are like works or art and unlike the Western type sandwich. The Japanese fruit sandos look more refined, light, and actually closer to a dessert than to a regular snack.

One of the distinct aspects of Japanese fruit sandwiches is their visually pleasing, aesthetic aspect. Thus, “There are many highly original fruit sandwiches, and each one is full of creativity”, to the point where they can be shared on Instagram, a social media platform where photos are the primary features that users appreciate: “the sandwiches look like beautiful works of art when cut, as they are filled with fruits of many different shades”, and are considered “photogenic” (Ministry of Foreign Affairs Japan, 2020). The Western sandwiches are considered more of being fast and practical, and Westerners are not preoccupied to the extent that the Japanese are with the visually pleasing image of their sandwiches.

How can we account for the differences between Japanese culture mindset and Western culture mindset when it comes to the way sandwiches are made and presented? What specific cultural features are at work?

## 2. MATERIALS AND METHODS

The Japanese culture is known for taking over various cultural products from elsewhere and then turning them into what could be called their own, specific brand. This is what has happened with the kimono, which was taken over from the hanfu in Chinese culture, with the art of calligraphy, and with the cherry blossoms’ symbol for spring and ephemeral beauty, taken over from the Chinese and Korean culture. Japan has become more popular than other Asian cultures,

even though the origins of various symbols and practices, as well as cultural products, are not its own from the very beginning.

This is what also happened to the sandwich. They called it “sando”, and their sandos belong to “a category of Japanese food known as *yōshoku*, or Western-inspired Japanese food. Though *yōshoku* dishes initially began as simple adaptations of Western foods -- like ketchup-y spaghetti known as *naporitan* and pan-fried cutlets of katsu -- it quickly transformed into its own established category of food that is uniquely Japanese.” One of the main differences in Japanese sandwiches lies in the following fact: “the construction of sandwiches” is obviously “neater”, and their sandwiches “aren’t weighed down with intense slabs of proteins, cheeses, and condiments”. The Japanese even use a different texture of bread for their sandos, which is called *shokupan*, a word which designates “milk bread, a slightly sweet white bread crafted from an enriched dough that is soft and pillowy”. What also sets the Japanese sandwiches apart from Western ones is “the attention to construction. They are generally well made so that the ingredients don't fall out as you eat the sandwich and it doesn't make a mess”. The Japanese sandwiches are also “neatly wrapped like a present”. Fruit sandwiches’ aesthetic aspect consists in the fact that they “contain colorful slices of strawberries, peaches, and kiwis gently encased in a whipped-cream cloak” (Thompson, 2019).

One main feature of Japanese culture is that fruits are having a different status from Western culture, in that “fruits are expensive”, and that “They were (and at times continue to be) a luxury in Japan, and while they became more commonly accessible to the public during the Taishō era (1912-1926), they were mostly bought for gifts (both personal and business) or special occasions.” What happened in Japan is that “Due to this, many fruit shops opened near major train stations and business districts in the early 1900s.” One common feature of Japanese culture is the willingness to buy gifts: “Japan loves to gift, so as the fruit shop business grew, many began to open fruit parlors, a cafe adjacent to the shop which served various fruit dishes such as parfaits and shortcakes. This allowed the public to access luxury fruits at a reasonable price.” It was in this context that “One of the most popular dishes” was “the fruit sandwich, more commonly known as “fruits sando” (*furutsu sando* [...]) in Japanese” (Kaori S., 2021).

Fruit parlors that still exist today and keep fruit sandos on the menu are Sembikiya in Tokyo, which “opened its main Nihonbashi shop in 1834, and began operating the first ever fruits parlor in 1894”. As for Kyoto, “, one of the oldest fruits shops, Yaoiso, which opened in 1869, established a fruit parlor in 1972” (Kaori S, 2021).

The design of the fruit sandwiches starting from “a way for the fruit shops to control their stock, so many of them used multiple fruits, often cut into small slices”. What is more, the fruit sandwiches “were also originally cut into squares, in a British sandwich style”, while “Nowadays, you’ll more often than not see sandwiches cut into triangles.” The “diagonally cut sandwiches only became popular in the post-war era in Japan. This came about in 1961, when the owners of Furenpan bakery decided to cut their sandwich diagonally, to better show off the sandwich filling and to make it easier for people to eat.” (Kaori S, 2021).

Regarding the time when fruit parlors and coffee shops served fruit sandwiches, we can go back to the 1920s: “Fresh fruit sandwiches were first served in Japanese coffee shops and specialty cafés called fruit parlors as early as in the 1920s” (Kikkoman Corporation, 2022).

Regarding the Japanese fruit sandwich, the form can be that of a sandwich, yet the function is that of a cake (Thompson, 2020). This is why it could be seen as a way of representing something different, to the point of reaching defamiliarization (Gunn, 1984), as compared to the sandwich in Western culture.

The Japanese fruit sandwich changed from luxury item in the 20s due to its availability only in the fruit parlors to a “convenience-store level availability” (Thompson, 2020). This is the path taken by most foods, from luxury items, or items that required hard work in order to be cooked, towards becoming items of consumerism, where they can be found everywhere in supermarkets and convenience stores, requiring little to no effort to prepare. Sometimes, it just means the effort to be purchased and eaten, sometimes while walking in the street, towards home or towards school.

If we refer to appropriation from the point of view of artists, since artists “represent what is already theirs.” Therefore, an “act of representing a culture is not an act of appropriating from it” (Young, 2010, p. 18). In a similar way, the Japanese have not taken, through culture appropriation, the sandwich as such from Western culture. They have, instead, included what was already culturally specific to themselves when they re-created it. Since the sandwich is no longer recognizable as the typical Western-culture sandwich, we could say that the Japanese have worked on it based on their understanding of food, visual culture, artistic effect and mindset altogether. While “The term cultural appropriation has been defined as ‘the taking – from a culture that is not one’s own – of intellectual property, cultural expressions or artifacts, history and ways of knowledge’” (Ziff and Rao, eds., 1997, p. 1), we can clearly see in the

example of the Japanese sando that the Western-type of sandwich is only used as a source of inspiration, over which the Japanese apply their sense of creativity.

### 3. RESULTS

Japanese culture transfers its visual culture preference over to food arrangement, and fruit sandwiches are no exception. We can see the primacy of the visual element in their culture everywhere, starting from haiku poems, where the visual image is central. Their writing system is also extremely visual, therefore calligraphy becomes a means of visual expression. In Western cultures, writing systems and poetry have abstract tendencies. In American culture, sandwiches become more and more utilitarian, and handy for everyday fast use, such as the hamburger. The artistic aspect is not a main feature. The commercial aspect becomes the main feature.

However, for Japanese culture fruit sandwiches, the aesthetically pleasing aspect of their food in general remains one of the main features. As a comparison between Western culture and Japanese culture mindsets, we could compare the sandwiches illustrated under Figure 2:

**Fig.2.** a. Western culture everyday life sandwich (Source: <https://www.today.com/food/5-tips-making-sandwiches-actually-better-next-day-t101209>); b. Western culture appetizer sandwiches (Source: <https://www.pinterest.com/pin/198299189819815169/>); c. Japanese culture fruit sando art (Source: <https://www.lifestyleasia.com/bk/food-drink/dining/japanese-sandwich-recipes/>)

The Japanese sandwich looks aesthetically pleasing, while the Western-culture usual type of sandwich could be regarded as a rough version of the Japanese sando. The Western culture type of sandwich is created abruptly and with concern only for what is practical. It is a sandwich that is considered serious enough to be eaten during lunch break at work, where the tasks are rough and no matter of art themselves. Therefore, neither is the sandwich a piece of art. Yet, sandwiches created for festivities can be more artistic even in Western culture, when they are part of appetizer arrangements. However, since we are talking about the norm and everyday life reality, Japanese culture sees fruit sando as pieces of art even in everyday life, of studying and

of work. The Japanese do not need a special occasion in order to have specially decorated sandwiches. The Western culture members, on the contrary, need special occasions to make their sandwiches different. Otherwise, they reflect the rough way of living and everyday life activities, without taking the time to consider an artistic aspect to them.

As can be seen in Fig. 2.c., the Japanese dedicate a long time and special attention to the aesthetics of the sando. The fruits in this case are arranged so as to suggest a floral arrangement. In Fig. 2.b., the Western counterpart only shows a smaller and more refined version, which does not rise to the level of artistry expressed in the Japanese fruit sando in Fig.2.c., however. The Japanese prove to give more attention to minute details when creating a visual impression. Even if food is art that can be just for fun, it is definitely an aspect Japanese culture relies on. It is not just for special occasions, and it is not just for sandwiches as appetizers. In Japanese culture, even convenience stores/ supermarkets can use fruit sandos with an aesthetically pleasing aspect for everyday use. This is, however, not the norm in Western culture. While the sandwiches in Western culture may look appealing, seeing them as art on a day-to-day basis is not the usual approach.

#### **4. DISCUSSION AND CONCLUSIONS**

While in Western culture we still encounter the example of using Nutella in sandwiches, generally sandwiches in Western culture are not expected to contain fruit and cream, which are regarded as desserts. Occasionally, though, there may be some sweet sandwiches, but this is not part of the usual perception of the sandwich. It is rather an exception to the norm. Yet, Japanese culture turned fruit into a luxury item, making fruit sandwiches a special treat. They could be considered more a dessert food item rather than a usual sandwich by Western culture members, who view sandwiches as everyday reality common items, created in this way to suggest workmen food and busy young people's lunch or meal during the day while running about to their university courses, school classes or workday schedule. In the Western world, sandwiches are considered to fit in with the rush of everyday life, while in the Japanese world, they are regarded as refinement, since fruit are a luxury or still expensive food item even nowadays, in convenience stores.

The fact that the fruit sando is a dessert food item could be related to the idea that it is a delicacy and, therefore, a special treat at all times, and not just a needed source of energy. The way it is understood and decorated makes it a special food item, borrowed from western culture, yet the

borrowing is done though adapting it creatively from one culture into another. Since the Japanese may not have been used to the Western-style sandwich, they may think of it as a special food item. This could be an explanation why they understood it as a savory dessert dish, instead of a utilitarian dish. Instead, for the Japanese, sushi is a usual food, while for Western culture members it can be regarded as an exotic treat. The fruit sando could be regarded in a similar way for the Japanese culture members, as an exotic treat. At the same time, the Japanese culture members have adapted creatively their own sandwich, which is much more different from what we know. Psychologically, this can sound as a creative act, yet it was not intended. It simply resulted as such from contact with a different culture.

**NIZAMI GƏNCƏVİ YARADICILIĞINDA AZƏRBAYCAN ŞİFAHİ XALQ  
ƏDƏBİYYATININ ROLU (BƏHRUZ BAMDADİNİN EYNİ ADLI MƏQALƏSİ  
ƏSASINDA)****Əsmət xanım MƏMMƏDOVA**

Dosent, i.o.professor, Fil. üzrə fəlsəfə doktoru, Bakı Dövlət Universiteti, Şərqsünaslıq  
fakultə, İran filologiyası kafedrası, Bakı, Azərbaycan

**XÜLASƏ**

Nizami Gəncəvi (1141-1209) yaradıcılığının xalqilik və bədii sənətkarlıq baxımından zənginləşməsində etnoqrafik biliyin bütün sahələrini özündə ehtiva edən folklor nümunələrinin rolu danılmazdır. Xalq müdrikliyindən - folklordan qaynaqlanan motiv, hadisə, süjet və formullardan yerində və məqamında istifadə zamana meydan oxuyan Nizami əsərlərinin əbədiyaşarlılığını şərtləndirən başlıca amillərdəndir. Azərbaycan xalqının nağıl, rəvayət, zərbül-məsəl, atalar sözləri, tapmaca və lətifələrinin ekvivalentlərinin deyil də, məhz fars dilinə hərfi tərcümə olunaraq verilməsi həm də mübahisə predmeti olan Nizaminin etnik kimlik məsələsinə aydınlıq gətirən məqamlardandır. Qeyd etmək lazımdır ki, Nizami əsərlərini fars dilində yazsa da bəzən fars oxucusuna onun yazdığı incəliklər anlaşılmaz və çətin gəlir. Məlumdur ki, Nizaminin hazırda elmə məlum olan “Divan” və “Xəmsə”si fars dilində qələmə alınmışdır. Lakin şairin farscası nə qədər rəvan, kamil olsa da, hər halda İran alimi Səid Nəfisnin dediyi kimi, “bu farsca bir farsın, tutalım, Firdövsinin farscası deyil”. Doktor Bəhrüz Bamdadi “Nizami Gəncəvi əsərlərində Azərbaycan şifahi ədəbiyyatı və folklorunun rolu” adlı məqaləsində yazır: “Nizami və onun müasirləri Azərbaycan üslubu nümayəndələri folklor və şifahi xalq ədəbiyyatından çox bəhrələnmiş, adi xalq danışığını, ifadə və deyimlərini əsərlərində böyük məharət və bacarıqla işlətməmişlər. Əsrlər keçməsinə baxmayaraq, bu ifadələr, deyimlər bu gün də azərbaycanlılar arasında canlı dil nümunəsi kimi işlədilir, keçən əsrlər, illər onlara heç bir təsir göstərə bilməmişdir” [Bamdadi, 2004: 5]. Alim fikrinə davam edərək, yazır: “...Nizami əsərlərini oxuyub, lazımı şəkildə başa düşmək üçün Azərbaycan (türk) dilinin incəliklərini bilmək lazımdır. Nizami əsərlərindəki bəzi ifadə və tərkiblərin türk olmayan oxucuya qarışıq və anlaşılmaz gəlməsinin səbəbi isə, onların şairin əsərlərindəki həmin incə, zərif mənaları bilməmələridir.) Müəllif belə bir doğru fikri müdafiə edir ki, “bu cəhət ən çox Nizaminin bir türk oğlu türk olmasından irəli gəlir”. Biz bu düşüncədə müəlliflə həmfikir olaraq deyirik ki, həqiqətən, dahi Nizami bir türk dili daşıyıcısı olmaqla çox hallarda tərkibləri, idiomatik ifadələri, atalar sözlərini tərcümə edərək nəzmə çəkmişdir. Bunula da fars dilinin lüğət tərkibini xeyli zənginləşdirmişdir. Bəhrüz Bamdadi bu işdə şairə iki xüsusiyyətin kömək olduğunu bildirir:

1. Azərbaycan dilinə tam sahib olması,
2. Sözyaratma qabiliyyətinə malik zehni və istedadı.

**Açar sözlər:** Nizami Gəncəvi, Bəhrüz Bamdadi, Azərbaycan şifahi xalq ədəbiyyatı, “Xəmsə”

**THE ROLE OF AZERBAIJAN ORAL LITERATURE AND FOLKLORE IN THE WORKS OF NIZAMI GANJAVI (BASED ON BAHRUZ BAMDADI'S ARTICLE OF THE SAME TITLE)****ABSTRACT**

The role of folklore examples, which includes all areas of ethnographic knowledge, in the enrichment of Nizami Ganjavi's (1141-1209) creativity in terms of folk and artistic craftsmanship is undeniable. The use of motifs, events, plots and formulas derived from folk wisdom - folklore, at the right place and at the right time, is one of the main factors determining the longevity of Nizami's works that defy time. In Nizami's works, giving not the equivalents of Azerbaijani people's tales, narratives, parables, proverbs, riddles and anecdotes, but literal translations into Persian is one of the points that clarify the issue of Nizami's ethnic identity, which is the subject of controversy. It should be noted that although Nizami wrote his works in Persian, sometimes the intricacies of what he wrote are incomprehensible and difficult for the Persian reader. Nizami wrote his "Divan" and "Khamsa" in Persian, which are currently known to science. No matter how smooth and perfect the poet's Persian is, in any case, as Iranian scholar Said Nafisi said, "this Persian is not the Persian of a Persian, let's say, Firdowsi". Dr. Bahruz Bamdadi writes in his article "The role of Azerbaijani oral literature and folklore in the works of Nizami Ganjavi": "*Nizami and his contemporaries, representatives of Azerbaijani style, benefited a lot from folklore and oral folk literature, and used ordinary folk speech, expressions and idioms in their works with great skill. Despite the passage of centuries, these phrases and idioms are still used today among Azerbaijanis as examples of living language, the past centuries and years have not had any effect on them*" [Bamdadi, 2004: 5] Continuing his opinion, the scientist writes: "*...In order to read and properly understand Nizami's works, you need to know the intricacies of the Azerbaijani (Turkish) language. The reason why some expressions and compositions in Nizami's works are confusing and incomprehensible to non-Turkish readers is that they do not know the subtle and elegant meanings in the poet's works.*"

The author defends such a correct opinion that "*this aspect mostly comes from the fact that Nizami is a Turk, the son of a Turk*". We agree with the author in this opinion and say that indeed, the genius Nizami, being a native speaker of the Turkish language, often translated compositions, idiomatic expressions, and proverbs into poetry. With this, he greatly enriched the vocabulary of the Persian language. Bahruz Bamdadi says that two features helped the poet in this work:

1. Full command of the Azerbaijani language,
2. A mind and talent with the ability to create words.

**Key words:** Nizami Ganjavi, Bahruz Bamdadi, Azerbaijani oral literature, "Khamsa"

## GİRİŞ

“Nizaminin əsərlərini oxuyan hər bir oxucu bu əsərdə xalqın döyünən qəlbini, onun istək və arzularını gördüyü kimi onun zəngin folklorunu, onun azad hisslərlə dolu zərbi-məsəllərini də öyrənmiş olur. Nizaminin əsərlərində təsadüf edilən nağıllar, dastanlar, məsəllər, atalar sözləri hamın geniş xalq kütlələri arasında deyilib, dildən-dilə gəzən nağıllar və atalar sözləridir. Böyük şair bu nağılları və lətifələri öz sənətkar qələmi ilə bəzəyir, onlara bədii forma və kəskin mənə verir, onlardakı elmi, fəlsəfi, tarixi, ictimai mahiyyəti daha bariz və daha parlaq bir formada oxucuya çatdırır” [M. Mübariz Əlizadə, 1938//2021: 184].

O, əsərlərini fars dilində yazsa da bəzən fars oxucusuna onun yazdığı incəliklər anlaşılmaz və çətin anamlı gəlir. “Nizami hazırda elmə məlum olan əsərlərini – “Divan”ını, “Xəmsə”sini farsca yazıb. Şairin farsçası nə qədər rəvan, kamil olsa da, hər halda məşhur İran alimi Səid Nəfisinin müşahidə etdiyi kimi, bu farsca bir farsın, turalım, Firdövsinin farsçası deyil” [Hüseynov, 2016:10]. Nizami əsərlərində Azərbaycan, türk folklorunun, xalq hikmətlərinin çox geniş, hərtərəfli işlənməsinə dair bir çox tədqiqatçılar fikir söyləmişlər. XXI əsrin başlanğıcında doktor Bəhrüz Bəmdadinin “Nizami Gəncəvi əsərlərində Azərbaycan şifahi ədəbiyyatı və folklorunun rolu” adlı məqaləsi diqqətimizi cəlb etdi. Bəhrüz Bəmdadinin Azərbaycan şairi Nizami Gəncəvi əsərlərindəki folklor nümunələri haqqındakı araşdırmasını sizinlə də bölüşmək istərdik.

### **Əsas araşdırılan mövzu:**

İlk əvvəl alim folklorun ədəbiyyatdakı rolu haqqında məlumat verərək deyir ki, bir xalqın folkloru barədə müzakirə aparmaq üçün birinci mərhələdə onun dilinin və mədəniyyətinin incəliklərini bilmək lazımdır. Sadə xalqın nümayəndələri, sırayı vətəndaşlar, əkinçi, kəndli təbəqəsindən olan insanların inancları, maraqları, adət-ənənələri, sevgiləri, düşüncələri, qürur mənbəyindən bəhs etdikdə meydana çıxan dil zənginliyi, rəngarəngliyi təəccüb doğuracaq dərəcədə diqqət cəlb edir. Onlar sevinclərini, kədərlərini, təcrübələrini, inanclarını mülayim, ifadəli və sadə şəkildə bildirir, düşündüklərini təbiətlə əlaqələndirib hekayələr, əfsanələr, müxtəlif zərbi-məsəllər çərçivəsində, füsunkar şəkildə bəyan edirlər. Folklor və ya ümumxalq ədəbiyyatı adlanan bu cür məsələlər topla olaraq müxtəlif sözlər, ifadələr, birləşmələr, məcazi, kinayəli qəliblər şəklində şeirdə, dastanlarda öz əksini tapır.

Nizami və onun müasirləri – Azərbaycan və ya Aran üslubunun şairləri xalq ədəbiyyatından çox təsirlənmiş və əsərlərində xalq dilində formalaşmış zərbi-məsəllər, hikmətli ifadələri böyük bacarıqla işləmişlər. Hal-hazırda yazıldığı dövrdən əsrlər keçməsinə baxmayaraq, bu hikmətli

sözlər, ifadələr bugünkü azərbaycanlıların dilində yaşamağa davam edir və aradan keçən uzun zaman ərzində onların tərkibində heç bir anlaşılmazlıq, dəyişiklik baş verməmişdir. Azərbaycan şairlərinin, o cümlədən, Nizaminin şeirlərini, dilini başa düşmək üçün türk dili və onun incəlikləri ilə tanış olmaq lazımdır və Nizami şeirlərinin mürəkkəbliyinin, anlaşılmaz olmasının səbəblərindən biri də qeyri-türkdilli oxucuların məhz türk dilinin incəliklərinə bələd olmamalarından irəli gəlir. Hətta bəzi Nizami əsərlərini tədris edən müəllimlər belə bu problemlə (Nizaminin bəzi beytlərinin fars dil daşıyıcıları, müəllimləri üçün anlaşılmaz olması nəzərdə tutulur – Ə.M.) üzləşirlər.

Müəllif belə bir doğru fikri müdafiə edir ki, bu cəhət ən çox Nizaminin bir türk oğlu türk olmasından irəli gəlir. Biz də burada müəlliflə tamamilə həmfikir olduğumuzu bildirib deyirik ki, həqiqətən, dahi Nizami türk dili daşıyıcısı olmaqla bir çox hallarda tərkibləri, idiomatik ifadələri, atalar sözlərini əsərlərində tərcümə edərək nəzmə çəkmişdir. Daha sonra müəllif sözünə davam edərək deyir:

“Azərbaycan şairləri və Nizami əsərlərini oxuyub, lazımı şəkildə başa düşmək üçün Azərbaycan (türk) dilinin incəliklərini bilmək lazımdır və Nizami əsərlərindəki bəzi ifadə və tərkiblərin türk olmayan oxucuya qarışıq və anlaşılmaz gəlməsinin əsas səbəbi isə, dediyimiz kimi, onun əsərlərindəki həmin incə, zərif mənaları bilməmələridir.

[Bamdadi, 2004: 5]

Alim fikrini davam etdirərək, Nizaminin türk dil daşıyıcısı olaraq Azərbaycan folklor nümunələrini öz əsərlərində verməklə fars dilinin lüğət tərkibini zənginləşdirdiyini qeyd edir. Eyni zamanda göstərir ki, burada iki başlıca cəhətə diqqət yetirmək vacibdir:

### **1. Şairin Azərbaycan dilinin lüğət tərkibinə tam sahib olması**

### **2. Nizaminin sözyaratma qabiliyyətinə malik zehni və istedadı**

Bu iki xüsusiyyət fars dilinin köməyinə çatdı və bu cür gözəl ifadələrin, tərkiblərin yaranmasına vəsilə oldu. Qeyd edək ki, azərbaycanlılar bu gün də bu tərcümə metodundan, müasir dövrün ifadəsi ilə desək, kalka üsulundan fars dilində danışan zaman istifadə edirlər. Burada qeyd edilən nümunələr bir azərbaycanlının Azərbaycan türkcəsinin köməyi ilə fars dilində həyata keçirdiyi dil fəaliyyətlərini göstərmək üçündür. Məsələn, Nizami “Xosrov və Şirin” dastanında deyir: *بیا تا یک دهن پر خنده داریم* /biya ta yek dəhən por xənde darim/- *Gəl ağız dolusu deyək, gülüşək*. Bu misrada işlənən idiomatik ifadəyə B. Bamdadi şərh verərək deyir: “یک دهن خندیدن – *“Bir ağız gülmək”* - tərkibinin tərcüməsidir. Sonrakı dövrlərdə *“Bir ağız oxumaq”* tərkibi

işlənsə də, ancaq hər hansı bir fars şairinin bu tərkibi bu şəkildə işlətdiyini güman etmirəm.  
[Bamdadi,2004:4]

**A) Kinayə, məcazi məzmunlu və digər tərkiblərin türk dilindən fars dilinə tərcüməsi**

دام نه ای دانه فشانی مکن، با چو منی مرغ زبانی مکن  
[Sirlər xəzinəsi,87]

*(Tələ deyilsən, dən səpməklə məşğul olma, Mənim kimi birisinə quş dili oxuma)*

مرغ زبانی کردن /**morğ zəbani kərdən**/- birləşməsini bugünkü azərbaycanlılar **“birinin qulağına quş dili oxumaq”** kimi işlədirlər. Müxtəlif yaşda olan insanlardan bu ifadə soruşulsa, mənasının həmin şəxs üçün məlum olduğu aydınlaşar. Bu ifadə başqa sözlə Azərbaycan dilində **“kiminsə qulağını doldurmaq”**, **“danışaraq kimisə müəyyən bir işdən çəkəndirmək”**, yaxud **“kimisə dilə tutub hansısa bir işdən, hərəkətdən əl çəkməyə razı salmaq, fikrini dəyişdirmək”** mənasını verir . Bu hikmətli ifadəyə Həsən Vəhid Dəstgərdinin verdiyi şərh haqqında məqalə müəllifinin (B. Bamdadinin - Ə. M.) aşağıdakı qeydi maraqlıdır.\* .

“Xosrov və Şirin” əsərindən verilən aşağıdakı beytdə vətəndən uzaqda yaşayan qəriblərin işlətdiyi ifadə məsnəvidə aşağıdakı kimi verilmişdir:

به تو باد هلاکم می دواند غلط گفتم که خاکم می دواند  
[Xosrov və Şirin,246]

*(Sənin torpağına əsdim külək tək, Səhv dedim, məni torpaq bura çəkdi)*

خاک دوانیدن /xak dəvanidən/ tərkibi məcazi mənada **“torpaq çəkmək”** (**“torpaq çəkir”**) mənasını verir və bu ifadə doğulduğu ana vətəndən didərgin düşən, qəriblikdə yaşayan, lakin sonra yenidən doğma yurduna qayıdan və orada vəfat edən şəxslər barəsində deyilir.

Bu məqamda adətən belə deyilirdi: **“onu torpaq çəkirdi”**, yəni torpaq (vətən) onu özünə çəkirmiş.

\* Qeyd: “Uzun illər Həsən Vəhid Dəstgərdinin Nizaminin əsərlərinə şərhələr yazmaqla məşğul olmasına baxmayaraq, Nizaminin Azərbaycan dilindən çevirdiyi atalar sözləri, hikmətli ifadələri Azərbaycan dilini bilmədiyindən “Sirlər xəzinəsi”nin bu beytinin şərhində yazır: **“Quş dili danışmaq – boş-boş danışmaqdır**, ona görə ki, quş dilinin heç bir mənası yoxdur!” Əslində isə azərbaycanlılar bilirlər ki, “bu ifadənin mənası – danışan o qədər gözəl, inandırıcı, bəlağətli danışır ki, dedikləri ilə qarşısındakının, dinləyənin fikrini dəyişməyə nail olur ”  
[Nizami, 1399:87].

**B) Nizaminin əsərlərində Azərbaycan türkcəsinə məxsus zərbi-məsəllər**

Azərbaycan üslublu şairlərin, xüsusilə bu üslubun, şübhəsiz, ən böyük iki nümayəndəsindən biri olan Nizami Gəncəvi Azərbaycan ərazisində işlənən bir çox zərbi-məsəllərdən, atalar sözlərindən yaradıcılığında çox bəhrələnmişdir. Nizami əsərlərindən bir sıra tərcümələrdə işlənən türk zərbi-məsəllərini nümunə olaraq çəkir və bu ifadələr türk dilində o qədər şirin və oxunaqlı olmuşdur ki, hətta əsrlər sonra belə müasir Azərbaycanın şəhər və kəndlərində bu ifadələr işlənməkdədir və heç biri indiyə qədər unudulmamışdır. Bu zərbi-məsəllərdən bir çoxu daha sonra fars dilinə yol tapmış və fars dilinin frazeoloji birləşmə, deyimlər, hikmətli sözlər baxımından söz xəzinəsinin zaman-zaman zənginləşməsinə səbəb olmuşdur. Bundan da irəli gələrək farsdilli Nizamisevərlər üçün əlavə izahlar verilsə, şairin demək istədikləri onlar üçün daha aydın olar. “İskəndərnamə”nin birinci hissəsi “Şərəfnamə”dən gətirdiyimiz nümunədə deyilir:

به جایى نخسبد عقاب دلیر،      که آبی توان بستن او را به زیر  
[Şərəfnamə,353]

*(Cəsur qartal altını su basacaq yerdə/Yatmaz və (heç vaxt) yuva qurmaz)*

Bəhruz Bəmdadi qeyd edir ki, Azərbaycan xalqı əgər xüsusi ağıl sahibi olan, zirək bir insanı təsvir etmək, ondan bəhs etmək istədikdə belə deyir: “**O, altına su çıxan yerdə oturmaz, yatmaz**”, yəni او جایى نمی خوابد که آب زیرش برود /u cayi nemixabəd ke ab be zireş berəvəd/-o su basa biləcək yerlərdə yatmaz (yəni, yurd salmaz - Ə.M.)

گرت سر در گل است آنجا مشویش،      وگر بر لب سخن آنجا مگویش  
[Xosrov və Şirin,108]

*(Başına gil də çəkmisənsə, orada yuma,/Ağzında söz danışırınsansa, yarımçıq qoy)*

Bu ifadə Azərbaycanda xalq arasında, xüsusilə, kənd əhalisi arasında işlək olan zərbi-məsəldir. Əgər bir nəfərdən bir işi dərhal yerinə yetirməsi və ya bir yerə özünü tez çatdırması istənilsə, belə deyirlər: “**Başını orada islat, burada yu**”. Yəni، سرت را آنجا خیسانده ای اینجا بشوی və ya dərhal burda ol, yəni “**başını orada islat, burada qırxdır**”. Bu zərbi-məsəl və atalar sözünün xalq arasında işlənən başqa bir variantı da mövcuddur: اگر در دستت روغن می جوشد بگذار زمین و بیا – **“Əlində yağ daşsa da, qoy yerə, gəl”**.

**C) Şəhər və kənd əhalisinin həyat tərzinin təsviri**

بدان کس که او را خمیر است خام،      همه کس دهد نان پخته به وام.  
[Şərəfnamə,243]

*(O adam ki, xəmir yoğurub (çörək bişirəcək),/ Hamı ona bişmiş çörək borc verməyi əsirgəməz)*

Kəndlilərin yaşam tərzində çörək satmaq anlayışı olmamışdır. Amma onların arasında yayılmış və sanki ənənə halını almış hadisələrin biri çörəyin borca verilməsi hadisəsi idi. Bir adamın tabağında çörəyi bitdiyi təqdirdə dərhal qonşusundan borca çörək istəyər, lakin ilk fürsətdə verilən bu borcu qaytaracağını, çörəyi geri verəcəyini qarşı tərəfə söz vermiş.

Belə hallarda borc çörək istəyən adam borcu geri qaytarmağa qadir şəxs olarsa, qonşularının gözündə etibar, hörmət qazanar, nə vaxt yenidən borc istəsə, ona tərəddüdsüz borc verilərdi. Lakin bu məqamda heç bir mal sahibi olmayan, kasıb insan borca çörək istədiyi təqdirdə isə məcburiyyət qarşısında ona borc verilirdi. Bu zərbi-məsəl də məhz elə belə vaxtlarda deyilirdi: **“Xəmiri olana çörək verərlər”** və ya **“Öküzü olana gön borc verərlər”**.

#### **D) Nizaminin əsərlərində Azərbaycan musiqisi nümunələri**

Azərbaycan musiqisi ilə tanışlığı olan hər kəs bilir ki, bu musiqinin əsas məzmununu sevgi, məhəbbət qafiyələrindən əlavə, əxlaqi hikmət, nəsihətlər, yaradılış fəlsəfəsinin bəyan edilməsi və s. məsələləri özündə əks etdirir və azərbaycansevərlər, müxtəlif türkdilli xalqlar, millətlər, tayfalar, nəsillər arasında bu düşüncələri ifadə etməyi əxlaqi bir vəzifə hesab edirlər. Nizaminin baxışı da, fikrimizcə, Azərbaycan musiqisinin təsiri altındadır və o, Barbəd və Nikisanı-iki Azərbaycanlı ozanı (aşığı)xüsusi fəlsəfi libasa bürümüş və onlar eşqdən əlavə imana, əxlaqa, həyat fəlsəfəsinə bağlılıqdan da bəhs edirlər [Xosrov və Şirin:359-379].

Burada qeyd edilməli olan ikinci məsələ Nizaminin Azərbaycan musiqisindən və onun qarşılıqlı müzakirə texnikasından təsirlənməsidir. Bu da Azərbaycan musiqisinin ən ümdə xüsusiyyətlərindən biri hesab olunur. Bu metod **“bağlaşma”**, **“bağlama”** və ya **“deyişmə”** adlanır.

Burada müsabiqədə iştirak etməyə hazırlaşan iki ozan o qədər bədahətən yaratmanın, musiqi pərdələrinin, ayrı-ayrı musiqi guşələrinə, oradakı gah və pərdələrə bələd olmalı, şeirin vəznə, üsulundan agah olmalı və epik, dini, tarixi, dastanvari, hekayə və əfsanələri dərinləndirən bilməlidilər ki, bu məsələlərlə bağlı sual ünvanlandıqda münasib cavabı verə bilsinlər. Bu sual-cavab bir tərəfin məğlub olması və müsabiqə meydanını tərk etməsinə qədər davam edir.

#### **E) Xalq inanc və inanclarının təsvir edilməsi**

Nizaminin əsərlərində xalq inancları da geniş şəkildə əks olunmuşdur. Şair inanc və xalq arasında yayılmış folklor nümunələrinə məsnəvilərində geniş vermiş və bu inanclardan ədəbi-bədii səviyyədə çox faydalanmışdır.

که را با شگونه بود پیرهن، به حاجت بود بازگشتن به تن  
تو زان ره که شد بازگونه نورد، یخواه از خدا حاجت بازگرد .  
[Şərəfnamə, 234]

*(Kim ki, köynəyini tərsinə geyinər. / Arzusu yerinə yetəndən sonra düzəldər.*

*Sənin bu dəfə döyüşdə işin tərs gətirdisə, / Allahdan arzunu, hacətini istə və qayıt gəl)*

Tərsinə köynək geyinmək Allahdan ehtiyacını istəmək üçün bir adət imiş, yəni ehtiyacını diləmək üçün köynəyini tərsinə geymiş adam məqsədinə çatdıqdan sonra yenə də onu düzünə geyinə bilərmiş. Sən də düşdüyün bu əyri, tərsinə olan yola dönmək üçün Allaha yalvar, hacətin, arzun yerinə çatar.

Bu hissədə müəllif “atəşə nal atmaq”, “keçi ayağına əfsun yazma”, “qızdırma ipi” (qızdırması olan adam üçün dua oxuyaraq sapa düyün vurma), pis nəzərə qarşı “göy muncuq”dan istifadə etmək kim inancları toplayaraq şərh etmişdir

مهر ازرق آورید به دست، وز پی چشم بد در ایشان بست  
[Yeddi gözəl, 233]

*(Göy muncuq gətirib, (o cavan) ələ, / Göz dəyməsin deyə üstünə bağlayır)*

“İskəndərnəmə”nin ikinci hissəsi “İqbalnamə”də İskəndərin hind alimi ilə sual cavabından aldığı parçanı məqaləsində yerləşdirən alim “göz dəyməyə”, “pis nəzər”ə qarşı inançı bəyan edir:

کسی را که چشمی رسد ناگهان، دهن دره اش اوفتد در دهان.  
رساننده چشم را جوش خون، بخاری ز پیشانی آرد برون.  
به این مرد و معنی شناسند و بس، که این چشم زن بود و آن پشم رس.  
سپند از پی آن شد افروخته، که آفت به آتش شود سوخته.  
فسونگر دگر گونه گفته است راز، که چون با سپاند آتش آمد فراز  
رسد بر فلک دود مشکین سپند، فلک خود ز ره باز دارد گزند.  
[İqbalnamə, 118]

*Birinə bəd nəzər dəyərsə əgər, / Dəyişər əhvalı tez-tez əsnəyər.*

*Bədnəzər olarsa əgər bir insan, / Alnı hərərətdən tərlər çox zaman.*

*Bu iki əlamət aydın göstərar: / Kimdir gözə gələn, kimdir bədnəzər.*

*Üzərrik yaxarlar göz dəyən üçün, / Od yaxıb-yandırar dərdi büsbütün.*

*Başqa bir bilici belə şərh edir / Üzərrik yananda tüstüsü gedir,*

*Qara pərdə kimi tutur havanı / Fələk də qaytarır dəyən bəlanı)*

**Nəticə:** Yekun olaraq onu demək istərdik ki, biz bu maraqlı araşdırmanı yalnız qısa formada xülasə edə bildik.

Tədqiqat işi əsasən aşağıdakı 5 bölmə üzrə öyrənilmiş, “Xəmsə” məsnəvilərindən olan beytlərə mənbə kimi müraciət edilmişdir:

1. Kinayə, məcazi məzmunlu və digər tərkiblərin türk dilindən fars dilinə tərcüməsi
2. Nizaminin əsərlərində Azərbaycan türkcəsinə məxsus zərbi-məsəllər
3. Şəhər və kənd əhalisinin həyat tərzinin təsviri
4. Nizaminin əsərlərində Azərbaycan musiqisi nümunələri
5. Xalq inanc və inanclarının təsvir edilməsi

Nizami və onun müasirləri Azərbaycan və Aran üslubu nümayəndələri folklor və şifahi xalq ədəbiyyatından çox bəhrələnmiş, adi xalq danışığını, ifadə və deyimlərini əsərlərində böyük məharət və bacarıqla işlətmişlər. Əsrlər keçməsinə baxmayaraq, hələ də o ifadələr, deyimlər bu gün də azərbaycanlılar arasında canlı dil nümunəsi kimi işlədilir, keçən əsrlər, illər onlara heç bir təsir göstərə bilməmişdir.

Müəllif belə bir doğru fikri müdafiə edir ki, bu cəhət ən çox Əbül-üla Gəncəvi, Xaqani Şirvani, Mücirəddin Beyləqani və Nizami Gəncəvi kimi şairlərin türk olmalarından irəli gəlir. Biz də burada müəlliflə tamamilə həmfikir olduğumuzu bildirib deyirik ki, həqiqətən, dahi Nizami bir türk dili daşıyıcısı olmaqla bir çox hallarda tərkibləri, idiomatik ifadələri, atalar sözlərini əsərlərində tərcümə edərək nəzmə çəkmişdir.

Wudil\_Kano, Nigeria.**ABSTRACT**

The banking segment is the engine of any nation's economy. The economic status of any nation rest on how stable their banking industry is. In other words, any issue that affects banks also has an impact on the economy of the nation. This study assessed the implication of treasury single account on the performance of First banks Nigeria PLC; a study of first bank of Nigeria PLC. A sample of 200 participants was randomly selected across 50 branches of first banks in Plateau, Ondo, Bayelsa, Bauchi, Kaduna and Enugu state. Primary and secondary data were used for this study. Descriptive statistics such as percentage was used to analyse the socio-demographic variable of the respondents in this study and inferential statistics such as regression and correlation analysis were used to analyze the data to test the three hypotheses in this study with the aid of SPSS version 25 software. The results revealed that TSA policy which seeks to reduce Federal Government Deposit in the commercial banks has significantly reduce the level of banks liquidity. TSA policy which seeks to reduce FG Deposit in the commercial banks has significantly reduce Commercial Banks Deposit Mobilization TSA policy which seeks to reduce FG Deposit in the commercial banks has significantly reduce Loans and Advances. The study recommended that relevant regulatory bodies such as central bank of Nigeria (CBN), Nigeria Deposit Insurance Cooperation (NDIC) and the Nigeria Security and Exchange Commission (SEC) should which will drive the effective implementation of the TSA in the states and local governments in order to promote accountability and transparency at all levels of government. The banks should avoid over-reliance of government funds and source for funds from other sectors of the economy. Rural banking should be aggressively undertaken to mobilise funds from the un-banked among rural dwellers among other recommendations were made.

**Keywords:** TSA, Banks, FG deposit, Loans and Advances, Commercial Banks Deposit Mobilization.

## **INTRODUCTION**

The banking sector is the mainstay of any nation's economy. The stability of any nation's economy rests on the stability of the nation's banking sector. Similarly, most issues that affected the banking sector also have a relationship with the economy of that nation (Allison & Ndukwe, 2021; Kanu, 2016). In Nigeria, for the past decades, Money deposit banks have been the custodians of government funds. The banking sector in Nigeria has experienced several reforms and policies, some favourable, others unfavourable. Numerous banks did not survive these reforms (Igbekoyi, 2022). Before the introduction of TSA, government Ministries, Departments, and Agencies (MDA's) operated a multiplicity of accounts in the Money deposit banks. The practice then was that MDA's used part of the funds generated to fund their operation and remitted the residual to the federation account (Igbekoyi, 2022).

This gave rise to leakages, embezzlement of funds, inadequate budgetary and financial planning. Yet the highest beneficiaries of this condition were the banks who relied on deposits from government agencies and lent back to the government at high-interest rates. The banks were operating "armchair banking" as they no longer mobilized funds from other sectors of the economy.

In connection to these, the federal government directed all MDA's to close their accounts with deposit money banks and remit the balances into the federation account with the apex bank of Nigeria which was contained in the central bank of Nigeria (CBN) circular no BPS/CSO/CON/DIR/01/079; dated, February 25, 2015 and addressed to all commercial banks. The circular has the title "Commencement of Federal Government's Independent Revenue Collection Scheme under the Single Treasury Account (TSA) Initiative".

The provision of law for a single account began in 1954 with the introduction of the Oliver Lyttleton's constitution; the document discussed the status of the federation in Nigeria, which states that the apex bank has the authority to operate a single revenue account for the country. However, the law of single revenue account was in operation until 1967 when the Nigerian civil war economy headed by General Yakubu Gowon necessitated the need for multiple accounts to meet its obligations. This practice continued endlessly without regard for section 80(1) and section 162(1) of the 1999 constitution of the federal republic of Nigeria as amended (Mayowaak, 2015). The policy was re-introduced in 2004 under the Olusegun Obasanjo regime by the federal government's economic reform and governance programme. As a result of the immense pressure from the banking industry, on the probable adverse effects of the policy on

the effectiveness and efficiency of their operation, led to the discarding of the policy in 2005 (Pronto, 2016; Babatunde, Olanike, & Oladunmomi, 2021) It was however re-debuted in 2012 under Goodluck Jonathan regime, after a pilot scheme for the single account was ran using 217 ministries, departments, agencies as a test case. The pilot scheme saved the country about 500 billion nairas in frivolous spending but was partially implemented. The operation of treasury single account was officially implemented on Monday, 17th of September, 2015 under the administration of President Muhammadu Buhari (The Stalwart Report, 2015).

The implementation of the policy came with its challenges as the banks struggled, though it is an approach adopted by most developed and developing nations of the world as a control measure to deliver on some macro-economic objectives programmed. Sailendra, Pattanyuk, & Israel (2010), Onodi, Eyisi, & Akujor, (2020) posit that idle cash of MDAs in deposit money banks often flop to earn market-related remuneration and for this reason, the government is not in full control. The government in turn borrows from the pool of their own money (Robert, 2021). This unnecessary contradiction is what the TSA stands to correct. In an article This Day newspaper of 17th August 2016 titled “Counting the gains of Treasury Single Account”, Adeosun pointed out the fact that, as at December 2015, ₦ 2 trillion had been remitted to the coffers of the federal government, and as at first quarter of 2016 the figure had moved to N3 trillion. She said, “These achievements are a huge strategic significance in our national economic recovery efforts”

First Bank of Nigeria Limited established in 1894, was the premier Bank in West Africa, Nigeria’s number one bank brand, and the leading financial services solutions provider. The Bank was founded by Sir Alfred Jones, a shipping magnate from Liverpool, England. With its head office originally in Liverpool, the Bank commenced business on a modest scale in Lagos, Nigeria under the name, Bank of British West Africa (BBWA)

In 1912, the bank acquired its first competitor, the Bank of Nigeria (previously called Anglo-African Bank) which was established in 1899 by the Royal Niger Company. In 1957, the Bank changed its name from Bank of British West Africa (BBWA) to Bank of West Africa (BWA). In 1966, following its merger with Standard Bank, UK, the Bank adopted the name Standard Bank of West Africa Limited and in 1969 it was incorporated locally as the Standard Bank of Nigeria Limited in line with the Companies Decree of 1968.

In 1979 and 1991, the bank's name was changed to First Bank of Nigeria Limited and First Bank of Nigeria Plc, respectively. In 2012, the Bank renamed itself First Bank of Nigeria

Limited as part of a reorganization that resulted in FBN Holdings Plc ("FBN Holdings") detaching its commercial business from the rest of the First Bank Group, in order to comply with the new Central Bank of Nigeria regulations (CBN). First Bank had 1.3 million shareholders worldwide, was listed on the Nigerian Stock Exchange (NSE), and had an unlisted Global Depository Receipt (GDR) program, all of which were transferred to FBN Holdings in December 2012.

As the global operating environment evolves, First Bank has kept pace, responding to the dynamic needs of its customers, investors, regulators, host communities, employees, and other stakeholders. Through a balanced approach to plan execution, First Bank has consolidated its industry leadership by maintaining trans-generational appeal. Thus, the Bank has continuously boosted its customer base which cuts across all segments in terms of size, structure, and sectors. Previous scholars have written extensively on treasury single accounts in Nigeria (Gwaison, Maimako, & Maimako 2018; Ojong, Agba, Eteng, Maruf, Akintola, & Usung, 2021). However, this study is an extension of the past studies which did not cover the individual firm to assess the implication of a single treasury account such as the first bank of Nigeria plc. It is against this background that this study examined the implication of treasury single account on the performance first bank of Nigeria plc.

### **Objectives of the Study**

The general objective of this study is to assess the implication of treasury single account on the performance of the first bank of Nigeria plc. More specifically, the objective includes:

1. to examine the implication of treasury single account on the liquidity of first bank Nigeria plc
2. To assess to what extent of the implication of treasury single account on deposit of first bank Nigeria plc.
3. To identify the implication of treasury single account on loan and advance of first bank Nigeria Plc.

### **Research Questions**

In line with the study objectives, the following questions were raised

- I. what is the implication of treasury single account on the liquidity of first bank Nigeria plc
2. What is the implication of treasury single account on bank deposits of first bank Nigeria plc?
3. What is the implication of on loan and advances of first bank Nigeria plc?

Hypotheses of the Study

The following null hypotheses were tested at a 0.05 level of significance.

HO<sub>1</sub>: there is no significant effect of a single treasury account on liquidity in first bank Nigeria plc

HO<sub>2</sub>: there is no significant effect of a single treasury account on bank deposits in first bank Nigeria plc

HO<sub>3</sub>: there is no significant effect of a single treasury account on loan and advances in first bank Nigeria plc

### **Conceptual Framework**

#### **Concept Treasury Single Account (TSA)**

According to Igbekoyi, (2022), TSA has covered a large part of the world's public sector accounting and finance in the past three decades. The study, further describe as the system of budget that is executed to carry out to take into account a number of fundamental principles, which traditionally include, general principles of the organization and building of a budget system, namely: budget transparency, the principle of separation of revenue, expenditure and sources of financing the deficit budget and other principles. The basic principles are reflected in the legislation of the majority of both federal and unitary state in the world. A treasury single account is a public accounting system under which all government revenue, receipts and income are collected into one single account, usually maintained by the country's central bank and all payments done through this account as well. The purpose is primarily to ensure accountability of government revenue, enhance transparency and avoid misapplication of public funds.

According to Adeolu (2015) Treasury single account is a public sector accounting system by which all revenue, receipts and payment of the government are collected into a single account, which is usually maintained by the apex bank of a country, and payments are done through the same account. It is also a tool used for the effective management of government finances, banking and cash position. The main aim is to ensure accountability of government revenue, enhance transparency and avoid misapplication of public funds. Onyekpere, (2015) Quarm, Sam-Quarm, & Sam-Quarm, (2020).Pointed that the treasury single account is a unified structure of government bank accounts enabling consolidation and optimal utilization of government cash resources. It is a bank account or a set of linked bank accounts through which the government transacts all its receipts and payments and gets a consolidated view of its cash position at any given time. Nelson, Adeoye, & Ogah, (2015) are of the opinion that treasury single account is an account that all ministries and government departments' account balances

are collated by the Central Bank, whereas there is an intermediate account for every ministry and department that shows the total of debit and credit transactions. Thus, the total amount will be reflected eventually on the treasury single account at the end of the day. It is a financial policy introduced by the federal government to consolidate all inflows from the country's ministries, departments, and agencies (MDAs) that is traceable to a single account.

Treasury Single Account (TSA) is one of the financial policies implemented by the federal government of Nigeria to consolidate all the revenue from all MDA's in the country by way of deposit into commercial banks traceable into a single account at the Central Bank of Nigeria (Kanu, 2016). Section 80 (1) of the 1999 Constitution as amended states that "all revenue or other money raised or received by the Federation (not being revenue or other money payable under this Constitution or any Act of the National Assembly into any other public fund of the Federation established for a specific purpose) shall be paid into and form one Consolidated Revenue Fund of the Federation". IMF, (2010) highlighted three essential features of TSA: First, the government banking arrangement should be unified, to enable the ministry of Finance (MOF) (or treasury) to have oversight responsibility for, over government cash flows in and out of these bank accounts. Second, no other government agency operates bank accounts outside the treasury single account arrangement. Third, the consolidation of resources should be comprehensive, and encompass all funds both budgetary and extra-budgetary.

Therefore, the TSA is a payment system in which all revenues due to the government are paid into a unified account domiciled with the CBN. Its objective is to ensure fiscal discipline and transparent management of the nation's finances (Kanu, 2016).

According to (Yusuf, 2016), TSA is a unified structure of government bank accounts enabling consolidation and optimal utilization of government cash resources. It is a bank account or a set of linked bank accounts through which the government transacts all its receipts and payments and gets a consolidated view of its cash position at any given time. This presidential directive would end the previous public accounting situation of several fragmented accounts for government revenues, incomes and receipts, which in the recent past has meant the loss or leakages of legitimate income meant for the federation account. The TSA is a process and tool for effective management of government's finances, banking and cash position. In accordance with the name, it pools and unifies all government accounts through a single treasury account.

## Theoretical Review

### Innovation diffusion theory.

Innovation diffusion theory (IDT) is a seminal theory in the communications literature that explains how innovations are adopted within a population of potential adopters. The concept was first studied by French sociologist Gabriel Tarde, but the theory was developed by Everett Rogers in 1962 based on observations of 508 diffusion studies. The four key elements in the theory are innovation, communication channels, time, and social system. Innovations may include new technologies, new practices, or new ideas, and adopters may be individuals or organizations. At the macro (population) level, IDT views innovation diffusion as a process of communication where people in a social system learn about new innovation and its potential benefits through communication channels (such as mass media or prior adopters) and are persuaded to adopt it. Diffusion is a temporal process; the diffusion process starts off slow among a few early adopters, then picks up speed as the innovation is adopted by the mainstream population, and finally slows down as the adopter population reaches saturation.

**Figure 1.** S-shaped diffusion curve

The cumulative adoption pattern therefore an S-shaped curve, as shown in Figure 1.1, and the adopter distribution represents a normal distribution. All adopters are not identical, and adopters can be classified into innovators, early adopters, early majority, late majority, and laggards based on the time of their adoption. The rate of diffusion also depends on characteristics of the social system such as the presence of opinion leaders (experts whose opinions are valued by others) and change agents (people who influence others' behaviors). At

the micro (adopter) level, Rogers (1995) suggests that innovation adoption is a process consisting of five stages: Namely; knowledge, persuasion Decision, implementation, and confirmation. This theory is related to the study as it presents the process of newness, implementation, and consequences of the innovation as regards the Treasury Single Account (TSA) policy.

### **Stakeholder's Theory**

"A stakeholder is any group or individual who can affect or is affected by the achievement of the organization objectives." (Zhong, Verma, Wei, Morrision, & Yang, 2022) Stakeholders are people who have classifiable relationships with the organization. The purpose of an organization is to manage the interest, needs, and viewpoints of its stakeholder. Stakeholder management is a major thought to be fulfilled in an organization (Friedman & Miles, 2006). The implementation of treasury single account could be likened to stakeholders 'theory; this is because the adoption of treasury single account was as a result of the pressure from stakeholders/citizens who are majorly against corruption. The stakeholder's theory suggests that government should take into consideration the interest, needs, and viewpoints of the stakeholders/citizens, and some responses should be informed of strategic opinions. It also provides insight to factors that motivate the federal government to implement treasury single accounts (Ekubiat & Ime, 2016).

### **Public Finance Management Theory**

This theory deals with matters relevant to the financing of public sector. The theory presumes that all aspects of resource mobilization and expenditure management should be properly considered by governments for the benefit of the citizen. Public finance management are laws, rules, and processes that are used by sovereign nations for revenue mobilization, allocation of public funds, the undertaking of public spending, accounting for such funds, and auditing of the results. It plays an important role in the governance process the collection of sufficient resources from the economy in an appropriate manner, and the efficient use of collected resources constitute good public financial management. The major aim for the implementation of treasury single account is to avoid misappropriation of public funds (Ekubiat & Ime, 2016).

### **Modern Money Theory (MMT)**

This is a macroeconomic theory that analyses and describes the modern economies as the economy in which the national currency is fiat money, that is a currency established and created as money by the government. The modern money theory, majorly contributed in the study of

the relationship between the treasury and the central bank. The central bank is the treasury's bank; it receives payments on behalf of the treasury. The central bank stands between the treasury and the spending unit, as well as the treasury and tax payers making payments to the government (Randall, 1998). The modern monetary theory gives insights on how monetarily sovereign governments operate and their impact on the economy. The modern monetary theory claims that a sovereign government's finances are nothing compared to those of households and firms. The sovereign government cannot be insolvent in its own currency. Thus, it can always make payments when due in its own currency. Governments don't need to borrow their own currency in order to spend (Randall, 2012) This theory shows the relevance of aggregating the central bank and the treasury into a government sector that finances itself through the creation of money, in order to ensure the smooth running of the monetary and fiscal policy (Ekubiat & Ime, 2016).

### Empirical review

Author(s)and Year	Topic	Methodology	Country	Findings	Gap
Udo & Esara, (2016)	The adoption of treasury single account (TSA) by state governments of Nigeria: benefits, challenges, and prospects	Descriptive cross-sectional survey(t-test)	Nigeria	TSA adoption and full implementation by the state governments is of greatest benefit

The Treasury Single Account System and Financial Stability in Nigeria	Time series regression	Nigeria	TSA system had a negative impact on government debt performance, with a significant negative impact on advances from commercial banks and external debt finance charges. However, it had an insignificant negative impact on overdrafts from Central bank of Nigeria (CBN). In the case of stock market performance, it was revealed that the TSA system had a significant negative impact on stock market liquidity and stock market size.	
Onodi, Eyisi,& Akujor, (2020).	Treasury Single Account (TSA) implementation and financial performance of commercial banks in Nigeria	Panel Regression	Nigeria	customers' deposit has a significant effect on profit after tax, return on assets and return on equity of commercial banks in Nigeria.	

### Methodology

This research, adopted ex post facto research design to show the influence of independent variables on the dependent variable and test the claim using statistical hypothesis testing techniques. Ex post facto research then is a method of teasing out possible antecedents of events that have happened but cannot, be manipulated by the investigator. The treasury single account was already implemented in 2015. Hence, this study assesses the implication of treasury single account on the performance of first bank Nigeria Plc. This study used a questionnaire to generate responses from the bank employee and customers of First bank plc titled Treasury Single Account Effectiveness Questionnaire (TSAEQ). Secondary sources such as the Central Bank of Nigeria Statistical Bulletin and First Annual Reports. This includes federal government deposit which was used as a proxy for TSA, first bank liquidity, first bank deposit, and first bank loans and advances were used as proxies for performance as observed in some previous

literatures. Data were used from 2012-to 2020. The population of the study is made up of all the 1516 employees in the 62 branches of the first bank in Plateau State, Bauchi state, Ondo state, Enugu State, Kaduna State, and Bayelsa State Nigeria. (First bank, 2020). A simple random sampling method was used for the sample selection. The sample of the study consisted of 255 participants mainly employees from 50 first bank branches selected from each state in the six geopolitical zones namely: Plateau state, Bauchi State, Kaduna State, Enugu State Ondo, and Bayelsa State respectively. According to Mugenda and Mugenda (2003), a sample size of 10% of the sample size is considered adequate for a survey study. The 255 participants are more than 10% of the total population of employees of the first bank in the 6 states Nigeria, hence the choice of this sample is Justified. This study will adopt simple random sampling techniques. Descriptive and inferential statistics were used to analyze the data collected. Descriptive statistics were used to analyze the socio-demographic variable of the respondents. However, inferential statistics such as regression and correlation analysis were used to analyze the data to test the hypotheses with the aid of SPSS version 25 software.

**Model Specification**

This model was adapted from the work of Gwaison, Maimako and Maimako (2018) investigating the Impact of the treasury Single Account (TSA) on the performance of the Nigerian economy. The model was modified to examine the implication of the Treasury Single Account on the performance of First bank Nigeria PLC as follow to form the analytical model in equation 4,5, and 6 respectively.

Conceptual Model

- 1.  $BL=f(FG Dp)$  .....1
- 2.  $BD=f(FG Dp)$  .....2
- 3.  $LAD=f(FG Dp)$ .....3

Where

- BL = First Bank Liquidity
- BD = First Bank Deposit Mobilization
- LAD =First bank Loans and Advances
- FG Dp= Federal Government Deposit

From the conceptual model in equations 1,2, and 3. We derive the analytical model in equation 4,5, and 6 respectively

- 1.  $BL= \beta_0+\beta_1 (FG Dp) +\varepsilon$  .....4

2.  $BD = \beta_0 + \beta_1 (FG Dp) + \varepsilon$  .....5

3.  $LAD = \beta_0 + \beta_1 (FG Dp) + \varepsilon$  .....6

Where

$\beta_0$  = Intercept

$\beta_1$  = Coefficient of the explanatory variable (slope)

$\varepsilon$  = Represents the error term in the model

### Results Presentations and Interpretations

**Table 1.** Analysis of Responses from the Questionnaire

Items	No. of Respondents	Percentage (%)
Questionnaire distributed	255	100
Questionnaire retrieved	211	82.74
Un-retrieved Questionnaire	44	17.25
Questionnaire used in the analysis	200	78.43
Unable questionnaires	11	4.31

**Source:** Field survey, 2021

255 questionnaires were administered to respondents from selected first bank branches in Plateau, Bauchi, Kaduna, Enugu, Ondo, and Bayelsa states respectively. From the total questionnaires distributed, 211 (82.74%) were retrieved while 44 (17.25%) were not retrieved because every effort to collect them from the respondents failed. 11 (4.31%) of the retrieved questionnaires were not used because they were not scored properly by the respondents. Therefore, 200 (78.43%) of the total questionnaire were used in the analysis of this study.

**Table 2: Socio-Demographic Variables of the Respondents.**

<b>Statement of Items</b>		<b>Frequency</b>	<b>Percentage (%)</b>
<b>Age Range</b>	Below 25years	41	20.5
	26-35years	54	27.0
	36-45years	77	38.5
	46-55years	21	10.5
	56years and above	7	3.5
	<b>Total</b>	<b>200</b>	<b>100.0</b>
<b>Gender:</b>	Male	80	40.0
	Female	120	60.0
	<b>Total</b>	<b>200</b>	<b>100.0</b>
<b>Marital Status</b>	Single	86	43.0

	Divorced	12	6.0
	<b>Total</b>	<b>200</b>	<b>100.0</b>
<b>Years of Experience</b>	1-10years	62	31.0
	11-20years	82	41.0
	21-30years	50	25.0
	31years and above	6	3.0
	<b>Total</b>	<b>200</b>	<b>100.0</b>
<b>Academic qualification</b>	ND/NCE	82	41.0
	B.Sc/HND	88	44.0
	M/Sc/PhD	20	10.0
	Others	10	5.0
	<b>Total</b>	<b>200</b>	<b>100.0</b>
<b>Position/Level</b>			
	Junior Staff	62	31.0
	Senior Staff	82	41.0
	Management Staff	56	28.0
	<b>Total</b>	<b>200</b>	<b>100.0</b>

**Source:** Author's Computations SPSS version 25

Table 2 revealed that 40% of the respondents were male, while 60% were female. This implies that majority of the respondents were female who dominate their male counterparts in selected first bank branches. The findings revealed that 20.5% were aged below 25 years, 27.0% were 26-35 years, 38.5% were 36-45 years, 10.0% were 46-55 years and 3.5% were 56 years and above. This means majority of the respondents were 36-45 years. More so, 43.0% of the respondents are single, 44.5% are married and 6% are divorce. This means majority of the respondents were married. The findings further revealed that 41.0% of the respondents had ND/NCE, 44.0% had HND/B.Sc, 10% had M.Sc /Ph.D and 5% had others not specify qualifications. This implies that most of the respondents have HND/B.Sc level of education. Hence, they can be more objective in their response. The years of experience shows that 31.0% had 1-10 years experience in first bank, 41.0% had 11-20 years experience, 25.0% had 21-

30years of experience and 3.0% had 31years and above years of experience. This implies that most of the respondents have 11-20years experience. Hence, they can be more reliable in their response. Lastly, 31.0% of the respondents are junior staff, 41.0 were senior staff and 28% were management staff. This implies that most of the respondents were senior staff. Therefore, they will be more reliable in their response since they are enlightened.

### Test of Hypothesis

Hypothesis 1: There is no significant effect of a single treasury account on the liquidity of first bank Nigeria plc

**Table 1:** Regression analysis between TSA (FG Deposits) and first banks Nigeria liquidity

Model		Unstandardized Coefficients		Standardized Coefficients	T	p-value
		B	Std. Error	Beta		
1	(Constant)	-.566	.085		-6.685	.002
	The implication of treasury single account on first Nigeria bank liquidity	.373	.027	.703	13.928	.002

**Source: Author's Computations SPSS version 25**

$$\text{Regression Model ; BL} = -0.566 + 0.373(\text{FG Dp})$$

The regression model explains that Federal Government Deposit (FG Dp) has a positive relationship with the first bank Nigeria Liquidity (BL). An increase in One Naira of FG Dp would lead to a proportionate increase of 0.373Naira and vice versa. The correlation coefficient of 70.3 percent indicates a strong positive relationship between Federal Government Deposit and first Bank Nigeria liquidity. The P-value was 0.002 which was less than 0.05 means that the P-value is statistically significant at the 5% level. Since t cal (-6.685) is outside our acceptance region (+/- 1.96), we, therefore, reject the null hypothesis and uphold the alternative hypothesis. That is, there is a significant impact of FG Deposit on first Bank Nigeria Liquidity. Therefore the TSA policy which seeks to reduce FG Deposits in the Commercial banks would significantly reduce first bank Nigeria Liquidity.

Hypothesis 2: there is no significant effect of a single treasury account on bank deposits in first bank Nigeria plc

**Table 2:** Regression analysis between TSA (FG Deposits) and first bank Nigeria deposit

<b>Coefficients<sup>a</sup></b>						
Model		Unstandardized Coefficients		Standardized Coefficients	T	p-value.
		B	Std. Error	Beta		
1	(Constant)	-.666	.080		-8.318	.001
	The implication of treasury single account on first bank Nigeria	.326	.020	.751	16.001	.001

**Source: Author's Computations SPSS version 25**

Regression Model; BD= -0.666 +0.326(FG Dp)

The regression model explains that Federal Government Deposit (FG Dp) has a positive relationship with first bank Nigeria Deposit (BD). An increase in One Naira of FG Dp would lead to a proportionate increase of 0.326 Naira in the first bank Nigeria Deposit and vice versa. The correlation coefficient of 75.1 percent indicates a strong positive relationship between Federal Government Deposit and the first bank Nigeria Deposit. The P-value was 0.001 which was less than 0.05 means that the P-value is statistically significant at 5% level. Since t cal (-8.318) is outside our acceptance region (+/- 1.96), we, therefore, reject the null hypothesis and uphold the alternative hypothesis. That is, there is a significant impact of FG Deposit on Commercial Bank Deposit. Therefore, the TSA policy which seeks to reduce FG Deposit in Commercial banks would significantly reduce first bank Nigeria Deposit

Hypothesis 3: there is no significant effect of a single treasury account on loan and advances in first bank Nigeria plc

**Table 3:** Showing Regression, Correlation analysis between TSA (FG Deposits) and Loans and Advances in first bank Nigeria plc

<b>Coefficients<sup>a</sup></b>						
Model		Unstandardized Coefficients		Standardized Coefficients	T	p-value.
		B	Std. Error	Beta		
1	(Constant)	-.928	.081		-11.412	.000
	The implication of treasury single account on loans and advances of first banks Nigeria.	.382	.020	.803	18.940	.000

**Source: Author's Computations SPSS version 25**

Regression Model  
LAD = -0.928+ 0.382 (FG Dp)

The regression model explains that Federal Government Deposit (FG Dp) has a positive relationship with loans and advances in first bank Nigeria plc. An increase in One Naira of FG Dp would lead to a proportionate increase of 0.382 Naira and vice versa. The correlation coefficient of 80.3 percent indicates a strong positive relationship between Federal Government Deposit and loans and advances of first bank Nigeria plc. The P-value was 0.000 which was less than 0.05 means that the P-value is statistically significant at the 5% level. Since t cal (18.940) is outside our acceptance region (+/- 1.96), we, therefore, reject the null hypothesis and uphold the alternative hypothesis. That is, there is a significant impact of FG deposits on loans and advances of banks in Nigeria. Therefore the TSA policy which seeks to reduce FG Deposits in the Commercial banks would significantly reduce loans and advances in the first bank Nigeria plc.

### **DISCUSSION OF FINDINGS**

The regression model explains that Federal Government Deposit (FG Dp) has a positive relationship with First Bank Nigeria Liquidity (BL). An increase in One Naira of FG Dp would lead to a proportionate increase of 0.373Naira and vice versa. This agreed with the findings of Kanu (2016), Chukwudi, Ogbonna, Harrison, and Amuji (2018), Adetunmobi, Adesina, Faboyeda, and Adejana(2017) that also confirmed that the implementation of Treasury Single Account impacted negatively on the liquidity base of banks in Nigeria. It was recommended that if the policy is executed it will lead to the prompt payment of all income going into the nation's purse without the intermediation of multiple banking arrangements.

The regression model explains that Federal Government Deposit (FG Dp) has a positive relationship with the first bank Nigeria plc Deposit (BD). An increase in One Naira of FG Dp would lead to a proportionate increase of 0.326 Naira in first bank Nigeria plc Deposit and vice versa. This agreed with the findings of Olowokure and Adetoso (2017) and Ndubuaka, Oheagbu,and Nsimoh (2017) also confirm that the implementation of the Treasury Single Account impacted on the deposit of banks in Nigeria.

The regression model explains that Federal Government Deposit (FG Dp) has a positive relationship with loans and advances in first bank Nigeria plc (LAD). An increase in One Naira of FG Dp would lead to a proportionate increase of 0.382 Naira and vice versa. This agreed with the findings of Ndubuaka, Oheagbu,and Nsimoh (2017) and Olowokure and Adetoso

(2017) that also confirm that the implementation of the Treasury Single Account impacted the loans and advances of in first bank Nigeria plc

### **CONCLUSIONS/RECOMMENDATIONS**

The policy has greatly improved the management of government revenue. Its implementation has paved way for the timely payment and capturing of all revenues going in the government treasury, without the intermediation of multiple banking arrangements. Besides, the system has reduced the mismanagement of public funds by revenue-generating agencies. It is also expected to help check excess liquidity, inflation, high-interest rates, round-tripping of government deposits, and the sliding value of the naira. In view of these benefits, we call for strict compliance with the directive on TSA by the relevant government organizations. The implementation of the order will, however, require the cooperation of the National Assembly with the Executive arm to ensure strict compliance by the MDAs. The fears that have been raised about the implications of the new measure are hardly necessary. The implementation of TSA has a positive relationship with First Bank Nigeria liquidity, deposit and loan, and advances

Based on the findings of the study, the followings recommendations are made:

1. Relevant regulatory bodies such as CBN, NDIC and SEC should which will drive the effective implementation of the TSA in the states and local governments in order to promote accountability and transparency at all levels of government.
3. To cushion the liquidity impact on the financial system, the central banks of Nigeria (CBN) should ensure an orderly migration of cash balances from the first bank accounts to the TSA should be considered and complemented with monetary policy measures.
4. The banks should avoid over-reliance on government funds and source funds from other sectors of the economy. Rural banking should be aggressively undertaken to mobilize funds from the un-banked among rural dwellers.
5. The government should find other avenues to encourage the private sector. The policy however should not be killed by policy intricacies.

6. The choice of the TSA should be informed and guided by the availability of clear operational basis technology infrastructure that supports the implementation of the model of their choice. CBN should go beyond the guidelines and put in place measures to correct any lapses or negative impact of the policy both on the banking sector and the economy at large.

7. First Banks should source funds from other sectors of the economy; more than 50% of the population of Nigeria does not have access to financial services. Savings and investments should be encouraged instead of people keeping their money under their pillow. It entails that unwavering commitment and sincerity of purpose are needed for the system to work effectively.

Post Graduate Student, Shah Abdul latif University Khairpur Mirs

**ABSTRACT**

The current research investigates Impact on Recent Mega Rain Flood in Sindh on Poverty in Pakistan: A Case study of Sindh. Data were collected from Eight most vulnerable flood affected Districts i.e. Ghotki, Sukkur, Khairpur Mirs, Larkana, Qambar Shahdakkot, Shikarpur, Kashmore and Dadu. It was revealed that after heavy rain disaster in Sindh affected three million people left their homes without getting anything from their belongings. In many cases specially in K.N.Shah (DADU) people evacuated their houses in one hour time. In this situation OGDCL come forward and rescue the people in all districts by providing tents, Ration and cooked foods. It was revealed that due to poor management in all districts 1200 people were died and thousands of Livestock losses in all districts. Dadu district is more affected compare to whole Pakistan. The flood victim people are living in Schools, Colleges and Pacca Bands where few N.G.Os are supporting them. According to UN 12 million people directly affected in flood in Sindh and overall 20 million people displaced from various districts.

**Key Words:** Recent Mega, Rain/Flood, Poverty

## INTRODUCTION
